3. In a spring-balance, the combination of a case, consisting of a drum and top and bottom end plates, spring-supports within the case rigid with the bottom plate thereof, a runner movable vertically through said bottom plate, and weighing-springs which are connected at their upper ends with said spring-supports and at their lower ends with the runner, with a chart-drum which lies between said spring-supports and the vertical walls of the case, an axial vertical arbor rigidly fastened to said chart-drum, which arbor is rotatably mounted in the case, a spool attached to the said arbor, a cord attached to and wound about said spool, and having its ends connected respectively with arms of the runner, and sleeves mounted on said spring-supports over which said cord runs, substantially as described.

4. In a spring-balance, the combination of a case, consisting of a drum and top and bottom end plates, spring-supports within the case rigid with the bottom plate thereof, a runner movable vertically through said bottom plate, and weighing-springs which are connected at their upper ends with said spring-supports and at their lower ends with the runner, with a chart-drum which lies between said spring-supports and the vertical walls of the case, an axial vertical arbor rigidly fastened to said chart-drum, which arbor is rotatably mounted in the case, a spool attached to the said arbor, a cord attached to and wound about said spool and connected at its ends with the runner, and a spring through which one end of said cord is connected with the runner, substantially as described.

702,928. METHOD OF MAKING PATTERN-PLATE. GALVIN R. DAVIS, South Bend, Ind., assignor to the South Bend Iron Works, South Bend, Ind. Filed July 16, 1901. Serial No. 68,811. (No model.)

Claim.—1. The method of making pattern-plates consisting in casting two plates having on their faces the contour of respective sides of a pattern, mounting the pattern on one of said plates, placing the other plate upon the one having the pattern so as to align the latter on the face of the top plate, then casting the pattern in the top plate, then separating the plates and then securing another pattern to the first-mentioned plate.

2. The method of making pattern-plates consisting in casting two plates having in their meeting faces the contour of the respective sides of a pattern, the contour in one of said plates being made larger than the pattern, mounting a pattern on one of said plates, placing the second plate

on the first so as to receive the pattern on the latter, then pouring molten metal into the said second plate and securing the pattern thereby to said second plate, separating said plates and securing another pattern to the first-mentioned plate.

3. The method of making pattern-plates, consisting in first casting from plaster onto plates having depressions in their opposing faces which together conform to the contour of a complete pattern, enlarging and grooving the wall of the depression in one of said casts prior to casting the plate thereon, securing heated pins in said depressed portion of the plate, mounting a pattern on the other plate, then placing said plates together, pouring molten metal through the upper plate and causing it to flow around the pattern into the groove and around the pins to securely lock the pattern thereto, then separating the plates and securing another pattern to the lower plate.

702,929. RAIL-TIE. GEORGE H. DUNN, Cambridge, N. Y. Filed Oct. 4, 1891. Serial No. 73,017. (No model.)

Claim.—1. A rail-tie having a body of approximate U form comprising a top and side members, and a fastener loosely connected to one side member and movable lengthwise under a hole when the said body is on said hole, and means for securing the ends of the other side member and the fastener together on the hole.

2. A rail-tie having a body of approximate U form comprising a top and side members, and a fastener loosely connected to one side member and movable lengthwise under a hole when the said body is on said hole, and means for securing the ends of the other side member and the fastener together on the hole, said fastener having a loop at each end and the first-mentioned side member having a loop at its end.

3. A rail-tie having a body of approximate U form comprising a top and side members, and a fastener loosely connected to one side member and movable lengthwise under a hole when the said body is on said hole, and means for securing the ends of the other side member and the fastener together on the hole, said means comprising a loop.

702,930. CHANGEABLE-SPEED AND REVERSING GEAR. THOMAS A. DUNN, Whiteburg, Pa. Filed Sept. 26, 1901. Serial No. 73,548. (No model.)

Claim.—1. In a speed-changing mechanism, the combination of a driving-shaft, a gear-wheel mounted on the shaft, a drum loosely surrounding said shaft, and independent, laterally-movable gear-pieces of different diameters capable of being individually shifted into and out of engagement with said gear-wheel and said drum, substantially as set forth.

2. In a speed-changing mechanism, the combination of a driving-shaft, a stepped gear-wheel mounted on said shaft, a rotary drum loosely surrounding said shaft, and laterally-movable transmitting-pieces of different diameters interposed between the drum and the steps of said gear-wheel, substantially as set forth.

3. The combination of a driving-shaft, a beveled cone-gear turning with said shaft, a rotary drum loosely surrounding said shaft and provided with an internal conical gear-rim, and laterally-sliding toothed pieces of

different diameters arranged to enter between the gear-rim of said drum and one of the wheels of said cone-gear, a casing including said shaft and drum, and shifting devices for said pieces extending through the wall of said casing, substantially as set forth.

4. The combination of a stationary casing, a driving-shaft arranged therein, a cone-gear mounted on said shaft, a drum surrounding said shaft and arranged within the casing, studs extending inwardly from one of the walls of the casing and arranged parallel with said driving-shaft, laterally-sliding transmitting-pieces of different diameters mounted on said studs, and shifting devices for said pieces extending through the wall of the casing, substantially as set forth.

5. The combination of a stationary casing, a driving-shaft arranged therein, a cone-gear mounted on said shaft, a drum surrounding said shaft and arranged within the casing, hollow studs projecting inwardly from one of the walls of the casing, transmitting-pieces of different diameters mounted to slide laterally on said hollow studs, and shifting-bells for said pieces sliding in said studs and extending through the wall of said casing, substantially as set forth.

6. The combination of a casing, a driving-shaft arranged therein, a gear-wheel mounted on said shaft, a drum loosely surrounding said shaft, a hollow stud extending inwardly from the wall of said casing and provided with a longitudinal slot, a transmitting-piece slidably mounted on said stud and provided in its bore with an annular groove, and a shifting-belt sliding in said hollow stud and provided with a transverse pin which passes through the slot of the stud and enters the groove of said piece, substantially as set forth.

7. The combination of a driving-shaft, a gear-wheel mounted thereon, a drum loosely surrounding said shaft, a plurality of retractable transmitting-pieces interposed between the gear-wheel on the driving-shaft and said drum, and a locking device having individual locking means for said transmitting-pieces constructed and arranged to release but one of said pieces at a time, substantially as set forth.

8. The combination of a driving-shaft, a gear-wheel mounted thereon, a drum loosely surrounding said shaft, a plurality of retractable transmitting-pieces interposed between the gear-wheel on the driving-shaft and said drum, individual shifting-bells for said pieces, and a movable locking-plate having slots constructed to interlock with said bells in one position of said plate and to release the bells in another position of the plate, substantially as set forth.

9. The combination of a driving-shaft, a gear-wheel mounted thereon, a drum loosely surrounding said shaft, laterally-sliding transmitting-pieces of different diameters interposed between said gear-wheel and the drum, shifting-bells connected with said pieces and each having a contracted neck, and a rotary locking-plate having curved locking-slots which are wide enough to receive the contracted necks of said bells but narrower than the bodies thereof, and which are provided with enlargements of sufficient size to receive the bodies of said bells, substantially as set forth.

10. The combination of a driving-shaft, a gear-wheel mounted thereon, a drum loosely surrounding said shaft, a plurality of retractable transmitting-pieces interposed between the gear-wheel on the driving-shaft and said drum, individual shifting-bells for said pieces, a movable locking-plate having slots constructed to interlock with said bells in one position of said plate and to release the bells in another position of the plate, a stationary scale arranged adjacent to said locking-plate, and a pointer carried by said plate and cooperating with said scale, substantially as set forth.

11. The combination of a driving-shaft, a drum driven therefrom, a pair of gear-wheels mounted loosely on said drum and geared together to turn in opposite directions, one of said gear-wheels forming a driver, and a clutch for coupling either of said gear-wheels to said drum, substantially as set forth.

12. The combination of a driving-shaft, a hollow drum loosely surrounding the same, a changeable-speed gear arranged within said drum and constructed to transmit motion from said shaft to said drum, and a reversing-gear mounted on the periphery of said drum, substantially as set forth.

13. The combination of a driving-shaft, a hollow drum loosely surrounding the same, a changeable-speed gear constructed to transmit motion from said shaft to said drum and arranged within the drum, adjusting devices for said speed-changing gear projecting laterally from said drum, a pair of opposing bevel-gears journaled on the periphery of said drum, an intervening pinion connecting said bevel-gears, and a clutch for coupling either of said bevel-gears to said drum, substantially as set forth.

702,931. PNEUMATIC RAILWAY SWITCH AND SIGNAL AP- PARATUS. FRANK L. DUNN, Rochester, and WENDELL COHENWORTH, New York, N. Y., assignors to International Pneumatic Railway Signal Company, Rochester, N. Y., a Corporation of West Virginia. Filed Oct. 26, 1901. Serial No. 82,107. (No model.)

Claim.—1. In a fluid-pressure-distributing device, a distributing-valve, a single source of fluid-pressure supply, which is to be distributed by the valve to different fluid-pressure conductors, a cylinder and a piston for operating said distributing-valve, a single operating-pipe, and means for connecting one side of said cylinder to the atmosphere when pressure is increased in the operating-pipe, and means for connecting the opposite side of the cylinder to the atmosphere when pressure is reduced in the operating-pipe, substantially as described.

2. In a fluid-pressure-distributing device, a distributing-valve, a single source of fluid-pressure supply which is to be distributed by said valve, a cylinder and a piston for operating said valve, a single controlling or operating pipe for the valve, two diaphragms, and valves operated by said diaphragms for controlling the admission of air to and from the two ends of the cylinder, substantially as described.

3. The combination, with a motor mechanism, of a fluid-pressure-distributing device, a distributing-valve, a single source of fluid-pressure supply which is to be distributed by said valve to different fluid-pressure conductors for operating the motor mechanism, a cylinder and a piston for operating said distributing-valve, a single operating-pipe for said valve, means for causing increase of pressure in said pipe above the normal, to operate the valve in one direction, means for causing decrease of pressure in said pipe below the normal to operate the valve in the other direction, and means for equalizing the pressure to the normal after each operation, said latter means being inoperative until after the valve has completed its movement, substantially as described.

4. In a fluid-pressure-distributing device, a single fluid-pressure-supply port, an exhaust-port, a single fluid-pressure-operating port, separate port connections for different fluid-pressure conductors, a distributing-valve, and means for operating said distributing-valve by variations of pressure in said operating-port to connect one of said port connections with the supply and another with the exhaust when pressure is increased at the operating-port and for reversing these connections when pressure is decreased at said operating-port, substantially as described.

5. In a fluid-pressure-distributing device, a single fluid-pressure-supply port, an exhaust-port, a single fluid-pressure-operating port, separate port connections for different fluid-pressure conductors, a distributing-valve, means for operating said distributing-valve by variations of pressure in said operating-port to connect one of said port connections with the supply and another with the exhaust when pressure is increased at the operating-port and for reversing these connections when pressure is decreased at said operating-port, and means for equalizing the pressure at the operating-port with that in the supply, after the valve has been operated to produce either of said connections, substantially as described.

6. In a fluid-pressure-distributing device, a single fluid-pressure-supply port, an exhaust-port, a single fluid-pressure-operating port, separate

port connections for different fluid-pressure conductors, a distributing-valve, means, comprising a cylinder and piston, for operating said distributing-valve by variations of pressure in said operating-port to connect one of said port connections with the supply and another with the exhaust when pressure is increased at the operating-port and for reversing these connections when pressure is decreased at said operating-port, means for equalizing the pressure at the operating-port with that in the supply, after the valve has been operated to produce either of said connections, means for connecting the cylinder on either side of the piston with the exhaust when operating-pressure is let into the cylinder on the opposite side of the piston, and means for equalizing the pressure on the opposite sides of the piston after an operation of the valve including cutting off the connection with the exhaust, substantially as described.

7. In a fluid-pressure switch or signal mechanism, a motor at the switch or signal, a single fluid-pressure supply for the motor, a fluid-pressure-distributing device for causing movement of said motor in either direction according to its position, a controlling mechanism in the tower, a single pipe between the controlling mechanism and the distributing device, means for reducing pressure in said pipe through the controlling mechanism, and means for producing an increase of pressure in said pipe through said controlling mechanism, said distributing device assuming one operating position when pressure is reduced in the operating-pipe and assuming another operating position when it is increased in said operating-pipe, substantially as described.

8. In a fluid-pressure-distributing device, a casing, a supply-inlet port, two outlet-ports, an operating-port therefor, a distributing-valve, and means for causing said distributing-valve to take one position when pressure is decreased in said operating-port and the opposite position when pressure is increased in said operating-port and means for causing the pressure in the operating-port to equalize with that in the supply, after the valve has moved to either extreme position, substantially as described.

9. In a fluid-pressure switch or signal mechanism, a motor at the switch or signal, a distributing device comprising a valve for distributing compressed air from a single supply-pipe to either of two fluid-pressure conductors to said motor, a manually-operated operating mechanism in the operating-station, a single fluid-pressure-operating pipe between the operating mechanism and the distributing-valve, means for reducing pressure in said operating-pipe through the operating mechanism, and means for producing an increase of pressure in said operating-pipe through said operating mechanism, means for causing said distributing-valve to take one distributing position when pressure is reduced in the operating-pipe and to take another distributing position when pressure is increased in the said operating-pipe, and means for causing the pressure in the operating-pipe to return to its normal pressure after the distributing-valve has assumed either of its extreme positions, substantially as described.

10. In a fluid-pressure switch or signal mechanism, a motor mechanism for said switch or signal, a distributing device comprising a valve for distributing compressed air from a single supply-pipe at a mean pressure to either of two fluid-pressure conductors to said motor, a single fluid-pressure-operating pipe from the operating-station to said distributing device, means in said device for causing it to assume either of two different positions by reduction or increase of pressure in the operating-pipe, a manually-operated operating-valve in the operating-station, a fluid-pressure supply under mean pressure, a second fluid-pressure supply under greater pressure, said second fluid-supply being connected to said operating-valve, two tanks connected to the outlet of said operating-valve, said operating-valve having ports whereby one of these tanks may be connected to the high-pressure supply or to the operating-pipe and the other tank may be connected to the operating-pipe or to the atmosphere, substantially as described.

11. In a fluid-pressure switch or signal mechanism, a motor mechanism for said switch or signal, a distributing device comprising a valve for distributing compressed air from a single supply-pipe at a mean pressure to either of two fluid-pressure conductors to said motor, a single fluid-pressure-operating pipe from the operating-station to said distributing device, means in said device for causing it to assume either of two different positions by reduction or increase of pressure in said operating-pipe, a manually-operated operating-valve in the operating-station, a fluid-pressure supply under mean pressure, a second fluid-pressure supply under greater pressure, said second fluid-supply being connected to said operating-valve, two tanks connected to the outlet of said operating-valve, said operating-valve having ports whereby one of these tanks may be connected to the high-pressure supply or to the operating-pipe and the other tank may be connected to the operating-pipe or to the atmosphere, substantially as described.

12. In a railway switch or signal apparatus, the combination of a double-acting fluid-pressure motor mechanism for setting the switch or

signal into its different positions, fluid-pressure supply for actuating the motor mechanism, a single fluid-column extending to the motor-station from an operating-station, means at the operating-station for causing variation of pressure in said column, and valve mechanism at the motor-station actuated by said variation of pressure for controlling the operation of the motor mechanism by fluid-pressure in its movements in both directions, substantially as described.

13. In a railway switch or signal apparatus, two reciprocating fluid-pressure-operated mechanisms, fluid-pressure supply for actuating one of them, two fluid-columns extending between the positions of said two mechanisms, a valve device adjacent to each mechanism actuated by a variation of pressure in one of said columns for controlling the operation of its operated mechanism in both directions by fluid-pressure, manually-operated mechanism for causing variation of pressure in one of said columns, and a valve device controlled in correspondence with the movement of said last-mentioned operated mechanism for causing variation of pressure in the other column, and a valve device actuated by said last-mentioned variation of pressure for controlling the operation of its operated mechanism, substantially as described.

14. In a railway switch or signal apparatus, the combination of fluid-pressure motor mechanism for the switch or signal, fluid-pressure supply under mean pressure for actuating the motor mechanism, a second fluid-pressure supply under a different pressure, a single operating fluid-column extending to the motor-station from an operating-station, a valve device at the motor-station actuated by variation of pressure in said column for controlling the operation of the motor mechanism in both of its directions by fluid-pressure, operating mechanism at the operating-station for causing said variation of pressure in the operating-column, comprising controlling devices whereby the said variations of pressure are exactly controlled, and a connection and ports from said mean-pressure supply for connecting the operating-pipe therewith at certain positions of the operating mechanism, substantially as described.

15. In a fluid-pressure switch or signal mechanism, a manually-operated lever in the operating-station, an indicator-cylinder to act upon the lever, a stop-roller carried by the piston of said indicator-cylinder, said roller having a slot in which the roller is guided, said slot having two parallel portions offset from each other and at right angles to the axis of the indicator-cylinder, thus forming two shoulders against one of which the roller abuts when the piston in the cylinder is in one position and against the other one of which shoulders the roller abuts when the piston is in another position, substantially as described.

16. In a fluid-pressure switch or signal apparatus, a manually-operated lever having a slot or groove with two portions arranged diagonally across said lever and two other portions connecting said diagonal portions, a reciprocating mechanism having a part extending into said slot or groove, whereby said part moves around in said slot and the lever may be moved in part by hand and in part by said reciprocating mechanism, substantially as described.

17. In a fluid-pressure switch or signal apparatus, a manually-operated lever having a slot or groove with two portions substantially in line of movement of the lever and two diagonal portions connecting the former two portions, a cylinder and piston, and a controlling device actuated by the piston and operating in said groove or slot, whereby the movement of the lever may be made in part independent of the piston and in part by the piston, substantially as described.

18. In a fluid-pressure switch or signal apparatus, a manually-operated lever having a slot or groove with two portions substantially in line of movement of the lever and two diagonal portions connecting the former two portions, a cylinder and piston, and a controlling device actuated by the piston and operating in said groove or slot, whereby the movement of the lever may be made in part independent of the piston and in part by the piston, and stop-flanges in said groove or slot whereby the lever is stopped at certain points until said piston is moved, substantially as described.

19. In a fluid-pressure switch or signal mechanism, a manually-operated operating-lever, an indicator-cylinder having a piston carrying a pin or roller adapted to run in a slot in said lever, the said slot having two parallel portions in line of movement of said lever, and two substantially parallel diagonal connecting portions whereby the movement of the pin or roller in one direction in one of said diagonal portions shifts the lever in one direction and the movement of the pin or roller in the other diagonal portion in the other direction shifts the lever in its opposite direction, substantially as described.

20. In a fluid-pressure switch or signal mechanism, a manually-operated operating-lever, an indicator-cylinder having a piston carrying a pin or roller adapted to run in a slot in said lever, the said slot having two parallel portions in line of movement of said lever, and two substantially parallel diagonal connecting portions whereby the movement of the pin or roller in one direction in one of said diagonal portions shifts the lever in one direction and the movement of the pin or roller in the

other diagonal portion in the other direction shifts the lever in its opposite direction, and stop-flanges at ends of said first-mentioned parallel portions whereby the lever is stopped until the piston is moved to carry the roller or pin away therefrom, substantially as described.

21. In a switch or signal mechanism, a manually-operated operating-lever, a reciprocating mechanism carrying a pin or roller adapted to run in a slot in said lever, the said slot having two parallel portions in line of movement of said lever and two substantially parallel diagonal connecting portions whereby the movement of the pin or roller in one direction in one of said diagonal portions shifts the lever in one direction and the movement of the pin or roller in the other diagonal portion in the other direction shifts the lever in its opposite direction, substantially as described.

22. In a switch or signal mechanism, a manually-operated operating-lever, a reciprocating mechanism carrying a pin or roller adapted to run in a slot in said lever, the said slot having two parallel portions in line of movement of said lever and two substantially parallel diagonal connecting portions whereby the movement of the pin or roller in one direction in one of said diagonal portions shifts the roller in one direction and the movement of the pin or roller in the other diagonal portion in the other direction shifts the lever in its opposite direction, and stop-flanges at ends of said first-mentioned parallel portions whereby the lever is stopped until said reciprocating mechanism is moved to carry the pin or roller away therefrom, substantially as described.

23. In a switch or signal mechanism, a manually-operated operating-lever, a reciprocating mechanism carrying a pin or roller adapted to run in a slot in said lever, the said slot having two parallel portions in line of movement of said lever and two substantially parallel diagonal connecting portions whereby the movement of the pin or roller in one direction in one of said diagonal portions shifts the roller in one direction and the movement of the pin or roller in the other diagonal portion in the other direction shifts the lever in its opposite direction, means controlled by said operating-lever for actuating the switch or signal and means controlled by the switch or signal for actuating said reciprocating mechanism, substantially as described.

24. In a switch or signal mechanism, a manually-operated operating-lever, a reciprocating mechanism carrying a pin or roller adapted to run in a slot in said lever, the said slot having two parallel portions in line of movement of said lever and two substantially parallel diagonal connecting portions whereby the movement of the pin or roller in one direction in one of said diagonal portions shifts the roller in one direction, and the movement of the pin or roller in the other diagonal portion in the other direction shifts the lever in its opposite direction, stop-flanges at ends of said first-mentioned parallel portions whereby the lever is stopped until said reciprocating mechanism is moved to carry the pin or roller away therefrom, means controlled by said operating-lever for actuating the switch or signal and means controlled by the switch or signal for actuating said reciprocating mechanism, substantially as described.

25. In a railway switch or signal apparatus, the combination of fluid-pressure motor mechanism for the switch or signal, fluid-pressure supply for actuating the motor mechanism, a single fluid-column extending to the motor-station from an operating-station, means at the operating-station for causing variation of pressure in said column, and valve mechanism at the motor-station actuated by said variation of pressure for controlling the operation of the motor mechanism in both of its movements by fluid-pressure, and means for automatically equalizing the pressure in said column to a selected pressure after each operation of said valve mechanism, substantially as described.

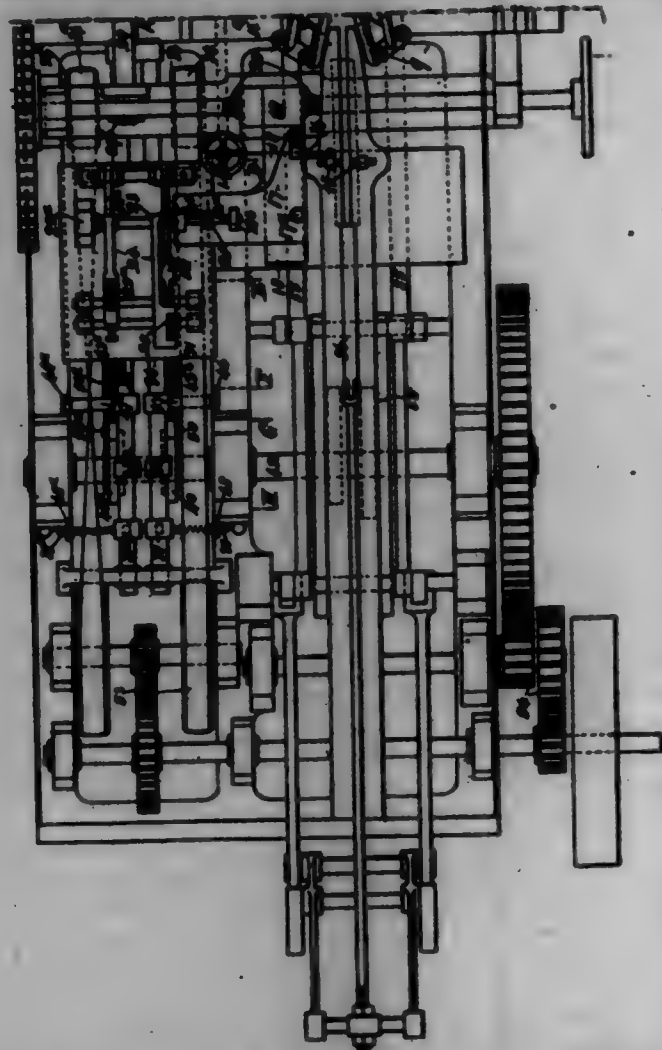

702,982. MACHINERY FOR JOINING OR FINISHING STAVE-PLANKS FOR CASKS. ALEXANDER DUNBAR, Liverpool, England. Filed June 12, 1897. Serial No. 649,508. (No model.)

Claim.—1. In combination with stave-jointing machinery a bar laterally movable in slides on the main frame, pairs of stave-guides pivoted to the movable bar, toothed quadrants connecting each pair of guides, and means for continuously pressing the ends of each pair of guides toward each other; substantially as described.

2. In combination with stave-jointing machinery a pair of rollers geared together and with ends arranged to press only on the center of the edges of a stave, outer-templates, reversible mechanism connected with the rollers and the templates for adjusting the templates, and guides guided by the templates; substantially as described.

3. In combination with stave-jointing machinery a pair of rollers geared together and arranged to press only on the center of the edges of a stave, a lever mounted on a movable fulcrum, one end of said lever being connected to one of the pair of rollers, adjustable outer-templates, adjusting mechanism operating in conjunction with the other end of said lever for adjusting the outer-templates and movable fulcrum either in or out, and opposite ends guided by the templates substantially as described.

4. In combination with stove-jointing machinery, a pair of feelers geared together and arranged to press only on the center of the edges of a stove, a template arranged to guide the cutters, reversible adjusting mechanism connecting the feelers with the template for adjusting the template, part of such mechanism being variable to alter the motion of the inner ends of the template relatively to the outer ends; substantially as described.

5. In combination with stove-jointing machinery a pair of feelers geared together and arranged to press only on the center of the edges of a stove, a lever mounted on a movable fulcrum and connected by one arm to one of the feelers; a lever mounted on a rock-shaft and connected to the movable-mounted lever by a universal joint, catches operated from the rock-shaft to hold or release weighted arms, catch levers arranged to be struck by the weighted arms, arms connected to weighted levers arranged to be held or released by the catch-levers, a rock-shaft having arms arranged to be struck by the weighted levers and arms for operating catches on a rotatable shaft, pulleys adapted to be engaged by the catches for rotating the shaft, and gearing connected with the shaft for adjusting the movable fulcrum and cutter-template; substantially as described.

6. In combination with stove-jointing machinery a pair of feelers geared together and arranged to press only on the center of the edges of a stove, a lever mounted on a movable fulcrum, movable cutters, movable template controlling the cutters, a rock-shaft carrying arms free to slide longitudinally on each shaft but oscillating therewith, connections from the sliding arms to the template, a fixed arm on the rock-shaft and a connection therefrom to the movable fulcrum to oscillate the shaft, a connection from one end of the movable-mounted lever to one of the pair of feelers, and mechanism connected with the other end of the said lever for adjusting the movable fulcrum; substantially as described.

7. In combination with stove-jointing machinery a pair of feelers geared together and arranged to press only on the center of the edges of a stove, a lever mounted on a movable fulcrum, movable cutters, movable template controlling the cutters, a rock-shaft carrying arms free to slide longitudinally on each shaft but oscillating therewith, one of such arms having an adjustable block, a connection from the adjustable block to the inner ends of the template, connections from the other sliding arms to the outer ends of the template, a fixed arm on the rock-shaft and a connection therefrom to the movable fulcrum to oscillate the shaft, a connection from one end of the movable-mounted lever to one of the pair of feelers, and mechanism connected with the other end of the said lever for adjusting the movable fulcrum; substantially as described.

8. In combination with stove-jointing machinery a pair of feelers geared together and arranged to press only on the center of the edges of

a stove, movable cutters controlled by movable template, mechanism for adjusting the template, mechanism movable out of neutral position by the feelers to put into action the template-adjusting mechanism, and connections from the template-adjusting mechanism to the feeler mechanism to restore said mechanism to neutral position; substantially as described.

702,988. MACHINE FOR SEPARATING PLASTIC MATERIALS INTO SHEETS. THOMAS E. EDWARDS, Ann Arbor, Mich., assignor of one-half to G. Frank Altmeyer, Ann Arbor, Mich. Filed Jan. 22, 1902. Serial No. 92,810. (No model.)

Claim.—A grooved linked belt with hinged joints A C to keep the units of said belt accurately in line, the units being fixed on both sides so that when joined to form a linked belt this belt will follow a plane surface on either or both of its sides, combined with a pressure K, to hold said belt to its work, and a smooth roller, R, in the manner described, for the purpose of shearing plastic materials by pressing them into the grooves in said belt, all substantially as set forth.

702,984. STUD-SETTING MACHINERY. FRANKLIN A. BRIDGTON, New York, N. Y. Filed Jan. 22, 1901. Serial No. 64,682. (No model.)

Claim.—1. A part having a socket the side walls of which are indented by a concentric spring-rooms having rigid side walls, an expandable annular spring located in said spring-rooms, and a centering spring or springs interposed between said annular spring and said rigid side walls of said rooms and adapted to elastically center said annular spring with said socket, substantially as described.

2. A part having a socket the side walls of which are indented by a concentric spring-rooms having rigid side walls, an expandable annular spring located in said spring-rooms, a centering spring or springs interposed between said annular spring and said rigid side walls of the rooms, and a shaft adapted to expand said annular spring and to elastically center thereby with said socket, substantially as described.

3. A part having a socket the side walls of which are indented by a concentric spring-rooms having rigid side walls, an expandable annular spring located in said spring-rooms, a centering spring or springs interposed between said annular spring and said rigid side walls of said rooms, a shaft adapted to expand said annular spring and having a shoulder to coact with said annular spring to support said shaft in said socket, substantially as described.

4. A part having a socket the side walls of which are indented by a concentric spring-rooms having rigid side walls, an expandable annular spring located in said spring-rooms, and a centering spring or springs arranged in angular form and interposed between said annular spring and said rigid side walls of said rooms, the central inner surfaces of the centering spring or springs being adapted to engage the periphery of the annular spring and the corners of the angular form being adapted to engage said rigid side walls of said spring-rooms, substantially as described.

5. A part having a socket the side walls of which are indented by a concentric spring-rooms having rigid side walls, an expandable annular spring located in said spring-rooms, and a centering spring or springs arranged in angular form and interposed between said annular spring and said rigid side walls of said rooms, the ends of the centering spring or springs being unattached to facilitate the insertion and removal thereof from said rooms, substantially as described.

6. A part having a socket the side walls of which are indented by a concentric spring-rooms having rigid side walls, an expandable annular spring located in said spring-rooms, and a centering spring or springs arranged in angular form and interposed between said annular spring and said rigid side walls of said rooms, the ends of the centering spring being bent

outward to hold said angular form in position to elastically center the annular spring, substantially as described.

7. A part having a socket the side walls of which are indented by a concentric spring-rooms having rigid side walls, an expandable annular spring located in said rooms, a centering spring or springs interposed between the annular spring and the rigid walls of the rooms to form an elastic connection between said rigid walls and said annular spring, a shaft, rotary driving-clutches carried by said socket part and by said shaft, said shaft having a shoulder so located along its periphery as to permit said annular spring to grip under said shoulder before said clutches become engaged, substantially as described.

8. A screw-threaded shaft, a stud-holder provided at one end with screw-threads to mesh with those of a stud and at the other end with screw-threads of a coarser pitch to mesh with the correspondingly-coarse screw-threads of the shaft, substantially as described.

9. A screw-threaded shaft, a stud-holder provided at one end with screw-threads to mesh with those of a stud and at the other end with screw-threads to mesh with those of the shaft, said shaft and said stud-holder having suitable projections to engage each other to limit the independent rotation of said parts, substantially as described.

10. A screw-threaded shaft, a stud-holder provided at one end with screw-threads to mesh with those of a stud and at the other end with screw-threads to mesh with those of the shaft, and a spring to retain said stud-holder upon said shaft to screw said shaft into said holder automatically after said screw-threaded parts have been partly unscrewed from each other, substantially as described.

11. A screw-threaded shaft, a stud-holder provided with screw-threads that mesh with those of said shaft, a removable stud-out connected to rotate with said stud-holder, said stud-out being internally screw-threaded to mesh with the threads of a stud, substantially as described.

12. A screw-threaded shaft, a stud-holder provided at one end with a removable stud-out having internal screw-threads of a finer pitch than those on said shaft and at the other end with screw-threads of a correspondingly-coarse pitch with those of said shaft, substantially as described.

702,985. POST-DRIVING APPARATUS. MARGARET C. FORTER and BOBBIE S. FORTER, Hawarden, Iowa. Filed Feb. 27, 1902. Serial No. 94,814. (No model.)

Claim.—1. A post-driver adapted for use upon an ordinary wagon-bed and comprising a supporting-frame provided with rack-bars and means of attachment to the sides of the bed, a carriage supported by the frame and having gears meshing with said rack-bars, means for operating the gears to adjust the carriage longitudinally on the frame, a guide-frame located at one end of the carriage, a hammer and operating means therefor supported by said guide-frame, and means applied to the opposite end of the carriage for attaching the same to a part of the wagon and tilting the carriage upon the gears as a fulcrum, substantially as described.

2. A post-driver adapted for use upon an ordinary wagon-bed and comprising a supporting-frame provided with rack-bars and means of attachment to the sides of the bed, a carriage supported by the frame and having gears meshing with said rack-bars, means for operating the gears to adjust the carriage longitudinally on the frame, a guide-frame located at one end of the carriage, a hammer and operating means therefor supported by said guide-frame, a block for supporting the hammer when the latter is not in use, a lever for adjusting said block in and out of the path of the hammer, and means applied to the opposite end of the carriage for attaching the same to a part of the wagon and tilting the carriage upon the gears as a fulcrum, substantially as described.

702,986. REGISTER. ELMER C. FOX, Cleveland, Ohio. Filed Mar. 15, 1901. Serial No. 81,882. (No model.)

Claim.—1. In combination with a register bottom and perforated top plate, a rectangular sheet-metal tube provided with a flange secured to said plate, a ventilator-plate, a rectangular sheet-metal tube provided with a flange secured to the ventilator-plate, one of said tubes sliding within the other, and springs connecting the bottom and ventilator-plate, substantially as described.

2. In combination with a register bottom and top plate thereon, a rectangular metal tube secured thereto, a ventilator-plate, and rectangular tube secured thereto, one of said tubes being telescoped within the other, said springs secured to said register-bottom and detachably connected with said ventilator-plate, substantially as described.

3. In combination, a register bottom and top plate and a ventilator-plate, and rectangular metal tubes secured to said plates, one secured over the other, springs connecting said bottom and ventilator-plate, and fingers arranged to extend on either side of the rectangular tubes and secured severally to the bottom and ventilator-plate, substantially as described.

4. In combination with a register top plate and bottom, a ventilator-plate, thin telescoping tubes secured respectively to said register and ventilator plates, springs connecting said register bottom and ventilator-plate, said ventilator-plate being provided with a removable central portion, substantially as described.

702,987. STOPPER FOR GAS-MAINS. JOHN FRANKLIN, Norwood, Ohio. Filed Feb. 15, 1902. Serial No. 94,822. (No model.)

Claim.—1. A stopper for gas-mains and the like comprising a flexible diaphragm of impervious material adapted to be extended across the interior of the main and a rim portion integral with said flexible diaphragm and inflatable and deflatable and provided with means for inflating it and when so inflated being adapted to press frictionally upon the walls of the main to hold the diaphragm in position in the main, the diaphragm and rim portion being both adapted for flexure to permit ready introduction of the device through an opening in the wall of a main, substantially as set forth.

2. A stopper for gas-mains and the like comprising a flexible diaphragm of impervious material adapted to be extended across the interior of the main and a hollow inflatable marginal portion extended around the edges of said diaphragm and adapted when inflated, to press frictionally against the walls of the main to hold the diaphragm in position within the main, the inner walls of said hollow marginal portion being thickened with respect to the outer walls thereof, whereby, when said portion is inflated, its distention is outward, substantially as set forth.

3. A stopper for gas-mains and the like comprising a flexible diaphragm adapted to be extended across the interior of the main, a hollow inflatable marginal portion for said diaphragm adapted when inflated to press frictionally upon the walls of the main to hold the diaphragm in

position within the main, a screw-threaded inflation-tube connected with said marginal portion, and an index device having a perforation through which the inflation-tube is passed and adapted to indicate the position of the stopper when in a main, and a nut screwed on said inflation-tube and between which and the marginal portion the index device is held, substantially as set forth.

702,988. TROLLEY FOR ELECTRIC RAILWAYS. FRANK W. GARRITT, Johnstown, Pa., assignor to the Lorain Steel Company, a Corporation of Pennsylvania. Filed Sept. 10, 1901. Serial No. 74,967. (No model.)

Claim.—1. The combination with a trolley-wheel, of a fixed shaft or spindle on which the wheel is revolvably mounted, and a longitudinally-extending metallic member seated in said shaft or spindle and spring-pressed into engagement with the inner bearing-surface of the wheel.

2. The combination with a trolley-wheel, and a fixed shaft or spindle upon which the wheel is revolvably mounted, of means for preventing loosening and play between the wheel and the shaft or spindle, consisting of a longitudinally-extending piece seated in a recess of the shaft or spindle and spring-pressed into engagement with the inner bearing-surface of the wheel, and pins or the like engaging said piece to prevent displacement thereof.

3. The combination with a trolley-wheel, of a fixed shaft or spindle upon which the wheel is revolvably mounted and which is provided with a longitudinally-extending groove or recess, a metallic piece movably seated in said groove or recess, and a spring or springs acting against said piece to force it outward into engagement with the inner bearing-surface of the wheel.

702,989. MECHANICAL BOILER-CLEANER. PIERCE F. GUNSON, Chicago, Ill., assignor of two-thirds to Edward G. Burke and Charles E. Foster, Chicago, Ill. Filed Dec. 2, 1901. Serial No. 64,328. (No model.)

Claim.—1. The combination with a tubular boiler having a smoke-chamber and door therein, of a screw-threaded shaft longitudinally journaled therein and having one of its ends extending into said chamber, a screw-threaded traveler mounted on said shaft, cleaners for the tubes of the boiler and for the crown-sheet thereof connected to the traveler and carried thereby, a shaft journaled in the door of the smoke-chamber and having means on its inner end to detachably engage the first-mentioned shaft, and means connected with the outer portion of the door-shaft to rotate the same, substantially as described.

2. The combination with a tubular boiler having a smoke-chamber and door therein, of a screw-threaded shaft longitudinally journaled

therein and having one of its ends extending into said chamber, a traveler mounted on said shaft, cleaners for the tubes, for the crown-sheet and for the bottom of the boiler connected to the traveler and carried thereby, a shaft journaled in the door of the smoke-chamber and having means on its inner end to detachably engage the first-mentioned shaft, and means connected with the outer portion of the door-shaft to rotate the same, substantially as described.

3. The combination with a rotatable shaft longitudinally journaled in the boiler, of a traveler mounted thereon, a series of bifurcated brackets secured to the traveler and extending vertically and horizontally therefrom between the tubes of the boiler and providing a front set of prongs and a rear set of prongs, a series of ringed frames located on the tubes and connected together in sets and then secured to the sets of prongs of said brackets, each of said frames consisting of two pieces joined together and having a number of semicircular portions to form rings, and provided with recesses in their adjacent surfaces, inwardly-extending pins on each of the semicircular portions, segmental pieces located in said rings and provided with openings for the pins, and springs located in said recesses to press the segments inwardly, substantially as described.

4. The combination with a rotatable shaft longitudinally journaled in the boiler, of a traveler mounted thereon, a series of bifurcated brackets secured to the traveler and extending therefrom between the tubes of the boiler, a series of ringed frames located on the tubes and connected together and secured to the said brackets, each of said frames consisting of two pieces joined together and having a number of semicircular portions to form rings and provided with recesses in their adjacent surfaces, inwardly-extending pins on each of the semicircular portions, segmental pieces located in said rings and provided with openings for the pins, and springs located in said recesses to press the segments inwardly, substantially as described.

5. A cleaner for the tubes of a boiler comprising a frame consisting of two pieces joined together and having a number of semicircular portions to form rings and provided with recesses in their adjacent surfaces, inwardly-extending pins on each of the semicircular portions, segmental pieces located in said rings and provided with openings for the pins, and springs located in said recesses to press the segments inwardly, substantially as described.

6. The combination with a rotatable shaft journaled in the boiler, of a traveler mounted thereon, an upright standard secured to the traveler and having on its upper end a roller, a rod located longitudinally in the upper portion of the boiler to support said roller, rails secured to the inner upper portion of the front of the boiler and having their rear ends downwardly inclined, rails secured to the inner upper portion of the rear of the boiler and having their front ends downwardly inclined, a hanger beam or bar pivotedly secured at one of its ends to the upright standard and provided at its other end with a transverse hanger having vertical slots in its ends, a roller journaled in the front end of the said beam or bar and resting on the said rod, a cleaner-body for the crown-sheet movably secured in the slots of the hanger, rollers journaled on each end of the cleaner-body and adapted to travel on the rails at the rear end of the boiler, a bell-crank lever fulcrumed on each side of the hanger-bar and having on its upper arm a roller to travel on the rails at the front end of the boiler and provided on its lower arm with means to engage the cleaner-body to hold it in a raised position, substantially as described.

702,940. NAIL-FASTENER. CLAYTON A. GOODHILL, Hartford, Ill. Filed July 30, 1901. Serial No. 69,694. (No model.)

Claim.—1. The combination with a pair of window sash and frame, of a fastener secured to one sash, suitable bolt-ends in the other sash, a bolt in said fastener, a slide guiding said bolt in a line at right angles with the sash, an arm upon said slide, a roller upon the end of said arm in contact with the sash, means for keeping said roller in permanent contact with said sash, said slide thereby keeping said bolt in line with the bolt-perforations, substantially as described.

2. The combination with a window-frame and a pair of window-sash therein, of a fastener for said window-sash consisting of a suitable frame secured to one of said sash, bolt-ends in the other sash, a bolt

supported in the fastener-frame so as to move in a line perpendicular to the other sash and also laterally with respect to the two sash and a lateral guide for said bolt mounted in the fastener-frame and provided with means of engagement with the other sash so as to maintain the bolt in the line of the sockets in said other sash; substantially as described.

3. The combination with the casing, C, perforated at c, c', and slotted at c'', c'', of the bolts, D, E, transversely arranged and guided in said casing, spring-pressed outwardly and provided with means for retaining them when drawn inwardly and a slide supported in the casing embracing the bolt, E, and having a part without the casing adapted for engagement with one of the window-sash to carry the bolt, E, with said sash in its lateral movements with respect to the casing, C; substantially as described.

702,941. SQUIRT-PREVENTER FOR TYPE-CASTING MACHINE. GEORGE A. GOODHILL, New York, N. Y. Filed Apr. 22, 1901. Serial No. 68,571. (No model.)

Claim.—1. In a type-casting machine, the combination with a mold, a matrix and metal-injecting device, of a lock for the metal-injecting device under the cooperative control of the matrix and the mold and operative to prevent any cast, in case the matrix and the mold fail to make a perfect joint, when in casting position, because of the intervention of foreign material between the face of the mold and the face of the matrix, substantially as described.

2. In a type-casting machine, the combination with a mold, a matrix and a pump, of clamping devices for clamping together the matrix and the mold in casting position, and a pump-lock subject to said clamping devices and operative to lock the pump and prevent any cast, in case the matrix and the mold fail to make a perfect joint, when in casting position, because of the intervention of any foreign material between the face of the matrix and the face of the mold, substantially as described.

3. The combination with a matrix, a mold and a pump, of a pump-lock and clamping devices, for clamping together the matrix and the mold in casting position, which clamping devices include a yielding part which, when the matrix and mold fail to make a perfect joint, in casting position because of the intervention of any foreign material between the matrix and the mold, will render said pump-lock operative to lock the pump in idle position, and thereby prevent any cast, substantially as described.

4. In a type-casting machine, the combination with a matrix, a mold, a pump, and clamping devices for clamping together the matrix and the mold in casting position, of a squirt-preventer including a pump-lock and intermediate device under the control of the said clamping devices, and operative to hold the lock in idle position, as long as the matrix and mold make a perfect joint, but to throw said lock into locking position, whenever said perfect joint is prevented by an intervening obstruction, between the matrix and the mold, substantially as described.

5. In the type-casting and setting machine substantially as described, the combination with the matrix, the mold, the melting-pot and the pump, of the vertically-movable mold-carriage, the non-actuated device for forcing the mold-carriage upward into casting position, the matrix-block, the centering-pin A'', the loose head A'' and the non-actuated plunger A'', for clamping the matrix against the face of the mold, when in casting position, the pump-actuating rod provided with a notch or other engaging surface thereon, and the squirt-preventer, including the elements marked 1' to 1'', inclusive, for cooperation, substantially as described.

702,942. BALL. ROBERT E. GRAY, London, England. Filed Sept. 26, 1901. Serial No. 70,548. (No model.)

Claim.—The combination with a ball of an identification-label integral with it, the area of the junction between the label and the ball being relatively small so that the label can be broken off without injuring the surface of the ball, substantially as set forth.

702,943. ART OF TREATING ORES CONTAINING SILICA OR SILICATES. GEORGE W. GILBERT, Grapeland, Cal., assignor to Robert McKnight, Philadelphia, Pa. Filed Oct. 21, 1901. Serial No. 70,408. (No specimens.)

Claim.—1. The art of treating ores, which consists in roasting with free access of air and agitation, a charge containing the ore, silica in an oxygen combination, and a haloid salt of an alkaline or alkaline-earth metal, the quantities being substantially those quantitatively requisite to form a stable silicate of the alkaline or alkaline-earth metal, and a haloid of the precious metal and continuing the heating of the ore until the haloid of the precious metal is volatilized and collecting the precious-metal values as haloids or oxyhaloids substantially as described.

2. The art of treating ores, which consists in roasting with free access of air and agitation, a charge containing the ore, silica in an oxygen combination, and a chlorid of an alkaline or alkaline-earth metal, the quantities being those quantitatively requisite to form a stable silicate of the alkaline or alkaline-earth metal, and continuing the heating of the ore until the chlorid of the precious metal is volatilized and collecting the precious-metal values as chlorids, or oxychlorids, substantially as described.

3. The art of treating ores, which consists in roasting with free access of air and agitation, a charge containing the ore, silica in an oxygen combination, and a haloid salt of an alkaline or alkaline-earth metal, the quantities being substantially those quantitatively requisite to form a stable silicate of the alkaline or alkaline-earth metal, and a haloid of the precious metal, and continuing the heating of the ore until the haloid of the metal to be recovered, is volatilized, and carrying off and collecting separate from the fumes of combustion, the precious-metal values as haloids or oxyhaloids substantially as described.

702,944. WALL-TIE OR BOND. PAUL HANMILL, Louisville, Mo. Filed Apr. 17, 1902. Serial No. 108,418. (No model.)

Claim.—1. A wall-tie formed of a single piece of wire and comprising two longitudinal main stems provided with loops at their opposite ends, the loops at one end of the tie being integrally connected, substantially as described.

2. A wall-tie formed of a single piece of wire and comprising two longitudinal main stems having loops at their opposite ends, the loops at one end of the tie being integrally connected and the stems diverging therefrom, thus holding the loops at the opposite end of the tie spaced apart, substantially as and for the purpose described.

702,945. ENVELOP. WILLIAM H. HAWORTH, New York, N. Y., assignor to Nicholas J. Mueprik, Brooklyn, N. Y. Filed May 1, 1901. Serial No. 68,948. (No model.)

Claim.—1. An envelop-blank having a body A, a side flap B with the gummed surface b, an opposite side flap D, with the gummed surface d, an end flap C with the gummed surface c, and an opposite end flap E with the gummed surface e; the said gummed surfaces b, c, d, and e being adapted, when folded and united by the adhesive to each other and to the underlying part of the body, to form a solid part of the envelop, for the purpose specified.

2. In an envelop made with side and end flaps, the combination of part of its body with three contiguous flaps pasted thereon and on each other, thereby diminishing the envelop's interior surface, and a tag-string hole through said pasted flaps and body, substantially as described.

702,946. DRAW-BEAR AND BUFFERS APPARATUS. PHILIP REIN, Chicago, Ill. Filed Sept. 18, 1901. Serial No. 78,907. (No model.)

Claim.—1. In a draw-gear and buffing apparatus, the combination with a hollow casing, of followers on either side of and extending within said casing, pairs of friction devices within said casing engaged by said followers, overlapping friction devices interposed between said pairs of said devices, means for moving said followers toward each other and thereby forcing said devices into frictional engagement, and means for moving the friction devices in each of said pairs toward each other and also relatively moving adjacent interposed overlapping devices transversely to the line of draft, substantially as described.

2. In a draw-gear and buffing apparatus, the combination with a casing having hollow end portions, of followers on either side of said end portions and extending within the same, pairs of friction devices within each of the hollow portions of said casing engaged by the followers on either side of said end portions, overlapping friction devices interposed between said pairs of said devices, means for forcing said devices into frictional engagement, and means for simultaneously or successively moving the devices in each of said portions toward each other and also moving relatively adjacent interposed overlapping devices transversely to the line of draft, substantially as described.

3. In a draw-gear and buffing apparatus, a friction device comprising friction-surfaces, a beveled edge, and corresponding beveled shoulders projecting from the edges of the sides thereof, substantially as described.

4. In a friction device for a draw-gear and buffing apparatus, the combination with a body portion having a beveled end and guide-shoulders projecting from opposite side edges, of friction-surfaces secured to the opposite faces of said body portion, substantially as described.

5. In a friction device for a draw-gear and buffing apparatus, the combination with a body portion having a beveled end, of friction-surfaces secured to opposite faces of said body portion and to said beveled end, substantially as described.

6. In a friction device for a draw-gear and buffing apparatus, the combination with a body portion having a beveled end, of friction-surfaces secured to the opposite faces of said body portion, one of said friction-surfaces continuing around said beveled end, substantially as described.

7. In a friction device for a draw-gear and buffing apparatus, the combination with a body portion having a beveled end, of friction-surfaces secured to the opposite faces of said body portion, the friction-surfaces on the smaller face extending around said beveled end, substantially as described.

8. In a draw-gear and buffing apparatus, a casing comprising a hollow end portion, having inclined interior surfaces, and wedges formed on the interior surfaces intermediate of the inclined surfaces, substantially as described.

9. In a draw-gear and buffing apparatus, a casing comprising hollow end portions having inclined interior surfaces, and wedges formed on the interior surfaces intermediate of the inclined surfaces, and side portions uniting said end portions, substantially as described.

10. In a casing for a draw-gear and buffing apparatus, the combination with a hollow end portion, having inclined interior surfaces, of wearing-plates secured to said inclined interior surfaces, and wedges formed on the interior surfaces intermediate of the inclined surfaces, substantially as described.

11. In a casing for a draw-gear and buffing apparatus, the combination with hollow end portions having inclined interior surfaces, of wearing-plates secured to said inclined interior surfaces, said wearing-plates extending around the outer ends of said surfaces, substantially as described.

12. In a casing for a draw-gear and buffing apparatus, the combination with hollow end portions having inclined interior surfaces, of wearing-plates secured to said inclined interior surfaces, and side portions uniting said end portions of the casing, substantially as described.

702,947. JOURNAL-BEARING. BENJAMIN REIL, South Norwalk, Conn. Filed Oct. 9, 1901. Serial No. 78,908. (No model.)

Claim.—A bearing consisting of a block with its inner face provided with a bearing-recess, two bolt-openings and two spring-recesses, a cap with its inner face provided with a bearing-recess and two bolt-openings, bolts extending through the bolt-openings in the cap and the spring-recesses and bolt-openings in the block, and a spring located in each of the spring-recesses in the inner face of the block and surrounding a bolt and holding the adjacent faces of the cap and the block away from each other, substantially as specified.

702,948. REEL, ROPE, OR CHAIN GRABBER. ROBERT H. HODGKINS, Middlesex county, England. Filed Nov. 7, 1901. Serial No. 81,461. (No model.)

Claim.—1. The combination of a driving-wheel, means for operating it, a wheel to be driven, chain-pinions of different sizes connected with one of said wheels, a chain engaging with the pinions, a chain-lifter, means for turning the chain-lifter downward during the first part of its motion, and means for shifting the pinions.

2. The combination of a driving-wheel, means for operating it, a wheel to be driven, chain-pinions of different sizes connected with the wheel to be driven, a chain connecting the driving-wheel with the pin-

ion, a chain-lifter formed in two parts, means whereby one part after moving independently actuates the other part, means for turning the first part downward during the first part of its motion and means for shifting the pinions.

3. The combination of a driving-wheel, means for operating it, a wheel to be driven, chain-pinions of different sizes connected with the wheel to be driven, a chain connecting the driving-wheel with the pinions, a chain-lifter formed in two parts, mounted inside the frame of the machine, means for turning the first part of the chain-lifter downward during the first part of its motion to cause it after moving for a time independently, to actuate the other part, and means for shifting the pinions.

4. The combination of a driving-wheel, means for operating it, a wheel to be driven, chain-pinions of different sizes connected with one of said wheels, a chain engaging with the pinions, means for changing the chain from one pinion to another, a jockey-wheel engaging with the chain, and means under the control of the rider, for moving the jockey-wheel away from the chain in order to relieve the pressure thereof, and permit the chain-changing means to operate easily.

702,949. GARMENT-CLOSURE. CHARLES E. HOWE, Chicago, Ill., assignor to Babin Curset Company, Chicago, Ill., a Corporation of Ill. Filed Mar. 4, 1902. Serial No. 80,708. (No model.)

Claim.—1. A garment-closure comprising a piece of fabric, having a row of apertures with the respective edges which are toward the margin of the garment in line with each other, the fabric at two sides of each aperture being folded back on itself to give the aperture folded edges at said sides, and bands secured to the fabric to protect the aperture edges toward the margin of the garment.

2. A garment-closure comprising a piece of fabric having a row of apertures, the fabric at at least two sides of each aperture being folded back on itself to give the aperture folded edges at each transversely-trending side; and bands secured to the apertured fabric at opposite sides of the same, covering the respective edges of the apertures toward the margin of the garment.

3. A garment-closure comprising two layers of fabric having coinciding apertures, the fabric at two sides of each aperture in each layer which trend transversely with respect to the margin of the garment, being folded back on itself at the surface facing the other layer to give the aperture folded edges at each transversely-trending side; bands on the opposite sides of the apertured fabric covering the respective apertured edges toward the margin of the garment, and stitching securing both layers and both bands together between the margin and the row of apertures.

4. A garment-closure comprising a piece of fabric folded on itself to form two layers, said layers having rows of apertures which coincide when the fabric is thus folded, the fabric at two sides of each aperture in each layer being folded back upon itself toward the opposite layer forming flaps and giving the apertures folded edges; parallel bands on the outer surfaces of both layers crossing the corners of the apertures at the side of the row toward the margin of the garment and also at the side remote from said

covering the aperture edges toward the garment margin, and stitching securing the layers together and the bands to the layers between the garment margin and the apertures.

5. A garment-closure comprising a layer of fabric having a row of apertures, the fabric at at least two sides of each aperture which trend transversely with respect to the garment margin being folded back upon itself, to give folded edges to each side of the apertures; third side of all said apertures toward the margin of the garment being in line; a pocket or tubular band infolding the fabric along said third side, and stitching securing the two sides of the pocket together and to the fabric at a line parallel with said third side between the garment margin and said apertures.

6. A garment-closure comprising a piece of fabric having a row of apertures, the fabric at at least two sides of each aperture which trend transversely with respect to the margin of the garment being folded back on itself giving the apertures each two folded edges; and bands secured upon the apertured fabric at the opposite sides of the same covering the corners of the apertures toward the margin of the garment.

7. A garment-closure comprising two layers of fabric having coinciding apertures, the fabric at two sides of each aperture in each layer being folded back on itself at the surface facing the other layer; bands hipping the corners of the apertures toward the margin of the garment and secured to said layers.

8. A garment-closure comprising a piece of fabric folded on itself to form two layers, said layers having coinciding apertures, the fabric at two sides of each aperture in each layer being folded back on itself at the surface toward the other layer; and the bands overlapping the corners of the apertures resulting from such folding; stitching securing the layers together and the bands to the layers.

9. A garment-closure comprising two layers of fabric having coinciding rows of apertures, the fabric at two sides of each aperture in each layer being folded back upon itself at the surface toward the other layer to make the margins of the apertures of fabric folds; a pocket or tubular band infolding the corners of the apertures at the side of the row toward the margin of the garment; and stitching securing the two layers together and the two edges of the infolding pocket or band to the layers.

10. A garment-closure comprising a piece of fabric folded on itself to form two layers, said layers having rows of apertures which coincide when the fabric is thus folded, the fabric at two sides of each aperture in each layer being folded on its surface toward the opposite layer to give the apertures folded edges; a pocket or tubular band infolding the fold of the folded fabric piece and the corners of the aperture toward said fold; and stitching securing the two layers together and the edges of the infolding pocket or tube to the same.

11. A garment-closure comprising two layers of fabric having coinciding rows of apertures, the fabric at two sides of each aperture in each layer being folded back on its surface toward the other layer to give the apertures folded edges; a guard-strip folded lengthwise on itself and inserted thus folded between the two layers at one side of the rows of apertures to separate the infolded flaps of the apertures of the two strips from each other; a stay-piece pocket infolding the corners of the apertures at the same side of the row at which said guard-strip is inserted and infolding said guard-strip; and stitching securing the edges of the stay-piece pocket to the layers and said layers to each other.

12. A garment-closure comprising a piece of fabric folded on itself to form two layers, said layers having rows of apertures coinciding when thus folded, the fabric at two sides of each aperture in each layer being folded back upon itself forming flaps on the surfaces of the layers toward each other to give the apertures folded edges; a folded strip lodged in the fold of the fabric between the line of folding and the rows of apertures to separate the flaps of the two layers from each other; and stitching securing the two layers together across the corners of the apertures at the side of the row toward the fold of the fabric.

13. A garment-closure comprising a piece of fabric folded on itself to form two layers, said layers having rows of apertures which coincide when it is thus folded, the fabric at two sides of each aperture in each layer being folded inward toward the other layer forming flaps and giving the apertures folded edges; a strip of fabric folded lengthwise and lodged in the fold of the apertured fabric hipping the corners of the apertures toward said fold to separate the flaps of the two layers from each other; a stay-piece pocket or tubular band infolding the fold of the apertured fabric and said folded strip therein; and stitching securing the inner edges of the stay-piece pocket together and to the fabric layers.

14. A garment-closure comprising two layers of fabric having coinciding rows of apertures, the fabric at two sides of each aperture in each layer which trend transversely with respect to the margin of the garment being folded back upon itself toward the opposite layer forming flaps and giving the apertures folded edges; parallel bands on the outer surfaces of both layers crossing the corners of the apertures at the side of the row toward the margin of the garment and also at the side remote from said

margin; and stitching securing the corresponding opposite edges of said bands together and to the fabric layers.

15. A garment-closure comprising two layers of fabric having coinciding rows of apertures, said apertures being formed by slots from an interior point to the corners of the apertures, the fabric bounded by the slots being folded back forming flaps on the surface of the layers facing each other giving the apertures folded edges, one side of all the apertures being in a straight line; a pocket or tubular binding forming the margin of the garment infolding the strips at the edge proximate to each line and infolding also said edges of the apertures; and stitching securing the two edges of the binding together and to the fabric strips within the apertures, whereby said apertures have an edge parallel with the bound edge of the fabric.

702,950. CARRIAGE-FREE MECHANISM FOR TYPE-WRITING MACHINES. CHARLES W. HOWELL, JR., NEWARK, N. J., assignor to the Wagner Typewriter Company, New York, N. Y., a Corporation of New York. Filed Feb. 21, 1901. Serial No. 48,908. (No model.)

Claim.—1. In a type-writing machine, the combination of a carriage, an escapement member operatively connected with the carriage, a second escapement member cooperating with the first-mentioned escapement member, key-operated mechanism for actuating said second member, a clutch controlling the connection of the escapement with the carriage, releasing mechanism connected with said clutch to release the carriage, said mechanism being carried by the framing of the machine and provided with an operating member, and hand-operated means carried by the carriage and provided with a part which during its movement with the carriage remains in operative relation to a part of the releasing mechanism.

2. In a type-writing machine, the combination of escapement mechanism, a universal bar normally out of contact with said mechanism so that said bar will have an independent movement before it engages and operates the escapement mechanism, a type-carrier arranged to operate the universal bar, means for operating each type-carrier at first independently of the universal bar and then in unison with said bar.

3. An escapement mechanism comprising a feed-rack, a movable dog-carrier, a fixed dog and a loose dog mounted on said carrier and arranged to engage the rack and to move transversely thereof, a spring connected with the loose dog and having a tendency to throw it longitudinally of the rack when said dog is disengaged from the rack by the transverse movement of the dog-carrier, and a stationary deflecting abutment against which the loose dog is thrown by the spring when said dog is released from the rack, said abutment acting to move the dog-carrier transversely in the opposite direction to its first movement so as to bring the loose dog in operative relation to the rack, and the fixed dog out of engagement therewith.

4. An escapement mechanism comprising a feed-rack, a dog-carrier movable transversely of the rack, a fixed dog on said carrier, a loose dog

arranged on said carrier and movable relatively thereto lengthwise of the rack, means connected with the loose dog and having a tendency to throw it lengthwise of the rack when said loose dog is disengaged from the rack by a transverse movement of the dog-carrier, and a stationary deflecting abutment against which the loose dog is thrown by the longitudinal movement occurring automatically upon the release of said loose dog, said abutment acting to move the dog-carrier in the opposite direction to the movement which releases the loose dog, so as to again bring the loose dog in operative relation to the rack, and the fixed dog out of engagement therewith.

5. In a type-writing machine, the combination of a carriage, an escapement member operatively connected with the carriage, a second escapement member cooperating with the first-mentioned escapement member, key-operated mechanism for operating said second member, a clutch controlling the connection of the escapement with the carriage, releasing mechanism connected with said clutch to release the carriage, said mechanism being carried by the framing of the machine and provided with an operating member or link, and hand-operated means carried by the carriage and provided with an operating-rod extending parallel to the direction of the feed and in sliding engagement with the said link.

6. In a type-writing machine, the combination of a carriage, a member of an escapement operatively connected to said carriage, a second escapement member cooperating with the first-mentioned escapement member, key-operated mechanism for operating said second-mentioned member, spring-pressed clutch mechanism for normally maintaining an operative connection between the escapement and the carriage, hand-operated means carried by the carriage and by the framing of the machine for disconnecting the clutch mechanism to release said carriage from the escapement.

7. In a type-writing machine, the combination of a carriage, a member of an escapement operatively connected to said carriage, a second escapement member cooperating with the first-mentioned escapement member, key-operated mechanism for operating said second-mentioned member, spring-pressed clutch mechanism for normally maintaining an operative connection between the escapement and the carriage, hand-operated means carried by the carriage for disconnecting the clutch mechanism to release said carriage from the escapement and key-operated mechanism carried by the framing of the machine which key-operated mechanism is operatively connected to the clutch mechanism to disconnect the same and thereby free the carriage from the escapement.

8. In a type-writing machine, the combination of a carriage, a rack carried by said carriage, a pinion meshing with the rack, escapement mechanism operatively connected to the pinion, disengageable clutch mechanism interposed between the pinion and escapement, hand-operated mechanism carried by the carriage for disconnecting the clutch mechanism without effecting a disengagement of the rack and pinion or the members of the escapement, a tabulating-key and intermediate mechanism between said tabulating-key and clutch mechanism.

9. In a type-writing machine, the combination of a carriage, a rack carried by said carriage, a pinion meshing with the rack, escapement mechanism operatively connected to the pinion, disengageable clutch mechanism interposed between the pinion and escapement, a tabulating-key, a movable tabulating-stop, intermediate connections between the tabulating-key and the tabulating-key and escapement mechanism, whereby an operation of the tabulating-key will interpose a stop in the path of a cooperating stop on the carriage and will disconnect the clutch mechanism to release the carriage.

10. In a type-writing machine, the combination of a carriage, a rack carried by said carriage, a pinion meshing with the rack, escapement mechanism operatively connected to the pinion, disengageable clutch mechanism interposed between the pinion and escapement, hand-operated mechanism for disconnecting the clutch mechanism without effecting a disengagement of the rack and pinion or the members of the escapement, a tabulating-key, a movable tabulating-stop, intermediate connections between said stop and the tabulating-key and escapement mechanism, whereby an operation of the tabulating-key will interpose the stop in the path of a cooperating stop on the carriage and will disconnect the clutch mechanism to release the carriage.

11. In a type-writing machine, the combination of a carriage, a rack carried by said carriage, a feed-rack, operative connections between said carriage and feed-rack, which connections comprise a disengageable clutch; means for disengaging said clutch, a laterally-vibrating feed-dog, a longitudinally-movable feed-dog which is likewise capable of vibrating laterally both of said dogs cooperating with the feed-rack, and cooperating means for effecting a lateral movement of both dogs by the longitudinal movement of the longitudinally-movable dog.

12. In a type-writing machine, the combination of a carriage, a rack carried by said carriage, a feed-rack, operative connections between said carriage and feed-rack, which connections comprise a disengageable clutch

means for disengaging said clutch, a laterally-vibrating feed-dog, a longitudinally-movable feed-dog, which is likewise capable of vibrating laterally, both of said dogs cooperating with the feed-rack, cooperating means for effecting a lateral movement of both dogs by the longitudinal movement of the longitudinally-movable dog, a type-carrier, hand-operated mechanism for moving said type-carrier and means controlled by said hand-operated mechanism for moving the feed-dogs laterally.

13. In a type-writing machine, the combination of a carriage, a rack carried by said carriage, a feed-rack, operative connections between said racks, which connections comprise a spring-pressed disengageable clutch, hand-operated means carried by the carriage for disengaging said clutch, a laterally-vibrating feed-dog, a longitudinally-movable feed-dog which is likewise capable of vibrating laterally, both of said dogs cooperating with the feed-rack, cooperating means for effecting a lateral movement of both dogs by the longitudinal movement of the longitudinally-movable dog, a type-carrier, hand-operated mechanism for moving said type-carrier, and means controlled by said hand-operated mechanism for moving the feed-dogs laterally.

14. In a type-writing machine, the combination of a carriage, a rack carried by said carriage, a pinion meshing with the rack, escapement mechanism operatively connected to the pinion, disengageable clutch mechanism interposed between the pinion and escapement, a tabulating device which is operatively connected to the clutch mechanism to disengage the clutch when the tabulator is operated and a brake which is controlled by said tabulator to retard the movement of the carriage when it is freed by the disengagement of the clutch.

15. In a type-writing machine, the combination of a carriage, a movable bar carried by said carriage, hand-operated means for moving said bar independently of the carriage, escapement mechanism, intermediate clutch mechanism between said escapement and the carriage to operatively connect the escapement to the carriage, a connection between the movable bar and the clutch mechanism whereby the clutch mechanism may be moved at will by the hand-operated means, tabulating mechanism and an intervening connection between the tabulating mechanism and the clutch mechanism whereby the clutch may be operated or disengaged either by the tabulating mechanism or the hand-operated means.

16. An escapement mechanism comprising a feed-rack, a vibratory dog-carrier, a fixed feed-dog and a loose feed-dog carried by said carrier, a spring connected to said loose dog and to a stationary part for operating the dog and the dog-carrier, an abutment with which the loose dog is adapted to contact when it is free to be moved by the spring, whereby the dog-carrier will be moved around its pivotal center in one direction, whereby the dog-carrier will be moved around its pivotal center in the opposite direction.

17. An escapement mechanism comprising a feed-rack, a vibratory dog-carrier, a fixed feed-dog and a loose feed-dog carried by said carrier, a spring connected to said loose dog and to a stationary part for operating the dog and the dog-carrier, an abutment with which the loose dog is adapted to contact when it is free to be moved by the spring, whereby the dog-carrier will be moved around its pivotal center in one direction, a type-carrier and means operatively connected to the type-carrier for moving the dog-carrier in an opposite direction.

18. An escapement mechanism comprising a feed-rack, a movable dog-carrier, a fixed dog and a loose dog mounted on said carrier and arranged to engage the rack and to move transversely thereof, a spring connected with the loose dog and having a tendency to separate it from the fixed dog in a longitudinal direction when said loose dog is disengaged from the rack by a transverse movement of the dog-carrier, and a stationary deflecting abutment against which the loose dog is thrown by the spring when said dog is released from the rack, said abutment acting to move the dog-carrier transversely in the opposite direction to its first movement, so as to bring the loose dog in operative relation to the rack and the fixed dog out of engagement with the rack.

19. An escapement mechanism comprising a feed-rack, a vibratory dog-carrier, a fixed dog on said carrier, a loose dog pivoted to the carrier about an axis transverse to that of the carrier, a spring connected with the loose dog and having a tendency to separate it from the fixed dog in a longitudinal direction, and a stationary deflecting abutment against which the loose dog is thrown by the spring when said dog is disengaged from the rack, to deflect said dog and the dog-carrier transversely.

20. In a type-writing machine, the combination of a carriage, a fixed rack carried by said carriage, a pinion engaging the rack on the carriage, a splined clutch-section operatively connected to the pinion, hand-operated means carried by the carriage for moving the clutch-section, tabulating mechanism and an intervening connection between said tabulating mechanism and clutch-section, a loosely-mounted star-wheel, a second clutch-section carried by said star-wheel and cooperating feed mechanism engaging said star-wheel.

702,951. THILL-COUPLES. THOMAS J. BUNNELL, Los Angeles, Cal., assignor to H. C. Morris, C. E. Horton, and Drucilla Hubbell, Los Angeles, Cal. Filed Apr. 18, 1902. Serial No. 108,267. (No model.)

Claim.—1. A thill-coupling, comprising a main body portion adapted to be removably secured to the axle, the said portion projecting forwardly and being provided with a shoulder and a hook the hump of the hook disposed upwardly and the end thereof projecting downwardly; a shaft-iron for attachment provided with openings for the reception of that portion of the coupling having a shoulder and another opening adapted to receive the downwardly-projecting end of the hook; a spring secured to the axle the free end thereof adapted to engage the top of the shaft-iron and hold the same spring-pressed against shaft-iron substantially as herein shown and described.

2. A thill-coupling, comprising a spring secured to the axle, the free end projecting over the shaft-iron and adapted to bear against the same and to hold the same down and in engagement with the coupling, in combination with a coupling secured to the axle and provided with a shoulder and a hook to enter openings in and engage the end of the shaft-iron; a shaft-iron having openings to receive the shoulder and the hook on the coupling substantially as shown and described.

3. A coupling for thills to detachably secure the thills to the axle without the use of bolts or screws or wrenches, comprising an antirattle-spring bolted to the axle and with the same bolts which secure the coupling to the axle, projecting upwardly therefrom over the axle and terminating in an end adapted to bear against the shaft-iron, and hold it spring-pressed against the coupling; a coupling detachably secured to the axle, the coupling having a shoulder and a hook of the configuration shown, the said shoulder and hook adapted to detachably engage the shaft-iron; a shaft-iron of the configuration shown, being provided with openings to engage the shoulder and hook on the coupling.

4. In a thill-coupling the combination of the antirattle-spring A, secured to the axle the free end A' thereof adapted to bear against the shaft-iron and hold the same spring-pressed against the shaft-iron, the coupling D detachably secured to the axle E and projecting forwardly therefrom, the coupling being provided with a shoulder portion d adapted to enter an opening in the shaft-iron and a hook D' adapted to enter another opening in the shaft-iron; a shaft-iron F provided with openings f and f' for the reception respectively of the shoulder portion d and the hook D' of the coupling D substantially as shown and described.

702,952. CLOTHES-LINE. EDWARD INESER, Zurich, Switzerland. Filed Sept. 23, 1901. Serial No. 78,953. (No model.)

Claim.—In combination with the running-rope, the grooved rings clasped thereon by means of the grooved portion, the depending supports carried in the grooves of the said rings and the clothes-line carried by the depending supports, substantially as described.

702,953. SAFETY-PIN. EDWIN S. INGRAM, Watertown, Conn., assignor to the Oakville Company, Watertown, Conn., a Corporation of Connecticut. Filed Dec. 21, 1900. Serial No. 40,608. (No model.)

Claim.—1. A safety-pin comprising a wire bent to form the legs of the pin, a shield, and a fixed stop constructed to prevent inward movement of the pointed end when pressed inward against said stop.

2. A safety-pin comprising a wire bent to form the legs of the pin, and a shield the unsharpened leg being folded back within the shield to form a stop to prevent inward movement of the pointed end when pressed inward against said stop.

3. A safety-pin comprising a wire bent to form the legs of the pin, and a shield, the unsharpened leg being folded back within the shield and secured on the upper side of the folded-back portion.

4. A safety-pin comprising a wire bent to form the legs of the pin,

a shield, and a guide, the unsharpened leg being folded back within the shield and concealed on the upper side of the folded-back portion and having the under side of said bent-back portion supported by the guide.

702,954. WATER-PIPE BOILER. HERMAN JANSCHKE, Vienna, Austria-Hungary. Filed Nov. 5, 1900. Serial No. 35,494. (No model.)

Claim.—In a water-pipe boiler, the combination with vertically-ascending collecting-pipes; of pipes connecting said collecting-pipes, the connecting-pipes being arranged in horizontal and vertical series, the horizontal series being in alignment, successive series of pipes being spaced equidistant, and the vertical series being out of alignment intermediate their ends.

702,955. SINKER FOR FISHING-NETS. ARON JOHNSON, Bismarck, N. Dak. Filed Apr. 8, 1902. Serial No. 101,967. (No model.)

Claim.—1. As a new article of manufacture, a sinker consisting of a downwardly-curving body portion having holding-wires extending upwardly and outwardly from the ends and with said body portion tapering in opposite directions from the center and merging into the outlines of the holding-wires, substantially as described.

2. As a new article of manufacture, a sinker consisting of a body portion curving downwardly and tapered in opposite directions toward the ends, and a holding-loop formed of a single piece of wire doubled together with the ends disposed intermediate of the loop and embedded centrally in said body portion, and extending in opposite directions upwardly and outwardly from said body portion, substantially as described.

3. As a new article of manufacture, a sinker for fishing-nets having remote terminal net-engaging means disposed at an interval sufficient to engage a marginal strand of the net in differing meshes, and bowed outwardly from the marginal strand between the terminal engaging means.

702,956. SLUICE-BOX. FREDERICK M. JENNISON, San Francisco, Cal., assignor to Kane Gold Reclamation Company, San Francisco, Cal., a Corporation of Arizona. Filed May 22, 1901. Serial No. 61,488. (No model.)

Claim.—1. The combination with a separating-surface provided with means for holding and retaining precious material passing over it, of one or more floating flexible sections of fibrous or textile material separated from said surface, so that the flow of material is caused to pass beneath it or thereon, such sections having a rough or open lower surface to retain material mechanically, but having a waterproof impervious upper surface.

2. The combination with a separating-surface provided with means for holding and retaining precious material passing over it, of one or more floating flexible sections of fibrous material above the said surface adapted

to receive and retain precious particles, and an independent waterproof flexible covering for and above each floating section.

702,957. SOFA-BED. HERBERT C. JOHM, Chicago, Ill. Filed July 24, 1901. Serial No. 69,504. (No model.)

Claim.—1. In a sofa-bed, in combination, a supporting-frame-work having a horizontal track; a seat and a back hinged together, the back having a link connection with said framework, also having an arm extending rigidly from the hinged side thereof, provided with a notch near its outer end; and a gravity-pawl pivotally mounted upon said seat at the side thereof adjacent to said back, for engaging the notch near the outer end of said rigid arm, to hold the seat and the back at an angle with each other.

2. In a sofa-bed, in combination, a supporting-frame-work; a seat and a back hinged together, the back having a link pivotally connected with each of its ends, the outer ends of said links having a pivotal connection with said framework; an arm projecting from the hinged side of said back, said arm having a notch near its outer end; and a gravity-pawl pivoted upon said seat at the hinged side thereof, which pawl is adapted to engage the notch in said arm to hold the seat and the back at an angle with each other.

3. In a sofa-bed, in combination, a supporting-frame-work having a horizontal track; a seat and a back hinged together, the back having a link connection with said framework; an arm rigidly fixed to said back, extending from a point near one end thereof, said arm having a notch near its outer end; and a pawl pivotally mounted near one end of said seat at the hinged side thereof, adapted to engage the notch in said rigid arm to hold the seat and the back at an angle with each other, said seat and said back being provided with rollers adapted to run upon said track.

702,958. SOFA-BED. HERBERT C. JOHM, Chicago, Ill. Filed July 24, 1901. Serial No. 69,505. (No model.)

Claim.—1. In a sofa-bed, in combination, a supporting-frame; a seat; a back; a hinge-joint between the seat and the back; a locking-bar extending between the members of said hinge-joint, said bar being pivoted to one of said members and being adapted at its other end to engage a stud fixed with relation to the other member and having a tooth adapted to engage a pawl pivoted to said other member; and said fixed stud and said pawl.

2. In a sofa-bed, in combination, a supporting-frame; a seat; a back; a transverse carrier by the seat; a pulley supported by the frame for receiving said transverse carrier; a hinge-joint between the seat and the back; a locking-bar extending between the members of said hinge-joint, said bar being pivoted to one of said members, and being adapted at its other end to engage a stud fixed with relation to the other member, and having a tooth adapted to engage a pawl pivoted to said other member; and said fixed stud and said pawl.

702,959. SOFA-BED. HERBERT C. JOHM, Chicago, Ill. Filed Oct. 22, 1901. Serial No. 79,998. (No model.)

Claim.—1. In a sofa-bed, in combination, a supporting-frame composed of two end members, two upright members, a rear brace, and a cross-piece; a back having two links, one for connecting it with each of said upright members; a seat having a pivotal connection with said back; a rail on each of said end members for supporting said seat; and a drawer having a link connection with the link supporting said back.

2. In a sofa-bed, in combination, a supporting-frame composed of two end members, two upright members, a rear brace, and a cross-piece; a back having two links, one for connecting it with each of said upright members; a seat having a pivotal connection with said back; means for releasably locking said seat and said back at an angle with each other; a rail on each of said end members for supporting said seat; and a drawer having a link connection with each of the links for supporting said back.

3. In a sofa-bed, in combination, a supporting-frame; a back having a link for connecting it with said frame; a seat; a hinge-joint between the seat and the back; a stud fixed to one member of said hinge-joint, said member also having a pawl pivoted thereon; and a locking-bar pivoted to the other member of said hinge-joint, and adapted to engage said fixed stud, and having a tooth adapted to engage said pawl.

4. In a sofa-bed, in combination, a supporting-frame composed of two end members, two upright members, a rear brace, and a cross-piece; a back having two links, one for connecting it with each of said upright members; a seat; a hinge-joint between the seat and the back; a stud fixed to one member of said hinge-joint, said member also having a pawl pivoted thereon; and a locking-bar pivoted to the other member of said hinge-joint, adapted to engage said fixed stud, and having a tooth adapted to engage said pawl.

5. In a sofa-bed, in combination, a supporting-frame composed of two end members, two upright members, a rear brace, and a cross-piece; a back having two links, one for connecting it with each of said upright members; a seat; a hinge-joint between the seat and the back; a stud

fixed to one member of said hinge-joint, said member also having a pawl pivoted thereon; a locking-bar pivoted to the other member of said hinge-joint, adapted to engage said fixed stud, and having a tooth adapted to engage said pawl; a drawer; and a link connection between the drawer and each of the links for the back for projecting said drawer.

6. In a sofa-bed, in combination, a supporting-frame composed of two end members, two upright members, a rear brace, and a cross-piece; a back having two links, one for connecting it with each of said upright members; a seat; a hinge-joint between the seat and the back; a stud fixed to one member of said hinge-joint, said member also having a pawl pivoted thereon; a locking-bar pivoted to the other member of said hinge-joint, adapted to engage said fixed stud, and having a tooth adapted to engage said pawl; a rail on each of said end members for supporting said seat; a drawer having a link connection with each of the links for said back; and guides in said frame for said drawer.

702,960. UPHOLSTERING-MACHINE. HERBERT C. JOHM, Chicago, Ill. Filed Mar. 21, 1902. Serial No. 94,288. (No model.)

Claim.—1. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism for the means for securing together the materials to be upholstered; means for releasing said holding mechanism; and means for rotating said upholstering-rollers.

2. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism for the means for securing together the materials to be upholstered; a series of compartments for containing the filling material; means for releasing said holding mechanism; and means for rotating said upholstering-rollers.

3. In an upholstering-machine, in combination, a supporting-frame; means for feeding forward the upholstering materials; a series of bottom-staple holders; a washer-feeding tube adapted to deliver washers at a point adjacent to said bottom-staple holders, which tube has a notch in its lower end and a holding-spring for the washers; and means for spreading the prongs of the bottom-staples.

4. In an upholstering-machine, in combination, a supporting-frame; means for feeding forward the upholstering materials; a series of bottom-staple holders; a washer-feeding tube adapted to deliver washers at a point adjacent to said bottom-staple holders, which tube has a notch in its lower end, a bearing-plate and two holding-springs for the washers; and means for spreading the prongs of the bottom-staples.

5. In an upholstering-machine, in combination, a supporting-frame; means for feeding forward the upholstering materials; a series of bottom-staple holders; a washer-feeding tube adapted to deliver washers at a point adjacent to said bottom-staple holders, which tube has a notch in its lower end, a bearing-plate, and two holding-springs for the washers; and a spreading-rod whose point lies in the notch in the lower end of the washer-feeding tube.

6. In an upholstering-machine, in combination, a supporting-frame;

two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism for a button-staple; the stationary framework having a guide-channel for the button-staple; a washer-feeding tube adapted to deliver a washer at a point adjacent to the end of said guide-channel; means for clenching said button-staple; and means for rotating said upholstering-rollers.

7. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism for a button-staple; means for clenching said button-staple; and means for releasing said holding mechanism.

8. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism for button-staples; a series of compartments for containing the filling material, having partitions between them, each of which partitions has a channel for guiding the button-staple; a washer-feeding tube adapted to deliver a washer at a point adjacent to the end of one of said channels; means for clenching said button-staple; and means for rotating said upholstering-rollers.

9. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; a series of button-staple holders arranged peripherally upon one of said upholstering-rollers; means on the supporting-frame for clenching a button-staple; and means for releasing said holding mechanism.

10. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them, the lower one of which rollers has a series of button-staple holders; means for clenching the button-staples; and means for releasing the holding mechanism.

11. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism for the means for securing together the materials to be upholstered; a washer-feeding tube adapted to deliver a washer at a point adjacent to said holding mechanism; means for releasing said holding mechanism; and means for rotating said upholstering-rollers.

12. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism for a button-staple; a washer-feeding tube adapted to deliver a washer at a point adjacent to said holding mechanism; means for clenching the button-staple; means for releasing said holding mechanism; and means for rotating said upholstering-rollers.

13. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them, the lower one of which rollers has a series of button-staple holders; a series of washer-feeding tubes adapted to deliver a washer at a point adjacent to said button-staple holders; means for releasing said button-staple holders; and means for rotating said upholstering-rollers.

14. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; a series of button-staple holders on the lower one of said rollers; a series of washer-feeding tubes adapted to deliver a washer at a point adjacent to one of said button-staple holders; a clenching device near the end of said washer-feeding tubes; means for releasing said button-staple holders; and means for rotating said rollers.

15. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; a rail journaled on the supporting-frame for one of said upholstering materials, the lower one of which upholstering-rollers has a series of peripheral grooves for receiving the ends of the button-staples; a series of washer-feeding tubes adapted to deliver washers at a point adjacent to said button-staples; means secured to the supporting-frame for clenching the button-staples; means for releasing said button-staple holders; and means for rotating said upholstering-rollers.

16. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them, the lower one of which upholstering-rollers has a series of button-staple holders; means for rotating said rollers; means for locking said jaws; the other of which upholstering-rollers has a series of peripheral grooves for receiving the ends of the button-staples; a series of washer-feeding tubes adapted to deliver washers at a point adjacent to said button-staple holders; a series of spreading-wedges adapted to lie in the peripheral grooves of the last-mentioned upholstering-roller; a series of projections extending from the supporting-

frame, for releasing the holding-jaws for the button-staples; and means for rotating said upholstering-rollers.

17. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them, the lower one of which upholstering-rollers has a series of radially-extending button-staple-holding stems provided with pivoted holding-jaws; a cam for said jaws; a stud for moving said cam; the other of which upholstering-rollers has a series of peripheral grooves for receiving the ends of the button-staples; a series of washer-feeding tubes adapted to deliver washers at a point adjacent to said button-staple-holding stems; a series of spreading-wedges secured to the supporting-frame, for clenching the button-staples; a series of projections extending from the supporting-frame, for engaging the studs which operate the cam for the holding-jaws; and means for rotating said upholstering-rollers.

18. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them, the lower one of which upholstering-rollers has a series of radially-extending button-staple-holding stems; pivoted holding-jaws for said stems; a cam for holding said jaws closed; a rotatable core for said stems; a stud fixed with relation to said core, which stud extends outward through an opening in the side of said stems; the other of which upholstering-rollers has a series of peripheral grooves; spurs on the surface of said last-mentioned roller; a series of washer-feeding tubes adapted to deliver washers at a point adjacent to said button-staple-holding stems; a series of spreading-wedges secured in the supporting-frame, for clenching the button-staples; a series of projections extending from the supporting-frame, for engaging the studs extending from the button-staple-holding stems; and means for rotating said upholstering-rollers.

19. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them, the lower one of which upholstering-rollers has a series of radially-extending button-staple-holding stems; two pivoted holding-jaws in each of said stems; a cam for holding said jaws closed; cores within said stems; a stud extending through an opening in the side of each of said stems, for moving each of said jaws; the other of which upholstering-rollers has a series of peripheral grooves for receiving the ends of the button-staples; a framework for holding the filling material, which framework is provided with partitions, each of which partitions has a guide-channel at its lower edge; a series of washer-feeding tubes adapted to deliver washers at a point adjacent to the end of said guide-channel; a series of spreading-wedges secured to the supporting-frame, for clenching the button-staples; a series of projections extending from the supporting-frame, for engaging the studs extending through openings in the sides of the button-staple-holding stems, to release the button-staples from their holding-jaws; and means for rotating said upholstering-rollers.

20. In a button-staple-holding mechanism, in combination, a holding-stem; a jaw thereon; a cam for holding said jaw in a closed position; and means for moving said cam.

21. In a button-staple-holding mechanism, in combination, a holding-stem; two jaws pivotally mounted thereon; a cam for holding said jaws closed; and means for moving said cam.

22. In a button-staple-holding mechanism, in combination, a holding-stem; two jaws pivotally mounted thereon; a cam for holding said jaws closed; a spring for holding each of said jaws open; and means for moving said cam.

23. In a button-staple-holding mechanism, in combination, a holding-stem; two jaws pivotally mounted thereon; a cam for holding said jaws closed; and a stud for rotating said cam.

24. In a button-staple-holding mechanism, in combination, a holding-stem; two L-shape jaws pivotally mounted thereon; a cam for engaging the inner ends of said jaws; a core adapted to lie within said stem; and a stud fixed with relation to said core.

25. In a button-staple-holding mechanism, in combination, a holding-stem in tubular form, having an elongated opening near one of its ends; two L-shape jaws pivotally mounted on opposite sides of said stem near one end thereof; a cam for engaging the inner ends of said jaws and holding them closed; a core for said stem; and a stud fixed with relation to said core, extending through the elongated opening in said stem.

26. In an upholstering-machine, in combination, a supporting-frame; an upholstering-roller journaled thereon; means for rotating said roller; holding mechanism for the button-staples; means for guiding said button-staples; and a spreading-wedge adapted to enter between the prongs of said button-staples during the forward movement of the upholstering materials to spread said points and clench said staple.

27. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism for a button-staple;

a clenching-wedge lying in the path of said button-staple, the point of said clenching-wedge being adapted to enter between the prongs of said button-staple to spread said prongs and clench said staple; means for rotating said upholstering-rollers; and means for releasing said holding mechanism.

28. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers adapted to move in the same direction; means for moving said upholstering-rollers; holding mechanism for the means for securing together the materials to be upholstered; and means for releasing said holding mechanism.

29. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers adapted to move in the same direction; means for moving said upholstering-rollers; holding mechanism for the means for securing together the materials to be upholstered, which holding mechanism is movable in the direction of travel of the upholstering materials; and means for releasing said holding mechanism.

30. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers adapted to move in the same direction; means for moving said upholstering-rollers; holding mechanism for the means for securing together the materials to be upholstered, which holding mechanism is secured to one of said upholstering-rollers; and means for releasing said holding mechanism.

31. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers adapted to move in the same direction; means for moving said upholstering-rollers; button-staple holders; and means for releasing said button-staple holders.

32. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers adapted to move in the same direction; means for moving said upholstering-rollers; button-staple holders movable in the direction of travel of the upholstering materials; and means for releasing said button-staple holders.

33. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers adapted to move in the same direction; means for moving said upholstering-rollers; button-staple holders secured to one of said upholstering-rollers; and means for releasing said button-staple holders.

34. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers adapted to move in the same direction, one of which rollers is inclined at an angle with the other; means for holding the securing means; means for fixing the securing means to permanently fasten the upholstering materials together; means for releasing said holding means; and means for removing said upholstering-rollers.

35. In an upholstering-machine, in combination, a supporting-frame; two movable upholstering-rollers, one of which is inclined at an angle with the other; means for holding the securing means; means for engaging the securing means employed to fasten the upholstering materials together; means for releasing said holding means; and means for moving said upholstering-rollers.

36. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers, one of which is inclined at an angle with the other; a spreading-wedge mounted upon the supporting-frame, and adapted to clench the button-staples employed to fasten the upholstering materials together; mechanism for holding the securing means; means for releasing said holding mechanism; and means for moving said upholstering-rollers to compress the upholstering materials between them.

37. In an upholstering-machine, in combination, a supporting-frame; an upholstering-roller journaled thereon; means for rotating said roller; holding mechanism for the button-staples; means for guiding said button-staples; and means for clenching said button-staples during the continuous forward movement of the upholstering materials.

38. In an upholstering-machine, in combination, a supporting-frame; an upholstering-roller journaled thereon; means for rotating said roller; holding mechanism for the button-staples; means for guiding said button-staples, which means comprise guide-channels formed in a portion of the supporting-frame; and means for clenching said button-staples during the continuous forward movement of the upholstering materials.

39. In an upholstering-machine, in combination, holding means for the device for securing the upholstering materials together; means for feeding continuously forward said upholstering materials and for moving the holding means with said materials; and means for fixing the securing device to unite said upholstering materials during their continuous forward movement.

703,961. UPHOLSTERING-MACHINE. HERBERT C. JONES, Chicago, Ill. Filed Mar. 21, 1902. Serial No. 98,220. (No model.)

Claim.—1. In an upholstering-machine, in combination, a supporting-frame; two relatively movable upholstering-rollers adapted to compress the upholstering materials between them; means caused by the pressure between the upholstering-rollers to engage the securing means with said materials, to fasten the latter together; and means for moving one of said upholstering-rollers.

2. In an upholstering-machine, in combination, a supporting-frame; two relatively movable upholstering-rollers adapted to compress the upholstering materials between them; holding mechanism for the means for securing together the materials to be upholstered; means caused by the pressure between the upholstering-rollers to engage the securing means with said materials to fasten the latter together; and means for moving one of said upholstering-rollers.

3. In an upholstering-machine, in combination, a supporting-frame; two relatively movable upholstering-rollers adapted to compress the upholstering materials between them; holding mechanism for the means for securing together the materials to be upholstered, which holding mechanism is fixed with relation to one of said upholstering-rollers; a device on one of said upholstering-rollers caused by the pressure between the upholstering-rollers to fix the securing means to permanently unite said materials; and means for moving one of said rollers.

4. In an upholstering-machine, in combination, a supporting-frame; two relatively movable upholstering-rollers adapted to compress the upholstering materials between them; holding mechanism for the means for securing together the materials to be upholstered, which holding mechanism is fixed with relation to one of said upholstering-rollers; means for releasing said holding mechanism; a device on one of said upholstering-rollers caused by the pressure between the upholstering-rollers to fix the securing means to permanently unite said materials; and means for moving one of said rollers.

5. In an upholstering-machine, in combination, a supporting-frame; holding mechanism for the means for securing together the materials to be upholstered; means for releasing said holding mechanism; means for feeding forward and compressing the upholstering materials; and a device on the compressing means, adapted to fix the securing means to permanently unite said materials.

6. In an upholstering-machine, in combination, a supporting-frame; button-staple holders; means for releasing said holders; means for feeding forward and compressing the upholstering materials; and a device on the compressing means, adapted to clench the button-staples in said holders to permanently unite said materials.

7. In an upholstering-machine, in combination, a supporting-frame; mechanism for holding the means for securing together the materials to be upholstered; means for releasing said holding mechanism; a roller for passing over the upholstering materials to compress the same; and a device on said roller adapted to fix the securing means to permanently unite said materials.

8. In an upholstering-machine, in combination, a supporting-frame; button-staple holders; means for releasing said holders; an upholstering-roller adapted to pass over and compress the materials to be upholstered; and a device on said roller adapted to clench the button-staples in said holders to permanently unite said materials.

9. In an upholstering-machine, in combination, a supporting-frame; means comprising an upholstering-roller for feeding forward and compressing the upholstering materials; a button-staple holder; means for releasing said button-staple holder; and a device on said roller adapted to clench a button-staple in said holder to permanently unite said materials.

10. In an upholstering-machine, in combination, a supporting-frame;

means for moving the materials to be upholstered into contact with a button-staple to cause said button-staple to penetrate certain of said materials; and for compressing said upholstering materials; and a device on the compressing means, actuated by the pressure compressing said upholstering materials, to clench said button-staple to permanently unite said materials.

11. In an upholstering-machine, in combination, a supporting-frame; means comprising an upholstering-roller for feeding forward the materials to be upholstered; a button-staple holder; means for releasing said holder; means for rotating said roller; and a device on said roller adapted to clench a button-staple in said holder to permanently unite said materials.

12. In an upholstering-machine, in combination, a supporting-frame; an upholstering-roller journaled thereon and adapted to rotate with the travel of the upholstering materials; holding mechanism for a button-staple, adapted to move the staple in the direction of travel of said upholstering materials to cause said button-staple to penetrate certain of the upholstering materials; means for moving said holding mechanism; means for releasing said holding mechanism; and a device on said upholstering-roller adapted to clench the button-staple in said holding mechanism to permanently unite said materials.

13. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism on one of said rollers for the means for securing together the materials to be upholstered; means for releasing said holding mechanism; a device for the other of said rollers adapted to fix the securing means to permanently unite said materials; and means for rotating said rollers.

14. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; a button-staple holder on one of said rollers; means for releasing a button-staple from said holder; a device for the other of said rollers adapted to clench a button-staple in said holder to permanently unite said materials; and means for rotating said rollers.

15. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism for a button-staple, for one of said rollers, and a pivoted wing for the other roller, which wing is adapted to spread the prongs of the button-staple and cause them to be clenched by the pressure between said rollers; and means for rotating said rollers.

16. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; holding mechanism for button-staples, arranged peripherally upon one of said rollers; a series of wings for spreading the prongs of the button-staples, arranged peripherally upon the other of said rollers and adapted individually to engage a button-staple, separate its prongs and clench said button-staple by means of the pressure between said rollers; and means for rotating said rollers.

17. In an upholstering-machine, in combination, an upholstering-roller having button-staple holders arranged in circumferential and in transverse series, certain of said circumferential series being rigidly affixed to the periphery of the upholstering-roller; a ring upon said upholstering-roller, for supporting one of said circumferential series of button-staples; means for rotating said rings with reference to said roller; means for rotating said roller; and means for clenching said button-staples.

18. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; button-staple holders for one of said upholstering-rollers, which holders are arranged in circumferential series, some of which series are mounted rigidly upon the periphery of said rollers; rings for supporting the other of said circumferential series of button-staple holders; means for rotating said ring with reference to said roller; means for rotating said rollers; and means for clenching said button-staples.

19. In an upholstering-machine, in combination, blank-forming projections adapted to be arranged in longitudinal and in transverse series; means for moving certain of said longitudinal series, to change the form of the upholstering; and mechanism for securing the upholstering materials together.

20. In an upholstering-machine, in combination, blank-forming projections adapted to be arranged in longitudinal and in transverse series; means for moving alternate longitudinal series of said projections, to change the form of the upholstering; and mechanism for securing the upholstering materials together.

21. In an upholstering-machine, in combination, an upholstering-roller having blank-forming projections adapted to be arranged in circumferential and in transverse series; means for moving certain of said circumferential series, to change the form of the upholstering; and mechanism for securing the upholstering materials together.

22. In an upholstering-machine, in combination, an upholstering-roller having blank-forming projections adapted to be arranged in circumferential and in transverse series, the projections of certain of said cir-

cumferential series being rigidly connected and adapted to be moved with relation to the transverse series, to change the form of the upholstering; and mechanism for securing the upholstering materials together.

23. In an upholstering-machine, in combination, holding mechanism for the means for securing together the materials to be upholstered; means for shifting the relative positions of certain of said holding mechanism, to change the form of the upholstering; and mechanism for securing the upholstering materials together.

24. In an upholstering-machine, in combination, holding mechanism for the means for securing together the materials to be upholstered, which mechanisms are adapted to be arranged in series; means for moving certain of said series to change the form of the upholstering; and mechanism for securing the upholstering materials together.

25. In an upholstering-machine, in combination, holding mechanism for the means for securing together the materials to be upholstered, which mechanisms are adapted to be arranged in longitudinal and in transverse series; means for moving certain of said longitudinal series, to change the form of the upholstering; and mechanism for securing together the upholstering materials.

26. In an upholstering-machine, in combination, holding mechanism for the means for securing together the materials to be upholstered, which mechanisms are adapted to be arranged in longitudinal and in transverse series; means for moving alternate longitudinal series with relation to adjacent longitudinal series, to change the form of the upholstering; and mechanism for securing the upholstering materials together.

27. In an upholstering-machine, in combination, an upholstering-roller having holding mechanism for the means for securing together the materials to be upholstered, mounted on said roller in circumferential and in transverse series; means for moving certain of the circumferential series with relation to the transverse series, to change the form of the upholstering; and mechanism for securing the upholstering materials together.

28. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; button-staple holders for one of said upholstering-rollers, which holders are arranged in circumferential series, some of which series are mounted rigidly upon the periphery of said roller; rings for supporting the other of said circumferential series of button-staple holders; means for rotating said ring with reference to said roller; a series of spreading-wedges secured to the supporting-frame for clenching certain of the button-staples; a series of clenching-wings, each pivotally mounted on the periphery of the other upholstering-roller; and means for rotating said upholstering-rollers.

29. In an upholstering-machine, in combination, a supporting-frame; two upholstering-rollers journaled thereon and adapted to pass the upholstering materials between them; the lower one of which upholstering-rollers has a number of radially-extending button-staple holders arranged in peripheral series, the other of which upholstering-rollers has a series of peripheral grooves having depressions at intervals in said grooves, for receiving the ends of the button-staples; a series of washer-feeding tubes adapted to deliver washers at a point adjacent to said button-staple holders; a series of spreading-wedges; clenching-wings pivotally mounted upon the upper upholstering-roller; and means for rotating said upholstering-rollers.

30. In a button-staple-clenching device, in combination, means for holding the button-staple; and a pivoted clenching-wing for separating the prongs of said button-staple and clenching the same by pressure, which said holding means and clenching means are mounted upon independent, rotatable axes.

31. In a button-staple-clenching device, in combination, means for holding a button-staple; a wing for separating the prongs of said button-staple, which wing is pivotally mounted near its center; and means for moving the wing and the button-staple together, for clenching the prongs of said button-staple by pressure.

32. In a button-staple-clenching device, in combination, means for holding a button-staple; a pivoted wing for separating the prongs of said button-staple, and for clenching said prongs; and means for moving said wing.

33. In a button-staple-clenching device, in combination, means for holding a button-staple; a pivoted wing for separating the prongs of said button-staple, which wing has a movement toward said button-staple to clench the prongs of said button-staple by pressure; and means for moving said wing.

34. In a button-staple-clenching device, in combination, means for holding a button-staple; and a pivoted wing for separating the prongs of said button-staple, and for clenching said prongs, which said holding means and said pivoted wing are mounted upon independent, rotatable axes.

35. In an upholstering-machine, in combination, a button-staple holder; means for feeding continuously forward the upholstering materials and for moving the button-staple holder with said materials; and

means adapted to travel continuously forward with said materials, for clenching a button-staple to fasten said materials together during the forward movement of the upholstering materials to permanently secure said materials together.

36. In an upholstering-machine, in combination, means for feeding the upholstering materials continuously forward; and mechanism adapted to travel continuously forward with said upholstering materials for securing said materials together during their forward movement.

37. In an upholstering-machine, in combination, means for feeding the upholstering materials continuously forward; and means adapted to travel continuously forward with said upholstering materials for inserting and clenching a device for securing said materials together during the forward movement of said materials.

38. In an upholstering-machine, in combination, means for feeding the upholstering materials continuously forward; and means adapted to travel continuously forward with said upholstering materials for inserting and clenching a button-staple in said materials during the forward movement of said materials.

39. In an upholstering-machine, in combination, means for feeding the upholstering materials continuously forward; holding mechanism for the means for securing together the materials to be upholstered, which holding mechanism moves forward with said upholstering materials; and means adapted to travel continuously forward with said upholstering materials for causing the securing means to permanently unite said materials during the forward movement of said materials.

40. In an upholstering-machine, in combination, holding mechanism for the means for securing together the materials to be upholstered, which holding mechanism is movable in the direction of travel of the upholstering materials; means for moving said holding mechanism and for feeding continuously forward said upholstering materials; and means adapted to travel continuously forward with said upholstering materials for causing the securing means to permanently unite said materials during the forward movement of said materials.

41. In an upholstering-machine, in combination, means for feeding the materials to be upholstered continuously forward into contact with a button-staple to cause said button-staple to penetrate certain of said materials; and means adapted to travel continuously forward with said upholstering materials for clenching said button-staples during the forward movement of said materials.

42. In an upholstering-machine, in combination, an upholstering-roller adapted to rotate with the travel of the upholstering materials; holding mechanism for the means for securing together said materials, which holding mechanism is movable in the direction of travel of said materials to cause the securing means to penetrate certain of said materials; means for moving said holding mechanism; and means traveling continuously forward with the upholstering materials, adapted to permanently unite said materials during their continuous forward movement.

43. In an upholstering-machine, in combination, means comprising an upholstering-roller for feeding continuously forward the materials to be upholstered; a button-staple holder; and a device on said roller adapted to clench a button-staple in said holder during the forward movement of said materials.

44. In an upholstering-machine, in combination, an upholstering-roller adapted to rotate with the travel of the upholstering materials; holding mechanism for a button-staple adapted to move the staple in the direction of travel of said upholstering materials to cause a button-staple in said holding mechanism to penetrate certain of said upholstering materials; means for moving said holding mechanism; and means adapted to travel continuously forward with said upholstering materials for clenching said button-staple during the continuous forward movement of said materials.

45. In an upholstering-machine, in combination, a means for compressing and feeding continuously forward the upholstering materials, which means comprise an upholstering-roller; holding mechanism for the means for securing together the upholstering materials adapted to travel with said materials; and a device on said upholstering-roller adapted to fix the securing means to permanently unite said materials during their continuous forward movement.

46. In an upholstering-machine, in combination, a means for compressing and feeding continuously forward the upholstering materials, which means comprise an upholstering-roller adapted to rotate with the travel of the upholstering materials; means for inserting a device for securing said upholstering materials together, during the forward movement of said materials; and mechanism carried by said upholstering roller adapted to fix the securing means to permanently unite said upholstering materials during their continuous forward movement.

47. In an upholstering-machine, in combination, a means for compressing and feeding continuously forward the upholstering materials, which means comprise an upholstering-roller adapted to rotate with the travel of the upholstering materials; button-staple holders adapted to

travel with said materials; and a device carried by said roller for clenching button-staples in said holders during the continuous forward movement of said materials.

702,962. UPHOLSTERING-MACHINE. HANCOCK & JONES, CHICAGO, ILL. Filed Mar. 21, 1902. Serial No. 90,291. (No model.)

Claim.—1. In an upholstering-machine, in combination, a supporting-frame; two upholstering-surfaces adapted to move in the same direction, one of which surfaces is a plane surface inclined at an angle with the other; means for fixing the securing means to permanently fasten the upholstering materials together; and means for moving said upholstering-surfaces.

2. In an upholstering-machine, in combination, a supporting frame; two movable upholstering-surfaces, one of which is a plane surface inclined at an angle with the other; means for engaging the securing means employed to fasten the upholstering materials together; and means for moving said table.

3. In an upholstering-machine, in combination, a supporting-frame; a table movably mounted on said supporting-frame; an upholstering-surface inclined at an angle with said table; means for fixing the securing means to permanently fasten the upholstering materials together; and means for moving said table.

4. In an upholstering-machine, in combination, a supporting-frame; a table movably mounted on said supporting-frame; an upholstering-surface inclined at an angle with said table and adapted to move in the same general direction with said table; means for fixing the securing means to permanently fasten the upholstering materials together; and means for moving said table and said upholstering-surface.

5. In an upholstering-machine, in combination, a supporting-frame; a table movably mounted on said supporting-frame; an upholstering-surface comprising a series of endless chain belts, said upholstering-surface being inclined at an angle with said table, to compress the upholstering materials between said belts and said table; means for engaging the securing means employed to fasten the upholstering materials together; and means for moving said table and said upholstering-surface.

6. In an upholstering-machine, in combination, a supporting-frame; two upholstering-surfaces adapted to move in the same direction, one of which surfaces is a plane surface inclined at an angle with the other; a spreading-wedge for engaging the securing means employed to fasten the upholstering materials together; and means for moving said upholstering-surfaces.

7. In an upholstering-machine, in combination, a supporting-frame; two upholstering-surfaces, one of which is a plane surface inclined at an angle with the other; a spreading-wedge, adapted to clench the button-

staples employed to fasten the upholstering materials together; and means for moving said upholstering-surfaces to compress the upholstering materials between them.

8. In an upholstering-machine, in combination, a supporting-frame; a table movably mounted on said supporting-frame; an upholstering-surface inclined at an angle with said table; button-staple holders carried by said table; means for clenching said button-staples; and means for moving said table.

9. In an upholstering-machine, in combination, a supporting-frame; an endless table rotatably mounted on said supporting-frame; an upholstering-surface inclined at an angle with said table; button-staple holders carried by said table; means for clenching said button-staples; and means for moving said table and said upholstering-surface.

10. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted on said supporting-frame; means for fixing the securing means to permanently fasten the upholstering materials together; and means for rotating said table.

11. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted on said frame; means for compressing the upholstering materials upon said table; means for engaging the securing means employed to fasten the upholstering materials together; and means for rotating said endless table.

12. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted on said frame; a series of inclined chain bolts rotatably mounted over said table for compressing the upholstering materials upon the table; means for engaging the securing means employed to fasten the upholstering materials together; and means for rotating said table and said chain bolts.

13. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted on said frame; a series of inclined chain bolts rotatably mounted over said table and adapted to compress the upholstering materials upon the table; means for presenting button-staples; means for clenching said button-staples to fasten the upholstering materials together; and means for rotating said table and said chain bolts.

14. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted thereon; a series of inclined chain bolts rotatably mounted over said table; a longitudinal series of button-staple holders secured to said table; a spreading-wedge for the button-staples; and means for rotating the endless table and said inclined chain bolts.

15. In an upholstering-machine, in combination, a supporting-frame; an endless table rotatably mounted on said supporting-frame; an upholstering-surface inclined at an angle with said table; button-staple holders carried by said table; a clenching-wedge for clenching said button-staples; a roller for flattening the spreading ends of said clenching button-staples; and means for moving said table and said upholstering-surface.

16. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted thereon; said table being composed of transverse cleats; a button-staple holder for each cleat; a series of inclined chain bolts rotatably mounted over said table; a series of spreading-wedges adapted to engage the button-staples employed to fasten the upholstering materials together; and means for rotating said table and said inclined chain bolts.

17. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted thereon; button-staple holders for said upholstering-table; a series of inclined chain bolts rotatably mounted over said table; a series of clenching-wedges for the button-staples secured to the supporting-frame; a series of washer-feeding tubes; and means for rotating said table and said inclined chain bolts.

18. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted thereon; means for compressing the materials to be upholstered upon said table; means for presenting button-staples; means for presenting washers; means for clenching button-staples; and means for rotating said table.

19. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted on said frame; button-staple holders for said table; means for compressing the upholstering materials upon said table; means for clenching the button-staples; and means for releasing said button-staples from said holders at a certain point in the rotation of the upholstering-table.

20. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted thereon; button-staple holders for said upholstering-table; a series of inclined chain bolts rotatably mounted over said table; a series of clenching-wedges for the button-staples secured to the supporting-frame, which wedges have pivoted points, each of which points carries a guide to direct the button-staple upon the point of the clenching-wedge; a series of washer-feeding tubes to supply washers to the button-staples; and means for rotating said table and said chain bolts.

21. In an upholstering-machine, in combination, a supporting-frame; sprocket-wheels rotatably mounted on said frame; two endless chain bolts adapted to run over said sprocket-wheels; transverse cleats supported by said endless chain bolts, which cleats comprise an endless upholstering-table; a series of button-staple holders for each of said cleats; a series of inclined chain bolts rotatably mounted over said upholstering-table; a series of clenching-wedges; a series of washer-feeding tubes; and means for rotating said endless upholstering-table and said inclined chain bolts.

22. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted thereon; a plurality of longitudinal series of button-staple holders for said upholstering-table; a framework for the filling material, pivotally mounted over said upholstering-table; means for compressing the upholstering materials upon the upholstering-table; means for presenting washers to the button-staples; means for clenching said button-staples; and means for rotating said endless table.

23. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted thereon, said table being composed of transverse cleats; a series of button-staple holders for each cleat, certain of said button-staple holders being secured to said cleats, and others being mounted in ways thereon and capable of being slid transversely of said cleats; means for compressing the upholstering materials upon said table; means for clenching the button-staples to fasten the upholstering materials together; and means for rotating said table.

24. In an upholstering-machine, in combination, means for compressing the materials to be upholstered; a series of button-staple holders; a pivotally-mounted washer-feeding tube for presenting washers to the button-staples; a hinged rod for carrying a supply of washers, which rod terminates near the upper end of said tube; and a clenching-wedge for spreading the prongs of the button-staples.

25. In an upholstering-machine, in combination, a supporting-frame; an endless upholstering-table rotatably mounted thereon; button-staple holders for said upholstering-table; a series of inclined chain bolts rotatably mounted over said table; an endless cord at each side of the upholstering-table for holding the backing material; a series of clenching-wedges for the button-staples secured to the supporting-frame; a series of washer-feeding tubes; and means for rotating said table and said inclined chain bolts.

26. In a holder for button-staples, in combination, a stem having a pocket at its upper end; a jaw pivoted on said stem; and a spring for holding said jaw in a closed position, said jaw extending downward from said button-staple into a position to be engaged by a fixed projection when the button-staple reaches a certain point in its travel.

27. In a feeding device for upholstering-washers, in combination, a curved tube for the washers, having a bifurcated lower end; means for oscillating said tube; a flat spring upon one side of said tube, extending into said bifurcation and adapted to impinge upon the lower edge of the lowest washer in the tube, to prevent the accidental escape of said washer; an enlarged upper end for said tube; a rod for holding a series of washers; a pivotal support for said tube near the upper end thereof; and a finger extending upwardly from the upper end of said tube and adapted to engage one of the said series of washers to normally hold said washers from entering said tube but to permit them to enter the tube one at a time when said tube is oscillated upon its pivotal support.

28. A clenching device for button-staples, comprising a rotatable wheel having clenching-wings pivoted thereon; an integral extension at the side of each of said wings; a spring for holding the free end of each of said wings toward the center of said wheel; a fixed projection for engaging the free end of each of said wings and moving them outward against the action of said springs as the wheel is rotated; and a spring-actuated hooked pawl for engaging and dragging downward one leg of the button-staple.

29. A clenching-wedge for button-staples, having a pivoted point and a guide fixed on said point for directing the prongs of the button-staple against the point of the clenching-wedge.

30. A clenching-wedge for button-staples, having a flat rearwardly-inclined under face, a pivoted point and a guide fixed on said point adapted to direct the prongs of the button-staple against the point of the clenching-wedge, which guide projects forward from said point and is flaring to receive the button staple.

31. A clenching-wedge for button-staples, having a flat rearwardly-inclined lower face, a pivoted point and a guide fixed on said point adapted to direct the prongs of the button-staple against the point of the clenching-wedge, which guide projects forward from said point and is flaring to receive the button staple.

32. In a clenching device for button-staples, in combination, means for holding and for advancing the button-staple; a framework having a guide-channel through which the button-staples are advanced; a clenching-wedge having a pivoted point; and a guide fixed on said point, which guide lies within said channel and is adapted to move laterally thereof to

receive the button-staple and to present it to the point of the clenching-wedge.

33. In an upholstering-machine, in combination, a supporting-frame; two upholstering-surfaces adapted to move in the same direction, one of which surfaces comprises a series of endless bolts; means for moving said upholstering-surfaces; and holding mechanism for the means for securing together the materials to be upholstered.

34. In an upholstering-machine, in combination, a supporting-frame; two upholstering-surfaces adapted to move in the same direction, one of which surfaces comprises a series of endless bolts; means for moving said upholstering-surfaces; and holding mechanism for the means for securing together the materials to be upholstered, which holding mechanism is movable in the direction of travel of the upholstering materials.

35. In an upholstering-machine, in combination, a supporting-frame; two upholstering-surfaces adapted to move in the same direction, one of which surfaces comprises a series of endless bolts; means for moving said upholstering-surfaces; and holding mechanism for the means for securing together the materials to be upholstered, which holding mechanism is secured to one of said upholstering-surfaces.

36. In an upholstering-machine, in combination, a supporting-frame; two upholstering-surfaces adapted to move in the same direction, one of which surfaces comprises a series of endless bolts; means for moving said upholstering-surfaces; and button-staple holders.

37. In an upholstering-machine, in combination, a supporting-frame; two upholstering-surfaces adapted to move in the same direction, one of which surfaces comprises a series of endless bolts; means for moving said upholstering-surfaces; and button-staple holders movable in the direction of travel of the upholstering materials.

38. In an upholstering-machine, in combination, a supporting-frame; two upholstering-surfaces adapted to move in the same direction, one of which surfaces comprises a series of endless bolts; means for moving said upholstering-surfaces; and button-staple holders secured to one of said upholstering-surfaces.

702,968. CAR-COUPPLERS. WILLIAM S. JONES and EDWIN W. WEBB. Chicago, Ill. Filed Sept. 18, 1901. Serial No. 75,594. (No model.)

Claim.—1. In a car-coupler, the combination with a coupling-head, of a knuckle pivoted therein, a vertically-sliding pin adapted to lock the knuckle in its closed position, a locking device, pivotally mounted within the coupling-head and adapted to retain the locking-pin either in its locked or unlocked position, substantially as described.

2. In a car-coupler, the combination with a coupling-head, of a knuckle pivoted therein, a vertically-sliding locking-pin adapted to lock the knuckle in its closed position, a pendulum-dog pivotally mounted within the coupling-head adapted to swing into engagement with and retain said locking-pin in its locked position and to swing under and support said locking-pin when the latter is elevated, substantially as described.

3. In a car-coupler, the combination with a coupling-head, of a knuckle pivoted therein, a two-part vertically-sliding locking-pin the lower part of which is adapted to lock the knuckle in its closed position, a pendulum-dog pivotally mounted within the coupling-head adapted to engage with and prevent the lower part of said locking-pin from creeping, a projection on said dog engaged by an inclined portion on the vertical wall of the upper part of said pin when the latter is elevated thereby swinging said dog out of engagement with the lower part of the pin, substantially as described.

4. In a car-coupler, the combination with a coupling-head, of a knuckle pivoted therein, a locking-pin comprising locking and lifting portions, means connecting said portions so as to permit an initial movement of the latter independently of the former, a pendulum-dog mounted within the coupling-head, a projection on said dog adapted to engage the locking portion of the pin when the latter is in its locking position, said dog having a second projection adapted to be engaged by the lifting portion of the

pin during its initial movement and the first projection therein disengaged from the locking portion of the pin, substantially as described.

5. In a car-coupler, the combination with a coupling-head, of a knuckle pivoted therein, a locking-pin comprising locking and lifting portions the latter when lifted having a slight initial movement before lifting the locking portion, lugs projecting from a reduced upper end of said locking portion and engaging slots formed through the walls of the lifting portion, a pendulum-dog mounted within the coupling-head, projections on said dog entering recesses in each portion of the pin when the latter is in its locking position, whereby the initial movement of the lifting portion through the engagement of the recess therein with the projection on the dog swings the other projection on the dog out of engagement with the recess in the locking portion of the pin, substantially as described.

6. In a car-coupler, the combination with a coupling-head, of a knuckle pivoted therein, a locking-pin comprising locking and lifting portions the latter when lifted having a slight initial movement before lifting the locking portion, lugs projecting from a reduced upper end of said locking portion and engaging slots formed through the walls of the lifting portion, a pendulum-dog mounted within the coupling-head, projections on said dog entering recesses in each portion of the pin when the latter is in its locking position and adapted to swing beneath the locking portion of the pin into the path of the tail of the knuckle when the pin is in its unlocking position, and means interposed between the lifting portion of the pin and said dog whereby the projection on the latter is swung out of engagement with the locking portion of the pin during the initial movement of the lifting portion and then permitted to swing by gravity beneath and support the locking portion until removed therefrom by the tailpiece of the knuckle when the latter is opened, substantially as described.

7. In a car-coupler, the combination with a coupling-head, of a knuckle pivoted therein, a two-part locking-pin comprising lifting and locking portions, connecting means between said portions permitting an initial movement of the lifting portion independent of the locking portion, said connecting means being engaged and disengaged by a relative rotation of said portions, and a locking device for the locking portion of the pin actuated by the initial movement of the lifting portion, substantially as described.

8. In a locking-pin for a Master Car-Builders' car-coupler, the combination with a lifting portion, of a locking portion, connecting means for coupling said portions comprising lugs and slots the latter having communicating grooves above their lower ends to permit the insertion of the lugs in the slots by a relative rotation of the portions of the pin, substantially as described.

702,964. SWINGING GATE. WILLIAM S. JONES, Marshall, Mo. Filed Feb. 12, 1902. Serial No. 94,995. (No model.)

Claim.—1. The combination, with a swinging gate, latches slidable therein, and a vertical reversible shaft, of the door having projecting arms and adjustable on the shaft, and the levers fulcrumed to the arms and connected to the latches.

2. The combination, with a swinging gate, spring-controlled latches slidable thereon, and a reversible shaft, of the door adjustable on the shaft and having projecting arms, and the levers having one end fulcrumed to the arms and the other end adjustably connected to the latches.

3. The combination, with a swinging gate, slidable latches, and springs to retract the latches and control the movement of the latter, of a reversible shaft, arms projecting from the shaft, and levers connecting the latches with the arms, to automatically operate the gate and the latches.

4. The combination, with the latches having steps, brackets on the latches, and springs for retracting the latches, of a reversible shaft, arms adjustable on and projecting from the shaft, and the levers fulcrumed to the arms and adjustably connected to the said brackets, whereby the height and throw of the arms, and reach of the levers may be varied.

702,965. FLOATABLE GARRON FOR CLEANING SHIP SIDES AND BOTTOMS. ROBERT KAUFER, Rochester, N. Y. Filed Oct. 15, 1901. Serial No. 73,733. (No model.)

Claim.—1. A floatable garron divided into a series of compartments, each compartment having suitable lights or windows, the upper railing arranged upon the top of the garron, the upper and lower galleys, the vertical cleaning-brushes, and the horizontal cleaning-brush all arranged and adapted to operate substantially as shown and described.

2. A floatable garron having horizontal adjustable journal-beams arranged at opposite sides, a horizontal brush journaled within the ends of said adjustable beams and means contained within the garron for adjusting the said beams in or out, substantially as described.

3. A floatable garron having upright rotary brushes journaled adjacent to the sides of said garron, the horizontal rotary brush journaled within the outer ends of the adjustable beams arranged upon the sides of the garron and at a point below the vertical brushes and means contained within the garron for operating the vertical brushes and means for operating and adjusting the horizontal brush substantially as described.

4. A floatable garron comprising a series of compartments arranged one above the other, the vertical rotary brushes arranged upon the sides of the garron, the horizontal rotary brush arranged adjacent to one side of the garron, below the vertical brushes, the adjustable brackets carrying the said horizontal brush, means contained within the garron for operating the vertical and horizontal brushes and a suitable traveling support connected to the said garron, substantially as and for the purpose described.

702,966. PAPER-JOGGER. PERCY E. KURT, Utica, N. Y. Filed June 17, 1901. Serial No. 64,787. (No model.)

Claim.—1. A jogger-finger arranged to support the overhanging edge of a mispiled sheet, and means for supporting and moving the finger away from the face of the receiving-table, as the pile of sheets increases, substantially as set forth.

2. A jogger-finger arranged to support the overhanging edge of a mispiled sheet, and means for supporting and moving the finger vertically away from the plane of the receiving-table as the pile of sheets increases, said means being operated by the pile of sheets.

3. A jogger-finger, a vertical movable slide on which said finger is mounted, a post or upright on which the slide is mounted and means for automatically moving and securing said slide, combined, substantially as set forth.

4. A jogger-finger having a weighted outer end, a vertical movable slide on which said finger is pivoted, a post or upright on which the slide is mounted and means for moving and securing said slide against backward movement, combined, substantially as set forth.

5. The combination with the paper-jogging mechanism of a finger mounted on and projecting in advance of the working face of the jogging mechanism, and means causing the finger to move away from the face of the table as the pile of paper builds thereon, substantially as set forth.

6. The combination with the table having a slotted opening, of a slide and operating means arranged on the under side of the table, said slide having a post projecting into said slotted opening and terminating below the upper surface of the table, a removable paper-jogging mechanism on top of the table having a socket adapted to fit over and fit the said post on the slide and within the slotted opening, substantially as set forth.

7. The combination with a receiving-table of a paper-erasing mechanism and means for carrying that portion of the sheet not supported by the pile during the action of the erasing mechanism.

8. The combination in a paper-jogging mechanism of a rocking plate or disk having radial slots, connecting-rods engaging on crank-pins adjustably secured in said slots and paper-engaging parts of said jogging mechanism connected to the other ends of said connecting-rods, substantially as set forth.

702,967. KNIFE. ISRAEL KINNEY, Toronto, Canada. Filed Sept. 30, 1901. Serial No. 77,072. (No model.)

Claim.—1. In a knife, in combination the sides and back stamped, formed or bent up from a single piece of metal, the longitudinal center of which forms the back and the portions to each side the sides, each longitudinal center being provided with a central slot or slots whereby and bridges are left connecting the sides, blades held within the sides and rivets extending through each blade and a spring fitting and suitably held within the slot and having the ends abutting the backs of the ends of the blades in proximity to and longitudinally within the end bridges, as specified.

2. In a knife, in combination the sides and back stamped, formed or bent up from a single piece of metal, the longitudinal center of which forms the back and the portions to each side the sides, each longitudinal center being provided with central slots leaving a central bridge and end bridges, blades held within the sides and rivets extending through each blade and sides and a spring held in position within the slots by the central bridge and having the ends abutting the backs of the ends of the blades in proximity to and longitudinally within the end bridges as specified.

702,968. POCKET-KNIFE. ISRAEL KINNEY, Toronto, Canada. Filed Apr. 7, 1902. Serial No. 101,315. (No model.)

Claim.—1. In a pocket or other knife, the combination with the blade, of a spring-metal handle comprising two sides, the end of one side of which is provided with a round hole and the end of the other with a slotted hole and a projection designed to extend underneath the inner end of the blade, the opposite end of the handle being provided with a bridge, whereby a spring is imparted to the blade, and a rivet extending through the end hole and slot and hole in the blade as and for the purpose specified.

2. In a pocket or other knife, the combination with the blade, of a spring-metal handle comprising two sides, the end of one side of which is provided with a round hole and the end of the other with a slotted hole and a projection designed to extend underneath the inner end of the blade, and the opposite end of the handle being provided with a bridge having cross-slots, whereby a spring is imparted to the blade, and a rivet extending through the end hole and slot and hole in the blade as and for the purpose specified.

3. In a pocket or other knife, the combination with the blade, of a spring-metal handle comprising two sides, the end of one side of which is provided with a round hole and the end of the other with a slotted hole and a projection designed to extend underneath the inner end of the blade, and the opposite end of the handle being provided with a bridge having diagonal side cross-slots whereby a spring is imparted to the blade, and a rivet extending through the end hole and slot and hole in the blade as and for the purpose specified.

4. In a pocket or other knife, the combination with the blade, of a spring-metal handle comprising two sides, the end of one side of which is provided with a round hole and the end of the other with a slotted hole and a projection designed to extend underneath the inner end of the blade, and the opposite end of the handle being provided with a bridge whereby a spring is imparted to the blade, and a rivet extending through the end hole and slot and hole in the blade, the end of the handle being open and designed to receive an instrument of utility as and for the purpose specified.

5. In a pocket or other knife, the combination with the blade, of a spring-metal handle comprising two sides, the end of one side of which is provided with a round hole and the end of the other with a slotted hole and a projection designed to extend underneath the inner end of the blade, the opposite end of the handle being provided with a bridge whereby a spring is imparted to the back of the blade, and a rivet extending through the end hole and slot, and hole in the blade, and the opposite side of the handle from the bridge being provided with lips designed to receive an instrument of utility as and for the purpose specified.

6. In a knife, a handle comprising two sides formed integrally of spring metal with a bridge connecting them at one end, one side being provided with a hole and being offset in relation to the other, which is provided with a slot and projection between which hole and slot the blade is held by a rivet, each bridge forming an edge-wise-prong spring at the free end of the sides and an inwardly-prong spring at the bridge end as and for the purpose specified.

7. In a knife, a handle comprising two sides formed integrally of spring metal with a bridge connecting them at one end, one side being provided with a hole and being offset in relation to the other, which is provided with a slot and projection between which hole and slot the blade is held by a rivet, each bridge forming an edge-wise-prong spring at the free end of the sides and an inwardly-prong spring at the bridge end as and for the purpose specified.

8. In a knife or similar article having a bent-end for fastening such instrument in place, a handle comprising two sides formed integrally of spring metal with a bridge connecting them at one end, one side being provided with a hole and being offset in relation to the other, which is provided with a slot and a rivet or pin extending through the hole in the slot and the butt-end of the knife as and for the purpose specified.

702,969. WAREHOUSE-TRUCK. WALTER A. KNIEST, Madisonville, Ohio. Filed Jan. 12, 1902. Serial No. 93,454. (No model.)

Claim.—1. An adjustable truck embodying a platform of longitudinal stringers and cross-braces at the ends thereof; running-gear including longitudinal bars and crank-shafts at the ends thereof and connecting the same with the platform, and provided with bearing-wheels; means for raising and lowering the running-gear relative to the platform said platform having one of its end braces serving as an abutment for preventing end thrust of the running-gear in one direction, when the latter is in use; and thrust-blocks adapted to be inserted between the bars and the other cross-braces of the platform for holding the running-gear from movement in an opposite direction.

2. In an adjustable platform-truck, the combination, with the platform of parallel bars carrying the bearing-wheels each bar being carried upon and connected with the platform by corresponding crank-shafts, and an intermediate double crank-shaft lying substantially in the horizontal plane of the other crank-shafts and passing centrally through the parallel bars and connecting the bars and platform-stringers and by its rotation actuating the bars in unison in parallelism with the platform, substantially as set forth.

3. In a device of the character indicated in combination with the platform and running-gear mounted thereon and including parallel longitudinal bars and crank-shafts at the ends thereof, the actuating crank-shaft, passing centrally through the parallel bars and the platform-stringers and lying substantially in the horizontal plane of the other crank-shafts, the terminal spur-wheel fixed to the central shaft, and the actuating-lever loosely centered on the shaft and engaging the spur-wheel, substantially as set forth.

702,970. DIKE-WATER-SETER. W. H. LARABEE, Worcester, Mass., assignor to Union Water Meter Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 12, 1902. Serial No. 97,316. (No model.)

Claim.—1. In a disk-piston action, the disk-chamber casing having a concentric circular railway-flange with an external guiding-surface, the disk piston having a central ball with a shaft-bearing opening at the axis thereof perpendicular to the plane of the disk, a traversing arm car-

rying depending bearing-studs, rollers mounted on said studs and rolling on the external surface of said circular flange, and a shaft fixedly supported in said traversing arm and extending on an incline into and turning within the central opening of said disk piston, substantially as set forth.

2. In a disk-piston action, in combination, a disk-chamber casing provided with a circular concentric flange having an exterior railway-surface and annular ledge thereon, the disk piston supported by a bearing-ball within said casing and having an axial opening perpendicular to the plane of the disk, a controlling member carrying a plurality of rollers that run upon said railway adjacent to said ledge, the piston-controlling shaft fixed in said member and extending at an angle into the disk piston, and a pin on said member adapted for moving the register-actuating mechanism.

3. In a disk-piston action, in combination, a disk-chamber and casing, a nutating disk piston having a center bearing-ball with a hole through the axis thereof, the upper portion of said hole formed of a larger diameter than the lower portion, and provided with an intermediate annular offset therein, a piston-controlling shaft fitting in said hole, said shaft extending through, or nearly through the ball, and having a shoulder adapted for abutting upon said intermediate offset, a traversing member supporting the end of said piston-shaft, adapted for positively maintaining its inclined relation, a circular guide-flange fixed concentric to the axial line of the disk-chamber, a plurality of rollers supported on said traversing member and running upon said guide-flange, and a register-driving projection arranged on said member.

4. In a disk water-meter, in combination with the disk-chamber casing, a diaphragm having a portion of its area from the bottom to the top of the chamber formed of greater thickness than the main portion of said diaphragm, the exterior sides of the thicker portion presenting outstanding surfaces for contact with the disk edges; a nutating disk piston having a radial slot, the edges of which are adapted to contact with said outstanding surfaces of the diaphragm, an obliquely-disposed depending shaft turning within a bearing-opening at the axis of the disk piston, a traversing member having said shaft fixed therein, for controlling the inclination or tilt of the disk piston, and means for supporting said traversing member for movement concentric with the axis of the casing.

5. In a disk water-meter, in combination, as described; the disk-chamber casing, the diaphragm having a portion of greater thickness at its inner end, adjacent to the ball-bearing, and a retaining-arc passing through the casing, and engaging in an opening formed in said thicker portion of the diaphragm, substantially as set forth.

702,971. FUMIGATING POULTRY-ROOST. OLIVER LA RUE, Bolton, Ind. Filed Dec. 14, 1901. Serial No. 93,948. (No model.)

Claim.—1. A fumigating poultry-roost comprising a perforated plate or bar, and a receptacle arranged beneath and extending over the perforated area of the plate or bar and adapted to contain a fumigating liquid or composition, said plate or bar being detachably secured to the receptacle and being extended beyond the same and adapted to support the receptacle, substantially as described.

2. A fumigating poultry-roost comprising a perforated plate or bar and a receptacle arranged beneath and extending over the perforated area of the bar or plate and adapted to contain a fumigating liquid or composition, said plate or bar forming a cover for the receptacle and having its perforations of a size to permit the liquid or composition to be readily poured into the receptacle through them and the said receptacle being provided with a drain-opening to permit the composition or liquid to be readily drawn off, substantially as described.

3. A fumigating poultry-roost comprising a perforated plate or bar, and a receptacle arranged beneath and detachably secured to the plate or

bar and terminating short of the ends thereof and provided with a drain-opening, substantially as described.

4. A fumigating poultry-roost comprising a perforated plate or bar, and an approximately semicylindrical receptacle arranged beneath the plate or bar and extending over the perforated area of the same and provided at one end with a drain-opening, said receptacle being provided with longitudinal side flanges detachably secured to the plate or bar, substantially as described.

702,972. MOTOR. PHILIP E. LAMBERT, Marblehead, Mass. Filed May 23, 1901. Serial No. 51,513. (No model.)

Claim.—1. A motor, a valve for admitting the motive fluid thereto, a normally inoperative actuator for said valve, a valve-operating lever pivoted to the valve-stem and engaging said actuator, means operated by the motor to positively turn said lever about its pivot, a stop to limit each positive turning movement of the lever, said positive turning movement of the lever operating to store up energy in the actuator and said lever being then operated on by the actuator to shift the valve.

2. A motor, a valve for admitting motive fluid thereto, an actuator for said valve including a normally inactive cam, a lever pivoted to the valve-stem and engaging said cam, means operated by the motor to positively turn said lever about its pivot, and a stop to limit each positive turning movement, the lever during each positive turning movement operating to render the cam active, and said cam when active engaging the lever and actuating the valve.

3. A motor, a puppet-valve for admitting the motive fluid thereto, a normally inoperative actuator for said valve, a valve-operating lever pivoted to the valve-stem, means operated by the motor to operate said lever, said lever operating through the first portion of its stroke to store up energy in said actuator and to hold the valve firmly to its seat, and being operated upon by the actuator during the latter portion of its stroke to shift the valve.

4. A motor, a puppet-valve for admitting motive fluid thereto, an actuator for said valve including a normally inactive actuating-cam, a lever pivoted to the valve-stem, and means connected to said lever and operated by the motor to render said cam active, said lever operating to hold the valve to its seat while the cam is being rendered active and said cam when active engaging the lever and actuating the valve-stem.

5. In a valve-operating mechanism, a spring-controlled cam-lever having a double cam-surface thereon, an operating-lever pivotedly connected to the valve-stem, and engaging said cam-surface, means to turn said operating-lever about its pivotal point against the action of the cam-lever, said lever during each turning motion operating to hold the valve to its seat, and said cam-lever after the operating-lever has passed its rise giving to the same a movement to shift the valve.

6. In a puppet-valve-operating mechanism, a valve, a yieldingly-supported cam, an operating-lever connected to the valve and engaging said cam, means to positively operate one of said parts until the point of engagement between the lever and the cam passes the rise thereof, the lever during each positive movement operating to hold the valve to its seat and the cam then operating against the lever to shift the valve.

7. In a puppet-valve-operating mechanism, a valve, a yieldingly-supported cam, an operating-lever connected to the valve-stem, and en-

gaging said cam, means to positively turn said lever until its point of engagement with the cam passes the rise thereof, the cam then operating to complete the stroke of the lever, and shift the valve, said lever during its initial turning movement operating to hold the valve to its seat.

8. In a valve-operating mechanism, a valve, a yieldingly-supported cam, an operating-lever pivoted to the valve-stem and engaging the cam, means to positively turn said lever and a stop to arrest the turning movement of said lever about its pivot as the point of engagement between said lever and the cam passes the rise of the cam, whereby said cam operates to move the lever about the stop as a fulcrum and thus shift the valve.

9. In a valve-operating mechanism, a valve, a spring-controlled actuating-lever having a cam thereon, an operating-lever pivoted to the valve-stem to engage the cam, means to positively turn said lever, and a stop to arrest the turning movement thereof as the point of engagement between the lever and cam passes the rise of the cam, whereby said cam operates to move the lever about the stop as a fulcrum, and thus shift the valve.

10. In a valve-operating mechanism, a valve, a yieldingly-supported cam, an operating-lever pivoted to the valve-stem and engaging said cam one side of the fulcrum thereof, means to positively turn the operating-lever about its fulcrum, a stop adapted to engage the opposite end of the lever as the point of engagement with the cam passes the rise thereof, whereby the yielding cam operates to turn the lever about the stop as a fulcrum and thus shift the valve.

11. In a valve-operating mechanism, a valve, a spring-controlled actuating-lever having a double cam thereon, an operating-lever pivoted to the valve-stem, one arm of said lever engaging said cam-surface, means to turn said lever about its fulcrum, a stop adapted to engage the other arm of said lever just as the point of engagement between the lever and the cam passes the rise of the cam, the lever-operating mechanism operating to positively lift the valve from its seat and the spring-controlled cam-lever operating to turn the operating-lever about the stop as a fulcrum and thus shift the valve.

12. In a valve-operating mechanism, a valve, a spring-controlled actuating-lever pivoted to a stationary support and having a substantially V-shaped cam-surface thereon, an operating-lever pivoted to the valve-stem and engaging the said cam-surface, a stop to limit the turning movement of the operating-lever about its pivotal point in either direction just as it passes the point of the cam, whereby the actuating-lever operates to turn the operating-lever about the stop as a fulcrum and thus shift the valve in either direction.

13. A motor including a reciprocating member, a valve for admitting motive fluid thereto, a spring-controlled cam-lever pivoted to a stationary support and having a substantially V-shaped cam-surface thereon, an operating-lever pivoted to the valve-stem and engaging said cam-surface, means connected to the reciprocating member of the motor to turn said lever about its pivotal point against the action of the cam-lever, a stop to limit the turning movement of the operating-lever about its pivotal point in either direction just as it passes the point of said cam, whereby the cam-lever operates to turn the operating-lever about the stop as a fulcrum, and thus shift the valve in either direction.

14. A motor including a cylinder and a reciprocating piston therein, a valve to alternately admit motive fluid to opposite sides of the piston, a spring-controlled cam-lever having a substantially V-shaped cam-surface thereon, and an operating-lever pivoted to the valve-stem and engaging said cam-surface, means operated by the piston to turn the lever about its pivotal point, and a stop to limit the movement of the operating-lever relative to the valve-stem just as the point of engagement between said lever and cam-surface passes the point of rise of the cam, whereby the cam operates to turn the lever about the stop as a fulcrum and thus shift the valve.

15. A motor, a balanced puppet-valve device for admitting the motive fluid thereto, an actuator for said valve including a normally inactive actuating-cam, a lever pivoted to the valve-stem, and means connected to said lever and operated by the motor to render said cam active, said means also operating to hold the valve to its seat until the cam is rendered active and said cam when active engaging the lever and shifting the valve device.

16. In a valve-operating mechanism, a balanced reciprocating valve, a yieldingly-supported cam, an operating-lever pivoted to the valve-stem and engaging the cam, means to positively turn said lever, and a stop to arrest the turning movement of the lever relative to the valve-stem as the point of engagement between said lever and the cam passes the rise of said cam, whereby said cam operates to turn the lever about the stop as a fulcrum and thus shift the valve.

17. In a valve mechanism, a globe-valve, means to move the same toward and from its seat, and a counterweight connected to the valve-stem and operating to retard the action of the valve in both directions, said counterweight having approximately the same weight as the valve.

18. In a valve mechanism, a globe-valve, means to move the same toward and from its seat, a casing, a piston in said casing and connected to said valve, said piston having substantially the same weight as the valve and serving as a counterweight therefor, and means to retard the movement of the piston in both directions, whereby the movement of the valve is cushioned.

19. In a valve mechanism, a globe-valve, means to move the same to and from its seat, a lever pivoted to the valve-stem, a counterweight connected to said lever and inclosed in a casing, and means to retard the movement of said counterweight in said casing in both directions, said counterweight having approximately the same weight as the valve.

20. A motor including a reciprocating piston, valve mechanism to admit motive fluid alternately to opposite sides of said piston, a single throttle-valve in the supply-pipe, and automatic mechanism to substantially close the same when the piston reaches each end of its stroke, said valve being automatically opened by the pressure of the motive fluid.

21. A motor including a reciprocating piston, a valve to admit motive fluid alternately to opposite sides thereof, a throttle-valve in the supply-pipe, a rocking lever to which said throttle-valve is attached, said lever having a fulcrum each side its point of attachment to said valve, and means operated by said piston as it reaches each end of its stroke to rock said lever whereby the throttle-valve is substantially closed.

22. A motor including a reciprocating piston, a valve to admit motive fluid alternately to opposite sides thereof, a throttle-valve in the supply-pipe, a rocking lever to which said throttle-valve is attached, said lever having a fulcrum each side of its point of attachment with the throttle-valve, and means operated by said piston when it reaches each end of its stroke to rock said lever about one fulcrum, and when it reaches the other end of its stroke to rock said lever about the other fulcrum, said lever in each rocking movement operating to substantially close the throttle-valve and said valve being automatically opened by the pressure of the motive fluid as the piston begins each return stroke.

23. In a motor, a reciprocating piston, a valve to supply motive fluid to said motor, valve-operating mechanism, a puppet throttle-valve in the supply-pipe, and means actuated by the piston as it reaches each end of its stroke to move said throttle-valve toward its seat to substantially close the same, the closing movement of the throttle-valve being always in the same direction regardless of the direction of movement of the piston.

24. A motor including a reciprocating piston, a valve to supply motive fluid to said motor, valve-operating mechanism rendered active when the piston reaches a predetermined point in its stroke in either direction, a puppet throttle-valve in the supply-pipe of the motor, and means operated by the valve-operating mechanism to substantially close the throttle-valve for an interval of time when the piston reaches each end of its stroke, said valve being opened by the pressure of the motive fluid.

25. A motor, including a reciprocating piston, a valve to supply motive fluid to said motor, valve-operating mechanism, a reciprocating throttle-valve in the supply-pipe, and a rocking member connected to the stem of said throttle-valve and actuated by the piston as it reaches each end of its stroke to move said throttle-valve toward its seat to substantially close the same, the closing movement of the throttle-valve being always in the same direction, regardless of the direction of movement of the piston.

26. In a motor, two oppositely-disposed cylinders, a reciprocating piston at its ends inclosed in said cylinders, an arm adjustably connected intermediate its ends to the central portion of the piston, and an adjustable support to which one end of said arm is pivoted, the other end of said arm being connected to the mechanism to be operated, the construction being such that the length of the stroke of the arm may be adjusted.

702,973. FEEDING-FASTENER. WILLIAM LAWRENCE, New York, N. Y. Filed Sept. 5, 1901. Serial No. 74,493. (No model.)

Claim.—In a securing device for neckties, &c., the combination with a securing-plate having a bifurcate tang H formed integral therewith and extending at a right angle therefrom, the legs of which are provided at the ends with securing-lugs c, of a collar-button B having a base E connected with a head L by a shank, wider horizontally than vertically, and provided with a horizontal slot F, which extends through the central portion of the shank H and is adapted to receive the bifurcate tang H which is then locked in place by the locking-lugs c being forced into the

perforations G in the side wall of the shank by the resiliency of the two legs of the tang, substantially as shown and described.

702,974. LOG-TURNER. WILLIAM L. LEMANA, Shreve, Cal. Filed Aug. 3, 1900. Serial No. 32,351. (No model.)

Claim.—1. A log-turner, comprising a pivoted pusher, a dog pivoted a short distance from one end to the pusher, and provided at the end of its long member with oppositely-projecting points, and a power-actuated device connected with the short member of the dog, whereby provision is made for turning a log in either direction, as set forth.

2. A log-turner comprising a pivoted pusher, a dog fulcrumed thereon, a locking device on said pusher, for locking the dog, when in a rearward position, in place on the pusher, the locking device being under the control of the operator, and a power-actuated device connected with said dog, for imparting a swinging motion to said dog and to said pusher, the arrangement being such that on the forward movement of said device the stored force is transmitted by the dog to the pusher to swing the latter forward, for pushing a log from the log-deck onto the carriage while the dog remains locked in a dormant position, as set forth.

3. A log-turner comprising a pivoted pusher, a dog fulcrumed thereon, a locking device on said pusher, for locking the dog, when in a rearward position, in place on the pusher, the locking device being under the control of the operator, a power-actuated device connected with said dog, for imparting a swinging motion to said dog and to said pusher, the arrangement being such that on the forward movement of said device the stored force is transmitted by the dog to the pusher to swing the latter forward, for pushing a log from the log-deck onto the carriage while the dog remains locked in a dormant position, and a spring pressing said locking device, so that when the locking device is released the force of the spring on the locking device causes the latter to swing the dog upward and forward in engagement with the log, so that on the rearward motion of said power-actuated device the lock and with it the pusher swing rearward to turn the log over, as set forth.

4. A log-turner, comprising a pivoted pusher, a dog fulcrumed thereon, a power-actuated device pivotally connected with the dog at the heel thereof and on the rear side of the dog's fulcrum, a spring-pressed bar carried by the pusher and pivotally connected with the dog on the forward side of the dog's fulcrum, and independent means under the control of the operator for restraining the action of the spring of the said bar, as set forth.

5. A log-turner comprising a pivoted pusher, a dog fulcrumed thereon, a power-actuated device pivotally connected with said dog at the heel thereof and to one side of the dog's fulcrum, a spring-pressed bar pivotally connected with the dog on the forward side of the dog's fulcrum, the bar being carried by said pusher, and means under the control of the operator, for locking the bar in place on the pusher at the time the dog is in rearward dormant position, as set forth.

6. A log-turner, comprising a pivoted pusher for pushing a log from a log-deck onto a carriage, a dog fulcrumed on the pusher and adapted to turn the log over, a link connected at one end with a power-actuated device and pivotally connected at its other end with said dog, a spring-pressed bar movable on said pusher, and pivotally connected with said dog, and a lever for forming a fulcrum for the log when the latter is to be turned over, said lever being connected with said link to move the lever out of active position when rolling or pushing the log upon the carriage, as set forth.

7. A log-turner, comprising a pivoted pusher for pushing a log from a log-deck onto the carriage, a dog fulcrumed on said pusher and adapted to turn the log on the carriage, a power-actuated device connected

with said dog, a spring-actuated connection between the said dog and pusher, said connection being so arranged relatively to the said power-actuating device, the dog and the pusher, that when the said power-actuating device pushes forwardly on the dog, the latter and the pusher swing forward, and when the pusher meets with resistance from a log or the like, then the further forward pushing of said actuating device causes a backward swinging of said dog, as set forth.

8. A log-turner, comprising a pivoted pusher for pushing a log from the log-deck onto the carriage, a dog, fulcrumed on said pusher and adapted to turn the log on the carriage, a power-actuated device connected with said dog, and a spring-actuated connection between the said dog and pusher, said connection being so arranged relatively to the said power-actuating device, the dog and the pusher, that when the said power-actuating device pushes forwardly on the dog, the latter and the pusher swing forward, and when the pusher meets with resistance from a log or the like, then the further forward pushing of said actuating device causes a backward swinging of said dog and a locking of said connection, as set forth.

9. In a log-turner, the combination of a pivoted pusher, a pivoted and spring-pressed dog carried by the pusher, a power-actuated device, a connection between the power-actuating device and the dog, and means for locking the dog in an inactive position, as set forth.

10. In a log-turner, the combination with a pivoted pusher, of a dog pivoted near one end to the pusher, a power-actuated device, a connection between the power-actuated device and the end of the dog, a spring-pressed bar carried by the pusher and connected with the dog on the side of its pivot opposite that with which the power-actuated device is connected, and means for locking the bar against the action of its spring, as set forth.

11. In a log-turner, the combination with a pivoted pusher, a dog pivoted on the pusher, and an actuating device for operating the dog and pusher, of a pivoted lever forming the fulcrum for a log, and a flexible connection between the actuating device and lever, as set forth.

702,975. METALLIC PAIL-BOTTOM. KATE E. LANE, Clifton Springs, N. Y. Filed Aug. 21, 1901. Serial No. 73,445. (No model.)

Claim.—1. A metallic pail having a two-part bottom, one of which parts is provided with a plurality of marginally-disposed orifices through which solder is passed to effect marginal sealing together of the two plates contiguous to the inner side of the body of the pail.

2. As a new article of manufacture, a metallic pail-bottom consisting of two metal plates of metal, the upper one, in use, being non-expandable in character, and the under one being provided adjacent to and concentrically of its periphery with orifices through which solder is passed to secure the two plates together at their peripheries.

3. As a new article of manufacture, a metallic pail-bottom, consisting of two metal plates of metal, the upper one, in use, being non-expandable in character and the under one being provided adjacent to and concentrically of its periphery with a plurality of orifices through which solder is passed to secure the two plates together at their peripheries, the said under plate being further provided with reinforcing depressions or ribs.

702,976. BICYCLE. BLA W. LYNSHUR, Warner, Canada. Filed Sept. 26, 1901. Serial No. 76,441. (No model.)

Claim.—In a bicycle, a seat-post tube open at its upper end, a hollow seat-post extending in said tube and adjustably secured to the upper end of the tube, a piston, an adjustable rod connecting the piston with the seat, air-apertures in the lower end of the post and a flexible tube connected to the lower end of said seat-post tube and to a wheel-tire to inflate said tire with air, substantially as set forth.

702,976.

702,977. BOX. GEORGE E. MARANT, Passaic, N. J. Filed Feb. 28, 1902. Serial No. 90,700. (No model.)

Claim.—1. A box comprising a body tapered to a point and closed at its lower end, and a base connected to the exterior of the body above the lower end thereof.

2. A paper box comprising a foldable or collapsible body tapered to a point and closed at its lower end and having a suitable cover, and a foldable or collapsible base surrounding and connected to the exterior of the lower portion of the body.

3. A paper box comprising the foldable or collapsible body tapered to a point and closed at its lower end; said body being formed of four flexibly-joined walls, and equipped with cover-flaps, and the foldable or collapsible base surrounding and connected to the exterior of the lower portion of the body; said base being formed of four flexibly-joined walls, and having creases in two of its walls.

702,978. SHAFT-PROP. WILLIAM L. MARSHALL, Xenia, Ohio. Filed Mar. 12, 1902. Serial No. 90,073. (No model.)

Claim.—A shaft-support consisting of an arm 2, a shorter arm 1 pivoted to the side thereof at one end, and a wire brace 3 having a central portion extending diagonally of the arm 2, and having end portions extending at right angles to said central portion, one of said ends being connected to one side of said arm 2 at the extreme end thereof and the other to the opposite side, said angular turned ends serving as stops to the shorter arm in either its folded or unfolded position, substantially as described.

702,979. PNEUMATIC HOIST. GEORGE E. MARTIN, Philadelphia, Pa., assignor to the Petrick and Ayer Company, Philadelphia, Pa. Filed Aug. 15, 1901. Serial No. 73,114. (No model.)

Claim.—1. In a fluid-pressure hoist comprising a cylinder, piston and piston-rod, a constant fluid-pressure communication to one side of the piston, a communication between both sides of the piston and a double valve device mounted in a single casing for controlling the admission of fluid-pressure to one side of the piston, its exhaust therefrom and automatically regulating the escape of pressure to hold the piston in its moved position, as described.

2. In a fluid-pressure hoist comprising a cylinder, piston and piston-rod, a constant fluid-pressure to one side of the piston, a communication between both sides of the piston and a pair of disk valves mounted in a single casing and provided with cooperating parts controlling admission of the fluid-pressure to the piston, its exhaust therefrom and automatically regulating its escape to maintain the piston in its elevated position, by an independent movement of one of said disks as described.

3. In a fluid-pressure hoist comprising a cylinder, piston and piston-rod, a constant fluid-pressure supply to one side of the piston, a communication between both sides of the piston, a double valve device mounted in a single casing with suitable cooperating parts controlling the admission of the fluid-pressure to one side of the piston, and its exhaust therefrom, a double-armed lever to actuate the valve and fluid-pressure and means for returning the lever to its normal position, as described.

4. In a fluid-pressure hoist comprising a cylinder, piston and piston-rod, a fluid-pressure supply to one side of the piston, a valve communication between both sides of the piston for controlling admission of the fluid-pressure to one side of the piston, its exhaust therefrom and automatically regulating its escape to hold the piston in its moved position, a lever frictionally connected to the piston-rod and connected to the valve and a guide for said lever having adjustable stops for limiting the movement of the lever as described.

702,980. STEERING SIGNALING FOR VEHICLES. HIRSH F. MAXIN, Hartford, Conn., assignor, by his attorney, to the Hartford Trust Company, trustee, a Corporation of New York. Filed Oct. 20, 1900. Serial No. 734,152. (No model.)

Claim.—1. In a motor-vehicle, the combination of a steering-pillar rotatable about its axis, a bearing for said pillar pivoted upon the vehicle, an arm operatively connected with the steering mechanism and pivotally mounted upon the vehicle, a gear fixed to said steering-pillar and a gear fixed to said arm to cooperate with the first-named gear, substantially as shown and described.

2. In a motor-vehicle, the combination of a steering-pillar rotatable

about its axis, a bearing for said pillar pivoted upon the vehicle, an arm operatively connected with the steering mechanism and pivotally mounted upon the vehicle, a gear fixed to said steering-pillar, and a gear fixed to said arm concentric with the pivot of the arm and the pivot of said bearing to cooperate with the first-named gear, substantially as shown and described.

3. In a motor-vehicle, the combination of a steering-pillar rotatable about its axis, a bearing for said pillar pivoted upon the vehicle, an arm operatively connected with the steering mechanism and pivotally mounted upon the vehicle, and cooperating members upon said pillar and said arm respectively, whereby the rotation of the pillar effects movement of the arm in any position of the pillar about the axis of its bearing, substantially as shown and described.

4. The combination of a steering post or pillar rotatable about its axis to steer the vehicle, a gear carried by said post or pillar, a second gear supported by the floor of the vehicle and operatively connected with the steering mechanism and in mesh with the first-named gear, and a support for the steering post or pillar mounted to swing about the axis of the last-named gear, substantially as shown and described.

5. The combination of a steering post or pillar rotatable about its axis to steer the vehicle, a gear carried by said post or pillar, a second gear supported by the floor of the vehicle in mesh with the first-named gear and operatively connected with the steering mechanism, a support for the steering post or pillar mounted to swing about the axis of the last-named gear, and a latch to engage said support, substantially as shown and described.

702,981. CONTROL OF ELECTRIC MOTORS. FRANK A. MERRICK and BENNETT W. STELL, Johnstown, Pa., assignors to the Lorain Steel Company, a Corporation of Pennsylvania. Filed Sept. 10, 1901. Serial No. 74,971. (No model.)

Claim.—1. In a system of train control, the combination with a plurality of train-wires to which the motors are connected, four for each motor, of one or more manually-actuated controllers on each car connected to each train-wire, corresponding leads in the different controllers being connected to different train-wires.

2. In a system of train control, the combination with a plurality of train-wires to which the motors are connected, of one or more manually-actuated controllers on each car connected to each of said train-wires, corresponding contacts of the several controllers being connected to different train-wires.

3. In a system of train control, a plurality of train-wires, one set for each motor, and each motor connected to one set only of said wires, and

motor-controllers on each motor-car, each of which is connected to all of said wires, and each of said controllers having contacts arranged to connect the motors and their elements in various ways to vary their power and speed and also their braking action.

6. In a system of train control, a plurality of train-wires, one for each motor-terminal, one or more motor-controllers on each motor-car, each of which is connected to all of said wires, and each of said controllers having contacts arranged to connect the motors and their elements in various ways to vary their power and speed and also their braking action.

7. In a system of train control, a plurality of train-wires, one for each motor-terminal, one or more motor-controllers on each car, each of said controllers being connected to all of said train-wires and arranged to connect the motors of each car both in series and in parallel, and in multiple with the motors of the other car or cars.

8. In a system of train control, a plurality of train-wires, one for each motor-terminal, one or more motor-controllers on each car, each of said controllers being connected to all of said train-wires and arranged to connect the motors on each car both in series and in parallel, and in multiple with the motors of the other car or cars, and also connect the motors in a closed local circuit of variable resistance to run as generators.

9. In a system of train control, a plurality of train-wires, one for each motor-terminal, one or more motor-controllers on each car, each of said controllers being connected to all of said train-wires and arranged to connect the motors of each car both in series and in parallel, and in multiple with the motors of the other car or cars, and also connect the motors in a closed local circuit of variable resistance to run as generators, together with brake-magnet coils included in said local circuit.

10. In a system of train control, a plurality of train-wires, one for each motor-terminal, one or more motor-controllers on each car, each of said controllers being connected to all of said train-wires and arranged to connect the motors of each car both in series and in parallel, and in multiple with the motors of the other car or cars, and also connect the motors in a closed local circuit of variable resistance to run as generators, together with brake-magnet coils included in said local circuit, and means for neutralizing the magnetism of said coils when said local circuit is opened and the motors are connected with trolley.

11. In a system of train control, the combination with a plurality of train-wires, to which the motor elements are separately connected, one or more motor-controllers on each car, each connected to all of said wires, and arranged to connect the motors of each car in parallel with the motors of the other car or cars, whereby any car may be detached or its motors cut out of circuit without affecting the motors of any other car or cars, together with switches for cutting the motors of any motor-car out of circuit.

12. A motor-controller for train control, consisting of a switch having contacts and connections for controlling a number of pairs of motors in parallel circuits, any one of which may be opened without affecting the others, with the individual motors of each pair on the same circuit, and auxiliary switch mechanism for cutting out a motor of each pair and establishing a circuit through the remaining motor.

13. A motor-controller, consisting of a switch having contacts and connections for controlling a number of pairs of motors in parallel circuits, any one of which circuits may be opened without affecting the others, the individual motors of each pair being in the same circuit, cut-out switches for opening the circuit of any pair of motors or of any motor, a reverse-switch, and additional contacts on the reverse and cut-out switches for completing the circuit through the motor of any pair when the other motor of that pair has been removed from circuit.

14. The combination with a plurality of electric motors, of a detector having contacts and connections for controlling said motors in pairs in parallel circuits, cut-out switches for opening the circuit of any pair of motors or of any motor in each pair, a reverse-switch, and additional switch-contacts on the reverse and cut-out switches for completing the circuit from either motor to any pair, when its companion motor has been removed from circuit.

15. In a system of train control, the combination of a plurality of independent train-wires to which the motors are connected, a controller on each car connected to all of said wires and having contact devices arranged to connect the motors of that car both in series and in parallel, and in parallel with the motors of the other cars, a cut-out switch on each car for each motor, and reversing-switches having contact devices which cooperate with the cut-out switches to maintain the circuit through one motor only.

Claim.—1. In a toboggan-slide or the like, a plurality of inclined tracks located side by side, the inclination of one track at certain points being greater than that of the other track at the corresponding point, and at certain other points the conditions being reversed, whereby provision is made for securing the novel effect of cars racing side by side at varying rate of speed, as set forth.

2. In a toboggan-slide or the like, a plurality of inclined tracks located side by side and forming a plurality of loops or circuits of parallel tracks arranged in different horizontal planes, the inclination of one track at certain points being greater than that of the other and at certain other points the conditions being reversed, as and for the purpose set forth.

3. In a toboggan-slide or the like, a plurality of inclined tracks arranged side by side and forming a plurality of loops or circuits of parallel tracks arranged in different horizontal planes, said tracks crossing each other so that portions of different tracks form the outside track at different portions of the structure, whereby the length of the tracks and the inclination thereof will in a measure be equalized.

4. In a toboggan-slide or the like, a plurality of inclined tracks arranged side by side and forming a series of loops or circuits of parallel tracks arranged in different planes, said tracks crossing each other so that portions of different tracks form the outside track at different portions of the structure, the track portions being at different levels at the crossing to allow the car on one track to pass under the other track, whereby the length of the tracks and the inclination thereof will in a measure be equalized and the danger of collision avoided.

5. In a toboggan-slide or the like, a plurality of inclined tracks having adjacent rising or elevating portions, and mainly descending or coasting portions connecting the ends of the rising portion by loops or circuits of parallel tracks arranged in different horizontal planes, the tracks crossing each other in said circuits, so that what is the outer track in the upper portion of the structure becomes the inner track in the lower portion thereof, and vice versa, the tracks forming one the continuation of the other, so that the plurality of tracks form one endless track.

6. In a toboggan-slide or the like, a plurality of inclined tracks located side by side and forming a plurality of loops or circuits of parallel tracks arranged in different horizontal planes, said tracks crossing one under the other so that portions of different tracks form the outside tracks at different portions of the structure, whereby the length of the tracks and the inclination thereof will in a measure be equalized and the danger of collision avoided and the tracks so arranged that the inclination of one track at certain points will be greater than that of the other, and at certain other points the conditions being reversed, as and for the purpose set forth.

702,988. CHAIR-SUPPORT. FRANK A. MILLIKEN, WRITON, Ohio. Filed July 8, 1901. Serial No. 67,884. (No model.)

2. The combination with the two inverted-V frames, of the single rod passed through an opening in the vertex of each frame, two rods paralleling but on a lower plane than the former rod, bars secured to opposite sides of each frame having openings to accommodate the lower rods, and means for binding said rods in said base, substantially as set forth.

702,984. HEATING-STOVE. GEORGE R. MOORE, COLUMBUS, Ohio. Filed Jan. 29, 1902. Serial No. 91,964. (No model.)

Claim.—1. In a heating-stove, the combination with an upright cylindrical casing having smoke-outlet in its top, of a plurality of vertically-arranged air-flues within said casing, said flues being substantially D-shaped in cross-section with lateral extending flanges abutting each other and secured to the inner wall of said casing, said flues having their upper and lower ends terminating in lateral extensions fitted in openings at the upper and lower portions of said casing.

2. In a heating-stove, the combination with an upright cylindrical casing having smoke-outlet in its top, of a plurality of vertically-arranged air-flues within said casing, said flues being substantially D-shaped in cross-section with lateral extending flanges abutting each other and secured to the inner wall of said casing, said flues having their upper and lower ends terminating in lateral extensions fitted in openings at the upper and lower portions of said casing, said flues being provided at their lower ends with inwardly-projecting legs, and a grate supported upon said legs.

702,985. WINDING-MACHINE. GEORGE A. MOORE, BROOKLINE, Mass., assignor to the Moore Talking Scale Company, a Corporation of Maine. Filed Sept. 12, 1901. Serial No. 73,311. (No model.)

Claim.—1. The combination with the revolvable shaft supporting a record-disk, of a speed-governing device controlling the same, a clutch member on said shaft, a tension-spring unengagedly connected with said clutch member at one end, a wheel or drum connected with the opposite end of said spring and constructed to wind the latter partially thereon, a pawl constructed to engage said wheel or drum when it is turned to put said spring in an increased tensional strain, and means acting on said clutch member to return it to its normal position when the strain on said spring is removed, substantially as described.

3. The combination of the frame comprising the side and the central web, the latter being apertured at its lower section and formed with the shelf near its upper end; the shaft revolvably supported by said sides and carrying the plate and record-disk at its outer end; the spur-gear fixed on said shaft; the governing device rotated by said gear; the sprocket-wheel and clutch on said shaft; the section of sprocket-chain passing over said sprocket-wheel and passing through an opening in said shaft; a pin projecting laterally from said chain below said shaft; the grooved wheel or drum rotatable in the aperture of said web and having the pins projecting into contact with said web; the helical spring extending from the periphery of said wheel or drum to said chain; the pawl constructed to engage a notch formed in said wheel or drum; a rod or link attached to the end of said chain opposite to said spring and descending through a hole in the tail of said pawl; an adjustable collar on said rod or link; and a weight suspended from the lower end of said rod or link, substantially as described.

4. The combination with a photographic record, of a sounder, a vertically-slidable bar supporting said sounder, and having the rack-teeth, a pinion meshing with said rack-teeth, a vertically-movable rod constructed to engage said bar, and mechanism constructed to simultaneously disengage said rod from said bar and to lock said pinion from further rotation, substantially as described.

5. The combination with a photographic record, of a sounder, a vertically-slidable bar carrying said sounder and notched near its upper end, a tension-spring supporting said bar, a vertically-slidable rod having its upper end bent over and bifurcated to engage said notches, and means whereby said bar is simultaneously disengaged from said rod and locked in the position wherein it is left by the latter, substantially as described.

702,986. ELECTRIC THIRD RAIL. PETER R. MCDONALD, NEW YORK, N. Y. Filed Dec. 29, 1900. Serial No. 60,752. (No model.)

Claim.—1. In an electric third-rail system, the combination with the electric rail, of a retaining chair-clamp, consisting of a larger base part extending under the rail and upwardly at one side thereof and overlapping the web edge and provided with a projecting lug, and a lower chair part, removably secured to the larger part and overlapping the rail edge on the opposite side and provided with an aperture with which said lug is adapted to engage in securing the parts together, substantially as described.

2. In an electric third-rail system, the combination with the electric rail, of its retaining-chairs, the series of yokes, and the hood-covering, mounted on and supported by said yokes in position above said rail, substantially as described.

3. In an electric third-rail system, the combination with the electric rail, of its retaining-chairs, the series of yokes, provided on the lower ends with anchoring-posts fixed in said chairs and extending upwardly therefrom and curving over said rails and having its upper end disengaged, and the hood-covering, supported on said yokes, substantially as described.

702,987. MANDOLIN ATTACHMENT. FRANK G. McFERRISON, Beaver Falls, Pa. Filed Aug. 28, 1901. Serial No. 72,962. (No model.)

Claim.—A block or plate having a felt or rubber surfaced bottom and also a lip-like clamp which protrudes from its edge and curves downward and underneath the same, whereby it is adapted to be clamped or fastened to a musical instrument, at its second-hole; and lie underneath the strings and above the surface of the top of instrument, to aid the performer in making a smooth and even tone, by keeping the pick at a uniform elevation.

702,988. CALENDAR. FLORENCE M. HAGE, San Francisco, Cal. Filed Sept. 12, 1901. Serial No. 75,122. (No model.)

Claim.—A year-calendar comprising a body portion having a series of display-openings, a reversible plate in rear of said openings, two series of different monthly calendar-sheets one series on each surface of said plate arranged to be exposed one sheet through each opening, and movable covers for said display-openings, substantially as described.

702,989. ELECTRICAL FLUSH SWITCH. WILLIAM J. NEWTON, New York, N. Y. Filed July 26, 1900. Renewed Mar. 21, 1902. Serial No. 90,200. (No model.)

Claim.—1. The combination of a switch-blade, an oscillating barrel, a spring-actuated member carried thereby and adapted to actuate said switch-blade, push-buttons, a lever actuated thereby, and an elastic member operatively connecting said lever and said barrel, substantially as described.

2. In a flush-switch device, the combination of a switch-blade, an insulating-body curved substantially as described, an oscillating barrel, and a spring-actuated member carried thereby and adapted to engage the

curved portion throughout the oscillation of the barrel, substantially as described.

3. The combination in a flush switch, of spring-contacts connected with the circuit-terminals, a switch-contact member having contact-plates insulated from each other and adapted to contact with said spring-contacts, an oscillating barrel, a spring-actuated member carried thereby engaging said switch-contact member, push-buttons, a lever actuated thereby, and an elastic connection between said lever and said barrel, substantially as described.

4. In a flush switch, the combination of a casing provided with the terminals of a circuit, a removable base provided with springs adapted to contact with said terminals, contact-springs in electric connection with said first-named springs, a switch contact member adapted to make and break contact with said contact-springs, an oscillating barrel, a spring-actuated part carried thereby and engaging said switch contact member, push-buttons, a lever actuated thereby, and an elastic connection between said lever and said barrel, substantially as described.

5. The combination in a flush switch, of an oscillating manual lever operated by push-buttons, an oscillating barrel at right angles to said manual lever, and pivoted at the center of oscillation thereof, a spring-actuated ball in said barrel, spring connections between said manual lever and said barrel, a plurality of switch-blades insulated from each other, and a shoe on the insulating material on which said ball engages, substantially as described.

6. In a flush-switch mechanism, the combination of a U-shaped standard, a switch contact member consisting of a plurality of metal blades mounted at their middle portion in a block of insulating material, said block being pivoted in said standard, a curved shoe on said block, a manual lever actuated by push-buttons, and an elastic member or members between said manual lever and said shoe, substantially as described.

7. In a flush-switch mechanism, the combination of a U-shaped standard, a manual lever operated by push-buttons and mounted in said standard, a block of insulating material provided with arms which are mounted in said standard, stops to limit the motion of said arms, metal plates set in said block and adapted to open and close a circuit as the block oscillates, a metal shoe on said block insulated from said plates, a barrel, a spring-actuated ball therein adapted to engage said shoe, and springs between said manual lever and said barrel, substantially as described.

702,990. ORE SEPARATOR. FRANK C. O'BRIEN, Chicago, Ill. Filed Feb. 7, 1900. Serial No. 4,206. (No model.)

Claim.—1. In a separator of the class described, the combination with a closed passage or conduit, of a mercury-coated cylinder forming a portion of the wall of said conduit, means for rotating said cylinder, and means for effecting the passage through said conduit of pulverized ore, substantially as described.

2. In a separator of the class described, the combination with an inclined air passage or conduit adapted for the passage therethrough of a stream of pulverized ore, of a mercury-coated cylinder forming a portion of the wall of said conduit, means for rotating said cylinder, and a blast

fan or the like for maintaining a current of air through said conduit, substantially as described.

3. In a separator of the class described, the combination with an inclined air passage or conduit adapted to receive a stream of pulverized ore, of mercury-coated cylinders forming portions of the walls of said conduit, means for rotating said cylinders, and a blast-fan or the like for creating a current of air through said conduit, substantially as described.

4. In a separator of the class described, the combination with an inclined sluiceway air passage or conduit, of mercury-coated cylinders arranged alternately on opposite sides of said passage or conduit and forming portions of the walls thereof, means for rotating said cylinders, and a blast-fan or the like for creating a current of air through said conduit, substantially as described.

5. In a separator of the class described, the combination with an inclined air passage or conduit adapted to receive a stream of pulverized ore, of rotating amalgamating-cylinders forming portions of the opposite walls of said conduit, means for continuously supplying mercury to the surfaces of said cylinders, and a blast-fan or the like located at one end of the conduit for creating an air-current therethrough, substantially as described.

6. In a separator of the class described, the combination with a suitable frame or casing, of removable sections supported therein and having cooperating concaves and cylinders to form an inclined air passage or conduit, said cylinders having mercury-coated surfaces, and a blast-fan or the like for creating a current of air through said conduit, substantially as described.

7. In a separator of the class described, the combination, with an air passage or conduit, of a rotating cylinder forming a portion of the wall thereof, a mercury-trough in which said cylinder runs, said trough having its entrance margin located immediately adjacent to the surface of the cylinder, and a roller located in the trough and bearing upon the cylinder immediately adjacent to the entrance margin of the trough, substantially as described.

8. In a separator of the class described, the combination, with a rotating cylinder and a mercury-trough having its entrance margin close to the surface of the cylinder above the level of the mercury, of an air-inlet nozzle located in one side of the trough at one end of the space thus formed, a source of supply of air under pressure connected with said nozzle, and an air-outlet in the other side of the trough at the other end of said space, substantially as described.

9. In a separator of the class described, the combination, with a mercury-coated revolving cylinder and a cooperating concave forming an air-passage, of deflecting or baffle plates extending from the concave into said air-passage in the direction of the air-current, substantially as described.

10. In a separator of the class described, the combination, with an ore-conduit and means for passing ore therethrough, of an amalgamating-cylinder located in said conduit and provided with a covering of wire gauze or netting contacting the cylinder-surface, and means for continuously supplying a coating of mercury to said cylinder, substantially as described.

11. In a separator of the class described, the combination with an ore-conduit and means for passing ore therethrough, of an amalgamating-cylinder rotatably mounted in said conduit and provided with a removable covering of wire gauze or netting contacting the surface of the cylinder, and means for continuously supplying a coating of mercury to said cylinder, substantially as described.

12. In a separator of the class described, the combination with an ore-conduit and means for passing ore therethrough, of an amalgamating-cylinder rotatably mounted in said conduit and provided with a peripheral surface of copper, and a removable covering of copper wire gauze or netting contacting the surface of the cylinder, and means for continuously supplying a coating of mercury to said cylinder, substantially as described.

13. In a separator of the class described, the combination, with an air passage or conduit, of a rotating cylinder forming a portion of the wall thereof and provided with a removable covering of copper wire gauze or netting adapted to form a series of mercury-retaining pockets, and means for continuously supplying a coating of mercury to said cylinder, substantially as described.

14. In a separator of the class described, the combination, with an upright air passage or conduit, portions of the walls whereof are formed by moving mercury-coated surfaces, said passage or conduit being provided with a trapped portion near its lower outlet end, of means for continuously supplying mercury to said moving surfaces, and means for blowing the material to be operated upon through said passage, substantially as described.

15. In a separator of the class described, the combination, with an upright air passage or conduit, portions of the walls whereof are formed by moving surfaces, the said passage or conduit being provided with a trapped portion near its lower outlet end, of means for continuously supplying mercury to said moving surfaces, and means for blowing the material to be operated upon through said passage or conduit, substantially as described.

serial to be operated upon through said passage or conduit, substantially as described.

702,991. COVERING FOR HEAT-DISTRIBUTING MAINS. WILLIAM E. FRANK, Chicago, Ill. Filed Jan. 22, 1902. Serial No. 80,904. (No model.)

Claim.—1. In a covering for heat-distributing mains, the combination with a horizontal base, of vertical side walls resting upon said base, an arched cover supported by said side walls, a lining of asbestos on the inner surface of said side walls and cover, and a sheet-metal covering on the upper surface of said base and on the inner surface of said asbestos lining, substantially as described.

2. In a covering for heat-distributing mains, the combination with a horizontal base, of vertical side walls resting upon said base, an arched cover supported by said side walls, said base, side walls and cover comprising parallel sections, packing material interposed between said sections, a lining of asbestos on the inner surface of said side walls and cover, and a sheet-metal covering on the upper surface of said base and on the inner surface of said asbestos lining, substantially as described.

3. In a covering for heat-distributing mains, the combination with a horizontal base, of vertical side walls resting upon said base, an arched cover supported by said side walls, said base, side walls and cover comprising parallel sections, packing material interposed between said sections, strengthening-strips engaging the adjacent surfaces of said base and side walls, a lining of asbestos on the inner surface of said side walls and cover, and a sheet-metal covering extended from said strengthening-strips around the inner surface of said asbestos lining, substantially as described.

4. In a covering for heat-distributing mains, the combination with a horizontal base, of vertical side walls resting upon said base, an arched cover supported by said side walls, strengthening-strips engaging the adjacent surfaces of said base and side walls, a wear-plate resting upon said base and engaging at its sides said strengthening-strips, and rollers for supporting said main mounted upon said wear-plate.

702,992. BICYCLE. PHIL PHOEN, Lena, Wis. Filed June 22, 1900. Serial No. 722,102. (No model.)

Claim.—In a bicycle, the combination with a crank-hanger, a central post secured thereto and a rear fork pivotally connected with the upper end of the central post, of rear stays, each secured at one end to the crank-hanger and at the other end to the rear fork, each of said stays comprising two aligned tubular sections screw-threaded internally at their inner ends, two screws entering the respective tubular sections, a cylindrical head from which said screws project in opposite directions, said head having a diameter equal to that of the tubular sections and disposed between the ends of the latter, a sleeve insulating the cylindrical head and loosely embracing the adjacent ends of the tubular sections, a pin securing said tube to the cylindrical head, a rear wheel at the rear end of said sectional stays, a sprocket-wheel carried by said rear wheel, another sprocket-wheel mounted in the crank-hanger and a sprocket-chain connecting said sprocket-wheels.

702,993. BED-CASE. MARY FITZ, Chicago, Ill. Filed Feb. 14, 1901. Serial No. 47,500. (No model.)

Claim.—In a bed-case the combination of the separable side panels 15, 16, and separable end panels 17, 18, with a separable bottom, a separable top 10, vertically-extending confining-rods 7, engaging with the

panels, bottom and top for detachably connecting them together and supports 8, substantially as specified.

702,994. APPARATUS FOR COOLING AND AGITATING AIR. EDWIN F. POORE, Boston, Mass., assignor to the Ray State Electric Heat & Light Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 20, 1907. Serial No. 602,542. (No model.)

Claim.—1. In an apparatus of the class described, a rotatable fan for creating a current of air and having passages leading through the same, a receiver for containing a cooling medium, a chamber leading from said receiver and connected with the passages in said fan, a chamber leading to said receiver and connected with the passages in said fan, and means for forcing the cooling medium through the passages of the fan, the chambers and the receiver.

2. In an apparatus of the class described, a rotatable fan for creating a current of air, and having passages leading through the same, a receiver for containing a cooling medium, a chamber leading from said receiver and connected with the passages in said fan, a chamber leading to said receiver and connected with the passages of said fan, and a pump located in one of said chambers for forcing the cooling medium through the passages of the fan, the chambers and the receptacle.

702,995. CHURN. JAMES W. POWELL, Chertsey, Kans. Filed Nov. 30, 1901. Serial No. 54,178. (No model.)

Claim.—1. In a churn, the combination with an oscillating body, having an opening in the top thereof, of a registering member extending through said opening to form flanges above and below the top, and a detachable cap overlying the exterior flange and covering the opening; substantially as described.

2. In a churn, the combination with a body having a relatively large opening therein, a cover for said opening having a relatively small registering opening, a central member extending through the opening above and below the cover, and a detachable strain-cap removably seated upon the exteriorly-extended portion of the central member; substantially as described.

3. In a churn of the character described, the combination with the body having portions forming fixed abutments, of a pair of grids or rifles contained therein, said rifles each bearing at one end against a fixed abutment in the churn-body, and converging toward a common point, and a removable key interposed between the adjacent ends of said rifles to force them into holding engagement with their respective abutments, substantially as described.

4. In a churn of the class described, the combination with the body, of a pair of grids or rifles contained therein, said rifles being inclined so as to bear against the opposite ends of the churn-body at the top, and to converge toward the middle of the churn at the bottom, a removable key interposed between the lower adjacent ends of said rifles and means for securing the key and rifles in such relation, substantially as described.

5. In a churn of the class described, the combination with a body having an opening in the top thereof, a pair of rifles within the body converging from the ends thereof toward a point below the opening and means for retaining the rifles in place removably interposed between the adjacent ends of said rifles, whereby said parts may be removed through said opening; substantially as described.

702,996. ALLOY. WLADISLAW FRANKOWSKI, Schodau, Austria-Hungary. Filed Dec. 5, 1901. Serial No. 54,317. (No specimen.)

Claim.—1. The process of producing alloys containing two or more metals of the iron group, which consists in alloying one atomic weight of aluminum with two atomic weights of any two of said metals, for the purpose set forth.

2. The process of producing alloys containing iron, nickel and aluminum, which consists in alloying two atomic weights of said elements of the iron group with one atomic weight of aluminum, for the purpose set forth.

3. The process of producing alloys of iron, nickel and aluminum, which consists in alloying two atomic weights of the said metals of the iron group with one atomic weight of aluminum to produce an alloy $\text{Ni}_2\text{Al}_2\text{Fe}_2\text{Al}$.

4. The process of producing alloys containing two or more metals of the iron group, which consists in alloying one atomic weight of aluminum with two atomic weights of any two of said metals and adding thereto another metal capable of hardening the alloy, for the purpose set forth.

5. The process of producing alloys containing iron, nickel and aluminum, which consists in alloying two atomic weights of said elements of the iron group with one atomic weight of aluminum and adding thereto a metal of the chromium group, for the purpose set forth.

6. The process of producing alloys of iron, nickel and aluminum, which consists in alloying two atomic weights of the said metals of the iron group with one atomic weight of aluminum to produce an alloy $\text{Ni}_2\text{Al}_2\text{Fe}_2\text{Al}$ and adding thereto a metal of the chromium group, for the purpose set forth.

7. An alloy containing one atomic weight of aluminum, combined with two atomic weights of two metals of the iron group, substantially as and for the purpose set forth.

8. An alloy containing one atomic weight of aluminum, combined with two atomic weights of two metals of the iron group, and another metal capable of hardening the alloy, substantially as and for the purpose set forth.

9. An alloy containing one atomic weight of aluminum, combined with two atomic weights of two metals of the iron group and a metal of the chromium group, substantially as and for the purpose set forth.

10. An alloy containing substantially of $\text{Fe}_2\text{Al}_2\text{Ni}_2\text{Al}$.

702,997. SURGICAL DRESSING-PACKER. JAMES H. POSE, Indianapolis, Ind., assignor to Wm. H. Armstrong & Co., Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 2, 1900. Serial No. 50,000. (No model.)

Claim.—1. A surgical instrument, consisting of a main barrel having an opening leading into the side thereof, a pin 11 projecting from the forward end of said main barrel, a cannula having a rear end adapted to receive the forward end of said main barrel, and having a bayonet-clip formed therein and adapted to receive said pin, a pair of finger-eyes carried by said barrel back of said opening, and a stylus, having a finger-eye at its rear end, adapted to be reciprocated within the main barrel and cannula.

2. A surgical instrument, consisting of the following parts: a cannula adapted to receive an obturator fitted to said cannula and having means for detachably engaging the cannula, a main barrel having an opening leading into its side, means carried by the main barrel and the cannula for detachable connection, holding means carried by the main barrel, and a stylus adapted to reciprocate within the main barrel and cannula.

3. A main barrel for surgical instruments, consisting of an open-ended tubular body having an opening leading into the side thereof, means carried by the forward end of said body for the readily-detachable reception of the rear end of a cannula, and means secured to the body to the rear of the opening whereby the body may be held by the fingers of one hand.

4. A main barrel for surgical instruments consisting of a tubular body having an opening leading into its side, means carried by the forward end of said body for the reception of the rear end of a cannula, means for holding the body secured to the rear of the opening, and a banding detachably secured to the rear end of the body, whereby the opening in the rear end of the body is reduced in size and the parts may be separated for cleaning.

702,998. COMBINED SCRUB-BRUSH AND MOP-HOLDER. JAMES S. RAFFERTY, Larchmont, Ohio. Filed Nov. 30, 1901. Serial No. 54,178. (No model.)

Claim.—1. The combination of a brush having apertured brackets held upon the opposite ends thereof, the central portion of the brackets being arranged in a semicircular form, rods connected to the said brackets and having their ends secured in the said apertures, a centrally-arranged bracket secured to the brush and having a semicircular extension formed thereon, a handle projecting from the said bracket, a brace-rod connecting the said end brackets, and centrally-arranged bracket and a mop carried by the rods that are secured to the semicircular portion of the brackets, substantially as shown and described.

2. As a new article of manufacture, a combined scrubbing-brush and mop, the latter comprising brackets having supporting-rods connected thereto, and a mop carried by the supporting-rods, and a central bracket having a handle projecting therefrom, and a brace-rod connecting the said brackets, substantially as shown and described.

3. In a device of the kind described, the combination of a brush, having brackets secured thereto, rods connected to the brackets and forming supports for a mop, a brace-rod connecting the said brackets, and a handle projecting from one of the brackets, substantially as shown and described.

702,999. PORTABLE FIREPLACE AND CHIMNEY. HERMAN S. RICHARDS, Grandville, Ark. Filed Sept. 21, 1901. Serial No. 70,072. (No model.)

Claim.—1. A device of the class described comprising a base plate, inner and outer side and back plates spaced apart and secured together and to the base-plate, the side plates being provided at their front edges with inwardly-extending vertical flanges, top plates, and the approximately U-shaped joints provided at their side edges with longitudinal flanges fitted against the outer faces of the flanges of the side plates and secured to the same, substantially as described.

2. A device of the class described comprising the inner and outer side and back plates spaced apart, the base-plate connected with the inner plates and extending in advance of the same to form a hearth, the inner and outer top plates spaced apart and connected with the side and back plates, the inner and outer fire-extensions, the stove-top 31 located at a

point between the base and top plates and provided at its front with a depending hinged plate, an oven located above the stove-top 31 at one side of the device, and the narrow water-tanks located in the spaces between the side plates, substantially as described.

702,000. GOLF-BALL. FRANK H. RICHARDS, Hartford, Conn., assignor to The Kongsball Manufacturing Company, a Corporation of New Jersey. Filed Mar. 12, 1900. Serial No. 57,880. (No model.)

Claim.—1. In a playing-ball, a spherical shell consisting at least partially of gutta-percha and distended by plastic material injected thereinto; a layer of solid rubber intervening between said shell and said injected mass.

2. In a playing-ball, an embossed shell formed at least partially of gutta-percha and distended by a core of gutta-percha injected thereinto; a layer of laminated solid rubber intervening between said shell and said injected mass.

3. In a playing-ball, a shell formed of gutta-percha and distended by a gutta-percha core injected thereinto; a layer of solid rubber intervening between said shell and said injected mass; and a plug filling the injection-hole in the shell and rubber layer.

4. In a playing-ball, a seamless or continuous shell of gutta-percha distended by a mass of mobile solid material injected thereinto; a layer of laminated solid rubber intervening between said shell and said injected mass.

702,001. MACHINE FOR CROSS-WINDING SPOOLS CLOSED-COILED. BRUNO RITTER, Winterthur, Switzerland. Filed Apr. 24, 1901. Serial No. 57,901. (No model.)

Claim.—1. In machines for cross-winding spools, the winding-spindles, a common driving-shaft, a plurality of levers 5 pivotally supported on the common driving-shaft and each carrying one of the spindles, means for driving the common driving-shaft, and a plurality of detachable driving connections between the common driving-shaft and the spindles, said connections being mounted on the said levers, and means for throwing each set of connections out of operation to stop its winding-spindle independently of the other winding-spindles, substantially as described.

2. In combination, the winding-spindle, a pivoted lever carrying the same, a thread-guide 7 below the spindle and upon which said spindle runs, a driving-shaft upon which the lever is pivoted and detachable driving connections between said shaft and the spindle, said connections being mounted on the lever and controlled by the movement thereof.

3. In combination, a plurality of winding-spindles, a lever for each spindle, a common driving-shaft upon which the levers are pivotally supported, detachable driving connections between the said spindles and shaft, a reciprocating rail, a plurality of thread-guides secured to said rail, a cam at each end of the said rail reciprocating the said rail and means for rotating the said cam jointly at variable speeds, all substantially as described.

708,001.

708,002. DOVETAILING-MACHINE. JOE SAGAR and DONALD SAGAR, Haldimand, England. Filed Jan. 7, 1902. Serial No. 68,731. (No model.)

Claim.—1. In a dovetailing-machine, the combination, with a frame, a work-table supported by the frame, and means for moving the said work-table longitudinally step by step; of a revoluble cam *a*, a lever *y* pivoted to the said frame and operated in one direction by the said cam, a bracket *b* projecting from the frame, a bracket *g* slidable on the bracket *b*, a connecting-rod *z* between the bracket *g* and the lever *y*, and means for moving the said bracket *g* and lever *y* in the reverse direction automatically, substantially as set forth.

2. In a dovetailing-machine, the combination, with a frame, a rev-

oluble outer supported from the said frame, and means for reciprocating the said outer horizontally; of a revoluble cam *c*, a lever *u* operated in one direction by the said cam, a lever *v*, a pawl *w* pivoted to the lever *v*, a connecting-rod *u'* between the levers *u* and *v*, a ratchet-wheel *u''* journaled on the pivot of lever *v* and driven by the said pawl, means for moving the said lever in the reverse direction automatically, a work-table slidable in the said frame crosswise of the said outer, a screw for traversing the said work-table, driving connections between the said ratchet-wheel and screw, and a spacing-disk connected with the said screw and provided with a locking-bar, substantially as set forth.

708,008. VEHICLE-WHEEL. HARRY E. SCHMIDT, Memphis, Mo. Filed Nov. 5, 1901. Serial No. 30,908. (No model.)

Claim.—1. A vehicle-wheel comprising the hub and tire, and a plurality of segment-shaped wooden sections arranged upon the hub and held in place by means of the tire, radial projections extending from the hub, said projections being of different lengths, the opening edges of the sections being cut away to receive the longer projections, the central portions of each section being recessed to receive the shorter projections, substantially as described.

2. A vehicle-wheel comprising a hub having an integral flange or collar, a forward flange or collar, the segment-shaped sections arranged about the hub and held in place by means of a surrounding tire, the hub having a plurality of triangular-shaped projections and also a number of projections intermediate the triangular-shaped projections, the edges of the sections being cut away to receive the triangular-shaped projections, the central portion of each section being recessed to receive the intermediate projections of the hub, substantially as described.

3. A vehicle-wheel comprising a hub and tire, a plurality of segment-shaped wooden sections surrounding the hub and held in place by the tire, spokes or pins extending from the segment-sections into the hub, thereby securing said sections to the hub, as shown and described.

708,004. FIELD-TELEPHONE SET. LAWRENT SCHMIDT, Weehawken, N. J. Filed Aug. 3, 1901. Serial No. 71,300. (No model.)

Claim.—1. The combination with a telephone set of a box to receive and support the same, a cover for said box, and means carried by said cover to engage and hold the receiver when the cover is closed, substantially as shown and described.

2. The combination with a telephone set comprising a magneto-box with movable hook-switch, a transmitter, and a receiver adapted to engage said hook-switch, of a box to receive and support said instruments, a cover for said box, and a bar or block carried by said cover to engage and hold the receiver with the hook-switch open when the cover is closed, substantially as shown and described.

3. The combination with a telephone set comprising a magneto-box with movable hook-switch, a transmitter, and a receiver adapted to engage said hook-switch, of a box to receive and support said instruments, a bar or block fixed in said box to engage the receiver, a cover hinged to said box, and a bar or block carried by said cover to cooperate with the first-named bar or block and hold the receiver with the hook-switch open when the cover is closed, substantially as shown and described.

4. The combination with a telephone set comprising a magneto-box, a receiver and a movable switch, of a box to receive and support the same, a cover for said box, and means carried by said cover to hold the receiver and to hold said switch open, substantially as shown and described.

708,005. JAR-CLOSURE. ALBERT E. GUNDEL, New York, N. Y. Filed Mar. 4, 1902. Serial No. 70,240. (No model.)

Claim.—The combination with the neck of a jar or vessel provided with an interior annular shoulder, of a cover provided with an annular bearing adapted to rest on the said interior shoulder, and a screw-threaded exterior portion spaced from the interior of the vessel, the said cover having its upper portion formed hollow and its outer wall spaced from the interior wall of the neck and its lower portion extending below the said annular bearing and a body of sealing material molded between the exterior screw-threaded portion of the cover and the interior of the neck, substantially as set forth.

708,006. BUT-AIR FURNACE. FREDERICK SCHLANGE, St. Louis, Mo. Filed Jan. 15, 1902. Serial No. 68,344. (No model.)

Claim.—1. In a hot-air furnace, a hot-air fire, a rotatable damper located therein, a water-pipe leading thereto and discharging into the same at a point above the damper, a valve in said pipe, and connections between the damper and valve for controlling the latter with the manipulation of the former, substantially as set forth.

2. In a hot-air furnace, a hot-air fire, a damper located therein, a water-tank located on top of the furnace, a pipe leading from the tank into the fire above the damper, a cap at the terminal of the water-pipe within the fire, an check-valve within the cap, and means for regulating the flow of water through the pipe, substantially as set forth.

708,007. PHOTOGRAPHIC CURTAIN-SHUTTER. RICHARD SCHULTZ, Jena, Germany, assignor to The Fern Opt. Soc., Jena, Germany. Filed Sept. 8, 1901. Serial No. 74,100. (No model.)

Claim.—1. In a roller-blind shutter having an adjustable aperture the combination with a single blind having two openings, of a setting-roller, to which the blind is shiftably attached by a point between the openings, exposure-recesses for both ends of the blind, means for rotating the setting-roller so as to wind up the blind, means for catching the setting-roller after the blind has been wound up, a spring action for rotating the exposure-recesses when the blind is released, and means for shifting the blind, essentially as described.

2. In a roller-blind shutter having an adjustable aperture the combination with a single blind having two openings, of a setting-roller to which the blind is shiftably attached by a point between the openings, two exposure-recesses one for each end of the blind, means for rotating the setting-roller so as to wind up the blind, means for catching the setting-roller, a spring for rotating one exposure-recess, a handle for rotating the other exposure-recess, and means for connecting and disconnecting both rollers, essentially as described.

708,008. IDENTIFICATION-TAG. CALVIN SCOTT, Myrtlebe, Mo. Filed Dec. 24, 1901. Serial No. 27,629. (No model.)

Claim.—An identification strip or tag for poultry, live stock, &c., comprising a piece of metal, having one end hollow and provided with an interior flange, a headed pin mounted on the other end of said strip, a disk having flexible wings mounted on said pin, said disk adapted to be inserted in the hollow end of the strip, and the wings to engage said flange, as set forth.

708,009. CLOTHES-WRINGER. CHARLES F. BRADLEY, Columbus, Ohio, assignor to William D. Summors, Columbus, Ohio. Filed Oct. 11, 1900. Serial No. 22,060. (No model.)

Claim.—In a wringer, the combination with the upper and lower rolls 1 and 2, roll-shafts 3 and 4 and angular clamping-levers 5 on said shaft 4, of an operating-lever 6 pivoted on the spindle portions of the shaft 2, clamping-arms 10 pivotally connected with the upper arms of the clamping-levers 5 and springs 15 having their upper and forward ends pivoted on said operating-lever at points above the shaft 3 and having their rear and lower ends rigidly connected with said clamping-arms 10, substantially as specified.

708,010. MOTO-CYCLE-PUMP. DE WANE S. SMITH, Dorchester, N. Y. Filed May 11, 1900. Serial No. 714,000. (No model.)

Claim.—1. The combination in a bicycle-pump of a cylinder, a foot or stirrup at the lower end of the cylinder, a plunger and operating-handle at the upper end of the cylinder, and a tube projecting laterally from the upper portion of the pump having an upwardly-opening end and a cushion the connection held and supported by said projecting tube, substantially as set forth.

2. The combination with a portable bicycle-pump having a foot stirrup or rest at its lower end, of an upwardly-opening cushion the connection supported by the pump and arranged to operate substantially as set forth.

708,001.

708,002. DOVERTAILING-MACHINE. JOE SAGAR and DONALD SAGAR, Haver, England. Filed Jan. 7, 1902. Serial No. 98,721. (No model.)

Claim.—1. In a dovertailing-machine, the combination, with a frame, a work-table supported by the frame, and means for moving the said work-table longitudinally step by step; of a reversible cam *a*, a lever *y* pivoted to the said frame and operated in one direction by the said cam, a bracket *g* projecting from the frame, a bracket *h* slidable on the bracket *g* and overlying the work-table, a reversible cam *z* carried by the bracket *h*, a connecting-rod *s* between the bracket *g* and the lever *y*, and means for moving the said bracket *g* and lever *y* in the reverse direction automatically, substantially as set forth.

2. In a dovertailing-machine, the combination, with a frame, a

slidable cutter supported from the said frame, and means for reciprocating the said cutter horizontally; of a reversible cam *f*, a lever *x* operated in one direction by the said cam, a pawl *w* pivoted to the lever *x*, a connecting-rod *u* between the lever *x* and *w*, a ratchet-wheel *v* journaled on the pivot of lever *w* and driven by the said pawl, means for moving the said lever in the reverse direction automatically, a work-table slidable in the said frame overwise of the said cutter, a screw for traversing the said work-table, driving connections between the said ratchet-wheel and screw, and a spring-disk connected with the said screw and provided with a locking-bar, substantially as set forth.

708,008. VEHICLE-WHEEL. HENRY E. SUMNER, Memphis, Mo. Filed Nov. 2, 1901. Serial No. 59,962. (No model.)

Claim.—1. A vehicle-wheel comprising a hub and tire, and a plurality of segment-shaped wooden sections arranged upon the hub and held in place by means of the tire, radial projections extending from the hub, said projections being of different lengths, the opposing edges of the sections being cut away to receive the longer projections, the central portions of each section being recessed to receive the shorter projections, substantially as described.

2. A vehicle-wheel comprising a hub having an integral flange or collar, a forward flange or collar, the segmental wooden sections arranged about the hub and held in place by means of a surrounding tire, the hub having a plurality of triangular-shaped projections, the edges of the sections being cut away to receive the triangular-shaped projections, the central portions of each section being recessed to receive the intermediate projections of the hub, substantially as described.

3. A vehicle-wheel comprising a hub and tire, a plurality of segment-shaped wooden sections surrounding the hub and held in place by the tire, spokes or pins extending from the segment-sections into the hub, thereby securing said sections to the hub, as shown and described.

708,004. FIELD-TELEPHONE SET. LAWRENCE SUMNER, Westport, N. J. Filed Aug. 4, 1901. Serial No. 71,908. (No model.)

Claim.—1. The combination with a telephone set of a box to receive and support the same, a cover for said box, and means carried by said cover to engage and hold the receiver when the cover is closed, substantially as shown and described.

2. The combination with a telephone set comprising a magneto-box with movable hook-switch, a transmitter, and a receiver adapted to engage said hook-switch, of a box to receive and support said instruments, a cover for said box, and a bar or block carried by said cover to engage and hold the receiver with the hook-switch open when the cover is closed, substantially as shown and described.

3. The combination with a telephone set comprising a magneto-box with movable hook-switch, a transmitter, and a receiver adapted to engage said hook-switch, of a box to receive and support said instruments, a bar or block fixed in said box to engage the receiver, a cover hinged to said box, and a bar or block carried by said cover to cooperate with the first-named bar or block and hold the receiver with the hook-switch open when the cover is closed, substantially as shown and described.

4. The combination with a telephone set comprising a magneto-box, a receiver and a movable switch, of a box to receive and support the same, a cover for said box, and means carried by said cover to hold the receiver and to hold said switch open, substantially as shown and described.

708,005. JAR-CLOSURE. ALBERT E. GUNTER, New York, N. Y. Filed Mar. 4, 1902. Serial No. 70,045. (No model.)

Claim.—The combination with the neck of a jar or vessel provided with an interior annular shoulder, of a cover provided with an annular bearing adapted to rest on the said interior shoulder, and a screw-threaded exterior portion spaced from the interior of the vessel, the said cover having its upper portion formed hollow and its outer wall spaced from the interior wall of the neck and its lower portion extending below the said annular bearing and a body of sealing material molded between the exterior screw-threaded portion of the cover and the interior of the neck, substantially as set forth.

708,006. STAIR-POURER. FREDERICK SCHMIDT, St. Louis, Mo. Filed Jan. 12, 1902. Serial No. 98,944. (No model.)

Claim.—1. In a hot-air furnace, a hot-air flue, a rotatable damper located therein, a water-pipe leading thereto and discharging into the same at a point above the damper, a valve in said pipe, and connections between the damper and valve for controlling the latter with the manipulation of the furnace, substantially as set forth.

2. In a hot-air furnace, a hot-air flue, a damper located therein, a water-trap located on top of the furnace, a pipe leading from the trap into the flue above said damper, a cup at the terminal of the water-pipe within the flue, an chamber within the cup, and means for regulating the flow of water through the pipe, substantially as set forth.

708,007. PHOTOGRAPHIC CAMERA-SHUTTER. HERMAN SCHMIDT, St. Louis, Mo. Filed Sept. 3, 1901. Serial No. 74,763. (No model.)

Claim.—1. In a roller-blind shutter having an adjustable aperture the combination with a single blind having two openings, of a cutting-roller, to which the blind is adjustably attached by a point between the openings, exposure-rollers for both ends of the blind, means for rotating the cutting-roller so as to wind up the blind, means for catching the cutting-roller after the blind has been wound up, a spring action for rotating the exposure-rollers when the blind is released, and means for shifting the blind, essentially as described.

2. In a roller-blind shutter having an adjustable aperture the combination with a single blind having two openings, of a cutting-roller to which the blind is adjustably attached by a point between the openings, two exposure-rollers one for each end of the blind, means for rotating the cutting-roller so as to wind up the blind, means for catching the cutting-roller, a spring for rotating one exposure-roller, a handle for rotating the other exposure-roller, and means for connecting and disconnecting both rollers, essentially as described.

708,008. IDENTIFICATION-TAG. CALVIN SMITH, Hixson, Mo. Filed Mar. 26, 1901. Serial No. 57,622. (No model.)

Claim.—An identification strip or tag for poultry, live stock, &c., comprising a piece of metal, having one end hollow and provided with an interior flange, a headed pin mounted on the other end of said strip, a disk having flexible wings mounted on said pin, said disk adapted to be inserted in the hollow end of the strip, and the wings to engage said flange, as set forth.

708,009. CLOTHING-WRINGER. CHARLES F. SHAMLEN, Columbus, Ohio, assignor to WILLIAM D. SHAMLEN, Columbus, Ohio. Filed Oct. 11, 1902. Serial No. 22,698. (No model.)

Claim.—In a wringer, the combination with the upper and lower rolls 1 and 2, roll-shafts 3 and 4 and angular clamping-levers 5 on said shaft 4, of an operating-lever 6 pivoted on the spindle portions of the shaft 2, clamping-arms 13 pivotally connected with the upper arms of the clamping-levers 5 and springs 15 having their upper and forward ends pivoted on said operating-lever at points above the shaft 3 and having their rear and lower ends rigidly connected with said clamping-arms 13, substantially as specified.

708,010. RECTO-PUMP. DE WANE S. SMITH, Portland, N. Y. Filed May 11, 1902. Serial No. 71,425. (No model.)

Claim.—1. The combination in a bicycle-pump of a cylinder, a foot or stirrup at the lower end of the cylinder, a plunger and operating-handle at the upper end of the cylinder, and a tube projecting laterally from the upper portion of the pump having an upward-opening end and a cushion the connection held and supported by said projecting tube, substantially as set forth.

2. The combination with a portable bicycle-pump having a foot stirrup or rest at its lower end, of an upward-opening cushion the connection supported by the pump and arranged to operate substantially as set forth.

3. The combination with a cylinder bicycle-pump having a stirrup at its lower end and a plunger of a tube connected with the cylinder and having an upwardly-opening end located out of the axial line of the cylinder and provided with a cushion tire connection, and means for supporting said tire connection with continuous pressure in engagement with a bicycle-tire nipple or other object to be inflated, substantially as set forth.

4. The combination with a bicycle-pump having a cylinder and plunger of a foot adapted to support the pump, and an upwardly-opening tube connected with the cylinder and provided with a cushion tire connection, and means for supporting the cushion connection in raising pressure applied from above to the cushion connection, substantially as set forth.

5. A bicycle-pump comprising a cylinder and a piston member, a base to which one of said members is secured, and an air-discharge pipe leading from the cylinder member having upwardly-tapered valve-engaging end fixed relative to and above the base in a position to be engaged with the downwardly-extending nipple of a tire turned into a position where the nipple will depend from the wheel top.

708,011. STAMP. BRATHAN H. SMITH, Orem City, U. S. Filed Mar. 2, 1902. Serial No. 94,399. (No model.)

Claim.—A stamp comprising a frame, type carried thereby, a pad of greater area than the area of the type, side members at opposite ends of said pad, a hinged and freely-sliding connection between said side members and said frame, and an operating-lever for said pad.

708,012. MACHINE FOR SCARPING LEATHER. FRED SCHMIDT, Chicago, Ill., assignor of one-half to Bernard F. Horsting, Chicago, Ill. Filed Jan. 26, 1901. Serial No. 45,395. (No model.)

Claim.—1. The combination of cutting means, upper and lower feed-rolls, and a guide and gage, said upper roll having a groove engaged by an upwardly-extending flange or web on said guide and gage, substantially as described.

2. A scarping-machine comprising a knife, upper and lower feed-rolls, each roll being supported by a vertically-adjustable frame or supporting-bracket, each vertically-adjustable frame or bracket being carried by a laterally or sidewise adjustable frame or carrier, and the two laterally-adjustable frames or carriers being mounted upon a support or carrier which is adjustable in a direction to move the rolls toward and away from said knife, substantially as described.

3. A scarping-machine comprising a knife, feed-rolls mounted upon adjustable supports, said supports being carried by a horizontally-acting

ing support whereby the rolls can be swung toward and away from the knife and about a vertical axis, substantially as described.

4. A scarping-machine comprising a knife, upper and lower feed-rolls, tilting frames upon which said rolls are mounted, the axis of each roll being at right angles to the tilting axis of the frame upon which each roll is mounted, substantially as described.

5. A scarping-machine comprising a cutting device, a pair of feed-rolls arranged to feed the leather to said cutting device, each roll being mounted upon a tilting frame, the axes of said frames being located at opposite ends of said rolls.

6. A scarping-machine comprising an annular knife mounted for rotation, feeding-rolls arranged to feed the leather to said knife and adapted to temporarily shape the same with reference to the curvature of said knife, movable supports for said rolls, a gage and guiding device arranged to cooperate with said rolls in properly presenting the leather to said knife, and springs adapted and applied to said supports for holding the rolls in contact with the surface of said leather.

7. A scarping-machine comprising rotary cutting means, feed-rolls arranged to feed the leather to said knife, each roll being mounted upon a tilting frame, the axes of said tilting frames being arranged at opposite ends of said rolls, springs applied to said tilting frames in such manner as to hold the rolls in contact with the leather, said frames being mounted upon movable supports, substantially as described.

8. A scarping-machine comprising a rotary knife, feed-rolls for feeding the leather to said knife, each roll being supported by a vertically-adjustable frame, horizontally and transversely movable or adjustable uprights or standards for supporting said frames, and a horizontally and longitudinally adjustable support for said standards or uprights, substantially as described.

9. A scarping-machine comprising a rotary knife, a pair of feed-rolls, each roll being mounted upon a tilting frame, springs applied to said frames in such manner as to hold the rolls in contact with the leather, adjustable stops for limiting the movement of the rolls toward each other, a gaging and guiding device mounted upon the lower tilting frame, a gage or guide on the upper tilting frame, and means whereby said rolls can be adjusted in direction both transverse and parallel to the axis of said knife.

10. A scarping-machine comprising a rotary knife, feed-rolls adjustable in direction both transverse and parallel to the axis of said knife, and shafts provided with telescoping and universal joints and connected with said rolls, substantially as described.

11. A scarping-machine comprising a hollow cylinder mounted for rotation and provided at its forward end with a cutting edge, a stationary cylinder supported within said rotary cylinder, feed-rolls, and adjusting mechanism for adjusting the rolls relatively to the knife, substantially as described.

12. A scarping-machine comprising a rotary cylinder provided at one end with an annular knife adapted for scarping leather, adjustably-mounted rolls D and D' arranged for presenting the leather to the knife and cooperating therewith to permit the knife to scarf the leather, a stationary guideway arranged within the rotary cylinder, and a conveyor

arranged to take the shavings from the knife and carry them back along the stationary guideway.

13. A scarping-machine comprising a rotary cylinder provided at one end with an annular knife adapted for scarping leather, adjustably-mounted rolls D and D' arranged for presenting the leather to the knife and cooperating therewith to permit the knife to scarf the leather, a stationary cylinder arranged within the rotary cylinder, and a conveyor arranged to take the shavings from the knife and carry them through the stationary cylinder.

14. A scarping-machine for scarping leather, comprising a horizontally-disposed cylinder mounted in suitable bearings and adapted for rotation, means for rotating said cylinder, an annular knife in the form of a ring having one edge sharpened and the opposite side or edge adapted for attachment to the forward end of said rotary cylinder, a stationary cylinder arranged within the said rotary cylinder and serving as a guideway for the shavings, upper and lower feed-rolls adapted for presenting the side edge of a belt end to said knife, and a conveyor adapted and arranged to take the shavings from said knife and convey the same through the said stationary cylinder, substantially as described.

15. A belt-scarping machine adapted for thinning down or scarfing off the lapping and portions of belting, comprising a horizontally-disposed rotary cylinder, an annular knife in the form of a ring having one edge sharpened and the opposite edge or side adapted for attachment to the end of said rotary cylinder, a stationary guideway extending through said cylinder and adapted to serve as a guide for the shavings, and a horizontally-disposed belt conveyor having its lower end arranged in the said guideway, the lower end of the belt thereby being capable of taking the shavings from the knife and sliding or moving the same along the guideway to the discharge end of the latter, and suitable rolls for presenting the belting to the said knife, substantially as described.

16. In a machine for thinning down or scarfing off the end portions of belting, the combination of a rotary cylinder provided at one end with an annular knife, a stationary and horizontally-disposed guideway arranged within said cylinder, means for presenting the belting to said knife, and a horizontally-disposed belt conveyor adapted and arranged to have its lower end in the said guideway, the lower end of the belt thereby being capable of taking the shavings from the knife and sliding or moving the same along the guideway to the discharge end of the latter, substantially as described.

17. In a machine for thinning down or scarfing off the lapping and portions of belting, the combination of a horizontally-disposed rotary cylinder, an annular knife secured to one end of said cylinder, a convex upper feed-roll and a concave lower feed-roll arranged in position to feed the belting to the bottom of said knife, a stationary guideway arranged within said cylinder, and a conveyor arranged within the bottom of said guideway and adapted to receive the shavings from the bottom of the knife and slide or move the same along the said guideway to the discharge end of the latter, substantially as described.

18. A machine for thinning down or scarfing off the lapping and portions of belting, comprising a horizontally-disposed rotary cylinder, an annular knife in the form of a ring having its outer edge sharpened and its inner edge or side adapted for attachment to the end of said rotary cylinder, an upper convex feed-roll and a lower concave feed-roll tilted sidewise and arranged to present or feed the leather belting to the bottom of said knife, a vertically and longitudinally adjustable structure for supporting said rolls, a stationary guideway arranged to extend through the said rotary cylinder, and a belt conveyor having its lower end arranged in the said guideway, substantially as set forth for the purpose set forth.

19. In a machine for scarfing or thinning down the lapping and portions of belting, the combination of a horizontally-disposed rotary cylinder, an annular knife in the form of a ring having its outer edge or side sharpened and its inner edge or side adapted to be secured to the end of said rotary cylinder, a stationary cylinder arranged concentrically within the said rotary cylinder and having in and which is adjacent to said knife supported by a ball-bearing, relatively and adjustably feed-rolls arranged to present or feed the leather to the edge of said knife, and a conveyor adapted and arranged to take the shavings from said knife and slide or move the same along the inner surface of said stationary cylinder, substantially as described.

20. In a machine for scarfing or thinning down the lapping and portions of belting, the combination of a rotary cylinder having one end provided with an annular knife, a stationary cylinder forming a guideway for the shavings, a conveyor arranged within said cylinder, upper and lower feed-rolls arranged in position the leather belting to said knife, pivotally and bodily adjustable structures or supporting members upon which said rolls are mounted and adjustably supported, hand-covers for adjusting the adjustable members of said supporting members, springs for holding said rolls together, the said rolls being normally tilted to one side, so as to properly present the side edge of the belt end to said knife, and a belt-pulley mounted on said rotary cylinder, substantially as described.

708,018. ENGINE FOR MOLDING-MACHINES. LEONARD S. BULLER, Philadelphia, Pa. Filed May 14, 1901. Serial No. 69,146. (No model.)

Claim.—1. In a reciprocating power mechanism adapted for molding or other work, the combination of a suspended supporting-frame, an engine pivoted in said frame and carried upon horizontal journals so as to be completely reversible, and a locking mechanism for supporting the engine in its reversed and different positions consisting of a circular frame having bolts arranged above and below the horizontal journals and a locking-pin adapted to said bolts one of said parts being secured to the engine and the other to the suspended supporting-frame.

2. In a reciprocating power mechanism adapted for molding or other work, the combination of a supporting-frame, a reversible engine pivoted in said frame upon horizontal journals, intermediate of its ends, and handles for guiding the engine blinged to each end of the engine-cylinder so as to hold close up to the cylinder or hold projecting therefrom under the action of gravity whereby when the cylinder is adjusted to an upright position the upper handles extend laterally therefrom into position to be grasped.

3. In a machine for molding or operating a reciprocating tool, the combination of a suspended supporting-frame, a reversible cylinder journaled at its middle to said frame so as to be reversible and having stuffing-boxes at each end, a piston in said cylinder, piston-rods from said piston extending respectively through the stuffing-boxes to the outside of each end of the cylinder, locking means for locking the cylinder in its reversed positions upon the suspended supporting-frame, differently-shaped rams attached in each end of the projecting piston-rods, and suitable valve mechanism for causing the motive fluid to be alternately supplied to each end of the cylinder to reciprocate the piston.

4. In a reciprocating power mechanism adapted for molding or other work, the combination of a supporting-frame, a reversible cylinder journaled at its middle to said frame and having stuffing-boxes at each end, a piston in said cylinder, piston-rods from said piston extending respectively through the stuffing-boxes to the outside of each end of the cylinder, differently-shaped rams attached to each end of the projecting piston-rods, and suitable valve mechanism for causing the motive fluid to be alternately supplied to each end of the cylinder to reciprocate the piston consisting of normally gravity-actuated valve-pistons and ports communicating between a source of supply of motive fluid and the valve mechanism and cylinder whereby the valve-pistons normally assume position adapted to direct the motive fluid to the bottom of the cylinder and under the compression upon starting the machine.

5. In a reciprocating power mechanism adapted for molding or other work, the combination of a supporting-frame, an engine blinged at its middle to said frame and having a projecting piston-rod, and a locking device between the support and engine for locking the engine in various adjusted positions upon the support.

6. In a reciprocating power mechanism adapted for molding or other

work, the combination of a supporting-frame, an engine hinged at its mid-
dle in said frame so as to be completely reversible and having a project-
ing piston-rod; and a locking device between the support and engine for
locking the engine in its reversed and various adjusted positions upon the
support, and an adjustable passage-way for motive fluid from the support
to the engine in all of its adjusted positions.

7. In a reciprocating power mechanism adapted to molding or other
work, the combination of the engine proper having a reciprocating piston
and piston-rod, automatic valve devices for controlling the supply and ex-
haust of the motive fluid to and from said engine, and a controlling-valve in
the exhaust-part of the valve devices for adjustably throttling the exhaust
for changing the length, speed and power of the stroke of the reciprocating
piston and valve consisting of a valve-body having small exhaust
vents or apertures and a throttling-valve for the body for opening an ad-
ditional exhaust-vent through the body of adjustable size.

8. In a machine for molding, the combination of a universally-ad-
justable suspended engine having a reciprocating piston-rod, a belt-run
having a circular body and convex under or operating face, and a belt-
and-socket connection between the run and piston-rod whereby the run
is made to automatically adjust itself to the work when the position of
the piston-rod is not at right angles to the surface of the mold.

9. In a machine for molding, the combination of a universally-ad-
justable suspended engine having a reciprocating piston-rod, a belt-run,
and a belt-and-socket connection between the run and piston-rod whereby
the run is made to automatically adjust itself to the work when the position
of the piston-rod is not at right angles to the surface of the mold.

10. The engine-cylinder formed of the inner tubular cylinder having
grooves or channels cut longitudinally in its outer surface, combined with
an outer case or sleeve tightly driven over the inner tubular cylinder
whereby the grooves or channels form ports or passage-ways for the moti-
ve fluid and a strong tight construction of cylinder is secured.

11. In a reciprocating power mechanism adapted to molding or other
work, the cylinder having a reciprocating piston, combined with a re-
movable internally-recessed head, a piston-rod extending through the re-
cessed head, packing about the piston-rod in the recess, a gland con-
sisting of the piston-rod and fitting into the recess of the head from the inside
of the cylinder, and an annular screw-plug curved into the head to hold
the gland in place.

12. In a reciprocating power mechanism adapted to molding or other
work, the cylinder having a reciprocating piston, combined with a re-
movable internally-recessed head, a piston-rod extending through the re-
cessed head and having a flattened side, packing about the piston-rod in
the recess, a gland consisting of the piston-rod and fitting into the recess of
the head from the inside of the cylinder, an annular screw-plug curved into
the head to hold the gland in place, and locking device for preventing the gland
and screw-plug from turning.

13. In a reciprocating power mechanism adapted to molding or other
work, the cylinder having a reciprocating piston, combined with a re-
movable internally-recessed head, a piston-rod extending through the re-
cessed head and having a flattened side, packing about the piston-rod in
the recess, a gland consisting of the piston-rod and fitting into the recess of
the head from the inside of the cylinder, and also having a flattened por-
tion fitting to the piston-rod to prevent it from turning, an annular screw-
plug curved into the head to hold the gland in place, and a locking de-
vice for holding the gland against turning.

14. In a reciprocating power mechanism adapted to molding or other
work, the combination of a cylinder having ports leading from the mid-
dle part to the ends, a piston for the cylinder, a valve casing or jacket
forced upon the cylinder intermediate of its ends and having ports corre-
sponding with the ports in the cylinder, and valves in valve-chambers of
the jacket to control the supply of motive fluid to and from the cylinder.

15. In a reciprocating power mechanism adapted to molding or other
work, the combination of a cylinder having ports leading from the mid-
dle part to the ends, a piston for the cylinder, a valve casing or jacket
forced upon the cylinder intermediate of its ends and having ports corre-
sponding with the ports in the cylinder, and the flanged ends through
which the valve-chambers open, annular caps or heads secured upon the
flat flanged ends to make tight joints and isolate the valve-chambers, and
valves in the valve-chambers of the jacket to control the supply of moti-
ve fluid to and from the cylinder.

16. In a reciprocating power mechanism adapted to molding or other
work, the combination of the cylinder, a reciprocating piston therefor, a
main valve for controlling the supply of the motive fluid to the ends of the
cylinder alternately, and an auxiliary valve operated by the motive fluid
delivered by the main valve to control the exhaust of the motive fluid
from the end of the cylinder opposite to that being supplied by the main valve.

17. In a reciprocating power mechanism adapted to molding or other
work, the combination of the cylinder, a reciprocating piston therefor, a
main valve for controlling the supply of the motive fluid to the ends of

the cylinder alternately, ports connecting the cylinder respectively with
the ends of the main-valve chamber to supply motive fluid to operate the
valve when alternately exposed by the piston but otherwise adapted to
be sealed by the piston or alternately opened to the atmosphere by the
piston, and an auxiliary valve operated by the motive fluid delivered by
the main valve to control the exhaust of the motive fluid from the end of
the cylinder opposite to that being supplied by the main valve.

18. In a reciprocating engine for molding-machines, &c., the com-
bination of the cylinder, a reciprocating piston therefor, a main valve for
controlling the supply of the motive fluid to the ends of the cylinder al-
ternately, ports controlled by the reciprocating piston for controlling the
supply and exhaust of motive fluid to the main valve to move it, and an
auxiliary valve operated by the motive fluid delivered by the main valve
to control the exhaust of the motive fluid from the end of the cylinder op-
posite to that being supplied by the main valve.

19. In a reciprocating power mechanism adapted to molding or other
work, the combination of the cylinder, a reciprocating piston therefor, a
main valve for controlling the supply of the motive fluid to the ends of
the cylinder alternately, ports controlled by the reciprocating piston for
controlling the supply and exhaust of motive fluid to the main valve to
move it, an auxiliary valve operated by the motive fluid delivered by the
main valve to control the exhaust of the motive fluid from the end of the
cylinder opposite to that being supplied by the main valve, and an ad-
justable throttling-valve to control the freedom of the exhaust from the
auxiliary valve to control the speed, stroke and character of the reciprocation
of the piston.

20. In a reciprocating power mechanism adapted to molding or other
work, the combination of the cylinder, a reciprocating piston therefor, a
main valve for controlling the supply of the motive fluid to the ends of
the cylinder alternately, an auxiliary valve operated by the motive fluid
delivered by the main valve to control the exhaust of the motive fluid
from the end of the cylinder opposite to that being supplied by the main
valve, and exhaust-ports controlled by the main valve for exhausting the
motive fluid from the end of the auxiliary valve to secure its quick reciprocation
in timed relation to the movements of the main valve.

21. In a reciprocating power mechanism adapted to molding or other
work, the combination of the cylinder, a reciprocating piston therefor, a
main valve for controlling the supply of the motive fluid to the ends of
the cylinder alternately, ports connecting the cylinder respectively with
the end of the main-valve chamber to supply motive fluid to operate the
valve when alternately exposed by the piston but otherwise adapted
to be sealed by the piston or alternately opened to the atmosphere by the
piston, and an auxiliary valve operated by the motive fluid delivered by
the main valve to control the exhaust of the motive fluid from the end of
the main valve to control the exhaust of the motive fluid from the end of
the cylinder opposite to that being supplied by the main valve, and ex-
hausting-ports controlled by the main valve for exhausting the motive
fluid from the end of the auxiliary valve to secure its quick reciprocation
in timed relation to the movements of the main valve.

22. In a reciprocating power mechanism adapted to molding or other
work, the combination of the cylinder, a main valve to control the sup-
ply of motive fluid to each end of the cylinder, ports for supplying motive
fluid from the cylinder to the valve-chamber to operate the valve, and a
bellow piston having a port and acting to control the escape of motive
fluid from the ends of the valve-chamber alternately by permitting said
ends of the valve-chamber to exhaust into the piston.

23. In a reciprocating engine the combination of the cylinder, a main
valve to control the supply of motive fluid to each end of the cylinder,
ports for supplying motive fluid from the cylinder to the valve-chamber
to operate the valve, and a piston-rod and piston having a port and act-
ing to control the escape of motive fluid from the ends of the valve-cham-
ber alternately by permitting said ends of the valve-chamber to exhaust
into the piston and through the piston-rod into the atmosphere.

24. In a reciprocating engine the combination of the cylinder, a main
valve to control the supply of motive fluid to each end of the cylinder,
ports for supplying motive fluid from the cylinder to the valve-chamber
to operate the valve, and a piston-rod and piston having a port and act-
ing to control the escape of motive fluid from the ends of the valve-cham-
ber alternately by permitting said ends of the valve-chamber to exhaust
into the piston and through the piston-rod into the atmosphere, and an
auxiliary valve actuated by the motive fluid being supplied to the cylin-
der and controlled by the main valve to alternately exhaust from the two
ends of the cylinder.

708,014. ROYALTY ENGINE. JAMES W. STANLEY, KILMER, ILL.
Filed Dec. 3, 1891. Serial No. 84,701. (No model.)

Claim.—1. The combination in a rotary engine, of the cylinder hav-
ing circular openings in its opposite side walls, a piston having a body
portion of greater diameter than that of the circular openings and fitting
within the cylinder, said piston having reduced and laterally-extended end

portions adapted to fit within said openings, packing-rings carried by said
laterally-extended portions for contact with the walls of said openings, and
abutments carried by said piston, substantially as specified.

2. The combination in a rotary engine, of the cylinder having cir-
cular openings in its opposite side walls, a rotary piston having a body
portion of greater diameter than that of the circular openings and fitting
within the cylinder, said piston having reduced and laterally-extended por-
tions provided with annular grooves, wedge-shaped packing-rings adapt-
ed to said grooves and adapted to be forced by steam-pressure into con-
tact with the wall of the cylinder-openings, a shaft carrying the piston,
and abutments carried by said piston, substantially as specified.

3. The combination in a rotary engine, of a cylinder of substantially
circular form, a fixed abutment 30 arranged within the cylinder and pro-
jecting inwardly from the wall thereof, a curved rib 36 arranged centrally
between the side walls of the cylinder and having its greatest inward pro-
jection at the lower edge of the said fixed abutment and from thence gradu-
ally diminishing in curved lines to its opposite end, the circular wall of
the cylinder being provided with chambers or pockets 51 adjacent to the
ends of said rib, a steam-escape port formed within the abutment, a steam-
port arranged on each side of said abutment, a steam-chest with which
all of the ports communicate, a governing-valve in the steam-chest, a ro-
tary piston arranged for contact with the fixed abutment, and movable
abutments carried by said piston, substantially as specified.

4. In a rotary engine, the combination with a piston having mov-
able abutments, of a fixed abutment, a packing-strip adapted to a slot in
said fixed abutment, said packing-strip having at its opposite end laterally-
extended portions having curved or inclined faces for preliminary con-
tact with the piston-abutments, substantially as specified.

5. The combination in a rotary engine, of the cylinder comprising
a substantially circular body portion, a rotary piston mounted therein,
movable abutments carried by said piston and provided with ports or
passages for the admission of steam to the lower ends thereof, opposite
cylinder-heads formed of rings 7 secured to the cylinder, the centrally-
disposed circular openings of said rings being of a diameter less than that
of the piston, laterally-extended end portions projecting from the piston
and having bearing-supports in said rings, said portions being grooved,
angular packing-rings arranged in said grooves and adapted to be pressed
by the steam-pressure against the circular walls of the ring-openings,
stationary grooved caps carried by the rings at points outside the cylin-
der, rock-shafts carried by the piston on lines parallel with the axis of
rotation of said piston and extending out through the end portions of the
piston, stuffing-boxes for said rock-shafts, crank-arms on said rock-shafts,
pins or rollers carried by said crank-arms and adapted to the cam-grooves,
and links arranged within the piston and connected to the movable abut-
ments, substantially as specified.

708,015. RUT-LAGE. JAMES E. SWINDELL, PUNAMONA, PA.
Filed Mar. 14, 1898. Serial No. 5,199. (No model.)

Claim.—1. The combination with a belt, of a nut having a con-
cave depression in the face thereof adjacent to and opposite the point of
emergence of the belt-thread, the said depression having walls, which are
inclined laterally in the face of the nut, the belt-thread being depressed
laterally into said depression, whereby the nut is locked to the belt, and
whereby on the application of power to turn said nut, said belt-thread is
restored to its normal position by the inclined walls of the said depression
and the nut unlocked, substantially as described.

2. The combination of a belt and a nut thereon, the latter having
an offset engaging surface disposed at a lateral incline to its face but not
displacing or affecting the thread thereof and opposite the thread of the
belt, said belt-thread being offset laterally, in advance of said offset en-
gaging surface, and engaging the same, substantially as described.

708,016. VEHICLE-AXIS NUT. THOMAS H. YAM, PATERSON, N.J.
Filed June 1, 1901. Serial No. 68,708. (No model.)

Claim.—1. The combination, with a vehicle-axle provided with an
interior longitudinal groove, of a spring-pressed dog pivoted within said
groove, the outer end of the dog being cut off to form a space between it
and the wall of the nut for the insertion of an operating tool or wrench.
2. The combination, with a vehicle-axle provided with an interior
longitudinal groove, of a dog pivoted intermediate its length therein, the
forward end of the dog being cut off to form a space between it and the
wall of the nut, for the insertion of an operating tool or wrench, and a
spring in engagement with the inner end of the dog to force it toward the
interior of the nut.

3. The combination, with a vehicle-axle provided with a series of in-
terior longitudinal grooves, of a spring-pressed dog in each groove, the
inner end of which is adapted to engage with the axle and the outer end
is cut off to form a space between the end of the dog and the wall of the
nut, for the insertion of an operating tool or wrench.

4. The combination with an axle provided with a series of longitu-
dinal grooves, of a nut provided with a series of interior longitudinal
grooves, the number of the grooves in the nut differing from those in the
axle, and a catch mounted in each groove in the nut in position to enter
the groove in the axle.

5. The combination, with an axle provided with four longitudinal
grooves, of a triangular nut provided with three interior longitudinal
grooves, one at each angle of the nut, and a catch mounted in each groove
in the nut in position to enter one end of the grooves in the axle when
the nut is rotated.

6. The combination, with an axle provided with a longitudinally-
grooved axle, of a substantially cup-shaped nut, the bottom of which is
perforated for the insertion of an operating-tool and the interior is pro-
vided with an interior longitudinal groove to register with each perfora-
tion, and a spring-pressed catch in each groove, the outer end of which is
cut off to form a space between it and the bottom of the groove, for the
insertion of an operating tool or wrench.

708,017. TYPE-SETTING MACHINE. BLAS THOMAS and FRANK
A. RAY, Columbus, Ohio. Filed Feb. 4, 1895. Renewed Nov. 20, 1895.
Serial No. 88,008. (No model.)

Claim.—1. In a type-setting machine, the combination with a frame-
work, a plate provided with inclined channels 6 and a main discharging-
channel with which said channels 6 communicate, of a pivoted lever 12
arranged in rear of each of said channels 6, lever-arms 14 and 16 piv-
otally connected with each of said levers 12, said lever-arm 14 adapted
to work in an opening 15 communicating with a channel 8, a plurality
of angular type, one arm of each of which extends within said channel
and the remaining arm of which bears on the plate adjacent to said chan-
nel, the lower type-body normally resting upon the end of the lever-arm
14 and the remaining lever-arm 16 adapted to move into position to en-
gage the next higher type-body when said arm 14 is withdrawn and
means for imparting a swinging movement to said lever 12, substantially
as specified.

2. In a type-setting machine, the combination with a framework, a

plate 4 rising therefrom and having a main channel 7 and diagonally-arranged channels 6 communicating therewith, each of said channels 6 having a slotted opening 15, of an arm 9 for each of said channels 6, a reciprocating plunger in said arm, a pivoted lever 12 connected with said plunger, a pair of lever-arms pivotally connected with said lever on opposite sides of its pivot-point and adapted by movement of the lever 12 to alternately move outward and inward through one of the openings 15, type contained in said channels 6 and adapted to be held against discharge therefrom by that lever-arm which is projected through said opening 15, a depressible bulb for each of the grooves 6 and a tubular connection between each of said bulbs and each of the lever-operating plungers, substantially as specified.

708,018. PACKAGE-TIE. JAMES A. THOMAS, Savannah, Ga.
Filed June 26, 1901. Serial No. 65,900. (No model.)

Claim.—A package-tie comprising a body having a portion cut out of one side, and a tapering twist-receiving notch extending from said cut-out portion toward one end, said body being also provided in one side with spaced tapering notches that extend into the body from one side thereof at an inclination to said side and form a twist-holding tongue therebetween, and a plurality of spaced stop-fingers projecting from the side edge of the body which is opposite the twist-holding tongue and at substantially right angles thereto, said fingers being arranged to engage opposite sides of a wrap of the twist located alongside the body.

708,019. CARRIAGE-SUPPORTER. WILLIAM W. THOMAS, Troy, Ohio. Filed Feb. 12, 1902. Serial No. 66,904. (No model.)

Claim.—1. As a new article of manufacture, a carriage-supporter, comprising a post or stake, a series of rings each of which has its ends projected through the openings in said post or stake out of alignment with each other the ends then projected through said openings being turned

at right angles in opposite directions to act as supports to the rings when in horizontal positions, substantially as specified.

2. In a carriage-supporter, the combination of a post or stake having several pairs of horizontal openings, a series of rings each having its ends projected through a pair of said openings and overlapping each other, the said ends so projected through the post being bent in opposite directions so as to provide a pivotal connection for each ring with said post, whereby the rings may be moved to positions parallel with the post, and whereby the said bent ends of said rings form stops to support said rings in horizontal positions, substantially as specified.

708,020. CLOCK-PENDULUM. DAVID W. THOMPSON, Chicago, Ill. Filed Sept. 20, 1901. Serial No. 77,009. (No model.)

Claim.—1. In a clock-pendulum, in combination, a supporting-block having oppositely-extending transverse upon which said block is intended to oscillate; bearings for said transverse; studs extending from opposite sides of said supporting-block and at right angles with said transverse, the central axis of said studs being in the same plane with the oscillatory axis of said supporting-block; and a pendulum-rod pivotally suspended upon said studs.

2. In a clock-pendulum, in combination, a supporting-block having central bearing-transverse projecting from opposite sides thereof; a bearing for said transverse; studs projecting from opposite sides of said supporting-block at right angles to the axial line of said transverse; and a pendulum-rod pivotally suspended upon said studs, the axis of suspension of said pendulum-rod being in the same plane with its axis of vibration.

3. In a clock-pendulum, in combination, a yoke; a supporting-block pivotally mounted in said yoke; and a pendulum-rod pivotally connected with said supporting-block, the oscillatory axis of the block and that of its pivotal connection with the pendulum-rod being in the same plane.

4. In a clock-pendulum, in combination, a yoke having aligned bearings therein; a supporting-block mounted to oscillate upon said bearings; a pendulum-rod pivotally connected with said supporting-block, the oscillatory axis of the block and the axis of the pivotal connection between the block and the pendulum-rod being in the same plane; and means for swinging the yoke in position with relation to a clock mechanism.

5. In a clock-pendulum, in combination, a yoke; two aligned bearings in said yoke; a supporting-block having oppositely-extending conical transverse adapted to fit within the bearings in said yoke, said block also being provided with studs extending from opposite sides thereof and at right angles to said transverse; and a pendulum-rod having perforated arms adapted to engage said studs, the axial center of said studs being in the same plane with the axial center of said transverse.

6. In a clock-pendulum, in combination, a yoke; two oppositely-extending aligned bearing-curves in said yoke; a supporting-block adapted to oscillate between the ends of said bearing-curves; and a pendulum-rod having a pivotal connection with said supporting-block.

7. In a clock-pendulum, in combination, a yoke having two oppositely-extending cup-bearing curves provided with ball-bearings; a bearing-block having oppositely-extending transverse adapted to fit within said ball-bearings; two studs projecting from opposite sides of said supporting-block at right angles to an axial line extending through said transverse; and a pendulum-rod having perforated arms adapted to engage said studs.

708,021. MOUNTING OF PLANO-KEYS. THOMAS THOMPSON and IRVING CARLSON, Chicago, Ill. Filed Dec. 20, 1901. Serial No. 67,709. (No model.)

Claim.—The combination of a plano-key having a solid top, with a balance-pin freely affixed in the under side of said key and projecting downward, and a balance-roll forming part of the key-frame, having an aperture adapted to receive said balance-pin and prevent any lateral or longitudinal movement of said key on said balance-roll, and an oblong chamber below said aperture in said roll, said oblong chamber being adapted in length to allow the free swing of the lower part of said balance-pin and adapted in width to receive a bushing of flexible material collectively affixed in the walls of said chamber, and a flexible bushing collectively affixed to the walls of said chamber, substantially as described.

708,022. CIRCUIT-CONTROLLER. SUMNER W. VOON, Chicago, Ill. Filed July 12, 1901. Serial No. 68,776. (No model.)

Claim.—1. The combination with a conductor, of a circuit having a fixed terminal supported adjacent to said conductor, and a movable terminal pivotally supported between said fixed terminal and the conductor, and adapted to be lifted into contact with said fixed terminal by the elevation of said conductor, substantially as described.

2. The combination with a conductor, of a trolley adapted to engage said conductor, a circuit having its terminals supported in proximity to said conductor, a device pivotally supported in proximity to said terminals for electrically connecting the same, and means for actuating said device operated by the rise and fall of the conductor, substantially as described.

3. The combination with a conductor, of a circuit-controller supported in proximity to said conductor and adapted to be operated by the rise and fall thereof, said controller comprising a fixed contact and a movable contact, the latter supported upon a rock-shaft, said rock-shaft having an arm fixed thereto and engaging said conductor, substantially as described.

4. The combination with a conductor, of a controller-box supported in proximity to said conductor, a rock-shaft mounted within said box, a contact-finger projecting from said shaft, fixed contact located within said box and extending into the path of said contact-finger, an arm rigidly secured to the end of said rock-shaft and actuated by the rise and fall of said conductor, substantially as described.

708,023. RECEPTACLE FOR CONTAINING PAPERS. MARTIN J. WARR, Iowa City, Iowa. Filed Dec. 2, 1902. Serial No. 64,602. (No model.)

Claim.—1. A receptacle for containing papers comprising a pocket closed on three of its sides and having a flap for closing the pocket-open-

ing and a rod removably connected to the receptacle between the pocket and flap and projecting at its ends beyond the sides of the pocket to form hangers, substantially as and for the purpose set forth.

2. A receptacle for containing papers closed on three of its sides to form a pocket for loosely receiving and holding the papers and having also to form bearing, and a rod supported in the bearings and its ends projecting laterally from the sides of the receptacle to form hangers by which said receptacle may be suspended from a suitable support, substantially as and for the purpose described.

708,024. PASTE POT OR JAR. MARTIN J. WARR, Iowa City, Iowa. Filed Apr. 8, 1902. Serial No. 101,482. (No model.)

Claim.—A paste pot or jar comprising an outer vessel or receptacle for containing the water and an inner vessel or holder for the paste composed of a porous material, the upper edges of both the outer vessel or receptacle and the inner vessel or paste-holder being flush and on line with each other, a packing resting on the edges and closing communication between the water-space of the outer vessel or receptacle and the interior of the vessel or paste-holder, a cover to hold the packing in place and having a central opening with upwardly-extending flange, and a cap to close the opening in the cover, substantially as and for the purpose described.

708,025. CENTER CONSTRUCTION FOR FLOOR-ARCHES. GUY E. WATTS, Lebanon, N. J. Filed June 10, 1901. Serial No. 64,612. (No model.)

Claim.—1. The herein-described construction consisting of elements of this or channel iron arranged to be embedded in the concrete of fire-proof arches and held on edge on suitable supports, suspension of substantially the form shown, adapted to hold said iron on edge, and temporary struts or shoring supported from said suspension, substantially as specified.

2. A hanger for use in fireproof construction made of wire twisted in the form of a double loop, the upper loop made to hold metallic members and the lower loop to support temporary centering, substantially as shown.

3. In fireproof floor construction the combination of metallic members, a twisted-wire hanger, a center support, c, and centering, d.

4. In fireproof floor construction temporary centering suspended from suitable members, a, by means of twisted-wire hangers, c, substantially as described.

5. In fireproof floor construction centering material, d, supported by joint, c, and twisted-wire hanger, a, substantially as described.

708,026. MACHINES FOR TRIMMING AND MARKING CHAIRS. ADOLPH W. WALDMAN, Chicago, Ill., and FRANK E. KAMER, Chicago, Ill. Filed Oct. 22, 1901. Serial No. 73,004. (No model.)

Claim.—1. The machine for trimming and marking chairs, comprising a pivoted operating-lever and a spring for returning the lever, in com-

JUNE 24, 1902.

bination with a pivotally-supported marking device, a separate spring for retracting said device, an arm projecting laterally from the operating-lever and over the marking device, and an adjustable contact carried by said arm and serving to actuate the marking device, substantially as specified.

2. The machine for trimming and marking cigars, comprising a pivoted operating-lever, a knife carried by the lever, and a spring for retracting the lever, in combination with a pivotally-supported marking device, a separate spring for retracting the marking device, an arm projecting laterally from the operating-lever and an adjustable contact carried by said arm and serving to actuate the marking device, and a stationary knife co-operating with said lever-knife, substantially as specified.

3. In a machine for trimming and marking cigars, the combination of a stationary knife, a movable knife, a swinging lever for operating the latter knife, a movable marking device, an arm projecting laterally from the lever and carrying a contact for operating the marking device, and separate springs for retracting said lever and said marking device, substantially as specified.

4. The machine for trimming and marking cigars, having in combination a stationary knife, a movable knife, a lever carrying the movable knife, and a marking device, an arm projecting laterally from the lever and carrying a contact adapted to engage and operate the marking device when the lever is depressed, both the lever and the marking device swinging on the same center, substantially as specified.

5. The machine for trimming and marking cigars, having in combination a stationary knife, a movable knife, a lever carrying the movable knife, and a marking device operated by said lever, both the lever and the marking device swinging on the same center and each having its own retracting-spring, substantially as specified.

6. The machine for trimming and marking cigars having a single operating-lever, carrying a knife and a laterally-extending arm provided with a contact-screw for operating the marking device and a swinging marking device, said lever and said marking device being both supported from and swinging on the same center, substantially as specified.

7. The machine for trimming and marking cigars having a single operating-lever, carrying a knife and a marking device both supported from and swinging on the same center, and each having its own independent retracting-spring, substantially as specified.

8. The combination with the hollow bearing 17, of the knife-carrying lever and its pivot passing through the bearing, the marking-device frame pivoted on the outside of said bearing, and a retracting-spring for said lever stayed by said frame, substantially as specified.

9. The combination with the hollow bearing 17, of the knife-carrying lever and its pivot passing through the bearing, the marking-device frame pivoted on the outside of said bearing, a retracting-spring for said lever stayed by said frame, and a separate spring for retracting the frame, substantially as specified.

10. The marking device for branding cigars, consisting of the thin type-plate having a U-shaped bend, a top plate having a ridge cutting into the bend of the type-plate and supporting the type, a supporting-frame, and a gas-burner for heating the type-plate and top plate and said type-plate being both extended rearwardly so as to inclose the flame from the burner, substantially as specified.

11. In a branding and trimming machine for cigars, the combination of a swinging heated branding device and a swinging knife-lever actuating the branding device, but having only a momentary contact therewith at each operation, the lever and branding device being independently supported and each having its own retracting-spring, substantially as specified.

708,027. MECHANICAL SPEED-REGULATOR. HENRY F. WHITE, Kansas, Mich. Filed Jan. 9, 1902. Serial No. 96,615. (No model.)

Claim.—1. In a mechanical speed-regulator, the combination of the frame A; shafts B', C', supported in suitable bearings on the said frame; a tapered cone B mounted upon said shaft B'; means for delivering power to said shaft B'; a tapered cone C mounted upon said shaft C'; means for delivering power from said shaft C'; said cones having like ends pointing in the same general direction; belts c connecting said cones; a track E; a frame D movable on said track; a shaft I adjustably supported on said frame D; idlers H on the said shaft I over which the said belts c pass; means for causing said movable frame to move along said track; all coacting substantially as described and for the purpose specified.

2. In a mechanical speed-regulator, the combination of a supporting-frame; tapered cones having like ends (either the large or small) pointing toward a common point; belts thereon; idlers engaging said belts to toward said cones to support and guide the same; a frame supporting the journal of said idlers under spring tension; a track upon which said frame is adapted to move; means for moving said frame along said track; coacting for the purpose specified.

3. In a mechanical speed-regulator, the combination of a support-

ing-frame; a driven tapered cone connected to a source of power; a driving tapered cone connected to the machine it is designed to operate, said cones having like ends pointing in the same general direction; a belt operating to transmit power between said cones; idlers engaging said belt; a frame supporting the journal of said idlers; a track upon which said frame is adapted to move; and means for moving said frame along said track, coacting for the purpose specified.

4. In a mechanical speed-regulator, the combination of a supporting-frame; a driven tapered cone; a driving tapered cone, the ends of which point toward each other; a belt connecting said cones; idlers engaging said belt; a movable frame supporting the journal of said idlers under spring tension; and a track upon which said frame is adapted to move, coacting for the purpose specified.

5. In a mechanical speed-regulator, the combination of a supporting-frame; a driven tapered cone connected to a source of power; the ends of which cones point the same way; a belt connecting said cones; idlers engaging said belt; a frame supporting the journal of said idlers under spring tension; and a track along which said frame is adapted to move, all coacting substantially as described for the purpose specified.

6. In a mechanical speed-regulator, the combination of a driven tapered cone mounted in suitable bearings and connected with a source of power; a driving tapered cone mounted in suitable bearings, provided with means for delivering power to a desired point, the ends of which cones point the same way; a belt operating to transmit power between said cones; idlers engaging said belt to support it in proper position; and means for causing the relative position of said belt upon said cones to be changed to vary the relation of their speeds.

7. In a mechanical speed-regulator, the combination of a driven tapered cone mounted in suitable bearings and connected with a source of power; a driving tapered cone mounted in suitable bearings, provided with means for delivering power to a desired point, the ends of which cones point the same way; a belt operating to transmit power between said cones; means for supporting said belt in proper position; and means for causing the relative position of said belt upon said cones to be changed to vary the relation of their speeds.

8. In a mechanical speed-regulator, the combination of tapered cones mounted upon suitable shafts with bearings for their support, the ends pointing in the same general direction; a belt connecting said cones; idlers engaging said belt, and means adapted to cause said belt to travel along the lateral surface of said cones to secure variations of speed.

708,028. KNITTING-MACHINE. FRANK E. WHEELER, North Town, Pa. Filed Nov. 4, 1901. Serial No. 81,989. (No model.)

Claim.—1. In combination in a knitting-machine, a pattern or cam wheel, an adjustable block carried thereby, means movable in a direction axially of the wheel for adjusting the said block, and means operated by the edge of the block according to the change in its position, substantially as described.

2. In combination, in a knitting-machine, a pattern or cam wheel, a plurality of radially-adjustable blocks carried thereby and a pattern pin or shaft adjustable in a direction axially of the wheel and having a plurality of cam-surfaces for adjusting the blocks, substantially as described.

3. In combination in a knitting-machine, a cam or pattern member having an adjustable block and a pin having a pattern-surface and projecting through said member for holding the block in place, and means operated by the peripheral edge of said block substantially as described.

4. In combination in a knitting-machine, a pattern or cam member having an adjustable block and a pattern-pin grooved longitudinally and arranged to control the said block substantially as described.

JUNE 24, 1902.

U. S. PATENT OFFICE.

2825

5. In combination in a knitting-machine, an adjustable pattern member and a pattern or cam pin having cam-surfaces, said pin being thrust longitudinally into operative position to cause its cam-surfaces to change the shape of the pattern member, substantially as described.

6. In combination in a knitting-machine, an adjustable pattern member and a pattern or cam pin having a plurality of series of cam-surfaces arranged at different points along the pin to be brought into play by a longitudinal adjustment of the pin, substantially as described.

7. In combination with a pattern or cam member, a pattern or cam pin to alter the shape of said member, said pin being grooved longitudinally and having a plurality of sets of high and low parts disposed at different points along the pin, substantially as described.

8. A pattern or cam wheel having a plurality of radially-adjustable blocks and a pattern-pin grooved longitudinally, axially arranged in respect to the wheel, said pin being removable, substantially as described.

9. A pattern or cam wheel having an adjustable block variable as to shape by the adjustment of the block and an axially-arranged pattern-pin having a cam-surface extending longitudinally, with means for automatically adjusting the relation of the parts in a direction longitudinally of the pin, substantially as described.

10. In combination, the pattern-wheel variable as to shape, a pattern-pin at the center of the wheel, means for turning the wheel and pattern mechanism for controlling the pin, substantially as described.

11. In combination, a pattern-wheel adjustable as to shape, a longitudinally-movable pattern-pin for altering said shape, a pattern-wheel with connections for operating the pin, and means for operating the pattern-wheel consisting of the lever with pawls and a cam on the knitting-head for operating the lever, substantially as described.

12. An adjustable pattern-wheel having a hub, a bearing in which the said hub turns, said pattern-wheel having an opening at its center and a pin removably held in said opening and having a pattern-surface to change the relation between the high and the low parts of the pattern-wheel, substantially as described.

13. A pattern-wheel adjustable as to shape, and a pattern-pin to change the relation between the high and the low parts of said wheel and removably connected therewith, substantially as described.

14. In combination, the adjustable pattern member and a pattern-pin to determine the shape of said member, said pin being tapered at its end and having its thickness running longitudinally thereof and of different forms, substantially as described.

15. In combination, a pattern-wheel comprising two disks or sections, blocks arranged to slide between said sections, and a pattern-pin at the center of the wheel to determine the position of said blocks at different distances from the center, substantially as described.

16. A pattern-wheel having a radially-adjustable block and an axially-located pattern-pin to determine the position of said block and means operated by the peripheral edge of said block, substantially as described.

17. In combination, a pattern-wheel variable as to shape and means for varying the shape of said wheel automatically comprising an axially-arranged pattern-pin with means for moving the same automatically in relation to the wheel, substantially as described.

708,029. BUTYLE REPAIR-SPOKE. FRANK A. WILKE, Chicago, Ill. Filed Dec. 31, 1901. Serial No. 87,804. (No model.)

Claim.—The combination in a bicycle, of the wheel having a perforated spoke-containing flange on its hub, and a rim; with a repair-spoke comprising a curved member adapted to be slipped through the perforation of the hub-flange, and a rod portion having a threaded end on one end and adapted to engage the threaded end of the flange-engaging member.

and a tubular nut attached to the rim adapted to engage the outer threaded end of the rod, all substantially as and for the purpose set forth.

708,030. LOCK-SWITCH GRAM. BRANTON E. WHEELLEY and BENJAMIN PHILLIPS, Lynn, Mass., assignors to United Shoe Machinery Company, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 22, 1901. Serial No. 78,967. (No model.)

Claim.—A lock-stitch gram consisting of the combination with suitable material of a thread provided with a series of loops each of which passes through a puncture in the material and thence transversely to the direction of the seam to another puncture in the material, and a second thread interlocked with each of said loops in said last-named puncture, the portions of each thread between the loops extending longitudinally of the seam on the same side of the material, substantially as described.

708,031. WOODEN SPLIT PULLEY. CARL WITTEGOWITZ, Berlin, Germany. Filed July 27, 1901. Serial No. 90,906. (No model.)

Claim.—1. In a wooden split pulley, the combination of a pulley rim consisting of two parts, each of which consists of several wood veneers glued together with their grains crossed, with several disks situated within the rim so as to support the same, said disks consisting of several wood veneers glued together with their grains crossed, and several wood veneers glued together with their grains crossed situated between the disks in the center of the same, so as to form the nave of the pulley, substantially as set forth.

2. In a wooden split pulley, the combination of a pulley-rim consisting of two parts, each of which consists of several wood veneers glued together with their grains crossed, with several disks situated within the rim so as to support the same, said disks consisting of several veneers glued together with their grains crossed, and several veneers glued together with their grains crossed, situated between the disks in the center of the same, so as to form the nave of the pulley, means for fixing the disks to the rim, there being grooves provided on the inner surface of the rim, substantially as set forth.

3. In a wooden split pulley, the combination of a pulley-rim consisting of two parts, each of which consists of several wood veneers glued together with their grains crossed, with several disks situated within the rim so as to support the same, said disks consisting of several veneers glued together with their grains crossed, and several veneers glued together with their grains crossed situated between the disks in the center

of the same, so as to form the nave of the pulley, means for fixing the disks to the rim, there being grooves provided on the inner surface of the rim, and strengthening-ribs provided on the joining faces of both halves of the rim, substantially as set forth.

4. In a wooden split pulley, the combination of a pulley-rim consisting of two parts, each of which consists of several wood veneers glued together with their grains crossed, with several disks situated within the rim so as to support the same, said disks consisting of several veneers glued together with their grains crossed, and several veneers glued together with their grains crossed situated between the disks in the center of the same, so as to form the nave of the pulley, means for fixing the disks to the rim, there being grooves provided on the inner surface of the rim, and strengthening-ribs provided on the joining faces of both halves of the rim, bolts for connecting both halves of the rim, said bolts being situated so as to connect the veneers situated between the disks and so that the nuts of these bolts can be reached through cut-outs provided in the disks, substantially as set forth.

708,082. STEAM-ENGINE. CHARLES C. WORTHINGTON, DUNDAS, N. J. Filed Nov. 27, 1899. Serial No. 738,387. (No model.)

Claim.—1. The combination with two engine-cylinders with pistons movable independently of each other and their valves controlling the admission and exhaust of the motor fluid, of means for shifting the valve of one cylinder for a stroke in one direction at the end of the stroke of the piston of the other cylinder and the valve of the other cylinder for a stroke in the opposite direction at the commencement of the stroke of the piston of the first-mentioned cylinder, substantially as described.

2. The combination with two engine-cylinders with pistons movable independently of each other and their valves controlling the admission and exhaust of the motor fluid, of means controlled by the pistons for shifting the valve of one cylinder for a stroke in one direction at the end of the stroke of the piston of the other cylinder and the valve of the other cylinder for a stroke in the opposite direction at the commencement of the stroke of the piston of the first-mentioned cylinder, substantially as described.

3. The combination with two engine-cylinders and their valves controlling the admission and exhaust of the motor fluid, of means for controlling the valve of one cylinder by the piston of the other cylinder to cause the shifting of said valve for a stroke in one direction at the end of the stroke of said piston and for controlling the valve of the other cylinder by the piston of the first-mentioned cylinder to cause the shifting of said valve for a stroke in the opposite direction at the commencement of the stroke of said piston, substantially as described.

4. The combination with two engine-cylinders and their valves controlling the admission and exhaust of the motor fluid, of means for shifting the valve of one cylinder by the piston of the other cylinder for a stroke in one direction at the end of the stroke of said piston and for shifting the valve of the other cylinder by the piston of the first-mentioned cylinder for a stroke in the opposite direction at the commencement of the stroke of said piston, substantially as described.

5. The combination with two engine-cylinders and their valves controlling the admission and exhaust of the motor fluid, of last-motion actuating connections between the valves of each cylinder and the piston of the other cylinder, one of said connections being arranged to actuate the valve for a stroke in one direction at the end of the piston-stroke and the other of said connections to actuate the valve for a stroke in the opposite direction at the beginning of the piston-stroke, substantially as described.

6. The combination with two engine-cylinders and their valves controlling the admission and exhaust of the motor fluid, of last-motion actuating connections between the valves of each cylinder and the piston of the other cylinder, one of said connections being arranged to actuate the valve for a stroke in one direction at the end of the piston-stroke and the other of said connections to actuate the valve for a stroke in the opposite direction at the beginning of the piston-stroke, and means for positively actuating the said last-mentioned valve later in the stroke in case of failure to actuate it at the beginning of the piston-stroke, substantially as described.

7. The combination with two vertical single-acting pump-plungers and their motor-cylinders, pistons movable independently of each other and valves controlling the admission and exhaust of the motor fluid, of valve movements controlled by the pistons for causing the movement of the pistons in opposite directions with one of the pistons reversed for a stroke in one direction at the end of the stroke of the other piston and the other piston reversed for a stroke in the opposite direction at the commencement of the stroke of the first-mentioned piston, substantially as described.

8. The combination with two vertical single-acting pump-plungers and their motor-cylinders, pistons movable independently of each other and valves controlling the admission and exhaust of the motor fluid, of valve movements actuated by the pistons for causing the movement of the pistons in opposite directions with one of the pistons reversed for a stroke in one direction at the end of the stroke of the other piston and the other piston reversed for a stroke in the opposite direction at the commencement of the stroke of the first-mentioned piston, substantially as described.

9. The combination with two vertical single-acting pump-plungers and their motor-cylinders, pistons and valves controlling the admission and exhaust of the motor fluid, of valve movements for each cylinder actuated by the piston of the other cylinder for causing the movement of the pistons in opposite directions with one of the pistons reversed for a stroke in one direction at the end of the stroke of the other piston and the other piston reversed for a stroke in the opposite direction at the commencement of the stroke of the first-mentioned piston, substantially as described.

10. The combination with two engine-cylinders and pistons therein movable independently of each other, of valve mechanism controlling the admission and exhaust of the motor fluid, and connections between said valve mechanism and the pistons for controlling the valves of each cylinder by the piston of the other cylinder for the movement of the pistons in opposite directions during their entire strokes, substantially as described.

11. The combination with an engine-valve, of a reciprocating member and yielding or friction connections between said member and the valve for actuating the valve during the first part of the movement of the member in either direction and releasing said member from the valve after the latter is moved to permit said member to complete its movement, substantially as described.

12. The combination with an engine-valve, of a reciprocating member and yielding or friction connections between said member and the valve for actuating the valve during the first part of the movement of the member in either direction and releasing said member from the valve after the latter is moved to permit said member to complete its movement, and means carried by said member for positively actuating said valve later in its movement in case the valve is not moved by the yielding or friction connections, substantially as described.

13. The combination with the valve-stem 19 and crank 17 thereof, of crank 1 pivoted on crank 17, bar 21 connected to crank 1 and having a limited movement permitting the crank 1 to swing on crank 17 in either direction for a certain distance and then locking the cranks together, and means for actuating crank 1, substantially as described.

14. The combination with the valve-stem 19 and crank 17 thereof, of crank 1 pivoted on crank 17, bar 21 connected to crank 1, spring 23 acting on said bar to oppose the swinging of crank 1 toward the center on crank 17, means for actuating crank 1, and means for stopping the valve when shifted, substantially as described.

708,088. ELECTRICITY-SWITCH. BLAKE E. WRIGHT, Chicago, Ill. Filed Apr. 11, 1899. Serial No. 677,308. (No model.)

Claim.—1. In an electrically-wound clock, the combination with the winding-shaft, of a lever arranged to act upon said shaft to turn it forward, a movable contact device carried by a movable part of the clock mechanism, arranged and moving in or parallel with the plane of movement of said lever and electrically connected with one pole of a source of electricity, a normally stationary contact device arranged in the path of movement of said movable contact device, mounted to move with the lever and electrically connected with the other pole of said source of electricity, a solenoid included in said circuit and arranged to act upon the lever when energized by the bringing together of said parts, whereby the movable contact, together with the winding-shaft, is thrust back in its

initial position by a single movement of said lever and means for opening the circuit at a point other than between the said circuit-closing contacts at the end of the movement of the lever, substantially as described.

2. In an electrically-wound clock the combination with the winding-shaft, of a lever arranged to act upon the shaft to turn it forward, a contact device carried by a movable part of the clock mechanism and electrically connected with one pole of a source of electricity, a contact device operatively connected with the lever and electrically connected with the other pole of said source of electricity, a solenoid included in said circuit and arranged to act upon the lever when energized by the bringing together of said contacts, the movement of said lever being such as to retain contact during the effective movement of the lever, and means for opening the circuit at the end of the movement of the lever embracing a contact-wheel included in the circuit and consisting of a plurality of spring-contact blades adapted to be successively brought into bearing with the lever, and a ratchet mechanism arranged to cooperate with the lever to hold the contact-wheel from backward movement and permit it to turn forward a step upon each reciprocation of the lever.

3. In an electrically-wound clock the combination with the winding-shaft, of a lever arranged to act upon the shaft to turn it forward, a contact device carried by a movable part of the clock mechanism and electrically connected with one pole of a source of electricity, a contact device operatively connected with the lever and electrically connected with the other pole of said source of electricity, a solenoid included in said circuit and arranged to act upon the lever when energized by the bringing together of said contacts, the movement of said lever being such as to retain contact during the effective movement of the lever, and means for opening the circuit at the end of the movement of the lever embracing a contact-wheel included in the circuit and consisting of a plurality of spring-contact blades adapted to be successively brought into bearing with the lever, a ratchet mechanism arranged to cooperate with the lever to hold the contact-wheel from backward movement and permit it to turn forward a step upon each reciprocation of the lever and an escapement-arm arranged to prevent the contact-wheel from rotating more than a step at a time.

4. In an electrical-winding clock, the combination with the winding-shaft, of a lever arranged to act upon said winding-shaft, a disk or segment mounted concentrically with, and adjacent to the gear and provided with a peripheral portion of insulating material and an electrical contact device mounted upon a part operatively connected with the clock-movement and adapted to travel upon said insulating portion and to form electrical connection with the disk when carried beyond the edge of the insulating-strip.

5. In an electrically-wound clock, the combination with the winding-shaft, of a gear arranged to act upon said winding-shaft, a disk or segment mounted concentrically with, and adjacent to the gear and provided with a peripheral portion of insulating material, and an electrical contact device mounted upon said gear and arranged to travel upon said insulating portion and adapted to form electrical connection with the disk when carried beyond the end of the insulating-strip.

6. An electrical connection comprising a spindle provided with an annular shoulder, a rotatable bearing within which said spindle is rotatably mounted, a washer clamped between the annular shoulder and a part of the bearing and a second washer apertured to receive and fit around the first washer so as to be in the same plane with the latter; one of said clamping parts being slightly yielding and said inner washer being of such thickness as to receive the greater part but not all of the clamping pressure, whereby the bearing member may be rotated with the spindle while the outer washer is held from movement and electrical contact is maintained between both washers and one of the clamping members.

7. The combination with an electric circuit, of a clock provided with a time-indicating hand connected with, and forming one terminal of, said circuit, the metal support E extending across the dial, the spindle P

mounted in said support, the contact-band P' mounted upon said spindle in electrical connection with the latter, the bushing F, the contact-band P' mounted upon the bushing, the check-out P', the contact-strip P' and washer P' interposed between the heads of the spindle and bushing, and the conductors P', I and M' electrically connecting the several parts, substantially as described.

8. In an electrical contact device, the combination with a movable part and a rotatable contact-wheel adapted to make and break contact with said movable part and comprising a plurality of spring-blades each adapted to impart rotation to the wheel by its rebound when breaking contact with the movable part, of a ratchet adapted to cooperate with the contact-wheel to hold the latter from backward rotation.

708,084. HOLDING APPARATUS. WILLIAM C. WRIGHT, Hopkinton, Mass., assignor to Draper Company, Portland, Me., and Hopkinton, Mass. Filed Oct. 17, 1901. Serial No. 78,908. (No model.)

Claim.—1. In molding apparatus, a match and its frame, the latter having a recessed portion, a pattern provided with a gate and a vibrator extension on the latter, the pattern, gate, and vibrator extension being supported wholly by the match independently of the match-frame during the construction of the drag, the vibrator extension passing through the recessed portion of the frame and out of contact with the latter.

2. In molding apparatus, a match and its frame, the latter having recessed portions, a cooperating pattern, and oppositely-extended vibrator extensions connected with the pattern and constructed as handles, said vibrator extensions passing through the recessed portions of the frame out of contact with the latter.

3. In molding apparatus, a pattern and its gate, extensions on the opposite ends of the latter, projecting beyond the flasks during the construction of the mold, and drag and cope flasks having external means thereon to cooperate with said extensions to position the pattern and flasks, the latter having clearance portions to receive said extensions, whereby the pattern, gate, and extensions, will be supported wholly by the drag during the construction of the cope.

4. In molding apparatus, a drag, and its flask, a pattern contained wholly by the drag independently of its flask during the construction of the cope, and adapted to be engaged exterior to the drag and cope flasks to be vibrated preparatory to separation of the cope and drag and withdrawal of the pattern.

708,085. FROG-OPERATING MECHANISM. FRANK C. ARDENSON, Cincinnati, Ohio, assignor of one-half to Aaron E. Lloyd and Goodwin F. Olitz, Cincinnati, Ohio. Filed Aug. 12, 1901. Serial No. 71,767. (No model.)

Claim.—In frog-operating mechanism, the combination of the frog-wing and its adjacent rail, of a hinged joint composed of the plates M N pivoted together, as at A, and bolted to the webs of the respective rail-sections, the plate O bolted to the web of the frog-wing and overlapping the joint, and a guide-ling f for the frog-wing guided in a housing g secured to the plate P, substantially as described.

708,086. CLOTH-CUTTING MACHINE. JOHN E. BAIRD, Buffalo, N. Y. Filed May 28, 1901. Serial No. 68,508. (No model.)

Claim.—1. In a cloth-cutting machine a base-plate; a post or pedestal mounted thereon; a motor-carrying frame carried by said post or pedestal; a slide within said frame; two cross-heads mounted to have a movement through said slide, each cross-head being movable in a direction opposite to that of the other under the action of the motor; and a notched cutting-knife carried by each of said cross-heads with their attached ends out of vertical alignment with their setting portions, said knives being adapted to form a shear cut.

2. In a cloth-cutting machine a base-plate having an opening; a post or pedestal on said base-plate in rear of said opening; a motor-car-

rying frame carried by said post or pedestal; a slide located within said frame; two cross-heads mounted to have a reciprocating movement in opposite directions through said slide, said slide forming a guide for said cross-heads in their movements; a notched cutting-knife carried by each of said cross-heads and having their upper ends inclined angularly and engaging shoulders on the said cross-heads; and guides carried by said frame and said base-plate respectively for controlling the movement of said knives.

2. In a cloth-cutting machine the combination with a support; of two cross-heads mounted within said support, each cross-head having at its lower end a beveled face; means for imparting a reciprocating movement in opposite directions to said cross-heads; and a notched cutting-knife carried by each of said cross-heads, each knife having its upper end inclined angularly to fit said beveled face.

4. In a cloth-cutting machine two notched cutting-knives each having a reciprocating movement, each movement being in opposite directions; means for imparting movement to said knives; and two rollers mounted on the outer sides of said knives, said rollers having an adjustable movement vertically, and normally yielding, whereby material will be held against a separating movement during the cutting action of the knives.

708,087. STREET-RAILWAY SWITCH. WALTER J. BELL, Los Angeles, Cal., assignor of one-half to Leon F. Moss, Los Angeles, Cal. Filed Mar. 26, 1902. Serial No. 50,567. (No model.)

Claim.—1. The combination of a switch-point, a switch-throwing device moved by the car, a yielding connection between the point and device, and electrically-controlled means for rendering such connection rigid.

2. The combination of a switch-point, a spring-pressed switch-throwing rail, a yielding connection between the point and rail, and electrically-controlled means for rendering such connection rigid.

3. The combination of a switch-point, means for throwing said point, a sectional rod between the point and means, a yielding connection between the rod-sections, and an electrically-controlled device arranged to be interposed in said connection to render the rod rigid.

4. The combination of a switch-point, a pivoted rail for throwing the switch, a sectional rod connecting the point and rail, a connection between the rods yielding in one direction, a movable foot, and electrical means for interposing said foot between the rod-sections to render the rod rigid.

5. The combination of a switch-point, a pivoted rail arranged to be engaged by a car-wheel, a sectional rod connecting the point and rail, a connection between the rods yielding in one direction, a pivoted foot, an electromagnet, and an armature arranged when attracted to elevate the foot between the rod-sections whereby movement of the rail is communicated to the switch-point.

6. The combination of a switch-point, a pivoted rail arranged to be engaged by a car-wheel, a sectional rod connecting the point and rail, a spring arranged to press the rail into the path of the wheel-flange, a cushioning-spring in the rod, a yielding connection between the rod-sections, and electrically-controlled means for rendering said rod rigid whereby movement of the rail is communicated to the switch-point.

7. The combination of a switch-point, a switch-throwing device moved by a car, a yielding connection between the point and device, means for rendering such connection rigid, a magnet, an armature operatively connected with said means, an electric circuit including said magnet, a circuit-making device in the path of the car-trolley, and a circuit-breaking device in the path of the car-trolley.

8. The combination of a switch-point the movement of which is controlled through the medium of an armature, a magnet arranged to attract said armature, an electric circuit connected with the magnet, a circuit-making device in the circuit arranged in the path of the car-trolley, a second magnet connected in the circuit, an armature arranged to be attracted by the second magnet, a contact in the path of the armature, and a circuit-breaker normally in contact with the trolley-wire and arranged to be moved by the car-trolley, and a connection between the circuit-breaker and second armature.

9. The combination of a switch-point the movement of which is controlled through the medium of an armature, a magnet arranged to attract said armature, a circuit-making device arranged to be engaged by the car-trolley, an electric circuit in the car connecting the trolley and motor-field wire, a circuit-breaker on the trolley-wire, and a second magnet and armature connected with the circuit-breaker and arranged to close a circuit with the trolley-wire when the circuit through the car connections is established.

10. The combination of a switch-point, means by which the switch-point is moved; said means being controlled through an armature, a magnet to attract the armature, a second magnet, a wire connecting the magnets, a lamp in the wire, a circuit-making device in the path of the car-trolley, a wire leading from the second magnet to the said device, a contact in said second wire, an armature arranged to be attracted by the second magnet and to engage the contact, a circuit-breaker on the trolley-wire, a wire connecting the armature and circuit-breaker, and a car-trolley connected with the motor-field wire and carrying contacts to engage the circuit-making device.

11. The combination in an electric-railway switch, of a circuit-breaker normally in contact with the trolley-wire and arranged to be brought into circuit with the switch-controlling means, and means on the car-trolley for moving the circuit-breaker out of engagement with the trolley-wire.

708,088. CUSHION-STUFFING DEVICE. HENRY E. BERRY, Hamilton, Ohio. Filed Nov. 7, 1901. Serial No. 51,602. (No model.)

Claim.—1. In a cushion-stuffing device, the combination with a button-check, of a conical plug formed with an axial opening in its base, and having a dart-shaped apical blade secured therein, said blade being sharpened at its point and side edges and projecting on opposite sides of said plug beyond its base.

2. In a cushion-stuffing device, a ball-bearing formed in two sections on a diagonal line and with the usual openings to register with the button-checks, and adapted to cooperate with a cushion-frame formed with outwardly-divergent ends and rear edge.

3. In a cushion-stuffing device, the combination with a rectangular cushion-box, of a lever removably fastened to a pin secured on one end of said box and adapted to cooperate with a cushion-frame formed with a curved edge.

4. A conical-shaped plug containing an axial opening in its base and

provided with a dart-shaped blade having a sharp point and side edges, said edges being extended from opposite sides of said plug and terminating on a plane with the base thereof.

708,089. CULTIVATOR. HOWARD H. BOWEN, Haddonfield, Pa. Filed Dec. 30, 1901. Serial No. 57,747. (No model.)

Claim.—1. The combination with the laterally-swinging plow-beam of a cultivator, of a vertically-extending hand-lever to swing the beam laterally, having shifting fulcrum connections with the frame of the machine.

2. The combination with the laterally-swinging plow-beam of a cultivator, of a vertical lever pivoted to said beam, and a fulcrum for the lever supported on the frame of the machine, said lever being longitudinally movable relative to the fulcrum.

3. The combination with the laterally-swinging plow-beam of a cultivator, of a vertically-extending hand-lever to swing the beam laterally, said lever being connected to one of the beams and fulcrumed in an arm supported by the frame of the machine, said lever having longitudinal movement relative to its fulcrum.

708,040. CAR-FENDER. WILLIAM BOWMAN, Philadelphia, Pa. Filed Nov. 4, 1902. Serial No. 56,362. (No model.)

Claim.—In a car-fender, the combination of a car having a platform and a dashboard thereon, arms pivotally connected to the dashboard as to swing in a horizontal plane, a fender proper comprising side bars having approximately horizontal forward portions and upwardly and rearwardly inclined rear portions, the upper and rear ends of which are disposed in front of and above the platform, connections interposed between the side bars and a notching conforming in shape to said side bars, flexible suspending devices interposed between the arms on the dashboard and the forward portions of the side bars of the fender proper, brackets on the under side of the car-platform provided with stops, and levers pivotally connected to the brackets above and in front of the stops thereof and extending forwardly from the brackets and thence upwardly, and pivotally

connected at their forward ends to the rear ends of the side bars of the fender proper, substantially as and for the purpose set forth.

708,041. MACHINE FOR SHEARING METAL. CHARLES CLARK, Avoca, N. Y., assignor of one-half to Allen James Hume, Avoca, N. Y. Filed Apr. 26, 1902. Serial No. 194,741. (No model.)

Claim.—1. A machine for shearing metal, comprising a suitable frame, a stationary blade and a movable blade, a pivoted bell-crank lever and means for pivotally and adjustably connecting it with the movable blade, a pivoted hand-lever and means for adjustably connecting it with the bell-crank lever, substantially as and for the purpose specified.

2. A machine for shearing metal, comprising a suitable frame, a stationary blade and a pivoted blade, a pivoted bell-crank lever, suitable links pivotally connected to said lever and both pivotally and adjustably connected to the pivoted blade, a pivoted hand-lever, a notched pinion-rod pivotally and adjustably connected to the hand-lever, and the notches in the pinion-rod engaging pins on the bell-crank lever, substantially as and for the purpose described.

708,042. STRAW-BURNING FURNACE. HARRY C. GRAY, Columbus, Ind., assignor to Revere & Company, Columbus, Ind., a Corporation of Indiana. Filed Nov. 22, 1901. Serial No. 53,373. (No model.)

Claim.—1. In a furnace, the combination with a series of grate-bars, of a dead-plate mounted at one end of the grate-bars, a supplemental dead-plate mounted upon the main dead-plate and movable longitudinally thereof and along the grate-bars, and means for holding said supplemental plate in various positions of longitudinal adjustment on the grate-bars.

2. In a furnace, the combination of a pair of independent side bars, a dead-plate adapted to rest upon and between said side bars at one end, an end bar adapted to rest upon and between the opposite ends of the said side bars, a series of fingers carried by the dead-plate and end bar, a series of grate-bars extending between the dead-plate and end bar and resting upon the fingers thereof, an auxiliary dead-plate mounted adjacent to the first plate and movable longitudinally of the grate-bars, and means for holding the auxiliary dead-plate in various positions of adjustment.

3. In a furnace, the combination of a pair of independent side bars

having a series of notches formed in the upper edges thereof, a dead-plate extending between said side bars at one end having its edges resting upon said bars, an end bar resting at its ends upon the opposite ends of the side bars, a series of fingers carried by the dead-plate and the end bar, a series of grate-bars each having at each end a projecting ear adapted to rest upon said fingers, and an auxiliary dead-plate mounted upon the first plate and provided with depending legs adapted to enter the notches of the side bars, substantially as and for the purpose set forth.

708,048. LIGHTING ATTACHMENT FOR GAS-BURNERS. EVAN W. CORRELL, Adrian, Mich., assignor of one-half to S. Milo Dolz, Adrian, Mich. Filed Apr. 8, 1901. Serial No. 54,708. (No model.)

Claim.—1. In a gas-lighting attachment, the combination with the burner of a valve adapted to control the supply of gas to said burner, a pilot-tube continuously communicating with the supply of gas, an auxiliary opening communicating continuously with said pilot-tube, an opening-space in said valve adapted to place said auxiliary opening also in communication with the supply of gas, said auxiliary opening being closed when the valve is in its closed and its open positions and a resistance-stop for checking the movement of said valve between the extremities of its movement when the open space therein has been brought to register with the auxiliary opening.

2. The combination with a burner, of a gas-valve adapted to control the passage of gas to the burner, a pilot-tube communicating independently with the source of gas, an auxiliary opening between the pilot-tube and the source of gas normally closed by said valve, a channel in said valve distinct and separate from the main gas-passage adapted by a movement of the valve to place said auxiliary opening in communication with the source of gas and a resistance-stop for checking only the movement of the valve when the channel therein has been brought to register with said auxiliary opening, said stop allowing a movement of the valve therefrom in both directions.

3. In a lighting attachment, the combination with a burner, of a valve adapted to control the passage of gas to the burner, a pilot-tube communicating with the source of gas, an auxiliary opening communicating with said pilot-tube said auxiliary opening being closed when the valve is in its closed and in its open position, an open space in the valve adapted to place said auxiliary opening independently in communication with the source of gas when the valve is partially turned to cut off the gas from the main burner and a resistance-stop for checking the valve between the limits of its movement in both directions but allowing said valve to be turned past said stop in either direction.

708,044. DRIER FOR PAPER, CLOTH, &c. CHARLES H. CROWELL, Lynn, Mass. Filed Oct. 2, 1901. Serial No. 77,363. (No model.)

Claim.—1. A drier for drying continuous-web material coming from gumming or similar devices, said drier having means for supporting and guiding said web while exposed to the drying agency entirely without contact with the moist face thereof, the said means comprising, essentially, a multiplicity of rods or rollers arranged proximately to one another in a curved line or series and upon the periphery of which at the convexity of said line or series the said web travels, and means of feeding the said web along the said series of rods or rollers through the drier, substantially as described.

2. A drier for drying continuous-web material coming from gumming or similar devices, said drier having means for supporting and guiding said web while exposed to the drying agency entirely without con-

tact with the moist face thereof, the said means comprising, essentially, a multiplicity of rolls arranged proximately to one another in a curved line or series and upon the periphery of which at the convexity of said line or series the said web travels, means for rotating the respective rods or rollers in the direction of the feed, and means of feeding the said web along the said series of rods or rollers through the drier, substantially as described.

3. A drier for drying continuous-web material coming from gumming or similar devices, said drier having means for supporting and guiding said web while exposed to the drying agency entirely without contact with the moist face thereof, the said means comprising, essentially, a multiplicity of rods or rollers arranged proximately to one another in an involute spiral and upon the periphery of which at the convexity of said line or series the said web travels, and means of feeding the said web along the said series of rods or rollers through the drier, substantially as described.

4. A drier for drying continuous-web material coming from gumming or similar devices, said drier having means for supporting and guiding said web while exposed to the drying agency entirely without contact with the moist face thereof, the said means comprising, essentially, a multiplicity of rods or rollers arranged proximately to one another in an involute spiral and upon the periphery of which at the convexity of said line or series the said web travels, means for rotating the respective rods or rollers in the direction of the feed, and means of feeding the said web along the said series of rods or rollers through the drier, substantially as described.

5. A drier for material in the form of a continuous web comprising, essentially, a multiplicity of rolls arranged proximately to one another in a curved line or series and upon the periphery of which at the convexity of the said line or series the said web travels, means for rotating the respective rolls in the direction of the feed, means of feeding the said web through the drier, and means of producing moving currents of heated air to act on said web while in transit along the said series of rolls, substantially as described.

6. A drier for material in the form of a continuous web comprising, essentially, a multiplicity of rolls arranged proximately to one another in a curved line or series and upon the periphery of which at the convexity of the said line or series the said web travels, means of feeding the web through the drier, and a duct adjacent the said series of rolls discharging air in streams upon the said web, substantially as described.

7. A drier for material in the form of a continuous web comprising, essentially, a multiplicity of rolls arranged proximately to one another in a curved line or series and upon the periphery of which at the convexity of the said line or series the said web travels, means of feeding the web through the drier, a duct adjacent the said series of rolls discharging air

in streams upon said web, and means of forcing heated air through said duct, substantially as described.

8. A drier for material in the form of a continuous web comprising, essentially, the series of rolls arranged in an involute spiral and upon the convexity of which the web travels, means of feeding the web along said series, and means of producing moving currents of heated air to act on said web while in transit along the series of rolls, substantially as described.

9. A drier for material in the form of a continuous web comprising, essentially, the series of rolls arranged in an involute spiral and upon the convexity of which the web travels, feed-rolls at the inner end of said spiral, and means of producing moving currents of heated air to act on said web while traveling along the series of rolls, substantially as described.

10. A drier for material in the form of a continuous web comprising, essentially, the series of rolls arranged in an involute spiral and upon the convexity of which the web travels, means for rotating the respective rolls in the direction of the travel of the web, feed-rolls at the inner end of said spiral, and means of producing moving currents of heated air to act on said web while traveling along the series of rolls, substantially as described.

11. A drier for material in the form of a continuous web comprising, essentially, the series of rolls arranged in an involute spiral, feed-rolls at the inner end of said spiral, and the ducts adjacent the spiral series of rolls discharging streams of heated air upon the material in transit along the series of rolls, substantially as described.

12. A drier for material in the form of a continuous web comprising, essentially, the series of rolls arranged in an involute spiral, the feed-rolls at the inner end of said series, means for furnishing heated air beneath said spiral, and the ducts adjacent the spiral series of rolls discharging streams of heated air upon the material in transit along the series of rolls, substantially as described.

13. A drier for material in the form of a continuous web comprising, essentially, the spiral series of rolls having the outer end thereof extended outwardly, the feed-rolls at the inner end of said series, means for furnishing heated air at the lower part of said spiral, the ducts adjacent the spiral series of rolls discharging streams of heated air upon the material in transit along the said series, and the casing having the extension inclosing the said outer end of the series of rolls, substantially as described.

14. A drier for material in the form of a continuous web comprising, essentially, the series of rolls arranged in an involute spiral and upon the convexity of which the web travels, means for rotating the respective rolls in the direction of the travel of the web, and means of producing moving currents of air to act on said web while traveling the said series of rolls, substantially as described.

15. A drier for material in the form of a continuous web comprising, essentially, a curved series of rolls upon the convexity of which the said web travels, means of feeding the web through the drier, a duct adjacent the said series of rolls discharging air in streams upon said web, means of supplying a current of air moving upwardly past the material on the rolls, and dampers to regulate the flow of said current, substantially as described.

16. A drier for material in the form of a continuous web comprising, essentially, the multiplicity of rolls arranged proximately to one another in a spiral series and upon the convexity of which series the web travels, the duct adjacent the said series of rolls discharging streams of air upon the material in transit along the series of rolls, the steam-coil, and means of regulating the flow of air from the said steam-coil past the material while passing along the said series of rolls, substantially as described.

708,045. APPARATUS FOR RAISING LIQUIDS. GUYVAY L. CHURCH and JOHN DYER, New York, N. Y. Filed June 2, 1901. Serial No. 62,302. (No model.)

Claim.—1. An apparatus for raising liquids, a liquid-elevating tank, a liquid-elevating pipe leading therefrom, a liquid-feed pipe, an air-vent pipe, a compressed-air-feed pipe, a controlling-valve for the liquid-feed, air-vent and compressed-air-feed pipes, and means for operating said valve comprising a seat, a rocking lever loosely mounted on the valve-stem connected to the seat, a two-armed lever fixed to the valve-stem and an intermediate weighted lever loosely mounted on the valve-stem in position to be engaged by the lever connected to the seat for causing the weighted lever to engage the lever connected with the valve-stem, substantially as set forth.

2. In an apparatus for raising liquids, a liquid-elevating tank, a liquid-feed pipe, an air-vent pipe, a compressed-air-feed pipe, a controlling-valve therefor, a crank-shaft mounted in the tank, with its arm exterior thereto, a seat fixed to said shaft, a lever fixed on the valve-stem, a lever loosely mounted on the valve-stem and connected to the crank-shaft arm and a weighted lever arranged in position to be engaged by the said loosely-mounted lever to be swung into position to fall by gravity into engagement with the valve-lever to operate the valve, substantially as set forth.

708,046. COLLAR-FASTENER. ROBERT G. DEATON, Detroit, Mich. Filed Dec. 10, 1900. Serial No. 28,411. (No model.)

Claim.—In a collar-fastener of the character set forth, the combination with a collar divided at one end by a separating-opening therethrough, of rigid metallic plates secured to the collar on opposite sides of the opening and extending from edge to edge of the collar, one of said plates having an opening extending vertically therethrough, a yielding coupling member formed from a single piece of spring-steel bent at its center to form an elongated handle, the ends of the said member being bent outwardly in opposite directions to form a T-shaped head adapted to pass through the opening in the plate and to fit loosely in a recess provided in the body of the collar, said coupling member being provided with an angular loop at one end, one-half of which is formed by each of the portions of the handle, and a stud-head rigidly secured to the opposite plate, said stud having a rounded or conical rear face for engagement by one of the transverse walls of the loop and being of a width greater than the normal width of the loop, the opposite sides of the stud being undercut near the base thereof to form seating-recesses for the side portions of the loop, substantially as specified.

708,047. MECHANICAL STAGE FOR MICROSCOPE. CARL Y. DIERCKMAN, Buffalo, N. Y., assignor to Spencer Lens Company, Buffalo, N. Y. Filed Nov. 7, 1901. Serial No. 21,464. (No model.)

Claim.—1. The combination of a base, a slide movable thereon, a second slide movable in a direction at an angle to the line of movement of the first slide, concentric rotatable shafts, a screw connection between one of said shafts and one slide, and a screw connection between the other shaft and the other slide, substantially as set forth.

2. The combination of a base, a slide movable thereon, a second slide movable in a direction at an angle to the line of movement of the first slide, a rotatable shaft journaled in said first slide and having operating parts at opposite ends thereof, a hollow shaft concentric with said first shaft and having an operating part adjacent to one of the operating parts of the first shaft, and operative connections between each of said shafts and one of said slides, substantially as set forth.

3. The combination of a base, a slide movable thereon, a second slide carried by the first slide and movable toward and from the same, a shaft journaled in said first slide, a hollow shaft concentric with said first shaft and having a screw-threaded engagement with said first slide, a screw-shaft journaled in said first slide and having a screw-threaded engagement with said second slide, and gearing connecting said first shaft and said screw-shaft, substantially as set forth.

4. The combination of a base, a slide movable thereon, a hollow shaft journaled in one end of said slide, a shaft extending through said hollow shaft and journaled in the opposite end of said slide, adjacent operating-hands each secured to one of said shafts for operating the same, a screw-threaded connection between said hollow shaft and said slide, a second slide carried by the first slide and movable toward and from the same, a screw-shaft journaled on said first slide and having a screw-threaded engagement with said second slide, and bevel-gears connecting said second-movement shaft and said screw-shaft, substantially as set forth.

5. The combination with a microscope-stage provided with operated holes, of a mechanical stage provided with a base having separated posts depending therefrom and detachably engaging in said holes in the microscope-stage, one of said posts being adjustable relative to the other, substantially as set forth.

6. The combination with a mechanical stage slide-bar provided with an elongated slot, of a holding-finger for a specimen-slide bearing against one side of said slide-bar, and a spring bearing against the opposite side of said slide-bar and secured to said finger by means passing through said slot, substantially as set forth.

708,048. SMOKE-CONSUMER. JAMES A. DOWNEY, Washington, D. C., assignor of one-half to Patrick J. Moran, Georgetown, D. C. Filed Mar. 26, 1902. Serial No. 99,999. (No model.)

Claim.—1. A smoke-consumer comprising a smoke-stack, approximately vertical flue in said stack, cross-flues connecting therewith, steam-pipes to discharge steam into said cross-flues in the direction of the draft, a diaphragm across the stack near the cross-flues, and discharge-flues connecting said cross-flues, at a point beyond the steam-discharge, with the space above said diaphragm, as described.

2. A smoke-consumer comprising a smoke-stack, approximately vertical flue in said stack, cross-flues connecting therewith, drip-pipes connected with said cross-flues steam-pipes to discharge steam into said cross-flues in the direction of the draft, a diaphragm across the stack near the cross-flues and discharge-flues connecting said cross-flues, at a point beyond the steam-discharge with the space above said diaphragm as described.

3. In a smoke-consumer, a smoke-stack, vertical flue in said stack

cross-flues connecting therewith, an inclined section in each of said cross-flues, steam-pipes opening into said cross-flues, a diaphragm across the stack and discharge-flues connecting with said cross-flues at a point beyond their inclined sections and opening above said diaphragm, substantially as herein set forth.

4. A smoke-consumer comprising a smoke-stack, vertical flue therein, cross-flues connecting therewith and extending through the stack, caps on the outer ends of said cross-flues, drip-pipes tapping said cross-flues, steam-pipes opening into said cross-flues to discharge steam in the direction of the draft, discharge-flues connecting with said cross-flues and opening above a diaphragm, steam-pipes above said diaphragm vents in said steam-pipes and an upper perforated diaphragm above said steam-pipes substantially as herein set forth.

708,049. SEWING-MACHINE RUFFLER OR GATHERER. JOHN DOUGLAS and VICTOR HANSEN, Elizabeth, N. J., assignors to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Aug. 2, 1902. Serial No. 26,703. (No model.)

Claim.—1. In a sewing-machine, the combination with the needle-bar-operating shaft located in the upper portion of the arm of the machine and provided near its forward end with two eccentrics, of a ruffing or gathering blade or foot, connections between said eccentrics and said blade or foot whereby positive four-motored movements are imparted bodily to the latter, and means, controlled by the operator, for throwing said blade or foot into or out of action without retarding or arresting the operation of the stitch-forming device.

2. In a sewing-machine, the combination with the needle-bar-operating shaft located in the upper portion of the arm of the machine and provided near its forward end with two eccentrics, of a ruffing or gathering blade or foot, connections between said eccentrics and said blade or foot whereby positive four-motored movements are imparted bodily to the latter, a lever operated from beneath the work-plate of the machine, and connections, controlled by said lever, whereby the said ruffing or gathering device may be thrown into and out of operation while the machine is running.

3. In a sewing-machine, the combination with the needle-bar-operating shaft located in the upper portion of the arm of the machine and provided near its forward end with two eccentrics, of a ruffing or gathering blade or foot, connections between said eccentrics and said blade or foot, whereby positive four-motored movements are imparted bodily to the latter, a lever operated from beneath the work-plate of the machine, connections, controlled by said lever, whereby the said ruffing or gathering device may be thrown into and out of operation while the machine is running, and means for lifting said ruffing device and for moving it away from the needle when it is thrown out of operation.

4. In a sewing-machine, the combination with the needle-bar-operating shaft located above the work-plate of the machine and provided near its forward end with two eccentrics, of a ruffing or gathering blade or foot, connections between one of said eccentrics and said blade or foot whereby positive forward-and-backward movements are imparted to the

latter, and connections between the other of said eccentrics and said blade or foot whereby positive up-and-down movements are imparted to said blade or foot.

5. In a sewing-machine, the combination with the needle-bar-operating shaft provided with two eccentrics, of two rock-shafts operatively connected with said eccentrics, a vertically-movable bar provided with a support, a ruffing device or foot sustained by said support and horizontally movable relative thereto, disconnectable connections between said rock-shafts and said bar and device or foot and actuating means whereby said connections may be caused to operatively join said rock-shafts and said bar and ruffing device or to disconnect the same.

6. In a sewing-machine, the combination with the needle-bar-operating shaft provided with two eccentrics, the rock-shaft E operatively connected with one of said eccentrics and having the arm F carrying the coupling-pin G, the rock-shaft G operatively connected with the other of said eccentrics, the sliding clutch-collar G' connected with said shaft G to rock therewith, the arm G' loosely mounted on said shaft G and having a hub constructed for operative connection with said clutch-collar, the spring-lever J connected with said clutch-collar and coupling-pin, the bar F notched to be engaged by said coupling-pin and having a cross-head F', the slide F' mounted on said cross-head and connected with the said arm G', the ruffing-foot connected with said slide, and means for moving the said clutch-collar lengthwise of the said shaft G.

7. In a sewing-machine, the combination with the needle-bar-operating shaft provided with two eccentrics, the rock-shaft E operatively connected with one of said eccentrics and having the arm F carrying the coupling-pin G, the rock-shaft G operatively connected with the other of said eccentrics, the sliding clutch-collar G' connected with said shaft G to rock therewith, the arm G' loosely mounted on said shaft G and having a hub constructed for operative connection with said clutch-collar, the spring-lever J connected with said clutch-collar and coupling-pin, the bar F notched to be engaged by said coupling-pin and having a cross-head F', the slide F' mounted on said cross-head and connected with the said arm G', the ruffing-foot connected with said slide, means for moving the said clutch-collar lengthwise of the said shaft G, the lever K provided with an incline, the sliding pin M engaged by said lever and having an arm engaging said clutch-collar and the lever I for operating the said lever K.

8. In a sewing-machine, the combination with the needle-bar-operating shaft provided with two eccentrics, the rock-shaft E operatively connected with one of said eccentrics and having the arm F carrying the coupling-pin G, the rock-shaft G operatively connected with the other of said eccentrics, the sliding clutch-collar G' connected with said shaft G to rock therewith, the arm G' loosely mounted on said shaft G and having a hub constructed for operative connection with said clutch-collar, the spring-lever J connected with said clutch-collar and coupling-pin, the bar F notched to be engaged by said coupling-pin and having a cross-head F', the slide F' mounted on said cross-head and connected with the said arm G', the ruffing-foot connected with said slide, means for moving the said clutch-collar lengthwise of the said shaft G, the lever K provided with an incline, the sliding pin M engaged by said lever and having an arm engaging said clutch-collar, the lever I for operating the said lever K, and the rock-shaft A connected with the said lever K and having an arm engaging the said slide for the purpose of lifting the said ruffing-foot and moving it away from the needle when said foot is thrown out of operation.

708,050. HANDS AND PARTNER FOR PAPER VERMULA. WILLIAM E. DUTCH, Indianapolis, Ind. Filed Oct. 24, 1901. Serial No. 78,222. (No model.)

Claim.—1. A handle and fastener for vams of the class described, consisting of a U-shaped handle having ends formed thereon, and a fastener having depending ends each of which is provided with a slot to receive the U of the handle and to cooperate with the other portions, substantially as described.

2. A handle and fastener for vams of the class described, consisting of a U-shaped handle, having ends formed thereon, and a fastener 10 having depending ends and a slot extending through the middle thereof and into the depending ends to receive the handle and cooperate with the ends of the vams thereof, substantially as described.

708,051. ELECTRIC METER. THOMAS A. BROWN, Lowell, Mass. Filed Oct. 15, 1901. Serial No. 22,054. (No model.)

Claim.—1. In an electric meter, the combination with an overbalanced beam, a core connected to one end of said beam, a stationary coil surrounding said core and traversed by the current to be measured, a register connected to and movable with the beam, and a friction-wheel movable with the beam and connected with said register, of a cam with which said friction-wheel periodically cooperates, and an electric motor connected across the line for rotating said cam at a constant speed, substantially as set forth.

2. In an electric meter, the combination with an overbalanced beam, a core connected to one end of said beam, a stationary coil surrounding said core and traversed by the current to be measured, a register connected to and movable with the beam, and a friction-wheel movable with the beam and connected with said register, of a cam with which said friction-wheel periodically cooperates, an electric motor connected across the line for rotating said cam at a constant speed, and an auxiliary coil of high resistance surrounding the core for overcoming magnetic hysteresis without producing saturation or polarization thereof, substantially as set forth.

3. In an electric meter, the combination with an overbalanced beam, a core connected to one end of said beam, a stationary coil surrounding said core and traversed by the current to be measured, a register connected to and movable with the beam, and a friction-wheel movable with the beam and connected with said register, of a cam with which said friction-wheel periodically cooperates, an electric motor connected across the line for rotating said cam at a constant speed, and an auxiliary coil of high resistance surrounding the core for overcoming magnetic hysteresis without producing saturation or polarization thereof, said core being in series with the meter, substantially as set forth.

4. In an electric meter, the combination with a beam, a current-indicator for moving said beam, a magnetic cut-out in series with the current-indicator for short-circuiting the latter when a destructive current traverses the cut-out, and a register connected to and movable with the beam, of a variable-speed gearing, one element of which is movable with the register, and a motor for operating the other element of said gearing, substantially as set forth for the purposes set forth.

5. In an electric meter, the combination with a current-indicator having a movable element, a beam to which said element is connected, elastic buffers for limiting the extreme movements of said element, and a register, of a variable-speed gearing the position of whose elements is determined by the position of said beam, and a motor for driving the register through said variable-speed gearing, substantially as set forth.

6. In an electric meter, the combination with a beam, a core connected to one end of said beam, a copper tube surrounding said core and in which the core is freely movable, an ampero-coil wound on the tube and traversed by the current to be measured, and a register, of a variable-speed gearing the position of whose elements is determined by the position of said beam, and a motor for driving the register through said variable-speed gearing, substantially as set forth.

7. In an electric meter, the combination with a beam, a core connected to one end of said beam, a copper tube surrounding said core and in which the core is freely movable, an ampero-coil wound on the tube and traversed by the current to be measured, elastic buffers for limiting the extreme movements of said core, and a register, of a variable-speed gearing the position of whose elements is determined by the position of said beam, and a motor for driving the register through said variable-speed gearing, substantially as set forth.

8. In a three-wire meter, the combination with a beam, a core connected to one end of said beam, a copper tube surrounding said core and within which the core is freely movable, four ampero-coils wound helically and consecutively upon said tube, the outer and inner coils being connected in series with one of the outside mains and the two inner coils being connected in series with the other outside main, and a register, of a variable-speed gearing the position of whose elements is determined by the position of said beam, and a motor for driving said register through said variable-speed gearing, substantially as set forth.

9. In an electric meter, the combination with a beam, a core connected to one end of said beam, an ampero-coil surrounding the core and traversed by the current to be measured, and a register, of a variable-speed gearing the position of whose elements is determined by the position of said beam, a motor for driving said register through said variable-speed gearing, and an auxiliary coil including the core for overcoming the magnetic inertia thereof without producing saturation or polarization, substantially as set forth.

10. In an electric meter, the combination with a beam, a core connected to one end of said beam, an ampero-coil surrounding the core and traversed by the current to be measured, and a register, of a variable-speed gearing the position of whose elements is determined by the position of said beam, a motor for driving said register through said variable-speed gearing, and a stationary auxiliary coil including the core and in series with said meter, substantially as set forth.

11. In an electric meter, the combination with a beam, an ampero-indicator the movable element of which is connected with said beam, said indicator including a coil traversed by the current to be measured, a register, and a motor for operating said register, of a magnetic cut-out arranged to close a shunt around the ampero-coil when said cut-out is influenced by an abnormal current, substantially as set forth.

12. In an electric meter, the combination with a register, an ampero-indicator, and a variable-speed gearing the position of whose elements is determined by said indicator, of a constant-speed motor for driving the register through the variable-speed gearing, and a centrifugal speed-regulator for said motor employing a weighted bell-rod carrying a friction-plate which cooperates with a glass friction-surface, substantially as set forth.

13. In an electric meter, the combination with a register and a driving-motor, of an ampero-indicator comprising a beam, a core connected to one end of said beam, a coil for influencing the core traversed by the current to be measured, and a copper tube on which the coil is wound and in which the core is freely movable, substantially as set forth.

14. In an electric meter, the combination with a register and a driving-motor, of an ampero-indicator comprising a beam, a core connected to one end of said beam, a coil for influencing the core traversed by the current to be measured, a copper tube on which the coil is wound and in which the core is freely movable, and elastic buffers for limiting the extreme movements of said core, substantially as set forth.

15. In an electric meter, the combination with a register and a driving-motor, of an ampero-indicator comprising a beam, a core connected to one end of said beam, a coil for influencing the core traversed by the current to be measured, a magnetic cut-out in circuit with said coil for shutting the same when a destructive current is traversing the coil, and a copper tube on which the coil is wound and in which the core is freely movable, substantially as set forth.

16. In an electric meter, the combination with a register and a motor for operating the same, of an ampero-indicator comprising a coil, a core, and an auxiliary coil for subjecting the same to an initial magnetizing effect without producing polarization or saturation thereof, substantially as set forth.

708,052. SHOE-CLEANER. DANIEL J. FOLEY, Cambridge, Mass. Filed May 16, 1901. Serial No. 92,593. (No model.)

Claim.—1. A shoe-cleaner comprising a base the forward portion of which is cut away to form a dirt-receptacle, a scraper secured to the base-board at the rear termination of said cut-away portion and extending slightly above the base-board, said base-board having an interior opening, a pair of spring-pressed arms secured in said opening having their free ends extending into said dirt-receptacle, and a brush carried by each of said arms, said brushes being adapted to engage the shoe-uppers and being located to the front and above said scraper, substantially as described.

2. A shoe-cleaner comprising a base the forward portion of which is cut away to form a dirt-receptacle, a scraper secured to the edge of the base-board at the rear termination of said cut-away portion and extending slightly above the base-board, a pair of spring-pressed brushes secured to the base-board and located in said cut-away portion, said brushes being located to the front and above said scraper and adapted to engage the shoe-uppers, the said scraper supporting and removing the dirt during the reciprocating motion of the foot, substantially as described.

708,053. BELL FOR CYCLES. DR. CLARET FORD, ALEXANDRIA, England. Filed Feb. 25, 1902. Serial No. 92,594. (No model.)

Claim.—1. The combination with a bell for cycles and the like, of an arm *b* secured to and extending from the exterior of the bell, a plate *b'* provided to said arm at right angles therewith, said plate facing the usual finger-actuated button or thumb-piece of the bell, an elastic bulb *c* interposed between said plate and the button or thumb-piece and a tube-engaging piece *d* at right angles to the plate *b'* through which passes the rubber tube *e* connecting the bulb *c* with the hand-bell *a*, as specified.

2. The combination with a bell for cycles and the like, of a detachable pneumatic operating device, said device consisting of the arm *b* detachably secured to the base of the bell, the plate *b'* extending at right angles from said arm, the pneumatic bulb *c* lying against the plate *b'*, the perforated lug *d* at right angles to the plate last mentioned and the rubber tube held by said perforated lug and connecting the bulb *c* with the hand-bell *a*, as specified.

708,054. HAY-RACK LIFTER. WILLIS J. FRANK, ALBANY, N. Y. Filed Mar. 30, 1902. Serial No. 92,595. (No model.)

Claim.—1. The combination with the posts having shoulders on their upper ends, of lifting-rails provided with stop-blocks at their front ends, latches pivoted on the stop-blocks and adapted to engage the shoulders on the posts, and swinging supports for the lifting-rails.

2. As means for lifting a hay-rack from a wagon running-gear, a pair of lifting-rails adapted to receive and support the rack, swinging supports for the said rails, and drop-logs pivoted on the rack and adapted to rest on the bolsters of the running-gear and each provided with a hook adapted to be locked on the bolsters.

708,054.

708,055. ATTACHMENT FOR MAKING OPEN OR LACE WORK IN STRAIGHT-KNITTING MACHINES. ALBERT GIER, Philadelphia, Pa., assignor to the Brown Knitting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 3, 1901. Serial No. 92,596. (No model.)

Claim.—1. In a straight-knitting machine, a set of lace-points, a pattern-disk controlling the shifting or transferring movements of said lace-points, a pawl adapted to advance said pattern-disk, an arm adapted to rotate said pawl, means controlled by the shagging-shaft for elevating and depressing said arm, a link carried by said arm, a second pawl adapted to be elevated and depressed by said link, a ratchet-wheel, a fashioning-point shaft adapted to be shifted longitudinally when said ratchet-wheel is advanced, and a pattern-chain operated by the shagging-shaft and adapted to periodically throw the second pawl into engagement with said ratchet-wheel.

2. In a straight-knitting machine, a set of lace-points and a pattern-disk controlling the shifting of said lace-points, a shagging-shaft controlling the movement of said pattern-disk, a fashioning-point shaft, a ratchet adapted to shift said fashioning-point shaft, a pawl adapted to advance said ratchet, a pattern-chain operated by the shagging-shaft, and electric means controlled by said pattern-chain for throwing the pawl periodically into and out of operative engagement with the ratchet-wheel.

708,056. TURNING-WATER-WHEEL SYSTEM. ARTHUR GIBLER, Dayton, Ohio, assignor to the Edgewood-Morris & Smith-Veale Co., Dayton, Ohio, a Corporation of Ohio. Filed Oct. 22, 1900. Serial No. 92,597. (No model.)

Claim.—1. In a turbine, the combination with a chute-case having two sets of openings with closed portions between, of a rotary gate having a sleeve, a pin upon which said sleeve is mounted and affording an elongated bearing therefor, two webs extending from opposite points of said sleeve and presenting convex surfaces to the incoming water, and a rim at the outer end of each web constructed to control the openings in the chute-case.

2. In a turbine, the combination with a chute-case having two sets of openings with closed portions between, of a rotary gate having a sleeve, a pin upon which said sleeve is mounted and affording an elongated bearing therefor, a bracket *F*, one end of the pin being secured in said bracket, the other end in the chute-case, two webs extending from opposite points of said sleeve and presenting convex surfaces to the incoming water, and a rim at the outer end of each web constructed to control the openings in the chute-case.

3. In a turbine, the combination with a chute-case having two sets of openings with closed portions between, of a rotary gate having a sleeve, a pin upon which said sleeve is mounted and affording an elongated bearing therefor, two webs extending from opposite points of said sleeve and each carrying at its outer end a rim constructed to control the chute-openings, said webs presenting curved surfaces to the incoming water, the curvature of each surface lessening in abruptness from the sleeve to the rims, substantially as described.

4. In a turbine water-wheel, the combination of a chute-case, a gate having a curved water side which terminates in a sleeve, a central shaft projected through said sleeve, the said shaft having bearings at each end, a piston, a connecting-rod between said piston and the gate, a walking-beam having a changeable fulcrum, and a connecting-rod between said walking-beam and the piston, the said connecting-rod being movable in a straight line, while the connecting-rod between the piston and the gate has an oscillating movement, substantially as specified.

5. In a turbine water-wheel, the combination of a chute-case, a gate having a curved water side terminating in a sleeve, a central shaft projected through said sleeve and affording a bearing for said gate approximately throughout the length of said shaft, a bearing at each end of said central shaft, a central induction-pipe including said gate and shaft and being rigidly attached to the chute-case, a piston, a walking-beam, connecting-rods between said walking-beam and the piston and the piston and the gate, the connecting-rod between the walking-beam and piston being movable in a straight line, and a changeable fulcrum for the walking-beam, substantially as specified.

708,057. RAILWAY-INDICATOR. LORENZO F. GRAHAM, San Jose, Cal. Filed Mar. 11, 1902. Serial No. 97,791. (No model.)

Claim.—1. In an indicator for traveling vehicles, the combination of a distance-meter actuated by the travel of the vehicle, means for indicating the distance traveled, electrically-operated devices for actuating said distance-indicating means from the distance-meter, and means under the control of the operator for obtaining said distance indication at any predetermined distance traveled by the vehicle.

2. In an indicator for traveling vehicles, the combination of a distance-meter actuated by the travel of the vehicle, means actuated by said meter for indicating the distance traveled, means under the control of the operator for obtaining said indication at any predetermined distance traveled by the vehicle, means separately indicating the selection by the operator of such predetermined distance, and electrically-operated devices for actuating said last-named means from the means under the operator's control.

3. In an indicator for railway-trains, the combination of a distance-meter actuated by the travel of the locomotive, means on the locomotive and actuated by said meter for indicating the distance traveled, means under the control of the engineer for obtaining said indication at any predetermined distance traveled by the locomotive, and means exterior to the locomotive for separately indicating to the conductor the selection by the engineer of such predetermined distance.

4. In an indicator for railway-trains, the combination of a distance-meter actuated by the travel of the locomotive, means on the locomotive and actuated by said meter for indicating the distance traveled, means under the control of the engineer for obtaining said indication at any predetermined distance traveled by the locomotive, means exterior to the locomotive for separately indicating to the conductor the selection by the engineer of such predetermined distance, and electrically-operated devices for actuating said last-named means from the means under the engineer's control.

5. In an indicator for traveling vehicles, the combination of a distance-meter actuated by the travel of the vehicle, means for indicating the distance traveled, electrically-operated devices for actuating said distance-indicating means from the distance-meter, means under the control of the operator for obtaining said distance indication at any predetermined distance traveled by the vehicle, means separately indicating the selection by the operator of such predetermined distance, and electrically-operated devices for actuating said last-named means from the means under the operator's control.

6. In an indicator for traveling vehicles, the combination of a distance-meter actuated by the travel of the vehicle, means actuated by said meter for indicating the distance traveled, a signal and electrical connections for operating it from said last-named means, and means under the control of the operator for obtaining said indication and signal at any predetermined distance traveled by the vehicle.

7. In an indicator for traveling vehicles, the combination of a distance-meter actuated by the travel of the vehicle, means for indicating the distance traveled, electrically-operated devices for actuating said distance-indicating means from the distance-meter, a signal and electrical connections for operating it from said last-named means, and means under the control of the operator for obtaining said indication and signal at any predetermined distance traveled by the vehicle.

8. In an indicator for traveling vehicles, the combination of a distance-meter actuated by the travel of the vehicle, means electrically actuated by said meter for indicating the distance traveled, a signal electrically operated by said last-named means, and means under the control of the operator for obtaining said indication and signal at any predetermined distance traveled by the vehicle, and electrically-operated means separately indicating the selection by the operator of such predetermined distance.

9. In an indicator the combination of a revolvable eccentric contact-arm, a fixed support disposed in the plane of a radius of the path described by the arm, a contact-pag adapted to be inserted in said support at various predetermined distances in its length, said pag lying in the path of movement of the arm whereby contact is made between the two at predetermined distances on the arm, an electric circuit in which said arm and pag form poles, and a signal operated by the closing of said circuit.

10. In an indicator for traveling vehicles, the combination of a revolvable eccentric contact-arm, a fixed support disposed in the plane of a radius of the path described by the arm, a contact-pag adapted to be inserted in said support at various predetermined distances in its length, said pag lying in the path of movement of the arm whereby contact is made between the two at predetermined distances on the arm, an electric circuit in which said arm and pag form poles, a signal operated by the closing of said circuit, a distance-meter actuated by the vehicle travel, and means operated by the distance meter for revolving the arm.

11. In an indicator for traveling vehicles, the combination of a revolvable eccentric contact-arm, a fixed support disposed in the plane of a radius of the path described by the arm, a contact-pag adapted to be inserted in said support at various predetermined distances in its length, said pag lying in the path of movement of the arm whereby contact is made between the two at predetermined distances on the arm, an electric circuit in which said arm and pag form poles, a signal operated by the closing of said circuit, a distance-meter actuated by the vehicle travel, and electrically-operated means actuated by the distance-meter for revolving the arm.

12. In an indicator for traveling vehicles, the combination of a revolvable eccentric contact-arm, a fixed support disposed in the plane of a radius of the path described by the arm, a contact-pag adapted to be inserted in said support at various predetermined distances in its length, said pag lying in the path of movement of the arm whereby contact is made between the two at predetermined distances on the arm, an electric circuit in which said arm and pag form poles, a signal operated by the closing of said circuit, a distance-meter actuated by the vehicle travel, and electrically-operated means actuated by the distance-meter for revolving the arm consisting of a ratchet-wheel on the axis of the arm, an actuating-pawl therefor, an electromagnet to operate the pawl, an electric circuit, and a circuit-closer operated by the distance-meter.

13. In an indicator for traveling vehicles, the combination of a revolvable eccentric contact-arm, a fixed support disposed in the plane of a radius of the path described by the arm, a contact-pag adapted to be inserted in said support at various predetermined distances in its length, said pag lying in the path of movement of the arm whereby contact is made between the two at predetermined distances on the arm, an electric circuit in which said arm and pag form poles, a signal operated by the closing of said circuit, a distance-meter actuated by the vehicle travel, electrically-operated means actuated by the distance-meter for revolving the arm consisting of a ratchet-wheel on the axis of the arm, an actuating-pawl therefor, an electromagnet to operate the pawl, an electric circuit, and a circuit-closer operated by the distance-meter, and means for resetting the arm consisting of an electromagnet to relieve the ratchet-wheel of its pawl, an electric circuit with a circuit-closer, and a weight to return the arm.

14. In an indicator, the combination of a revolvable eccentric contact-arm, a fixed support disposed in the plane of a radius of the path described by the arm, a contact-pag adapted to be inserted in said support at various predetermined distances in its length, said pag lying in the path of movement of the arm whereby contact is made between the two at predetermined distances on the arm, an electric circuit in which said arm and pag form poles, a signal operated by the closing of said circuit, an annunciator to indicate the position of the pag in its support and an electric circuit closed by the insertion of the pag and adapted to operate the annunciator.

15. In an indicator for traveling vehicles, the combination of a revolvable eccentric contact-arm, a fixed support disposed in the plane of a radius of the path described by the arm, a contact-pag adapted to be inserted in said support at various predetermined distances in its length, said pag lying in the path of movement of the arm whereby contact is made between the two at predetermined distances on the arm, an electric circuit in which said arm and pag form poles, a signal operated by the closing of said circuit, a distance-meter actuated by the vehicle travel, means operated by the distance-meter for revolving the arm, an annunciator to indicate the position of the pag in its support and an electric circuit closed by the insertion of the pag and adapted to operate the annunciator.

708,055. PROCESS OF PRESERVING TANNING AGENTS FROM THE SAW-PALMETTO. EDWARD F. GRAY, Tampa, Fla. Filed Feb. 15, 1901. Serial No. 47,513. (No specimen.)

Claim.—1. The herein-described process of producing a tanning agent by extracting tannin from the roots of the saw-palmetto, which consists in, first, cleansing the roots; second, separating the juices out of the roots alone; third, cutting said juices until the precipitates are separated from the clear portion; fourth, racking off said clear portion, and, fifth, concentrating this portion in vacuo.

2. The herein-described process of producing a tanning agent by extracting tannin from the roots only of the saw-palmetto, which consists in, first, separating the white from the red parts of the roots; secondly, separately separating the juices out of the respective colored roots; thirdly, allowing said juices to settle until the precipitates are separated from the clear portion; fourthly, racking off said clear portion, and, fifthly, allowing the said racked-off portion to concentrate in vacuo under diminished pressure.

708,059. WINDOW SHADE AND CURTAIN HOLDER. WILLIAM H. GRITTEY, Jersey City, N. J. Filed Feb. 24, 1902. Serial No. 96,146. (No model.)

Claim.—1. The herein-described means for supporting a window-shade and window-curtain, comprising a cornice or molding adapted to be secured in the top of a window-frame between the sides thereof and the ends of which are curved backwardly, a shade-roller supported between the ends thereof rearwardly of and above the front lower edge thereof, a curtain-rod suspended beneath the front lower edge of the cornice or molding and ends of which are curved backwardly, curtain-rings mounted on said rod and movable thereon, and pulleys suspended from said cornice or molding and provided with cords which are connected with the curtain-rings and by which the curtains may be opened or closed, substantially as shown and described.

2. The herein-described means for supporting a window-shade and window-curtain, comprising a cornice or molding adapted to be secured in the top of a window-frame between the sides thereof, and the ends of which are curved backwardly, a shade-roller supported between the ends thereof and rearwardly of and above the front lower edge thereof, a curtain-rod suspended from said cornice or molding and the ends of which are curved backwardly, curtain-rings mounted on said rod and movable thereon, pulleys suspended from the opposite ends of said cornice or molding, two other pulleys suspended from the central portion thereof, and cords connected with said pulleys and with the curtain-rings and by means of which the curtains may be opened or closed, substantially as shown and described.

708,060. CLEVER. WILLIAM H. GRITTEY, Jersey City, N. J. Filed Sept. 26, 1901. Serial No. 73,563. (No model.)

Claim.—1. A clever having a head with slots arranged in vertical alignment therein, and a block for attaching purposes adapted to be interchangeably mounted in either of the slots.

2. A clever having a head with vertically-aligned slots, a block for attaching purposes interchangeably mounted in either of the slots, and a bolt removably mounted in the head and engaging the block.

3. A clever having a head with vertically-aligned slots, a block adapted to be interchangeably mounted in relation to said slots, and having an attaching device applied thereto, the upper and lower ends of said block having at one side and in opposite positions being provided with flanges, and means for removably securing the slots in the block.

4. A clever comprising a pair of parallel bars for embracing a beam, a vertical brace connecting said bars near the outer ends thereof, a spar disposed on said brace and adapted to engage said beam, an intermediate partition-bar projecting outwardly from the brace in a line parallel with the extended ends of the beam-embracing bars, and a block adapted to be interchangeably mounted in the openings or slots formed by these extended ends and the partition-bar.

5. A clever comprising two parallel bars adapted to embrace a beam, a vertical brace connecting said bars near the outer ends thereof, an intermediate bar projecting outwardly from the brace in a line parallel with the extended ends of the beam-embracing bars, and forming slots, a block adapted to be mounted in one of said slots, and a bolt extending through the outer ends of said bars and through said block, and a clevis-loop connected with said block.

708,061. THRESHING-MACHINE. GEORGE W. HAINES, Buckton, Cal., assignor to Haines & Haines Manufacturing Company, Buckton, Cal., a Corporation of California. Filed Jan. 12, 1901. Serial No. 42,905. (No model.)

Claim.—1. The combination of the bearing-wheel, the threshing-cylinder, and mechanism intermediate of the two whereby motion is transmitted from the bearing-wheel to the cylinder, said mechanism including a gear-wheel fixed to one of the bearing-wheels, a shaft extending across the machine, having a pinion upon one end to engage said gear-wheel and having a wheel upon the opposite end; a second shaft extending across the machine, having an internal-gear wheel on the same side of the machine as the last-named wheel, and a wheel fixed to the face of said internal-gear wheel, a belt connection between the wheel of the first-named shaft and the last-named wheel, and a cylinder-shaft having a pinion to engage the internal gear.

2. The combination of the bearing-wheel, the threshing-cylinder, and mechanism intermediate of the two whereby motion is transmitted from the left bearing-wheel to the cylinder, said mechanism including a shaft extending across the machine having a pinion on the left end and a sprocket-wheel on the right end and said pinion engaging a gear-wheel fixed to the left bearing-wheel, a second shaft extending across the machine having an internal-gear wheel on its right-hand end and a sprocket-pinion removably belted to the face of said gear-wheel, a bracketable chain connecting the sprocket wheel and pinion, and a cylinder-shaft having a pinion engaging the teeth of the internal-gear wheel.

3. In a threshing-machine, a threshing-cylinder, bearing-wheel therefor, a threshing-cylinder journaled upon the frame, a mechanism for transmitting motion and speed from the left bearing-wheel to the cylinder, consisting of an internal gear fixed to and carried by the left bearing-wheel, an externally-toothed pinion meshing therewith and mounted upon a shaft journaled upon the main frame timbers of the machine, a sprocket-wheel fixed to the opposite end of said shaft and lying between the right-hand

bearing-wheel and the frame-timbers on that side, a pinion fixed to the right end of the cylinder-shaft, an internal gear, the teeth of which engage therewith, said gear mounted upon a shaft which is journaled upon and extends across the same structure with the cylinder-shaft, a sprocket-pinion detachably fixed to the internal gear and a chain connecting the sprocket wheel and pinion.

708,069. COIN-CONTROLLED APPARATUS. ARTHUR W. HAVEN, Richmond, Va. Filed Oct. 15, 1900. Serial No. 33,048. (No model.)

Claim.—1. In a coin-controlled machine, a pivoted locking-arm, a horizontal arm pivoted with the locking-arm, a coin-receiver swung upon the horizontal arm and supported in its normal position by means of a spring, a stop to limit the downward movement of the horizontal arm, and a lever provided with a pin normally projecting over the coin-receiver so arranged that when the lever is depressed the pin bearing upon the coin on the coin-receiver depresses the horizontal arm to unlock the locking-arm, and so that upon the said horizontal arm striking the stop the pin still bearing upon the coin lifts the coin-receiver and slides the coin therefrom.

2. In a coin-controlled apparatus, a coin-controlled mechanism consisting of a horizontal pivoted arm, a coin-receiver swung upon the arm and supported in its normal position by means of a spring, a stop to limit the downward movement of the arm, and a lever provided with a pin normally projecting over the coin-receiver so arranged that when the lever is depressed the pin bearing upon the coin on the coin-receiver depresses the arm and so that upon the arm striking the stop the pin still bearing upon the coin lifts the coin-receiver and slides the coin therefrom.

3. In a coin-controlled machine, the combination of an operating-lever provided with a projecting pin, a pivoted locking-bar having a horizontal extension, a coin-receiver swung on the extension and located in the path of the operating-lever pin, a stop to limit the downward movement of the locking-bar extension and means to move said extension to its horizontal position, and away from the said stop.

4. In a coin-controlled machine, the combination of a coin-controlled mechanism consisting of an operating-lever provided with a projecting pin, a pivoted horizontal arm, a coin-receiver swung upon the arm and located in the path of the operating-lever pin, a stop to limit the downward movement of the arm.

5. In a coin-controlled machine, the combination of an operating-lever provided with a projecting pin, a pivoted arm, a coin-receiver swung upon the arm and located in the path of the operating-lever pin, a stop to limit the downward movement of the arm and means to move said arm away from said stop.

6. In a coin-controlled machine, the combination of an operating-lever having a projecting pin, a vertically-swinging locking-bar having a horizontal extension, a coin-receiving plate swung on the extension and held in its normal position by means of a spring and located in the path of the operating-lever pin, and a stop to limit the downward movement of the locking-bar extension.

7. In a coin-controlled machine, the combination of an operating-lever having a projecting pin, a pivoted arm, a coin-receiving plate swung on the arm and held in its normal position by means of a spring and located in the path of the operating-lever pin, and a stop to limit the downward movement of the arm.

8. In a coin-controlled machine, a coin-controlled mechanism consisting of an operating-lever having a projecting pin, a pivoted arm, a coin-receiver swung upon the arm and held in its normal position by means of a spring and located in the path of the operating-lever pin, and a stop to limit the downward movement of the arm.

9. In a coin-controlled machine, the combination of an operating-lever having a projecting pin, a vertically-swinging locking-bar having a horizontal extension, a coin-receiving plate swung on the extension and held in its normal position by means of a spring and provided with a slot located in the path of the operating-lever pin, and a stop to limit the downward movement of the locking-bar extension.

10. In a coin-controlled machine, the combination of an operating-lever having a projecting pin, a horizontal pivoted arm, a coin-receiving plate swung on the arm and held in its normal position by means of a spring and provided with a slot located in the path of the operating-lever pin, and a stop to limit the downward movement of the arm.

11. In a coin-controlled machine, a coin-controlled mechanism consisting of an operating-lever having a projecting pin, a pivoted arm, a coin-receiving plate swung upon the arm and held in its normal position by means of a spring and provided with a slot located in the path of the operating-lever pin, and a stop to limit the downward movement of the arm.

708,068. DENTAL BUR. FRANK F. HAWKINS, Troy, N. Y. Filed Nov. 2, 1900. Serial No. 33,361. (No model.)

Claim.—1. A rotary cutting-tool comprising a shank, and a head convergent toward said shank, and provided on said convergent portion with a cutting-tooth presenting a forwardly-facing cutting edge and a rearwardly-beveled back, said cutting edge being inclined forwardly toward its shank end, substantially as described.

2. A rotary cutting-tool comprising a shank and a head having thereon cutting edges oppositely inclined relatively to the axis of the head, one forwardly toward the shank end and another forwardly toward the outer end of the head.

3. A rotary cutting-tool comprising a shank and a head having thereon a cutting edge inclined forwardly toward its outer end and a cutting edge inclined forwardly toward its shank end and said cutting edges being separated by a clearance-space at right angles to the axis of the head, substantially as described.

708,064. SUBSTANCE AND MANTLE FOR INCANDESCENT GAS-LIGHTS. LOUIS HENRI, Englewood, N. J. Filed Dec. 28, 1900. Serial No. 41,413. (No model.)

Claim.—1. A hood or frame for an incandescent gas-light consisting substantially of oxid of thorium, a comparatively large percentage of oxid of lanthanum and a comparatively small percentage of oxid of cerium, substantially as described.

2. A hood or frame for an incandescent gas-light consisting substantially of oxid of thorium, a comparatively large percentage of oxid of yttrium and a comparatively small percentage of oxid of cerium, substantially as described.

3. A hood or frame for an incandescent gas-light composed substantially of oxid of thorium, a comparatively large percentage of the combined oxides of lanthanum and of yttrium, and a comparatively small percentage of oxid of cerium, substantially as described.

4. A hood or frame for an incandescent gas-light consisting substantially of oxid of thorium, a comparatively large percentage of oxid of lanthanum and a comparatively small percentage of any one or more of the oxides of the hereinbefore-mentioned metals of the second class, substantially as described.

5. A hood or frame for an incandescent gas-light consisting substantially of oxid of thorium, a comparatively large percentage of the oxid of yttrium and a comparatively small percentage of any one or more of the oxides of the hereinbefore-mentioned metals of the second class, substantially as described.

6. A substance for an incandescent gas-light consisting substantially of the oxid of any one or more of the hereinbefore-mentioned metals of the first class, a comparatively large percentage of oxid of lanthanum and a comparatively small percentage of the oxid of any one or more of the hereinbefore-mentioned metals of the second class, substantially as described.

7. A substance for an incandescent gas-light consisting substantially of the oxid of any one or more of the hereinbefore-mentioned metals of the first class, a comparatively large percentage of oxid of yttrium and a comparatively small percentage of the oxid of any one or more of the hereinbefore-mentioned metals of the second class, substantially as described.

8. A substance for an incandescent gas-light consisting substantially of the oxid of any one or more of the hereinbefore-mentioned metals of the first class, a comparatively large percentage of the combined oxides of

lanthanum and yttrium and a comparatively small percentage of the oxid of any one or more of the hereinbefore-mentioned metals of the second class, substantially as described.

708,065. MACHINE FOR GRINDING BALLS. HENRY G. HOTTEN, Chelmsford, England. Filed Apr. 4, 1901. Serial No. 34,234. (No model.)

Claim.—1. In a ball-grinding machine, the combination with a grinding device, of a ball-supporting ring, a holding device for the balls, acting in conjunction with the ball-supporting ring and a common fixed spindle for carrying all of said members.

2. In a ball-grinding machine, the combination with a central fixed spindle, of a grinding-ring, means for rotating said grinding-ring, a holding-down ring for the balls, means for securing it to the spindle, a counterpoise for the grinding-ring against which the pressure of the grinding-ring is exerted, and means for holding the balls up to the grinding medium.

3. In a ball-grinding machine the combination with a grinding-ring of a revolvable ball-supporting ring and means for allowing same a rocking movement to adjust itself to inequalities of the balls.

4. In a ball-grinding machine the combination with a grinding-ring of a revolvable ball-supporting ring, means for allowing same a rocking movement to adjust itself to inequalities of the balls, and means for locking such rocking means so that the revolvable ball-supporting ring may be firmly held while being rotated for regrinding purposes.

5. In a ball-grinding machine, and in combination, a central spindle, a grinding-ring, means for rotating the latter, a ball-supporting ring having an angular groove for the balls, a part carrying each ball-ring, a spherical seat on each part, a plane portion carrying each spherical seat, means for connecting the two surfaces so that they may be rotated together while capable of a rocking movement, and means for carrying and rotating the inclined plane portion.

6. The combination with a grinding-ring and a ball-supporting ring, and means for rotating both, of an annular ball-holding hopper, a ball-holding trough and discharging means carried by same, and means carried by the hopper whereby the balls can pass therefrom in regulated numbers to the ball-supporting ring.

7. The combination with a ball-supporting ring and grinding and holding devices for the balls, of means for rotating each ring, means for raising and lowering same, and a trough surrounding each ring for receiving the balls thrown out by the rotation of the ring.

8. The combination with a ball-supporting ring and grinding and holding devices for the balls of means for raising and lowering each ring, a hopper surrounding each ring, and means carried by the hopper whereby a regulated number of balls can be released to fill the ring.

9. In a ball-grinding machine, the combination with a revolvable grinding-ring, a revolvable ball-supporting ring, and a fixed holding-ring of an annular ball-holding hopper, means for feeding the balls from same,

means for receiving the balls from the ball-supporting ring when discharged therefrom and means for raising and lowering each ring.

10. In a ball grinding machine, the combination with a central fixed spindle having a threaded portion, of a grinding-ring, a casing whereby said ring is carried, means for rotating said casing and ring, means for holding the balls up to the grinding-ring, a nut carried by the threaded portion of the spindle, a hand-wheel for rotating same, a slide, means for carrying same, and an adjustable stop carried by the hand-wheel and acting in conjunction with the slide, whereby the amount of rotation of each hand-wheel can be regulated.

11. In a ball-grinding machine, the combination with a central spindle, a ball-grinding ring, means for rotating same, a ball-supporting ring, means for rotating same, a spring for forcing same upwardly so as to maintain the balls in contact with the grinding-ring, and means for indicating the decreasing diameter of the balls during grinding.

12. The combination with a ball-supporting ring and means for imparting a vertical movement to same, of a grinding device, a spindle carrying each ball-supporting ring, a dial and means carried by the spindle and controlled by the vertical movement of the ball-supporting ring whereby the amount of such movement is directly indicated.

13. The combination with a ball-supporting ring and means for rotating same comprising in its parts a clutch device, of a slide by which each ring is carried, means for moving each slide vertically, and means carried by each slide and capable of interlocking with a part of the clutch device whereby each clutch must be thrown out of action before the slide is moved vertically.

708,066. REMINDER DEVICE. GEORGE H. HENNER, Niagara Falls, N. Y., and EDWARD W. ANDERSON, Washington, D. C. Filed Sept. 3, 1901. Serial No. 74,157. (No model.)

Claim.—A pocket measurer or reminder, having a smooth face, a number of perforations or cuts, for a detachable attention peg or marker, distributed over said face, mnemonic words or symbols severally in juxtaposition to each face perforation, and a holding connection for said peg or marker, at the edge portion of said reminder, removed from the face thereof, whereby the face of the reminder is left unobstructed, when the peg or marker is not in use, substantially as specified.

708,067. EXHAUST-CONVEYER. GEORGE A. HUNT, Everett, Mass., assignor of one-half to F. C. Alden, Reading, Mass. Filed June 2, 1901. Serial No. 32,856. (No model.)

Claim.—1. In an exhaust-conveyer, the combination of a hopper having a space above it for products of combustion said space forming a flue, an exhaust-conduit located in said flue, an exhaust-discharge outlet

at one end of the flue, an air-mixer associated with said outlet, and an air-inlet for supplying air directly to said flue and disposed relatively to the air-mixer to cause the supply of air on its way to the air-mixer to pass through the entire combustion space or flue over the boiler, whereby the air and steam are dried and heated prior to being mixed.

2. In an exhaust-convector, the combination of a boiler having a space above it for products of combustion said space forming a flue, an exhaust conduit located in said flue, a muffler in said conduit, an exhaust-discharge outlet at one end of the flue, an air-mixer associated with said outlet, and an air-inlet for supplying air directly to said flue and disposed relatively to the air-mixer to cause the supply of air on its way to the air-mixer to pass through the entire combustion space or flue over the boiler, whereby the air and steam are dried and heated prior to being mixed.

3. In an exhaust-convector, the combination of a boiler having a heater therefor, an engine supplied by said boiler, a flue for disposing of the products of combustion, an engine exhaust-conduit located in said flue, an exhaust-discharge outlet at one end of the flue, a downwardly-opening air-mixer associated with said outlet and forming an outlet for the flue, and an air-inlet for supplying air to said flue and disposed relatively to the air-mixer to cause the supply of air on its way to the air-mixer to pass through said flue over the boiler, whereby the air and steam are dried and heated prior to being mixed.

708,068. AUTOMATIC STOKER AND SMOKE-CONSUMER.
ROBERT W. KING, Toronto, Canada. Filed June 20, 1900. Serial No. 21,378. (No model.)

Claim.—1. In an apparatus for feeding furnaces, a horizontal plate for supporting the fuel as it is fed into the furnace, an inclined surface in prolongation of said plate and having a series of pockets for containing coal fed upon said inclined surface, a series of rollers movable in said pockets to feed the coal over said surface, and means for moving said series of rollers beyond the inclined surface and into the under surface of the coal resting thereon.

2. In an apparatus of the class described, a cooking-plate and an inclined pocketed continuation thereof, combined with a series of rollers operable in said pockets.

3. In an apparatus of the class described, a plate for supporting the fuel as it is fed into the furnace, an inclined surface in prolongation of said plate and provided with pockets for containing coal fed upon said inclined surface, a series of rollers, a plurality of rollers connected to each driver and means to actuate said rollers to reciprocate the series of rollers into said pockets and beyond the inclined surface.

4. In an apparatus of the class described, an inclined plate to contain coal, said plate having pockets arranged in a plurality of vertical series, combined with a plurality of series of rollers operable in said pockets in different vertical planes corresponding to the vertical series of pockets, and means to alternately move said series of rollers in said pockets and beyond the inclined surface of the plate to enter the under surface of the coal.

5. In an apparatus of the class described, a cooking-plate having a continuation provided with fuel-containing pockets arranged in different vertical series, and a plurality of series of rollers arranged in series and

entering said pockets, and means to operate said rollers whereby after the fuel has been cooked the rollers are thrust forward through said pockets to advance the fuel.

6. In an apparatus of the class described, a surface provided with pockets to contain coal, a series of driving grate-bars arranged below the pocketed surface and means to actuate said bars for advancing the coal fed thereupon from the pocketed surface.

7. In an apparatus of the class described, a series of carriages provided with a detachable fuel-containing surface, each detachable fuel-containing surface comprising a series of drivers.

8. In an apparatus of the class described, a series of carriages having a detachable fuel-containing surface comprising driving-surfaces located in different planes, and means for moving the said surfaces to feed the fuel.

9. In an apparatus of the class described, a stationary bed-grate, a cross-bar, a series of carriages provided each at its upper outer end with a plate *d*, the lower inner ends of said carriages resting on said cross-bar, means to sustain the lower side of each of said plates *d*, and a series of driving grate-bars carried by each of said carriages.

10. In an apparatus of the class described, an inclined pocketed plate to receive fuel, a plurality of rollers, a series of feeding grate-bars, a bed-grate, and means for operating said rollers and feeding grate-bars to feed the fuel upon said bed-grate.

11. In an apparatus of the class described, an inclined pocketed plate to receive fuel, a plurality of rollers movable in said plate, a movable grate adjacent said pocketed plate, and means for operating said rollers to feed the fuel upon said grate, and a bed-grate to receive the fuel from the movable grate.

12. In an apparatus of the class described, a series of grate-carriages having detachable grate-bars each having at its inner end a hook to engage a part of a carriage, the upper end of each detachable grate resting upon and being secured to a portion of each carriage near its outer end, and means to reciprocate said carriages.

13. In an apparatus of the class described, a coal-containing surface having a plurality of series of pockets, a grate-bar for each series of pockets, a series of rollers in alignment with each of said grate-bars, and means to move said rollers and grate-bars in and be in the same direction.

14. In an apparatus of the class described, a hopper for receiving fuel, a series of feeding devices located therein, a throat having a series of fuel-passages leading to the combustion-chamber and means to actuate the series of feeding devices to feed the fuel from said hopper through the series of fuel-passages into the furnace.

15. In an apparatus of the class described, a hopper, a throat having a series of fuel-passages, a series of feeding devices shaped to cut or comminute the coal being fed into the combustion-chamber through the separate fuel-passages.

16. In an apparatus of the class described, a hopper, a throat having a series of fuel-passages leading from said hopper to the combustion-chamber combined with a series of rotatable feeding devices each provided with a spiral groove to prevent cutting-runs.

17. In an apparatus of the class described, a hopper, a passage leading from said hopper into the combustion-chamber, a feeding and cutting device located in the said passage and presenting a drawing and shear cutting edge within the passage to cut and feed the fuel as it passes from the hopper into said passage.

18. In an apparatus of the class described, a hopper to receive fuel, a plate on which the fuel is fed, a throat located between said plate and hopper and presenting a plurality of fuel-passages, and a plurality of rotatable feeding devices presenting each cutting edges, each feeding device feeding the fuel from the throat through a separate passage therein onto the plate referred to.

19. In an apparatus of the class described, a hopper, a throat having a series of fuel-passages to separately feed fuel therefrom into the combustion-chamber, and a series of feeding devices, each of said feeding devices having a connected worm-toothed gear, a shaft having a series of worms in operative engagement with said worm-toothed gears, and means to actuate said shaft to operate all of said feeding devices.

20. In an apparatus of the class described, a coal-containing plate, a hopper to supply coal, and a door having air-passages to deliver external heated air to the coal lying on the said plate to facilitate combustion.

21. In an apparatus of the class described, a hopper, a coal-containing plate, a series of feeding devices having worm-toothed wheels, a series of worms to actuate said worm-toothed wheels, some of the worms being adapted to actuate said feeding devices to feed the coal at varying speeds one with relation to the other.

22. In an apparatus of the class described, a hopper, a fuel-containing plate provided with pockets for containing fuel, means for feeding coal from the hopper substantially continuously onto said pocketed plate, a series of rollers movable in said pockets, a movable grate below said fuel-

containing plate and rollers, and means for simultaneously operating the rollers and movable grate.

23. In an apparatus of the class described, a hopper, a fuel-containing plate provided with pockets, means for continuously feeding coal from the hopper onto said plate, a series of rollers operable in said pockets, a movable grate located below the fuel-containing plate and rollers and receiving coal through the operation of said rollers, means for automatically and simultaneously operating the rollers and grate.

24. In an apparatus of the class described, a fuel-containing plate, a hopper for receiving fuel to be fed to said plate, fuel-feeding devices in said hopper, a pocketed plate, a series of rollers movable in the pocketed plate, a fuel-driving grate to receive the fuel from the pocketed plate, means to actuate the fuel-feeding devices in the hopper to feed the coal upon the fuel-containing plate, and adjustable connecting devices operable by the means for actuating the fuel-feeding means, whereby the feeding movement of the fuel-driving grate may be varied according to the requirements of combustion.

25. In an apparatus of the class described, a plate to receive coal fed to the combustion-chamber, an inclined plate in continuation thereof, said inclined plate being provided with pockets, combined with a series of driving grate-bars below said inclined plate to receive the coal therefrom and feed the same further into the combustion-chamber, and means for moving said series of driving grate-bars.

26. In an apparatus of the class described, a grate-carriage, a movable link for actuating the same, and a notched loose pin connecting said carriage and link, combined with a keeper applied to the notch of said pin.

27. In an apparatus of the class described, a cooking-plate, an inclined pocketed plate in continuation thereof and leading downwardly therefrom, said plate having a series of pockets to contain the fuel, means to feed the fuel positively and continuously over said cooking-plate and upon said inclined plate, and means acting intermittently upon the fuel lodged in the pockets of the inclined plate to insure the traveling of said fuel down said inclined plate.

28. In an apparatus of the class described, a cooking-plate, an inclined pocketed plate in continuation thereof having a series of horizontal fuel-containing surfaces open to supply air to the fuel passing over said inclined plate, and means for acting intermittently on the fuel resting on said containing-surfaces to insure the traveling of the fuel downwardly over said plate from one to another of said horizontal surfaces and a feeding-grate below said inclined plate.

29. In an apparatus of the class described, a bed-grate, a cooking-plate, an inclined pocketed plate in continuation thereof having a series of horizontal fuel-containing surfaces open to supply air to the fuel passing over said inclined plate, and means for acting intermittently on the fuel resting on and remaining-surfaces to insure the traveling of the fuel downwardly over said plate from one to another of said horizontal surfaces, a grate to receive the fuel from said inclined plate and means to move the grate to feed the fuel onto the bed-grate.

30. In an apparatus of the class described, a cooking-plate located within the furnace-chamber and having in continuation thereof an inclined pocketed plate provided with fuel-containing surfaces open for the communication of air to the under side of the fuel passing over said plate, means to move the fuel from said inclined plate means to feed fuel to the cooking-plate and upon the said inclined plate, and a furnace crown-shaped and cut to concentrate the heat and impinge the heated products of combustion upon the fuel lying on said cooking-plate.

31. In an apparatus of the class described, a cooking-plate located inside the furnace-chamber and having as a continuation thereof a downwardly-inclined pocketed plate, a hopper, fuel-feeding device, communicating with said hopper and means to actuate said device to feed the fuel onto the cooking-plate and over the same upon the inclined continuation thereof.

32. In an apparatus of the class described, a spring, a detachable series of grate-bars supported thereby, a link for reciprocating the carriage and grate-bar, an adjustable crank-pin actuating each link, and means for actuating the crank-pins, the adjustment of the crank-pins providing for any desired variation in stroke of the grate-bars.

33. In an apparatus of the class described, a hopper, a cooking-plate, and feeding means provided with smaller grooves to receive and feed the fuel, means to rotate said feeding means positively, the said feeding means having provision for cutting and cracking fuel as the latter is fed from the hopper upon the cooking-plate.

708,069. RAILWAY-CAR. FREDERICK KENNETH, Buffalo, N. Y., assignor of one-half to LYNN LAMSON, Buffalo, N. Y. Filed Oct. 31, 1901. Serial No. 80,636. (No model.)

Claim.—1. In a railway-car, the combination with the roof of rails or bolts provided at their upper ends with screw-nuts arranged adjacent to the roof and accessible through wrench-openings located in the roof opposite the said upright tubes or nipples secured to the roof in line with

said openings, and removable caps applied to the upper ends of said nipples, substantially as set forth.

2. In a railway-car, the combination with the upper and lower decks, the deck top and bottom rails and the posts arranged between said rails, of tie-bolts passing through said top and bottom rails and having nuts at their upper ends which are accessible through wrench-openings located in the upper deck opposite the said tubes or nipples applied to said openings and projecting above said deck and each provided with a base-flange which is secured to the surface of the deck, and removable caps applied to the projecting upper ends of said tubes, substantially as set forth.

3. In a railway-car, the combination with the upper and lower decks, the deck top and bottom rails and the posts arranged between said rails, of tie-bolts passing through said top and bottom rails and having nuts at their upper ends which are accessible through wrench-openings located in the upper deck opposite the said tubes, externally-screw-threaded tubes or nipples applied to said openings and projecting above the upper deck and each provided with a base-flange having an inclined under side which rests upon the top of said deck and a straight upper face arranged at right angles to the axis of the tube, and screw-caps engaging with said screw-threaded tubes and each having a straight lower end which bears against the upper face of the corresponding base-flange, substantially as set forth.

708,070. INCANDESCENT GAS-LAMP. JOSEPH LEVY, New York, N. Y. Filed June 14, 1901. Serial No. 84,517. (No model.)

Claim.—1. In an incandescent gas-lamp, the pipe D bringing air under pressure and a second pipe E bringing gas, each extended down to

a level below the flame and bent upward, in combination with an insulating tube G and with a horizontal chamber G' opening into the upper end thereof and with a plurality of burners, all arranged for joint operation substantially as herein specified.

2. In an incandescent gas-lamp, the pipe D bringing air under pressure and a second pipe E bringing gas, each extended down to a level below the flame and bent upward and each toward the other, in combination with an insulating tube G, having its base open to the atmosphere, and with a horizontal chamber G' in connection therewith and with a plurality of burners, and provisions for expanding mantles in the proper relations to each burner and for attaching temporary supports for such mantles when required, all substantially as herein specified.

708,071. WEIGHT-MOTOR FOR GAS-MACHINES. WILLIAM D. LUCE, Haverhill, Mass. Filed Mar. 26, 1901. Serial No. 32,991. (No model.)

Claim.—1. A gas-machine having a water-cooled bell, means for raising and lowering said bell comprising a shaft, means which act to rotate the same in one direction, a locking means for said shaft which is adapted to prevent rotation thereof, means for automatically causing said locking means to release said shaft when the bell sinks to a predetermined level so that the shaft is permitted to rotate, means for automatically connecting said shaft to said bell as it is rotated, and means for automatically disconnecting said shaft from said bell when the latter has been lifted to a predetermined height, so that it is permitted to sink, said locking means being adapted to again lock said shaft when the bell is liberated.

2. A gas-machine having a water-cooled bell, means for raising and lowering said bell comprising a shaft, means which act to rotate the same in one direction, a locking means for said shaft which is adapted to prevent rotation thereof, a winding-drum which is adapted to rotate freely in both directions, connections between said drum and bell whereby the latter will be lifted when the former is rotated in one direction, means for automatically causing said locking means to release said shaft when said bell is lowered to a predetermined point, means for automatically connecting said shaft to said drum so that the drum will be rotated by the shaft and will lift said bell, means for automatically disconnecting said shaft and drum when the bell has been lifted to a predetermined height, so that the drum may rotate in the opposite direction and permit said bell to sink, said locking means being adapted to release the shaft when the latter is disconnected from said drum.

3. In combination with the cup or bell of a gas-machine which is adapted to draw in and discharge gas as it is raised and lowered, means for raising and lowering said cup, comprising a shaft, means which act to rotate the same, a wheel which is connected to said shaft, a single ratchet-tooth thereon, a pawl which is pivoted to a fixed support and is adapted to engage said tooth and hold said shaft against rotation, a winding-drum which is journaled on said shaft, a pawl which is pivoted on said wheel and is adapted to engage said winding-drum so as to lock said shaft and drum together when said shaft is rotated, a cable connecting said drum

and cup, means for lifting the pawl first named when said cup is at a predetermined point, permitting said shaft to rotate and lift said cup, and a fixed finger which is adapted to engage said second-named pawl and lift the same out of engagement with said drum when the latter has nearly made one complete rotation, said first-named pawl being liberated so that it may engage the teeth of said wheel and lock said shaft immediately after said winding-drum is disconnected therefrom.

4. In combination with a cup or bell of a gas-machine which is adapted to draw in and discharge gas as it is raised and lowered, means for raising and lowering said cup, comprising a shaft, means which act to rotate the same, a locking device which is adapted to prevent rotation of said shaft, a drum which is adapted to rotate on said shaft, means for automatically connecting said shaft and drum when the shaft is rotated, connections between said cup and drum which are adapted to lift the cup when the drum is rotated, means for releasing said shaft when said cup sinks to a certain position, whereby the latter may be lifted, means for disconnecting said shaft and drum when they have made nearly one complete rotation, said locking device being adapted to lock said shaft when it has completed its rotation.

5. An apparatus of the character described comprising a shaft, means which act to rotate the same in one direction, means for locking said shaft against rotation, an inverted cup, means for causing the same to draw in and discharge gas when it is raised and lowered, connections between said shaft and cup whereby the cup will be lifted when said shaft is permitted to rotate, and a brake which is adapted to retard the rotation of said shaft during the first part of its rotation after it is unlocked.

6. An apparatus of the character described comprising an inverted cup, means for causing the same to draw in and discharge gas when it is raised and lowered, a shaft, means which act to rotate the same in one direction, means for locking said shaft against rotation and for unlocking the same when said cup reaches a predetermined position, a segmental projection which is concentric with said shaft and connected thereto, and a brake which is in position to engage said projection immediately upon the unlocking of said shaft whereby the speed of rotation of said shaft may be retarded during the initial part thereof.

7. A gas-machine comprising a tank containing a liquid, an inverted cup which is suspended therein, means for lifting said cup so as to draw a gas therein at a predetermined rate, means for admitting an additional flow of gas into said cup as it finishes its upward movement, and means for permitting said cup to sink into said tank immediately thereafter.

8. A gas-machine comprising a tank containing a suitable liquid, an inverted cup which is suspended therein, lifting means for said cup, means for controlling said lifting means so that the latter may act to lift said cup and permit the same to sink into said tank under predetermined conditions, means for permitting said cup to draw in a gas at a predetermined rate as it is lifted, and means for permitting an additional flow of gas into said cup as it finishes its upward movement.

9. A gas-machine comprising a tank containing a liquid, an inverted cup which is suspended therein, lifting means for said cup, means for controlling said lifting means so that the latter may act to lift said cup and permit the same to sink into said tank under predetermined conditions, means for permitting said cup to draw in a gas at a predetermined rate as it is lifted, a gas-holder, a passage connecting said cup and holder having a check-valve which is arranged to prevent a return flow from said holder to said cup, a by-pass about said check-valve having a normally closed valve therein, and means for opening said by-pass valve which are adapted to be operated by said cup as it finishes its upward movement.

708,072. COMBINED SEAL AND KEY. HENRY A. HAINES, New York, N. Y. Filed Sept. 20, 1901. Serial No. 75,916. (No model.)

Claim.—1. In combination, a handle provided with a socket, a ring seated in the socket and projecting beyond the handle to form part of a seal, a die-block forming the balance of the seal and means for removably securing the die-block within the ring.

2. In combination, a handle, a ring permanently secured therein forming part of the seal, a die-block removably secured within the handle by means of the ring and forming a seal in connection with the ring and means for ejecting the die-block from the ring, substantially as set forth.

3. In combination, a handle, a ring permanently seated therein forming part of a seal, a die-block removably secured within the handle forming the balance of the seal, the said ring having a spring-tongue for removably securing the die-block within the ring, substantially as set forth.

4. In combination, a handle provided with a socket, a ring seated in

the socket and projecting beyond the handle to form part of a seal, a die-block forming the balance of the seal, means for removably securing the die-block within the ring and means for positively ejecting the die-block comprising a centrally-arranged sliding follower located entirely within the handle.

708,073. FLY-BUTTON. HATHAMER M. MARSHALL, Portland, Me. Filed Jan. 6, 1902. Serial No. 33,536. (No model.)

Claim.—1. As a new article of manufacture, a garment-button having a wide thin body adapted to pass through a buttonhole, said body having one of the members of a ball-and-socket union positioned at the center of its front side and spaced apart from its edge and on its back side means for attaching it to a garment.

2. As a new article of manufacture, a garment-button having a wide thin body and the socket member of a ball-and-socket union made integral therewith and provided with thread-receiving holes in the bottom of said socket.

3. The combination with a garment having a fly-opening therein of a closure for said opening consisting of a button secured to one side of the opening and adapted to pass through and engage a buttonhole in the other side, a member of a ball-and-socket union made integral with the front side of said button and a complementary member of said union secured to the inside of the flap and positioned to engage said first-named member when the flap is closed.

708,074. MAIL-BAG CATCHING AND DELIVERING MECHANISM. RALPH J. HENY, Elizabeth, Colo., assignor of one-half to Lillian E. Doddridge, John S. Doddridge, and John R. Dowd, Redford, Colo. Filed Mar. 25, 1902. Serial No. 30,380. (No model.)

Claim.—1. In a mail-bag catching and delivering mechanism, the combination with a support, of a pair of oppositely-disposed sack-engaging forks consisting of a rigid bar centrally secured to the supports and projecting from opposite sides thereof to form a rigid side for each fork, and a single continuous piece of resilient material centrally fixed to the support and projecting from opposite sides thereof to form a resilient side for each fork, said resilient material being provided with sack-receiving loops or bands arranged adjacent to the support and adapted to clamp a sack, substantially as described.

2. In a mail-bag catching and delivering mechanism, the combination of a standard, an upper pivotally-mounted sack-supporting arm provided with means for engaging a sack or bag, a lower pivoted sack-sup-

porting arm provided with plates extending from its outer end, means arranged at the outer ends of the plates for engaging a sack or bag, and the oppositely-disposed sack-engaging forks comprising a continuous bar secured between the said plates and extending from opposite sides thereof, and a continuous spring also secured between the plates and projecting from opposite sides of the same, substantially as described.

3. In a mail-bag catching and delivering mechanism, the combination of a hinged car-crane arranged to swing horizontally and designed to be mounted on the interior of a car and provided with means for engaging a sack, a pivoted fork mounted on the crane and arranged to swing upward and downward, and operating mechanism connected with the fork and adapted also for swinging the crane inward and outward, substantially as described.

4. In a mail-bag catching and delivering mechanism, the combination of a hinged car-crane designed to be mounted on the interior of a car and arranged to swing horizontally and provided with means for supporting a sack, bag or sack engaging means pivotally mounted on the crane and arranged to swing upward and downward, a rock-shaft connected with the said means and adapted to swing the same upward and downward, said rock-shaft being also adapted for swinging the crane, substantially as described.

5. In a mail-bag catching and delivering mechanism, the combination of a car-crane designed to be hinged at the interior of a car and provided with means for holding a sack, a sack-engaging fork movably mounted on the crane, a rock-shaft mounted on the crane and connected with the fork, and a handle arranged at the inner end of the rock-shaft and adapted for operating both the fork and the crane, substantially as described.

6. In a mail-bag catching and delivering mechanism, the combination of a car-crane designed to be hinged to a car at the interior thereof, a sack-engaging fork pivotally mounted on the crane at the top thereof and provided with means for engaging the same to limit its upward swing, and a rock-shaft mounted on the crane and provided at its outer end with an arm connected with the fork, said rock-shaft being also provided at its inner end with a handle adapted to be operated to manipulate the fork and to oscillate the crane, substantially as described.

7. In a mail-bag catching and delivering mechanism, the combination of brackets designed to be secured within a car, a reversible crane provided at the top and bottom with legs detachably mounted on the brackets, said crane being composed of a vertical bar or standard, an upper rigid sack-supporting arm, and a lower sack-supporting arm adjustably mounted on the bar or standard, a fork pivotally mounted on the upper supporting-arm, and operating mechanism connected with the fork and adapted to oscillate the crane, substantially as described.

708,075. VEHICLE-WHEEL. CHARLES T. MCGEE, Hartford, Conn., assignor to the Premier Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed July 20, 1900. Serial No. 699,467. (No model.)

Claim.—1. An axle-arm, a cone supported on the end of the arm and slidable lengthwise thereof, a bolt fitting a threaded hole in the end of the arm and having a head for holding the cone in position, a hub supported on the arm, a ball-socket located in the opening in the end of the hub and closely embracing the head of said bolt, and means for holding the ball-socket in position.

2. An axle-arm, a cone supported on the end of the arm and having lengthwise movement, but held against rotary movement, a bolt fitting a threaded opening in the end of the arm and having a head for holding the cone in position, a hub supported on the arm, a ball-socket fitting a threaded opening in the end of the hub and closely embracing the head of said bolt and having an annular shoulder forming a rabbet between the shoulder and the wall of the hub, and a lock-nut fitting the threaded opening in the hub and bearing on said shoulder.

3. An axle-arm, a hub mounted thereon, a cone mounted on the arm and forming a thrust-bearing, balls located in the ball-race on each side of the thrust-bearing, ball-socket apparatus to each ball-socket, and a collar located on the thrust-bearing and forming a ball-retainer for the balls on each side thereof.

708,076. FUELLER. FRANK L. HAPIER, St. Joseph, Mich. Filed Oct. 12, 1901. Serial No. 73,400. (No model.)

Claim.—1. In the pump described, the blocks representing the locomotives and cars of two trains, and an idle car; in combination with a base having a main track and branch tracks diverging in reverse directions from one side of the main track and uniting in a stem so as to form a Y, and also having an auxiliary branch track extending from the main track at an intermediate point in the length of the latter.

2. In the pump described, the combination with a base having a main track and branch tracks diverging in reverse directions from one side thereof, and uniting in a stem so as to form a Y, and also having an auxiliary branch track extending from the main track at an intermediate point in the length of the latter; of blocks representing the locomotives and cars of two trains; said blocks being of such size as to loosely occupy the main track, and another block representing an idle car and adapted to be arranged in the Y.

708,077. FOLDING CHAIR. WILLIAM E. RIVIER, Britton, Mich., assignor of one-half to Charles E. Goodson, Algonac township, Branch county, Mich. Filed Aug. 20, 1901. Serial No. 73,722. (No model.)

Claim.—1. An independent two-way folding chair comprising legs having extension-feet, diagonally-pivoted braces connecting said legs and a seat adapted to be turned against the back to fold laterally, substantially as set forth.

2. An independent two-way folding chair comprising legs having extension-feet, diagonally-pivoted braces connecting said legs, a seat adapted to be turned against the back and be folded laterally, and a laterally-folding back, substantially as set forth.

3. The combination, in a folding chair, of legs having extension-feet, diagonal pivoted braces pivoted to said legs and feet, seat-bars pivoted to the rear uprights, and a member or members connecting said bars, adapted to fold laterally, substantially as set forth.

4. The combination, in a folding chair, of legs having extension-feet, diagonal pivoted braces pivoted to said legs and feet, seat-bars pivoted to the rear uprights, and straps pivoted to said bars and the front legs, substantially as set forth.

5. The combination, in a folding chair, of legs having extension-feet, diagonal pivoted braces pivoted to said legs and feet, seat-bars pivoted to the rear uprights, and seat-supports pivoted at their rear terminals to said bars, adapted to be diagonally disposed normally, substantially as set forth.

6. The combination, in a folding chair, of legs having extension-feet, diagonal pivoted braces pivoted to said legs and feet, seat-bars pivoted to the rear uprights, seat-supports pivoted at their rear terminals to said bars, adapted to be diagonally disposed normally, parallel folding braces and a connecting central brace pivoted to said folding braces and bars, substantially as set forth.

7. In combination with the legs and pivoted diagonal leg-braces of a folding chair, feet provided with rods attached to said legs and capable of vertical movement, substantially as described.

8. In combination, legs having extension-feet, diagonal pivoted braces pivoted to said legs and feet, seat-bars pivoted to the rear uprights, folding seat-supports attached to said bars, back-bars, folding parallel braces, a central brace pivoted to said parallel braces and to said back-bars, substantially as described.

708,078. PNEUMATIC STACKER. FRANKLIN L. HORTON, Racine, Wis. Filed Mar. 8, 1902. Serial No. 97,300. (No model.)

Claim.—1. In a pneumatic stacker, a chute comprising two sections, one of said sections having a cut-away space in its wall and the other of said sections having its discharge end connected to the first-mentioned section opposite said cut-away space and means for varying the relative positions of said sections and varying the point at which one section discharges into the other.

2. In a pneumatic stacker, a chute comprising two sections connected together out of axial line, one of said sections having a cut-away space in its wall and the other of said sections having its discharge end connected to said first-mentioned section opposite said cut-away space, said sections being adjustable relative to each other in the direction of their length.

3. In a pneumatic stacker, a chute comprising two sections connected together out of axial line, one of said sections having a cut-away space in its wall and the other of said sections having its discharge end connected to said first-mentioned section opposite said cut-away space, said sections being adjustable relative to each other in the direction of their length and a shield to cover the cut-away space of said first-mentioned section.

4. In a pneumatic stacker, a chute comprising two sections connected together out of axial line, one of said sections having a cut-away space in its wall and the other of said sections having its discharge end connected to said first-mentioned section opposite said cut-away space, said sections being adjustable relative to each other in the direction of their length and a shield to cover the cut-away space of said first-mentioned section, said shield being connected to one of said sections.

5. In a pneumatic stacker, a chute comprising two sections adjustably connected together out of axial line, one of said sections having a cut-away space and the other of said sections having an open end arranged opposite said cut-away space, one of said sections being provided with a guide-rail and the other of said sections being provided with a bracket engaging said guide-rail.

6. In a pneumatic stacker, a chute comprising two sections adjustably connected together out of axial line, one of said sections having a cut-away space and the other of said sections having an open end arranged opposite said cut-away space, one of said sections being provided with forwardly-projecting rails and the other of said sections being provided with brackets engaging said rails.

7. In a pneumatic stacker, a chute comprising two sections adjustably connected together out of axial line, one of said sections having a cut-away space and the other of said sections having an open end arranged opposite said cut-away space, one of said sections being provided

with forwardly-projecting rolls and the other of said sections being provided with brackets engaging said rolls, said brackets carrying anti-friction-rolls to bear on said rolls.

8. In a pneumatic stacker, a chute comprising an inner and an outer section, one of said sections having one side of its wall cut away and the other of said sections having its discharge end open both longitudinally and transversely to afford a free discharge from said inner to said outer section, and means for shifting one of said sections lengthwise of the other.

9. In a pneumatic stacker, a chute comprising an inner and an outer section, one of the sections being adjustable lengthwise of the other section and having a portion of the wall at its inner end cut away, and being provided adjacent said space with an extension, said other section having its discharge end opposite the above-mentioned cut-away space and having a guard-plate projecting within the aforesaid extension, and a shield adapted to close more or less of the said cut-away space.

10. In a pneumatic stacker, a chute comprising an inner and an outer section, said outer section having its side wall cut away to form a space along its inner end and said inner section being provided at its outer end with an opening arranged opposite said cut-away space of the outer section and with a shield adapted to cover more or less of said cut-away space and means for shifting said outer section inwardly and outwardly along said inner section.

11. In a pneumatic stacker, a chute comprising an inner and an outer section, said outer section having its side wall cut away to form a space along its inner end and said inner section being provided at its outer end with an opening arranged opposite said cut-away space of the outer section and with a shield adapted to cover more or less of said cut-away space and means for shifting said outer section back and forth comprising a cable connected to said outer section and a pulley upon said inner section around which said cable passes.

12. In a pneumatic stacker, the combination with a chute formed of inner and outer sections, the outer section being adjustable lengthwise of the inner section, of a connection leading inwardly from said outer section and whereby it is adjusted and a standard mounted upon a fixed part of the structure and having its upper end extending to a point substantially above the center of horizontal oscillation of the chute, and there united to said connection that leads from the outer chute-section.

13. In a pneumatic stacker, the combination with a chute formed of inner and outer sections, the outer section being provided at its outer end with a movable head, a connection leading inwardly from said head and whereby it may be shifted, and a standard mounted upon a fixed part of the structure and having its upper end extending to a point above the center of oscillation of the chute and there united to the connection that leads from said head.

14. In a pneumatic stacker, the combination with a chute provided with means whereby it may be laterally oscillated, of a standard mounted upon a fixed part of the structure and having its upper end extending to a point substantially in line with the center of oscillation of the chute, to which standard may be united the connections that lead to movable parts of the chute.

15. In a pneumatic stacker, the combination with a chute provided with means whereby it may be laterally oscillated, of a standard mounted upon a fixed part of the structure and having its upper end extending to a point substantially in line with the center of oscillation of the chute, said standard being formed of collapsible sections whereby it may be lowered out of the way when not in use.

708,079. DOUBLE-STAVE-VENEER-BARREL MACHINE. WILLIAM J. OTZ, Chicago, Ill., assignor to Veneer Barrel Machine Co., Chicago, Ill. Filed Mar. 21, 1902. Serial No. 90,295. (No model.)

Claim.—1. In a veneer-barrel machine, the combination of a frame; a reversible collapsible drum journaled therein; a clamping member extending across the face of the drum parallel with its axis and adjustable

toward and away from the periphery of said drum; said clamping member being arranged to permit a sheet of veneering to be passed between same and the periphery of the drum, being revoluble with said drum, and having at each end of the drum an arm extending toward the axis of said drum, and one of said arms being provided with a cam; a lever fulcrumed on said drum, having thereon a cam adapted to cooperate with the cam on said arm for urging said clamping member toward the face of the drum; and means for rotating, collapsing and expanding said drum.

2. In a veneer-barrel machine, the combination of a frame; a reversible collapsible drum journaled therein; a clamping member extending across the face of the drum parallel with its axis and adjustable toward and away from the periphery of said drum; said clamping member being arranged to permit a sheet of veneering to be passed between same and the periphery of the drum, and being revoluble with said drum; a depending member rigidly supported by the upper part of the frame and extending near the upper surface of said drum, a rod supported by said depending member and extending parallel with the axis of the drum; a plurality of hoop-guides, each having rigidly secured at its upper part a collar mounted on said rod, and provided with securing means adapted to permit said hoop-guides to be adjusted longitudinally of said rod and tilted on said rod to different inclinations; said hoop-guides being suitably arranged to guide, toward the drum, hoops passed under said rod; said frame being free from obstructions immediately under said guides to permit sheets of veneering of the full width of the drum to be passed under said guides toward and upon the drum; and means for rotating, collapsing and expanding said drum.

708,080. COIN-CONTROLLED MECHANICAL TOY. GEORGE R. PALMER and HENRY HARTLEY, Birmingham, England. Filed Oct. 22, 1900. Serial No. 24,689. (No model.)

Claim.—1. In cycle-racing and like mechanical toys in which figures are caused to travel around a circular track by the operation of rotatable handles on the exterior of the machine-casing, the combination with each of the said handles of figure-driving mechanism a coin-catch wheel rotatable with the handle, an arm pivoted adjacent to the said catch-wheel, and a spring-clutch connection between the catch-wheel and the figure-driving mechanism, to which movement is transmitted from the catch-wheel through an inserted coin the said pivoted arm and connecting rods and levers between the arm and the said clutch, substantially as described.

2. In combination, the figure-driving mechanism, a handle and a coin-catch wheel rotatable together, an arm pivoted adjacent to the catch-wheel, a spring-clutch connection between the catch-wheel and a figure-driving mechanism, connecting rods and levers between the said clutch and pivoted arm, and a locking-bolt having a pin engagement with one of the said levers and a gapped plate rotatable with the figure-driving mechanism, against which said locking-bolt abuts, substantially as described.

3. In combination, the figure-driving mechanism, a handle and a coin-catch wheel rotatable together, an arm pivoted adjacent to the catch-wheel, a spring-clutch connection between the catch-wheel and figure-driving mechanism, connections between the said clutch and pivoted arm, a locking-bolt and an extension-piece from the said bolt projecting within a coin-chute disposed beneath the said catch-wheel, substantially as described.

4. In combination, the figure-driving mechanism, a handle and a coin-catch wheel rotatable together, an arm pivoted adjacent to the catch-wheel, a spring-clutch connection between the catch-wheel and figure-driving mechanism, connections between the said clutch and pivoted arm, a plate rotatable with the figure-driving mechanism and having a pin projecting therefrom, and a spring-controlled pivoted arm engaged at one end by the said projecting pin and at the opposite end by the said locking-bolt, substantially as described.

5. In combination, the figure-driving mechanism, a handle and a catch wheel rotatable together, an arm pivoted adjacent to the catch wheel, a spring-clutch connection between the catch-wheel and figure-driving mechanism, linkage between the said clutch and pivoted arm, a flag with pivoted stem, and connections between the stem and the said linkage, substantially as described.

6. In combination, the plurality of toy figures, rotating mechanisms, free operating-handles, connections between said handles and rotating mechanisms, indicating devices, and means whereby one of said indicating devices is operated upon the arrival of the corresponding figure at the termination, substantially as described.

708,081. MACHINE FOR MOLDING ARTIFICIAL STONE. EDWIN F. PALMER, Brooklyn, N. Y. Filed Mar. 11, 1902. Serial No. 97,884. (No model.)

Claim.—1. In a machine for molding artificial stone, the combination of a mold with a slotted supporting-plate, a core, means for clamping the core to the plate, and a perforated false bottom which embraces the core and covers the slot beyond the core, substantially as specified.

2. In a machine for molding artificial stone, the combination of a mold with a slotted supporting-plate, a sectional core, means for clamping the core-sections to the plate, a partition between the core-sections, and a false bottom upon the plate, substantially as specified.

3. In a machine for molding artificial stone, the combination of a mold, with a vertically-movable core-support, a sectional core adjustably secured thereto, and a partition between the core-sections, substantially as specified.

4. In a machine for molding artificial stone, the combination of a mold, with a vertically-movable core-support, a sectional core adjustably secured thereto, a laterally-extending partition between the core-sections, and a false bottom for supporting the free ends of the partition, substantially as specified.

708,082. TYPE-WRITER. CHARLES J. PAULSON, Brooklyn, N. Y. Assignor to Richard C. Cox, Brooklyn, N. Y. Filed May 15, 1901. Serial No. 92,326. (No model.)

Claim.—1. The combination with keys, of a member common to said keys and actuated thereby; a type-hammer pivoted at one end and connected to said member by a spring; a trigger for restraining said hammer, said trigger being releasable by said member; and means for causing said member, when released by the keys, to force the type-hammer to swing back to locking position.

2. The combination with keys, of a lever actuable by any of said keys; a type-hammer pivoted at its lower end and having its striking at its upper end and also having a yielding connection to said lever; a trigger for restraining said type-hammer, said trigger being controlled by said lever; and means for causing said lever to force said type-hammer to swing back to locking position.

3. The combination with keys, of a transverse device, as 11, actuable by any of said keys; a pivot 7 whereon said transverse device swings; a type-hammer pivoted at one end and having a striking-head at the other end and also having a spring connection to said transverse device; an arm 12 rigid with said transverse device; a trigger for restraining said type-hammer, said trigger being releasable at the terminal portion of the initial movement of said transverse device 11; and means for causing said arm 12 to swing back said hammer to its locking position.

4. The combination with keys, of a lever actuable by any of said

keys; a type-hammer swinging upon a pivot and having a striking-head at its free end and also having a yielding connection to said lever; a trigger releasable by said lever and adapted to restrain said type-hammer when tensioned by said lever; and means for causing said lever to force said hammer to swing back to locking position.

5. The combination with keys, of a member which is moved at each key-stroke; a type-hammer mounted upon a pivot; an adjustable spring connecting said type-hammer to said member; a trigger releasable by said member and adapted to restrain said hammer; and means for causing said member to swing back said hammer to locking position.

6. In a type-writing machine, the combination of a type; a type-hammer mounted upon a pivot; a key; a spring tensioned by said key and tending to swing said hammer to the impression-point; a trigger restraining said hammer and releasable by said key; and a spring operating at the swing back of said key to return the hammer to locking position.

7. In a type-writing machine, the combination of a type; a type-hammer mounted upon a pivot; a key; a spring tensioned by said key and tending to swing said hammer to the impression-point; a trigger restraining said hammer and releasable by said key; and a spring operating at the return of said key to swing back the hammer to locking position, said hammer-tensioning spring being adjustably connected to said key.

8. In a type-writing machine, the combination with keys and a type-hammer, of a spring for moving said hammer to the printing-point; a trigger for restraining said hammer; and means controlled by said keys for retracting said hammer to locking position during the operation of the keys and materially before the complete return of the keys to normal position.

9. The combination with keys, of a hammer-spring tensioned by said keys; a trigger for said hammer; means for causing said keys to release said trigger; and means for positively returning said hammer to locking position during the return of the keys and at a material interval before they reach normal position.

10. The combination with keys, of a member common to said keys and actuated thereby; a type-hammer connected to said member by a spring; a trigger for restraining said hammer, said trigger being also releasable by said common member; and means for causing said member to force the type-hammer back to normal position during the return of the keys and at a material interval before they reach normal position.

11. The combination with keys, of a lever actuable by any of said keys; a type-hammer having a yielding connection to said lever; a trigger for restraining said type-hammer, said trigger being controlled by said lever; and means for causing said lever to force said type-hammer back to locking position during the return of the keys and at a material interval before they reach normal position.

12. The combination with keys, of a transverse device, as 11, actuable by any of said keys; a pivot 7 whereon said transverse device swings; a type-hammer connected by a spring to said device 11; an arm 12 rigid with said device 11; a trigger for restraining said type-hammer, said trigger being releasable at the terminal portion of the movement of said device 11; and means for causing said arm 12 to restore said lever to its locking position during the return of the keys and materially before they reach normal position.

13. The combination with keys, of a lever actuable by any of said keys; a type-hammer having a yielding connection to said lever; a trigger releasable by said lever and adapted to restrain said type-hammer when tensioned by said lever; and means for causing said lever to force said hammer back to locking position during the return of the keys and materially before they reach normal position.

14. The combination with keys, of a type-hammer; an adjustable spring connecting said type-hammer to a member which is moved at each key-stroke; a trigger releasable by said member and adapted to restrain said hammer; and means for causing said member to restore said hammer to locking position during the return of the keys and materially before they reach normal position.

15. In a type-writing machine, the combination of a type; a type-hammer; a key; a spring tensioned by said key and tending to move said hammer to the impression-point; a trigger restraining said hammer and releasable by said key; and a spring operating to return the hammer to locking position during the return of the key and at a material interval before the latter reaches normal position.

16. In a type-writing machine, the combination of a type; a type-hammer; a key; a spring tensioned by said key and tending to move said hammer to the impression-point; a trigger restraining said hammer and releasable by said key; and a spring operating to return the hammer to locking position during the return of the key and materially before the latter reaches its normal position; said hammer-tensioning spring being adjustably connected to said key.

17. In a type-writer, the combination with a pivoted hammer having a cam-face; means operative by a finger-key in engagement with the

cam-face; a spring operable by said means and effective to advance the hammer against the key-operated means; and means engaging said hammer and adapted to be engaged by said key-operated means for holding and releasing said hammer.

18. In a key-operated machine, the combination with a frame, of finger-keys located thereon; a lever below said finger-keys and operable thereby; a pivoted hammer having a cam-face adapted to be in engagement with said lever during part of the movement thereof; a spring connecting said lever and hammer; a bell-crank lever having a pin in the upward path of said lever; and a pawl adapted to engage the hammer after it has been partially advanced and to be tripped by the lever to release the hammer to the influence of the spring after the lever has passed over the cam-face of the hammer.

19. In a machine of the class specified, the combination with a pivoted hammer; a cam-face in connection with the hammer; and a lever adapted to engage said cam-face and control the forward movement of the hammer up to a point just prior to its blow and to again engage said cam-face for the purpose of returning the hammer to its normal position.

708,083. INCANDESCENT GAS-BURNER. ALLEN A. PRATT, New York, N. Y. Assignor to Francis Dales Warner, New Orleans, Ind. Filed June 18, 1901. Serial No. 94,678. (No model.)

Claim.—1. A gas-burner, having a shell, a conductor, and a pressure and mixing chamber in the said shell and into which the conductor extends, the said pressure and mixing chamber having slots in its wall extending to the top of the chamber for the passage of the mixture of air and gas, the material between the slots being adapted to be heated by the flame when the burner is in use, so that gas and air passing from the shell into the said chamber become intimately mixed before passing to the point of ignition, as set forth.

2. A gas-burner, having a shell, a conductor open to the gas-supply and formed with air-inlet openings, and a mixing and pressure chamber in the said shell and into which the conductor extends, the base of the said chamber fitting closely into the shell, and the chamber opening at its lower end into an expansion-chamber formed between the conductor and the said shell, as set forth.

3. A gas-burner, having a shell, a conductor extending into the same and open to the gas-supply, the conductor being provided with air-inlets, and a mixing and pressure chamber in the said shell and into which opens the said conductor, the said chamber comprising a base and prongs extending therefrom to form slots between adjacent prongs for the passage of the mixture of air and gas, the said slots extending from the base to the top of the prongs, as set forth.

4. A gas-burner, having a shell, a conductor extending into the same and open to the gas-supply, the conductor being provided with air-inlets, and a mixing and pressure chamber in the said shell and into which opens the said conductor, the said chamber comprising a base and prongs extending therefrom to form slots between adjacent prongs for the passage of the mixture of air and gas, the said prongs being arranged in the form of a cone with the upper ends of the prongs forming carrying means for the mantle-supporting rod, as set forth.

5. A gas-burner, having a mixing and pressure chamber, comprising a hollow base and prongs extending from the base and arranged in cone shape, adjacent prongs forming narrow slots for the passage of the mixture of gas and air, the slots extending from the base to the top of the prongs, as set forth.

6. A gas-burner comprising a shell, a mixing and pressure chamber in the said shell, and a tubular conductor extending into the shell and opening into the mixing and pressure chamber, the said conductor terminating at its lower end in a base having a shoulder for engagement with the lower end of the said shell, the base being provided with air-inlets and adapted for connection with a gas-supply, as set forth.

7. A gas-burner, having a conductor comprising a tubular portion, terminating at its lower end in a bell-shaped base, a ring forming part of the conductor and having arms integrally connected with the lower end of the said base, the space between the arms of the ring forming inlet-openings for the air, the said ring being set up in the said base with the inner walls of the air-inlet openings inclined inwardly and upwardly and a gas-inlet serving into the said ring and adapted for connection with a gas-supply pipe, as set forth.

8. A gas-burner having a mixing and pressure chamber comprising a hollow base and prongs extending from the base and arranged in cone shape, the prongs being close together forming narrow slots between adjacent prongs for the passage of the mixture of air and gas, and a mantle-supporting rod carried at the upper ends of the prongs, as set forth.

9. A gas-burner, comprising a shell having a tubular extension at its lower end, a mixing and pressure chamber having its base fitting closely in the said shell, and a conductor adapted for connection with a gas-supply and provided with air-inlets, the conductor having a tubular portion fitting in the tubular extension of the shell and extending at its upper end into the lower end of the mixing and pressure chamber, the conductor being spaced from the inner surface of the shell above the tubular extension forming an expansion-chamber below the mixing and pressure chamber and into which the lower end of the mixing and pressure chamber opens, as set forth.

10. A gas-burner, comprising a shell formed in two tapering sections fluted together at their base ends, the lower or apex end of the lower section terminating in a tubular extension, a mixing and pressure chamber set in the said shell and comprising a base and prongs extending therefrom to form slots between adjacent prongs for the passage of the mixture of air and gas, the said prongs being arranged in the form of a cone and spaced from the inner surface of the shell, a mantle-supporting rod carried at the upper ends of the prongs, and a tubular conductor fitting in the tubular extension of the shell, and terminating in a base provided with air-inlet openings, the said base being adapted for connection with a gas-supply, as set forth.

708,084. ORE-SEPARATOR. CYRUS C. PRATT, Portland, Ore. Assignor of one-half to Thomas Holland, Portland, Ore. Filed June 18, 1901. Serial No. 95,941. (No model.)

Claim.—1. In an apparatus for separating metals from ore, gravel, lean and the like, a sluice adapted to be connected with a suitable source of water-supply and having a riffle comprising a board provided with openings, longitudinal sluing walls interspersed between the board and the bottom of the sluice and forming tortuous channels in communication with the openings in the board, means for retaining the flow of water through said channels, and a screen arranged upon the upper side of the board for causing the pulp to drag along the riffle and preventing large particles from entering the openings of the board.

2. In an apparatus for separating metals from ore, gravel, lean and the like, a sluice adapted to be connected with a suitable source of water-supply and having a riffle comprising a board provided with openings, longitudinal sluing walls connected to the under side of the board and forming tortuous channels, and a screen connected to the upper side of the board and adapted to cause the pulp to drag along the riffle, and also to prevent large particles from entering the openings of the board.

3. In an apparatus for separating metals from ore, gravel, lean and the like, the combination of a conduit, a sluice arranged to receive from said conduit and having a grizzly disposed below the same, and also having riffle-sections arranged and to end on its bottom and susceptible of being raised; the said riffle-sections respectively comprising a board having openings, longitudinal sluing walls connected to the under side of the board and forming tortuous channels, one or more transverse strips connected to and depending from the board, and a screen connected to the upper side of the board, one or more transversely-disposed inclined boards arranged in the sluice and disposed at slight distances above the riffle, adjustable devices adapted in one position to retain the riffle-sections in their operative position on the bottom of the sluice and in another position to permit of the said riffle-sections being raised, and suitable means on the sluice for raising the riffle-sections.

4. In an apparatus for separating metals from ore, gravel, lean and the like, a sluice adapted to be connected with a suitable source of water-supply and having a riffle comprising one or more boards provided at intervals with slots, and also provided intermediate of the slots with comparatively small apertures, longitudinal sluing walls connected below the board or boards and in communication with the slots and openings thereof, one or more transverse strips intersecting the said channels, and a screen arranged upon the upper side of the board or boards and adapted to prevent rocks and large particles from entering the slots and comparatively small apertures therein.

5. In an apparatus for separating metals from ore, gravel, lean and the like, the combination with a conduit adapted to be connected with a suitable source of water-supply; of a sluice having an arch-shaped screen or grizzly disposed below the discharge end of said conduit and also hav-

ing a riffle comprising one or more boards provided at intervals with slots, and also provided intermediate of the slots with a plurality of comparatively small apertures, longitudinal tortuous channels arranged below the board or boards and in communication with the slots and openings thereof, one or more transverse strips intersecting the said channels, and a screen arranged upon the upper side of the board or boards and adapted to prevent rocks and large particles from entering the slots and comparatively small apertures therein.

6. In an apparatus for separating metals from ore, gravel, loam and the like, a sluice adapted to be connected with a suitable source of supply, and having a riffle comprising a board provided with openings, longitudinal tortuous channels disposed below the board, means for retarding the flow of water through said channels, and a screen arranged upon the upper side of the board for causing the pulp to drag along the riffle and preventing large particles from entering the openings of the board, and one or more transversely-disposed inclined boards arranged in the sluice and disposed a slight distance above the screen.

708,085. SAW-GUIDE. THOMAS PRINTER, New Britain, Conn.
Filed Jan. 24, 1902. Serial No. 91,085. (No model.)

Claim.—1. In a bevel-gage for saws, a base or member constructed to be directly applied to the upper surface of the work to be operated upon, and a guide supported by the base for controlling the direction of cut of the saw, said base being notched or cut away at the edge and provided on its upper surface with a longitudinal rib adapted to be grasped by the hand of the operator to hold the structure to the work.

2. In a bevel-gage for saws, a base constructed on its lower face to be directly applied to the upper surface of the work operated upon, a guide-frame comprising upstanding rods mounted at an end of the base on the top face thereof, and a saw-guide slidably supported on the rods and overhanging the base at such end.

3. In a bevel-gage for saws, a base constructed on its lower face to be directly applied to the upper surface of the work operated upon, a guide-frame comprising upstanding rods mounted at one end of the base on the top face thereof, a saw-guide slidably supported on the rods and overhanging the base at such end, and means connecting said rods for limiting the upward movement of said saw-guide.

4. In a bevel-gage for saws, a base constructed on its lower face to be directly applied to the upper surface of the work operated upon, a guide-frame comprising upstanding rods mounted at an end of the base on the top face thereof, a saw-guide slidably supported on the rods and overhanging the base at such end, and means on one of the rods for limiting the downward movement of said saw-guide.

5. In a bevel-gage for saws, a base constructed on its lower face to be directly applied to the upper surface of the work operated upon, a

guide-frame comprising upstanding rods mounted at an end of the base on the top face thereof, a saw-guide slidably supported on the rods and overhanging the base at such end, and means for engaging said saw-guide in its uppermost position.

6. In a bevel-gage for saws, a base or member constructed on its lower face to be directly applied to the upper surface of the work operated upon, a rotatable guide-frame comprising upstanding rods mounted at an end of the base on the top face thereof, means for securing the frame in different positions, a saw-guide slidably supported on the rods and overhanging the base at such end, and means connecting the rods limiting the upward movement of said saw-guide.

7. In a bevel-gage for saws, a base or member constructed on its lower face to be directly applied to the upper surface of the work operated upon, and provided with a substantially circular seat at an end of the same on the top face thereof, a guide-frame comprising a circular graduated plate having axial adjustment on said seat and provided with upstanding rods, and a saw-guide slidably supported on the rods and overhanging the base at the end thereof before mentioned.

8. In a bevel-gage for saws, a base constructed on its lower face to be directly applied to the upper surface of the work operated upon, a guide-frame comprising upstanding rods mounted at an end of the base on the top face thereof, a saw-guide slidably supported on the rods and overhanging the base at such end, a table, and means for holding the table and base spaced apart to receive the work between them.

9. In a bevel-gage for saws, a base constructed on its lower face to be directly applied to the upper surface of the work operated upon, a guide-frame comprising upstanding rods mounted at an end of the base on the top face thereof, a saw-guide provided with anti-friction devices for a saw and overhanging the base at the end mentioned and means connecting the upper ends of the rods for limiting the upward movement of said saw-guide.

10. In a bevel-gage for saws, the combination with a base for sustaining the work, of a wall for engaging a surface of the work and constituting a stop therefor; a member carried by the base and embodying a plate for resting upon the work, and a rib upon the member; the base, wall, plate and rib constituting stops for the work and each engaging a different surface thereof; and means for controlling a saw carried by the plate.

11. In a bevel-gage for saws, the combination with a base for sustaining the work, of a wall for engaging a surface of the work and constituting a stop therefor; a member carried by the base and embodying a plate for resting upon the work, and a rib upon the member; the base, wall, plate and rib constituting stops for the work and each engaging a different surface thereof; a standard upon the member; and a guide for a saw mounted upon the standard and capable of reciprocation thereon.

12. In a bevel-gage for saws, the combination with a base for sustaining the work, of a wall for engaging a surface of the work and constituting a stop therefor; a member carried by the base and embodying a plate for resting upon the work, and a rib upon the member; the base, wall, plate and rib constituting stops for the work and each engaging a different surface thereof; a standard upon the member; a guide for a saw mounted upon the standard and capable of reciprocation thereon; and means for adjusting the guide relatively to the member.

13. In a bevel-gage for saws, the combination with a base for sustaining the work, of a wall for engaging a surface of the work and constituting a stop therefor; a member carried by the base and embodying a plate for resting upon the work, and a rib upon the member; the base, wall, plate and rib constituting stops for the work and each engaging a different surface thereof; and means for controlling the saw carried by the plate, and embodying portions for engaging the sides of a saw to control its direction of cut and portions for engaging a part of the saw to cause the guide to follow the saw in its movement incident to its depth of cut.

14. In a bevel-gage for saws, the combination with a base for sustaining the work, of a wall for engaging a surface of the work and constituting a stop therefor; a member carried by the base and embodying a plate for resting upon the work, and a rib upon the member; the base, wall, plate and rib constituting stops for the work and each engaging a different surface thereof; means for controlling the saw carried by the plate, and embodying portions for engaging the sides of a saw to control its direction of cut and portions for engaging a part of the saw to cause the guide to follow the saw in its movement incident to its depth of cut; and a stop to limit each movement of the saw.

15. In a bevel-gage for saws, the combination with a base for sustaining the work, of a wall for engaging a surface of the work and constituting a stop therefor, a member carried by the base and comprising a plate for resting upon the work, said member having a rib, means for adjustably uniting the member with the base, said base, wall, plate and rib constituting stops for the work and each engaging a different surface thereof; a standard upon the member, and a guide for a saw mounted upon the standard and capable of reciprocation thereon.

16. In a bevel-gage for saws, the combination with a base for sustaining the work, of a wall for engaging a surface of the work and constituting a stop therefor, a member carried by the base and comprising a plate for resting upon the work, said member having a rib, means for adjustably uniting the member with the base, the said base, wall, plate and rib constituting stops for the work and each engaging a different surface thereof; a standard upon the member, a guide for a saw mounted upon the standard and capable of reciprocating thereon, and means for adjusting the guide relatively to the member.

17. In a bevel-gage for saws, the combination with a base for sustaining the work, of a wall for engaging a surface of the work and constituting a stop therefor, a member carried by the base and comprising a plate for resting upon the work, said member having a rib, means for adjustably uniting the member with the base, the said base, wall, plate and rib constituting stops for the work and each engaging a different surface thereof; and means for controlling a saw-carried by the plate and embodying portions for engaging the sides of the saw to control the direction of cut thereof, and also embodying portions for engaging a part of the saw to cause the guide to move in correspondence with its depth of cut.

18. In a bevel-gage for saws, the combination with a base for sustaining the work, of a wall for engaging a surface of the work and constituting a stop therefor, a member carried by the base and comprising a plate for resting upon the work, said member having a rib, means for adjustably uniting the member with the base, the said base, wall, plate and rib constituting stops for the work and each engaging a different surface thereof; means for controlling a saw carried by the plate and embodying portions for engaging the sides of the saw to control the direction of cut thereof, and also embodying portions for engaging a part of the saw to cause the guide to move in correspondence with its depth of cut; and a stop for limiting such movement.

19. In a bevel-gage for saws; a base constructed on its lower face to be directly applied to the upper surface of the work operated upon, a guide-frame comprising upstanding rods mounted at an end of the base on the top face thereof, a saw-guide slidably supported on the rods and overhanging the base at such end, means limiting the upward movement of said saw-guide, and an adjustable contour-gage mounted at the forward part of said base.

20. In a bevel-gage for saws, a base constructed on its lower face to be directly applied to the upper surface of the work operated upon, a guide-frame comprising upstanding rods mounted at an end of the base on the top face thereof, a saw-guide slidably supported on the rods and overhanging the base at such end, a cross-bar connecting the upper ends of the rods and limiting the upward movement of said saw-guide, and a contour-gage mounted at the forward part of the base and comprising a leg and means for securing the same in adjusted position.

21. A mitring device comprising a base adapted to engage on its under side a face and an edge of the work, and having projecting from its upper side a frame, saw-guiding devices slidably freely on said frame and arranged to overhang one end of said base so that the saw may pass from a position above the work down past the base into or through the work.

22. A mitring device comprising a base adapted to engage on its under side a face and an edge of the work, and having projecting from its upper side a pivoted frame, saw-guiding devices slidably freely on said frame and arranged to overhang one end of said base so that the saw may pass from a position above the work down past the base into or through the work.

708,086. GAGE. ALFRED EMMERSON, Cleveland, Ohio. Filed Jan. 11, 1901. Serial No. 48,568. (No model.)

Claim.—1. In a gage, the combination of two measuring members one of which is mounted upon and reciprocable in a support, a spring in said support tending to cause said measuring members to approach, positive means for retracting said reciprocable member, a recording member mounted and slidable upon a support, said reciprocable member provided with means adapted during its movement toward the other to engage said recording member and during its retracting movement to disengage same.

2. In a gage, the combination of two measuring members one of which is mounted upon and reciprocable in a support, a spring in said support tending to cause said members to approach, positive means for retracting said reciprocable member, means for locking said retracting means, a recording member mounted and slidable upon said support, said

member connected with said reciprocable member in a manner such as to be movable therewith during the approaching movement and independent thereof during the retracting movement.

3. In a gage, the combination of two measuring members, one of which is mounted upon and reciprocable in a support, a spring in the latter tending to cause said members to approach, said support provided with a laterally-extending handle having a spring-grip positively connected with said reciprocable member and means for locking same, a recording-collar mounted and slidable upon said support, said reciprocable member provided with a lateral projection adapted to engage one extremity of said collar.

708,087. TANK-HEATER. HENRY E. GERRIN, Memphis, Mo. Filed Mar. 13, 1902. Serial No. 96,181. (No model.)

Claim.—A tank-heater comprising a casing, said casing divided into a combined fuel and air chamber; a combustion-chamber and an exit-flue; a pendant partition between the air-chamber and combustion-chamber; a rearwardly-extending partition separating the combustion-chamber and the exit-flue; grooved guides within the casing; a partition slidably mounted in certain of said guides between the air-chamber and exit-flue and a damper slidably mounted in certain of said guides between the air-chamber and the combustion-chamber.

708,088. BARREL-CLEANING MACHINE. GUYTON BROWN, New York, N. Y. Filed Aug. 17, 1901. Serial No. 73,307. (No model.)

Claim.—1. The combination of a frame, guides mounted to move up and down for adjustment, brush-carrying slides movable in and out on said guides, and operating-levers having vertical slots receiving projections on said slides.

2. In a cleaning-machine, the combination of a frame, cleaning devices movable inward or outward on said frame, an operating member adapted to be engaged by the articles to be cleaned prior to their arrival at the cleaning device, and a connection from said operating member to the cleaning device to throw them outward before the articles arrive between them.

3. The combination of a runway, a depressible operating member adjacent thereto, a frame, movable brushes connected with said operating member and a support for the article.

4. The combination of a frame, brushes movable transversely of said frame, a rocking operating member located in the path of the articles to be cleaned and a connection from said operating member to the brushes.

5. The combination of a frame, a brush movable inward and outward on the frame and also capable of a pivotal or swinging movement relatively thereto, an operating member arranged in the path of the ar-

articles to be cleaned and a connection from the operating member to the said brush.

6. The combination of the frame and the support for the articles to be cleaned with brushes movable horizontally at the opposite sides of said frame, a top brush movable vertically and also capable of a swinging movement, a connection from the side brushes to the top brush and an operating member located in the path of the articles to be cleaned and connected with the side brushes.

708,089. SPRINKLING OR SPRAYING DEVICE. GUNAV SCHON, New York, N.Y. Original application filed Aug. 17, 1901. Serial No. 72,887. Divided and this application filed Feb. 21, 1902. Serial No. 86,022. (No model.)

Claim.—1. In a cleaning-machine, the combination of a nozzle mounted to slide, with a gear-wheel held against sliding and mounted to turn with the said nozzle, driving means in permanent engagement with said gear-wheel, and a fluid-supply box in which said nozzle slides and with which it communicates in a predetermined position only said wheel being located upon the nozzle between the outlet thereof and the fluid-supply box.

2. In a cleaning-machine, the combination of a frame provided with a central guide and a bearing adjacent thereto, a gear-wheel held against sliding and provided with a hub mounted to turn in said bearing, a fluid-supply box located on the side of the gear-wheel opposite to said guide, means for driving said wheel, and a nozzle held to turn with the gear-wheel and held to slide lengthwise in the central frame-guide, the hub of the gear-wheel, and the fluid-supply box, said nozzle being arranged to communicate with the said box in a predetermined position only.

3. In a cleaning-machine, the combination of a nozzle having a head with an outlet or slit extending from its center to one side only, and means for rotating said nozzle.

4. In a cleaning-machine the combination of a rotary nozzle, a fluid-supply box in which said nozzle is mounted to rotate and to slide, the nozzle being perforated so as to communicate with the fluid-supply box in a predetermined position, links arranged at each side of the nozzle and pivotally connected therewith, a forked lever connected with said links, and means for rotating the nozzle.

5. In a cleaning-machine, the combination of a longitudinally-slidable nozzle, a stationary fluid-supply box with which said nozzle is adapted to communicate in a predetermined position only, and a driving member held to turn with the nozzle but independent of its sliding motion and located on the nozzle between its outlet and the fluid-supply box.

708,090. AUTOMATIC DEVICE FOR DISCHARGING LIQUID-TANKS. WILLIAM S. SHENCK, Chicago, Ill. Filed Oct. 23, 1901. Serial No. 86,904. (No model.)

Claim.—1. An apparatus for the purpose set forth comprising a liquid tank or receptacle, a plurality of discharge devices for emptying the tank, and means for successively operating said discharge devices comprising a float mechanism, and a traveling weight controlled by said float mechanism.

2. An apparatus for the purpose set forth comprising a liquid tank or receptacle, a plurality of discharge devices for successively emptying said tank, a plurality of floats one associated with each discharge device, and means operated by the rise and fall of said floats for successively operating the discharge devices embracing a traveling weight the movement of which is controlled by said floats.

3. An apparatus for the purpose set forth comprising a liquid tank

or receptacle, a plurality of siphons which act successively to discharge the contents of said tank, a plurality of floats, one associated with each siphon, and means operated by the rise and fall of said floats for successively starting said siphons into action, embracing a traveling weight, the movement of which is controlled by said floats.

4. The combination with a liquid tank or receptacle, of a plurality of siphons for discharging the contents of the same, an air-pipe connected with each siphon, valves in said pipe, and a traveling weight adapted to severally actuate said valves in a predetermined relative order for successively starting the siphons into operation and thereby emptying said tank or receptacle.

5. An apparatus for the purpose set forth comprising a liquid tank or receptacle, a plurality of siphons for discharging the contents of the tank, mechanism for starting said siphons into operation, and an actuating-weight which travels from one siphon-actuating mechanism to the other.

6. The combination with a liquid tank or receptacle, of a plurality of siphons for discharging the contents of the same, a corresponding number of float-chambers, floats in said chambers which rise and fall with the rise and fall of the liquid in the receptacle, inclined troughs or track-sections connecting said chambers, a traveling weight which passes by gravity through said troughs or track-sections from one float-chamber to the other, said weight being lifted by said floats to the receiving ends of the several troughs or track-sections, an air-pipe connected with each siphon, a valve in each pipe, and a trip-lever projecting into the trough in the path of said moving weight and operatively connected with the valve.

708,091. ELECTRIC BELL. ALBERT F. SWINER, Ansonia, Conn., assignor to the Ansonia Electrical Company, Ansonia, Conn., a Corporation of Connecticut. Filed Feb. 21, 1902. Serial No. 86,089. (No model.)

Claim.—1. In an electric bell the combination with an armature-spring and circuit breaker frame, of a contact-spring provided with a contact-point, and an ordinary commercial screw arranged to support said contact-spring and also to regulate the adjustment of said contact-point relative to said armature-spring.

2. The approximately U-shaped contact-spring 18 having a contact-point 22, substantially as shown, for the purpose specified.

3. In an electric bell, the combination with a circuit-breaker frame having an arm provided with engaging lugs and an opening, of a core having a head, a coil-head having recesses to receive the lugs, and an insulating-sleeve lying between the core and the wall of the opening and having a flange lying between the circuit-breaker frame and the core-head.

4. In an electric bell, the combination with a circuit-breaker frame having an arm provided with engaging lugs, an opening, and a neck leading into said opening, of a core having a head, a coil-head having recesses to receive the lugs, and an insulating-sleeve lying between the core and the wall of the opening and having a flange lying between the circuit-breaker frame and the core-head, said neck permitting the core to pass but retaining the sleeve in the opening.

5. In an electric bell, the combination with a circuit-breaker frame having an arm provided with engaging lugs, and an opening, of a core having a head provided with an undercut groove, a coil-head having recesses to receive the lugs, and an insulating-sleeve lying between the core and the wall of the opening and having a flange lying between the circuit-breaker frame and the core-head, said flange when the coil-head and the core-head are pressed together being partly crowded into the undercut groove.

6. The circuit-breaker frame 19 having an arm 26 provided with lugs 25 and an opening 27, substantially as shown, for the purpose specified.

7. The combination with the frame and a terminal 24, of an insulating-washer having an extension and a flange surrounding the washer and the sides of the extension, a metal washer adapted to lie in the top of the insulating-washer and having a lip adapted to lie between the side flanges of the extension and a screw passing through the washers and engaging the frame to which the terminal is connected above the insulating-washer.

8. The insulating-washer 27 having an extension 26 and a flange surrounding the washer and the sides of the extension, substantially as shown, for the purpose specified.

9. In an electric bell, the combination with coil-heads having holes formed therein, said heads also having lips or extensions also having holes formed therein, of coils having their ends passed through said former holes and then passed backward through the holes of said lips or extensions and connected together on the inner sides of the coil-heads between the coils.

708,092. DAMPING APPARATUS. GEORGE BRADY, New York, N.Y. Filed Aug. 27, 1901. Serial No. 73,462. (No model.)

Claim.—1. A damping apparatus comprising an absorbent pad composed of strongly-compressed staple cotton antiseptized with peroxid of hydrogen, and a holder therefor.

2. A damping apparatus consisting of a receptacle, an absorbent pad occupying the lower portion of the receptacle, a removable cover member snugly fitting in the receptacle whereby it is enabled to exclude air from the interior thereof, and an absorbent pad carried at the inner side of the cover member; the said pads being each composed of strongly-compressed staple cotton antiseptized with peroxid of hydrogen.

708,093. REEFER. ALGER STREET, Philadelphia, Pa. Filed Aug. 23, 1901. Serial No. 73,701. (No model.)

Claim.—A brush composed of three disks, screw-threaded holes formed through the center of said disk, a handle, a screw-threaded portion formed upon the end of the handle upon which the disks are adapted to be threaded, bristles adapted to be carried by each of said disks, the bristles of the outside disks adapted to project outward from the periphery of said disks and the outer face of the same, the bristles of the middle disk

adapted to project only out of the periphery of the same so that said bristles arranged in all three of the disks, when said disks are assembled, will form a spherical-shaped brush, substantially as and for the purpose specified.

708,094. GARMENT-HANGER FOR WARDROBES. Dr. PETER SWAN, Baltimore, Md. Filed June 22, 1901. Serial No. 84,481. (No model.)

Claim.—1. A garment-hanger comprising a fixed guide formed of upper and lower members mounted in juxtaposition, and a movable carrier also formed of upper and lower members having telescopic engagement with the members of said guide, as set forth.

2. A garment-hanger comprising a fixed guide formed of upper and lower members mounted in juxtaposition, a movable guide also formed of upper and lower members having telescopic engagement with the members of said guide, and means for limiting the outward movement of said movable guide, as set forth.

3. A garment-hanger comprising a fixed guide formed of a sleeve and a rod mounted in juxtaposition, and a movable carrier also comprising a sleeve and a rod arranged to have telescopic engagement with the members of said guide, as set forth.

4. A garment-hanger comprising a fixed guide formed of a sleeve and a rod mounted in juxtaposition, a head of a casing having a handle and a sleeve and a rod mounted in juxtaposition in said head or casing and arranged to have telescopic engagement with the members of said guide, as set forth.

5. A garment-hanger comprising a fixed guide formed of a rod and a sleeve mounted in juxtaposition, a movable carrier also comprising a sleeve and a rod arranged to have telescopic engagement with the members of said guide, and means for limiting the outward movement of said guide, as set forth.

6. A garment-hanger comprising a fixed guide formed of a rod and a sleeve mounted in juxtaposition, a movable carrier also comprising a sleeve and a rod mounted in juxtaposition and arranged to have telescopic engagement with said guide and a collar carried by the sleeve of said carrier and arranged to slide on the sleeve of said guide, as set forth.

7. The combination with a receptacle of a fixed guide comprising two members secured in juxtaposition to one of the walls of said receptacle, a movable carrier also formed of two members and having telescopic engagement with said guide, rack-bars secured to opposite walls of said receptacle and parallel with said guide, and a follower adjustably mounted on said rack-bars, substantially as set forth.

708,095. HERBIAL TRUSS. GEORGE H. STEWART and ABRAHAM L. WINSTON, Tipton, Kans. Filed Mar. 14, 1902. Serial No. 84,881. (No model.)

Claim.—1. The combination with a pad and wire comprising the arch attached thereto, of a main body-strap connecting the pad and approximately the summit of the arch, and an auxiliary strap connecting the rear end of the arch and the main body-strap at the back.

2. The combination with a pad and wire comprising the arch attached thereto, of a main body-strap connecting the pad and approximately the summit of the arch, and a substantially vertical auxiliary strap connecting the rear end of the arch and the main body-strap.

3. The combination with a pad having the general form of a half-pair and having its upper outer corner cut away as shown giving the upper inner corner an abnormally-protruding effect so as to form a plug for the hernia; of a wire comprising the arch attached to the pad; a main body-strap connecting the pad and approximately the summit of the arch; and a substantially vertical auxiliary strap connecting the rear end of the arch and the main body-strap.

4. The combination with a pad having the general form of a half-pair and having its upper outer corner cut away as shown giving the up-

per inner corner an abnormally-protruding effect so as to form a plug for the horns; of a wire comprising the arch attached to the pad; a main body-strap connecting the pad and approximately the summit of the arch, and an auxiliary strap connecting the rear end of the arch and the main body-strap at the back.

5. In a hornal truss the combination with a pad having the general form of a half-pair and having its upper outer corner cut away as shown giving the upper inner corner an abnormally-protruding effect so as to form a plug for the horns; a recess and a groove in the outer surface of said pad and a hole in the bottom of the recess; a wire comprising the arch fitting in the groove, and having a U-bend fitting in the recess, the extreme end of the wire being bent inwardly into the hole in the bottom of the recess; a stud-screw whose shank is screwed into the pad between the legs of the U-bend and whose lower flange forms a retaining-plate for the U-bend; and means for holding the pad and arch on the body.

6. In a hornal truss, the combination with a pad having a recess in its outer surface, of a wire comprising the arch having a U-bend fitting in the recess, the extreme end of the wire being bent inwardly into the pad, and means for holding the U-bend in the recess.

7. In a truss the combination with a pad having a groove and recess in its outer surface; of a wire comprising the arch fitting in the groove and having a U-bend fitting in the recess; a screw-stud whose shank is screwed into the pad between the legs of the U-bend and whose lower flange forms a retaining-plate to hold the U-bend in the recess; the extreme end of the arch-wire being bent inwardly into the pad.

8. The combination with a pad having a groove and a recess in its outer surface; of a wire comprising the arch fitting in the groove and having a U-bend fitting in the recess, the extreme end of the wire being bent inwardly into the pad, and means for holding the U-bend in the recess; a stud on the pad; a main body-strap connecting the pad and approximately the summit of the arch, and an auxiliary strap connecting the rear end of the arch and the main body-strap at the back.

9. The combination with a pad having the general form of a half-pair and having its upper outer corner cut away as shown giving the upper inner corner an abnormally-protruding effect so as to form a plug for the horns; a recess and a groove in the outer surface of said pad; a wire comprising the arch fitting in the groove and having a U-bend fitting in the recess, the extreme end of the wire being bent inwardly into the pad; a stud-screw whose shank is screwed into the pad between the legs of said U-bend and whose lower flange forms a retaining-plate for the U-bend; a main body-strap connecting the pad and approximately the summit of the arch; and an auxiliary strap connecting the rear end of the arch and the main body-strap at the back; substantially as described.

708,096. PROCESS OF PREPARING LITHOGRAPHIC-PRINTING PLATES. OTTO C. SRENNER, Darmstadt, Germany. Filed July 6, 1901. Serial No. 67,170. (No specimen.)

Claim.—The process of preparing metal plates or alloys for lithographic printing and other purposes consisting in submitting the well-ground plates, which are provided with a lithographic design or transfer or the like, to the treatment of a solution which acts with acid and is acted upon by the metal used, and which is composed from a salt or salts the acids of which form insoluble compounds with the metal applied, and an oxidizing means, preferably nitrate of ammonium and an acid substance, which does not decompose the salts of the solution or set an acid free, forming thereby an insoluble hyposulphite layer firmly adherent to the plate of the metal or alloy, substantially as described.

708,097. MEASURING-GUP. JAMES H. STROVE, Portland, Me. Filed Nov. 15, 1891. Serial No. 23,621. (No model.)

Claim.—1. The combination with an open-ended vessel having at its lower end a stop or shoulder, a bottom or follower adapted to slide within the vessel, oppositely-disposed slides secured in the bottom or follower and bearing on indicating-cams having a notched edge for engagement with said stop, and a finger-piece connecting the lower ends of said slide, substantially as specified.

2. The combination with an open-ended vessel, of a bottom or follower adapted to slide within the vessel and in frictional contact with the inner wall of the vessel thereby to assist in retaining the parts in an adjusted position, one of said slides being provided with an indicating-cam, substantially as specified.

3. The combination with an open-ended vessel having at its lower end an inwardly-projecting stop-shoulder and provided with a locking-tongue, of a bottom or follower adapted to slide within the vessel, op-

positely-disposed slides secured to said bottom or follower, a finger-piece connecting the lower ends of the slides, there being on two of said slides an indicating-cam and a series of notches, the latter being adapted for engagement with the fixed tongue of the vessel.

708,098. WHEEL-DRAPERY. JAMES C. STURGE, Mount Pleasant, Iowa. Filed Feb. 4, 1902. Serial No. 22,022. (No model.)

Claim.—1. In a drapery of the class described, the combination with the axle and its carrying-wheel, the Johnson bar fastened on the axle, and the pan suspended from the overhanging end of the Johnson bar, of draft-irons united to the axle by a jointed connection which, on the application of the draft, tends to partially rotate the axle backwardly in the wheels and thus elevate the pan, substantially as described.

2. In a drapery of the class described, the combination with the arched axle and its carrying-wheel, the Johnson bar fastened on the ends of the axle, and the pan suspended from the overhanging end of the Johnson bar, of rigid projections on and extending forwardly of the axle substantially at a right angle to the ends of the axle, and draft-irons pivoted to the forward ends of said projections, substantially as and for the purpose described.

3. In a drapery of the class described, the combination with the arched axle and its carrying-wheel, the Johnson bar fastened on the ends of the axle, and the pan suspended from the overhanging end of the Johnson bar, of a pair of forwardly-projecting crank-arms keyed fast on the axle between the journals and the ends of the axle, respectively, and disposed at substantially a right angle to the ends of the axle, and a pair of draft-irons pivoted at their inner ends to the forward ends of said crank-arms, substantially as and for the purpose described.

4. In a drapery of the class described, the combination with the arched axle and its carrying-wheel, the Johnson bar fastened on the ends of the axle, and the pan suspended from the overhanging end of the Johnson bar, of a pair of crank-arms rigidly mounted on spaced portions of the axle lying between the journals and the ends thereof, respectively, and projecting forwardly substantially into the transverse plane of the points of suspension of the pan from the Johnson bar, and a pair of draft-irons pivoted at their inner ends to the forward ends of said crank-arms, the parts being so disposed that the application of the draft carries the crank-arms from an angular position relatively to the draft-irons into longitudinal alignment therewith, at the same time turning backward the axle in its bearings and elevating the pan.

5. In a drapery of the class described, the combination with the arched axle and its carrying-wheel, the Johnson bar fastened on the ends of the axle, and the pan suspended from the overhanging end of the Johnson bar, of a pair of crank-arms keyed fast on the axle between the journals and the ends thereof, respectively, and extending forwardly substantially parallel and co-extensive with the overhanging end of the Johnson bar, a pair of draft-irons pivoted at their inner ends to the forward ends of said crank-arms, a pair of draft-hooks pivoted to and depending from said draft-irons, cooperating catch-hooks on the pan, and means whereby said draft-hooks are automatically actuated by the movements of the Johnson bar and draft-irons, substantially as described.

6. In a drapery of the class described, the combination with the arched axle and its carrying-wheel, the Johnson bar fastened on the ends of the axle, and the pan suspended from the overhanging end of the Johnson bar, of a pair of crank-arms keyed fast on the axle between the journals and the ends thereof, respectively, and extending forwardly substantially parallel and co-extensive with the overhanging end of the Johnson bar, a pair of draft-irons pivoted at their inner ends to the forward ends of said crank-arms, a pair of draft-hooks pivoted to said draft-irons, and actuating-leads for said draft-hooks pivoted at their inner ends to the forward end of the Johnson bar and at their outer ends to the draft-hooks, substantially as described.

708,099. ONION-CLIPPING MACHINE. JAMES E. TAYLOR, Philadelphia, Pa. Filed Oct. 22, 1901. Serial No. 73,545. (No model.)

Claim.—1. The combination in an onion-clipping machine, of a trough or passage having the bottom thereof made of longitudinal bars, vibratory blades operating under said bars, mechanism operating said vibratory blades, and a blower or fan operating to force air downwardly through the bottom of said trough or passage, substantially as and for the purpose set forth.

2. The combination in an onion-clipping machine, of an inclined trough or passage having the bottom thereof made of longitudinal bars, vibratory blades operating under said bars, crank-and-pitman mechanism for operating said blades, oscillating wings in said trough or passage, mechanism for operating the same, and a blower or fan forcing air downwardly through the bottom of said trough or passage, substantially as and for the purpose set forth.

3. The combination in an onion-clipping machine, of an inclined trough or passage having the bottom thereof made of longitudinal bars with open spaces between them, transverse guides or ways under the ends thereof, transverse bars operating reciprocally in said guides or ways, longitudinal blades secured to said bars diagonally to the bars forming the bottom of the trough or passage, crank-and-pitman mechanism for actuating said reciprocating cross-bars and blades secured thereto, blower or fan mechanism forcing air downwardly through the bottom of said trough or passage, and a hopper at the upper end of said trough or passage, substantially as and for the purpose set forth.

4. The combination in an onion-clipping machine, of a frame, an inclined trough or passage mounted thereon having the bottom thereof made of longitudinal bars spaced apart from each other, longitudinally-reciprocating blades operating under and diagonally to the bars forming the bottom of the trough or passage, mechanism for operating said blades, a hopper at the upper end of said trough or passage, a longitudinally-barred screen at the lower end of said trough or passage, vibratory wings in said trough or passage, and a blower or fan for forcing air downwardly through the bottom of said trough or passage substantially as and for the purpose set forth.

708,100. MARRASING IMPLEMENT. JULIUS E. WARD, Chicago, Ill. Assignor to Victor Electric Company, a Corporation of Illinois. Filed Mar. 10, 1902. Serial No. 67,678. (No model.)

Claim.—1. In a marrasing implement, the combination of an electric motor, a cam on the motor-shaft and a vibrator engaging with said cam, substantially as described.

2. In a marrasing implement, the combination of an electric motor, a cam on the motor-shaft at one end of the motor, and a vibrator having a slotted and embracing said cam, substantially as described.

3. A marrasing implement comprising, in combination, an electric motor, a casing inclosing said motor and adapted to be carried with its contained mechanism in the hand of the operator, a cam on an end of the motor-shaft and a vibrator engaged by said cam, substantially as described.

4. In a marrasing implement, the combination of an electric motor having its field-magnet formed of two end poles with a metal bar connected between them and the armature journaled at the opposite ends of its shaft in said poles, a cam on one end of said shaft and a vibrator engaged by said cam, substantially as described.

5. In a marrasing implement, the combination of an electric motor having its field-magnet formed of two end poles with a metal bar connected between them and the armature journaled at the opposite ends of its shaft in said poles, a cam on one end of said shaft and a vibrator engaged by said cam, substantially as described.

6. In a marrasing implement, the combination of an electric motor

having its field-magnet formed of two end poles connected by metal bars and the armature journaled at opposite ends of its shaft in said poles, a cam on one end of said shaft and a vibrator pivoted to the adjacent end of the motor and having a slotted and embracing and engaged by said cam, substantially as described.

7. A marrasing implement comprising, in combination, an electric motor having its field-magnet formed of two end poles connected by metal bars, the armature journaled at the opposite ends of its shaft in the cores of said poles, and the binding-post on one pole connected by a wire from one terminal with the opposite pole, which is in turn connected by a wire with the speed carrying said binding-post and with the other terminal of the latter, and a wire connection between each commutator-brush and a terminal on the binding-post, a cam on one end of said shaft, a vibrator engaged by said cam, and a casing inclosing the motor, the whole being adapted to be carried in the hand of the operator, substantially as described.

708,101. MEDICINE-DROPPER. WALTER F. WARE, Camden, N. J. Filed June 8, 1901. Serial No. 22,712. (No model.)

Claim.—1. The combination of a compressible nipple open at one end, an annular groove or recess formed on the interior of said nipple adjacent its open end, a valve-disk having flanges adapted to be seated in said annular recess, valves upon said disk and a tubular barrel having an annular flange on its upper end clamped snugly in the annular recess of the nipple against the lower margin of the valve-disk, substantially as described.

2. The combination of a compressible nipple, open at its lower end, a pair of annular ribs or flanges formed on the interior of said nipple adjacent its open end forming a recess between them, a valve-disk provided with two valves each opening in opposite directions, the margin of said disk being seated against the upper wall of the recess, and a tubular barrel having an annular flange on its upper end clamped in the recess below the valve-disk against said disk, substantially as described.

3. The combination of a compressible nipple, open at its lower end, a pair of annular ribs or flanges formed on the interior of said nipple adjacent its open end forming a recess between them, a valve-disk provided with two valves each opening in opposite directions, the upper margin of said disk being seated against the upper wall of the recess and connected thereto so as to become practically integral with the nipple, and a tubular barrel having an annular flange on its upper end adapted to be forced in the recess below the valve-disk said flange abutting the lower margin of the disk, substantially as described.

4. A compressible nipple or bulb for medicine-droppers, comprising a hollow bulb open at its lower end, an interior groove formed in said bulb adjacent its open end, a valve-disk having valves opening in opposite directions, the edges of said disk seated in the upper portion of the groove, and means for securing the said valve-disk in the groove, substantially as described.

708,102. ADVERTISING DEVICE. ALFRED WASHINGTON and MARSHALL STAMFORD, Chicago, Ill. Filed Aug. 14, 1901. Serial No. 73,121. (No model.)

Claim.—1. An advertising device of the character described and adapted for application to a pillar or like vertical support, the same comprising a series of vertically-disposed corner-posts, each of which has a pair of longitudinal front and rear grooves in each side thereof, a series of vertically-slidable plates each provided with transverse double oblongways at suitably-spaced intervals on its outer face, a series of horizontally-slidable cards containing the advertising matter to be displayed engaging at their top and bottom edges the oblongways of the plates, and a series of transparent panels of like dimensions to the said plates, each slidably engaging by its side margins the front grooves of adjacent corner-posts, said plates and their contained cards engaging by their vertical margins the rear grooves of the corner-posts, all substantially as and for the purpose described.

2. In an advertising device, a sign-holder panel, the same comprising a pair of vertical side supports each provided on that side which is nearest the other with front and rear longitudinal grooves, a plate provided with a series of transverse card-supports and vertically slidable within and between the rear grooves of said supports, a transparent plate also vertically slidable within and between the front grooves of said supports, and top and bottom transverse members uniting said vertical supports to form a rigid frame, substantially as described.

3. In a sign-holder panel for advertising devices, the combination with a plate adapted to receive thereon a series of cards or the like containing advertising matter, of a series of transverse card-supports applied to the outer face of said plate, each of said supports comprising a sheet-metal plate bent and doubled lengthwise thereof so as to present a T shape in cross-section and thus constitute a double slide-way for the cards, and a series of pins passing through the outer face of each of said supports and between the overlying inwardly-bent inner edge portions thereof and securing the same to the plate, substantially as described.

708,108. SYRINGE-NOZZLE. HENRY H. WHEAT, Canton, Ohio.
Filed Mar. 14, 1902. Serial No. 98,343. (No model.)

Claim.—1. In a syringe, a valve-case, a valve normally held on a seat in said case, a stem projecting from said valve, an elastic disk attached by its rim in said case, there being an aperture in said disk, and a spout located in said aperture and attached to said disk and having its inner end beveled around the rim and of said valve-case.

2. In a syringe, a valve-case, an elastic disk attached by its rim in said case, there being an aperture in said disk, a spout located in said aperture, and a valve in said case adapted to be opened by movement of the inner end of said spout.

708,104. CHLORINATED METHYL-ETHER OF MENTHOL.
EDGAR WINTER, THUNDERBOLT, Germany. Filed Feb. 25, 1902. Serial No. 98,344. (Specimens.)

Claim.—As a new article of manufacture the improved product heretofore described being a chlorinated methyl-ether of menthol corresponding to the formula $C_{10}H_{17}OCH_2Cl$ and being a yellow oily liquid of peculiar pungent odor, of specific gravity about 0.9631, insoluble in water and alcohol and readily soluble in ether and chloroform.

708,105. BLUE WOOL-DYE AND PROCESS OF MAKING SAME.
ARTHUR WINTER, Frankfurt-on-the-Main, Germany, assignor to Leopold Cassella & Co., Frankfurt-on-the-Main, Germany. Filed Jan. 14, 1902. Serial No. 98,345. (Specimens.)

Claim.—1. The process of producing fast-blue coloring-matter by combining p. diametro-o-chlorobenzene with 1.8. dixynaphthalene 3.6.

dioxynaphthalene, reducing the nitro group and treating the resulting product with alkylating agents substantially as described.

2. The blue coloring-matter above described which is a blackish-blue powder, easily soluble in water with a bright-blue color turning to charcoal by addition of alkalis, being precipitated from its aqueous solution by mineral acids in shape of red flakes, dissolving in strong sulfuric acid with reddish-violet color and dyeing wool fast-blue shades substantially as described.

708,106. BRAKE-OPERATING DEVICE. MILTON G. WIGG, Babylon, N. Y. Filed Sept. 24, 1901. Serial No. 78,302. (No model.)

Claim.—A brake-operating device, comprising a vertically-arranged spindle or shaft which passes through the platform of a car or other vehicle, a ratchet-wheel secured on said spindle or shaft below said platform, a lever pivotally supported over said ratchet-wheel and adapted to engage therewith and a spring-operated rod pivotally connected with said lever and passing upwardly through the platform and adapted to be depressed, said spindle or shaft being also provided below said ratchet-wheel with means for connecting a flexible brake-operating device therewith.

708,107. SYRINGE-NOZZLE. CHARLES S. WOOD, Chicago, Ill.
Filed Jan. 10, 1902. Serial No. 98,346. (No model.)

Claim.—1. In a syringe-nozzle, the combination of a tube a button on the delivery end of the tube and a sponge on the tube, each tube extending entirely through the sponge and each sponge secured at the delivery end of the tube in contact with the button; substantially as described.

2. In a syringe-nozzle the combination of a tube, each tube provided with a shoulder at one end thereof, a button on the tube in contact with the shoulder, means to force the button into close contact with the shoulder on the tube, and a sponge on the delivery end of the tube secured to the tube in contact with the button; substantially as described.

3. In a syringe-nozzle, the combination of a sponge, a tube extending entirely through said sponge, each tube provided with a flaring end and means for securing the sponge to the tube at the delivery end of each tube in contact with the flaring end thereof; substantially as described.

708,108. CAR-TRUCK. WILLIAM S. C. BAKER, Baltimore, Md.
Filed Jan. 14, 1902. Serial No. 98,347. (No model.)

Claim.—1. The combination of a car-body and a center-bearing truck connected therewith, comprising side frames formed with axle-box pedestals and provided with cushioning-springs for the axle-boxes below said boxes, and lookout-beams secured to the car-body and extending over the axle-boxes back beyond said boxes and terminating close to the car-body.

2. The combination with the truck-frame, of the cringing truck-bolster, the laterally-moving bolster-supporting posts secured thereto, and passing through openings in the truck-frame, and spring-supports for the posts connected by laterally-moving links to the side frames of the truck.

3. The combination of the truck-frame, the truck-bolster, the bolster-supporting posts secured thereto, and passing through openings in the side frames of the truck, spring-supports for the posts, connected by links to the side frames of the truck, and braces connecting truck-bolster with the lower ends of the posts.

4. The combination of the truck-frame, the truck-bolster, the bolster-supporting posts secured at their upper ends to the truck-bolster, and formed with spring-seats at their lower ends, brace-rods connecting the lower ends of the posts with the middle portion of the truck-bolster, and spring-supports for the posts connected by links to the side frames of the truck.

5. The bolster-supporting post herein described, provided at the top with a seat for the end of the truck-bolster, and at its lower end with a spring-seat and with an inwardly-projecting bracket to receive the end of a brace-rod.

6. The combination with the side frames of a truck, each formed with a recess to accommodate a bolster-supporting post, a casting secured to each side frame opposite said recess, cross-bars connecting the side frames near their middle portion, the truck-bolster, the bolster-supporting posts, springs for supporting said posts, and links connecting the springs to the side frames of the truck.

7. The combination with the side frames of the truck, of the truck-bolster, the bolster-supporting posts, the leaf-springs connected therewith and the links for connecting said springs with the side frames of the truck, each provided at its lower end with an opening to receive the end of the spring, and having a block seated in said opening for the purpose specified.

708,109. COMBINATION MEASURING INSTRUMENT. EDWARD BARR, Ravenna, Pa. Filed Feb. 15, 1902. Renewed May 2, 1902. Serial No. 100,922. (No model.)

Claim.—In a measuring instrument, the combination with the handle; of outside caliper-legs pivoted at one end thereof and adapted to be folded within the handle, and a segmental scale pivoted below said cal-

iper-legs and adapted to be swung in each position that the distance between the points of said caliper-legs may be determined, as set forth.

708,110. GARMENT-FOLDING DEVICE. JOHN H. BRENNEMAN, Troy, N. Y., assignor to the Firm of Bismarck Bros. & Co., Cohoes, N. Y. Filed Mar. 12, 1902. Serial No. 97,905. (No model.)

Claim.—1. A garment-folding form comprising connected front and back members adapted to receive between them portions of the body of the garment, one of said members being provided with a slot adapted to register with indicia on the garment when the form is properly applied thereto.

2. A garment-folding form comprising a pair of hinge-connected members adapted to receive between them the middle portion of the back and bosom of a garment, one of said members being provided near its hinged end with an aperture adapted to receive the neckband of the garment.

3. A garment-folding form comprising a pair of hinge-connected members adapted to receive between them portions of the back and bosom of a garment, one of said members being provided with a longitudinal slot adapted to register with and receive the buttons on the front of the garment, and adjacent to its hinge connection with an aperture adapted to receive the neckband of the garment.

708,111. EGG-SEPARATOR. CHARLES BUEHNAGH, BOWEN, N. J., assignor to Adolph Degerton, Jersey City, N. J. Filed Aug. 22, 1901. Serial No. 78,751. (No model.)

Claim.—1. An egg-separator comprising a perforated cup adapted to receive the yolk, and an inclined chute leading to and spaced from the cup, substantially as described.

2. An egg-separator comprising a cup adapted to receive the yolk and a chute leading to and spaced from the cup, substantially as described.

3. In an egg-separator, a cup adapted to receive the yolk and having an opening to discharge the same, a chute provided with shoulders or ridges adapted to receive the egg from the shell, the end of the chute being placed a distance from the cup, adapted to allow the white of the egg to be separated from the yolk, the yolk being discharged into the cup by reason of its greater specific gravity, while the white falls through the space between the chute and cup, substantially as described.

4. In an egg-separator, a cup adapted to receive the yolk, having an opening for the discharge of the yolk, a spout for directing the yolk to a suitable receptacle, a chute adapted to receive the egg from the shell, said chute directing the yolk to the cup but leaving an intervening space between the chute and cup to allow the discharge of the white and a receptacle to receive the white.

708,112. SAND-BOX. JOHN L. CROSBY, Providence, and EDWIN V. BERRY, Arlington, R. I. Filed Oct. 21, 1901. Serial No. 78,368. (No model.)

Claim.—1. A sand-box having a sliding bottom and a rod flexibly connected with the bottom and extending obliquely through the hopper, as described.

2. A sand-box having a sliding bottom and one or more rods flexibly connected with the sliding bottom and with the hopper by a sliding support, as described.

3. In a sand-box, the combination with the hopper 4, the discharge-spout 5, the sliding bottom 6, and means for operating the same, of the rods 13, the enlargements 13' on the rods, and the brackets 14, whereby the opening and closing of the sliding bottom moves the rods through the sand, as described.

4. The combination with the car 1, the wheel 2, the hopper 4, the discharge-spout 5, the sliding bottom 6, the rods 13 13', the enlargements 13' on the rods, and the brackets 14, of the rod 7, the abutment 8 on the car, the abutment 9 adjustable on the rod 7, the coiled spring 10, and means for operating the rod 7 to draw the sliding bottom outward against the force of the coiled spring, as described.

708,113. BOTTLE-STOPPER ATTACHMENT. HARRY A. CLARK, San Francisco, Cal., assignor of one-half to J. E. Daly, San Francisco, Cal. Filed Feb. 3, 1902. Serial No. 93,377. (No model.)

Claim.—1. The combination with a bottle-stopper, a link fitted thereto and extending down upon each side of the bottle, and a lever having one portion fulcrumed upon each side of the bottle and an intermediate portion loosely connected with the lower ends of the link, of a lever fulcrumed to the bottle and passing downwardly through, and adapted to bear outwardly against, the lower portion of the first-named lever, to raise the latter from its closed position against the bottle.

2. The combination with a bottle-stopper of a bent link extending therethrough and having interned lower ends, a curved lever partially surrounding the bottle-neck having loops in which the interned ends of the link are fitted, a wire surrounding the bottle-neck having loops in which the ends of the lever are turnable, and a supplemental lever fulcrumed to said wire and passing through and adapted to bear outwardly against the curved portion of the first-named lever to raise said lever from its closed position against the bottle-neck.

3. A bottle-stopper-releasing device consisting of a lever fulcrumed to the neck-band of the apparatus, extending downwardly from the stopper-holding-link actuating-lever, and having an outwardly-turned loop at its lower end.

708,114. COAR-STORAGE CASE. JAMES E. CURWELL, Anderson, Ind., assignor to the Wilko Manufacturing Company, Anderson, Ind., a Corporation. Filed Feb. 26, 1902. Serial No. 95,628. (No model.)

Claim.—A tobacco-tempering case consisting of a double-wall the refrigerator the interior tile blocks of which are glazed on their exterior surface to be impervious to moisture, the interior surfaces of which are

well smoothed to present a uniform hygroscopic surface on the interior of the case, and a door also provided with tile blocks, adapted to register with said interior lining to form a continuous lining, effectually sealing the interior of the case against the admission of air.

708,115. COMBINED LADDER AND HOSE-NOZZLE-CONTROL-LING APPARATUS. JOHN COOK and ARTHUR S. EDGEMAN, Chicago, Ill. Filed Feb. 3, 1902. Serial No. 93,402. (No model.)

Claim.—1. In a combined ladder and hose-nozzle-controlling apparatus, the combination, with the side rail of a ladder, of a rung built up to constitute a double crank, a strap, means to detachably attach the strap to the wrist of the crank, each strap and wrist of the crank fitting around the hose-nozzle and respectively provided with an aperture in which the spanner-pins of the nozzle fit, and means to control the position of the double crank; substantially as described.

2. In a combined ladder and hose-nozzle-controlling apparatus, the combination with the side rail of a ladder, of strap-iron extensions to each side rail, standards attached to the extensions between the strap-iron sides thereof, a rung built up to constitute a double crank, each crank-rung pivotally mounted in the standards, a strap, means to detachably attach the strap to the wrist of the crank, each strap and wrist of the crank fitting around the hose-nozzle and respectively provided with an aperture in which the spanner-pins of the nozzle fit, and means to control the position of the double crank; substantially as described.

3. In a combined ladder and hose-nozzle-controlling apparatus, the combination with the side rail of a ladder, of strap-iron extensions to each side rail, standards attached to the extensions between the strap-iron sides thereof, a rung built up to constitute a double crank, each crank-rung pivotally mounted in the standards, a strap, means to detachably attach the strap to the wrist of the crank, each strap and wrist of the crank fitting around the hose-nozzle and respectively provided with an aperture in which the spanner-pins of the nozzle fit, a lever attached to the crank-rung, cables attached to the lever, drums around which the cables are wound and means to turn the drums in opposite directions; substantially as described.

4. In a combined ladder and hose-nozzle-controlling apparatus, the combination with the side rail of a ladder, of strap-iron extensions to each side rail, standards attached to the extensions between the strap-iron sides thereof, a rung built up to constitute a double crank, each crank-rung pivotally mounted in the standards, a strap, means to detachably attach the strap to the wrist of the crank, each strap and wrist of the crank fitting around the hose-nozzle and respectively provided with an aperture in which the spanner-pins of the nozzle fit, a lever attached to the crank-rung, cables attached to the lever, an additional ladder, drums mounted on a rotatable shaft in one of the side rails of the additional ladder, around which drums the cables are wound and one of such drums secured rigidly to the rotatable shaft, a connection between the drums whereby when one of the drums is turned in one direction the other drum is turned in the opposite direction and means to release the drums from their position relative to each other to permit a change in the relative position of the ladders; substantially as described.

5. In a combined ladder and hose-nozzle-controlling apparatus, the combination with the side rail of a ladder, of a rung built up to constitute a double crank, a strap, means to detachably attach the strap to the wrist of the crank, each strap and wrist of the crank fitting around the hose-nozzle and respectively provided with an aperture in which the spanner-pins of the nozzle fit, a lever attached to the crank-rung, cables at

tached to the lever, an additional ladder, drums mounted on a rotatable shaft in one of the side rails of the additional ladder, around which drums the cables are wound and one of such drums secured rigidly to the rotatable shaft, gear-teeth on adjacent ends of the drums, a disk loosely mounted on the drum-shaft between the drums, gear-wheels rotatably mounted in the disk to intermesh with the gear-teeth on the ends of the drums, and means to hold the disk to prevent rotation thereof when desired; substantially as described.

6. In a combined ladder and base-nomble-controlling apparatus, the combination with the side rails of a ladder, of strap-iron extensions to each side rail, standards attached to the extensions between the strap-iron sides thereof, a rung built up to constitute a double crank, each crank-rung pivotally mounted in the standards, a strap, means to detachably attach the strap to the wrist of the crank, each strap and wrist of the crank fitting around the base-nomble and respectively provided with an aperture in which the spacer-pieces of the nomble fit, a lever attached to the crank-rung, cables attached to the lever, an additional ladder, drums mounted on a rotatable shaft in one of the side rails of the additional ladder, around which drums the cables are wound and one of such drums secured rigidly to the rotatable shaft, gear-teeth on adjacent ends of the drums, a disk loosely mounted on the drum-shaft between the drums, gear-wheels rotatably mounted in the disk to intermesh with the gear-teeth on the ends of the drums, and means to hold the disk to prevent rotation thereof when desired; substantially as described.

708,116. MACHINE FOR WORKING AND SHAPING DOUGH.
WILLIAM E. CROSTY and CHARLES I. CROSTY, Washington, D. C. Filed
Mar. 11, 1898. Serial No. 571,038. (No model.)

Claim.—1. In a machine adapted to work dough, the combination of a wheel having a peripheral working face, a casing opposed to and substantially parallel with the said working face and constituting a pressure-board, the said casing being movable toward and from the said working face of the wheel, the framework in which the wheel is mounted provided with radiating arms *G* having expanded ends or heads which carry stops or bearings *G* against which the casing normally rests, and the springs which hold the casing against their bearings with a yielding force, substantially as set forth.

2. In a machine adapted to work dough, the combination of a wheel having a face constituting the advancing member of the dough passage-way, a casing opposed to the wheel and constituting the resistance member of the passage-way, and side walls for the passage-way, each side wall being in part movable and in part stationary, substantially as set forth.

3. In a machine adapted to work dough, the combination of a wheel having a face constituting the advancing member of the dough passage-way, a casing opposed to the wheel and constituting the resistance member of the passage-way, and side walls for the passage-way, each wall being part movable and connected with the wheel, and part stationary, substantially as set forth.

4. In a machine adapted to work dough, the combination of a wheel having a face constituting the advancing member of the dough passage-way, a casing opposed to the wheel and constituting the resistance member of the passage-way, and side walls for the passage-way, each wall consisting of flanges *K* at the edges of the wheel-face, and flanges *L* carried by the casing, and extending past the flanges *K*, substantially as set forth.

5. In a machine for working dough, the combination with a pressure-board, which constitutes one wall of a dough-passage, and means for advancing the dough through such passage, constituting the other wall

thereof, of means for forming the dough into sheets or thin masses, means for curling such dough masses, and a support for the dough masses over which they pass before they reach the curling means or the advancing means, substantially as set forth.

6. In a machine for working dough, the combination of a wheel having a dough-working face, and a casing opposed thereto and constituting a pressure-board, means for forming the dough masses into sheets, a curlier, and means independent of the said wheel for supporting the dough masses between the curlier and the dough-shooting means, substantially as set forth.

7. In a machine for working dough, the combination of a wheel having a peripheral dough-working face, a casing arranged opposite thereto and constituting a pressure-board, and being, at points intermediate its ends, movable toward and from the face of the wheel, rolls for flattening or shooting masses of dough, and a curlier situated below the said rolls, and between them and the face of the wheel whereby the curling action is begun before the wheel engages with the dough mass, substantially as set forth.

8. In a machine for working dough, the combination of a wheel having a peripheral dough-working face, a casing arranged opposite thereto, the casing being supported at points intermediate its length, and being, at such points, movable toward and from the face of the wheel, dough-shooting rollers, a curlier situated below the said rollers, whereby the dough sheets are fed from the rollers to the curlier by gravity, and supporting means interposed between the curlier and the said rollers for sustaining the dough sheets while the curling is being started, substantially as set forth.

9. In a machine for working dough, the combination of a wheel for advancing the dough, a casing arranged opposite the working face of the wheel, a feed-passage through which the dough masses are fed to the machine, and a curlier situated below the said feed-passage and between it and the face of the wheel, whereby the dough masses pass to the curlier by gravity and the curling operations begin before the wheel engages with the dough masses, substantially as set forth.

708,117. CAR-TRUCK BOLSTER. DANIEL C. COURTNEY, Wm. Va. Filed June 4, 1901. Serial No. 62,122. (No model.)

Claim.—1. A car-truck bolster comprising two flanged beams arranged parallel with their webs in vertical planes and each having top and bottom flanges; a plate riveted to the lower flanges of the beams and extending the entire length thereof; the under surface of the ends forming top bearings for springs, a top plate riveted to the top flanges at the center, and spacing-pieces uniting the beams at the ends; the top flanges and portions of the webs of the beams being cut away at the ends to allow the same to pass beneath the top arch-bars, and the vertical portions of

the webs being located adjacent the arch-bars and curving as steps to prevent the excessive endwise movements of the bolster in either direction.

2. The combination with a truck-frame having transverse C C and top arch-bars of a bolster comprising two flanged beams, a bottom plate, a top plate, and opening-pieces at the extreme ends; the said bolster being cut away at the ends and the top surface thereof being in a plane above the plane of the top arch-bars, whereby the bolster is held against endwise movements and the transverse C C serve as bearings for the bolster in its sidewise movements.

708,118. DRAFT-RIGGING. WILLIAM E. GALT, Iron Mountain, Mich. Filed Mar. 18, 1902. Serial No. 97,998. (No model.)

Claim.—1. In a draft-rigging, the combination of tubular telescoped support and draw-bar members, the latter member having an endwise movement upon the former member, and both members having front and rear pairs of corresponding slots, front and rear abutment-bars lying in the respective pairs of slots, and a spring housed within the inner member and bearing in opposite directions against the abutment-bars to normally hold the same at the outer ends of the slots.

2. In a draft-rigging, the combination with a fixed tubular casing having front and rear pairs of transversely-aligned slots, of a tubular draw-bar working within the casing and provided with pairs of front and rear slots normally corresponding to the slots in the casing, front and rear abutment-bars lying in the corresponding front and rear slots, and a spring housed within the draw-bar and bearing in opposite directions against the abutment-bars to hold the same at the outer ends of the slots.

3. In a draft-rigging, the combination of telescoped support and draw-bar members, of which the draw-bar member is tubular, and both members are provided with front and rear pairs of aligned slots, front and rear abutments lying in the respective pairs of slots, a pair of aligned helical springs located between and bearing in opposite directions against the respective abutments, and a plate interposed between the inner ends of the springs and provided with a stem projected in opposite directions therefrom and entering the respective springs.

4. In a draft-rigging, the combination of telescoped support and draw-bar members which are provided with front and rear pairs of aligned slots, pairs of headed abutments lying in the respective front and rear slots, the members of each pair being detachably connected and having their heads reversely arranged to lie exteriorly at opposite sides of the device to prevent endwise displacement of the abutments, and a spring located between the pairs of abutments and bearing in opposite directions thereagainst.

5. The combination of telescoped support and draw-bar members which are provided with front and rear pairs of transversely-aligned slots, pairs of headed abutments lying in the respective pairs of slots and projected beyond opposite sides of the device, the heads of the members of each pair of abutments being reversely arranged and lying exteriorly against the opposite sides of the device to prevent endwise displacement of the abutments, detachable fastenings connecting the ends of the members of each pair of abutments, and a spring lying between the pairs of abutments and bearing in opposite directions thereagainst.

6. In a draft-rigging, the combination with a casing having front and rear pairs of transversely-aligned slots, a tubular draw-bar working in the casing and having front and rear slots corresponding to the slots in the casing, pairs of headed abutments lying in the respective pairs of slots,

the members of each pair of abutments being reversely disposed with their heads lying exteriorly at opposite sides of the casing and overlapping the slots, detachable fastenings connecting the opposite ends of said members, front and rear helical springs within the draw-bar and between the abutments, and a plate interposed between the springs and having a stem projected in opposite directions therefrom and lying within the respective springs.

7. In a draft-rigging, the combination of a substantially tubular casing which is open at its front end, and is provided at its top with opposite longitudinal flanges for attachment to the underframing of a car, a tubular draw-bar working within the casing, the latter and the draw-bar being provided with front and rear pairs of transversely-aligned slots, front and rear abutments lying in the slots and movable with the draw-bar, and a spring housed within the draw-bar and between the abutments and bearing in opposite directions against the latter.

8. The combination with the center sills of a car-underframing, of a plate secured to the under edges of the sills and closing the space therebetween, a substantially tubular casing which is open throughout its top and its front end, and is provided at its top with opposite longitudinal flanges, which are fastened flat against the plate, whereby the latter closes the top of the casing, a tubular draw-bar working in the casing, the latter and the draw-bar having front and rear pairs of transversely-aligned longitudinal slots, front and rear abutments lying in the respective pairs of slots, and a spring located within the draw-bar and between the abutments and bearing in opposite directions against the latter.

9. The combination of a substantially tubular casing which is open at its front end and is provided at its top with opposite outwardly-directed longitudinal attaching-flanges, a tubular draw-bar working in the casing and having an open rear end, the casing and the draw-bar being provided with front and rear pairs of transversely-aligned longitudinal slots, front and rear pairs of headed abutments lying within the respective slots and projected at opposite sides of the casing, the members of each pair of abutments being reversely arranged with their heads lying exteriorly at opposite sides of the casing and overlapping the slots thereof, detachable fastenings connecting the opposite ends of said members, a pair of helical springs located within the draw-bar and between the abutments and bearing in opposite directions against the latter, and a plate interposed between the springs and having a central stem projected in opposite directions therefrom and entering the respective springs.

708,119. RAILWAY-TIE. ALLEN F. COOPER, Fulton, Mich. Filed Feb. 1, 1902. Serial No. 98,100. (No model.)

Claim.—1. In a composition railway-tie, the combination of a body portion A; fastening-plates C having keyhole-slots F therein; and plates D arranged in a vertical position, toward the ends of the said body portion; cables c securing said fastening and end plates together; trans-cables i securing said end plates together; trans-cables i secured toward the upper edge of one of said end plates, and passing under the fastening-plate nearest it, and over the fastening-plate on the opposite end, and secured to the lower edge of the opposite end plate, all embedded in said body portion; openings E in said body portion which register with the openings F in the fastening-plates C; bolts a adapted to be inserted in said openings and engage said plates C, and project above the face of said body portion, to secure the rail in position; and a wedge-block E to retain said bolts in position, all constituting for the purpose specified.

2. In a composition railway-tie, the combination of a body portion A; fastening-plates C having keyhole-slots F therein; and plates D arranged in a vertical position, toward the ends of the said body portion; cables c securing said fastening and end plates together; trans-cables i secured toward the upper edge of one of said end plates and passing under the fastening-plate nearest it, and over the fastening-plate on the opposite end, and secured to the lower edge of the opposite end plate, all embedded in said body portion; openings E in said body portion which register with the openings F in the fastening-plates C; bolts a adapted to be inserted in said openings and engage said plates C, and project above the face of said body portion, to secure the rail in position; and a wedge-block E to retain said bolts in position, all constituting for the purpose specified.

3. In a composition railway-tie, the combination of a body portion A; fastening-plates C having keyhole-slots F therein; and plates D arranged in a vertical position, toward the ends of the said body portion; cables c securing said fastening and end plates together; trans-cables i securing said end plates together; all embedded in said body portion; openings E in said body portion which register with the openings F in the

fastening-plates G; bolts a adapted to be inserted in said openings and engage said plates G, and project above the face of said body portion, to secure the rail in position; and a wedge-block E to retain said bolts in position, all constituting for the purpose specified.

4. In a composition railway-tie, the combination of a body portion A; fastening-plates G having keyhole-slots F therein; cables c securing said fastening and end plates together, all embedded in said body portion; openings E in said body portion which register with the openings F in the fastening-plates G; bolts a adapted to be inserted in said openings and engage said plates G, and project above the face of said body portion, to secure the rail in position; and a wedge-block E to retain said bolts in position, all constituting for the purpose specified.

5. In a composition railway-tie, the combination of a body portion A; fastening-plates G having keyhole-slots F therein; all embedded in said body portion; openings E in said body portion which register with the openings F in the fastening-plates G; bolts a adapted to be inserted in said openings and engage said plates G, and project above the face of said body portion, to secure the rail in position; and a wedge-block E to retain said bolts in position, all constituting for the purpose specified.

6. In a composition railway-tie, the combination of a body portion A; fastening-plates having keyhole-slots embedded therein; cables c securing said plates together; openings in said body portion which register with slots in said fastening-plates; bolts adapted to be inserted in said openings and engage said plates and project above the face of said body portion to secure the rail in position and a wedge-piece to retain said bolts in position for the purpose specified.

7. In a composition railway-tie, the combination of a body portion A; fastening-plates having keyhole-slots embedded therein; openings in said body portion which register with slots in said fastening-plates; bolts adapted to be inserted in said openings and engage said plates and project above the face of said body portion to secure the rail in position; and a wedge-piece to retain said bolts in position, for the purpose specified.

708,180. PNEUMATIC-CARRIER SYSTEM. WILLIS W. DASHLEY, Chicago, Ill., assignor to American Pneumatic Service Company, Boston, Mass., a Corporation of Delaware. Filed July 20, 1900. Serial No. 25,346. (No model.)

Claim.—1. In a pneumatic-carrier system, the combination of a plenum side, a vacuum side, mechanism for maintaining the pressure in both sides and automatic governing devices arranged to control said pressure-supplying mechanism, whereby the operation of the latter is accelerated whenever the pressure falls below a determined point on either side.

2. In a pneumatic-carrier system, the combination of a plenum side, a vacuum side, a blower having its inlet connected with the vacuum side and its outlet discharging into the plenum side, a motor actuating said blower, a governor controlling said motor, and a pressure-actuated gov-

ernor connected with each side of the system and both adapted to act upon the motor-controller, substantially as described.

3. In a pneumatic-carrier system, the combination of a plenum side and vacuum side, and means for transferring a carrier from one side to the other during its travel.

4. In a pneumatic-carrier system, the combination of a plenum side, a vacuum side, and means for transferring a carrier from one side to the other during its travel, comprising intersecting passages, the delivery-passage of which is arranged to discharge the carrier into the receiving-passage in substantial alignment with the latter, and a valve adapted to be opened by impact of the carrier, normally forming a closure between the two sides.

5. In a pneumatic-carrier system, the combination of a transmitting-terminal operated by vacuum-pressure, a transmitting system into which said transmitting-terminal discharges operated by plenum-pressure, and a valve operated by impact interposed between the pressure and vacuum sides.

6. In a pneumatic-carrier system, the combination with a transmitting-pipe and a closure arranged to close the carrier-inlet thereof, of means operated automatically by the operation of sending the carrier for venting the transmitting-pipe for a limited period and during the transmission of the carrier through said pipe.

7. In a pneumatic-carrier system, the combination with a transmitting-pipe and a closure arranged to close the carrier-inlet thereof, of means operated by the opening of said closure for venting said transmitting-pipe, and a dash-pot acting to retard the return of said venting device to its normally closed position.

8. In a pneumatic-carrier system, the combination with a transmitting-pipe and a closure arranged to close the carrier-inlet thereof, of a return or branch pipe communicating with said transmitting-pipe, a vent in said communicating pipe, a closure controlling said vent, operative connections between the closure of the carrier-inlet and the vent-closure, whereby the latter will be opened with the former, and means acting automatically to delay the closing of the vent after a carrier has been inserted.

9. In a pneumatic-carrier system, the combination with a transmitting-pipe and a hinged closure arranged to close the carrier-inlet thereof, of a return or branch pipe communicating with said transmitting-pipe, a vent in said communicating pipe, a closure controlling said vent, a reciprocatory rod arranged to act upon said vent-closure to open the same, a crank-arm rigid with the hinged closure of the carrier-inlet operatively connected with said reciprocatory rod, and a dash-pot arranged to control the return reciprocation of said rod, substantially as described.

10. In a pneumatic-carrier system, the combination with a transmitting-pipe and a hinged closure arranged to close the carrier-inlet thereof, of a return or branch pipe communicating with said transmitting-pipe, a vent in said communicating pipe, a closure controlling said vent, a reciprocatory rod arranged to act upon said vent-closure to open the same, a crank-arm rigid with the hinged closure of the carrier-inlet operatively connected with said reciprocatory rod, and a dash-pot arranged to control the return reciprocation of said rod, the connections between said closure of the carrier-inlet and the reciprocatory rod being constructed to afford lost motion whereby the carrier-inlet closure is free to close independently of the movement of the vent-closure, substantially as described.

11. In a pneumatic-carrier system, the combination with a plenum side and a vacuum side, of a pressure-actuated mechanism connected with each of said sides, a weighted arm operatively connected with each pressure-actuated mechanism, a common arm upon which both of said weights are adapted to act and a pressure-supplying mechanism controlled by the movement of said common arm, substantially as described.

12. In a pneumatic conveyor, the combination of a conveying-tube, means for producing a movement of air therethrough, a normally closed admission-valve for the tube which may be opened to admit air, and a time-regulator connected with said valve and controlling its period of closing, said regulator operating independently of the pressure in the conveying-tube and independently of the means for producing said movement of air.

13. In a pneumatic conveyor, the combination of a conveying-tube, means for producing a movement of air therethrough, a normally closed admission-valve which may be opened to admit air, a time-regulator connected with said valve and controlling its period of closing, said regulator operating independently of the pressure in the conveying-tube, and independently of the means for producing said movement of air, and means for adjusting the period of action of said regulator.

14. In a pneumatic conveying apparatus, the combination of a conveying-tube, an air-supply pipe connected therewith, an outwardly-opening valve between the junction of said air-supply pipe with said conveying-tube and the discharging end of said conveying-tube, a valve for admitting air from said supply-pipe to said conveying-tube, and a time-regulator connected with said valve and controlling its period of closing,

said time-regulator operating independently of the pressure in said conveying-tube and air-supply pipe.

15. In a pneumatic conveying apparatus, the combination of a conveying-tube, an air-supply pipe connected therewith, an outwardly-sealing valve in said conveying-tube located between the junction of the air-supply pipe therewith and the dispatching end of the tube, a valve for admitting air from the supply-pipe to the conveying-tube, a time-regulator connected with said air-valve having a spring tending to keep the valve closed, said time-regulator operating independently of the pressure in said conveying-tube and in the air-supply pipe, and means for opening said air-valve and setting said time-regulator.

16. In a pneumatic conveying apparatus, the combination of a conveying-tube, an air-supply pipe connected with said tube, an outwardly-sealing valve located in said conveying-tube between the junction of the air-supply pipe therewith and the admission end of said conveying-tube, an air-valve for admitting air from said supply-pipe to the conveying-tube, an admission-door on the conveying-tube, and a time-regulator connected with and operating said air-valve and admission-door, said time-regulator operating independently of the pressure in the conveying-tube and in the air-supply pipe.

17. In a pneumatic conveying apparatus, the combination of a conveying-tube, means connected with the delivery end of said tube for reducing the pressure therein, a dispatching-door, means for closing said door and a time-regulator connected with said dispatching-door for controlling its period of closing.

18. In a pneumatic conveyor, the combination of an outgoing distributing-tube, an incoming collecting-tube, means for supplying pressure to the distributing-tube, and suction to the collecting-tube, a normally closed air-admission valve for said collecting-tube, and a time-regulator controlling the period of closing of said valve, said regulator operating independently of the pressure in said tube, and independently of the current-producing means.

19. In a pneumatic conveyor, a collecting-tube provided with a station intermediate of its length, and which is extended back from its extremity back to said intermediate station, a door at said intermediate station on the incoming or carrying portion of said collecting-tube, an air-admission valve on the backward extension of said collecting-tube connected with said door, means for controlling the period of closing of said air-admission valve, and means for applying suction to said air-collecting tube near its delivery end.

20. In a pneumatic conveyor, the combination of a plurality of distributing-tubes, a collecting-tube provided with an outlying loop-station and an intermediate station, said collecting-tube being extended from said loop-station back to said intermediate station, an air-admission valve connected with said collecting-tube at said loop, a door at said intermediate station on the incoming or carrying portion of said collecting-tube, an air-admission valve on said backward extension of said collecting-tube connected with said intermediate-station door, means for controlling the period of closing of said air-admission valve, and means for applying suction to said collecting-tube adjacent to its delivery end.

21. In a pneumatic conveyor, an air-compressor, a plurality of distributing-tubes connected with the high-pressure side of said compressor, valves controlling the admission of air from said compressor to said distributing-tubes, doors near the dispatching end of said distributing-tubes connected with said valves, a collecting-tube connected at its delivery end with the low-pressure side of said compressor, an inwardly-sealing valve near the delivery end of said collecting-tube, a plurality of dispatching-doors for said collecting-tube, and means for controlling the admission of air to said collecting-tube at the several stations.

22. In a pneumatic conveyor, the combination of a conveying-tube provided with a valve seating toward the admission end of the tube and adapted to be opened by a carrier, an air-supply pipe connected with said tube inside of said valve, and means for giving an initial impulse to the carrier whereby it is carried past said valve and into the path of the air-current from the air-supply pipe.

23. In a pneumatic conveyor, the combination of a conveying-tube provided with a valve seating toward the admission end of the tube and adapted to be opened by a carrier, an air-supply pipe connected with said tube inside of said valve, and means for producing an inward flow of air through the part of said conveying-tube between the admission end thereof and the said valve whereby an initial impulse is given to the carrier for carrying it past said valve and into the path of the air-current from said supply-pipe.

24. In a pneumatic conveyor, the combination with a conveying-tube, provided with a valve which seats toward the dispatching end of the tube, an exhaust-pipe connected with said tube between said valve and its dispatching end, an air-supply pipe connected with said tube inside of said valve and means supplying air to said air-supply pipe and producing suction in said exhaust-pipe whereby carrier inserted at the delivery end

of said tube are first carried past said valve by atmospheric pressure and then carried to their destination by the force of the compressed air.

25. In a pneumatic conveyor, the combination of an air-compressor, a distributing-tube provided with a dispatching-door and inside of said door with an outwardly-sealing valve capable of actuation by a carrier, an exhaust-pipe connecting said tube at a point between said valve and the dispatching-door with the low-pressure side of said compressor, an air-supply pipe joining said tube inside of said valve with the high-pressure side of said compressor, and a valve controlling the flow of compressed air through said air-supply pipe.

26. In a pneumatic conveyor, the combination of a distributing-tube provided with a dispatching-door and inside of said door with an outwardly-sealing valve, an exhaust-pipe joining said tube between said valve and the dispatching-door, an air-supply pipe joining said tube inside of said valve, a valve in said air-supply pipe connected with said dispatching-door, means for controlling the period of closing of said dispatching-door and air-valve, and means for supplying air to said air-supply pipe and for producing suction in said exhaust-pipe.

27. In a pneumatic conveyor, the combination of a compressor, a distributing-tube provided with a dispatching-door, and inside of said door with a valve which seats toward the door and is adapted to be opened by a carrier, an exhaust-pipe joining said tube between said valve and the door with the low-pressure side of said compressor, an air-supply pipe joining said tube inside of said valve with the high-pressure side of said compressor, a valve in said supply-pipe connected with said dispatching-door, a collecting-tube provided with a dispatching-door and adjacent to its delivery end with a valve which seats toward said delivery end and is adapted to be opened by a carrier, and an exhaust-pipe connecting said collecting-tube inside of said valve with the low-pressure side of said compressor.

28. In a pneumatic conveyor, the combination of a compressor, a conveying-tube connected at its end toward which the carrier moves with the said compressor, a normally closed dispatching-door for the conveying-tube, a valve in the conveying-tube which seats toward the dispatching end of the tube and is adapted to be opened by a carrier, and pressure-actuated means connected with the low-pressure side of the compressor for regulating the action of said compressor.

29. In a pneumatic conveyor, the combination of a compressor, a collecting-tube connected adjacent to its delivery end with the low-pressure side of said compressor, a valve adjacent to the delivery end of the collecting-tube, movable by a carrier, a normally closed dispatching-door in the collecting-tube, and pressure-actuated means connected with the low-pressure side of the compressor for regulating the action of said compressor.

30. In a pneumatic conveying apparatus, the combination of a compressor, a distributing-tube provided with a normally closed dispatching-door and inside of said door with an outwardly-sealing valve, an exhaust-pipe joining said tube between said valve and the dispatching-door with the low-pressure side of said compressor, an air-supply pipe joining said tube inside of said valve with the high-pressure side of said compressor, and pressure-actuated means connected with the low-pressure side of the compressor for regulating the action of the said compressor.

31. In a pneumatic conveying apparatus, the combination of a compressor, a distributing-tube provided with a normally closed dispatching-door and inside of said door with an outwardly-sealing valve, an exhaust-pipe joining said tube between the said valve and the dispatching-door with the low-pressure side of said compressor, an air-supply pipe joining said tube inside of said valve with the high-pressure side of said compressor, a collecting-tube connected with the exhaust side of said compressor, a normally closed dispatching-door for said collecting-tube, an inwardly-sealing valve at the delivery end of said collecting-tube and pressure-actuated means connected with the low-pressure side of said compressor for regulating the action of said compressor.

32. In a pneumatic conveying apparatus, the combination of a conveying-tube provided with a dispatching-door, a valve in said tube adapted to be opened by a carrier, and which opens away from the dispatching-door, an exhaust-pipe connected with said tube inside of said valve, means for closing said door embracing a time-regulator which operates independently of the pressure in said tube or in the exhaust-pipe and controls its period of closing and means producing suction in said exhaust-pipe.

708,121. SLOTTING MECHANISM FOR SCREW-MACHINES.
WILLIAM E. DAVENPORT, Providence, R. I., designer to Brown and Sharpe Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed May 28, 1908. Serial No. 12,212. (No model.)

Claim.—1. In a slotting mechanism for screw-machines, the combination with a slotting device of a carrier having a socket for supporting the article being formed, mechanism for moving the carrier to bring the socket in line with the article, advancing the carrier to bring the arti-

ole into the socket, moving the carrier directly into position in front of the slotting device, advancing the carrier to bring the article under the action of the slotting device and moving said carrier away from the slotting device, and an ejector acting during the backward movement of the carrier to eject the slotted article.

2. In a slotting mechanism for screw-machines, the combination with a slotting device, of an oscillating arm, means for oscillating said arm to a position in front of the chuck of the screw-machine, a socket in said arm for supporting the article being formed, means for advancing said arm to bring the article into the socket, means for swinging said arm directly into position to bring the article in line with the slotting device, means for advancing said arm to feed the article against the slotting device and means for retracting said arm.

3. In a slotting mechanism for screw-machines, the combination with a slotting device, of an oscillating arm, a socket therein for supporting the article being formed, a rock-shaft to which said arm is secured, means for rocking said shaft to swing the arm to a position in front of the chuck of the screw-machine, means for moving said shaft longitudinally when the socket is in line with the article being formed, means for swinging said arm directly into position to bring the article in line with the slotting device, and for advancing and retracting said shaft longitudinally when the socket registers with the slotting device.

4. In a slotting mechanism for screw-machines, the combination with a slotting device of a carrier, having means for supporting and carrying the article being formed, means for operating said carrier to present an article to the slotting device, means for retracting said carrier, and a stationary finger for ejecting the article from the carrier during its retracting movement.

5. In a slotting mechanism for screw-machines, the combination with a slotting device of a carrier, having a socket for the article being formed, a slot extending into said socket, an ejector arranged to pass through said slot as the carrier is retracted and means for retracting the carrier.

6. In a slotting mechanism for screw-machines, the combination with a slotting device of an oscillating carrier for presenting the article being formed to the slotting device, a rock-shaft to which said carrier is secured, a pinion keyed to said shaft, a segment engaging said pinion, a cam for operating said segment, a rack connected with said pinion, a pinion engaging said rack, and a cam connected to operate said pinion.

7. In a slotting mechanism for screw-machines, the combination with a slotting device of an oscillating carrier for presenting the article being formed to the slotting device, a rock-shaft to which said carrier is secured, means for rocking said shaft, a rack connected with said shaft, a pinion engaging said rack, a bevel-pinion connected to said pinion, a lever having a segment engaging said bevel-pinion and a cam for operating said lever.

8. In a slotting mechanism for screw-machines, the combination of

the carrier B, rock-shaft 5 to which said carrier is secured, spring c acting on said shaft, pinion c' connected with said shaft, lever c' having segment c' engaging pinion c', cam c', sleeve c' on said shaft, pinion d engaging teeth on said sleeve, pinion d' connected with pinion d, lever d' having segment d' engaging pinion d' and cam d'.

9. In a slotting mechanism for screw-machines, the combination with a slotting device, of a swinging carrier having a socket for supporting the article, an adjustable stop for determining the swing of the carrier, a rock-shaft on which said carrier is mounted, a lag on said carrier, a yoke secured to said shaft and having arms straddling said lag and a spring between one of said arms and said lag.

10. In a slotting mechanism for screw-machines, the combination with a saw a, of a carrier B, having a socket B' and a slot B' extending into said socket, an ejector-finger f and a chute A' into which the articles are discharged by the finger f.

11. In a slotting mechanism for screw-machines, the combination with a slotting device, of a carrier having a socket to receive the article being formed, means for moving said carrier to bring said socket in line with the article in the chuck of the screw-machine, means for advancing said carrier to bring the article into said socket, means for moving said carrier directly to a position to bring the article in line with the slotting device, means for advancing said carrier to feed the article against the slotting device, and means for retracting said carrier.

12. In a slotting mechanism for screw-machines, the combination with a slotting device, of a carrier having a socket to receive the article being formed, means for moving said carrier to bring said socket in line with the article in the chuck of the screw-machine, means for advancing said carrier to bring the article into said socket, means for moving said carrier directly to a position to bring the article in line with the slotting device, means for advancing said carrier to feed the article against the slotting device, a fixed ejector located in the path of the socket in the retracting movement of said carrier, and means for retracting said carrier and moving it past said fixed ejector from one side thereof to the other.

708,122. PROCESS OF DYING. GUYAVE DE KESSELARE, Brussels, Belgium. Filed Oct. 18, 1891. Serial No. 79,145. (No opposi-
tion.)

Claim.—1. The herein-described process of treating textile material such as cotton and wool on cops, bobbins, crossed bobbins, spindle-rolls and the like with a treating liquid consisting in subjecting the material to the action of the treating liquid when embedded in a suitable pulverulent material.

2. The herein-described process of treating textile material such as cotton and wool on cops, bobbins, crossed bobbins, spindle-rolls and the like with a treating liquid consisting in placing the material to be treated in a suitable pulverulent material, subjecting the textile material embedded in said pulverulent material to the action of the treating liquid, removing the textile material from the pulverulent material and finally washing the textile material.

3. The herein-described process of treating textile material such as cotton and wool on cops, bobbins, crossed bobbins, spindle-rolls and the like with a treating liquid consisting in placing the material to be treated in a suitable box, filling up the interstices and channels between the cops or the like with suitable pulverulent material, then closing the box, causing the treating liquid to circulate through the pulverulent material and the textile material, and removing after the treatment the textile material from the pulverulent material in which it is embedded.

4. The herein-described process of treating textile material such as cotton and wool on cops, bobbins, crossed bobbins, spindle-rolls and the like with a treating liquid consisting in placing the material to be treated in a suitable box, throwing a certain quantity of pulverulent material in the box, then directing a jet of water upon the said material whereby the said pulverulent material is carried into the interstices between the cops or the like, then closing the box containing the pulverulent material and the textile material, causing the treating liquid to circulate through the

pulverulent material and the textile material, removing the textile material from the pulverulent material in which it is embedded and finally washing the textile material.

5. The herein-described process of dyeing textile material such as cotton and wool on cops, bobbins, crossed bobbins, spindle-rolls and the like consisting in subjecting the textile material to the action of the dyeing liquid when embedded in a suitable pulverulent material.

6. The herein-described process of dyeing textile material such as cotton and wool on cops, bobbins, crossed bobbins, spindle-rolls and the like consisting in subjecting the textile material to the action of the dyeing fluid after having filled the interstices between the cops or the like with sand, removing the textile material from the sand after dyeing and finally washing the dyed material in order to free it from any particles of sand which may have adhered.

7. The herein-described process of dyeing textile material such as cotton and wool on cops, bobbins, crossed bobbins, spindle-rolls and the like consisting in placing the cops or the like in a perforated box covered inside with a filtering fabric, throwing a certain quantity of sand in the box, directing a jet of water upon the said sand thereby causing it to fill up all the interstices between the cops or the like while the water flows off out of the box through the filtering fabric, closing the box, dyeing in the usual manner in a suitable dyeing-vat; removing the dyed cops or the like from the sand in which they are embedded and finally washing the textile material, substantially as described and for the purpose set forth.

708,128. DORRSHOE. JOHN DILLER, New York, N. Y. Filed Feb. 24, 1902. Serial No. 95,205. (No model.)

Claim.—1. A horseshoe comprising a member adapted for attachment to a hoof and having perforations therethrough, an elastic pad disposed against the under face of the member and having perforations aligned with the perforations of said member, a supplemental shoe disposed against the under face of the pad and having perforations aligning respectively with those of the first member and cushion, and means for holding said parts together, said means consisting of calks engaged slidably with the perforations and having retaining means engaged with their upper ends above the first member whereby the calks are slidably contained.

2. A horseshoe comprising a main member adapted for attachment to a hoof, an elastic pad disposed against the under face of said member and having a channel therein, a supplemental shoe disposed within the channel, said parts having aligning perforations, and means for holding said parts together, said means consisting of calks slidably engaged with the perforations and having nuts screwed on their upper ends above the main member whereby the calks are yieldably contained.

3. A horseshoe comprising a main member adapted for attachment to a hoof, an elastic pad disposed against the under face of said member and having a channel therein, a supplemental shoe disposed within the channel, and lying with its lower face above the lower face of the elastic pad, said parts having aligning perforations, and means for holding said parts together, said means consisting of calks slidably engaged with the perforations and having nuts screwed on their upper ends above the main member whereby the calks are yieldably contained.

708,124. DUST-COLLECTOR. PAUL BERNSTEIN, Jackson, Mich. Filed Mar. 23, 1902. Serial No. 9,992. (No model.)

Claim.—1. In a dust-collector, the combination of a filtering-chamber which is open at its upper and lower ends and which has an elastic front cloth spring to a bow shape and arranged with its concave side inwardly, a filter-cloth supported at the front of the chamber by said cloth, whereby the cloth is stretched, and a hammer arranged to strike the re-entrant portion of said cloth for jarring the cloth, substantially as set forth.

2. The combination of an upper chamber which receives the dust-laden air, a lower chamber which receives the separated dust, vertical, flat, filtering-chambers arranged side by side between said upper and lower chambers and communicating therewith at their upper and lower ends, a corresponding series of individual hammers adapted to strike the narrow upright side of each filtering-chamber separately, flexible arms to which

the hammer-heads are secured, and mechanism whereby said arms are actuated simultaneously, substantially as set forth.

3. The combination of an upper chamber which receives the dust-laden air, a lower chamber which receives the separated dust, vertical, flat, filtering-chambers arranged side by side between said upper and lower chambers and communicating therewith at their upper and lower ends, a cut-off device which temporarily shuts off the dust-laden air from said filtering-chambers, a series of individual hammers adapted to strike each filtering-chamber separately, flexible arms to which the hammer-heads are secured, and mechanism whereby said arms are actuated while the dust-laden air is shut off, substantially as set forth.

4. The combination with a series of filtering-chambers arranged side by side, of a corresponding series of individual hammer-heads adapted to strike each chamber separately, a corresponding series of flexible arms to which the hammer-heads are secured, a cross-bar connecting said arms between the supported ends of the latter and the hammer-heads, and an actuating device whereby said cross-bar is moved back and forth, thereby moving said arms and hammer-heads simultaneously, while said hammer-heads are also capable of individual movement by reason of the flexibility of said arms, substantially as set forth.

5. The combination with the filtering-chambers, of a series of individual hammers adapted to strike each chamber separately, means whereby the arms of said hammers are connected for simultaneous operation, a rotary shaft capable of longitudinal movement, an actuating device mounted on said shaft and adapted to be engaged with and disengaged from said connecting means by the longitudinal movement of said shaft, and means for shifting said shaft longitudinally, substantially as set forth.

6. The combination with the filtering-chambers, of a series of individual hammers adapted to strike each chamber separately, a cross-bar connecting the arms of said hammers and provided with a yoke, a rotary shaft capable of longitudinal movement, and an actuating-cam mounted on said shaft and adapted to be engaged with and disengaged from said yoke by the longitudinal movement of said shaft, substantially as set forth.

7. The combination with the filtering-chambers, their striking device, and the longitudinally-movable rotary shaft whereby the striking device is actuated, of a rocking shifting lever connected with said shaft for moving the same alternately in opposite directions and provided with two opposite actuating-faces, and a rotary crank which engages alternately with said faces and shifts said rocking lever from one side to the other and holds the lever in either position while traveling over the face of the lever, substantially as set forth.

8. The combination with the filtering-chambers, their striking device, and the longitudinally-movable rotary shaft whereby the striking device is actuated, of a rocking shifting lever connected with said shaft and provided with two opposite actuating-faces, a rotary crank which engages

alternately with said faces and shifts said lever from one side to the other, and righting-springs bearing against the lever and tending to hold the same in its central position, substantially as set forth.

9. The combination with two groups of filtering-chambers, their striking devices, and a longitudinally-movable rotary shaft provided with means whereby each striking device is actuated, of a rocking shifting lever connected with said shaft and provided with two opposite actuating-faces, and a rotary crank which engages alternately with said faces and shifts said lever from one side to the other, thereby alternately engaging one of said actuating means with the striking device and disengaging the other from its striking device, substantially as set forth.

10. The combination with two groups of filtering-chambers, their striking devices, and a longitudinally-movable shaft, of means whereby a continuous rotary movement is imparted to said shaft, a rocking shifting lever connected with said shaft for moving the same alternately in opposite directions, an actuating device whereby said shifting lever is alternately shifted from one side to the other, and cams for actuating said striking devices arranged on said shaft in such position that one of said cams is engaged with its striking device and the other is disengaged from its striking device by the longitudinal movement of the shaft, substantially as set forth.

11. The combination with an upper chamber which receives the dust-laden air, a lower chamber which receives the separated dust, and vertical filtering-chambers arranged between said upper and lower chambers and communicating therewith at their upper and lower ends, of a cut-off slide which controls the communication of one of said chambers with said filtering-chambers, a rotary arm for actuating said slide, and cams connected with said slide and adapted to be alternately engaged by said arm, thereby shifting the slide alternately from one position to the other and allowing the slide to remain at rest while the arm rotates from one cam to the other, substantially as set forth.

12. The combination with an upper chamber which receives the dust-laden air, a lower chamber which receives the separated dust, and vertical filtering-chambers arranged between said upper and lower chambers and communicating therewith at their upper and lower ends, of a cut-off slide which controls the communication of one of said chambers with said filtering-chambers, a guide-bar connected with the outer end of said slide and provided with two oppositely-arranged cams, a stationary guide device which engages with said bar, and a rotary arm which alternately engages said cams, substantially as set forth.

13. The combination with the upper chamber which receives the dust-laden air, the lower chamber which receives the separated dust, upright filtering-chambers arranged between said upper and lower chambers and communicating therewith at their upper and lower ends, a cut-off device which controls the communication of said upper chamber with said filtering-chambers, and the fan which propels the dust-laden air to said upper chamber, of a suction-passage connecting said lower chamber with the suction side of the fan, whereby a reverse air-current is drawn through the cloth of the filtering-chambers when the latter are cut off from said upper chamber, substantially as set forth.

708,125. MILK JAR OR BOTTLE. HENRY C. BROWN, Washington, D. C. Filed Sept. 20, 1901. Serial No. 78,904. (No model.)

Claim.—1. A bottle or jar having a dish-receiving seat formed upon the interior of the mouth thereof, and in the inner side of the wall of the mouth with a depression cutting through said seat and disposed below the same for the purpose substantially as set forth.

2. A bottle or jar having an annular dish-receiving seat formed upon

the interior of the mouth thereof, and a depression in the inner side of the wall of the mouth thereof, disposed below the seat, substantially as described.

3. A bottle or jar having an annular dish-receiving seat formed upon the interior of the mouth thereof, a depression cutting said seat and disposed below the same, and a depression formed in the upper edge of the mouth and extending inwardly to a point above said seat, substantially as described.

4. A jar or bottle formed with a horizontally-disposed annular seat upon the inner side of its mouth, and a recess having its upper end cut through said seat, and tapering at its lower end into the inner diameter of the mouth, substantially as described.

5. A bottle or jar having an annular dish-receiving seat formed upon the interior of the mouth thereof, a depression formed in the inner wall of said mouth and cutting the seat and extending below the same, and a depression formed in the upper edge of the mouth and extending inwardly to said seat, substantially as described.

708,126. METAL-WIRE-WINDING DEVICE. EDWARD E. FOWLER, New York, N. Y. Filed Aug. 10, 1900. Serial No. 22,671. (No model.)

Claim.—1. A metal-wire-winding device which consists of a rotatable bobbin with means for rotating the same under proper tension and a carrier which consists of a sleeve loose upon a shaft, a horizontal arm for said carrier, a roller carried thereby and pressing upon the wire as laid on the bobbin, a vertical arm and a grooved pulley carried thereby; said carrier being adapted to supply wire to the bobbin and to be automatically operated by the side pressure of the wire during the winding process substantially as described.

2. The above-described carrier for metal-wire-winding machines which consists of a sleeve loosely mounted upon a shaft and provided with a horizontal arm, a pressure-roller carried thereby and means substantially as described, whereby said pressure-roller is kept in contact with the wire and holds the same down upon the bobbin during the winding process.

708,127. ELEVATOR. HERMAN HANFORD, Malden, Mass. Filed Aug. 20, 1901. Serial No. 72,748. (No model.)

Claim.—1. In combination with an elevator-car, air-cylinders secured in the upper part of the wellway, two elastically-moving pistons in said air-cylinders, suspended depending safety-ropes attached to said free moving pistons, a clatching device secured to the car for the purpose of grasping the elastically-suspended safety-ropes; an cushion rope attached to the clatching device which travels with the car and revolves a speed-

governor, the said governor, a brake-wheel, stop-pin in brake-wheel, a brake-wheel friction-band, and means connected to the brake-wheel band, said brake-wheel friction-band operated by the governor for the purpose of throwing the clutches into action by arresting the movement of the traveling endless rope; all arranged substantially as shown and for the purposes set forth.

2. In an elevator safety device in combination with an elevator-car, an air-cushioning device consisting of cylinders and pistons; safety-ropes elastically suspended from the pistons, clutches for grasping the said elastically-suspended safety-ropes, an endless traveling rope secured to the said clutches, a friction brake-wheel band, hooks attached to the said brake-wheel band, a brake-wheel, stop-pin in the brake-wheel adapted to be engaged by the hooks on the brake-band, a tension-adjusting screw for regulating the tension or pressure of the brake-wheel band on the endless rope attached to the clutches, and a speed-governor revolved by the endless rope; all arranged substantially as shown and for the purpose set forth.

3. The combination of a car, clutches including swinging arms on the car, an endless rope adapted to operate said arms, a brake-wheel driven by said rope, a friction brake-band around said wheel, stop-pin in said wheel and hooks and hook-shaft slidable in slots, said hooks being adapted to engage said pins, substantially as shown and described.

4. The combination of an elevator-car, the depending air-supported movable safety-ropes on each side, the clutches arranged to grasp the safety-ropes, an endless rope attached to the clutches through cross-shaft and arms, a hand-operated lever also attached to the cross-shaft, vertical rods connecting the overhead cross-shaft and the swinging clutch-arms, a brake-wheel, stop-pin on said wheel, a brake-band rigidly secured at one end, for retarding the movement of said endless rope, the other end arranged slidably in slots, hooks attached to said brake-band, and a governor for elevating said hooks till they engage with the stop-pins of the brake-wheel; substantially as shown and described.

5. The combination of an elevator-car, the cylinders overhead, the pistons within said cylinders, the depending ropes on each side secured to the pistons of the air-cylinders at the top of the wellway and to the floor at the bottom of the elevator-well, simultaneously-acting clutches on each side of the car, an endless rope arranged to operate said clutches, a brake-wheel, a friction brake-band around the brake-wheel, an adjusting-screw for regulating the tension of the brake-band, stop-pin in the brake-wheel, and hooks on hook-shaft slidably mounted in slots for engaging the said stop-pins; substantially as shown and described.

6. In combination with a safety device herein described having air-cylinders and movable pistons, an automatically hoisting machinery stop mechanism, consisting, in proper relation, of a rope, a shaft, a weight on said rope resting on said shaft, the starting device, the said rope being attached to the piston within one of said cylinders and to the starting device of the hoisting machinery, the said rope being looped downward and passed through a pulley attached to said weight; substantially as shown and described.

708,128. ELECTRIC TIME-SWITCH. CLARENCE F. HEATH, Providence, R. I., assignor, by direct and cross assignments, to Charles R. Orr and John W. Bond, Providence, R. I. Filed Mar. 11, 1902. Serial No. 97,783. (No model.)

Claim.—1. In an automatic switch, the combination with a wheel of plungers mounted in the wheel and normally projecting beyond the face thereof, means for rotating said wheel, a lever-arm, pivotally mounted above the wheel, adapted to depress one of the plungers, a tripping-lever mounted upon the lever-arm and means operated by a clock for tripping the tripping-lever.

2. In an automatic switch, the combination with a wheel of spring-actuated plungers mounted in the wheel, and normally projecting beyond the face thereof, a shaft for rotating said wheel, a lever-arm pivotally mounted above the wheel adapted to depress one of the plungers, a stop upon the machine-frame in the path of the projecting portion of the plunger, and means operated by a clock for releasing the lever-arm.

3. In an automatic switch, the combination with a wheel, of spring-actuated plungers radially mounted in the wheel and normally projecting beyond the face thereof, a projection on the side of the wheel in advance of each plunger, acting on the wheel to rotate the same, a stop upon the machine-frame, a lever-arm pivotally mounted above the wheel adapted to depress one of the plungers, a lever-arm projecting downwardly from the lever-arm, and normally within the path of the said projection, and means operated by a clock for releasing the lever-arm as described.

4. In an automatic switch, the combination with a wheel, of a spring-actuated plunger radially mounted in the wheel and normally projecting beyond the face thereof, a shaft for rotating said wheel, a stop upon the machine-frame in the path of the projecting portion of the plunger, a lever-arm pivotally mounted above the wheel adapted to depress one of the plungers, a spring upon the free end of the lever-arm ensuring a downward tension thereon, and means operated by a clock for releasing the lever-arm.

5. In an automatic switch, the combination with a frame, of a lever-arm pivoted at one end to the frame, a second lever fulcrumed to the frame above the lever-arm, a link connecting the outer ends of lever and lever-arm, a latch mounted in the free end of the lever, a tripping-lever pivoted to lever-arm, a shoulder on the tripping-lever for engaging with said latch, a revolving clock-dial actuated by clock mechanism, tripping-pin, in the rotating dial adapted to contact with the tripping-lever, spring means for forcing the lever-arm downward, a wheel mounted below the lever-arm, and a spring-actuated plunger in said wheel adapted to receive the impact of the lever-arm upon release of the tripping-lever.

708,129. BUTLER. JOHN B. HOWE and JOSEPH J. FREEMAN, Danbury, Conn. Filed Feb. 24, 1902. Serial No. 971,493. (No model.)

Claim.—The combination with a frame, a rear axle and crank-arms on said rear axle, of a cylindrical crank-hanger box having an elongated extension, removable heads secured into the ends of said cylindrical casing and having bearing-cups on their inner faces, a crank-shaft passing through holes in the respective heads of the cylindrical casing, integral cones on said crank-shaft, balls between said cones and the bearing-cups on the removable heads, a gear-wheel on the crank-shaft within the casing, two gears in the extension of the cylindrical casing and meshing with each other, one of said gears meshing with the gear-wheel in the cylindrical casing, bearings for balls secured to the extension of the casing, bearings for balls integral with said gears, cranks secured to one of said gears, cranks on the rear axle, and pinions connecting said cranks.

708,199.

708,180. GATE. OLAV R. JACOB, Reineb, Iowa. Filed May 8, 1901. Serial No. 32,334. (No model.)

Claim.—1. The combination with a supporting structure having a gateway, of a vertically-swinging gate movably mounted in the gateway and leaving an open space in the same, a lock for the gate, and operating means for the lock located in the open space of the gateway and movable transversely thereof.

2. The combination with a fence having a gateway, of a gate pivotally hung at its upper end in the gateway and leaving an open space in said gateway, a lock for the gate, and operating means for the lock located in the open space of the gateway and movable transversely of the fence.

3. The combination with a fence having a gateway, of a vertically-swinging gate pivotally hung at its upper end in the gateway and terminating short of the bottom thereof leaving an open space beneath said gate, a lock for the gate, and operating means for the lock located in the open space beneath the gate.

4. The combination with a fence having a gateway, of a vertically-swinging gate pivoted in the gateway and leaving an open space therein, locking means pivotally secured at the upper end of the gate, and an operating device for the locking means located in the open space of the gateway, and movable transversely of the fence.

5. The combination with a fence having a gateway, of a gate movably mounted in the gateway and leaving an open space beneath the same, locking means mounted independently of the gate and arranged in the path of movement thereof, and an operating device also mounted independently of the gate for moving the locking means out of operative position, said operating device being located in the open space beneath the gate and movable transversely of the fence.

6. The combination with a swinging gate, of a swinging panel lo-

calated adjacent to the gate and arranged to swing in the same direction, said panel being provided with means that engage the gate to lock said panel and gate against independent movement.

7. The combination with a vertically-swinging gate having an open space beneath the same, of a locking element normally located in the path of movement of the gate and coacting with the same to prevent its being opened, and an operating device connected to the locking element and located in the open space directly beneath the lower end of the gate.

8. The combination with a vertically-swinging gate having an open space beneath the same, of a vertically-swinging locking element normally located in the path of movement of the gate and coacting with the same to prevent its being opened, and an operating device connected to the locking element and located in the open space directly beneath the lower end of the gate.

9. The combination with a vertically-swinging gate, of a vertically-swinging locking-panel pivoted independently of the gate, and holding means carried by the gate and panel, said means engaging each other upon the movement of the gate toward the locking-panel, to hold said gate against being opened.

10. The combination with a vertically-swinging gate, of a vertically-swinging locking-panel pivoted independently of the gate, and carrying means arranged to engage the gate to hold the same against opening, said panel having an operating part located below the gate.

11. The combination with spaced standards, of a vertically-swinging gate pivoted at its upper end to the standards, and a vertically-swinging locking-panel also pivoted at its upper end to the standards, and having means for engaging the gate when the latter is swung in one direction to hold the same against being opened.

12. The combination with spaced standards, of a vertically-swinging gate pivoted at its upper end to one side of the standards, and a vertically-swinging locking-panel pivoted at its upper end to the side of the standards opposite the gate and interlocking devices carried by the gate and panel to hold the gate against being opened.

13. The combination with spaced standards, of a vertically-swinging gate having offset pivotal connections with the upper ends of the standards upon one side thereof, whereby it will normally hang at an inclination to said standards, a panel having offset pivotal connections with the standards upon the side opposite the gate, whereby said panel will also hang at an inclination to the standards and interlocking devices carried by the gate and panel to prevent the opening of the gate.

14. In a gate, the combination with spaced standards having transverse supporting-arms located at their upper ends, of a gate pivoted at its upper end to said arms on one side of the standards and having its lower end located a short distance above the ground or floor, a locking-panel hung at its upper end to the supporting-arms on the side of the standards opposite the gate, and having a transverse operating-roll at its lower end, said roll being located below the lower end of the gate, and catches carried by the locking-panel and engaging the gate upon its movement toward said locking-panel.

708,181. URINE-RECEPTACLE. EDWARD JAMME, Döber, Hildesheim, Germany. Filed Feb. 14, 1902. Serial No. 94,022. (No model.)

Claim.—1. A urine-receptacle having an interchangeable neck-stopper ground into the neck thereof, said stopper being tubular and closed at its lower end and provided with a side opening in proximity to the bottom, said opening when turned upward facing the side wall of the neck, but opening directly into the interior of the receptacle when directed downward, as set forth.

2. A urine-receptacle having a neck with a bulge and an interchangeable neck-stopper ground into the neck thereof and of tubular form closed at its lower end and provided with a side opening in proximity to said closed end, said opening when turned upward facing the side wall of the neck but opening directly into the interior of the bottle when turned downward opposite said bulge, as set forth.

708,182. HAND-CUTTER AND FEEDER FOR THRASHING-MACHINES. AUGUSTUS JOHNSON, Falm, Kans. Filed May 31, 1901. Serial No. 62,927. (No model.)

Claim.—1. The combination of a conveyor, a scattering-grate disposed above the same and adapted for reciprocating movement, transversely-oscillating shafts having cranks supporting and connected by said grate, and means to impart reciprocating movement to the latter, and thereby impart oscillatory motion to said crank-shafts, substantially as described.

2. The combination of a conveyor, a scattering-grate disposed above the same, a head-cutting mechanism above said grate and a shaft-conveyor to convey sheaves to said head-cutting mechanism, the relative disposition of said cutting mechanism, grate and shaft-conveyor being such that the sheaves, while the bands thereof are being cut, are on said grate and between said cutting mechanism and shaft-conveyor, substantially as described.

3. The combination of a conveyor, a scattering-grate above the same, an endless traveling head-cutter, horizontally disposed above said grate, and a plurality of shaft-conveyors with their inner portions opposite the leads of said head-cutter, the relative disposition of said grate, head-cutter and shaft-conveyors being such that the sheaves, while the bands thereof are being cut are on said grate and between said head-cutter and shaft-conveyors, substantially as described.

708,188. LIFE-SAVING APPARATUS. BLAKE J. JOHNSON, New York, N. Y. Filed Jan. 19, 1901. Serial No. 43,578. (No model.)

Claim.—1. A fire-escape apparatus, comprising a top bar, and means for suspending the same, two casings provided with pulleys and side compartments, said casings being open at the upper and lower ends, two crank-shafts provided with central cranks, and each of which is provided with a pair of casings loosely mounted thereon in each of which is a spool or drum, and ropes or cords passed around the pulley-wheels in the first-named casings, and around the top bar, one end of said ropes or cords being connected with the spools in one set of the crank-shaft casings, and the other end being connected with the spools in the other set of crank-shaft casings, substantially as shown and described.

2. A fire-escape apparatus, comprising a top bar, and means for suspending the same, two casings provided with pulleys and side compartments, said casings being open at the upper and lower ends, two crank-shafts provided with central cranks, and each of which is provided with a pair of casings loosely mounted thereon in each of which is a spool or drum, and ropes or cords passed around the pulley-wheels in the first-named casings, and around the top bar, one end of said ropes or cords being connected with the spools in one set of the crank-shaft casings, and the other end being connected with the spools in the other set of crank-shaft casings, said crank-shafts being also provided with supporting devices, substantially as shown and described.

3. A fire-escape apparatus, comprising a top bar, and means for suspending the same, two casings provided with pulleys and side compartments, said casings being open at the upper and lower ends, two crank-shafts provided with a pair of casings loosely mounted thereon in each of which is a spool or drum, and ropes or cords passed around the pulley-wheels in the first-named casings, and around the top bar, one end of said

ropes or cords being connected with the spools in one set of the crank-shaft casings, and the other end being connected with the spools in the other set of crank-shaft casings, said crank-shafts being also provided with supporting devices, consisting of straps, adapted to be hooked around the body, other straps supporting a seat and another strap or straps forming a support for the feet, substantially as shown and described.

708,184. TROLLEY. PHILIPAS F. KING, Cleveland, Ohio, assignor of one-half to Charles H. Tucker, Cleveland, Ohio. Filed July 22, 1901. Serial No. 60,306. (No model.)

Claim.—1. In a trolley, the combination of a wheel rigidly mounted on a hollow spindle, the upper halves of the journal-bearings for said spindle integral with the trolley-fork, the lower halves detachable therefrom, a lubricant-chamber in the upper halves of the journal-bearings and openings from said chamber to the spindle, substantially as specified.

2. In a trolley the combination of the wheel rigidly mounted on a spindle having an opening extending entirely through the center thereof, the upper halves of the journal-bearings for said spindle integral with the trolley-fork, the lower halves provided with tapered projections which fit into tapered slots in the said fork, means for securing the two halves together and means for lubricating said spindle, substantially as specified.

708,185. INSULATING ELECTRIC CONDUCTOR. IRVING KIMMEL, Philadelphia, Pa. Filed Apr. 17, 1902. Serial No. 156,457. (No model.)

Claim.—1. The method of covering electric conductors which consists in coating said conductors with a cellulose solution containing sulfur or its compound and then curing or vulcanizing said coating.

2. The method of covering electric conductors which consists in coating said conductors with a compound containing dissolved cellulose and sulfur or its compound and then curing or vulcanizing the coating by the application of heat.

3. The method of covering wire which consists in passing it through a solution of dissolved cellulose and sulfur or its compound and then passing it through a temperature of a degree capable of melting said sulfur or its compound.

4. The process of insulating electric conductors which consists in the

following steps: first, coating the conductor with a solution containing a non-conducting compound; second, annealing the drying out of said coating through the application of a draft of air; third, compressing said coating, and, fourth, curing or vulcanizing said coating.

5. In the process of insulating electric conductors, the following steps to wit: first, coating said conductor with an insulating compound containing its solvent; second, compressing said coating left porous through evaporation of said solvent.

6. In the process of insulating electric conductors, the following steps to wit: first, coating said conductor with an insulating compound containing its solvent; second, providing the outer surface of said insulating-coating with a spray of sulfur; third, compressing said sulfur into the pores of said coating.

7. In the process of insulating electric conductors, the following steps to wit: first, coating said conductor with an insulating compound containing its solvent; second, providing the outer surface of said insulating-coating with a spray of sulfur; third, compressing said sulfur into the pores of said coating, and, fourth, curing or vulcanizing said coating with the aid of heat.

8. In the process of insulating electric conductors, the following steps to wit: first, coating said conductor with an insulating compound containing its solvent; second, providing the outer surface of said insulating-coating with a spray of sulfur; third, compressing said sulfur into the pores of said coating, and, fourth, curing or vulcanizing said coating with the aid of heat.

9. An electric cable consisting of a series of individual wires, insulated from each other by amorphous cellulose containing sulfur and cured or vulcanized with the aid of heat.

10. The process of insulating electric wires which consists in surrounding said wire with an insulating material containing its solvent, and after partially drying the same, subjecting it to pressure to decrease the porosity due to the evaporation of the solvent.

11. The process of insulating electric conductors, said process consisting in providing the conductor with an insulating material and providing the outer surface of said insulating material with sulfur.

12. The process of insulating electric conductors which consists in surrounding the conductor with an insulating material and providing said insulating material with a spray of a second insulating material, said second material adapted to melt at a temperature not injuriously affecting the first insulating material.

13. As a new article of manufacture, an insulated wire consisting of the wire proper and an insulating-coating enveloping said wire, said insulating-coating consisting of amorphous cellulose, cured or vulcanized in the presence of sulfur with the aid of heat.

708,186. WATER-GLASSY PLUMBING TANK OR CISTERNE. ARTHUR KIMMEL, JR., Baltimore, Md. Filed Jan. 28, 1902. Serial No. 51,108. (No model.)

Claim.—1. The combination of a tank provided with an inlet and

an outlet for water; a supply-valve governing said inlet, and comprising a main valve, and an auxiliary valve having a limited movement independent of said main valve; a discharge-valve adapted to govern the water-outlet; a lever adapted to move both the supply-valve and discharge-valve; an air-vent valve adapted to close the tank and make the same air-tight whereby the water flowing in the tank will compress the air at the upper part of said tank; and a connection between said air-vent valve and said lever.

2. The combination of a tank provided with a water-inlet and a water-outlet; a supply-valve for governing said water-inlet; a discharge-valve for governing said water-outlet; a lever connected to both of said valves and arranged to open one when it closes the other; an air-vent valve adapted to close the tank and make the same air-tight whereby the water flowing into the tank will compress the air at the upper part of the tank; and a connection between said air-vent valve and said lever adapted to close said air-vent valve when the supply-valve is open and the discharge-valve is closed, and adapted to open said air-vent valve when the supply-valve is closed and the discharge-valve is open.

3. The combination of a tank provided with an inlet and an outlet for water; a supply-valve for governing said inlet and comprising a ring valve, and a puppet-valve adapted to be seated on said ring valve and provided with a shank extending therethrough; a valve-rod rigidly secured to said shank and provided with a shoulder adapted to contact with said ring valve to raise the same; a lever having one arm connected to said ring valve to raise the same; a discharge-valve adapted to govern the water-outlet and provided with a shoulder adapted to contact with the other arm of said lever; an air-vent valve adapted to close the top of said tank; and a pull-rod carrying said air-vent valve and connected to the last-named arm of said lever and extending through the bottom of the tank.

708,187. VENDING-MACHINE. DALLAS KNOWLTON, Washington, D. C. Filed May 20, 1901. Serial No. 61,096. (No model.)

Claim.—1. The combination, in a cigar-vending machine, provided with a discharge-opening, of a movable cut-off having a delivery-opening adapted to be thrown into said cut-off of register with the hopper-discharge, and the said cut-off 9 located over the front edge of the hopper-discharge said cut-off being curved from its lower edge upwardly.

2. The combination, in a vending-machine, of a hopper having a discharge-opening, a sliding cut-off mounted thereunder and provided with a delivery-opening, a gage-board located immediately below said cut-off hinged at one end and provided with a discharge at one side of and out of register with the hopper-discharge, and means for vertically adjusting the free end of said gage-board.

3. The combination, in a vending-machine, of a hopper having a discharge, a sliding cut-off arranged thereunder and provided with a delivery-opening, a gage-board having a discharge at one side of that of the hopper and having its rear and hinged to a support, and an adjusting-screw arranged in the gage-board and in the machine, whereby said gage-board is capable of being raised and lowered to increase or diminish the depth of the delivery-opening in the sliding cut-off.

4. The combination, in a vending-machine, of a hopper having a discharge, a sliding cut-off located thereunder and having a delivery-opening, of a threaded shaft journaled at one side of the cut-off, and a projection carried by the latter and engaging the thread of said shaft.

5. The combination, in a vending-machine, of a hopper having a feed-opening, a fixed cut-off, arranged in front thereof, a subsequent sliding cut-off having a delivery-opening, a slide wall set in conformity to the hopper-bottom and the cut-off, and means for adjusting said slide wall laterally.

6. The combination in a vending-machine, of a hopper, a slide wall adjustably mounted at one side of the hopper and provided with an outwardly-extending support seated on the wall of the hopper, a spur at the front wall of the hopper, and a clamp having a shoulder at its rear end and mounted adjustably on that wall of the hopper opposite to which the said slide wall is mounted.

708,188. VENDING-MACHINE. DALLAS KNOWLTON, Washington, D. C. Filed Jan. 20, 1902. Serial No. 90,502. (No model.)

Claim.—1. The combination, in a vending-machine, of a hopper having a discharge-opening and an inclined bottom terminating above the plane of the opening, a sliding cut-off arranged for movement under the opening and provided with a corresponding discharge-opening, and a transverse rib arranged on the sliding cut-off between the opening and rear end of the slide and extending above the surface of the cut-off and adapted to pass under the said inclined bottom, said rib having oppositely-inclined faces.

2. The combination, in a vending-machine, of a hopper having a discharge-opening, a sliding cut-off arranged for movement under the opening and provided with a discharge, and a roller loosely journaled and located at one edge of said opening of the discharge of the sliding cut-off, and having its periphery in the same plane as the upper surface of said cut-off.

3. The combination, in a vending-machine, of a hopper having a discharge-opening, a fixed auxiliary cut-off located at the front edge of said opening, a sliding cut-off arranged below the hopper and having a discharge, and a roller loosely mounted for free rotation adjacent to the rear edge of said opening in the cut-off and having its periphery in the same plane as the upper surface of said cut-off.

4. The combination, in a vending-machine, of a hopper provided with a discharge-opening, a cut-off located at the front edge of said opening and having its lower end curved, a sliding cut-off located below the hopper and provided with a discharge-opening, and a loose roller located at the rear edge of the latter opening and within the same.

5. The combination, in a vending-machine, of a hopper provided with a discharge and a rear inclined bottom terminating above the plane of the opening, the fixed curved cut-off at the front edge of said opening and depending below the inclined bottom of the hopper and in a plane with said opening, a sliding cut-off provided with a discharge, a loose roller journaled in the discharge of the cut-off adjacent to the rear edge of the discharge, and a transverse rib seated on the sliding cut-off and having oppositely-inclined faces and adapted to pass under said inclined bottom of the hopper.

6. The combination, in a vending-machine, of a hopper provided with a discharge-opening, a fixed auxiliary cut-off arranged at the front end of the same, a sliding cut-off arranged below the opening and having a corresponding discharge-opening, the rear edge of which latter opening is curved, a roller loosely journaled in the cavity of said opening free to rotate and of a diameter substantially agreeing with the width of said sliding cut-off, and a transverse rib seated on the sliding cut-off in rear of the opening therein and having oppositely-inclined faces.

7. The combination, in a vending-machine, of a movable discharge and a superimposed hopper having an opening, and means for causing the movable discharge to move at an accelerated speed before and after receiving the article to be vended from the hopper.

8. The combination, in a vending-machine, of a movable discharge and a superimposed hopper having an opening, and means for causing the movable discharge to move at an accelerated speed before and after receiving the article to be vended from the hopper.

9. The combination, in a vending-machine, of a hopper having a discharge, a movable discharge arranged thereunder and adapted to take therefrom during its said movement, the cylinder 30 having its front end open and enlarged and near its opposite end having the perforation 32, the piston-head, the rod, and connection between the latter and the movable discharge whereby it is permissible for said movable discharge to move at a greater rate of speed at the beginning and ending of its travel.

708,189. STELLAR COMPASS AND GREAT-CIRCLE-COURSE PROJECTOR. ROBERT T. LAWREN, Alameda, Cal. Filed Feb. 24, 1902. Serial No. 90,466. (No model.)

Claim.—1. In the machine of the character described, the combination of a suitable support, a latitude and declination circle mounted to swing in said support, a horizontal plane and compass circle mounted to swing in said support at an angle to the plane of movement of the latitude and declination circle, and means to determine the angular disposition of said two circles with respect to each other.

2. In a machine of the character described, the combination of a suitable support, a latitude and declination circle mounted to swing in said support, a horizontal plane and compass circle mounted to swing in said support and in a plane at substantially right angles to the plane of movement of the latitude and declination circle, and a circular arc to determine the angular disposition of the said two circles with respect to each other.

3. In a machine of the character described, the combination of a suitable support, a latitude and declination circle, a horizontal plane and compass circle, pivotal supports for said circles disposed substantially at right angles to each other, and a quadrant or circular arc mounted on the supports of one of said circles to determine the angular disposition of said circles with respect to each other.

4. In a machine of the character described, the combination of a suitable support, a latitude and declination circle, a horizontal plane and compass circle, pivotal supports for said circles disposed substantially at right angles to each other, means for moving said circles upon their pivotal supports, and a quadrant or circular arc mounted on the supports of one of said circles to determine the angular disposition of said circles with respect to each other.

5. In a machine of the character described, the combination of a suitable support, a latitude and declination circle, a horizontal plane and compass circle, each of said circles being provided with suitable graduations, pivotal supports for said circles disposed substantially at right angles to each other and a quadrant or circular arc to determine the angular disposition of any portions of the said circles with respect to each other.

6. In a machine of the character described, the combination of a suitable support, a latitude and declination circle, a horizontal plane and compass circle, pivotal supports for said circles disposed substantially at right angles to each other, and a quadrant mounted to swing upon the support of one of said circles.

7. In a machine of the character described, the combination of a suitable support, a latitude and declination circle, a horizontal plane and compass circle, pivotal supports for said circles disposed substantially at right angles to each other, and a pointer and a quadrant mounted to swing upon the support of one of said circles.

8. In a machine of the character described, the combination of a suitable support, a latitude and declination circle, a horizontal plane and compass circle, each of said circles being provided with suitable graduations or scales, pivotal supports for each of said circles arranged at right angles to each other whereby the circles may be swung in planes at right angles, a rod centrally disposed with relation to said circles and movable

with one of them, and a quadrant having suitable graduations and mounted to swing on said rod.

9. In a machine of the character described, the combination of a suitable support, a latitude and declination circle, a horizontal plane and compass circle, pivotal supports for said circles arranged substantially at right angles to each other, a time-circle mounted on the supports of one of the first-named circles, and a quadrant mounted upon the support of the other of said circles.

10. In a machine of the character described, the combination of a suitable support, a latitude and declination circle, a horizontal plane and compass circle, pivotal supports for said circles arranged substantially at right angles to each other, a time-circle and pointer mounted on the supports of one of the first-named circles, and a quadrant mounted upon the support of the other of said circles, and means to clamp the pointer to its support.

11. In a machine of the character described, the combination of a suitable support, a latitude and declination circle, a horizontal plane and compass circle, pivotal supports for said circles arranged substantially at right angles to each other, a time-circle and pointer mounted upon the pivotal support of the latitude and declination circle, means to clamp said pointer and time-circle in desired position, a quadrant mounted to swing upon the support of the horizontal plane and compass circle, all of said circles being provided with suitable graduations.

708,140. T-SQUARE. GEORGE M. LAM, Dublin, Ireland. Filed Jan. 21, 1902. Serial No. 90,061. (No model.)

Claim.—1. A T-square the arm of which is provided adjacent to the cross-head thereof with an anti-friction-roller mounted therein and the perimeter of which projects slightly below said arm, substantially as shown and described.

2. A T-square the arm of which is provided adjacent to the cross-head thereof with an opening, a casing secured to said arm above said opening and an anti-friction-roller mounted in said casing and the perimeter of which projects slightly below the said arm, substantially as shown and described.

3. A T-square the arm of which is provided adjacent to the cross-head thereof with an opening, a casing secured to said T-square above said opening, and an anti-friction-roller mounted in said casing and the perimeter of which projects slightly below the said arm, the perimeter of said roller being also beveled substantially as shown and described.

4. A T-square provided with an anti-friction-roller which is adapted to bear on a board, table or other support in connection with which the T-square is used, said roller being provided with a beveled perimeter and the table, board or support being provided with a correspondingly-beveled strip on which the roller works, substantially as shown and described.

5. A T-square, the arm of which is provided adjacent to the cross-head thereof with an opening and an anti-friction-roller mounted therein and the perimeter of which projects slightly below said arm, substantially as shown and described.

708,141. HECKTIE-BOX, &c. IRVING LEVY, Philadelphia, Pa. Filed Sept. 2, 1901. Serial No. 74,573. (No model.)

Claim.—1. A tray for a needle or other box, formed from an integral blank, provided with coverings on opposite faces thereof, the portions of said blank exterior to the outer coverings being bent upwardly to form the outer side walls of said tray, and the portions of said blank intermediate said outer coverings being suitably deflected to form intermediate partitions, and tabs filling the spaces intermediate the extremities of said partitions and side walls between the partitions and side walls.

2. A tray for a needle or other box, formed from an integral blank,

provided with coverings on opposite faces thereof, the portions of said blank exterior to the outer coverings being bent upwardly to form the outer side walls of said tray, and the portions of said blank intermediate said outer coverings being suitably deflected to form intermediate partitions, and opening devices for holding said walls and partitions in proper alignment, said opening devices consisting of tabs integral with said trays and being bent to completely close the openings between the extremities of said partitions and walls.

708,143. PENCIL-CASE. CHARLES R. LITTLE, London, England. Assignor to R. Morden and Company, Limited, London, England. Filed Oct. 11, 1901. Serial No. 71,205. (No model.)

Claim.—1. The combination of the dotted case or tube carrying the pencil, the movable jawed tube fitting slidably therein and having a longitudinal slot extending from the jaws to the opposite end, said slot coinciding with that in the dotted case or tube, and the lead-carrier contained within said jawed tube and having its lead-pieces projecting through both said slots.

2. In a pencil-case of the kind referred to, the combination with a fixed dotted tube carrying the pencil, of the movable dotted jawed tube fitting slidably within said tube so that their slots coincide, and containing a lead-carrier having a lead-piece projecting through both slots, and means for moving said carrier longitudinally of the case so as to first protrude the jawed tube beyond the pencil and then the carrier beyond the jawed tube.

3. A pencil-case composed of the following instrumentalities: an internally-screw-threaded casing, a longitudinally-slotted tube secured to the pencil at one end and to a knob at the other, and arranged within said casing, a tube within said tube having also a longitudinal slot and so arranged that both said slots coincide, and having spring-jaws normally extending beyond the pencil, and a lead-carrier slidably fitting within the said jawed tube and having a lateral projection passing through both said slots and engaging the screw-threads of the casing, whereby on a revolving motion being imparted to the pencil-case, first the lead is propelled beyond the jaws, then the jaws beyond the pencil, and finally the outer end of the lead-carrier beyond the jaws, and so for the purposes set forth.

708,148. PLATE-METAL CAR-WHEEL. HENRY F. HARR, Allentown, Pa. Filed Apr. 10, 1902. Serial No. 100,000. (No model.)

Claim.—1. A car-wheel, the web, tread and rail-flange of which are made of a single plate; three-fourths of the thickness, more or less, of said plate, composed of low-carbon steel or wrought-iron and one-fourth of its thickness, more or less, composed of high-carbon steel, so that when the plate is given the proper form, the wearing-surfaces of the tread and rail-flange of the wheel will be composed of high-carbon hard steel, substantially as set forth.

2. A car-wheel the web, tread and rail-flange of which are made of a single plate, three-fourths of the thickness, more or less, of said plate composed of low-carbon steel or wrought-iron and one-fourth of its thick-

ness, more or less, composed of high-carbon hard steel, so that when the plate is given its proper form, the wearing-surfaces of the tread and rail-flange of the wheel will be composed of high-carbon hard steel, and a hub made of suitable material and proper form seated in the outwardly-curved portion of the center of the web, the hub provided with a flange resting against the rear face of the web and firmly secured thereto by rivets, or other suitable means, substantially as shown and described.

3. A car-wheel the web, tread and rail-flange of which are made of a single plate of metal three-fourths of the thickness, more or less, of said plate composed of low-carbon steel, or wrought-iron, and one-fourth of its thickness, more or less, composed of high-carbon hard steel, so that when the plate is given its proper form, the wearing-surfaces of the tread and rail-flange of the wheel will be composed of high-carbon steel, and a hub made of suitable material and proper form, the hub provided with a flange resting against the rear face of the web, and a washer fitting over the front end of the hub and against the front face of the web, the three parts, *i. e.*, the flange of the hub, the web and washer being firmly secured together by rivets, or other suitable means, substantially as shown and described.

708,144. ELECTRIC MOTOR. JAMES H. MASON, Brooklyn, N. Y. Filed Nov. 23, 1900. Serial No. 37,437. (No model.)

Claim.—1. In an electric motor, an armature in two sections, separate windings on said sections and an iron sleeve joining said sections, whereby the armature is made to virtually consist of horseshoe-magnets with outwardly-turned poles and with neutral points in said sleeve.

2. In an electric motor, two separate armature-sections, each composed of radially-placed arms carrying pole-pieces at their extremities, windings on said arms, an armature-shaft, means for fastening said sections to said shaft and a separate iron sleeve clamped between said sections.

708,145. ELECTRIC RAILWAY-SIGNAL. FREDERICK C. MILLER, Brooklyn, N. Y. Filed Mar. 10, 1900. Serial No. 97,517. (No model.)

Claim.—1. A railway-signal comprising electrically-controlled signal-indicating means upon a car, a striking device upon the road, and a single lever-striker and electric switch upon the car pivoted so as to move under friction and to retain the position to which it is moved until positively moved therefrom and adapted to be moved into different positions under the same direction of movement of the car by contact with the striking device upon the road to cause different indications at the signal-indicating means.

2. A railway-signal comprising electrically-controlled indicating means upon a car, a striking device upon the road, and a combined striking-lever and circuit-controller upon the car adapted to be moved into different positions under the same direction of movement of the car by contact with the striking device upon the road to cause different indications at the signal-indicating means.

3. A railway-signal comprising electrically-controlled signal-indicating means upon a car capable of indicating danger and safety, a striking device upon the road, a combined striking-lever and circuit-controller upon the car adapted to be moved into different positions under the same direction of movement of the car by contact with the striking device upon the road to cause different indications at the signal-indicating means to cause a danger indication, and

means for closing a test-circuit to cause a safety indication of the signal-indicating means when the combined striking-lever and circuit-controller is in normal position.

4. A railway-signal comprising electrically-controlled signal-indicating means upon a car, a striking device upon the road, and a single lever-striker and electric switch upon the car pivoted so as to move under friction and to retain the position to which it is moved until positively moved therefrom and adapted to be moved into different positions under the same direction of movement of the car by contact with the striking device upon the road to cause different indications at the signal-indicating means.

5. A railway-signal comprising electrically-controlled signal-indicating means capable of indicating danger and safety, a striking device upon the road, a single lever-striker and electric switch upon the car adapted to be actuated by the striking device upon the road to control the circuit of the signal-indicating means to cause a danger indication, and means for closing a test-circuit to cause a safety indication, of the signal-indicating means when the striking device upon the road is in normal position.

6. A railway-signal comprising electrically-controlled signal-indicating means upon a car, a striking device upon the road, a single lever-striker and electric switch upon the car adapted to be actuated by the striking device upon the road to control the circuit of the signal-indicating means, and manual means upon the car for restoring the striking device and switch to normal position.

7. A railway-signal comprising an electrically-controlled indicating means upon a car, a striking device upon the road, a combined striking-lever and circuit-controller upon the car adapted to be actuated by the striking device upon the road to control the circuit of the signal-indicating means, and a manually-operated tension device connected to the combined striking-lever and circuit-controller for restoring the same to normal position.

8. A railway-signal comprising electrically-controlled indicating means upon a car, a striking device upon the road, a combined striking-lever and circuit-controller upon the car adapted to be moved into different positions by contact with the striking device upon the road to cause different indications of the signal-indicating means, and a manually-operated tension device connected to the combined striking-lever and circuit-controller for restoring the same to normal position from any one of said different positions.

9. A railway-signal comprising electrically-controlled signal-indicating means upon a car, a striking device upon the road, a single lever-striker and circuit-controller upon the car adapted to be moved into different positions under the same direction of movement of the car by contact with the striking device upon the road and a plurality of stationary electric contacts arranged in the path of such movement of the striking device and circuit-controller, and circuit-completing means connected to the striking device and circuit-controller and signal-indicating means and stationary contacts.

10. A railway-signal comprising a home-danger-indicating device and a distant-danger-indicating device upon a car, a striking device upon the road, a single lever-striker and circuit-controller upon a car adapted to be moved into different positions under the same direction of movement of the car by contact with the striking device upon the road, an electric contact in the path of the striking device and circuit-controller and connected to the distant-danger-indicating device, another electric contact at a different point in the path of the striking device and circuit-controller under the same direction of movement of the car and connected to the home-danger-indicating device, and circuit-completing means connected to the striking device and circuit-controller and to the signal-indicating means.

11. A railway-signal comprising a home-danger-indicating device, a distant-danger-indicating device and a safety-indicating device upon a car, a striking device upon the road, a single lever-striker and circuit-controller upon a car adapted to be moved into different positions by contact with the striking device upon the road, an electric contact in the path of the striking device and circuit-controller and connected to the distant-danger-indicating device, another electric contact at a different point in the path of the striking device and circuit-controller and connected to the home-danger-indicating device, an electric contact located so as to make contact with the striking device and circuit-controller when the striking device and circuit-controller is in normal position and connected to the safety-indicating means, and circuit-completing means connected to the striking device and circuit-controller and to the signal-indicating means, the circuit for the safety-indicating means including a circuit make-and-break device.

708,146. OBSERVATION-TOWER. JOHN A. WHAMST, Hamilton, Ohio. Filed Jan. 9, 1901. Serial No. 42,000. (No model.)

Claim.—In an observation-tower, the combination of a stationary central column, a spiral rail supported upon the outer end of the column, a rotatable car adapted to travel upon said rail, axle mounted radially upon the car and having journals thereon projecting inwardly, and adjacent to the exterior of the column, and wheels mounted upon said inwardly-projecting radial journals.

708,146.

708,147. LETTER-BOX. THOMAS C. MILLER, Seattle, Wash., assignor to himself and Griffith Hunter, Seattle, Wash. Filed Apr. 11, 1901. Serial No. 64,573. (No model.)

Claim.—1. The combination with a letter-box having a stationary support to which it is normally locked, of folding devices between the box and stationary support acting to contain the box when it is unlocked and moved bodily away from the support, substantially as specified.

2. The letter-box consisting of a movable box-body, bottom and end lugs-arms connecting the body to the supporting device, and forming when extended a basket for the mail, and also as a means of sustaining the box when unlocked and means for locking the body to the supporting device, substantially as specified.

3. The letter-box consisting of a box 6, means for locking the box to its stationary supporting device and extensible connections between said box 6 and the supporting device allowing the box to move bodily outward when unlocked from the supporting device, substantially as specified.

4. The letter-box consisting of a box 6, means for locking the box to its stationary supporting device and extensible connections between said box 6 and the supporting device allowing the box to move bodily outward when unlocked from the supporting device, said connections also acting to prevent the mail from falling when the box is opened, substantially as specified.

5. The letter-box consisting of a box open at its lower side, a support against which the box is positioned and to which it is locked, and folding devices connected to the box and the support and acting to support the mail when the box is unlocked and moved outward from the support, substantially as specified.

6. The letter-box consisting of a box open at its lower side, a support against which the box is positioned and to which it is locked, and devices connected both to the box and its support and folding within the box and acting to support the mail when the box is unlocked and opened, substantially as specified.

708,148. ROLLER-SIDE BEARING FOR RAILWAY-CARR. SAMUEL W. McKEOWN and BROWN & WOOD, Chicago, Ill. Filed Nov. 4, 1900. Serial No. 62,971. (No model.)

Claim.—1. A side bearing for railway-cars comprising upper and lower castings having normally parallel bearing-surfaces, a single roller adapted for contact with said bearing-surfaces, and transverse on said roller which travel in channels or ways in said upper casting, the lower surfaces of which channels are inclined from the ends thereof toward the center, said transverse being out of contact with the bearing-surfaces of the channels when the roller has contact with the parallel bearing-surfaces of the castings.

2. A side bearing for railway-cars comprising upper and lower castings having normally parallel bearing-surfaces, a roller adapted for contact with said bearing-surfaces, and transverse on said roller which travel in channels or ways in said upper casting, the lower surfaces of which are inclined from the ends thereof toward the center, said transverse being out of contact with the bearing-surfaces of the channels when the roller has contact with said parallel bearing-surfaces of the castings, and the ends of said channels or ways constituting steps to arrest the bodily movement of the roller with respect to said bearing-surfaces.

3. A side bearing for railway-cars comprising upper and lower castings having normally parallel bearing-surfaces, the upper casting being provided with depending side and end flanges forming an inclosed space to receive a roller, a roller located in said space and adapted for contact with said bearing-surfaces, transverse on said roller which travel in channels or ways formed in the side flanges of the casting, the lower surfaces of which channels are inclined, said transverse being out of contact with the bearing-surfaces of the channels when the roller has bearing with said parallel bearing-surfaces of the castings, and the ends of said channels constituting steps to arrest the bodily movement of the rollers before said rollers are brought into contact with the end flanges of the upper casting.

4. A side bearing for railway-cars comprising upper and lower castings having normally parallel bearing-surfaces, of a roller adapted for contact with said bearing-surfaces, and transverse on said roller which travel in channels or ways in said upper casting, the lower surfaces of which channels are inclined from the ends thereof toward the center, said transverse being out of contact with the bearing-surfaces of the channels when the roller has contact with the parallel bearing-surfaces of the castings, upwardly-opening slots in said upper casting, intersecting said channels and through which the transverse of the rollers pass when the rollers are inserted in place, and removable stops projecting into said slots.

708,149. SMOKE-CONSUMING ATTACHMENT. WILLIAM McKEOWN, Boston, Mass. Filed July 27, 1901. Serial No. 63,922. (No model.)

Claim.—1. The combination with a plurality of independent tubular boilers, and fire-bricks operatively related thereto, each boiler having a smoke-chamber at its forward end to receive the products of combustion

after their passage through the boiler-tubes, each smoke-chamber having an independent damper uptake for the direct escape of the products of combustion in a stack or chimney, of a corresponding plurality of independent conduits, each leading from the smoke-chamber of one boiler below the damper of the uptake to the fire-box of an adjacent boiler above the grate of said fire-box, whereby when the uptake of any smoke-chamber is closed by its damper, the products of combustion received by such chamber are drawn through the conduit leading from that chamber to the fire-box of an adjacent boiler by the draft existing in the last-mentioned fire-box, and means for forcing air with said products of combustion into each fire-box.

2. In a smoke-consuming apparatus, the combination of a plurality of smoke-chambers, each communicating with boiler tubes or flues, each smoke-chamber having a damper uptake for the direct escape of the products of combustion in a stack or chimney, a plurality of fire-boxes, a corresponding plurality of independent conduits, each leading from one smoke-chamber below the damper of the uptake to the space above the grate of the fire-box, under an adjacent smoke-chamber, and means for introducing air to said conduits at the point of connection with the fire-boxes to facilitate the consumption of products of combustion passing from said conduits to the fire-boxes.

708,150. WINDOW. HANS I. OLSEN, MYRUM, Utah. Filed Aug 18, 1901. Serial No. 72,175. (No model.)

Claim.—In combination with a window-frame, each mounted therein, sectional parting-strips, the upper portions of which are fixed in the frame, angle-springs fixed to the sill of the frame, the lower ends of the removable sections of the parting-strip adapted to rest upon the angled ends of said springs, said springs adapted to be depressed in recesses in, or in, the sill, as set forth.

708,151. COMPOSITION OF MATTER. THEODORE G. PARR, ALBANY, Ga., assignor of one-half to John S. Clark, Atlanta, Ga. Filed Mar. 22, 1901. Serial No. 55,406. (No specimens.)

Claim.—1. As a new article of manufacture, a plurality of layers or sheets of burip, which have been treated to a solution of magnesium chloride, magnesia, and a mineral powder, a plastic compound applied to the backing and consisting of magnesium chloride, magnesia, and a mineral powder, and a final surfacing compound applied to the plastic compound.

2. As a new article of manufacture, a plurality of layers or sheets of burip, which have been treated to a solution of magnesia, an alkaline salt of magnesia, and a mineral powder, a surfacing compound applied thereto, and a sizing solution applied to the surfacing compound and capable of taking a high polish.

3. As a new article of manufacture, a plurality of layers or sheets of burip, which have been treated to a solution of magnesia, a salt of magnesia, and a mineral powder, a surfacing compound applied thereto, and a sizing solution applied to the compound.

4. A new article of manufacture, consisting of a backing, a plastic surfacing material applied thereto, a sizing applied to the surface after it has become dry, a filler applied to the surface after the sizing, and a final sizing applied to the filled surface, the latter sizing being polished.

5. A new article of manufacture, consisting of a plurality of sheets of burip, which have been subjected to a solution of magnesia, magnesium chloride, and whiting, a surfacing compound applied thereto and consisting of magnesium chloride, magnesia, whiting, and silica, a soap so-

lution applied to the surface, a filler applied after the soap solution, and a sizing of soap solution after the filler, the latter soap solution being polished.

6. As a new article of manufacture, a backing treated with a compound of magnesia, a salt of magnesia, and a mineral powder and provided with a surface coating.

7. As a new article of manufacture, a flexible, porous backing treated with a compound of magnesia, a salt of magnesia and a mineral powder and provided with a surface coating.

708,152. GARMENT-SUPPORTER. JAMES E. FLEMMING, WASHINGTON, D. C., assignor to Christine J. Higley, New York, N. Y. Filed Nov. 21, 1901. Serial No. 55,074. (No model.)

Claim.—A garment-supporter comprising a frame having parallel bars connected at opposite ends by side bars, a stationary metal plate secured to said side bars the said plate having an opening therein the said opening having a substantial constriction near the center thereof but with the edges spaced apart, and a garment-supporter tape secured to the lower of said parallel bars and a tape passing through the space between the upper of said parallel bars and the stationary plate and around said stationary plate the end of said tape being held in position between the constricted edges of the opening in said plate, substantially as described.

708,153. PROTECTING APPARATUS FOR ELECTRICAL MACHINES AND PLANTS. PAUL RICHARD, GENEVA, Switzerland. Filed July 22, 1901. Serial No. 55,200. (No model.)

Claim.—A lightning-arrester consisting of a tubular body of insulating material, pistons in said body and provided with shanks extending out of the ends, a mass of mixed pulverized conducting and non-conducting material in said tubular body between the pistons, contact-heads, one at each end of the tubular body and provided each with an inner and an outer arm, means for clamping the inner arm of each head to one end of the tubular body, means for securing the shanks of the pistons respectively to the outer arm of the heads, at opposite ends of the body, contact-lugs on said heads, and spring-clamps adapted to receive said lugs, substantially as set forth.

708,154. MATCH-MAKING MACHINE. FRANK SCHAPIRA, Philadelphia, Pa., assignor to Ernest Raymond Paterson, Philadelphia, Pa. Filed Feb. 26, 1901. Serial No. 44,308. (No model.)

Claim.—1. In a match-making machine, means for cutting splints, a beveled inclined conveyor in which said splints are received, and means for retaining said splints in said conveyor, while the cutting device is being removed from said splints.

2. In a match-making machine, means for cutting splints, a beveled inclined rotary conveyor in which said splints are received, and means for retaining said splints in said conveyor while the cutting device is being removed from said splints.

3. In a match-making machine, means for cutting splints, a rotary beveled inclined conveyor in which said splints are received in one plane and carried to a plane at an angle thereon, and means for retaining said splints in said conveyor while the cutting device is being removed from said splints.

4. In a match-making machine, means for cutting splints, a beveled

inclined conveyor in which said splints are received, and means for retaining said splints in said conveyor while the cutting device is being removed from said splints, in combination with means for imparting an intermittent movement to said conveyor.

5. In a match-making machine, means for cutting splints, a beveled inclined conveyor, means for securing said splints in said conveyor, means for heating and drying said splints, and means for applying the composition to the ends of said splints to form the match-heads.

6. In a match-making machine, means for cutting splints, a beveled inclined rotary conveyor, means for securing said splints in said conveyor, means for heating and drying said splints, means for waxing said splints and means for applying the composition to the ends of said splints to form the match-heads.

7. In a match-making machine, means for cutting splints, a beveled inclined rotary conveyor, means for securing said splints in said conveyor, means for heating and drying said splints, and means for applying the composition to the ends of said splints to form the match-heads, in combination with means for directing a blast upon said heads so as to cause the latter to become set.

8. In a match-making machine, means for cutting splints, a beveled inclined rotary conveyor, means for securing said splints in said conveyor, means for heating and drying said splints, and means for applying the composition to the ends of said splints to form the match-heads, in combination with movable means for ejecting the finished matches from said conveyor.

9. In a match-making machine, means for cutting splints, a rotary beveled inclined conveyor, means for securing said splints in said conveyor, means for heating and drying said splints, and means for applying the composition to the ends of said splints to form the match-heads, in combination with movable means for ejecting the finished matches from said conveyor, and movable means for ejecting said matches therefrom.

10. In a match-making machine, means for cutting splints, a rotary beveled inclined conveyor, means for securing said splints in said conveyor, means for heating and drying said splints, and means for applying the composition to the ends of said splints to form the match-heads, in combination with means for ejecting the finished matches from said conveyor and means for ejecting said matches therefrom upon drying devices.

11. In a match-making machine, an inclined conveyor, a beveled surface on said conveyor, grooves in said surface, means for feeding match-splints into said grooves, and means for pressing the same thereto.

12. In a match-making machine, a cutter for cutting match-splints, a conveyor located in proximity to said cutter, means for intermittently actuating said conveyor, grooves of different angularity carried by said conveyor, fingers located above said grooves and adapted to press said

splints thereto and means for actuating said fingers to and away from said conveyor, whereby the splints are pressed into the grooves and the conveyor can rotate after the fingers are moved away.

13. In a match-making machine, a cutter for cutting match-splints, a conveyor located in proximity to said cutter, means for intermittently actuating said conveyor, grooves of different angularity carried by said conveyor, fingers located above said grooves adapted to press said splints thereto and means for actuating said fingers to and away from said conveyor whereby the splints are pressed into the grooves and the conveyor can rotate after the fingers are moved away, in combination with means for drying, waxing and applying composition to said splints.

14. In a match-making machine, a cutter for cutting match-splints, an inclined circular conveyor having grooved plates attached thereto, whereby the matches are received horizontally and dipped vertically, means for securing said splints in the grooves in said plates, and means for holding the splints therein in a plane inclined to the plane of rotation of the said conveyor.

15. In a match-making machine, a cutter for cutting match-splints, an inclined circular conveyor having grooved plates attached thereto, whereby the matches are received horizontally and dipped vertically, means for pressing said splints in the grooves in said plates, and means for holding the splints in a plane inclined to the plane of rotation of said conveyor, in combination with means for applying the composition to the ends of said splints so as to form the match-heads.

16. In a match-making machine, a cutter for cutting match-splints, a beveled inclined conveyor whereby the matches are received in a horizontal plane and moved to a plane at an angle thereby having a curved outer and grooved plates attached thereto, means for pressing said splints in the grooves of said plates, a plate having a concave face movably supported adjacent to said conveyor, whereby the ends of the splints conform to a radius, the center of which is the center of the conveyor, and means for moving said face against the ends of said splints at the proper intervals.

17. In a match-making machine, a cutter for cutting match-splints, a beveled inclined conveyor having a curved outer and grooved plates attached thereto, means for pressing said splints in the grooves of said plates, a plate having a concave face movably supported adjacent to said conveyor, whereby the ends of the splints conform to a radius, the center of which is the center of the conveyor, and means for moving said face against the ends of said splints at the proper intervals, in combination with means for treating the ends of said splints so as to produce the finished matches.

18. In a match-making machine, an inclined spider, a beveled circular conveyor rotatably mounted thereon, whereby the splints are received horizontally and dipped vertically, and means for intermittently actuating said conveyor.

19. In a match-making machine, a reciprocating cutting device, a spider located in proximity thereto, a beveled rotary inclined conveyor mounted on said spider, and means for intermittently actuating said conveyor.

20. In a match-making machine, a reciprocating cutting device, a spider located in proximity thereto, a beveled rotary inclined conveyor mounted on said spider, and means for intermittently actuating said conveyor, in combination with means for retaining match-splints in said conveyor, and means for drying, waxing and coating said splints.

21. In a match-making machine a beveled inclined conveyor having a curved outer, means for intermittently actuating the latter, device located in proximity to said conveyor for drying, waxing, coating and hardening a match-head, and a movable ejecting device for propelling the finished match from said conveyor.

22. In a match-making machine, a conveyor for supporting the finished matches, an ejector for propelling said matches from said conveyor, means for imparting a slow rotary movement to said ejector during its contact with said matches, and means for imparting an accelerated rotary movement to said ejector after it leaves said matches.

23. In a match-making machine, the combination of a conveyor, device for holding matches thereon, a plate for loosening said matches, and a rotary ejector for finally discharging said matches from said conveyor.

24. In a match-making machine, the combination of a conveyor, device for holding matches thereon, a plate for loosening said matches, and a rotary ejector for finally discharging said matches from said conveyor, said ejector moving slowly against said matches, but having an accelerated movement after it leaves said matches.

25. In a match-making machine, an inclined conveyor, adapted to receive the matches horizontally and move the same to a plane at an angle thereby, device for holding matches thereon, means for loosening said matches, and a rotary ejector having teeth adapted to enter said device longitudinally for finally discharging said matches from said conveyor.

26. In a match-making machine, an inclined conveyor, device for

holding matches thereon, means for loosening said matches, and a rotary ejector for finally discharging said matches, in combination with means for moving said ejector slowly against said matches, and means for giving said ejector accelerated movement after leaving said matches.

27. In a match-making machine, a beveled inclined circular conveyor, means for actuating the latter, and means for holding a match on said conveyor in a horizontal position and moving the same to a vertical position, for the dipping of said match, whereby a perfect head is formed in the splint.

28. In a match-making machine, a roller for applying the composition to the ends of the splints, means for rotating the same when in the composition, means for holding the splints and for carrying the same to said roller, the plane of movement of the said splints being at an angle to the plane of rotation of said roller and means for elevating and stopping the rotation of said roller when said composition is applied to the ends of said splints, whereby only the ends of the splints are supplied with composition and a surplus supply thereof is prevented.

29. In a match-making machine, a roller for applying the composition to the ends of the splints, means for rotating the same when in the composition, means for holding said splints in a vertical position when the composition is applied thereto, and means for elevating said roller when said composition is applied to the ends of said splints, in combination with means for stopping the rotation of said roller when in its elevated position, and device for effecting the rotation of said roller when in its lowermost position.

30. In a match-making machine, a receptacle for the composition, a hot-water jacket surrounding said composition, a roller adapted to receive in said composition, means for raising and lowering said roller and means for stopping the rotation of said roller when the latter is in its elevated position.

31. In a match-making machine, the combination of a receptacle for the composition, a circular conveyor, a roller rotatably mounted in the lower portion of said receptacle, means for causing said roller to continuously rotate and mechanism for causing said roller to intermittently rotate, whereby the same will be stationary when in contact with the splint, so that no excess of material cannot be imparted to the splint.

32. In a match-making machine, a circular conveyor, supported at an angle, means for imparting an intermittent rotary movement to said conveyor, a beveled surface on the latter, and device on said surface for engaging match-splints, said surface being so arranged that said splints will be fed thereto in a horizontal position and will stand in a vertical position during the act of dipping.

33. In a match-making machine, means for cutting splints, a beveled inclined conveyor adapted to receive the splints in a plane inclined to the plane of rotation thereof, means for dipping the same, a chain adapted to receive the finished match and drying-aprons adapted to receive the match from said chain.

34. In a match-making machine, a cutter for cutting match-splints, a conveyor located in proximity to said cutter, means for actuating said conveyor, grooves carried by said conveyor, fingers located above said grooves in the path of the conveyor adapted to press said splints thereto, means for actuating said fingers to and away from said splints, and grooves or serrations on said fingers.

35. In a match-making machine, the combination of a conveyor, device for holding the matches thereon, a plate for loosening the said matches, and grooves or corrugations therein corresponding to said device.

36. In a match-making machine, the combination of a conveyor, device for holding the matches thereon, an ejector for discharging said matches from said conveyor, and a plate or guard on said ejector extending over the matches, whereby the same are prevented from being scattered.

37. In a match-making machine, the combination of a conveyor, device for holding the matches thereon, a plate for loosening said matches, an ejector for finally discharging said matches from said conveyor, and a guard on said conveyor.

38. In a match-making machine, the combination of a conveyor, device for holding the matches thereon, an ejector for finally discharging said matches from said conveyor, and a groove in the lower portion of said ejector adapted to prevent the matches from falling down.

39. In a match-making machine, a conveyor consisting of a circular frame rotatably supported at an angle, said frame having a beveled surface and adapted to receive match-splints so that the splints in one portion will be in a horizontal position and the splints in another portion will be in a vertical position for dipping the same.

40. In a match-making machine, a beveled inclined conveyor receiving the splints in one plane and carrying the same to a plane at an angle thereto.

41. In a match-making machine, a beveled inclined conveyor receiving the splints in one plane and dipping the same in a plane substantially at right angles thereto.

42. In a match-making machine, a beveled rotary inclined conveyor adapted to receive the splints in one part of the machine in one plane and to carry the same to another part of the machine in a different plane.

43. In a match-making machine, a cutting device, a dipping device, and a beveled inclined conveyor adapted to receive the splint substantially horizontally from the cutting device and carry the same to substantially an upright position to the dipping device.

44. In a match-making machine, a beveled inclined conveyor adapted to receive the splint in one plane and means for rotating said conveyor, whereby the splint is carried to a plane at an angle to the first-mentioned plane.

45. In a match-making machine a beveled inclined conveyor adapted to receive the splints in a plane inclined to the plane of rotation of said conveyor and means for waxing and dipping the match-splints.

46. In a match-making machine, a beveled inclined conveyor adapted to receive the splints in a plane inclined to the plane of rotation of the said conveyor and adapted to carry said splints to a plane substantially at right angles to the receiving plane.

47. In a match-making machine, a beveled inclined conveyor, means for feeding match-splints thereto, means for securing said splints to said conveyor, means for heating and drying said splints and means for applying a composition to the ends of said splints to form the match-heads.

48. In a match-making machine, a beveled inclined conveyor adapted to receive the splints from the feeding device in one plane and carry the same to another plane at an angle thereto, and means for securing said splints in said conveyor.

49. In a match-making machine, a rotary beveled inclined conveyor, means for feeding the splints to said conveyor, means for securing said splints in said conveyor and means for ejecting said splints from said conveyor after the composition has been applied thereto.

50. In a match-making machine, an inclined conveyor, a beveled surface thereon, grooves in said surface, which are situated at an angle to each other, and means for feeding match-splints into said grooves and for pressing the same thereto.

51. In a match-making machine in combination with the splint delivering and dipping device, of a carrier interposed between the same, said carrier having a beveled face to receive the splints from the delivering device in one plane inclined to the plane of rotation of said carrier and present them in another plane to the dipping device.

52. In a match-making machine, an inclined conveyor having a beveled surface on the periphery thereof, which is adapted to receive the match-splints in a plane inclined to the plane of rotation of the said conveyor.

53. In a match-making machine, an inclined conveyor and means thereon which are adapted to receive the splints in a plane inclined to the plane of rotation of said conveyor and carry the said splints to a plane at an angle thereto.

54. In a match-making machine, a conveyor, grooves on the periphery thereof adapted to receive and hold the match-splints, and an ejecting device having teeth thereon, which latter are adapted to enter the grooves longitudinally in said conveyor for removing the splints.

55. In a match-making machine, a roller for applying the composition to the splints, means for rotating the same, a conveyor adapted to receive the splints and carry the same to the dipping-roller, the plane of rotation of said roller being at an angle to the plane of movement of the conveyor and means for stopping the rotation of said roller when the composition is applied to the splints.

56. In a match-making machine, a roller for applying composition to the splints, means for rotating the same, a conveyor adapted to receive the splints, means for moving the conveyor which movement is in a plane at an angle to the plane of rotation of said roller and means for stopping the rotation of the roller and the movement of the conveyor simultaneously during the dipping.

57. In a match-making machine, a roller for applying the composition to the ends of the splints, means for rotating the roller when in the composition, a conveyor for receiving the splints and carrying the same to the roller, the plane of movement of said conveyor being at an angle to the plane of rotation of said roller and means for elevating said roller whereby the same is prevented from rotating at the dipping of the splints.

58. In a match-making machine, a dipping device adapted to rotate, means for elevating said dipping device and means for carrying the splints to said device, the plane of movement of said carrying means being at an angle to the plane of rotation of said dipping device.

708,155. JAR. WILLIAM G. SCHULTZ, St. Louis, Mo., assignor to F. R. Rice Manufacturing Cigar Company, St. Louis, Mo., a Corporation of Missouri. Filed July 28, 1901. Serial No. 70,078. (No model.)

Claim.—1. The combination with a jar having a lateral projection, of a casing-section of greater length than the distance between said pro-

jection and the jar-bottom and of greater interior diameter than the exterior diameter of said jar, the said projection upon said jar resting upon the upper edge of the wall of the said casing-section, whereby said jar is suspended in said casing-section, substantially as described.

2. The combination with a jar having a lateral projection, of a casing-section of greater length than the distance between said projection and the jar-bottom and of greater interior diameter than the exterior diameter of said jar, the said projection upon said jar resting upon the said casing-section, whereby said jar is suspended in said casing-section, and a casing-cover having a flange engaging said projection upon the jar and overlapping said casing-section, substantially as described.

3. The combination with a jar having a lateral projection, of a casing-section of greater length than the distance between said projection and the jar-bottom and of greater interior diameter than the exterior diameter of said jar, the said projection upon said jar resting upon the said casing-section, whereby said jar is suspended in said casing-section, and a casing-cover having a flange engaging said projection upon the jar and out of contact with said jar above said projection, substantially as described.

708,156. ARTIFICIAL FOOT. MATTHEW SMITH, Liverpool, England, assignor of one-half to Edward Emory Walker, Smith, county of Lancaster, England. Filed Sept. 24, 1901. Serial No. 70,241. (No model.)

Claim.—1. In an artificial limb, the combination with an artificial leg having an ankle portion at its lower end, of a boot, the top of which embraces said ankle portion of the leg, an air-cushion under the said leg and forming the heel portion of the foot, and the part forming the front portion of the foot, said front portion abutting against said cushion, and the said front portion and heel portion being inclosed within said boot, substantially as set forth.

2. In an artificial limb, the combination with the artificial leg having a convex lower end from front to rear, a cushion under the lower end of said leg and forming the heel portion only of the foot, the front portion of the foot abutting at the rear against said cushion, and means for connecting said parts together, substantially as and for the purpose set forth.

3. In an artificial foot and in combination, the pneumatic cushion and artificial leg having its heel surface that rests against said cushion slanting downward transversely from the outside to the inside, substantially as and for the purpose described.

708,157. STARTING MECHANISM FOR GAS-ENGINE. FRANK A. L. BUSHNER, Osnabrück, Germany, assignor to Charles H. Lombard, Osnabrück, Germany. Filed Mar. 7, 1901. Serial No. 68,197. (No model.)

Claim.—An igniting mechanism for gas-engines comprising a firing-pin, a contact movable toward and from the firing-pin, a lever connected with the contact, a firing-lever adapted to engage with the former lever, a dog engaging with said firing-lever and having a yieldable connection with the actuating mechanism of the engine, a dog-carrier, and a lever adapted to be operated by hand and engaging with said dog-carrier, substantially as described.

708,158. PLANE. ALAN W. STANLEY and HENRY S. WALTER, New Britain, Conn., assignors to Stanley Rule & Level Company, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 27, 1901. Serial No. 57,503. (No model.)

Claim.—1. In a plane, a plane-iron, a bearing therefor, a cap-screw for holding said plane-iron in engagement with said bearing, an adjusting-screw for regulating the position of said plane-iron, said adjusting-screw also engaging said cap-screw to lock it, substantially as described.

2. In a plane, a plane-iron, a cap-screw for holding said plane-iron in position, an adjusting-out, a screw therefor, said screw engaging said cap-screw, substantially as described.

3. In a plane, a plane-iron, a cap-screw for holding said plane-iron in position, a portion of the thread on said cap-screw being turned down, a separate screw engaging the turned-down portion of said cap-screw, and an adjusting-out mounted upon said separate screw, and means cooperating with said adjusting-out for shifting the position of the plane-iron without disturbing the adjustment of the cap-screw.

4. In a plane, a holding-screw *H* set into the frog *R*, an adjusting-out working on a screw *H*, said screw engaging said holder to lock it in position, substantially as described.

708,159. FLOOR. BENJAMIN A. STEVENSON, Toledo, Ohio. Filed Feb. 22, 1902. Serial No. 68,067. (No model.)

Claim.—1. In a floor, the combination of timbers, each of said timbers having a longitudinal groove at the center of one of its faces, and one or more longitudinal grooves between the central groove and an outer edge, said timbers having their outer edges in contact and being joined together by nails passing through one timber into the contiguous timber, the heads of said nails coming into the last-mentioned groove.

2. In a floor, the combination of a plurality of timbers, each of

which is provided on one of its vertical sides with a central longitudinal groove and a longitudinal groove on each side of said central groove, and nails extending through one of said timbers, the heads of said nails entering the latter groove.

708,160. LEATHER-CUTTING MACHINE. HENRY BROCKMAN, Philadelphia, Pa. Filed Dec. 5, 1901. Serial No. 94,745. (No model.)

Claim.—1. In a leather-cutting machine, die, and a cutting-block movable toward and away from each other, die-holders for said die provided with sockets, headed pins having one end situated within said sockets and extending through an opening in the ends thereof, a rod engaging said pins to prevent their rotation, tables secured to the other end of said pins, and a spring situated between said tables and holders.

2. In a leather-cutting machine, a cutting-block consisting of two members, one of which is secured to the actuating device of the machine and the other of which is secured to said first-mentioned member by means interengaging that permit the shifting thereof both laterally and longitudinally.

3. In a leather-cutting machine, a cutting-block consisting of a member that is secured to the actuating mechanism and is provided with outwardly-extending fingers, a second member provided with slotted plates to receive said fingers, and means for moving said fingers to said member to hold the members rigidly together and by means of which the same may be loosened to allow them to be shifted.

4. In a leather-cutting machine, in combination with a cutting-block, a plurality of die-holders suitably supported and provided with ledges along the sides thereof forming channels between the adjacent die-holders, and knives situated within said channels and secured to said die-holders.

5. In a leather-cutting machine, in combination with a cutting-block, a plurality of die-holders having meeting bases provided with upwardly-facing ledges forming channels between the adjacent die-holders, knives situated within said channels and resting upon said ledges, and suitable fastening devices passing through adjacent die-holders and intermediate knives and securing the same together.

6. In a leather-cutting machine, in combination with a cutting-block, a plurality of die-holders, assembled together side by side and end to end, certain of said die-holders being provided with ledges along one side and one end thereof, certain of said die-holders being provided with ledges along a side and an end thereof, and certain of said die-holders being provided with a ledge along one side only thereof, whereby channels are formed between adjacent die-holders and knives situated within said channels.

7. In a leather-cutting machine, in combination with a cutting-block, a plurality of die-holders situated side by side and end to end and provided with ledges on the outside thereof and channels between the same, angular knife-sections secured at the outside corners of the assembled die-holders and extending partially along the sides and ends of the corner die-holders, knife-sections extending between the angular knife-sections on the outside of the die-holder, and knife-sections situated within said channels.

8. In a leather-cutting machine, in combination with a cutting-block, a plurality of die-holders provided with channels between the same, knife-sections secured to the outside of said assembled die-holders, and knife-sections situated within said channels and having overhanging end portions to interfit with adjacent knife-sections.

708,161. GARMENT HOOK AND FASTENER. JAMES H. TAYLOR and EDNA TAYLOR, Philadelphia, Pa. Original application filed Sept. 7, 1900, Serial No. 29,369. Divided and this application filed May 16, 1902. Serial No. 107,857. (No model.)

Claim.—1. A device of the kind specified, consisting of a plate having a lip at one of its side edges thereof bent toward one side of the plate to form a hook extending transversely thereon, a bearing at one end of the plate and on the side thereof opposite said hook, the outer end of said bearing being situated adjacent to the edge of the plate from which said hook extends and the inner end of said bearing being between the side edges of said plate, a pin with an angular plate having a head engaging the outer end of said bearing, the said pin engaging the inner end of said bearing, and a sheath at the other end of the plate on the side thereof opposite the hook, said sheath being formed integral with said plate.

2. A device of the kind specified, consisting of a plate having a lip at one of its side edges thereof bent toward one side of the plate to form a transverse hook, a bearing at one end of and on the other side of said plate, a pin provided in said bearing and extending longitudinally across the plate approximately at a right angle to said transverse hook, and a sheath at the other end of said plate consisting of an integral lip composed of an end piece H and a side piece G bent against the side of the plate upon which the pin is pivoted, said pin being arranged so that it normally lies against the end piece of said sheath, whereby it is necessary to spring the same in inserting and removing it from said sheath.

708,162. CIGAR PIERCER. EDWARD TUDOR, JR., New York, N. Y. Filed Apr. 25, 1902. Serial No. 104,696. (No model.)

Claim.—1. A cigar-piercer comprising a body, a punch movable therein, an ejector for actuating the punch, a spring for retracting the punch, and means for engaging and disengaging the ejector and the punch.

2. A cigar-piercer, comprising a body, a punch movable in said body, a pin on said punch projecting through a slot in said body, an ejector sliding on said body and having slots to engage with said pin, and a spring attached to the body and the ejector.

3. A cigar-piercer, comprising a body having a longitudinal slot with a short transverse slot at one end, an ejector sliding on the body and having a longitudinal slot with a short transverse slot at each end, a punch in said body having a pin engaging with said slot, and a spring engaging said body and ejector and fastened to them respectively at each end.

4. In a cigar-piercer, the combination with the cap 1, of the body 2 having the slots 7 and 8, the punch 3 provided with the pin 6, the ejector 10 having the slots 10, 11 and 12 and the slot 13, the spring 14 attached to the body and the ejector, and the telescopic casing 15, 16.

708,163. SHELF-TONGUE. EDWARD W. TOLAN, Kansas City, Mo. Filed Oct. 16, 1901. Serial No. 78,930. (No model.)

Claim.—1. The combination of a handle, tongue secured to one end of the same, jaws swivelled to and at the inner sides of the tongue-arms, and pin-and-dot connections between said arms and jaws whereby the swivel movement is limited to a fraction of a circle, substantially as described.

2. The combination of a handle, tongue secured to one end of the same, jaws swivelled to and at the inner sides of the tongue-arms, and having pin-and-dot connections with the latter, and provided at their inner sides with flanges of compressible material, and at least one of them with an upwardly-disposed hook, substantially as described.

708,164. ANIMAL-DIPPING APPARATUS. WILLIAM E. TUCK, Lima, Pa., assignor to West Distributing Company, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1901. Serial No. 94,746. (No model.)

Claim.—1. An animal-dipping apparatus comprising a tank, an admission-chute and an endwise-tilting platform hinged to the admission-chute arranged to project the animal into the tank when the platform is tilted, substantially as set forth.

2. An animal-dipping apparatus comprising a tank, an admission-chute, an endwise-tilting platform hinged thereto arranged to project the animal into the tank when the platform is tilted and a door for the discharge end of the platform, substantially as set forth.

3. An animal-dipping apparatus comprising a tank, an admission-chute, an endwise-tilting platform hinged thereto arranged to project the animal into the tank when the platform is tilted and a hand-lever for operating the platform, substantially as set forth.

4. An animal-dipping apparatus comprising a tank, an admission-chute, an endwise-tilting platform hinged thereto arranged to project the animal into the tank when the platform is tilted and a dripping-pen leading from the tank, substantially as set forth.

5. An animal-dipping apparatus comprising a tank, an admission-chute, an endwise-tilting platform hinged thereto arranged to project the animal into the tank when the platform is tilted and a door for closing the front end of the chute, the said door serving as an approach for the chute when the door is open, substantially as set forth.

708,165. PROCESS OF SEPARATING THE FIRM MATERIAL FROM THE CRAP. THOMAS TWYMAN, Mounton, England. Filed July 12, 1901. Serial No. 94,747. (No specimens.)

Claim.—1. The herein-described process for separating tin from the scrap, cuttings, &c., which consists in bringing the scrap, cuttings, &c., into contact with finely-divided carbon in presence of a strong solution of chlorid of sodium, substantially as shown and described.

2. The hereinbefore-described process of separating tin from the scrap, cuttings, &c., which consists in forming a strong solution of chlorid of sodium, mingling a quantity of carbon-dust therein, so as to thicken the solution, dipping the scrap or cuttings therein, exposing the same to the air, and removing the same therefrom by washing.

3. The herein-described process of separating tin from the scrap, cuttings, &c., which consists in forming a strong solution of salt in water, mingling a quantity of carbon-dust with such solution to thicken the same, dipping the scrap, cuttings, &c., therein, withdrawing the same therefrom, drying the scrap or cuttings so coated with the solution with an ad-

ditional quantity of fine, pulverized dry carbon, submitting the same to the action of the atmosphere, removing the carbon-dust and tin from the scrap, or cuttings by agitating the same in water, and separating or recovering the suspended oxid of tin.

708,166. NUT-LOCK. DAVID T. WALLACE, Chicago, Ill., assignor of one-third to Charles F. Thompson, Chicago, Ill. Filed July 30, 1901. Serial No. 92,015. (No model.)

Claim.—1. The combination with a bolt and a nut, said nut being provided on its inner face with an annular series of teeth or projections which extend beyond the inner face of the nut, of a washer non-rotatively mounted on the bolt, the outer end of which engages the inner face of the nut within said series of teeth or projections, and a locking-ring removably surrounding the body of the washer and non-rotative thereon, said ring being provided with a click adapted for engagement with said teeth or projections on the nut.

2. The combination with a bolt and a nut, said nut being provided on its inner face with an annular series of teeth or projections, of a washer non-rotatively mounted on the bolt, the outer end of which engages the inner face of the nut within said series of teeth or projections thereof, and a locking-ring surrounding the cylindrical body of the washer and provided with a lug which engages a notch in said body and with a click which is adapted for engagement with said teeth or projections on the nut.

3. The combination with a bolt and a nut, said nut being provided on its inner face with an annular series of teeth or projections, of a washer non-rotatively mounted on the bolt, the outer end of which engages the inner face of the nut within said annular series of teeth or projections and provided on its inner end with a radial annular flange, and a locking-ring surrounding the cylindrical body of the washer, said ring being provided with a lug which engages a notch in the body of the washer, and with a second lug which engages a notch on the flange of said washer, and being provided also with a click which is adapted to engage the teeth or projections on the nut.

4. The combination with a bolt and a nut, said nut being provided on its inner face with an annular series of teeth or projections, of a washer non-rotatively mounted on the bolt, the outer end of which engages the inner face of said nut within said annular series of teeth or projections and provided on its inner end with a radial annular flange, and a locking-ring surrounding the cylindrical body of the washer, said ring being provided on its inner margin with an angular lug which fits within a like-shaped notch formed on the side and end faces of the cylindrical body of the washer, and provided also with a click adapted for engagement with the teeth or projections on the nut.

5. The combination with a bolt and nut, said nut being provided on its inner face with an annular series of teeth or projections, of a washer mounted non-rotatively on the bolt inside of said nut, the outer end of which engages the inner face of said nut, and a sheet-metal ring removably and non-rotatively mounted on said washer and provided with a click adapted for engagement with the teeth or projections of the nut.

6. The combination with a bolt and a nut, said nut being provided on its inner face with an annular series of teeth or projections, of a washer non-rotatively mounted on the bolt, said washer being provided in its outer end face with an outwardly-opening groove located in annular alignment with the teeth or projections of the nut, and a non-rotative ring in said groove provided with a click adapted to engage the teeth or projections on the nut, said washer being provided with an opening through which access may be had for releasing said click from said teeth or projections.

7. The combination with a bolt and a nut, said nut being provided on its inner face with an annular series of teeth or projections, of a washer non-rotatively mounted on said nut and provided in its outer end face with an outwardly-opening groove located in annular alignment with said teeth or projections, and a spring-click carried by said washer in said groove adapted for engagement with said teeth or projections, said washer being provided with an opening through which access may be had for releasing the click from the said teeth or projections.

8. The combination with a bolt and a nut, said nut being provided on its inner face with an annular series of teeth or projections, of a washer

non-rotatively mounted on the nut and comprising a central body, a radial annular flange on the inner end of said washer, an annular rim on the margin of said flange having its outer margin flush with the end face of said body and adapted to engage the inner face of the nut outside said annular series of teeth or projections, a non-rotative ring located in the groove between said rim and the central body and provided with a click adapted for engagement with the teeth or projections of the nut, said rim being provided in line with said click with an opening.

9. The combination with a bolt and a nut, of a washer non-rotatively mounted on the bolt, interlocking connections between the adjacent faces of said nut and washer which prevent relative rotation thereof in a direction to remove the nut from the bolt, and means preventing separation of said nut and washer longitudinally of the bolt while permitting said nut to turn on the bolt.

10. The combination with a bolt and a nut, said nut being provided on its inner face with an annular series of teeth or projections, of a washer non-rotatively mounted on said bolt and carrying a click adapted for engagement with said teeth, and interlocking connections between the washer and nut preventing movement of the same endwise of the bolt.

11. The combination with a bolt and a nut, said nut being provided on its inner face with an annular series of teeth or projections, of a washer non-rotatively mounted on the bolt and carrying a click adapted for engagement with said teeth or projections, and a hook on the washer adapted to pass over and engage the outer face of the nut to prevent separation of said nut and washer longitudinally of the bolt.

12. The combination with a bolt and a nut, said nut being provided with an annular radial flange and on its inner face with an annular series of teeth or projections, of a washer non-rotatively mounted on the bolt and carrying a click adapted for engagement with said teeth or projections, and a hook on the washer adapted for engagement with the flange on the nut in a manner to prevent separation of said nut and washer longitudinally of the bolt.

13. The combination with a nut and bolt, said nut being provided on its inner face with an annular series of teeth or projections, of a washer non-rotatively mounted on the bolt and provided with a click adapted for engagement with said teeth or projections, said washer being provided with an annular rim adapted for engagement at its outer margin with the inner face of the nut and said rim being provided with a hook which engages the outer face of the nut in a manner to prevent separation of the nut and washer longitudinally of the bolt.

708,167. SPRAY-NOZZLE FOR SPRINKLING-VEHICLES. LOUIS C. WILLIAMS, New York, N. Y., assignor of one-half to William Pretzel, New York, N. Y. Filed Jan. 27, 1902. Serial No. 91,494. (No model.)

Claim.—1. In a spray-nozzle for sprinkling-vehicles, the combination, with the lower end of a water-supply tube provided with slotted segmental projections at diametrically opposite points, of a spray-nozzle provided with a cylindrical body, suspension-curves for connecting said body with the slotted projections of the supply-tube, means for clamping said body to the tube, said spray-nozzle being provided with a recessed closed bottom and an inclined spring-lip below said recess, substantially as set forth.

2. In a spray-nozzle for sprinkling-vehicles, the combination, with the lower end of a water-supply tube provided with slotted segmental projections at diametrically opposite points, of a spray-nozzle provided with a cylindrical body, means for attaching said body to the supply-tube, means for adjusting the spray-nozzle vertically on said supply-tube, and means for adjusting the same axially thereon, substantially as set forth.

3. In a spray-nozzle for sprinkling, the combination, with the lower end of the water-supply tube provided with slotted segmental projections at diametrically opposite points, of a spray-nozzle composed of a cylindrical body with a closed bottom, a recessed lower portion in said body, provided with an inclined spring-lip in front of said recess, suspension-curves for connecting the body of the spray-nozzle with the segmental projections of the supply-tube, legs for adjusting the suspension-curves vertically on said segmental projections, and means for clamping the spray-nozzle to the lower end of the supply-tube, substantially as set forth.

708,168. ROAD-SCALFIER AND TRENCH-CUTTER. BERNARD ASPLER, Harwich, England. Filed July 27, 1901. Serial No. 66,577. (No model.)

Claim.—1. In a carriage of the class described, the combination with an outer casing of an inner casing movable up and down in the outer casing; means for securing the said inner casing in position, said inner casing being provided at the bottom and on the opposite sides with outwardly-flaring walls provided at their lower ends with inwardly-extending flanges and adjacent to the inner side of said flaring walls with slots or orifices, scarifying teeth or lines adapted to enter said slots or orifices and to project outwardly beyond the flanges and end walls, substantially as shown and described.

2. In a device of the class described, the combination with an outer casing, of an inner casing supported within the outer casing, buffer-springs interposed between the top of the inner casing and that of the outer casing, and a plurality of scarifying teeth or lines secured to the lower end of the inner casing projecting therefrom outwardly at an angle less than that of a right angle, substantially as shown and described.

3. In a device of the class described, the combination with an outer casing provided with side supporting-flanges, of an inner casing reciprocating up and down in the outer casing provided on two sides of the bottom with outwardly-flaring end walls provided with backwardly-extending flanges provided adjacent to the inner side walls of the flares with slots or orifices, scarifying teeth or lines located in said slots and projecting outward beyond the flange, a supporting-screw having an upper thread coating with a screw-thread carried by the top of the outer casing, the lower end of which screw-rod is threaded and is revolvably connected to the top of the inner casing, a buffer-plate reciprocatingly mounted upon each lower portion of the screw, a plurality of buffer-springs interposed between the buffer-plate and the top of the inner casing, and a plurality of regulating-screws passing through the top of the outer casing, substantially as shown and described.

708,169. MOLDING PROCESS. FREDERICK BALST, Sr., Chester, Pa. Filed Jan. 21, 1902. Serial No. 93,714. (No specimens.)

Claim.—The process for molding uniform articles without fins, &c., which consists in first finishing a master-mold of the article to be cast; then forming from said mold by casting a number of fusible patterns; then embedding said patterns in suitable molding material, whereby a series of molds are produced; fusing said patterns and removing the same in a molten state from said molds; and finally introducing molten metal into the spaces formerly occupied by the fusible patterns, whereby a plurality of finished articles are cast without fins, &c., and which are counterparts.

708,170. PROCESS OF CASTING CHAINS. FREDERICK BALST, Sr., Chester, Pa. Filed Aug. 1, 1901. Serial No. 79,666. (No specimens.)

Claim.—The herein-described process for casting chains, which consists in embedding a fusible pattern, for links and headers extending therefrom in a mold with the links interlocked and separated, next fusing said pattern of the links and headers and removing the fused material from the mold, whereby the links and headers are removed, and next pouring molten metal separately into the spaces formerly occupied by the fusible links and headers, whereby the links of the chain are disconnected when removed from the mold.

708,171. CASTING PROCESS. FREDERICK BALST, Sr., Chester, Pa. Filed Jan. 21, 1902. Serial No. 93,717. (No specimens.)

Claim.—1. A process for casting, which consists in forming a fusible pattern, packing molding material therearound by projecting the same with sufficient force to pack the material and form the mold, heating said pattern to a molten state to remove the same, and lastly introducing molten metal into the space formerly occupied by the said pattern.

2. A process for casting which consists in forming a seamless mold by employing a fusible pattern, supporting said pattern in a single receptacle out of contact with the walls thereof, packing the molding material around said pattern by projecting the said material into said receptacle with sufficient force to pack the material and form the mold, heating said pattern to a molten state to remove the same, and then introducing molten metal into the space formerly occupied by the said pattern.

708,172. MOLDING PROCESS. FREDERICK BALST, Sr., Chester, Pa. Filed Mar. 27, 1902. Serial No. 100,312. (No specimens.)

Claim.—The process for molding which consists in first, finishing a master-mold of the article to be cast; then forming from said mold, by casting, a plurality of fusible patterns; then placing said patterns in a suitable receptacle, then injecting molding material thereinto with sufficient force to pack the same, whereby the series of molds are produced; fusing said pattern and removing the same in a molten state from said molds; and finally introducing molten material into the spaces formerly occupied by the fusible patterns, whereby a plurality of finished articles are produced, which are counterparts.

708,178. WARDROBE. GEORGE BELL, New York, N. Y. Filed Sept. 22, 1901. Serial No. 78,198. (No model.)

Claim.—The herein-described means for hanging garments in a wardrobe consisting of slotted supports adapted to be secured to the opposite sides of the wardrobe near the top thereof, a bar mounted in said supports, hangers adapted to be secured to the top of said wardrobe near the front thereof, and provided with eyes or openings and rods connected

with said bar and passing forwardly through said eyes or openings, substantially as shown and described.

708,174. COIN-DELIVERY MACHINE. EDWARD J. BRADY, Waterbury, Vt. Filed Aug. 28, 1901. Serial No. 73,577. (No model.)

Claim.—1. The coin-pusher lever, pawl in connection with said lever, register mechanisms having unit-disk ratchet-wheels thereof arranged to be actuated by the pawl, and a bar arranged over said levers to limit upward movement of same.

2. The coin-pusher lever, pawl in connection with said lever, register mechanisms having unit-disk ratchet-wheels thereof arranged to be actuated by the pawl, and detents engageable with said ratchet-wheels, pawl-legs normally engaging the ratchet-wheels, and means whereby there is disengagement of a pawl-leg from a ratchet-wheel when a corresponding lever is actuated in one direction of its movement.

3. The coin-pusher lever, taper-shank spring-controlled pawl in connection with said lever and provided with triangular legs, a notched plate engaged by the pawl-shanks and arranged in the path of their legs, and register mechanisms having unit-disk ratchet-wheels thereof arranged to be actuated by the pawl.

4. The coin-pusher lever, pawl in connection with said lever, register mechanisms having unit-disk ratchet-wheels thereof arranged to be actuated by the pawl, an aperture bar, and spring-controlled ratchet-wheel detents guided in the bar-aperture.

5. The coin-pusher lever, pawl in connection with said lever, register mechanisms having unit-disk ratchet-wheels thereof arranged to be actuated by the pawl, a slide-plate provided with ears, and means for automatic shift of the plate to bring its ears in and out of engagement with said ratchet-wheels coincident with the movement of any one of the aforesaid levers.

6. The coin-pusher lever, pawl in connection with said lever, register mechanisms having unit-disk ratchet-wheels thereof arranged to be actuated by the pawl, a slide-plate provided with ears arranged to be brought into engagement with said ratchet-wheels, a cam-lever in connection with the slide-plate, a rocker arranged to be actuated by any one of the aforesaid coin-pusher levers against spring-resistance, and an arm in connection with the rocker engaging the cam portion of the slide-plate lever.

7. The coin-pusher lever, pawl in connection with said lever, a guide-plate for the pawl, register mechanisms having unit-disk ratchet-wheels thereof arranged to be actuated by the pawl and provided with ears arranged to be brought into engagement with said ratchet-wheels, a bracket suspended from the guide-plate, a cam-lever pivoted on the bracket and connected to the slide-plate, a rocker arranged to be actuated

by any one of the aforesaid coin-pusher levers against spring-resistance, and an arm in connection with the rocker engaging the cam portion of the slide-plate lever.

8. The parallel arbors longitudinally adjustable in bearings and provided with pins normally engaging machine-frame notches springs opposing ends of the arbors furthest from the pins, a lock having a cross-head bolt normally clut between the other ends of said arbors and coming-apartures through which to insert an arbor adjusting and turning tool, coming-disks of register mechanisms loose on the aforesaid arbors but held against play longitudinally of the same, and cogs aligned on each arbor to be brought in opposition to laterally-projecting teeth in connection with the corresponding series of disks.

9. The parallel arbors, coming-disks of register mechanisms loose on the arbors, a plate having slots engaged by the disks of each register mechanism, and bars having recesses engaged by said disks below the plate.

708,175. COIN-DELIVERY MACHINE. EDWARD J. BRADY, Watertown, Wis. Original application filed Aug. 23, 1901, Serial No. 73,577. Divided and this application filed Jan. 10, 1902. Serial No. 80,126. (No model.)

Claim.—1. The coin-delivery chute having the pivotally-hung rear upper flange, the flange-appearing coin-stop plate, and a spring arranged to normally hold said chute in position to have said flange thereof abut the lower edge of said plate.

2. The coin-delivery chute having the pivotally-hung rear upper flange, the flange-appearing coin-stop plate, a spring arranged to normally hold said chute in position to have said flange thereof abut the lower edge of said plate, and the back-plate arranged back of the plate aforesaid.

708,176. ELECTRIC METER. FRANCIS A. BROWN and ARTHUR BLANCHET, Paris, France, assignors to Compagnie pour la Fabrication des Compteurs et Matériel d'Usines à Gaz, Société Anonyme, Paris, France. Filed Mar. 27, 1902. Serial No. 100,190. (No model.)

Claim.—In a meter-measure the combination with a casing to contain the meter and indicating or registering mechanism, said casing being provided with an opening; of the structure-shaft and commutator of the said meter and one of the bearings for said structure-shaft extending out of said casing through said opening; and a supplemental casing or box detachably secured to the main casing to inclose said commutator and brushes and the bearing, as set forth.

708,177. COOLER. EDWARD E. BURTON, Abington, Mass. Filed Sept. 18, 1901. Serial No. 75,505. (No model.)

Claim.—1. The combination of a pipe-connecting rack or holder formed with a plurality of holes, pipes projecting through said holes and connected by said holder and formed with flanges overlying one face of the holder, a return-band connecting the pipes and having a telescopic connection therewith, and means connective of the holder and the return-band and detachably holding the same and the pipes in assembly.

2. The combination of a pipe-connecting rack or holder formed with a plurality of apertures, longitudinally-divided bushings in said apertures, pipes projecting through the bushings and connected by said holder and formed with flanges overlying said bushings, a return-band connecting the pipes, and means connective of the holder and the return-band and detachably holding the same and the pipes in assembly.

708,178. PICTURE-HOOK HANGER. MARY A. STE, Rochester, Tenn. assignor of one-half to Charles T. Leonard, Minneapolis, Minn. Filed Oct. 26, 1900. Serial No. 24,600. (No model.)

Claim.—1. A picture-hook hanger, comprising a body member having a recess or socket, a suitable pole or stick fitting therein, arms provided on said member between which the hook is supported, one of said arms having a vertical slot, for the purpose specified.

2. A picture-hook hanger, comprising a body member having a recess or socket, a suitable pole or stick fitting therein, arms provided on said member between which the hook is supported, one of said arms being longer than the other and the shorter arm being provided with a vertical slot, for the purpose specified.

3. A picture-hook hanger, comprising a body member having a recess or socket, a suitable pole or stick fitting therein, arms provided on said member between which the hook is supported, one of said arms being longer than the other and inwardly curved and adapted to engage the upper portion of the hook and direct it to its rest on the molding and the shorter arm being provided with a vertical slot, for the purpose specified.

4. A picture-hook hanger, comprising a substantially cylindrical cap 4 having a socket 5 to receive the end of a pole or stick, arms 6 and 7 provided at the upper end of said cap and forming continuations of the opposite walls thereof, the end of said cap between said arms being provided with a curved surface 8, conforming substantially to the curved end of a picture-hook, and the arm 6 being inwardly curved to protrude said surface and engage the curved upper surface of the hook and aid in seating the same on the molding.

708,179. GRAB-MACHINE. THOMAS R. CARPENTER, Providence, R. I. Filed June 1, 1901. Serial No. 82,745. (No model.)

Claim.—In a grab-machine, the combination of three main rollers properly mounted and arranged one above the other two and in a vertical plane midway between them, a companion conical roller rotatable with the upper main roller, supported thereby at its inner end and provided at its outer end with a beveled conical lip and having a suitable support at said outer end, a companion conical roller for each of the lower main rollers and rotatable therewith, respectively, and supported thereby, respectively, at the inner end, said lower conical rollers being shorter than the upper conical roller and each having a plane circular outer end with means of support at said outer end and said three conical rollers extending angularly from their respective companion main rollers and converging at their outer ends and so arranged that the conical lip of the upper conical roller projects over and is in contact with the plane small ends of the lower conical rollers, substantially as described.

708,180. PRINTING ATTACHMENT FOR PAPER-CLIPS. JULIUS I. GARR, Chicago, Ill. Filed Dec. 1, 1900. Serial No. 24,600. (No model.)

Claim.—1. The combination with a paper-clip, having a spring-actuated clamping-jaw, of a printing-plate and means connecting the printing-plate with the jaw-operating mechanism of the clip, whereby the jaw and frame move together and the one holds the paper while the other prints it, substantially as described.

2. The combination with a paper-clip, having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame secured to the base, a printing-plate, means movably mounted upon the frame and carrying the printing-plate, and means connecting said means for carrying the frame with the jaw-operating mechanism of the clip whereby said jaw-operating mechanism simultaneously moves the jaw and frame into contact with the paper so that as the one holds it the other prints it, substantially as described.

3. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame secured to the base, a printing-plate, a yoke slidably mounted upon the frame and carrying the printing-plate, and means connecting said yoke with the jaw-operating mechanism of the clip, substantially as described.

4. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame, means for removably securing the frame to the base, a printing-plate, means movably mounted upon the frame and carrying the printing-plate, and means connecting said means for carrying the printing-plate with the jaw-operating mechanism of the clip, substantially as described.

5. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame, means for adjustably securing said frame to the base, a printing-plate, means movably mounted upon the frame and carrying the printing-plate, and means connecting said means for carrying the printing-plate with the jaw-operating mechanism of the clip, substantially as described.

6. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame, a post rising from the base, means for adjustably securing the frame to the post, a printing-plate, means movably mounted upon the frame and carrying the printing-plate, and means connecting said means for carrying the printing-plate with the jaw-operating mechanism of the clip, substantially as described.

7. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame, a post for supporting the frame, means for removably securing the post to the base, a printing-plate, means movably mounted upon the frame and carrying the printing-plate, and means connecting said means for carrying the printing-plate with the jaw-operating mechanism of the clip, substantially as described.

8. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame secured to the base, a yoke slidably mounted upon the frame, a printing-plate carried by the yoke, an arm projecting from the yoke, a second arm joined to the arm first aforesaid, and means connecting the second arm with the jaw-operating mechanism of the clip, substantially as described.

9. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame secured to the base, a yoke slidably mounted upon the frame, a printing-plate carried by the yoke, an arm projecting from the yoke, a second arm joined to the arm first aforesaid, and means connecting the second arm with the jaw-operating mechanism of the clip, substantially as described.

10. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame secured to the base, a yoke slidably mounted upon the frame, an arm projecting from the yoke, a second arm having a cross-head occupying the end carried by the arm of the yoke, a spring-actuated detent for holding said cross-head in said end, and means connecting the cross-head with the jaw-operating mechanism of the clip, substantially as described.

11. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame secured to the base, a yoke slidably mounted upon the frame, a printing-plate carried by the yoke, a spring-arm projecting from the yoke and having a rest, a second arm having a cross-head occupying said rest, a detent for holding said cross-head in said rest, and means for connecting the second arm with the jaw-operating mechanism of the clip, substantially as described.

12. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame secured to the base and having vertical slides provided with slots extending quite to the bottom thereof, a yoke slidably mounted upon the frame and having vertical slides, a rod extending from one to the other of the vertical slides of the yoke and passing through the slots in the slides of the frame, a printing-plate carried by said rod, and means connecting the yoke with the jaw-operating mechanism of the clip, substantially as described.

13. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame secured to the base and having vertical slides provided with slots extending quite to the bottom thereof, a yoke slidably mounted upon the frame and having vertical slides, a rod extending from one to the other of the vertical slides of the yoke and passing through the slots in the slides of the frame, a printing-plate carried by said rod, and means connecting the yoke with the jaw-operating mechanism of the clip, substantially as described.

14. The combination with a paper-clip having a base and a spring-actuated clamping-jaw, of a printing attachment having a frame secured to the base, a yoke slidably mounted upon the frame, a printing-plate carried by the yoke and movable to a position that brings its printing-surface below the bottom of the frame, a detent spring interposed between the frame and yoke, and means connecting the yoke with the jaw-operating mechanism of the clip, substantially as described.

708,181. MARINE PROPELLER. CARLOS OMBERTINO DA ROCHA CARVALHO, Lisbon, Portugal. Filed Feb. 6, 1902. Serial No. 62,846. (No model.)

Claim.—1. In a marine propeller, a reciprocating part, guideways for the same, links connected with said part, a cross-head mounted to travel on said ways, propeller-blades pivoted on the cross-head, articulated connections between the blades and a central shaft, and an axial rod carried by the cross-head and movably connected with said part, as and for the purpose specified.

2. The combination of the guideways a, a, the reciprocating shaft C, the cross-head B attached to said shaft and formed with the flanges d, d', engaging the ways a, a, and with the horizontal extension P', the cross-bar G, formed with the runners g, g, the propeller-blades P, P', pivotedly supported on the cross-bar G, and the toggle-links e, e', the whole arranged and operating substantially in the manner and for the purpose described.

3. The combination of the guideways a, a, the cross-head B, supported upon and between, the said ways a, a, the reciprocating shaft C, attached to the cross-head, the axial recess P', formed in the horizontal member P', of the cross-head B, the cross-bar G, formed with the axial rod A, engaging the recess P', in the cross-head B, the propeller-blades P, P', pivotedly supported on the cross-bar G, and the toggle-links e, e', the whole arranged and operating substantially as set forth.

4. In a marine propeller, the combination of fixed guideways, a cross-head guided thereon, a cross-head also mounted on said ways, propeller-blades pivoted on the last-mentioned cross-head, a horizontal member on the other cross-head, axial means on the one movably engaged with the other, a beam, wrist-pin thereon and toggle connections, as set forth.

708,182. ROSS-COUPLING. GEORGE H. CARPENTY, Milwaukee, Wis. Filed Oct. 7, 1901. Serial No. 77,703. (No model.)

Claim.—1. A base-coupling comprising a male member and a female member, the female member having an enlarged engaging end, with jaws projecting therefrom and recesses in said jaws, the male member having studs projecting from opposite sides thereof at the engaging end, and heads on said studs, a reduced portion carried on the engaging end of the male member to enter an annular seat provided therefor in the engaging end of the female member, and a locking lever or tongue pivoted on the female member and adapted to engage the male member to lock the members together, substantially as described.

2. A base-coupling comprising two interlocking members, jaws carried by one member with recesses therein, studs carried by the other member for locking engagement in the recesses of said jaws, a reduced portion carried on the engaging end of one member, a gasket on said reduced portion, packing-strips secured to the studs, and a locking device carried by one member and adapted to engage the other member to lock the members together, substantially as described.

708,183. MACHINE FOR FEEDING AND CUTTING SHEETS. WILLIAM G. CHAPIN, Brooklyn, N. Y., assignor to the Thompson & Norris Company, a Corporation of New Jersey. Filed Nov. 9, 1901. Serial No. 61,063. (No model.)

Claim.—1. In a machine of the character described, the means for feeding the sheet material intermittently, said means comprising a reciprocating carriage, a gripper device thereon for seizing the material, a cam rotatively mounted in said carriage and adapted to operate said gripper, and a rotating spline-shaft parallel with the path of the gripper-carriage and extending through said cam, whereby the latter is rotated during the movement of the carriage.

2. In a machine of the character described, the means for feeding the sheet material intermittently, said means comprising a horizontally

rotating crank, a gripper-carriage slidably mounted on guides, the said guides, a rod connecting said crank and carriage, a fixed gripper-jaw on said carriage, the movable gripper-jaw on said carriage, the rotating-spline of said jaws, a cam 27 mounted rotatively in said carriage and adapted to operate said movable jaw, a spline-shaft 28, rotatively mounted parallel with the guides of the carriage, said shaft extending through a square aperture in the cam, and means for driving said shaft.

3. In a machine for feeding sheets intermittently, and cutting off the same, the combination with a main driving-shaft, a reciprocating half-driven from said shaft, and means for feeding the sheet to the trim, said means comprising an upright crank-shaft driven from the main shaft, a crank on the upright shaft, a gripper-carriage, a rod coupling the wrist of the crank with said carriage, a sheet-gripper on said carriage, a cam rotatively mounted in the carriage for operating the gripper, and a spline-shaft driven from the main shaft and driving in turn the said cam.

4. In a machine for the purpose specified, the feeding device, comprising the carriage, the trackway guideways therefor, the upper jaw of the gripper mounted on said carriage and provided with cushion-springs, the lower jaw of the gripper mounted movably, its guide and spring, the cam for operating said lower jaw, said cam being mounted rotatively in said carriage, means for reciprocating said carriage and means for rotating said cam during the movement of the carriage.

5. In a machine for the purpose specified, the gripper device comprising the carriage 15, having upright guide-rods 20, the bar 19 mounted on said rods, the cushion-springs behind said bar, the upper gripper-jaw 18 mounted on said bar, the guide 23 of the lower gripper-jaw 22, the said jaw, the spring for depressing said jaw in its guide, and the cam 27, mounted rotatively in the carriage under said lower jaw and bearing thereon.

708,184. CARTON-MACHINE. WILLIAM G. CHAPIN, Brooklyn, N. Y., assignor to the Thompson & Norris Company, a Corporation of New Jersey. Filed Nov. 12, 1901. Serial No. 61,061. (No model.)

Claim.—1. In a machine for the purpose specified, the combination with a cutter, of means for folding over the flaps of the creased strip a, means for feeding said strip intermittently to the cutter, and means for applying a gummed or glued strip z over the joint between the folded flaps of the carton-strip as the latter is fed, of a movable heater for drying said applied strip, and means for moving said heater, substantially as and for the purpose set forth.

2. In a machine for the purpose specified, the combination with the cutter, of means for folding over the flaps of the creased strip a as it is moved along, means for applying adhesive material to the strip z, means for applying said strip to the meeting edges of the flaps on the strip as the latter is moved along, and a heater for drying said strip, of an intermittent feeder for the strip, said feeder comprising a movable upper gripper-jaw and a movable lower gripper-jaw, means coupling said jaw for simultaneous action, a reciprocating carriage on which said jaws are mounted, a spring for retracting said jaws, a cam, rotatively mounted in said carriage for closing said jaws, and means for rotating said cam during the reciprocation of the carriage, substantially as and for the purpose set forth.

3. In a machine for the purpose set forth, the combination with an intermittently-operating cutter, an intermittently-operating feeder for the carton-strip, means for applying an adhesive hinging-strip to the moving carton-strip and means for drying the adhesive material on said strip, said means comprising a hallow heater 18, mounted movably over the bed of the machine, means for supplying steam to said heater, and means for alternately raising and lowering said heater, substantially as set forth.

4. In a machine for the purpose set forth, the combination with a reciprocating carriage, of the gripper device thereon, comprising the upper jaw 42, the bar carrying the same, the lower jaw 43, the bar carrying the same, the draw-bar 44, the coupling-levers 44 whereby the up-

per and lower jaws are made to operate simultaneously, the spring for opening the jaws, a cam rotatively mounted in the carriage and bearing on the lower jaw of the gripper device for closing the jaws of the latter, and means for rotating said cam uniformly during the movements of the carriage, substantially as set forth.

5. In a machine for the purpose specified, the combination with the mechanisms for folding, feeding and cutting the carton-strip, and means for applying an adhesive hinging-strip thereon, of means for pressing and drying the adhesive material of the last-named strip, said means comprising the hallow metal heater 18, the pipes 14 for supplying steam thereto, the rock-shaft 15, having a lifting-arm, the lifting-rod 20, the spring 21 on said rod, the arm 17 on the rock-shaft, and the rotating cam 16, adapted to bear on the arm 17 and lift the heater, substantially as set forth.

6. In a machine for the purpose specified, the combination with means for feeding forward the strip to be folded, and means for gradually turning over the marginal flaps on the strip, of the curved bearers supporting said turning means, substantially as and for the purpose set forth.

7. The combination with the heater, of a disk-like base 2* rotatively mounted thereon, and a turner or folder 2 rotatively mounted on said base, substantially as set forth.

708,185. ROADWAY FOR MOTOR-VEHICLES. ALEXANDER CLARK, EVANSTON, Ill. Filed Jan. 20, 1902. Serial No. 60,426. (No model.)

Claim.—1. An intersecting junction for a highway and a roadway for motor-vehicles, the latter consisting of two parallel tracks, and parallel guard-rails projecting upwardly from said tracks, said guard-rails terminating at each side of the highway, and the tracks and the highway being graded to bring the same to an approximate level and thereby facilitate the passage of motor-vehicles from the roadway to the highway and vice versa.

2. An intersecting junction for a highway and a roadway for motor-vehicles, the latter consisting of two parallel tracks, and parallel guard-rails projecting upwardly from said tracks, said guard-rails terminating at each side of the highway, and the tracks and the highway being graded to bring the same to an approximate level and thereby facilitate the passage of motor-vehicles from the roadway to the highway and vice versa, and the terminals of said guard-rails on each side of the roadway being curved so as to afford no abrupt obstructions to the ingress and egress of the vehicles.

3. A roadway for motor-vehicles consisting of two separate parallel tracks, each comprising a solid mass of concrete, and having a smooth non-metallic surface which constitutes the traction-surface of the track, and parallel guard-rails anchored to and projecting upwardly from said track, said guard-rails terminating at each side of an intersecting roadway, and the upper surfaces of the track and the approach thereto at the intersecting roadway being located at the level of said intersecting roadway there-

by facilitating the passage of vehicles from the motor-vehicle roadway to the intersecting roadway and vice versa.

4. A roadway for motor-vehicles, consisting of two parallel tracks, parallel guard-rails, removable sections in said guard-rails for permitting ingress and egress of vehicles to and from the roadway and an approach to said roadway opposite to said removable sections which is located at the level of the track.

5. A roadway for motor-propelled vehicles consisting of two parallel tracks and projecting upwardly from said tracks, wooden guard-rails and metal wearing-strips attached to the vertical faces of said guard-rails, the ends of said wearing-strips being turned inwardly and embedded in said guard-rails.

6. A roadway for motor-vehicles comprising two parallel tracks, and parallel guard-rails projecting upwardly from said tracks, said guard-rails being provided with removable sections.

7. A roadway consisting of two parallel tracks, and parallel guard-rails projecting upwardly from said tracks, said guard-rails being provided with removable sections, each of which is hinged at one end and means for securing the free end of each of said removable sections, when in its closed position.

8. A roadway for motor-vehicles consisting of two parallel tracks, each comprising a solid mass of concrete having a smooth top surface constituting the traction-surface thereof, and parallel guard-rails anchored to and projecting upwardly from said tracks.

9. A roadway for motor-vehicles consisting of two parallel tracks, each comprising a solid mass of concrete having a smooth top surface constituting the traction-surface thereof, parallel guard-rails supported on said tracks and projecting upwardly therefrom, and both embedded in said tracks and projecting upwardly therefrom to which the guard-rails are secured.

10. A roadway for motor-propelled vehicles consisting of two parallel tracks, wooden guard-rails projecting upwardly from said tracks, and metal wearing-strips attached to the vertical faces of said guard-rails, the ends of said wearing-strips being turned inwardly and embedded in said guard-rails.

708,186. VEHICLE. ALEXANDER CLARK, Chicago, Ill. Filed Feb. 17, 1902. Serial No. 60,426. (No model.)

Claim.—1. A vehicle consisting of a running-gear embracing longitudinal side bars, a box or body supported on said running-gear having a reduced part which extends downwardly between said side bars, and the upper or enlarged part of which overhangs said side bars, and means on said running-gear for detaching the box from the running-gear and loading the same thereon.

2. A vehicle consisting of a running-gear embracing longitudinal side bars, a box or body supported on said running-gear and having a re-

desired lower part which extends downwardly between said side bars, means for lowering said box to rest upon the surface which supports the vehicle, the upper or enlarged part of said box or body projecting over or overhanging the side bars, and means for removing the box or body from the running-gear when the same is resting on the surface which supports the vehicle.

3. A vehicle consisting of a running-gear comprising longitudinal side bars connected at their ends by transverse bars, a box or body located principally above the running-gear and having a part which extends between said bars and means for depending said box or body from said bars constructed to permit detachment of said box or body, one of said transverse bars being removable from the side bars to permit the running-gear to be moved away from the box when the latter rests on the surface which supports the running-gear.

4. A vehicle consisting of a running-gear comprising longitudinal side bars connected at their ends by transverse bars, a box or body having a part which extends between said side bars, said box or body being constructed to permit detachment of said box or body, one of said transverse bars being detachable to permit removal of the box or body from the running-gear.

5. A vehicle consisting of a running-gear embracing longitudinal side bars, said bars supported on said side bars and extending transversely between the same, means for raising and lowering said side bars, a box or body supported on said side bars and having a reduced lower part which extends downwardly beneath said side bars to engage the side bars, the upper part of said box or body overhanging the side bars of the running-gear, and means for detaching the box or body from the running-gear or attaching the same thereto when said box or body is lowered to rest upon the surface which supports the vehicle.

6. A vehicle consisting of a running-gear, permanently-attached axle thereon upon which the supporting-wheels are mounted, a box or body supported on said running-gear, and means for raising or lowering said box-body, said running-gear being capable of being opened at one end, whereby the running-gear may be moved away from the box or body when the latter is resting on the surface which supports the running-gear.

7. A vehicle consisting of a running-gear, comprising longitudinal side bars, axles permanently attached in said side bars and supporting-wheels mounted on said axles, a box or body supported on said running-gear and having a part extending downwardly between said side bars and means for raising or lowering said box or body, said side bars being permanently connected at one end of the running-gear by means of a transverse member or members, but not permanently connected at the other end of said running-gear, whereby the running-gear may be moved away from the box or body when the latter is resting on the surface which supports the running-gear.

708,187. BURGLAR-PROOF DEVICE FOR SAFE-DOORS. ALVIN H. COHEN, Springfield, Mass. Filed Mar. 17, 1902. Serial No. 98,567. (No model.)

Claim.—1. The combination with a door of a safe or the like, of a hinged shelf on which is supported a breakable receptacle containing a noxious substance, a movable device adapted to support said shelf, said device being held in shelf-engaging position by said door when the latter is closed, and means for disengaging said device from the shelf when the door is opened.

2. A burglar-proof attachment for safe-doors and the like comprising a hinged shelf on which is supported a breakable receptacle for containing a noxious substance, a latch held in contact with the door in engaging position relative to said shelf whereby, by the opening of the door, the shelf may be released to drop said receptacle, combined with an auxiliary sustaining-latch for said shelf, and a suitable clock mechanism associated with said latch, whereby the latter, at a predetermined time, may be moved into engagement with said shelf to render it inoperative.

3. The combination with a door of a safe or the like, of a hinged shelf on which is supported a breakable receptacle containing a noxious substance, a movable device adapted to support said shelf, said device being held in shelf-engaging position by said door when the latter is closed, a latch to maintain said shelf during the closing of the door and adapted to be engaged by said movable device and swing out of contact with the shelf, and a suitable spring for disengaging the said movable device from said shelf when the door is opened.

4. A burglar-proof attachment for safe-doors and the like comprising a hinged shelf on which is supported a breakable receptacle for containing a noxious substance, a latch held in contact with the door in engaging position relative to said shelf whereby, by the opening of the door, the shelf may be released to drop said receptacle, an electrical circuit having an alarm-bell therein, and means operable upon the release of said shelf to effect the ringing of said bell.

5. A burglar-proof attachment for safe-doors and the like comprising a hinged shelf on which is supported a breakable receptacle for containing a noxious substance, a latch held in contact with the door in engaging position relative to said shelf whereby, by the opening of the door, the shelf may be released to drop said receptacle, combined with an auxiliary sustaining-latch for said shelf, and a suitable clock mechanism associated with said latch, whereby the latter, at a predetermined time, may be moved into engagement with said shelf to render it inoperative, an electrical circuit having an alarm-bell therein, and means operable by the movement of said auxiliary latch to effect the ringing of said bell.

708,188. CASE-REGISTER. ISAAS S. DUBOIS, Chicago, Ill., assigner, by mesne assignments, to American Mechanical Cashier Company, a Corporation of New Jersey. Filed Mar. 9, 1902. Serial No. 7,573. (No model.)

Claim.—1. The combination with a plurality of indicators and a plurality of sets of keys, of a controlling device corresponding to each set of keys, and controlled by said keys so as to move from normal position to different positions, clutch connections between the respective controlling devices and indicators, means adapted to be operated by one of said sets of keys to release said clutch connections, means for restoring the indicators to normal position when so released, and restoring mechanism for the aforesaid controlling devices, operatively connected with the clutch-releasing means so as to cause engagement of the clutch and consequently effect the operation of the indicator during the restoring movement.

2. The combination with a register and a plurality of keys, of a controlling device controlled by said keys so as to move from normal position to different positions, an indicator and an indicator-shaft, a clutch connection between the controlling device and the indicator-shaft, means for releasing said clutch connection, means for restoring the indicator to normal position when thus released, a restoring mechanism for the aforesaid controlling device operatively connected with the clutch-releasing means so as to cause engagement of the clutch and consequently effect the operation of the indicator during the restoring movement, and a pawl-and-ratchet connection between the indicator-shaft and the register to cause operation of the register during each restoring movement.

3. The combination with a plurality of keys, of a rotary controlling device provided with an actuating-spring and with a series of steps adapted to engage the respective keys to arrest the rotary controlling device in different positions, detent means adapted to hold the rotary controlling device against the action of its spring and adapted to be operated by the said keys, so as to release the rotary controlling device when a key is operated but to return to operative position upon release of the keys so as to hold the rotary controlling device in the position in which it is arrested by the key, restoring mechanism for the rotary controlling device and an indicator having operating connection with the rotary controlling mechanism and operated during the return movement thereof.

4. The combination with a plurality of keys, of a rotary controlling device provided with an actuating-spring and with a series of steps adapted to engage the respective keys to arrest the rotary controlling device in different positions, detent means adapted to hold the rotary controlling device against the action of its spring and adapted to be operated by the said keys, so as to release the rotary controlling device when the key is operated but to return to operative position, upon release of the keys, so as to hold the rotary controlling device in the position in which it is arrested by the key, restoring mechanism for the rotary controlling device

and a register having operating connection with the rotary controlling mechanism and operated during the return movement thereof.

5. In a register, the combination with a rotary controlling device carrying a series of steps, and a spring for actuating said controlling device, of a plurality of keys arranged to engage said steps to arrest said controlling device in different positions, a ratchet connected to said rotary controlling device and a pawl device controlled by said keys and engaging said ratchet so as to hold the rotary controlling device in normal position until released by the operation of a key, and after the release of the key from said step device, to hold the said controlling device in the position in which it was held by the key.

6. In a cash-register, the combination of a plurality of indicating devices, spring-driven controlling mechanisms adapted to shift the respective indicating devices, groups of keys acting as steps for the respective controlling mechanisms, means for restoring the keys, pawl-and-ratchet means for holding the controlling mechanism in shifted position when the key is restored to normal position and means for restoring the controlling mechanism.

7. In a register, the combination with a rotary controlling device carrying a series of steps, and a spring for actuating said controlling device, of a plurality of keys arranged to engage said steps to arrest said controlling device in different positions, a ratchet connected to said rotary controlling device, a pawl device controlled by said keys and adapted to engage the said ratchet to hold the rotary controlling device against the action of the spring except when a key is operated, locking means engaging with said keys to lock same in operative position, a restoring mechanism for the rotary controlling device, a releasing means connected with the said locking means and operated by the restoring mechanism to release the said locking means, and means for returning the keys to normal position when released from the locking means.

8. In a register, the combination with a rotary controlling device carrying a series of steps, and a spring for actuating said controlling device, of a plurality of keys having shoulders and arranged to engage said steps, to arrest said controlling device in different positions, a ratchet connected to said rotary controlling device, a pawl device controlled by said keys and engaging the ratchet to hold the rotary controlling device against the action of its spring except when a key is operated, a locking-plate adapted upon the operation of any of said keys to engage with the shoulder of each key to hold same in operative position, restoring mechanism for the rotary controlling device, a releasing device engaging with the said locking-plate and adapted to be operated by the restoring mechanism to release said locking-plate, and means for returning the keys to normal position when released from the locking means.

9. In a cash-register the combination of a rotary controlling device provided with an actuating-spring and with a series of steps, a plurality of keys adapted when operated to engage the respective steps of the said controlling device to stop the said controlling device in different positions, locking means adapted to engage the said keys, when operated, to hold same in operative position, an indicator, a clutch connection between the indicator and the rotary controlling device, means for releasing said clutch connection, restoring mechanism for the rotary controlling device, a releasing device engaging with the said locking device and adapted to be operated by the said restoring mechanism and means operated by said restoring mechanism to cause engagement of the clutch previous to the restoring movement of the rotary controlling device, so that the indicator is operated in each restoring movement.

10. In a cash-register, the combination of a rotary controlling device provided with an actuating-spring and with a series of steps, a plurality of keys adapted when operated to engage the respective steps of the said controlling device to stop the said controlling device in different positions, locking means adapted to engage the said keys, when operated, to hold same in operative position, a register, a clutch connection between the register and the rotary controlling device, means for releasing said clutch connection, restoring mechanism for the rotary controlling device, a releasing device engaging with the said locking device and adapted to be operated by the said restoring mechanism and means operated by said restoring mechanism to cause engagement of the clutch previous to the restoring movement of the rotary controlling device, so that the indicator is operated in each restoring movement.

11. In a cash-register the combination with an indicator, of a rotary controlling device provided with an actuating-spring and with a series of steps, a plurality of keys respectively adapted, when operated, to engage with the respective steps of the rotary controlling device and stop the latter in different positions, locking means adapted to lock said keys in operative position, means for returning the keys to normal position when released from said locking means, a clutch connection between the indicator and the rotary controlling device, a clutch-releasing plate operated by said keys and adapted to release the clutch when a key is operated, restoring mechanism for the rotary controlling device, an actuator for said restoring mechanism, and means operated by said actuator to cause re-

loss of the key-locking plate, from the key and consequent movement of the key and the clutch-releasing device to normal position and the reengagement of the clutch before the resetting operation, so that the indicator will be operated during each resetting operation.

12. In a cash-register, the combination with a register, of a rotary controlling device provided with an actuating-spring and with a series of stops, a plurality of keys respectively adapted, when operated, to engage the respective stops of the rotary controlling device and stop the latter in different positions, locking means adapted to lock said keys in operated position, means for returning the keys to normal position when released from such locking means, a clutch connection between the register and the rotary controlling device, a clutch-releasing plate operated by said keys and adapted to release the clutch when a key is operated, resetting mechanism for the rotary controlling device, an actuator for said resetting mechanism, and means operated by said actuator to cause release of the key-locking plate from the key and consequent movement of the key and the clutch-releasing device to normal position and reengagement of the clutch before the resetting operation, so that the register will be operated during each resetting operation.

13. In an indicator, the combination with an indicator, of a rotary controlling device provided with an actuating-spring and with a series of stops, a plurality of keys respectively adapted, when operated, to engage with the respective stops of the rotary controlling device and stop the latter in different positions, a ratchet on the rotary controlling device and a pawl engaging therewith and controlled by said keys, to hold the rotary controlling device against the action of said spring except when said keys are in operated position, locking means adapted to lock said keys in operated position, means for returning the keys to normal position when released from such locking means, a clutch connection between the indicator and the rotary controlling device, a clutch-releasing plate operated by said keys and adapted to release the clutch when a key is operated, resetting mechanism for the rotary controlling device, an actuator for said resetting mechanism and means operated by said actuator to cause release of the key-locking plate from the key and consequent movement of the key and the clutch-releasing device to normal position and the reengagement of the clutch before the resetting operation, so that the indicator will be operated during each resetting operation.

14. In a register, the combination with a register, of a rotary controlling device provided with an actuating-spring and with a series of stops, a plurality of keys respectively adapted, when operated to engage the respective stops of the rotary controlling device and stop the latter in different positions, a ratchet on the rotary controlling device and a pawl engaging therewith and controlled by said keys, to hold the rotary controlling device against the action of said spring except when said keys are in operated position, locking means adapted to lock said keys in operated position, means for returning the keys to normal position when released from such locking means, a clutch connection between the register and the rotary controlling device, a clutch-releasing plate operated by said keys and adapted to release the clutch when a key is operated, resetting mechanism for the rotary controlling device, an actuator for said resetting mechanism and means operated by said actuator to cause release of the key-locking plate from the key and consequent movement of the key and the clutch-releasing device to normal position and reengagement of the clutch before the resetting operation so that the register will be operated during each resetting operation.

15. In a cash-register, the combination with a stop-cylinder provided with a series of spirally-arranged stops, and a spring for actuating said stop-cylinder, of a series of push-keys, adapted, when operated, to directly engage said stops on the stop-cylinder, a ratchet carried by said stop-cylinder and a pivoted bar engaged directly by said keys and carrying a pawl engaging with said ratchet.

16. The combination with a plurality of controlling-keys, of a controlling device, adapted to be moved from normal position to different positions in the operation of the respective keys, a recording mechanism whose recording means are connected to and moved in conjunction with each controlling device during its movement from normal position, a resetting mechanism for the controlling device, an actuating device for the resetting mechanism having a to-and-fro movement, a plate for the recording mechanism connected to said actuating device so as to operate to produce a record during one movement of the actuating device, the return movement of the actuating device serving to withdraw the plate and reset the controlling device, and an indicator and means controlled by said actuating device to connect said indicator to said controlling device during each resetting movement.

17. In a cash-register, the combination with the registering device, of a plurality of rotary controlling devices therefor, a plurality of groups of keys controlling the said register through the said controlling devices, a handle, a shaft operated thereby, runs placed in different angular positions on said shaft, slide-bars adapted to be operated successively by said arms, and means, consisting of racks on said slide-bars and pinions on the

rotary controlling devices for operating the registering mechanism from said handle, through the said shaft, arms, slide-bars, racks and pinions and rotary controlling devices.

18. The combination with the recorder and the registering device, of controlling devices for the registering device and the recorder, an operating device having a to-and-fro movement, a plate for the recorder operatively connected with said operating device, and a resetting mechanism for the said register-controlling device connected by a pawl-and-ratchet connection with the said operating device.

19. The combination with the recording-wheels and the pivoted recording-plate, of an operating-handle, a sliding bar connected to and operated by said handle, a lever operated by said bar and a rod connecting each lever to the plate.

20. The combination with the recording-wheels and the means for feeding a check-strip in position to be printed upon by said wheels, of a recording-plate adapted to press the strips against the recording-wheels and provided with cutting means for cutting off the check-strip, said plate being so pivoted as to move away from said recording-wheels after the printing is effected, so as to allow the check-strips to drop by gravity, a guide-chute for receiving the moved check, and means for operating the plate.

21. The combination with the recording-wheels and a pivoted plate, means for simultaneously feeding a check-strip and a record-strip between the recording-wheels and the plate, means carried by the plate for cutting off the check-strip, guiding means for the plate for guiding the record-strip away from the cutting means, and means for carrying on ink-ribbon between the check-strip and the record-strip.

22. The combination with a plurality of parallel operating-shafts with two indicators arranged, one flat and one loose, on each shaft and the flat and loose indicators arranged respectively in two rows of gear-wheels mounted on said shafts and connecting each of the said operating-shafts on one side with an indicator on the other side, so as to cause the indicators to exhibit similarly on front and back.

708,189. PRINTING-PRESS. JAMES I. FISK, Chicago, Ill., assignor to the Goss Printing Press Company, Chicago, Ill. Filed Apr. 1, 1901. Serial No. 53,325. (No model.)

Claim.—1. A printing-press having two superposed decks, each deck consisting of two impression-cylinders in the center and a form-cylinder at each end, each form-cylinder having form/curved thereon to cover substantially half the surface of the cylinder, each form being adjacent both circumferentially and longitudinally to a blank space of substantially equal size.

2. A printing-press having two superposed decks each consisting of two printing-couples composed of a form-cylinder and an impression-cylinder, means for leading a web in succession first through the printing-couples at one end of each deck and then between the pair of impression-

cylinders in each deck and then through the printing-couples at the other end of each deck.

3. A printing-press having two superposed decks each consisting of two printing-couples composed of a form-cylinder and an impression-cylinder, means for leading a web in succession first through the printing-couples at one end of each deck and then through the printing-couples at the other end of each deck, said form-cylinders having forms thereon which are adjacent both circumferentially and longitudinally thereof to substantially equal blank spaces, the second cylinder printing on the same side of the web as the first cylinder and in the spaces left blank by the first cylinder.

4. A printing-press having two superposed decks each consisting of two printing-couples composed of a form-cylinder and an impression-cylinder, means for leading a web in succession first through the printing-couples at one end of each deck and then between the pair of impression-cylinders in each deck, and means for conducting an offset web with the printed web while passing between the impression-cylinders and through the second pair of printing-couples.

708,190. PRESS FOR EXPRESSING JUICE FROM FRUIT OR OTHER MATERIAL. HERBERT A. SHREVE, Cleveland, Ohio. Filed Dec. 28, 1901. Serial No. 57,398. (No model.)

Claim.—1. In a press of the character indicated, the combination with a case having juice-discharging apertures or passage-ways, and a screw conveyor arranged within and longitudinally of the case and having the channel formed between the convolutions of the thread of the conveyor discharging at the rear end of the case, of a valve for regulating the discharge of material at the rear and discharging end of the conveyor, which valve is borne by the conveyor, and means for operating the valve.

2. In a press of the character indicated, the combination with a cylindrical case having juice-discharging apertures or passage-ways, and a screw conveyor arranged within and longitudinally of the case and provided, at its discharging end, with a circular rim snugly but easily fitting within the surrounding case and provided with a discharging-aperture communicating with the channel formed between the convolutions of the thread of the conveyor of a valve carried by the conveyor and arranged as required to render it capable of more or less closing the said aperture, and means for operating the valve.

3. In a press of the character indicated, the combination with a cylindrical case having juice-discharging apertures or passage-ways, and a screw conveyor arranged within and longitudinally of the case and provided, at its discharging end, with a circular rim snugly but easily fitting within the surrounding case and having a discharging-aperture communicating with the channel formed between the convolutions of the thread of the conveyor, of a valve journaled in the case or body of the conveyor so as to render it capable of movement from and toward the said body or case, which valve is arranged as required to render it capable of more or less closing the said aperture, and means for operating the valve, and the

said body or case being cut away to accommodate the location and operation of the said valve.

4. In a press of the character indicated, the combination with a cylindrical case having juice-discharging apertures or passage-ways, a shaft extending centrally and longitudinally through the said case, a screw conveyor operatively mounted upon the said shaft and provided, at its discharging end, with a circular rim which snugly but easily fits within the surrounding case and has a discharging-aperture communicating with the channel formed between the convolutions of the thread of the conveyor, of a valve carried by the conveyor and arranged as required to render it capable of more or less closing the said aperture, a tubular shaft embracing the first-mentioned shaft and having a cam for operating the said valve.

5. In a press of the character indicated, the combination, with a case having juice-discharging apertures or passage-ways, and a screw conveyor arranged within and longitudinally of the case, of a series of partitions or followers arranged in axial line and transversely of the channel formed between the convolutions of the thread of the conveyor and movable edgewise and longitudinally of the conveyor and adapted to be actuated by the said thread toward the rear and discharging end of the conveyor during the operation of the conveyor, and a suitably-applied endless carrier carrying the said partitions or followers, and the aforesaid case being slotted to accommodate the location and operation of the said partitions or followers.

708,191. BUNK FOR CORSETS. GEMMELL F. DE GRANGE, Park, France. Filed Aug. 31, 1901. Serial No. 72,735. (No model.)

Claim.—1. The combination with a pair of metal bunks provided along their meeting edges with reciprocal fastening devices, and at their outer margins with closed keepers, of a corset provided with stiffening-strips *d d* provided with closed keepers along their free edges, and lacing-cords engaging the keepers on the bunks and stiffeners, substantially as set forth.

2. The combination with a pair of metal bunks provided along their meeting edges with reciprocal fastening devices, and at their outer margins with closed keepers, of a corset provided with stiffening-strips *d d* provided with closed keepers along their free edges, and lacing-cords engaging the keepers on the bunks and stiffeners, the said keepers alternating on the respective stiffeners and the bunks to which they are laced, a single lacing-cord being employed, as set forth.

708,192. TONGS FOR PHOTOGRAPHIC PLATES. OSWALD SMITH, New York, N. Y. Filed Oct. 22, 1901. Serial No. 73,488. (No model.)

Claim.—1. Tongs for photographic plates, consisting of two sub-curved spring-actuated members, each provided with a handle, a downwardly-extending shank, and a lateral right-angular jaw, said jaw being provided with a longitudinal inwardly-bent retaining-flange, substantially as set forth.

2. Tongs for photographic plates, consisting of two sub-curved and spring-actuated sections, each section having an angular jaw with a flat bottom portion, an upright rear flange and retaining side flanges, said side flanges being inwardly bent so as to hold the plate in position, substantially as set forth.

708,193. THREAD-CUTTING APPLIANCE. ROBERT A. HAMILTON, Brooklyn, N. Y. Filed Nov. 9, 1902. Renewed Apr. 3, 1903. Serial No. 101,234. (No model.)

Claim.—1. A plurality of series of simultaneously-operable thread-cutting surfaces, means to move the same in a plane past the article to be threaded, a work-support, and means to rotate the same and to impart simultaneously thereto a pitch movement.

2. A plurality of series of simultaneously-operable thread-cutting surfaces, means to rotate the same in a plane past the article to be threaded, a work-support, and means to rotate the same and to impart simultaneously thereto a pitch movement.

3. A plurality of connected series of simultaneously-operable thread-cutting surfaces, means to move the same in a plane past the article to be threaded, a work-support, and means to rotate the same and to impart simultaneously thereto a pitch movement.

4. One or more series of thread-cutting surfaces moving while in operation in a plane tangent to the surface acted upon, a work-support, and means to impart to said series of thread-cutting surfaces and to said work-support simultaneous, relative, rotary and pitch movements.

5. A rotary head having its end face provided with one or more series of thread-cutting surfaces, a work-support, means to impart to said head bodily, and to said work-support simultaneous, relative, rotary and pitch movements.

6. A rotary head, having its end face provided with one or more radial series of thread-cutting surfaces, a work-support, and means to impart thereto simultaneous, relative, rotary and pitch movements.

7. A plurality of traveling series of thread-cutting surfaces, corresponding surfaces of each series while cutting traveling in the same plane and path, a work-support, and means to impart thereto and to said series of thread-cutting surfaces simultaneous, relative, rotary and pitch movements.

8. A rotary head having its end face provided with one or more radial series of thread-cutting surfaces, and means to rotate the same for the purpose described.

9. The within-described screw-thread-cutting device, formed in the shape of a ring or cylinder and having on its end face a series of concentrically-arranged cutters, with means for rotating the same, to operate as described.

10. In a thread-cutting device the combination of a rotating shaft, a cutter attached thereto, having on its end face a series of concentric cutters, a work-carrying shaft, and means for moving the work at the desired pitch into contact with the concentric cutter.

708,194. STREET-SWEEPER. PETER R. HAMBURY, New York, N. Y. Filed Feb. 27, 1902. Serial No. 93,002. (No model.)

Claim.—1. A sweeper comprising a vehicle having a body portion, longitudinal conveyor-casing supported beneath said body portion and

open at its front end and the rear end of which is in communication with a dust and dirt receptacle, a brush-holder hinged to the front end of the conveyor-casing and adapted to be raised and lowered, the rear bottom portion of the brush-holder being inclined downwardly and forwardly, and the front portion thereof being open, brushes mounted in the brush-holder and a conveyor mounted in the conveyor-casing and extending downwardly over the inclined bottom portion of the brush-holder, and means for operating the brushes and the conveyor, substantially as shown and described.

2. A street-sweeper comprising a vehicle having a body portion, a conveyor-casing mounted thereunder and open at its front end and the rear end of which is in communication with the dust and dirt receptacle, a brush-holder hinged to the front end of the conveyor-casing and the rear bottom portion of which is inclined downwardly and forwardly and the front bottom portion of which is open, brushes mounted in the brush-holder, a conveyor placed in the conveyor-casing and the front end of which extends downwardly and forwardly over the inclined portion of the brush-holder, a motor geared in connection with the axle of the vehicle and with the conveyor and the brushes, and means for operating said motor, substantially as shown and described.

3. A street-sweeper comprising a vehicle having a body portion, a conveyor-casing mounted beneath said body portion and open at its front end and the rear end of which is in communication with a dust and dirt receptacle, a brush-holder hinged to the front end of the conveyor-casing and the rear bottom portion of which is inclined downwardly and forwardly and the front bottom portion of which is open, a brush-shaft mounted in said brush-holder casing and provided with two brushes, bars pivoted to the sides of the body portion of the casing and extending forwardly and downwardly, a supplemental shaft mounted in the ends of said bars and at the front end of the brush-holder, said shaft being provided with a plurality of cylindrical brushes, means for raising and lowering the brush-holder and the brushes, a conveyor mounted in the conveyor-casing and extending downwardly and forwardly over the inclined portion of the brush-holder and means for operating said conveyor, substantially as shown and described.

4. An apparatus of the class described, comprising a vehicle having a body portion, a conveyor-casing mounted thereunder and open at its front end, a brush-holder hinged to said conveyor-casing at the front end thereof and the rear bottom portion of which is inclined downwardly and forwardly and the front bottom portion of which is open, a brush-shaft mounted in said brush-holder, bars pivoted to the body of the vehicle and extending forwardly and downwardly, another brush-shaft mounted in the ends of said bars and occupying the front end of the brush-holder, said brush-shafts being geared in connection, means for raising and lowering the front end of the brush-holder and the front ends of said bars, a conveyor placed in the conveyor-casing and extending downwardly and forwardly over the inclined bottom portion of the brush-holder and means for operating the vehicle, the conveyor and the brushes in the brush-holder, substantially as shown and described.

708,195. HOT-AIR FURNACE. EDWARD L. HEALD, New Island, Ill., assignor to Gasolene Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1901. Serial No. 73,291. (No model.)

Claim.—1. In a hot-air furnace, the combination with the heating-shell, outer casing and a cold-air flue communicating with the heating-chamber between said shell and casing, the aperture to which flue is in the base of said casing, of a fire-box so disposed within said heating-shell as to provide an annular chamber between said fire-box and shell, and means for concentrating the hot gaseous products of combustion at a point within said annular chamber substantially opposite the aperture of said cold-air flue.

2. In a hot-air furnace, the combination with the heating-shell, outer

casing and a cold-air flue having its induction-aperture in the base of said casing, of a fire-box so disposed within said heating-shell as to provide a chamber between said fire-box and shell, and means for causing the flow of hot gaseous products of combustion downward through said chamber and their concentration at a point within the heating-shell substantially opposite the aperture of said cold-air flue.

3. In a hot-air furnace, the combination with the heating-shell, outer casing and a cold-air flue having its induction-aperture in the base of said casing, of a fire-box so disposed within said heating-shell as to provide a chamber between said fire-box and shell, and means for causing a comparatively uniformly distributed flow of the hot gaseous products of combustion over the top of said fire-box and down through said chamber prior to their concentration for final discharge at a point at the base of said chamber and within the heating-shell substantially opposite the aperture of said cold-air flue.

4. In a hot-air furnace, the combination with the heating-shell, outer casing and a cold-air flue having its induction-aperture in the base of said casing, of a fire-box so disposed within the heating-shell as to provide a chamber between said fire-box and said shell, of a vertical flue within said chamber having its inlet-aperture near the base of said chamber and the top of which communicates with the smoke-pipe, thereby necessitating a comparatively uniformly distributed downward flow of the hot gaseous products of combustion through said chamber prior to concentration at the aperture of said vertical flue.

5. In a hot-air furnace, the combination with the heating-shell, outer casing and a cold-air flue having its induction-aperture in the base of said casing, of a fire-box so disposed within the heating-shell as to provide a chamber between said fire-box and shell, of a vertical flue within said chamber having its inlet-aperture near the base of said chamber and substantially opposite the induction-aperture of said cold-air flue, and the top of which vertical flue communicates with the smoke-pipe, thereby necessitating a comparatively uniformly distributed downward flow of the hot gaseous products of combustion through said chamber prior to their concentration at the aperture of said vertical flue.

6. In a hot-air furnace, the combination with the heating-shell, outer casing and a cold-air flue having its induction-aperture in the base of said casing, of a fire-box so disposed within the heating-shell as to provide a chamber between said fire-box and shell, of a vertical flue within said chamber having its inlet-aperture near the base of said chamber and substantially opposite the induction-aperture of said cold-air flue, a substantially U-shaped radiator between said shell and casing, means for conveying said gaseous products from the top of said vertical flue to the top of said radiator, and means for conveying said gases from the bottom of said radiator to the smoke-pipe.

7. In a hot-air furnace, the combination with the heating-shell, outer casing and a cold-air flue having its induction-aperture in the base of said casing, of a fire-box so disposed within the heating-shell as to provide a chamber between said fire-box and shell, of a vertical flue within said chamber having its inlet-aperture near the base of said chamber and substantially opposite the induction-aperture of said cold-air flue, a substantially U-shaped radiator between said shell and casing, a suitable flue connecting the top of said vertical flue with the top of said radiator and a flue connecting the bottom of said radiator with the smoke-pipe.

8. In a hot-air furnace, the combination with the heating-shell, outer casing and a cold-air flue having its induction-aperture in the base of said casing, of a fire-box so disposed within the heating-shell as to provide a chamber between said fire-box and shell, a vertical flue within said chamber having its inlet-aperture near the base of said chamber and substantially opposite the induction-aperture of said cold-air flue, a substantially U-shaped radiator between said shell and casing, said radiator being divided horizontally by a baffle-plate into two connecting compartments, a suitable flue connecting the top of said vertical flue with the upper compartment of said radiator, and a flue connecting the lower compartment of said radiator with the smoke-pipe.

708,196. INSULATED WIRE. JOHN A. HEART, Philadelphia, Pa., assignor to the Teter-Henry Developing Company, Philadelphia, Pa., and Charleston, W. Va., a Corporation of West Virginia. Filed Feb. 14, 1901. Renewed Nov. 21, 1901. Serial No. 81,172. (No specimen.)

Claim.—1. An insulating-covering for electric wires, consisting of asbestos or similar material and an adhesive mixture, such as a silicate and an oxid, adapted to firmly unite the asbestos to the wire and to render the same impervious to moisture.

2. An insulating-covering for electric wires, consisting of a coating or covering of silicate of sodium and manganese oxid and asbestos flakes forced into the coating or covering under pressure.

3. An insulating-covering for electric wires, consisting of a coating or covering of a silicate and an oxid and asbestos forced into the coating or covering under heat and pressure.

4. An insulating-covering for electric wires, consisting of asbestos

or similar material and an adhesive mixture, such as silicate of sodium and manganese oxid adapted to thoroughly conglomerate with said asbestos or similar material under heat and pressure so as to firmly cling to the wire.

708,197. MANUFACTURE OF INSULATED WIRE. JOHN A. HEART, Philadelphia, Pa., assignor to the Teter-Henry Developing Company, Philadelphia, Pa., and Charleston, W. Va., a Corporation of West Virginia. Filed Feb. 22, 1901. Renewed Nov. 21, 1901. Serial No. 81,173. (No model.)

Claim.—1. In an apparatus of the character described, a tank containing a liquid adhesive mixture through which the wire is adapted to be drawn to become coated therewith, a receptacle in which the fibrous material, comprising the covering, is adapted to be received, means for feeding said fibrous material from said receptacle, and means for blowing the material so fed upon the coated wire, substantially as and for the purposes described.

2. In an apparatus of the character described, a receptacle adapted to contain a fibrous, flaky insulating material, means for feeding said material from said receptacle, a blower-chamber adapted to receive the material so fed, a blower situated at one end of said chamber and a tubular extension at the other end of said chamber through which the wire is adapted to be fed, substantially as and for the purposes described.

3. In an apparatus of the character described, in combination with means for feeding the wire, and means for coating said wire with an adhesive substance, of means for blowing upon the coated surface of the wire an insulating material in fibrous, flaky form, substantially as and for the purposes described.

4. In an apparatus of the character described, in combination with means for feeding the wire and means for coating said wire with an adhesive substance, of a receptacle adapted to be traversed by the coated wire and containing a fibrous flaky insulating material, a tubular extension partly inclosing said wire, means for conveying the insulating material from said receptacle toward said tubular extension, and means for blowing the material into the tubular extension and onto the wire, substantially as and for the purposes described.

5. In an apparatus of the character described, a drum-like receptacle divided into two main compartments by an inclined partition, one of said compartments arranged to contain the insulating material, a base carrying said receptacle, a hollow revolvable shaft to which the base is centrally secured, said shaft constituting a guide for the wire and the means for rotating the drum, means for feeding the wire axially through the drum, and means controlled by the rotation of the drum for blowing the material in fibrous flaky form upon the wire as said drum revolves around the wire, substantially as and for the purposes described.

6. In an apparatus of the character described, a drum divided into two main compartments by an inclined partition, the upper of said compartments containing the insulating material, and having an outlet at the lowermost end of the partition adjacent to a peripheral wall of the drum, a picker-wheel arranged below said outlet, a conveyor located below the picker-wheel, a chamber into which the conveyor discharges intermediate of the ends, a blower located in the chamber at one end thereof adjacent to the peripheral wall of the drum, a tubular guide at the opposite end of said blower-chamber through which the wire is adapted to be fed, means for revolving said drum and tubular guide about the wire as an axis, and means controlled by the revolution of the drum for actuating the picker-wheel, conveyor and blower, substantially as and for the purposes described.

7. In an apparatus of the character described, a drum divided into two main compartments by an inclined partition, the upper compartment adapted to contain the insulating material, a blower-chamber located below the upper compartment, means for feeding the material from said upper compartment to the blower-chamber intermediate of its ends, said chamber arranged radially with respect to the drum, a blower located at the outer end of said blower-chamber, a tubular guide adapted to receive the wire and located at the axial or outlet end of said blower-chamber, and means controlled by the rotation of the drum for actuating said blower, substantially as and for the purposes described.

8. In an apparatus of the character described, a revolvable receptacle divided into compartments, in one of which the insulating material is adapted to be contained, means for feeding the wire to be covered axially through the revolvable receptacle, and means for feeding and blowing the insulating material toward and upon said wire, said feeding and blowing means revolving with the receptacle, substantially as and for the purposes described.

9. In an apparatus of the character described, in combination with the revolvable drum having a compartment containing the insulating material and traversed axially by the wire to be covered, and means for blowing the material upon the wire, said means traveling with the drum, of a shaft controlling the blowing means, a friction-wheel located upon said shaft, and a track surrounding the drum and upon which the friction-wheel is adapted to travel as the drum revolves, substantially as and for the purposes described.

10. In an apparatus of the character described, in combination with a revolvable drum, having a compartment containing the insulating material and traversed axially by the wire to be covered, and means for blowing the material upon the wire, said means traveling with the drum, of a shaft controlling said means and adapted to receive a friction-wheel, a track surrounding the drum and upon which the friction-wheel is adapted to travel as the drum revolves, and means for elevating or depressing said track toward or away from the shaft, whereby friction-wheels of varying diameters may be interchangeably secured to said shaft to regulate the speed of said shaft, substantially as and for the purposes described.

11. In an apparatus of the character described, in combination with means for coating the wire with an adhesive substance and means for blowing the insulating material in flaky fibrous form upon said coated wire to cause the same to adhere thereto, of means for compressing and compacting said flaky fibrous material on said wire, substantially as and for the purposes described.

12. In an apparatus of the character described, a spool upon which the covered wire is adapted to be wound, a driven shaft upon which the spool is loosely arranged, a collar secured to said shaft, a split sleeve adapted to be clamped frictionally to said collar, and an arm or pin connecting said split sleeve to the side of said spool, substantially as and for the purposes described.

13. In an apparatus of the character described, a spool upon which the covered wire is adapted to be wound, a driven shaft upon which the spool is loosely arranged, a collar secured to said shaft, a split sleeve

adapted to be clamped frictionally to said collar, and means for connecting said sleeve to said spool, substantially as and for the purposes described.

14. In an apparatus of the character described, means for coating wire with an adhesive substance, means for blowing upon the coated surface of the wire a non-combustible fibrous material or substance to cause the same to adhere thereto, means for compressing the material or substance applied to said coated and covered wire in the laying up of the same in the machine, substantially as and for the purposes described.

15. In an apparatus of the character described, means for applying an adhesive coating and applying a fibrous material or substance to a wire, and means for compressing the material or substance applied to said coated and covered wire by drawing the wire between a plurality of rollers, at varying angles and said rollers adapted to rotate around the wire in its passage between them, substantially as and for the purposes described.

708,198. INSULATING METALLIC SURFACES OR WIRES. JOHN A. HEARTY, Philadelphia, Pa., assignor to the Teter-Hearty Developing Company, Philadelphia, Pa., and Charleston, W. Va., a Corporation of West Virginia. Filed Nov. 9, 1901. Serial No. 81,720. (No specimens.)

Claim.—1. As an improvement in insulating material adapted for application to a metallic surface or wire, a paste of albuminous or gelatinous material and lime and dry and flaky asbestos impregnated with chemical salts, substantially as and for the purposes described.

2. As an improvement in insulating material adapted for application to a metallic surface or wire, a paste of albuminous or gelatinous material and lime, combined with dry and flaky asbestos impregnated with chemical salts and a covering of the paste mixed with chemical salts, substantially as and for the purposes described.

3. As an improvement in insulating material adapted for application to a metallic surface or wire, a paste of albuminous or gelatinous material and lime combined with dry and flaky asbestos impregnated with chemical salts and embedded in the paste.

4. As an improvement in insulating material adapted for application to a metallic surface or wire, a paste of albuminous or gelatinous material and lime, combined with dry and flaky asbestos impregnated with chemical salts and embedded in the paste, and a covering of the paste combined with chemical salts surrounding the embedded asbestos.

708,199. WATER, ACID, AND FIRE PROOF COMPOSITION. JOHN A. HEARTY, Philadelphia, Pa., assignor to the Teter-Hearty Developing Company, Philadelphia, Pa., and Charleston, W. Va., a Corporation of West Virginia. Filed Nov. 11, 1901. Serial No. 81,820. (No specimens.)

Claim.—1. A water, acid and fire proof insulation for metallic conductors, consisting of a covering of asbestos coated with a mixture of oil and metallic oxide, said mixture combined by boiling until the free acid of the oil has been driven off.

2. A water, acid and fire proof insulation for metallic conductors, consisting of a covering of asbestos united to the part to be insulated and then coated with a mixture of oil and metallic oxide.

3. A water, acid and fire proof insulation for metallic conductors, consisting of a layer of asbestos covering the surface to be insulated and a coating of oil combined with metallic oxide applied directly to the covering of asbestos.

4. A water, acid and fire proof insulation for metallic conductors, comprising a covering of asbestos, coated with oil, red lead and litharge combined by boiling until the free acid of the oil has been driven off.

5. The method of insulating metallic conductors which consists in first covering the surface to be insulated with asbestos, second forming a mixture of oil and metallic oxide by boiling the oil and oxide until the free acid of the oil has been driven off and finally coating the asbestos covering with the mixture of oil and metallic oxide thus formed.

708,200. METHOD OF PREPARING ASBESTOS FOR USE AS AN INSULATION FOR METALLIC SURFACES. JOHN A. HEARTY, Philadelphia, Pa., assignor to the Teter-Hearty Developing Company, Philadelphia, Pa., and Charleston, W. Va., a Corporation of West Virginia. Original application filed Nov. 9, 1901, Serial No. 81,879. Divided and this application filed Jan. 8, 1903. Serial No. 84,967. (No specimens.)

Claim.—1. The method of preparing asbestos for use as an insulation for metallic surfaces, which consists in impregnating asbestos with sulfate of ammonia, boric acid, sulfate of soda and chloride of ammonia and soda in liquid form and picking the impregnated asbestos into fibrous or flaky form prior to application by adhesion to the metallic surface, substantially as and for the purposes described.

2. The method of preparing asbestos for use as an insulation for me-

tallic surfaces, which consists in impregnating asbestos with a solution containing sulfate of ammonia, boric acid, sulfate of soda, chlorid of ammonia and chlorid of soda in water, drying the asbestos and then separating the dried asbestos into flaky or fibrous form, substantially as and for the purposes described.

708,201. METHOD OF INSULATING METALLIC SURFACES WITH ASBESTOS. JOHN A. HART, Philadelphia, Pa., assignor to the Teter-Henry Developing Company, Philadelphia, Pa., and Charleston, W. Va., a Corporation of West Virginia. Original application filed Nov. 8, 1901. Serial No. 81,718. Revised and this application filed Jan. 9, 1902. Serial No. 81,712. (No specimens.)

Claim.—1. The method of insulating metallic surfaces with asbestos, which consists in first applying to the metallic surface a paste or cement, second, in embedding asbestos in fibrous or flaky form in said cement, and finally covering the asbestos with a solution of chemical or metallic salts combined with a gluey or albuminous substance containing lime.

2. The method of insulating metallic surfaces with asbestos, which consists in first impregnating the asbestos with a solution of chemical or metallic salts, second, reducing the impregnated asbestos to flaky or fibrous form, third, applying an adhesive paste or cement to the metallic surface, fourth, applying the asbestos to the adhesive metallic surface, and finally coating the asbestos thus applied with a solution of chemical or metallic salts combined with an albuminous or gelatinous substance containing lime.

3. The method of insulating metallic surfaces with asbestos, which consists in first coating the metallic surface with an albuminous or gelatinous substance containing lime in a solution of chemical or metallic salts, second, applying and compressing asbestos in fibrous or flaky form onto said surface, third, coating the asbestos-covered metallic surface with a fire and water proof paste or cement, and finally compressing the coated fibrous or flaky asbestos on said metallic surface.

4. The method of insulating metallic surfaces with asbestos, which consists in applying directly to the metallic surface to be insulated a paste of lime combined with a gelatinous or albuminous solution, then applying and compressing asbestos in fibrous or flaky form into the paste applied to said surface, then coating the asbestos-covered surface with metallic or chemical salts and finally compressing the coated fibrous or flaky asbestos onto said metallic surface.

5. The method of insulating metallic surfaces with asbestos, which consists in first applying to the metallic surface to be insulated a paste consisting of an albuminous or gelatinous solution combined with lime and with metallic or chemical salts, then applying flaky or fibrous asbestos to said paste, and finally compressing the asbestos upon the metallic surface.

6. The method of insulating metallic surfaces with asbestos, which consists in first applying to the metallic surface to be insulated a paste consisting of an albuminous or gelatinous solution combined with lime, second, embedding flaky or fibrous asbestos in said paste, and finally applying to the asbestos a fire and water proof paste or cement.

708,202. MACHINE FOR FORMING RIMS ON SCYTHES. ANTOINE HENRIOT, St. Etienne, France. Filed Dec. 10, 1901. Serial No. 85,307. (No model.)

Claim.—1. In a machine for forming ribs on scythe-blades, the combination of a base having a fixed jaw, a movable jaw secured thereto, a frame supported on said base, a ram guided in said frame, matrices carried by said base and ram, means for clamping a scythe-blade between said jaws, power-transmitting mechanism for actuating said ram, and means cooperating with said power-transmitting mechanism for actuating said clamping means, substantially as set forth.

2. In a machine for forming ribs on scythe-blades, the combination of a base having a fixed jaw, a movable jaw secured thereto, a frame supported on said base, a ram guided by said frame, cam means for clamping the cross-head of said ram, releasing means connected therewith, matrices carried by said ram and base, means for clamping a scythe-blade between said jaws, a rotating drum, a plurality of belts for actuating the jaw-clamping means, and a belt for raising said ram, said belts being operated by engagement with said drum, substantially as set forth.

3. In a machine for forming ribs on scythe-blades, the combination of a base having a fixed jaw, a movable jaw secured thereto, a frame supported on said base, a ram guided by said frame, cam means on said frame for clamping the cross-head of said ram, releasing means connected therewith, matrices carried by said ram and base, said matrices being provided with tapering grooves and having adjacent edges concave and convex, cam-levers for clamping the jaws, belts connected with said levers, a drum for actuating said belts, and a ram-lifting belt actuated by said drum, substantially as set forth.

708,203. BOTTLE-CAPPING MACHINE. OSCAR REYNOLDS, New York, N. Y. Filed Mar. 26, 1902. Serial No. 100,084. (No model.)

Claim.—1. In a device of the character described, the combination of a cylinder, an elastic sleeve fitted therein, a removable cap on the end of said cylinder, a central opening in said cap of lesser diameter than the bore of the cylinder, a portion of said cap, extending from the said opening to the inner surface of the cylinder, inwardly beveled, and means for causing the said sleeve to be pressed against the said beveled portion.

2. In a device of the character described, the combination of a cylinder, an elastic sleeve therein, a removable cap, a central opening in the said cap, a sliding plug within the said cylinder, a plunger having one end in contact with the said plug, a sleeve into which the opposite end of said plunger passes, an interior threaded portion of said sleeve at its opposite end, and a rod threaded therein and means for causing the said rod to reciprocate.

3. In a device of the character described, the combination of a cylinder, an elastic sleeve fitted therein, a cap on the end of said cylinder, a central opening in said cap of lesser diameter than the bore of the cylinder, and an inwardly-beveled portion of said cap extending from the central opening to the inner surface of the cylinder, and means for causing pressure upon the end of the said sleeve opposite the cap.

4. In a device of the character described, the combination of a cylinder, an elastic sleeve therein, a cap on the end of said cylinder, a central opening in said cap, a sliding plug within said cylinder, a plunger having one end in contact with said plug, a sleeve which receives the outer end of said plunger and a rod adjustably connected to the end of said sleeve opposite the one which receives the end of the plunger.

708,204. LEVELING-MACHINE. JOHN J. REITZ, Lynn, Mass. Filed Oct. 13, 1900. Serial No. 33,640. (No model.)

Claim.—1. In a leveling-machine, two or more pivoted jacks, two or more reciprocating molds arranged to move in unison, automatic means for alternately moving each jack to a position of clearance and permitting its return to a position of pressure, and provisions whereby either jack may be prevented from being returned to a position of pressure without interfering with the motion of the molds or the leveling action of the active jack and its complementary mold.

2. A leveling-machine comprising an oscillatory jack, a complementary mold, power devices whereby the jack is swung from a position of clearance to a position for pressure, and provisions whereby said jack

may be manually retained in a position of clearance irrespective of the movement of the power device.

3. A leveling-machine comprising a reciprocating mold, an oscillatory jack, power device whereby said mold and jack are moved from their respective positions of clearance to positions of pressure, and provision for holding said jack against movement during the operation of the mold.

4. A machine of the character specified comprising jacks and complementary molds, and automatic mechanism for causing said jacks to occupy in succession a position of clearance and a position for pressure, with provision whereby each jack is retained in a position of clearance while the other is moved from a position of clearance to a position for pressure and returned to original position.

5. A leveling-machine comprising a mold, a head carrying said mold and reciprocating in approximately horizontal planes, a normally upright jack, and automatic means whereby said jack moves automatically from an upright position of clearance to a recumbent position for pressure.

6. A leveling-machine comprising a mold-carrier, a jack, and automatic means whereby said mold-carrier moves said jack to a position of clearance.

7. A leveling-machine comprising a mold-carrier, an oscillatory jack, and means whereby said mold-carrier moves said jack from a position for pressure to a position of clearance, that is at an angle to the plane occupied by the mold and jack when exerting pressure.

8. A leveling-machine comprising jacks and complementary molds, means for moving said molds toward said jacks, and automatic means for oscillating said jacks alternately to and from a position of clearance in succession.

9. A leveling-machine comprising a mold and a complementary jack, a reciprocating mold-carrier, movable in lines inclined from the vertical, a pivoted jack-carrier having an upright position of clearance, and provision whereby said jack-carrier is controlled in its movements by the mold-carrier.

10. A duplex leveling-machine comprising molds and complementary jacks, oscillatory jack-carriers adapted to have an approximately upright position of clearance and a recumbent position for pressure, a mold-carrier located with respect to the jacks whereby the mold complementary to an upright jack is out of contact therewith when the other mold and jack are in a position of pressure, means for reciprocating said mold-carrier, and means whereby said jacks alternately occupy a position for pressure.

11. A leveling-machine comprising an automatically-operated jack and a complementary mold, said jack being automatically movable to a position for pressure, and a latching device for holding said jack in a position of clearance.

12. A leveling-machine comprising automatically and alternately operated jacks and complementary molds, said jacks being movable to a position for pressure, latching devices for holding said jacks in a position of clearance, and tripping mechanism whereby said jacks are alternately released from the latching devices.

13. A leveling-machine comprising a jack and a complementary mold, a carrier for the jack movable to a position for pressure, a reciprocating head for the mold, and means whereby said head regulates the movement of said jack-carrier to a position for pressure.

14. A leveling-machine comprising a jack and a complementary mold, a carrier for the jack movable to a position for pressure, a reciprocating head for the mold, connection between said head and said jack-carrier whereby the latter is moved by the former to a position of clearance.

15. A leveling-machine comprising a jack and a complementary mold, arranged to have the lines of pressure inclined from the vertical, a pivoted jack-carrier movable to an upright position of clearance and overbalanced to fall automatically to a position for pressure, and mechanism for automatically latching said jack-carrier in and releasing it from a position of clearance.

16. A leveling-machine comprising a jack and a complementary mold, arranged to have the lines of pressure inclined from the vertical, a pivoted jack-carrier movable to an upright position of clearance and overbalanced to fall automatically to a position for pressure, a latch connected to said jack-carrier to hold it in a position of clearance, and means for tripping said latch.

17. A leveling-machine comprising a jack and a complementary mold arranged to have the lines of pressure inclined from the vertical, a pivoted jack-carrier movable to an upright position of pressure and overbalanced to fall automatically to a position for pressure, a latch connected to said jack-carrier to hold it in a position of clearance, means for tripping said latch, and a reciprocating head for the mold, having provision for moving the jack-carrier to a position for pressure.

18. A leveling-machine comprising a reciprocating carrier having molds, oscillatory jacks complementary to said molds, a rock-shaft having an arm or arms connected to said carrier, a crank-shaft operatively connected to said rock-shaft, and provision whereby at each reciprocation of the mold-carrier, one or the other of said jacks is moved to position to cooperate with its mold.

19. A duplex leveling-machine having a frame having side guides, a reciprocating head carrying an intermediate guide, and independently-actuating mold-carriers on said head, each sliding between the intermediate guide and one of the side guides.

708,205. MACHINE FOR MANUFACTURING RAIL-HEAD CANS, PAILS, OR OTHER VESSELS. JOHN C. HOSKINS, Maywood, Ill., assignor, by means of assignment, to American Can Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 22, 1901. Serial No. 22,502. (No model.)

Claim.—1. The combination with a pair of interior ear-forming male dies and an interior work-holder adapted to reciprocate in respect thereto, a pair of reciprocating exterior ear-forming female dies operating to form alternately first one half-ear and then the other, substantially as specified.

2. The combination with a pair of interior ear-forming male dies and an interior work-holder adapted to reciprocate in respect thereto, a pair of reciprocating exterior ear-forming female dies operating to form alternately first one half-ear and then the other, and a pair of eye-punching dies, substantially as specified.

3. The combination with a pair of interior ear-forming male dies and an interior work-holder adapted to reciprocate in respect thereto, a pair of reciprocating exterior ear-forming female dies operating to form alternately first one half-ear and then the other, said exterior female dies having projecting lips adapted to fit or lap over the work-holder, substantially as specified.

4. The combination with a pair of interior ear-forming male dies, a stationary die-holder therefor, a reciprocating work-holder, springs between the work-holder and die-holder to return the work-holder to its normal position, and a pair of reciprocating, exterior, ear-forming female dies operating to form alternately first one half-ear and then the other, substantially as specified.

5. The combination with a pair of interior ear-forming male dies, a stationary die-holder therefor, a reciprocating work-holder, springs between the work-holder and die-holder to return the work-holder to its normal position, and a pair of reciprocating, exterior, ear-forming female dies operating to form alternately first one half-ear and then the other, said work-holder having guide-pins to register the ear projections on the sheet-metal ring or work with the dies, substantially as specified.

6. The combination with a pair of interior ear-forming male dies, a stationary die-holder therefor, a reciprocating work-holder, springs between the work-holder and die-holder to return the work-holder to its normal position, and a pair of reciprocating, exterior, ear-forming female dies operating to form alternately first one half-ear and then the other, and a pair of independently-operated eye-punching guides, substantially as specified.

7. The combination with a pair of interior ear-forming male dies, a stationary die-holder therefor, a reciprocating work-holder, springs between the work-holder and die-holder to return the work-holder to its normal position, and a pair of reciprocating, exterior, ear-forming female dies operating to form alternately first one half-ear and then the other, a pair of independently-operated eye-punching guides, and extractor-pins for discharging the work from the holder, substantially as specified.

8. The combination with a pair of interior ear-forming male dies and an interior work-holder adapted to reciprocate in respect thereto, a pair of reciprocating exterior ear-forming female dies operating to form alternately first one half-ear and then the other, and guide-pins on the work-holder for causing the ear projections on the sheet-metal ring or work to register with the dies, substantially as specified.

9. The combination with a pair of interior ear-forming male dies and an interior work-holder adapted to reciprocate in respect thereto, a pair of reciprocating exterior ear-forming female dies operating to form alternately first one half-ear and then the other, and reciprocating extractor-pins for discharging the work from the work-holder, substantially as specified.

708,206. BEER-TAPPING APPARATUS. PATRICK H. KEMM, Maryland, Pa. Filed Oct. 22, 1901. Serial No. 78,519. (No model.)

Claim.—In a beer-tapping apparatus, the combination with a flexible collar engaging in the bung-hole of a barrel, of a bushing having an enlarged upper end, the lower edge of which is curved inwardly and merges in an inclined lower end, said enlarged end provided with an inwardly-extended annular recess communicating with the central bore of the bushing, said central bore being of smaller diameter than the said recess and of the same diameter throughout its length, a flexible washer seated in the said recess, and engaging the periphery of a drawing-tube arranged in the bushing-bore, a tightening-rod engaged in the said threaded recess, and an upwardly-inclined tubular projection having an externally and internally curved-shoulder outer end, and its inner end formed integral with the enlarged upper end of the said bushing, said tubular projection provided with an inclined bore, communicating with a draw-

ingly-inclined bore in the said enlarged portion, said drawing-off tube and said bushing having a space therebetween communicating with the inclined bore of the said tubular projection, substantially as described.

708,207. COIN-CONTROLLED MECHANISM FOR VENDING-MACHINES. DALLAS KNOWLES, Washington, D. C. Filed Jan. 20, 1902. Serial No. 92,002. (No model.)

Claim.—1. In a vending-machine, the combination with a delivery mechanism, of means for operating said delivery mechanism, a coin-advancing mechanism operated by said delivery-operating means, and means operated by said coin-advancing mechanism to allow a plurality of operations of the delivery mechanism upon the insertion of each single coin, whereby a plurality of articles may be vended.

2. In a vending-machine, the combination with a delivery mechanism, of means for operating said delivery mechanism, a coin-advancing mechanism operated by said delivery-operating means, and means operated by said coin-advancing mechanism to allow a plurality of successive operations of the delivery mechanism whereby a plurality of successive deliveries upon the insertion of each single coin will occur.

3. In a vending-machine, the combination with a delivery mechanism, of means for operating said delivery mechanism, a coin-advancing mechanism operated by said delivery-operating means, and a removable mechanism operated by said coin-advancing mechanism to allow said delivery mechanism to operate a plurality of times upon the insertion of each single coin, whereby a plurality of articles will be vended.

4. In a vending-machine, the combination with a delivery mechanism comprising a sliding cut-off, of means for operating the sliding cut-off, a coin-advancing mechanism operated by said cut-off-operating means, and means operated by said coin-advancing mechanism to allow a plurality of successive operations of said cut-off upon the insertion of a single coin, whereby a plurality of articles will be vended.

5. In a vending-machine, the combination with a delivery mechanism, and a trip-lever for locking said delivery mechanism and adapted to be unlatched upon the insertion of a coin, of means for retaining the trip-lever in an unlatched position upon the insertion of a coin and during a given number of successive operations of the said delivery mechanism, whereby a plurality of vendable articles may be successively delivered.

6. In a vending-machine, the combination with a cut-off and a trip-lever for locking said cut-off and adapted to be unlatched upon the insertion of a coin, of means for retaining the trip-lever in an unlatched position upon the insertion of a coin and during a given number of successive operations of said cut-off, whereby a plurality of vendable articles may be successively delivered.

7. In a vending-machine, the combination with a delivery mechanism, a trip-lever for engaging and locking the same and adapted to be disengaged therefrom by a coin and a coin-advancing mechanism, of a rotatable disk adapted to engage and retain said trip-lever in either its engaged or disengaged position and lock said coin-advancing mechanism, and means for rotating said disk so as to cause the same to engage said trip-lever.

8. In a vending-machine, the combination with a delivery mechanism, a trip-lever for engaging and locking the same and for disengaging from the same, a coinway adapted to guide a coin to select or disengage the trip-lever, and a coin-advancing mechanism, of a rotatable disk notched to engage the trip-lever when in its locked position with relation to the delivery mechanism, and means operated by the coin-advancing mechanism for rotating the disk a predetermined distance at each successive reciprocation of the coin-advancing mechanism.

9. In a vending-machine, the combination with a delivery mechanism comprising a sliding cut-off, a trip-lever engaging the same and provided with an L-shaped catch, a coinway adapted to guide the coin to depress the lever, and a coin-advancing mechanism, of a rotatable disk provided with a peripheral notch adapted to receive said L-shaped catch when the trip-lever is in its engaged position, and means for advancing

or rotating the disk a predetermined distance upon each disengagement of the trip-lever and movement of the delivery mechanism.

10. In a vending-machine, the combination with a delivery mechanism comprising a sliding cut-off, a trip-lever engaging the same and provided with an L-shaped catch, a coin-advancing mechanism, of a rotatable disk provided with a peripheral notch adapted to receive said L-shaped catch when the trip-lever is in its engaged position and when moved to support said lever, and means operated by the coin-advancing mechanism for advancing said disk at each movement thereof.

11. In a vending-machine, the combination with a delivery mechanism comprising a sliding cut-off, of a trip-lever engaging the same and adapted to be thrown out of engagement therewith upon the insertion of a coin, a disk mounted for rotation adjacent to the trip-lever and provided with depressions and adapted to engage at certain points with said trip-lever, an arm pivoted over the disk and adapted to engage the depression, a spring for throwing the arm in one direction, and a coin-advancing device connected with the cut-off and adapted to come in contact with and operate the said arm.

12. In a vending-machine, the combination with a delivery mechanism comprising a sliding cut-off, a trip mechanism engaging the cut-off and adapted to be operated upon the advancement of a coin, a coin-advancing mechanism, a rotatable disk adapted to engage the trip mechanism at predetermined points, and means for advancing or partially rotating the disk upon each movement of the coin-advancing mechanism and the cut-off.

13. In a vending-machine, the combination with a delivery mechanism comprising a sliding cut-off, of a trip mechanism engaging the cut-off and adapted to be operated by a coin, a coin-advancing mechanism connected with the trip mechanism, a disk mounted for rotation at one side of the trip mechanism, a yielding vibratory arm adapted to engage with and advance or partially rotate said disk, said arm being adapted to be operated by said coin-advancing mechanism.

14. In a vending-machine, the combination with a delivery mechanism comprising a sliding cut-off, a trip-lever at its rear end engaging said cut-off and between its ends provided with a leg at its front end adapted to be depressed by a coin, a coin-advancing mechanism connected with the cut-off a disk mounted for rotation above the trip-lever and having peripheral notches at predetermined points for engaging the same, and between said notches adapted to support said lever in an elevated position, a vibratory arm pivoted at one side of and extending over the disk and provided with a detent adapted to engage openings in the disk, and a spring for throwing said arm in one direction, said arm being adapted to be operated in the opposite direction by the movement of the coin-advancing mechanism.

708,208. FLEXIBLE RULER. CHARLES LAWRENCE, BOSTON, MA. Filed Nov. 4, 1901. Serial No. 61,310. (No model.)

Claim.—1. A flexible ruler comprising a hard spring-strip, and a soft, flexible strip secured along one surface thereof and of less width than the hard spring-strip, the soft and flexible strip being formed in its edge with an ink-receiving gutter which partitions the resiliency of the soft strip and is overlying by the ruling edge of the ruler.

2. A flexible ruler comprising a hard spring-strip, and a soft, rubber strip secured thereto and provided in its edge with an ink-receiving gutter the walls of which partition the yielding or elastic qualities of the strip in which the gutter is formed, for the purpose specified.

3. A flexible ruler composed of a flat hard spring-strip having its ruling edge underlaid on a board, and a flat soft, elastic strip of less width secured thereto and provided in its edge with an elastic-walled gutter one wall of which registers with the beveled edge of the hard spring-strip, substantially as described.

4. A flexible ruler comprising a hard spring-strip, studs or buttons projecting from one surface thereof, and a soft, flexible, and elastic strip secured flatwise against that surface of the spring-strip which carries the studs or buttons, the latter having their heads embedded in the soft strip, substantially as described.

708,209. MALTED CEREAL FOOD AND METHOD OF MAKING SAME. JONATHAN E. LUTHER, BATTLECREEK, MICH., assignor to Charles Kuhnke, Battlecreek, Mich. Filed Sept. 10, 1901. Serial No. 74,978. (No specimen.)

Claim.—1. The herein-described process for preparing food from grain, which consists in first cooking the whole grain, cooking the mass without breaking the outer coating, drying the cooked grain, crushing it, baking the crushed product by dry heat, adding malt and water and mixing thoroughly, and finally again baking the mixture by dry heat; substantially as described.

2. In a process for preparing food from grain, cooking the whole grain, cooking the cooked grain whole in the presence of moisture, crushing the cooked grain, baking the crushed product by dry heat, adding malt and water and granulating and finally again baking by dry heat; substantially as described.

3. The herein-described food in dry granular form, consisting of a compound analyzing about as follows: gluten eighteen, starch thirty, maltose eleven, dextrine 50.4, water six, residue 4.5.

708,210. SHEET CATCHING AND PACKING DEVICE. ARTHUR J. HARKNEY, Martins Ferry, Ohio. Filed June 12, 1901. Serial No. 50,100. (No model.)

Claim.—1. In a machine of the character described, the combination with the bearings and cold-rolls, of a small roll journaled in said bearings on the left side of said cold-rolls, a table having its front end pivotally mounted on said small roll, a pair of rolls mounted in the rear end of said table, traveling belts connecting the first-mentioned roll with the lower of the last-mentioned rolls, means for imparting motion to said first-mentioned roll, and through the belts to the last-mentioned rolls, adjustable guide-bars on said table, an adjustable sheet-packing box at the rear of said table, and an adjustable evening device on the rear end of said table, all substantially as and for the purposes set forth and described.

2. In a machine of the character described, the combination with the bearings and cold-rolls, of a small roll having its bearings in said bearings, a table pivoted at its front end on said small roll, the rear end of said table adapted to be raised to any position on said small roll as a fulcrum, a pair of rolls mounted on the rear end of said table, endless traveling belts connecting the said small roll with the lower roll of the pair of rolls, means for imparting motion to said rolls and belts, adjustable guide-bars on said table, an adjustable sheet-packing box in the rear of said table, and an adjustable evening device on the rear end of said table adapted to cause sheets of metal carried by the machine to be dropped in an even pack in the packing-box, substantially as set forth and described.

3. In a machine of the character described, the combination with the bearings and the cold-rolls, of a small roll having its bearings in said bearings on the left side of the cold-rolls, a table having its front end pivotally mounted on said small roll, a pair of rolls mounted in the rear end of said table, traveling sheet-carrying belts connecting the lower of said last-mentioned rolls with the said small roll, adjustable sheet-guiding bars mounted on said table, an adjustable sheet-packing box seated in the rear of said table, and an evening device adapted to keep the sheets, carried forward by the machine, in an even pack in the packing-box, substantially as shown and described.

4. In a machine of the character described, the combination with the bearings and the cold-rolls, of a small roll journaled in the bearings on the left side of said cold-rolls, a table having its front end pivotally mounted on said small roll, a shaft journaled in the front end of said table, a contact-wheel fixed on said shaft and adapted to be revolved by contact with the upper of the cold-rolls, a sprocket-wheel mounted on the outer end of said shaft, a second sprocket-wheel mounted on the said small roll, a sprocket-wheel connecting the said sprocket-wheel and

adapted to impart motion to the said small roll; a pair of rolls mounted in the rear end of said table, a plurality of traveling belts connecting the lower of said last-mentioned rolls with the said small roll, and adjustable guides provided on said table adapted to guide sheets of metal forward evenly to the said last-mentioned rolls, substantially as described.

708,211. HAND-PROTECTOR. DANIEL F. MORGAN, Toledo, Ohio. Filed Apr. 14, 1902. Serial No. 102,941. (No model.)

Claim.—1. A hand-covering, comprising a single piece, and having near its upper edge a slit extending transversely thereof, near its inner and upper edges a slit at an angle to said transverse slit, and provided with a series of apertures near its lower edge, substantially as described.

2. An article of manufacture comprising a single piece of leather or other material, said piece having an outwardly-curved transverse slit near its upper edge and an outwardly-curved vertical slit near one end of said transverse slit and forming a tongue, and being provided with a series of openings of various sizes near its lower edge, substantially as described.

3. A hand-covering comprising a single piece and being provided at its lower portion with a series of openings for the insertion of the fingers, and a slit in its upper outer portion for the insertion of the thumb, and having its upper portion cut to form a strap in a single piece and integral with the said hand-covering at each end, substantially as described.

4. A protector for the palm portion of the hand comprising a single piece of material having its lower and upper portions cut to form openings for the insertion of the hand, said cut portions forming straps, and having a slit near its inner and upper edges for the insertion of the thumb, substantially as described.

5. A hand-covering comprising a single rectangular piece of leather or other material conforming to the shape of the palm portion of the hand, said piece having the slots a and c cut therein and the openings d in its lower portion, one of said slots being cut to form the integral strap b.

708,212. GRINDING-MACHINE. EDWARD W. FRISCH, Fort Washington, Wis., assignor to Western Implement Company, Fort Washington, Wis. Filed Dec. 30, 1901. Serial No. 67,761. (No model.)

Claim.—1. A grinding-machine comprising a base and standard, an arm in swing connection with the standard, a rotatory grinding device in suspension from the arm, a slide-bar clamp in pivotal connection with the base, a clamp-controlling spring, means for regulating spring tension, grinding-device drive-gear having the main wheel thereof provided with an eccentric, and a rocker outside the eccentric in connection at its ends with said arm and a branch of said standard.

2. A grinding-machine comprising a standard having the upper end thereof in the form of a sleeve, an arbor held fast in the sleeve, an arm having a yoke end straddling said sleeve and loose on the arbor, a rotatory grinding device in suspension from the arm, a slide-bar clamp in pivotal connection with the base, a clamp-controlling spring, means for regulating spring tension, grinding-device drive-gear having the main wheel-hub thereof in the form of an eccentric loose on said arbor, and a rocker outside the eccentric in connection at its ends with said arm and a branch of said standard.

3. A grinding-machine comprising a base and standard, an arm in

swing connection with the standard, a rotatory grinding device in suspension from the arm, a pivotal slide-bar clamp having a bracket-chank thereof of adjustable on the base longitudinally of the same, a clamp-controlling spring, means for regulating spring tension, grinding-device drive-gear having the main wheel thereof provided with an eccentric, and a rocker outside the eccentric in connection at its ends with said arm and a branch of said standard.

4. A grinding-machine comprising a base and standard, an arm in swing connection with the standard, a rotatory grinding device having a hanger provided with a chank in adjustable connection with the arm longitudinally of the same, a slide-bar clamp in pivotal connection with the base, a clamp-controlling spring, means for regulating spring tension, grinding-device drive-gear having the main wheel thereof provided with an eccentric, and a rocker outside the eccentric in connection at its ends with said arm and a branch of said standard.

5. A grinding-machine comprising a base and standard, an arm in swing connection with the standard, a rotatory grinding device in suspension from the arm, a slide-bar clamp consisting of a base-bracket, a pivot-rod supported by the bracket, clamp-jaws loose on the rod, a spiral spring connecting one of the jaws with a stationary portion of the machine, a tension-screw carried by the other of the jaws to abut an arm of said bracket, a bolt engaging both jaws and a nut on the bolt; grinding-device drive-gear having the main wheel thereof provided with an eccentric, and a rocker outside the eccentric in connection at its ends with said arm and a branch of said standard.

6. A grinding-machine comprising a base and standard, an arm in swing connection with the standard, a rotatory grinding device in suspension from the arm, a slide-bar clamp in pivotal connection with the base, a clamp-controlling spring, means for regulating spring tension, a gear-wheel having a pinion-hub loose on a lateral beam of said arm, a pinion on the grinding-device arbor in mesh with said gear-wheel, an eccentric hub-driving gear-wheel loose on an arbor constituting the swing-arm axis, and a rocker outside the eccentric hub in connection at its ends with said swing-arm beam and a branch of said standard.

7. A grinding-machine comprising a base and standard, an arm in swing connection with the standard, a leg on said standard arranged to constitute a rest for the swing-arm, a rotatory grinding device in suspension from said arm, a slide-bar clamp in pivotal connection with the base, a clamp-controlling spring, means for regulating spring tension, grinding-device drive-gear having the main wheel thereof provided with an eccentric, and a rocker outside the eccentric in connection at its ends with said arm and a branch of said standard.

8. A grinding-machine comprising a base and standard, an arm in swing connection with the standard, a rotatory grinding device in suspension from the arm, a slide-bar clamp in pivotal connection with the base, a clamp-controlling spring, a screw arranged to regulate tension of said spring, a spiral spring on the screw between its head and the adjacent clamp-jaw, grinding-device drive-gear having the main wheel thereof provided with an eccentric, and a rocker outside the eccentric in connection at its ends with said arm and a branch of said standard.

708,213. MACHINE FOR CUTTING BEVELED EDGES ON PLATE OR SHEET METAL. PAUL PARONELLA, Chicago, Ill. Filed July 11, 1901. Serial No. 67,626. (No model.)

Claim.—1. In a machine for cutting beveled edges, on plate or sheet metal, a shaft, a second shaft set at a suitable angle to the first-named shaft, cutters mounted upon the adjacent ends of said shafts, gearing between them and suitable means for adjusting one of the cutters longitudinally of its axis of rotation; substantially as described.

2. In a machine for cutting beveled edges upon plate or sheet metal, a suitably-rotated cutter, a second cutter angularly disposed with reference to the first-named cutter, a longitudinally-adjustable sleeve and a suitably-

rotated shaft carrying said second-named outer and journaled in said sleeve; substantially as described.

8. In a machine for cutting beveled edges upon plate or sheet metal, a base or frame, an approximately horizontal shaft journaled in said base, means for its rotation, a cutter upon one of its ends, a second shaft angularly disposed with reference to the first-named shaft, a cutter upon its end adjacent to the first-named shaft, a sleeve seated in the base and having screw-threads upon its periphery threaded in the base, said second-named shaft being journaled in the sleeve and geared to the first-named shaft; substantially as described.

708,214. CURTAIN POLE OR ROD. ELWOOD C. PHILLIPS, Chicago, Ill., assignor to Standard Development Company, Incorporated, Chicago, Ill. Filed Feb. 1, 1900. Serial No. 98,112. (No model.)

Claim.—1. An extensible curtain pole or rod formed of a closely-wound spiral of resilient material and integrally formed with attaching-eyes at its respective ends, in combination with attaching-brackets provided with a plurality of vertically-arranged hook-shaped engaging tongues to any one of which the attaching-eyes of the pole or rod may be secured to vary the distance of the pole or rod from the upper portion of the window or door frame without changing the position of the bracket on the frame.

2. An extensible curtain pole or rod formed of a closely-wound spiral of resilient material and integrally formed with attaching-eyes at its respective ends, in combination with attaching-brackets provided with a plurality of vertically-arranged hook-shaped engaging tongues to any one of which the attaching-eyes of the pole or rod may be secured to vary the distance of the pole or rod from the upper portion of the window or door frame without changing the position of the bracket on the frame, said brackets being also provided with top and bottom prongs for attachment of the brackets to the frame.

3. An extensible curtain pole or rod formed of a closely-wound spiral of resilient material and formed with attaching-eyes at its respective ends, in combination with attaching-brackets provided with a vertical series of hook-shaped engaging tongues for the attaching-eyes of the rod or pole, and with top and bottom prongs for attachment to the window-frame, substantially as set forth.

4. An extensible curtain pole or rod formed of a closely-wound spiral of resilient material and formed with attaching-eyes at its respective ends, in combination with attaching-brackets provided with a vertical series of hook-shaped engaging tongues for the attaching-eyes of the rod or pole, with top and bottom prongs for attachment to the window-frame, and with recesses adjacent to the said prongs for use in a removal of the bracket from its attachment to the window-frame, substantially as set forth.

708,215. SUBMERGED WATER-HEATER. ORRISON C. FINNEY, Haverhill, Mass. Filed Nov. 24, 1899. Serial No. 74,492. (No model.)

Claim.—1. In a submerged water-heater, the combination of a sheet-metal drum closed at its bottom, a closed annular water-chamber within said drum, the space within the chamber constituting an open down-flow, vertical water-inlet pipes passing through the bottom of the drum

and into the bottom of said water-chamber, laterally-extended water-outlet pipes connected with the water-chamber near its top and extending across the heating-chamber and out through the wall of the drum, and heat-generators located in the space between the water-chamber and the drum and above the lower end of the water-chamber, whereby the air in the drum around said water-chamber is heated and caused to flow up and out through the top of the drum and air to supply the combustion is drawn down through the line passing through said water-chamber, substantially as specified.

2. The combination of a sheet-metal drum closed at its bottom, an annular closed water-chamber within said drum, the space within the chamber constituting an open down-flow, inlet-pipes passing through the bottom of the drum and into the bottom of the water-chamber, laterally-extended outlet-pipes connected with the water-chamber near its top and passing out through the wall of said drum, a plurality of burners located in the space between the drum and water-chamber, and above the lower end of the latter and pipes tying in the down-flow for supplying fuel to said burners, substantially as specified.

3. The combination of a sheet-metal drum closed at its bottom, a closed annular water-chamber in said drum, the space within the chamber constituting an open down-flow, inlet-pipes connected with the bottom of the water-chamber and extended out through the bottom of the drum, outlet-pipes connected with the water-chamber near its top and extended out through the side of the drum, a plurality of burners located in the space between said water-chamber and drum, an annular liquid-fuel tank secured to the upper end of said water-chamber, and pipes leading through the down-flow connecting said fuel-tank with said burners, substantially as specified.

4. The combination of a sheet-metal drum closed at its bottom, a closed annular water-chamber in said drum, inlet-pipes connected with the bottom of the water-chamber and extended out through the bottom of the drum, outlet-pipes connected with the water-chamber near its top and extended out through the side of the drum, a plurality of burners located in the space between said water-chamber and drum, an annular liquid-fuel tank secured to the upper end of said water-chamber, and pipes connecting said tank with said burners, an annular alcohol-tank also supported by said water-chamber and having pipes leading to the drip-cups of said burners, substantially as specified.

5. The combination of a sheet-metal drum closed at its bottom, a closed annular water-chamber in said drum, inlet-pipes in said water-chamber passing through the bottom of the drum, outlet-pipes to said chamber connected with it near its top and extended out through the walls of said drum, heat-generators located substantially as described whereby to heat the space between the water-chamber and drum, and an annular cover resting upon the top of the water-chamber and inclined therefrom upwardly and outwardly to the top of the drum upon which it also rests, there being a plurality of slots in said cover near its upper edge, substantially as specified.

6. The combination of a sheet-metal drum closed at its bottom and open at top, an annular inclined vertical water-chamber extending nearly to the bottom of the drum with its open lower space which acts as a down-flow, and burners located in the space between said drum and the water-chamber and above the lower end of the latter, substantially as specified.

708,216. WATER-WHEEL-PISTON-CONSTRUCTION. JAMES W. KIRBY, Minneapolis, Minn., and MONTGOMERY E. BARNES, Sterling, Ill.; said Barnes assignor to said Kirby. Filed Mar. 14, 1898. Serial No. 97,481. (No model.)

Claim.—1. A series of two or more open water-wheel pistons having partition-walls between them, said walls being composed of upright beams having their lower ends anchored to the piston-rod-floor, a suitable filling material between the beams of each wall and the rods or bars connecting the tops of said walls.

2. A series of two or more open water-wheel pistons having partition-walls between them, said walls being composed of upright beams having their lower ends embedded or set into the piston-rod-floor, a suitable filling material between the beams of each wall, caps horizontally arranged upon the top of each wall and secured to the beams thereof, and the rods or bars extending over said walls and connecting and tying the walls and the caps thereon together.

3. A series of two or more open water-wheel pistons having partition-walls between them, said walls being composed of upright I-beams having their lower ends embedded or set into the piston-rod-floor, a concrete filling material between the beams of each wall and forming arches, channel-bars upon the top of each wall and secured to said I-beams, and angle the bars or rods secured to said channel-bars and connecting and tying the tops of said walls together.

4. In a series of two or more adjoining water-wheel pistons, the combination of partition-walls separating the pistons, with semicylindrical metallic bulkheads closing the ends of said pistons, respectively, and tangential to and secured to said walls.

5. In a series of two or more adjoining water-wheel pistons, the combination of a series of partition-walls separating the pistons, said walls being composed of upright beams having their lower ends embedded in the piston-rod-floor and a suitable filling material between them, with semicylindrical metallic bulkheads closing one end of said pistons and secured to said partition-walls, and the rods or bars connecting the tops of said beams and walls and tying them together.

6. In a series of two or more adjoining water-wheel pistons, the combination of a series of partition-walls separating the pistons, with semicylindrical metallic bulkheads anchored at their ends to said walls and closing the open end of said pistons, and means for forming a close water-tight joint between the lower edges of said bulkheads and the floor of said pistons.

7. A series of open water-wheel pistons, comprising a suitable floor provided with draft-tube openings, partition-walls between adjoining pistons and consisting of metal beams having their lower ends anchored to said floor and a suitable filling material between said beams, means connecting or tying the tops of said walls together, semicylindrical metallic bulkheads anchored at their ends to said walls and tangential with respect thereto, beams embedded in said floor at the bottom of said bulkheads, and angle-bars secured to said bulkheads and to said walls.

8. In a series of two or more open water-wheel pistons, the combination of a series of partition-walls separating the pistons and composed of metallic frames embedded at their lower ends in the piston-rod-floor and having a suitable concrete filling, with semicylindrical bulkheads having their ends riveted to the frames of said partition-walls and tangential thereto, and the rods or bars extending across said walls and secured to said frames and tying them and said walls together.

9. In an open water-wheel piston, a semicylindrical metallic bulkhead closing one end of the piston, and walls whereon said bulkhead is anchored.

10. In an open water-wheel piston, walls composed of beams having their lower ends anchored to the piston-rod-floor, a suitable filling material between the beams of each wall, and means for tying the upper portions of said walls together.

708,217. APPARATUS FOR DRYING AND POLISHING BROOM-HANDLES. CHARLES A. RYLAND, Akron, Mich., assignor of two-thirds to WILLIAM E. JACKSON and GEORGE A. JACKSON, Buffalo, N. Y. Filed Dec. 28, 1891. Serial No. 98,902. (No model.)

Claim.—1. An apparatus for drying broom-handles, &c., consisting of a rotary drum having one of its heads provided centrally with an air-duct which communicates with the drum, and a partition arranged near said head and forming separate air-distributing and drying chambers, said drying-chamber being provided with air-escape openings, and said partition having passages through which the air issues into said drying-chamber lengthwise of the drum, whereby the air-current passes lengthwise through the space between the handles placed in the drum, substantially as set forth.

2. A drying apparatus, consisting of a rotary drum having tight heads provided with hollow journals which communicate with the ends of the drum, and perforated partitions arranged in the drum near its ends and forming air inlet and distributing chambers at opposite ends of the drum and an intermediate drying-chamber, into which latter the air issues in opposite directions lengthwise of the drum, said drying-chamber being provided in its cylindrical wall with air-escape openings, substantially as set forth.

3. A drying apparatus, consisting of a rotary drum having tight heads provided with hollow journals which communicate with the ends of the drum, and perforated partitions arranged in the drum near its ends and forming air inlet and distributing chambers at opposite ends of the drum and an intermediate drying-chamber, the latter having air-escape openings in its cylindrical wall, and said partitions being convex in the side facing the drying-chamber, substantially as set forth.

4. An apparatus for drying broom-handles, &c., consisting of a rotary drum having one of its heads provided centrally with an air-duct which communicates with the drum, and a perforated partition arranged near said head, forming separate air-distributing and drying chambers and provided with a removable wear-facing having perforations which register with those of the partition, said drying-chamber being provided with air-escape openings, substantially as set forth.

708,218. RAILWAY-SIGNAL-OPERATING APPARATUS. JOHN A. SNOW, Youngstown, Ohio. Filed Feb. 27, 1902. Serial No. 93,961. (No model.)

Claim.—1. In an apparatus of the class described, the combination with the signal, of a rotary disk having separate operating elements at opposite sides thereof, swinging levers oscillated from the said operating elements of the disk, and reciprocity signal-actuating connections with the levers.

2. In an apparatus of the class described, the combination with the signal, of a single rotary disk having cam-guides upon opposite sides thereof, swinging levers having engaging elements co-operating with said cam-guides, and reciprocity signal-actuating connections with the levers.

3. In an apparatus of the class described, the combination with the signal, of a rotary disk having separate operating elements at opposite sides thereof, swinging levers oscillated from the said operating elements of the disk and pivotally mounted upon axes disposed in parallel to the axis of the disk, and reciprocity signal-actuating connections with the levers.

4. In an apparatus of the class described, the combination with the signal, of a single rotary disk having separate operating elements at opposite sides thereof, and arranged upright upon a horizontal axis, vertically-swinging levers oscillated from the said operating elements of the disk, and reciprocity signal-actuating connections with the levers.

5. In an apparatus of the class described, the combination with the signal, of a rotary disk having separate operating elements at opposite sides thereof, levers moved from said operating elements of the disk, signal-actuating connections with the levers, and an operating device for the disk arranged directly on the axis of the latter, said operating device including means for indicating the various combinations provided for by the separate cam-guides.

6. In an apparatus of the class described, the combination with the signal, of a rotary disk having at opposite sides thereof continuous and slanted cam-guides, the separate cam-guides being reversely related, but having portions in concentric circles, a pair of swinging adjusting-levers pivotally supported at one end and carrying at their other ends elements engaging the said cam-guides, reciprocity signal-actuating connections with the levers, and a signal-operating device for the disk arranged directly on the axis thereof, said operating device including indicating means having points corresponding to the various combinations provided for by the said cam-guides.

7. In an apparatus of the class described, the combination with the signal, of a rotary disk having separate cam-guides upon opposite sides thereof, said cam-guides having portions thereof disposed in coincident relation, separate adjusting-levers respectively engaging the separate guides, actuating connections between the levers and the signal, as operating devices including a lever or handle directly upon the axis of the disk for turning the latter, and a stationary dial co-operating with the lever or handle and having indications corresponding to the related portions of the separate guides.

8. In an apparatus of the class described, the combination with the signal, of a controlling mechanism comprising a rotary wheel or disk provided upon opposite sides thereof with continuous and slanted cam-guides, portions of which are in coincident relation, an axle for said wheel or disk, separate levers engaging respectively with the separate cam-guides, actuating connections between said levers and the signal, a stationary indicator-dial having a plurality of locking-points arranged in spaced relation corresponding to the related portions of the separate cam-guides, and an operator's lever or handle secured to the axle of the wheel or disk and carrying a latch co-operating with the locking-points of said dial.

9. In an apparatus of the class described, the combination with the signal, of controlling mechanism having an actuating-rod for the signal, said actuating-rod being provided with colored portions, and a telltale device consisting of a sleeve receiving the rod and having a sight-opening exposing the colored portions thereof.

708,219. INTERMEDIATE SUGAR PRODUCT. CLAREN A. SPRENGEL and CHARLES A. KIRBY, New York, N. Y., assignors to Federal Refining Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Nov. 19, 1901, Serial No. 82,590. Divided and this application filed May 6, 1902. Serial No. 106,110. (No specimens.)

Claim.—1. The intermediate body, consisting of a mass of sugar-crystals mixed with a sulfonated defecating agent, substantially as described.

2. The intermediate body, consisting of a mass of sugar-crystals mixed with a sulfonated defecating agent, substantially as described.

3. The intermediate body, consisting of a mass of sugar-crystals, substantially freed from sugar impurities, and mixed with a sulfonated defecating agent, substantially as described.

708,220. FEEDING MECHANISM FOR BOILERS. ROLLIN H. WHITE, Cleveland, Ohio, assignor to the White Sewing Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 2, 1900. Serial No. 222. (No model.)

Claim.—In a feeding mechanism, in combination, a supply-tank, a main feed-pipe, a boiler connected therewith, pumping mechanism adapted to force water from the tank into the feed-pipe, an air-chamber communicating with the feed-pipe between the pumping mechanism and boiler, a by-pass leading from between the feed-pipe and pumping mechanism back to the supply-tank, a valve normally closing said by-pass but adapted by pressure to open it, a pipe for communicating pressure to the valve, which pipe is connected with the fluid on the opposite side of the air-chamber to that at which the pumping mechanism is connected, substantially as described.

708,221. FOUNTAIN-SPITTOON. WILLIAM E. ALLEN, Baltimore, Md. Filed June 20, 1901. Serial No. 93,962. (No model.)

Claim.—1. A fountain-spittoon, comprising a bowl; a rotatable disk mounted in said bowl and provided with a substantially convex upper face; and a spray device secured within the rim of said bowl above the said disk and provided with two series of jets, one series being disposed

toward the wall of the bowl and the other series disposed tangentially toward said disk, as set forth.

2. A fountain-spittoon comprising a bowl provided below its top with an outwardly-extending flange curving upward and inward to the rim edge of the bowl whereby to form an annular trough; a rotatable disk in said bowl; and a spray device secured within the rim edge of said bowl and provided with two series of jets, one series being arranged to spray toward said trough and the other series arranged to spray tangentially against said disk to rotate the latter, as set forth.

3. A fountain-spittoon comprising a bowl; a substantially convex disk mounted in said bowl with its convex face upward and provided with a central depression; and a spray device having one or more jets opening tangentially toward said disk.

4. In a fountain-spittoon, the combination of a bowl having a bottom discharge; and an annular pan detachably resting on the bottom wall of the bowl and provided with an upwardly-turned apertured inner edge adapted to catch solid snail-like objects injected into the bowl, whereby said pan may be removed with such objects in it, and cleaned, as set forth.

5. A fountain-spittoon, comprising a bowl; a disk mounted to rotate in said bowl and provided with a series of segmental slots; a main spray device adapted to spray said disk to rotate the same; and an auxiliary spray device underneath said disk and adapted to spray upwardly through said slots, as set forth.

6. A fountain-spittoon, comprising a bowl; a disk mounted to rotate in said bowl and provided with a series of segmental slots; a main feed-pipe; a main spray-ring secured to said feed-pipe above said disk and adapted to spray on the top of the latter; a branch feed-pipe provided with a cock, and also provided with one or more tubular arms extending upwardly on the inside of the bowl; and an auxiliary spray-ring secured to the top of said arms underneath said segmental slots and provided with a series of upwardly-opening jets adapted to spray through said slots, as set forth.

708,222. ELEVATED-CABLE SYSTEM OF TRANSPORTATION. TONY ALEXANDER, New Orleans, La., assignor of one-half to Sidney Alexander, New Orleans, La. Filed Oct. 7, 1901. Serial No. 77,702. (No model.)

Claim.—1. In an overhead-cable system of transportation, the combination of a cable and a series of supports therefor around which the cable is wound, the cable curving and diverging from the upper side of said supports, substantially as shown and described.

2. In an overhead-cable system of transportation, the combination of a cable, means for stretching it, and a series of pivoted supports therefor around which the cable is wound, and upon the top of which the cable is crossed, as shown and described.

3. In an overhead-cable system of transportation, the combination of a cable, and a series of grooved sheaves supporting the same and journaled in suitable supports, the cable being wound around the sheaves and curving and diverging in opposite directions upon the upper side of the sheaves, substantially as shown and described.

4. In an overhead-cable system of transportation, the combination of a cable, means for stretching it, a series of sheaves journaled as described and supporting the cable and around which the latter is wound, and means for locking the cable and sheaves, substantially as shown and described.

5. In an overhead-cable system of transportation, the combination of a cable, means for stretching it, and sheaves journaled as described, and supporting said cable, which is wound around them, and pivoted dogs arranged in opposite sides of the several sheaves, and having locking engagement with the portion of the cable containing the sheaves, substantially as shown and described.

6. In an overhead-cable system of transportation, the combination with a series of stationary frames or supports, of a cable, a series of grooved sheaves held on said supports and around which the cable is wound, dogs pivoted on opposite sides of the sheaves and adapted to engage with the cable-section encircling the sheaves and curving on the upper side of the latter, and means arranged at the terminals of the line for stretching or slackening the cable adjacent to each terminal, substantially as shown and described.

7. In an overhead-cable system of transportation, the combination with a series of stationary frames or supports, of a cable, a series of grooved sheaves held on said supports and around which the cable is wound, dogs pivoted on opposite sides of the sheaves and adapted to engage with the cable-section encircling the sheaves and curving on the upper side of the latter, and means arranged on cable-supports intermediate of the terminals for slackening the cable, the latter being looped and engaged with such means at each point, as shown and described.

8. In an overhead-cable system of transportation, the combination with a series of stationary frames or supports of a cable, a series of grooved sheaves held on said supports and around which the cable is wound, dogs pivoted on opposite sides of the sheaves and adapted to engage with the cable-section encircling the sheaves and curving on the upper side of the latter, two windlasses applied to a cable-supporting frame, which is intermediate the terminals of the line, and antifriction cable-sheaves arranged between the said windlasses and the sheaves whereon the cable is wound, the cable having a loop between the windlasses sufficient to produce any required slack adjacent to the frame-support of the cable, substantially as shown and described.

9. In an overhead-cable system of transportation, the combination with a series of stationary frames or supports of a cable, a series of grooved sheaves held on said supports and around which the cable is wound, dogs pivoted on opposite sides of the sheaves and adapted to engage with the cable-section encircling the sheaves and curving on the upper side of the latter, two windlasses applied to a cable-supporting frame which is intermediate the terminals of the line, means for locking said windlasses, a sheave 14 arranged adjacent to one of the cable-supporting sheaves 2 and antifriction-sheaves arranged on the frame below each of said cable-sheaves 2, the cable passing over the several sheaves and beneath the supporting-sheaves 2 and being secured to both windlasses and looped between the latter, as shown and described.

10. In an overhead-cable system of transportation, the combination with a stationary cable upon which carriages run, of a leading-rope arranged adjacent thereto, guide-sheaves between which the rope runs, and a pivoted shiftable guard extending across the space intervening the pulleys, substantially as shown and described.

11. In an overhead-cable system of transportation, the combination of a stationary cable, a carriage adapted to travel on the latter and provided with a lateral and pendant arm, a leading-rope attached to said arm, sheaves arranged opposite and serving as guides for said rope, a pivoted arm arranged horizontally, and a spring connected with the arm and tending to hold it extended across the space between the sheaves, the carriage-arm being adapted to pass between the upper edges of the sheaves and push the pivoted arm aside, as shown and described.

12. A rotatable cable support and lock, consisting of a grooved sheave, a casing in which the same is journaled and two weighted dogs pivoted in said casing one on each side of the sheave and arranged with its weighted end in the same plane with the sheave, substantially as shown and described.

13. The improved carriage for use on overhead cables, comprising an arched and trussed top frame, and a straight frame joining the ends of the same, which are journaled in the straight frame and aligned with each other, substantially as shown and described.

14. The improved carriage for use on overhead cables, comprising an arched top frame, longitudinal bars connecting the ends of said frame, and struts connecting the bars with the arched top, substantially as shown and described.

15. The improved carriage for the use specified, comprising an arched top plate, an arched reinforcing plate or rib attached to the under side of the same, longitudinal bars connecting the ends of the arched portions, struts connecting the said bars with the arched top, and wheels journaled between the said bars in line with each other, substantially as shown and described.

16. The improved carriage for the use specified, comprising a frame provided with running wheels, and locking-bars pivoted on the depending portions of said frame and held normally projected inward so as to practically open the space beneath the wheels, whereby they are adapted to hold the carriage upon its support and to be pushed outward for passing obstructions, substantially as shown and described.

17. The improved carriage for the purpose specified, comprising a frame having running wheels therein and depending portions as specified, obtuse-angled bars pivoted upon such depending portions and arranged horizontally, springs holding their angles normally in contiguity whereby they practically open the space beneath the wheels and are adapted to operate, substantially as shown and described.

18. The combination of the carriage with a fixed support upon which it is adapted to travel and locking-bars pivoted upon depending portions of the carriage and held normally in contiguity beneath the running wheels of said carriage and adapted to yield for passing obstructions in the line, substantially as shown and described.

19. The combination with a cable and support therefor consisting of sheaves and casings in which the same are journaled, said casings having lateral flanges at the top, of a carriage comprising a suitable frame and running wheels arranged therein, said carriage having depending portions and locking-bars pivoted thereto and projecting practically across the space beneath the wheels and adapted to yield as specified, whereby the carriage is locked to the cable and its supports, substantially as shown and described.

20. The improved carriage comprising a top and lower frame, running wheels journaled in the lower portion, a middle attached to the latter and a C-shaped arm resting in said middle and adapted for support of a grapple or other freight-carrier, substantially as shown and described.

21. The improved carriage for the purpose specified, comprising an arched top portion, horizontal lengthwise bars connecting the end of the arch and middle-piece interposed between the middle portion of said bars and supported thereon, and a C-shaped hanger attached to said middle and bearing therein, and freight-carrying device attached to said hanger, substantially as shown and described.

22. The improved carriage for the purpose specified, comprising an overhead arch, lengthwise connecting-bars, running wheels journaled in the frame, a lateral arm having a depending V-shaped portion, the same being rigidly attached to the central portion of the carriage between the running wheels, substantially as shown and described.

708,223. FISHING-REEL. LEONARD ARSON, Philadelphia, Pa. Filed July 13, 1901. Serial No. 68,513. (No model.)

Claim.—1. The combination in a fishing-reel, of a casing made in two parts hinged together, a spool carried by said casing, means for turning said spool, a friction-brake for governing the rate of turning of the spool, one part of said casing being constructed to act as one of the members of said brake, substantially as described.

2. The combination of a two-part casing, one part being hinged to

the other, a spool mounted in the casing, a friction-ring mounted on the movable part of the casing and bearing upon the spool at the will of the operator, substantially as described.

3. The combination in a fishing-reel, of a two-part casing, one part being pivoted to the other, and having bearings, a spool having transverse members in the bearings, said spool having a recess in one side, a friction brake-ring secured to the movable portion of the casing and mounted in the recess in the spool, so that on drawing the movable part of the casing to the fixed part the brake-ring will come into frictional contact with the spool, substantially as described.

4. The combination in a reel, of a casing made in two parts, one pivoted to the other, a thumb-rod on one part by which the movable part can be drawn to the fixed part, bearings in the said one, a spool having transverse members in the bearings, the said spool being recessed at each side, a ratchet-wheel on the spool, a spring-rod engaging said ratchet-wheel, a brake-ring within the recess on the upper side of the spool, said brake-ring being secured to the movable portion of the casing, substantially as described.

708,224. WASHBOARD-HOLDER. CHARLES E. BAKER, Portland, Me. Filed Dec. 13, 1901. Serial No. 58,227. (No model.)

Claim.—1. A washboard-holder comprising triangular rods adapted to be rigidly attached to the side of a washboard longitudinally thereof, sliding arms on said rods angularly disposed thereto and adapted to rest against the inside of a tub and means for holding said arms against the longitudinal movement on said rods.

2. In a washboard-holder, in combination, a triangular rod with means at one end for attaching the same to the side of a washboard, a removable hollow member to receive the other end of said rod and to hold said rod in position, a member movable lengthwise on said rod and angularly disposed thereto, said movable member being provided with a plurality of legs, said legs being placed transversely of said rod and means for holding said movable member against lengthwise movement on said rod.

708,225. POLE-CHANGER. JAMES H. C. BRADY, Fremont, Colo. Filed Feb. 13, 1902. Serial No. 52,707. (No model.)

Claim.—1. A pole-changer for currents of high potential, comprising a base, a vertical insulating standard mounted thereon, radially-movable metallic arms pivoted upon said standard and provided with knobs, insulating-handles connected with said arms for actuating the same, and means for connecting said arms with an electrical supply.

2. A pole-changer for currents of high potential, comprising a base, an insulating member mounted thereon, Leyden jars mounted upon said base and disposed about said insulating member, metallic arms pivotally mounted upon said insulating member and provided with knobs for discharging said Leyden jars, insulating-handles for actuating said arms, and electric conductors connected with said metallic arms.

3. A pole-changer for currents of high potential, comprising a base, an insulating-standard mounted thereon, Leyden jars mounted upon said base, means for continuously charging said jars by currents of opposite sign, metallic arms mounted upon said insulating-standard and free to swing radially, said arms being provided with metallic knobs and with insulating-handles and separate conductors connected with said metallic arms.

4. A pole-changer comprising a base, an insulating-standard mounted thereon, a plurality of metallic arms pivoted upon said standard and terminating in knobs, means for actuating said arms, and conductors for connecting said arms with opposite poles of an electric machine, the arrangement being such that said arms when not in use may be folded parallel with each other and with said standard.

708,226. TORACOD-DRIVING DEVICE. LEAVITT F. BUNELL and JOHN SULLIVAN, Buffalo, Conn. Filed Nov. 29, 1901. Serial No. 52,723. (No model.)

Claim.—1. A sliding box or crate provided with a series of compartments having mouths of different lengths, in combination with shelves in the compartments adapted to be adjusted vertically to different points as desired, all substantially as described and for the purposes set forth.

2. A sliding box or crate provided with a series of compartments and having mouths of different lengths, in combination with a series of shelves for said compartments independent of one another and adapted to be adjusted vertically to different points as desired, all substantially as described.

3. A sliding box or crate provided with a series of compartments, a removable cover therefor having slots corresponding to said compartments, said slots being of different lengths, in combination with shelves in the compartments adapted to be adjusted vertically to different points as desired, said shelves being supported at one end only, substantially as described.

4. A sliding box or crate provided with a series of compartments having mouths of different lengths in combination with shelves in the compartments, means whereby they may be adjusted vertically to different points as desired, and means for raising said shelves, substantially as described and for the purposes set forth.

708,227. CHAIR. HARVEY P. BLACKMAN, Omaha, Ill. Filed June 26, 1901. Serial No. 66,998. (No model.)

Claim.—1. A chair, comprising a main frame, portions of said main frame forming the front and rear legs, the rear legs being curved, rocks on said rear legs, a back pivoted on the main frame, a seat-frame having swinging connection with the back, parts carried by the back for engaging with said rocks, and a lever pivoted to one side of the main frame and having connection with the parts, substantially as specified.

2. A chair having a main frame, comprising front and rear legs, the rear legs being curved, rocks on the upper sides of said rear legs, a back-frame pivoted to the main frame, parts carried by the back and adapted for engagement with the rocks, a lever having operative connection with

said parts, a seat-frame having swinging connection with the back-frame, and a seat fabric or material attached at one end to the forward portion of the seat-frame and at the other end to the upper portion of the back-frame, substantially as specified.

3. In a chair, a back-frame, a seat-frame, rods connecting the opposite members of the seat-frame, legs on said members rearward of said rods, a rod connecting the opposite members of the back-frame, legs on said members below said rod, a flexible seat material, a rod secured to the forward end of the seat material and adapted to engage against the legs and to press the material against the rod connecting the seat members, and a rod attached to the opposite end of the material and adapted to bear against the legs on the back-frame members and to press the material against the bar above said legs, substantially as specified.

4. In a chair, a frame comprising front and rear legs, rocks on the rear legs, side bars connecting the lower portions of the legs of a side, arms connected to the upper portions of the legs of a side, a back-frame, a rod supported in said side bars and upon which the back-frame is mounted to swing, arms extended forward from the lower portion of said back-frame, short arms having hinged connection with the first-named arms, a fixed bar on the front legs with which the first-named arms engage, a foot-rest having swinging connection with the short arms, a seat-frame having swinging connection with the back-frame, and parts carried by the back-frame for engaging the rocks on the rear legs, substantially as specified.

708,228. SHOWAWAY MUD-GUARD FOR VEHICLES OR THE LIKE. CHARLES W. BURNER, FRANK E. BURNER, and ROBERT A. BURNER, London, England. Filed Mar. 2, 1902. Serial No. 59,473. (No model.)

Claim.—1. A cycle mud-guard made of celluloid and molded with a curvature in two directions at right angles so that it will roll up into a small compass and when unrolled will be rigid, said guard being perforated to permit of attachment to the stays, in combination with said stays for keeping the guard extended when on the machine and hinged projections on the stays passing through and locking with the perforations in the guard substantially as described.

2. A mud-guard for vehicle-wheels composed of a relatively thin and flexible strip of celluloid or similar material, said strip being molded with a curvature in two directions at right angles, viz: longitudinally and transversely, and capable of being rolled up into small compass when detached.

708,229. RUBBER-TIP ATTACHMENT FOR LEAD-PENCILS. CLAREN W. BUNAK, New York, N. Y., assignor to Eagle Pencil Company, New York, N. Y. Filed Feb. 26, 1902. Serial No. 59,149. (No model.)

Claim.—A rubber-tip attachment for lead-pencils consisting of a short-metal tube adapted at one end to fit upon the pencil and at the other end to fit upon the pencil.

other and split longitudinally for a portion of its length into gripping-jaws having biting ends *c*, and back of said ends hump or raised portions *d*, and back of said raised portions longitudinal raised and inclined ribs *f*, and a sliding ring or sleeve on said tube provided back of its front end portion with an internal annular recess or clearance *g* adapted to coast with the jaws and the inclines *f* thereof, as and for the purposes hereinafter set forth.

708,980. WRENCH. GEORGE E. BRY, Worcester, Mass. Filed Oct. 20, 1891. Serial No. 30,425. (No model.)

Claim.—In a wrench of the character described, in combination with the wrench-bar having the fixed jaw and handle arranged thereon, and the jaw-adjusting screw; the slidable jaw comprising a body portion and guiding-strap made of malleable iron, and provided with a steel or hard-metal reinforcing-plate covering the top face and the jaw-supporting strap surrounding said wrench-bar, said reinforcing-plate being permanently united to the jaw body and strap, around the bar-space opening, by an integral union of the adjacent surfaces, substantially as and for the purposes set forth.

708,981. HYDROCARBON-LAMP. JAMES C. BRACE, St. Louis, Mo. Filed Jan. 9, 1891. Serial No. 42,001. (No model.)

Claim.—1. In a hydrocarbon-lamp, the combination with a burner, of a generator comprising a pipe made up of a horizontal member and a

vertical member, both within the heat zone of said burner and communicating with a source of supply for liquid hydrocarbon, a vapor-jet having a cup thereon, and a vaporizer located between said vapor-jet and said burner and comprising an inner and an outer tube secured together to form an annular chamber which communicates with said pipe and said vapor-jet, as and for the purposes set forth.

2. In a hydrocarbon-lamp, the combination with a burner, of a generator comprising a vertical member and a horizontal member, the latter member being removable without disturbing the relation of the other parts, located above said burner and within the heat zone thereof and communicating with a source of supply for liquid hydrocarbon, a vapor-jet having an annular cup thereon, and a vaporizer located above said vapor-jet and comprising an inner and an outer tube secured together to form an annular chamber which communicates with said vertical member and said vapor-jet, as and for the purposes set forth.

3. In a hydrocarbon-lamp, the combination with a burner, of a generator comprising a fixed vertical member and a horizontal member removable without disturbing the relation of the other parts located above said burner and within the heat zone thereof, a hydrocarbon-supply pipe communicating with said horizontal member, a vapor-jet, a valve controlling the flow of hydrocarbon to said vapor-jet, an annular cup secured to and surrounding said vapor-jet and located below the discharge-orifice therein, and a vaporizer located between said vapor-jet and said burner and comprising an inner and an outer tube secured together to form an annular chamber which communicates with said vertical member and said vapor-jet.

4. In a hydrocarbon-lamp, the combination with a burner, of a generator comprising a fixed vertical member having an enlarged, internally-threaded, outwardly-directed upper end and a horizontal member removable without disturbing the relation of the other parts curving within the upper end of said vertical member and located above said burner and within the heat zone thereof, a hydrocarbon-supply pipe connected with said horizontal member, a vapor-jet, a valve controlling the flow of hydrocarbon to said vapor-jet, an annular cup secured to and surrounding said vapor-jet and located below the discharge-orifice therein, and a vaporizer located between said vapor-jet and said burner and comprising an inner and an outer tube secured together to form an annular chamber which communicates with said vertical member and said vapor-jet.

708,982. ICE-SKATE. FRANK E. BROWN, AMHERST, IOWA. Filed Mar. 17, 1892. Serial No. 34,540. (No model.)

Claim.—An ice-skate comprising a runner, a foot-plate secured to said runner at the heel and adapted to spring therefrom, a keeper secured to the toe of said foot-plate, a flat spring secured to said runner and adapted to slide within said keeper, and a stop upon said runner having a recess in its upper face adapted to receive said keeper to steady the foot-plate, substantially as set forth.

708,988. APPARATUS FOR SAMPLING GRAIN OR SEED. JAMES J. BROWN, London, England. Filed Feb. 24, 1902. Serial No. 33,671. (No model.)

Claim.—1. In apparatus for obtaining samples of grain or seed, the combination of a case, a cover connected to said case and adapted to be moved longitudinally along said case so as to open and close the upper end thereof, a removable pointed bottom adapted to close the lower end of said case, and a removable receptacle to receive the grain or seed, substantially as set forth.

2. The combination of a case, a cover, slide-bar attached to said cover adapted to slide between guides fixed to said case, a pointed bottom hinged to the lower end of the case, a removable receptacle for the grain or seed, a handle-stem fitted to said cover, and means for locking the case to said cover, substantially as set forth.

3. The combination of a case, an inwardly-projecting conical lip at the upper end of said case, a cover adapted to be moved longitudinally along said case, a handle-stem adapted to partially retain in said cover, a cross-bar on said stem, hooks attached to said case, a pointed bottom hinged to said case, and a removable grain or seed receptacle, substantially as set forth.

4. The combination with a cover attached to a handle-stem and adapted to be moved longitudinally, a case fitted with a removable pointed bottom and provided with means for locking the case to the cover, of a grain-receptacle adapted to be placed inside said case, a sample-bag, and a cylindrical stretcher adapted to hold open said bag, substantially as set forth.

708,984. ELECTRIC CONTROLLER. JOHN W. BROWN, JR., Philadelphia, Pa. Filed Mar. 7, 1902. Serial No. 37,128. (No model.)

Claim.—1. In an electric controller, the combination of a slab or plate of insulating material, concentric series of contact-plates thereon, an operating-spindle carrying a contact-arm provided with openings and also constructed of insulating material, metallic plates carried on the upper surface of said arm, one of said plates being bent over the end of the arm and extended to engage directly with one series of the contact-plates and spring-controlled brushes carried by the insulating-frame in said openings thereof, said brushes being placed to engage others of the contact-plates when the controller is operated, substantially as described.

2. An electric controller consisting of a plate of insulating material,

an operating-spindle and a handle for moving the same, an arc of insulating material fixed to said handle, concentric series of contact-plates upon the insulating-plate, spring-controlled brushes within the openings in the insulating-arm, two metallic plates insulated from one another carried by the arm, one of the same being connected to two others of the brushes, the second plate being formed so as to engage with one of the series of contact-plates, substantially as described.

3. In an electric controller for varying the speed of a motor by varying its field, the combination of a pair of contacts connected respectively to the armature-terminals of the motor, a series of contacts having resistance between them connected to one terminal of the field of the motor, the other terminal of said field being connected to one of the supply-mains, a contact-plate connected to the other main, and movable brushes respectively connecting one of the pair of contacts in the armature-circuit with one of the supply-mains, and the other of said contacts with the second supply-main and with the contacts in circuit with the field, substantially as described.

4. In an electric controller, the combination of brushes with means for connecting the same to the positive and negative supply-mains respectively, a pair of contact-plates connected to the armature-terminals of a motor to be operated, a number of contacts having resistance between them and in connection with one terminal of the field of the motor, the other terminal of said field being in connection with one of the supply-mains, one of said brushes normally forming connection between one of the supply-mains and the contact of one armature-terminal when the other is connecting the contact of the other armature-terminal and the contacts of the field with the second supply-main, substantially as described.

5. In an electric controller, the combination of brushes, means for connecting the same to supply-mains, a pair of armature contact-plates, a number of field contact-plates, resistance between the said field contact-plates, one of said brushes being constructed to be in contact with one of the armature contact-plates when the second brush is in contact with the other armature contact-plate and the field contact-plates, substantially as described.

6. The combination in an electric controller, of a central contact, a pair of armature-contacts on the arc of a circle adjacent to the central contact, a contact-plate on the arc of a second circle, and a series of contacts on a third circle having resistance connected between them, a brush forming connection between the central contacts and one of the armature-contacts when the controller is operated and a second brush placed to simultaneously form contact between the second of the armature-contacts and the contacts of the second and third circle, substantially as described.

708,985. PROTRACTING-RULER. BERNARD H. CANNON, U. S. Revenue Marine. Filed Dec. 2, 1891. Serial No. 34,524. (No model.)

Claim.—1. In a retracting-ruler, the combination of a base or main part, a slide movable longitudinally thereon, pointers adapted to register with graduations upon said base or main part, a protractor upon said slide, a swinging member, a perforated extension upon said slide adapted to lap upon the end of said swinging member, a quadrant secured to said swinging member, having a perforation adapted to register with the perforation upon the said extension, said quadrant being provided with a curved edge concentric with said protractor, and a screw passing through the perforations in said quadrant and the extension upon said slide.

2. In a retracting-ruler, the combination of a base or main part, a slide movable longitudinally thereon, pointers carried by said slide adapted to register with graduations upon said base portion, a segmental plate raised upon the top of said slide having concentric inner and outer edges, a swinging member, a perforated extension upon said slide adapted to be pivoted to said member, a perforated quadrant secured to said member, and having a graduated curved edge concentric with and adapted to slide upon the inner edge of said protractor, and a screw passing through said perforations to secure the same to said swinging member.

708,286. FIRE-ESCAPE. EDWARD H. CHASE and WILLIAM I. HALDEMAN, Pittsburgh, Pa. Filed Mar. 12, 1902. Serial No. 66,961. (No model.)

Claim.—In a fire-escape, the combination of a cylindrical casing, and a bar held therein, said bar being of essentially uniform diameter and having a spiral groove formed therein, the groove being open at the sides of the bar at all points along the length of the bar, and the spiral along which said groove is formed being of greatest diameter at approximately the middle of the bar and tapering gradually toward each end until said spiral runs into the longitudinal axis of the bar.

708,287. VARIABLE-SPEED FRICTION-GEARING. EDWARD P. COTLER, Warren, Ohio. Filed Dec. 7, 1900. Serial No. 30,686. (No model.)

Claim.—1. In a device for changing speed, two parallel, rotatable wheels or disks, a friction-roller supported between and arranged to engage both said disks to transmit motion from one to the other, and means

for adjusting the plane of rotation of said friction-roller angularly to its normal tangent position at its point of contact to cause said roller to traverse said wheels or disks in opposite directions toward or from their centers.

2. In a device for changing speed, a rotatable wheel or disk, a friction-roller arranged to engage said wheel or disk, a shaft supporting said friction-roller, links pivotally connected to the ends of said shaft, a spindle rotatable about an axis lying in the normal plane of rotation of the roller, arms pivotally connected to said spindle and to the abutment links, means for rocking said arms about their pivotal connection with the spindle to adjust the plane of rotation of the friction-roller angularly to its normal tangent position at its point of contact, whereby the spindle will be rotated and the friction-roller will traverse the wheel or disk either from or toward its center, and means for applying power to or taking power from said friction-roller.

3. In a device for changing speed, a rotatable wheel or disk, a friction-roller arranged to engage said wheel or disk and to be adjusted bodily about two axes at right angles to each other, means for positively adjusting said roller about one of said axes from its normal tangent position at its point of contact, and a support for said roller so constructed that when the plane of rotation of said roller is varied as aforesaid said support and the roller will be automatically adjusted about the other said axis and caused to traverse the wheel or disk either from or toward its center.

4. In a device for changing speed, a rotatable wheel or disk, a friction-roller arranged to engage said wheel or disk and normally rotating in a plane tangent to a circle described about the axis of said wheel or disk, a movable carrier for said roller, means for adjusting the said roller from said normal tangent position, whereby the carrier for the roller will be automatically moved and the roller will traverse the wheel or disk from or toward its center, and a pivotal support for the roller on said carrier adapted after each such adjustment to return the roller to its normal tangent position.

5. In a device for changing speed, two parallel, rotatable wheels or disks, a friction-roller arranged between and engaging with both said wheels or disks, a rotatable spindle extending between said wheels or disks and having at its end between said wheels or disks two yokes, a rock-shaft journaled in the ends of one of said yokes and provided with two diametrically opposite arms, a shaft for the friction-roller extending parallel to said arms or the rock-shaft, the bearings for said shaft engaging the arms on the other yoke, and links pivotally connected to the arms on the rock-shaft and to said bearings, and means for rocking said rock-shaft.

708,288. COMBINED SEEDER, FERTILIZER-DISTRIBUTOR, AND CULTIVATOR. ARTHUR CHAVET, Montevideo, Uruguay. Filed Oct. 18, 1901. Serial No. 73,108. (No model.)

Claim.—1. In an agricultural machine of the character described, the combination with a delivery device, of a shaft mounted below the de-

Every device, a plow secured to the shaft, and an operating-lever secured to said shaft, as set forth.

2. In an agricultural machine of the character described, the combination with a delivery device, of a shaft mounted below the delivery device, a plow secured to the shaft, means for operating the shaft, a harrow, and a connection between the said shaft and harrow, as set forth.

3. In an agricultural machine of the character described, the combination with grain-delivery device, and a fertilizer-delivery device in rear of the grain-delivery device, of a shaft mounted below the grain-delivery device, a plow secured to the shaft, a harrow secured to the said shaft, a roller, and a flexible connection between the harrow and roller, as set forth.

4. In an agricultural machine of the character described, the combination with grain and fertilizer delivery devices, of a shaft arranged below the grain-delivery device, a plow secured to the shaft, a harrow connected with the shaft, a mixing device secured to the rear of the harrow, a roller with the shaft of which the mixing device is connected, and means connected with the shaft of the roller for raising the roller, mixing device and harrow off the ground, as set forth.

5. An agricultural machine of the character described, comprising a seed-delivery device, a plow for opening a furrow to receive the seed, a harrow in rear of the plow for covering the seed delivered into the furrow, said harrow being loosely connected with the plow-support, a fertilizer-distributing device in rear of the seed-delivery device and delivering the fertilizer at the rear of the harrow, a mixing device loosely connected with the rear of the harrow for mixing the fertilizer with the soil, and a roller with the shaft of which the mixing device is loosely connected, as set forth.

708,289. GOLF-BALL. OLIVIER DAVIS, U. S. Navy. Filed Apr. 18, 1902. Serial No. 68,577. (No model.)

Claim.—1. A golf-ball, composed wholly or in part of a nitrocellulose compound and provided with a hollow cavity in its center, said cavity being filled with an elastic fluid under pressure, substantially as described.

2. A hollow golf-ball, comprising a shell of nitrocellulose compound, and an outer shell of gutta-percha, and having the cavity therein filled with an elastic fluid under pressure, substantially as described.

3. A hollow golf-ball, comprising an inner shell of rubber, an intermediate shell of a nitrocellulose compound and an outer shell of gutta-percha, and having the cavity therein filled with an elastic fluid under pressure, substantially as described.

4. A golf-ball, composed wholly or in part of a nitrocellulose compound and provided with a hollow cavity in its center, and an inflated bag containing elastic fluid under pressure located in said cavity, substantially as described.

5. A golf-ball, comprising a plurality of concentric shells of homogeneous elastic material, the inner shell being hollow, and an inflated bag containing elastic fluid under pressure contained in said inner shell, substantially as described.

6. A hollow golf-ball, comprising a shell of nitrocellulose compound, and an outer shell of gutta-percha, and an inflated bag filled with elastic fluid under pressure in the hollow portion of said ball, substantially as described.

7. A hollow golf-ball, comprising an inner shell of rubber, an intermediate shell of a nitrocellulose compound and an outer shell of gutta-percha, and an inflated bag containing fluid under pressure contained in the cavity in said ball, substantially as described.

708,240. PROCESS OF OBTAINING RELATIVELY-YIELDABLE LIQUIDS. THOMAS E. SMITH, Cleveland, Ohio. Filed Oct. 2, 1901. Serial No. 73,997. (No specimens.)

Claim.—An improvement in the production of gelatin-yieldable liquid from gelatin-yieldable material, comprising the heating of the material within a receptacle and draining or flowing gelatin-yieldable liquid from the receptacle through a body or mass of filtering material and maintaining the liquid adequately heated preparatory to and during the filtering operation so as to prevent fermentation of the liquid before the liquid has been filtered.

708,240.

708,241. PHOTOGRAPHIC DEVELOPER. ARTHUR SCHMIDT and KARL DUMMER, Elberfeld, Germany, assignors to Farbwerke of Elberfeld Co., New York, N. Y., a Corporation of New York. Filed July 17, 1901. Serial No. 68,974. (No specimens.)

Claim.—1. The herein-described developing agent for photographic pictures containing a solution of a product of addition from polyhydroxyl derivatives of aromatic compounds with nitrogen bases, substantially as described.

2. The herein-described developer for photographic pictures consisting of an aqueous solution of pyrogallol-dimethylamine to which an aqueous solution of sodium sulfite has been added, substantially as described.

708,242. PROCESS OF DEVELOPING PHOTOGRAPHIC PICTURES. ARTHUR SCHMIDT and KARL DUMMER, Elberfeld, Germany, assignors to Farbwerke of Elberfeld Co., New York, N. Y., a Corporation of New York. Filed July 17, 1901. Serial No. 68,975. (No specimens.)

Claim.—1. The herein-described process of developing photographic pictures consisting in subjecting them to the action of a solution containing a product of addition from polyhydroxyl derivatives of aromatic compounds with nitrogen bases, substantially as hereinbefore described.

2. The herein-described process of developing photographic pictures consisting in subjecting them to the action of a solution containing pyrogallol-dimethylamine, substantially as hereinbefore described.

3. The herein-described process of developing photographic pictures consisting in subjecting them to the action of an aqueous solution containing pyrogallol-dimethylamine and sodium sulfite, substantially as hereinbefore described.

708,243. PHOTOGRAPHIC DEVELOPER AND PROCESS OF MAKING SAME. ARTHUR SCHMIDT and THOMAS SMITH, Elberfeld, Germany, assignors to Farbwerke of Elberfeld Co., New York, N. Y., a Corporation of New York. Filed July 17, 1901. Serial No. 68,976. (Specimens.)

Claim.—1. The process for producing new products of addition from polyhydroxyl derivatives of the benzene series which process consists in first treating these compounds with nitrogen bases of the aliphatic series and then isolating the resulting bodies from the reaction mixture, substantially as hereinbefore described.

2. The process for producing a new product of addition being pyrogallol-dimethylamine of the formula:

by first treating pyrogallol with dimethylamine and then isolating the new compound from the reaction mixture, substantially as hereinbefore described.

3. The herein-described new products of addition from polyhydroxyl derivatives of the benzene series with nitrogen bases of the aliphatic series which are crystalline substances, soluble in water and possessing an alkaline reaction, being split up into their components by the action of caustic alkalis, substantially as hereinbefore described.

4. The herein-described pyrogallol-dimethylamine having the formula:

which is a crystalline powder melting at 163° centigrade which is easily soluble in water, soluble with difficulty in alcohol and insoluble in ether, substantially as hereinbefore described.

708,244. SCALE ATTACHMENT. WILLIAM B. EVANS and JOHN T. MARSHALL, Boston, Mass. Filed Oct. 10, 1901. Serial No. 73,997. (No model.)

Claim.—1. A scale attachment, comprising a dial, a pointer movable over the dial, a pinion on the shaft of the pointer, a segment-rack engaging with the pinion, a lever carrying said rack, a balance-weight adjustable on the lever, a trip-rod to which the lever is pivotally connected, a spring arranged between the upper end of said trip-rod and a fixed device, and a sleeve adjustable on said rod for engaging with a scale-beam, substantially as specified.

2. A scale attachment, comprising a casing, a dial on said casing, a pointer movable over the dial, a pinion on the shaft of said pointer, a rack engaging with the pinion, a lever carrying the rack, a balance-weight adjustable on the lever, a spring-pressed trip-rod having connection with the lever, and a swinging link connection between said rod and the casing, substantially as specified.

3. A scale attachment, comprising a casing, a dial on said casing, a pointer movable over the dial, a pinion on the shaft of said pointer and within the casing, a segment-rack engaging with said pinion, a lever carrying the rack, an adjustable stop for the lever, a trip-rod having connection with said lever and extending through an opening in the casing and adapted to engage at its lower end with a scale-beam, a screw adjustable in the upper wall of the casing, and a spring arranged between the upper end of the trip-rod and said screw, substantially as specified.

4. In a scale attachment, a casing, a dial on said casing, a pointer movable over the dial, a pinion on the shaft of said pointer and within the casing, a segment-rack engaging with the pinion, a trip-rod pivoted to the lever and passing through an opening in the bottom wall of the casing, the lower end of the trip-rod being designed for engagement with a scale-beam, a screw adjustable in the top wall of the casing, a spring arranged between said screw and the upper end of the trip-rod, a cover for the screw, and a link connection between the trip-rod and the casing, substantially as specified.

5. In a scale attachment, a dial, a pointer movable on the dial, a trip-rod, a sleeve adjustable on said trip-rod and having a pointed end for engaging with the upper end of a scale-beam, flanges extending downward from said sleeve for engaging at opposite sides of the scale-beam, and device operated by movements of the trip-rod for moving the pointer, substantially as specified.

708,245. SHIRT-TEST HALF AND POUCH. WILLIAM S. FARLEIGH, Lynchburg, Va. Filed July 13, 1901. Serial No. 55,453. (No model.)

Claim.—1. A test-half made of fabric and having a water-receiving and retaining receptacle the same of fabric and formed therewith or secured thereto.

2. A test-half having a slit formed therein, a flap secured along one edge of the slit on one side of the test-half and overlying the slit, and another flap secured along the other edge of the slit on the opposite side of the test-half and overlying the slit, whereby the said test-half may be utilized as a pouch, as set forth.

708,246. REGULATOR FOR CONTROLLING THE DESCENT OF ELEVATOR-CARS. AUGUST GALLIHER, West Babylon, N. Y. Filed Aug. 31, 1900. Renewed Jan. 27, 1902. Serial No. 91,200. (No model.)

Claim.—1. A regulator for controlling the descent of elevator-cars, consisting of a series of rotary devices for causing accelerated rotation, a device arranged to be driven by said accelerating device and adapted to offer resistance to the air when revolving in one direction, and to offer no such resistance when revolving in the opposite direction, a sprocket-wheel secured to the same shaft as one of the accelerating devices, a sprocket-chain passing over and engaging with said wheel, and adapted to have a weight suspended from one of its ends, and its other end adapted to be attached to the car, all as and for the purposes set forth.

2. A regulator for controlling the descent of elevator-cars, consisting of a series of rotary devices for causing accelerated rotation, a device arranged to be driven by said accelerating device and adapted to offer resistance to the air when revolving in one direction, and to offer no such resistance when revolving in the opposite direction, a sprocket-wheel secured to the same shaft as one of the accelerating devices, a sprocket-chain passing over and engaging with said wheel and having a weight suspended from one of its ends, and its other end adapted to be attached to the car, all as and for the purposes set forth.

3. A regulator for controlling the descent of elevator-cars, consisting of a series of rotary devices for causing accelerated rotation, a fan having folding wings arranged to be driven by said accelerating device, a sprocket-wheel secured to the same shaft as one of the accelerating devices, a sprocket-chain passing over and engaging with said wheel and adapted to have a weight suspended from one of its ends, and its other end adapted to be attached to the car, all as and for the purposes set forth.

4. A regulator for controlling the descent of elevator-cars, consisting of a series of rotary devices for causing accelerated rotation, a device arranged to be driven by said accelerating device and adapted to offer resistance to the air when revolving in one direction, and to offer no such resistance when revolving in the opposite direction, a pulley and sprocket-wheel secured to the same shaft as one of the accelerating devices, a sprocket-chain passing over and engaging with said wheel and having a weight suspended from one of its ends, and its other end adapted to be attached to the car, all as and for the purposes set forth.

5. A regulator for controlling the descent of elevator-cars, consisting of a series of accelerating-gears, a device arranged to be driven by one of said gears, and adapted to offer resistance to the air when revolving in one direction, and to offer no such resistance when revolving in the opposite direction, a pulley and sprocket-wheel secured to the same shaft as one of said gears, a sprocket-chain passing over and engaging with said wheel and having a weight suspended from one of its ends, and its other end adapted to be attached to the car, all as and for the purposes set forth.

6. A regulator for controlling the descent of elevator-cars, consisting of a series of accelerating-gears, a fan having folding wings arranged to be driven by said gears, a pulley and sprocket-wheel secured to the shaft of one of said gears, a sprocket-chain passing over and engaging with said wheel and having a weight suspended from one of its ends, and its other end adapted to be attached to the car, all as and for the purposes set forth.

7. A regulator for controlling the descent of elevator-cars, consisting of a series of accelerating-gears, a fan having folding wings arranged to be driven by said gears, a pulley and sprocket-wheel secured to the shaft of one of said gears, a sprocket-chain passing over and engaging

with said wheel and having a weight suspended from one of its ends, and its other end adapted to be attached to the car, said pulley adapted to have the lifting-cable pass over it in the same direction as the chain, and a guide-pulley situated between the other pulley and the source of power, for the lifting-cable to pass over, all as and for the purposes set forth.

8. A regulator for controlling the descent of elevator-cars, consisting of a series of accelerating-gears, a fan having folding wings arranged to be driven by said gears, a pulley and sprocket-wheel secured to the shaft of one of said gears, a sprocket-chain passing over and engaging with said wheel and having a weight suspended from one of its ends, and its other end adapted to be attached to the car, said pulley adapted to have the lifting-cable pass over it in the same direction as the chain, and a guide-sprocket-wheel situated between the other wheel and the weight for the sprocket-chain to pass over, all as and for the purposes set forth.

9. A regulator for controlling the descent of elevator-cars, consisting of a series of rotary devices for causing accelerated rotation, a device arranged to be driven by said accelerating device and adapted to offer resistance to the air when revolving in one direction, and to offer no such resistance when revolving in the opposite direction, a pulley and sprocket-wheel secured to the same shaft as one of said accelerating devices, a sprocket-chain passing over and engaging with said wheel and having a weight suspended from one of its ends, and its other end adapted to be attached to the car and the lifting-cable passing over said pulley in the same direction as the chain, all as and for the purposes set forth.

10. A regulator for controlling the descent of elevator-cars, consisting of a series of accelerating-gears, a fan having folding wings arranged to be driven by said gears, a pulley and sprocket-wheel secured to the shaft of one of said gears, a sprocket-chain passing over and engaging with said wheel and having a weight suspended from one of its ends, and its other end adapted to be attached to the car, said pulley adapted to have the lifting-cable pass over it in the same direction as the chain, a guide-pulley and a guide sprocket-wheel for guiding the lifting-cable and the sprocket-chain to the source of power and to the weight respectively, all as and for the purposes set forth.

11. A regulator for controlling the descent of elevator-cars, consisting of a series of accelerating-gears, a fan having folding wings arranged to be driven by said gears, a pulley and sprocket-wheel secured to the shaft of one of said gears, a sprocket-chain passing over and engaging with said wheel and having a weight suspended from one of its ends, and its other end adapted to be attached to the car, said pulley adapted to have the lifting-cable pass over it in the same direction as the chain, a guide-pulley and a guide sprocket-wheel both on the same shaft, for guiding the lifting-cable and the sprocket-chain to the source of power and to the weight respectively, all as and for the purposes set forth.

12. A regulator for controlling the descent of elevator-cars, consisting of a series of accelerating-gears, a fan having folding wings arranged to be driven by said gears, a pulley and sprocket-wheel secured to the shaft of one of said gears, a sprocket-chain passing over and engaging with said wheel and having a weight suspended from one of its ends, and its other end adapted to be attached to the car, said pulley adapted to have the lifting-cable pass over it in the same direction as the chain, a guide-pulley and a guide sprocket-wheel both on the same shaft, for guiding the lifting-cable and the sprocket-chain to the source of power and to the weight respectively, all as and for the purposes set forth.

708,247. DRESS-PAINTER. LEVI F. CHAMBER, Donkey, N. H. Filed Mar. 23, 1902. Serial No. 77,900. (No model.)

Claim.—1. In a painter, the combination of a rock-arm extended rearward from its pivot, a seed-tube pivoted independent of the rock-arm on a pivot located in the rear of the rock-arm, a plunger connected pivotally with the rock-arm and extended into the seed-tube and means for swinging the seed-tube forward as the rock-arm is raised, substantially as described.

2. In a painter, the combination of a rock-arm extended rearward from its pivot, a seed-tube pivoted independent of the rock-arm on a pivot located in the rear of the rock-arm, a plunger connected pivotally with

the rock-arm and extended into the seed-tube, and an extension of the upper end of the seed-tube adapted to move into the path of the swinging end of the arm when the lower end of the tube is swung rearward from its normal position, substantially as described.

3. In a painter, the combination of a rock-arm extended rearward from its pivot, a seed-tube pivoted independent of the rock-arm on a pivot located in the rear of the rock-arm, and a plunger connected pivotally with the rock-arm and extended into the seed-tube; the front of the upper end of the seed-tube being curved above the pivot of the tube to conform, when the seed-tube is in its normal position, to the arc described by the upper motion of the swinging end of the arm, substantially as described.

4. In a painter, the combination of a rock-arm, a seed-tube, a plunger connected pivotally with the rock-arm and extended into the seed-tube, and a valve pivoted between its ends in the seed-tube with one end normally closing below the plunger, when the plunger is raised and the other end adapted to close the tube above the pivot of the valve when the plunger forces the lower end of the valve open, substantially as described.

5. In a painter, the combination of a rock-arm, a seed-tube pivoted independent of the rock-arm on a pivot located in the rear of the rock-arm, a plunger pivotally connected with the rock-arm and extended into the seed-tube, and a valve pivoted between its ends in the seed-tube in position for each end to close the tube when the other end is open, substantially as described.

6. In a painter, the combination of a rock-arm, a seed-tube pivoted independent of the rock-arm, a valve for the lower end of the seed-tube, a plunger pivotally connected with the rock-arm and extended into the seed-tube, and an extension of the seed-tube adapted to swing into the path of motion of the swinging end of the rock-arm when the arm is lowered and the tube is swung backward in act of planting; whereby the seed-tube is forced forward by the rise of the rock-arm, substantially as described.

7. In a painter, the combination of a shaft, adapted to travel along the surface of the soil and penetrate the same to varying depths, a furrow-former attached to the shaft, and seed-planting mechanism in the shaft protrudable below the furrow-former; whereby the planting mechanism may be used to plant at ordinary depths and the furrow-former may be used with the planting mechanism when unusual depth of planting is desired.

708,248. LINOTYPE OR SIMILAR COMPOSING-MACHINE. JOHN GRAY, Farnworth-on-Tyne, England. Filed Jan. 23, 1902. Serial No. 90,571. (No model.)

Claim.—1. In a linotype-machine, a dotted mold having its slot divided into two lengths, and provided with a projection at the point of division to enter the matrix-line and aid in holding the matrices on opposite sides thereof, that the two groups may be independently justified.

2. In a linotype-machine, a dotted mold having a partition dividing the slot into two independent lengths or sections, and a protruding nose 2 to cooperate with the matrix-line, substantially as described.

3. In a linotype-machine, a dotted mold having its slot divided into

distinct lengths or sections, a projection on the face of the mold, two jaws between which the matrix-line is confined in front of the mold, a compound line of matrices, and a quad dividing the compound line into two groups and cooperating with the projection on the mold substantially as described.

4. In a linotype-machine, a dotted mold having its slot divided into two independent lengths or sections and having a projection on its face at the point of division, in combination with a quad adapted to be cut in the matrix-line and to interlock with the projection on the mold to resist lateral movement, substantially as described, whereby the quad is adapted to divide the matrix-line into two independently-adjustable groups or short lines.

5. In a linotype-machine, a mold having a projection on its face, in combination with a quad for insertion in the line of matrices, adapted to interlock with the projection on the mold.

6. In a linotype-machine, a dotted mold having its slot divided into two lengths or sections, in combination with a matrix-assembler slide, a special stop to arrest the same at an intermediate point in the composition of the matrix-line, a divider-quad, and means for delivering the quad into the line of matrices when the special stop is in action.

7. In a linotype-machine, a matrix returned to admit a projection on the mold.

8. In a linotype-machine and in combination with the usual character-matrix, a matrix returned in the front edge, and a mold provided with a projection to enter the returned matrix.

9. In a linotype-machine, a mold having a projection adapted to enter between the matrices in the compound line and divide the same into two groups or lines.

10. In a linotype-machine and in combination with the usual matrices and means for assembling the same in line, a special quad for dividing the line, and means for delivering said quad into the line at a predetermined point in its length.

11. In a linotype-machine and in combination with the usual matrices and a mold having its slot divided into two independent lengths, a composing mechanism for assembling the matrices in a line to cooperate with both sections of the mold, divider-matrices, and means for inserting the divider-matrices in the compound line of matrices at a predetermined point, whereby the line is divided into two groups corresponding with the two sections of the mold.

12. In a linotype-machine, the combination of an assembler-slide actuated by the matrix-line as composition progresses, a stop to arrest the assembler-slide before composition of the line is completed, and means for throwing said stop out of action and delivering into the line a divider-matrix, substantially as described.

13. In a linotype-machine and in combination with an assembler-slide *j* and a preliminary stop 12 thereof, a magazine and connections for delivering divider-quads to the line, a finger-lay 13, and connections from said lay to throw the stop 12 out of action and to effect the delivery of the matrix to the line.

14. In a linotype-machine, the combination of a magazine *B* and its component, the assembler-slide *j*, its preliminary stop 12, the finger-lay 13 and connections 17 and 18 from said lay to the stop and the component respectively.

15. In a type-composing machine the combination with an assembler-bar moving forward with the extension of an assembling line of matrices, a fixed detent on the machine-frame, full-measure and short-measure stops on the assembler-bar, engaging the fixed detent, a special matrix-quad for insertion in the assembling line, having an angular recess, a mold for casting a linotype from the line of matrices, and a partition in the mold with angular surfaces engaging the angular recess, substantially as set forth.

16. In a type-composing machine the combination of a special matrix-quad for insertion in an assembling line of matrices, having a recess in its rear edge, a mold for casting a linotype from said assembled line and a partition in the mold registering with the recess of the special matrix, substantially as set forth.

17. In a type-composing machine the combination with the mold for casting a linotype from an assembled line of matrices and a partition therein for casting said linotype in separate parts, of a special matrix-quad for insertion in the mid line of matrices, having a recess in its rear edge for registering with the mold-partition, and springs on the sides of the said special matrix, substantially as set forth.

18. In a type-composing machine a matrix-quad having a recess, but no formative cavity in its rear edge, substantially as set forth.

708,249. WATER-RESERVOIR FOR RANGES. CURTIS E. GRIMM, Rutland, Vt. Filed June 24, 1901. Serial No. 65,817. (No model.)

Claim.—1. A water-reservoir for stoves and ranges, comprising a casing extending from the stove or range and connected with the interior thereof by an inlet and an outlet for the products of combustion, and a water-reservoir set in the mid casing and having an air-inlet and a steam-outlet, the inlet for the products of combustion being arranged directly opposite the steam-outlet from the reservoir, and a damper for controlling said inlet, as set forth.

2. A water-reservoir for stoves and ranges, comprising a casing extending from the stove or range and connected with the interior thereof by an inlet and outlet for the products of combustion, the casing having an air-inlet, and a water-reservoir set in the casing and spaced from the walls thereof, the reservoir having an air-inlet, and a steam-outlet above the water-line, the casing-inlet for the heated gases being arranged directly opposite the steam-outlet from the reservoir, and a damper for controlling the said casing inlet and outlet, as set forth.

3. A water-reservoir for stoves and ranges having a water-reservoir casing connected with the interior of the stove or range by an inlet and an outlet arranged one above the other in the wall between the reservoir and stove or range, the inlet being formed by a series of apertures arranged in a row, a water-reservoir set in the mid casing and having an air-inlet in the cover, a steam-outlet above the water-level opposite the casing-inlet, and a damper for controlling the casing-inlet, the said damper being mounted to slide transversely and provided with apertures adapted to register with the inlet-apertures of the casing, as set forth.

4. A water-reservoir for stoves and ranges, comprising a reservoir-body formed in one of its walls with a steam-outlet above the water-line, protecting means arranged on the inside of the reservoir for preventing water passing through the steam-outlet, a cover for the reservoir having an air-inlet, and a drip-pan suspended below the reservoir-bottom, as set forth.

5. A water-reservoir for stoves and ranges, comprising a reservoir-body, formed in one of its walls with a steam-outlet, protecting means for said outlet, a cover for the reservoir-body having an air-inlet, and a drip-pan below the reservoir-bottom, as set forth.

6. A water-reservoir for stoves and ranges comprising a water-reservoir casing extending from the stove or range and connected with the interior thereof by an inlet and outlet, the casing having an air-inlet at the outer side, a water-reservoir set in the mid casing and spaced from the walls thereof, a drip-pan suspended below the mid reservoir-bottom, and means for detachably connecting the drip-pan with the reservoir-bottom and holding it a suitable distance below the reservoir, as set forth.

7. A water-reservoir for stoves and ranges having a water-reservoir casing extending from the stove or range and connected with the interior thereof by an inlet and outlet, the casing having an air-inlet at the outer side, a water-reservoir set in the mid casing and spaced from the sides and bottom thereof, the reservoir having an air-inlet in its cover and a steam-outlet above the water-line, the steam-outlet being opposite the casing-inlet and provided with protecting devices to prevent the water from passing to the said steam-outlet, and a damper for controlling the said casing inlet and outlet, as set forth.

8. A water-reservoir for stoves and ranges having a water-reservoir casing extending from the stove or range and connected with the interior thereof by an inlet and outlet, arranged one above the other in the wall between the reservoir and stove or range, the mid casing having an air-inlet at the outer side at or near the top thereof, and a water-reservoir set in the mid casing and spaced from the walls and bottom thereof, the mid reservoir having an air-inlet in its cover and a steam-outlet above the water-line, the steam-outlet being opposite the mid casing-inlet, and protecting-caps over the mid steam-outlet to prevent the water from passing to the mid steam-outlet, as set forth.

708,250. MUSTARD-POT. HANS GRIMM, Erfurt, Germany. Filed June 12, 1901. Serial No. 65,822. (No model.)

Claim.—A mustard-pot comprising a body having a slot through its wall, a recess in the inside of said wall and a bottom having a discharge-opening, a valve-lever normally extending across the discharge-opening and projecting through the slot, a pin projecting laterally from the valve-lever into the recess, and a spring coiled about the pin and bearing at its ends against the body and valve-lever respectively, substantially as described.

708,251. PIPE-FULLER. JAMES A. HARRIS, Waynesburg, W. Va. Filed Apr. 14, 1902. Serial No. 65,735. (No model.)

Claim.—1. In a pipe-filler, a support, right and left hand threaded screws mounted to revolve upon the said support, a cross-head having a central opening for a pipe, sets carried at the ends of the cross-head and threaded correspondingly to the threads of the screws, one of the sets being adapted to travel upon each of the said screws, right and left hand worm-wheels secured upon correspondingly-threaded screws, a drive-shaft, and right and left hand worms on the drive-shaft, adapted to engage one with the right-hand worm-wheel and the other with the left-hand worm-wheel, as described.

2. In a pipe-filler, a support, right and left hand threaded screws mounted to revolve upon the said support, a cross-head having a central opening for a pipe, sets carried at the ends of the cross-head and threaded correspondingly to the threads of the screws, one of the sets being adapted to travel upon each of said screws, right and left hand worms secured upon correspondingly-threaded screws, a drive-shaft, and right and left hand worms on the drive-shaft, adapted to engage one with the right-hand worm-wheel and the other with the left-hand worm-wheel, a reversing mechanism mounted to revolve upon the support, pinions meshing with the gear and loosely mounted on the shaft, said pinions being provided with clutch-faces, and a clutch mounted to slide on and turn with the shaft between the clutch-faces of the pinions, and means for shifting the said clutch, as described.

708,252. WINDOW ATTACHMENT. ROBERT HANDELSON, Oshkosh, Wis. Filed June 8, 1901. Serial No. 65,736. (No model.)

Claim.—1. The window attachment herein described, comprising a bar for connection with the window-frame, and lock-engings secured to the sashes and provided with openings for the said bar and having within said casing bolts pivoted between their ends and having one arm engaged with the bar, a spring engaging the other arm of the bolt, a lever having one arm connected with the arm of the bolt which engages with the bar, and an operating-rod connected with the other arm of said lever, the latter arm being extended whereby it may be operated directly by hand, substantially as set forth.

2. In an apparatus substantially as described, the combination with the lock-enging having openings for the passage of the bar, and having its base-plate provided with a guide-pulley, the pivoted bolt in said lock-enging and arranged to engage the bar passed through the guide-openings in the casing, the lever engaging with said bolt for releasing the same and a cord connected with said lever and passed over the guide-pulley in the base of the case, substantially as set forth.

3. The combination with the bar for connection with the window-casing and the lock-enging having guide-openings in said bar, of the lever-bolt pivotedly supported by said casing and rocking in a plane at a right angle to the direction of the guide-openings in the case, the spring for actuating the said bolt into engagement with the bar passed through said guide-openings, and means for releasing said bolt from engagement with the bar, substantially as set forth.

4. The combination with the lock-enging having guide-openings for the bar for connection with the window-frame, of the lever-bolt rocking in said casing in a direction at a right angle to the direction of the guide-openings, a spring for actuating said lever in one direction, and the ball-crank lever for operating the bolt in opposition to the spring, a guide upon the casing for said ball-crank lever, and a guide-pulley supported by the casing for a cord by which to operate the ball-crank lever, substantially as set forth.

708,253. SHARP. ROBERT HANDELSON, Oshkosh, Wis. Filed Sept. 20, 1901. Serial No. 70,003. (No model.)

Claim.—1. The improvement in shears herein described consisting of the base-plate provided in its upper face with a longitudinal undercut groove open at one end, the base-blade provided at its lower edge with a rib fitted to the undercut groove of the base-plate and provided at the rear end of said blade with an upwardly-projecting arm curved rearwardly to form a handle and having said arm provided with a downwardly-facing curved shoulder, the upper blade having a knuckle operating beneath said shoulder and pivoted to the base-blade and provided with a handle extending beneath that of the base-blade and a spring operating between said handles.

2. The shears herein described comprising the base-plate the base-blade secured thereto and provided with the upwardly-projecting arm extending rearwardly to form a handle and having said arm provided with a lateral downwardly-facing shoulder, and the upper blade having a knuckle fitting and operating below said shoulder and pivoted to the base-blade and provided with a handle extending beneath the handle of the base-blade substantially as set forth.

3. The combination of the base-plate, the base-blade thereon and provided at its rear and with an upwardly-projecting arm having a rearwardly-extending handle portion overlying the base-plate in rear of the base-blade, and the upper blade provided at its rear end with a handle portion underlying the handle of the base-blade and operating between the same and the rear portion of the base-plate substantially as set forth.

708,254. COAL-SEPARATOR. WILLIAM J. HANDELSON, Oshkosh, Wis., assignor of two-thirds to THOMAS B. HUGHES, Oshkosh, Wis. Filed Sept. 20, 1901. Serial No. 71,971. (No model.)

Claim.—1. In a separator of the class described, a series of chutes each having an adjustable bottom section, and means for simultaneously effecting an adjustment of all of said sections.

2. In a separator of the class described, a series of chutes each having a pivotal adjustable bottom section, common adjusting means for effecting a synchronous adjustment of all of the bottom sections, and common fastening means for holding all of said sections set in their adjusted position.

3. In a separator of the class described, a series of chutes each having a pivotal adjustable bottom section, a shaft carrying an adjusting-rod for each bottom section and a link-arm, a series of toggle-bars connecting the several link-arms, and an operating-lever connected with said toggle-bars and having a fastening device.

4. In a separator of the class described, a series of chutes having bottom discharge-openings and regulating-gates therefor, and means for synchronously adjusting the several gates.

5. In a separator of the class described, a series of chutes having bottom discharge-openings and slidable regulating-gates therefor, and common adjusting mechanism for all of said gates, said mechanism including means for individually setting each gate independently of the others.

6. In a separator, a series of chutes having bottom discharge-openings, slidable regulating-gates for said openings, pivotally-supported adjusting-links having operative connection with the gates, an oscillatory connecting-lever, a series of adjusting-bars connected respectively with said lever and with said links, a single operating-handle, and a fastening device associated with one of the adjusting-bars.

708,255. TONGUE-BUCKLE. NATHAN C. HANSEN, Modford, Mass., assignor of one-half to Abbott R. Colburn, Westwood, Mass. Filed Dec. 14, 1901. Serial No. 58,908. (No model.)

Claim.—1. A tongue-buckle comprising the following instrumentalities—to wit, two parallel side members *a a*, a transverse bar *b* and

ing their contiguous ends and a tongue-bar *c* formed integral with each other, in combination with a tongue *d*, tubular recesses *e e* in the members *a a*, springs *f f* located therein and a bent arm *B* having three members *A A I*, the two parallel side members *A A* of which enter the recesses *e e* centrally in the direction of the longitudinal axis of the springs, constructed, arranged and operating as described.

2. In a tongue-buckle, the members *a a*, *b* and *c* cast integral with each other, recesses *e e*, within the members *a a* and springs *f f* located therein, in combination with a bent arm *B* having side members *A A* which enter the recesses *e e* and are located within the longitudinal axis of the springs, blocks *i i* turned over the ends of the members *A A* contiguous to the transverse bar *b* of the buckle, and screw-nuts *m m* for closing the ends of the tubular members *a a* of the buckle contiguous to the member *f* of the bent arm—all specifically constructed, arranged and operating as set forth.

708,256. ATTACHMENT FOR CAR-COUPLING. THOMAS HARRISON, Bowling Green, Ohio. Filed Jan. 20, 1902. Serial No. 51,623. (No model.)

Claim.—1. The combination with a draw-head, and a knuckle provided with inner and outer perforations, of a removable attachment or safety device conforming to the configuration of the car-coupling and provided with vertical openings forming continuations of the openings of the knuckle, said attachment being also provided adjacent to the engaging portion of the knuckle with a recess, a continuous knuckle-pin passing through the attachment, the draw-head and the knuckle, and a vertical pin connecting the outer portion of the attachment to the outer portion of the knuckle, substantially as described.

2. The combination with a draw-head and a knuckle having a perforation at its outer end, of the safety device provided at its outer end or face with a projecting flange approximately triangular and having a rounded shunting face, said attachment being provided with openings forming continuations of the openings of the knuckle, and pins arranged in the said openings and securing the safety device to the knuckle and pivoting the latter to the draw-head, substantially as described.

708,257. GARRAGE-CAR. JOHN H. HAYTON, Des Moines, Iowa. Filed Aug. 31, 1901. Serial No. 74,004. (No model.)

Claim.—1. The combination with a trolley-wire, and a car mounted to travel thereon, and having an automatically-closing drop-bottom, of a receptacle arranged beneath the path traversed by the car, and a lifting trip contiguous to the receptacle operating to release the drop-bottom.

2. The combination with a trolley-wire, a car mounted to travel thereon, a self-closing drop-bottom for the car, and a bottom-holding latch, of a receptacle arranged beneath the path traversed by the car, and a trip contiguous to the receptacle adapted to act on the latch, release the drop-bottom and fold to let the latch pass in the return movement of the car.

3. The combination with a trolley-wire, a car mounted to travel thereon, a self-closing drop-bottom for the car, and a bottom-holding latch, of a receptacle beneath the path traversed by the car, and a spring-actuated trip contiguous to the receptacle adapted to trip the latch, release the drop-bottom and fold to allow for the return movement of the car.

4. The combination with a trolley-supported traveling car, having a self-closing drop-bottom, and a bottom-holding latch, of a receptacle beneath the path traversed by the car, and a knuckle-jointed trip contiguous to the receptacle and arranged to cooperate with the latch.

5. The combination with a support, of a series of converging trolley-wires secured thereto, arms mounted to travel on said wires and having self-closing drop-bottoms, latches for supporting said bottoms, a common receptacle adjacent to the convergent ends of said wires, a common bracket provided with a socket to embrace the support, and a series of trips mounted upon the circular portion of said bracket.

708,258. ISOLATING-MACHINE. JOHN HOSKINS, Cheshire, W. Va. Filed Sept. 20, 1901. Serial No. 77,107. (No model.)

Claim.—1. A machine for the purpose described, including front, rear and intermediate frame-sections in longitudinal alignment with each other, a pair of rectangular outer-frames mounted on the intermediate frame, disposed parallel to each other and at an angle to the stock; slots in said outer-frames to provide means for their adjustment on the intermediate frame in the direction of their greatest length; each of said outer-frames carrying a shaft mounted centrally and longitudinally thereof and extending inwardly beyond the frame to the stock; a pulley mounted on said shaft between its bearings in the outer-frames; and at the inner projected end of said shaft a cutter-head adjustable longitudinally of the shaft and carrying a rotatable cutter, adapted to engage the opposite faces of the turned part of the stock, said cutters having said-projecting edges, as set forth.

2. A machine of the character described, including a frame having front and rear end sections in longitudinal alignment, and an intermediate section; rotary cutter mechanism mounted on the intermediate frame, said mechanism including a spindle, having a revolving cutter on one end and there-of for engaging the stock; feed mechanism for the front and rear sections, adapted to engage the stock and feed it to the cutters in a combined rotary and longitudinal direction; said cutters including horizontally-disposed longitudinal frames having thin blades at the center of their end sections through which the stock passes, feed-rollers for gripping the stock and a longitudinal shaft mounted in bearings at one side of the rectangular frame, said shaft having means for rotating the rollers, and having one end extending beyond the said rectangular frame, carrying a gear to engage a stationary cog-wheel on the main frame, for the purpose described.

3. In a machine as described, a feed mechanism for imparting a longitudinally-rotary movement to the stock being worked on, said mechanism including a rectangular rotatable frame mounted on hollow spindles through which the stock passes, said spindles being rigidly secured to said rotatable frame midway of its end sections and forming journals therefor, said journals having bearings in the main frame of the machine, said rotatable frame carrying two oppositely-disposed yoke-frames, which form supports for the feed-rolls, and a longitudinal shaft having a gear-wheel at one end thereof, meshing with a wheel rigidly attached to the main frame, and means at its center for communicating motion to a transverse shaft operatively connected to the feed-rolls, and imparting motion thereto, said opposing feed-rolls adapted to grip the stock from opposite sides, and yieldable laterally relatively to the stock, for the purpose described.

708,259. NOTER-BOOK. ARTHUR L. HOLTON, Norfolk, Va. Filed June 16, 1901. Serial No. 64,714. (No model.)

Claim.—1. A note-book substantially as herein described comprising the note-sheets having openings for the arch-pieces, the holder having a base-plate and provided thereon with upwardly-projecting ends having sockets one socket of each pair being threaded and the arch-pieces

being provided at one end with a tension to fit one socket and at their other ends with the spiraled sections to screw into the threaded sockets, the note-sheets being held on said arch-pieces substantially as and for the purposes set forth.

2. In a device substantially as described, the base-plate provided with an upwardly-projecting end having a threaded socket in its upper end, and an arch-piece provided at one end with a spiraled threaded section for screwing into the socket of the base-plate and arranged at its other end for engagement with the base, substantially as set forth.

3. A holder for note-books comprising the base-plate having the upwardly-projecting ends arranged in pairs and provided with sockets, one socket of each pair being threaded, and the arch-pieces having at one end tension and at their other ends threaded sections and fitted to the sockets of the base-plate substantially as set forth.

4. A holder for note-books substantially as described comprising the base-plate beveled or sloped off at its opposite edges and provided with the upwardly-projecting ends arranged in pairs, and the arch-pieces provided at one end with tension and at their other ends with threaded sections whereby they may be secured detachably to the base-plate substantially as set forth.

708,260. TABLET. ARTHUR L. HOLTON, Norfolk, Va. Filed Apr. 1, 1902. Serial No. 101,010. (No model.)

Claim.—The holder for tablets substantially as herein described and shown, having a stem or connecting rod and provided at the ends thereof with projecting base-sections at approximately right angles to the connecting-rod, the base or arches extending from the outer ends of the base-sections over the stems and thence to a point beyond the connecting-rod approximately equal to the length of the said base-sections and provided at each end of the base or arches with returned base-sections approximately equal to the length of the base-sections projecting from the ends of the connecting-rod, all substantially as set forth, whereby the connecting-rod is located approximately centrally with the base or arches and midway between the ends of the base of said base or arches, as and for the purposes set forth.

708,261. SPEED-REGULATOR FOR ROTARY SHAFTS. ALLEN S. HOWE, New York, N. Y. Filed Mar. 3, 1902. Serial No. 95,460. (No model.)

Claim.—1. The herein-described speed-regulator, for rotary shafts, consisting of a rotary driver-shaft *A*, longitudinally-movable and radially-grooved cones *G, H*, splined on said shaft, sprocket-wheels *F, I*, engaging right and left screw-threads on said shaft, radially-adjustable bars *L, M* movable in the said grooved cones, a shaft *K*, longitudinally-adjustable grooved cones *L, M* splined on said shaft, bars *N, N* engaging said cones, an endless sprocket-chain engaging said bars *L, I, N, H*, sprocket-wheels *K, R*, engaging left and right screw-threads on said shaft *K*; and intermediate connecting mechanism from said driver-shaft *A*, to said sprocket-wheels on the shafts *A* and *K*, substantially as and for the purpose set forth.

2. The rotary speed-regulator, as described, consisting of a rotary driver-shaft and a rotary driven shaft, a pair of longitudinally-adjustable and radially-grooved cones splined on each of said shafts, bars adjustable in said grooved cones, an endless chain engaging said bars internally-screw-threaded right and left sprocket-wheels working on corresponding screw-threaded portions of said shafts, a sprocket-wheel on the driving-shaft, a sprocket-chain connecting said sprocket-wheel to said pair of sprocket-wheels, and clutch mechanism on the latter for regulating the speed imparted from the shaft *A*, to the shaft *K*, substantially as herein set forth and described.

3. In a rotary speed-regulator, in combination a rotary driver-shaft, and a rotary driven shaft, a pair of longitudinally-movable grooved cones splined upon each of said shafts, bars adjustable in said grooved cones, an

endless chain, connecting said bars, internally-curved sprocket-wheels engaging curves on said shaft, an adjustable sprocket-wheel connected to the sprocket-wheels on the driver-shaft and loosely-rotating grooved cones G', H', L', M', arranged respectively on the cones I, H, and L, M, substantially as and for the purpose set forth.

708,262. STOP AND WASTE FOR WATER-PIPE. EDWIN HOWLAND, Boston, Mass. Filed Mar. 11, 1902. Serial No. 97,742. (No model.)

Claim.—1. In a stop and waste for water-pipe, the plug B provided with a suitable handle and formed with a central horizontal part or passage; and a case, as A, provided with apertures on opposite sides extending through said case in the plug below the part in said plug, and with a port or passage adapted to register with the said port in the plug, said plug being formed with a passage or by-pass extending downward from the part therein to the level of the aperture in the case, whereby the rotation of the plug produced by swinging the handle in either direction from one in line with the pipe enables the by-pass to register with the aperture on that side below the port in the plug, substantially as described.

2. In a stop and waste for water-pipe, the plug B provided with the central part B' and with a suitable handle; and the case A provided with a central part K adapted to register with the part B', and further provided with apertures H on opposite sides of the plug below the part B', said plug being provided with the by-pass H extending downward from and on opposite sides of the part B', and adapted to register with either of said apertures H as the handle of the plug is swung to the right or to the left, and said case being formed on its inner surface with the passage L, extending from the lower portion of and on opposite sides of the part K, and adapted to coincide or register with the by-pass when the plug is suitably rotated, substantially as set forth.

708,268. CASE-REGISTER. EDWARD W. BROWN, Toledo, Ohio, assignor of two-thirds to Leroy E. Plummer, Toledo, Ohio. Filed June 26, 1901. Serial No. 91,661. (No model.)

Claim.—1. In a case-register, the combination with a case having its front curved in two concentric arcs one above the other with a horizontal ledge connecting the curves and provided with openings, the wall

of the case above the upper curve being apertured, of toothed counter-wheels journaled in the casing concentrically with the curves thereof, arc-shaped operating-plates concentric with the curves and wheels and passing through said apertures and having their free ends extending through openings in said ledge, operating means projecting from said plates in line with the ledge-openings, operating means carried by said arc plates and engaging the counter-wheels, and a door in said case formed in the lower curve for permitting inspection of said counter-wheels, substantially as described.

2. In a case-register, the combination with indicator-cylinders, springs for normally returning them to zero position, pawls normally holding them at indicating position, a normally spring-closed cash-drawer, a pawl holding the drawer closed and carrying a key, an arm secured to said key, branches formed on the free end of said arm contacting with the indicator-cylinders retaining pawls and designed, upon the depression of the drawer-releasing key to move said last-mentioned pawls and release the indicator-cylinders from indicating position, substantially as described.

3. In a case-register, the combination with indicator-cylinders, springs for normally returning them to zero position, pawls normally holding them at indicating position, a normally spring-closed cash-drawer, a pawl holding the drawer closed and carrying a key, an arm secured to the last-mentioned pawl for releasing said first-mentioned pawls, registering keys or fingers, hand-wheels operated by said keys, and flexible means operated by said hand-wheels for moving the cylinders to indication position, substantially as described.

4. In a case-register, the combination with indicator-cylinders, springs for normally returning them to zero position, registering keys or fingers, shafts rotated determinately thereby, cylinders on said shafts, and cords connecting said cylinders with the indicator-cylinders for transferring said determinate movements to the indicator-cylinders, substantially as described.

5. In a case-register, the combination with a centrally-located shaft, of counter-wheels mounted thereon having ratchet-toothed peripheries and correspondingly-numbered rings, graduated arc-shaped operating-plates concentric with the wheels, pawls operated by said plates engaging the ratchet-tooths, means for determining the extent of movement of the plates, spring-operated means for automatically returning the said plates to their normal position after each operation, and flexible means connecting said plates with said spring-operated means, substantially as described.

6. In a case-register, the combination with a centrally-located shaft, of counter-wheels secured thereto having ratchet-toothed peripheries and correspondingly-numbered rings, graduated arc-shaped operating-plates concentric with the wheels, pawls operated by said plates engaging the ratchet-tooths, a spring connected with each of said plates for returning the same to its normal position after each operation, spaced fingers projecting from said plates, a ledge on the case having an opening for the passage of the plates and its fingers and serving as a stop therefor, and means at the free end of each of said plates for limiting its return movement, substantially as described.

7. In a case-register, the combination with a case having its front curved in two different but concentric arcs with a horizontal ledge connecting the curves and provided with openings, the wall of the case above the upper curve being apertured, of toothed counter-wheels journaled in the case concentrically with the curves, arc-shaped operating-plates concentric with the curves and wheels, and passing through said apertures, and having their free ends extending through said ledge-openings, spaced fingers projecting from the plates through the slots of the curve in line with the ledge-openings, and pawls engaging the counter-wheels and connected to the arc plates, substantially as described.

8. In a case-register, the combination with a case provided with a

curved front, of a shaft supported within the case and arranged concentrically with the curved front, toothed counter-wheels on the shaft, an arc-shaped plate concentric with the front and the shaft and wheels and including a portion of the front, spaced fingers projecting from said plate, ratchet-arms pivoted on the shaft and connected with the operating-plates, and pawls on the ratchet-arms engaging the counter-wheels, substantially as described.

9. In a case-register, the combination with a centrally-arranged, solid shaft, a hollow shaft arranged concentric to said solid shaft and cast and disc toothed counter-wheels secured side by side on the solid and hollow shafts respectively, of a lever pivoted on the frame below the counter-wheel and projecting upward alongside thereof, plate projecting laterally from the counter-wheel at every tooth space, a weighted pawl-lever pivoted to the pivoted lever before mentioned and normally in the path of movement of said plate, and a lateral projection on the first-named lever adapted to engage the disc-wheel, means for causing the disengagement of the pawl from the pin on the counter-lever after each tooth space movement of said wheel, and means for automatically returning said pawl-lever projecting lever to its normal position after each operation, substantially as described.

10. In a case-register, the combination with adjacent counter-wheels independently rotatable and means for transferring every tooth movement of one wheel to the other, comprising a gravity-pawl and a laterally-projecting pin thereon, of a plate fixed tangentially with the wheel in the vertical plane of said lateral pin in position to jam the pin after one movement into contact with the next tooth to prevent the transfer of more than one movement, and means for adjusting said plate toward or from said wheel, substantially as described.

11. In a case-register, the combination with adjacent counter-wheels independently rotatable and means for transferring every tooth movement of one wheel to the other, comprising a gravity-pawl and a laterally-projecting pin thereon, of a plate fixed tangentially with the wheel in the vertical plane of said lateral pin in position to jam the pin after one movement into contact with the next tooth to prevent the transfer of more than one movement, a rod depending from the free end of the tangential plate through the bottom of the case, and a nut threaded on said rod and bearing upon the bottom of the case to adjustably support the tangential plate, substantially as described.

12. In a case-register, the combination with counter-wheels, arc-shaped operating-plates and pawls engaging the wheels and operated by said plates, of concentric shafts, hand-wheels thereon corresponding in number and vertical planes with the operating-plates, bands connected at their respective ends to the operating-plates and hand-wheels, indicating-wheels independently rotatable, a second series of hand-wheels secured to and forming pairs with the first series on the same concentric shafts, and cords connecting this second series of hand-wheels with the indicating-wheels, substantially as described.

13. In a case-register, the combination with counter-wheels, arc-shaped operating-plates and pawls engaging the wheels and operated by said plates, of concentrically-arranged, independently-rotatable shafts, hand-wheels thereon corresponding in number and vertical planes with the operating-plates, a spring carried by each of said shafts for effecting their backward rotation after each operation, spring-pawls to prevent backward rotation of the counter-wheels, and means for imparting action from said hand-wheels to said operating-plates, substantially as described.

708,264. PRINTER'S FORM OR CHAIN RACE. CHARLES E. BROWN, London, England. Filed Mar. 17, 1902. Serial No. 96,066. (No model.)

Claim.—1. A printing form or chain race comprising a base, guide carried by said base and between which the form is adapted to be guided, and an arm loosely mounted at one end and adapted to engage at its opposite end with the upper edge of a form, in the manner and for the purpose specified.

2. A printing form or chain race comprising a base, guide carried

by said base between which a form is adapted to be guided, antifriction-rollers carried by the base and adapted to take against the lower edge of the form, an arm loosely mounted at one end and fixed at the opposite end and on antifriction-roller between the parts of the arm, all arranged for cooperation as and for the purpose specified.

3. A printing form or chain race comprising a base, horizontal antifriction-rollers carried by the base and forming guides for the form or chain, vertical antifriction-rollers carried by the base against which the lower edge of the form is adapted to bear, an arm loosely mounted at one end and fixed at the opposite end, and an antifriction-roller between the parts of the arm, all arranged for cooperation as and for the purpose specified.

708,265. INK-PRESSER FOR PRESS. IVAN BRISTMAN and ADOLF H. JOHANSSON, Stockholm, Sweden. Filed Dec. 26, 1901. Serial No. 97,864. (No model.)

Claim.—An ink-presser having continuous longitudinal channels with a terminal wedge-shaped lower end, an intervening groove between the channels, adjustable clamps on the upper portion of the channels, and levers for partially closing the upper ends of said channels, substantially as specified.

708,266. REPEATING FIREARM. WILLIAM W. BENTON, Sheffield, Eng. Filed Sept. 2, 1901. Serial No. 74,699. (No model.)

Claim.—1. In repeating firearm, a frame, a magazine connected therewith, the frame having a coverless cartridge-chamber in communication with the magazine, a cartridge-controlling spring in the magazine tending toward the cartridge-chamber in the frame, spring-controlled cartridge-stops mounted in the side portions of the frame, each stop comprising an inner and outer member adapted for attachment to the frame, and a body member having a pivotal connection with the end member, and a leg carried by each body member, adapted to engage with and to be disengaged from a cartridge, and means, substantially as described, for manipulating the cartridge-stops from the exterior of the frame, as set forth.

2. In repeating firearm provided with an outlet in communication with the magazine, the cartridges in the magazine being spring-controlled, cartridge-stops consisting of bars having hinged connection with the inner frame of the frame at their rear portions and provided with springs, normally forcing their forward or free ends inward within the frame, the free ends of the said cartridge-stops being capable of outward movement, levers slidable within the frame, operating from the outside of the frame, and connection between the said levers and the free ends of the cartridge-stops, whereby the levers on the cartridge-stops may be drawn outward within the plane of the inner side frame of the frame, permitting cartridges from the magazine to enter the frame and escape through the opening thereof.

3. In repeating firearm, the combination, with the frame, stock, barrel and magazine, and a spring-controlled plunger located in the magazine, the frame having outlet-openings in communication with the said magazine, of cartridge-stops comprising an attaching member and a body member hinged thereto, the cartridge-stops being located in longitudinal channels formed in the inner frame of the frame, a leg extending from the inner face of the body of each cartridge-stop at its forward end, which legs are adapted to normally engage with the rim of the innermost cartridge in the magazine, springs attached to the body portions of the cartridge-stops, holding them in their normal position, levers slidable upon the frame, each lever having a member which extends beyond the outer face of the frame and a member which connects with a forward end of the body portion of the cartridge-stops, the said parts operating in the manner herein set forth.

4. In firearm, a frame having an outlet for cartridges, springs controlling cartridge-stops, mounted within the side portions of the frame, which stops are secured at one end, being free at their opposite ends, and legs at the movable ends of the stops, adapted to engage with and to be disengaged from a cartridge, as described.

708,267. MACHINE FOR CUTTING SLATS. CHARLES E. BROWN, Birmingham, W. Va. Filed Dec. 12, 1901. Serial No. 94,660. (No model.)

Claim.—1. In a machine of the class described, a base, a table, a

gauge, a carrier for the gauge upon the base, bolts, one of which passes through the carrier, and the other of which passes through the carrier and gauge, one on the base, and a clamp-plate having perforations to receive the bolts and adapted to bear against the gauge, and one of the nuts serving to hold the carrier against longitudinal movement, and the other nut serving to prevent angular movement of the gauge.

2. In a machine of the class described, a slotted base, a knife, a gauge, a carrier for the gauge supported for sliding movement between the slots of the base, bolts, one of which passes through the carrier, and the other of which passes through the carrier and gauge, one on the base, and a clamp-plate having perforations to receive the bolts and adapted to bear against the gauge, and one of the nuts serving to hold the carrier against longitudinal movement, and the other nut serving to prevent angular movement of the gauge.

3. In a machine of the class described, a slotted base, the slots and the spaces between the same being of similar widths, a knife connected by said base, a gauge, and means for securing independent adjustments of the gauge angularly and longitudinally with respect to the base.

4. In a machine of the class described, a base having a slot, a slide fitted in said slot and tapering toward one end thereof, a gauge substantially adjustable in cross-section, the web of which is adapted to rest upon said base, bolts, one of which passes through said slide and web, and the other of which passes solely through the slide, a clamp-plate perforated to receive the bolts, and nuts upon the upper ends of the bolts adapted to engage said clamp-plate.

708,968. COVER-PLATE FOR BOILERS. CHARLES L. HUNTER, Centerville, Pa. Filed Feb. 20, 1900. Serial No. 704,394. (No model.)

Claim.—1. The combination with a boiler or other container having an opening provided with an internal flange, of a struck-up sheet-metal cover-plate having a flat flange, packing between the flange of the cover-plate and the flange of the boiler, a central socket in one face of the cover-plate and an irregular opening extending through the cover-plate at the socket, a yoke on the outside of the boiler, a bolt having a rounded head mounted in the socket and having an irregular-shaped portion under the head constructed to fit the opening in the cover-plate, said bolt extending through the plate and the yoke and having a nut by which it is drawn tightly to its seat, and packing between the bolt-head and the plate, substantially as described.

2. As a new article of manufacture, a struck-up sheet-metal cover-plate for a boiler or other container, having a peripheral bearing-flange, said cover-plate being crimped to form a corrugation of an outline similar to the contour of the plate and being depressed at the center to form a curved socket, an irregular opening extending through the cover-plate at the socket and through which a securing-bolt may extend, substantially as described.

708,969. APPARATUS FOR COOKING FOODS FOR POULTRY. GAMB, JR., BY STRAIN. GEORGE J. HERRMAN, London, England. Filed June 17, 1901. Serial No. 64,589. (No model.)

Claim.—The combination of a boiler, a steamer rising thereon and provided with an opening in its bottom, a perforated pipe situated within the steamer and surrounding said opening, a perforated plate supported

near the top of the steamer and forming with the sides and cover thereon a condensing-chamber, and a pipe leading from said condensing-chamber and communicating with the boiler below the water-level thereof.

708,970. REGISTER. GEORGE F. HERRMAN, Worcester, Mass., assignor to Crumpton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 20, 1902. Serial No. 100,604. (No model.)

Claim.—1. A register comprising in its construction, a case, two disks or wheels rotatably supported within said case and having overlapping and inwardly-turned peripheral flanges, said inwardly-turned flanges being provided with an unequal number of teeth, a driven shaft provided with a worm also supported within the case and to the rear of the disks or wheels, said worm being in engagement with the teeth on the overlapping internal flanges of the disks or wheels.

2. A register comprising in its construction a case, a stud supported within said case, two disks or wheels rotatably supported on said stud within the case and each having an inwardly-turned flange, said flanges overlapping each other, and provided with teeth parallel to the axis of said disks or wheels, a driven shaft provided with a worm also supported within said case in rear of the disks or wheels, said worm being in engagement with the teeth on the overlapping internal flanges of the disks or wheels, whereby the parts are compactly arranged and all within a single case.

708,971. PAPER-JUGGER. WILLIAM R. JESS, Chattanooga, Tenn., assignor to the Chattanooga Medicine Company, Chattanooga, Tenn. Filed Aug. 9, 1901. Serial No. 71,403. (No model.)

Claim.—1. The combination of a base, a tray set inclined thereon, a can mounted on the base and bearing under the tray and means for driving the can for the purpose specified.

2. The combination of a base, a tray set inclined thereon, a can mounted on the base and bearing under the tray and means for driving the can for the purpose specified, and an inclined pin standing on the

base and slidably engaged by the tray, whereby to force the tray to move in an inclined path.

3. The combination of a base, a tray set inclined thereon, a can mounted on the base and bearing under the tray and means for driving the can for the purpose specified, and a plate fastened to the inner walls of the tray to be engaged by the edges and sides of the paper, whereby to prevent adhesion between the paper and tray.

4. The combination of a base having an inclined top, a tray set on said top, a pin set on the top of the base perpendicular thereto and slidably engaged by the tray for the purpose explained, means for yieldingly holding the base against the tray, and a can driven against the bottom of the tray to jar the latter.

708,972. CUTTER-HEAD. GUNTERMAN JOHNSON, JR., Baltimore, Md. Filed Oct. 27, 1900. Serial No. 84,446. (No model.)

Claim.—A cutter-head for a wood-planing machine, in two parts or sections adapted to run side by side on a single shaft with means to draw the two sections together, combined with circular cutters situated between the two sections of the cutter-head having teeth on their hubs, shafts for sustaining the cutters, and bearings for the said shafts having teeth on the faces adjoining the cutters adapted to interlock with those on the hubs of the cutters, substantially as specified.

708,978. COOKING-STOVE ATTACHMENT. ANNELENE JELLY, Columbus, Ind. Filed May 8, 1900. Serial No. 14,519. (No model.)

Claim.—1. An attachment to be placed upon the top of a cooking-stove, the same consisting of a box-like structure composed of substantially like parts telescopically related to admit of varying the capacity and length of the attachment to suit different sizes and shapes of cooking vessels, each part having an opening in its top extending outward from its inner end, and means for circulating cool air through the attachment in varying quantity for controlling the temperature within the attachment at any stage of adjustment, substantially as specified.

2. An attachment to be placed upon the top of a cooking-stove, and consisting of a box-like structure composed of telescoping parts to admit of varying the capacity and length of the attachment to suit different sizes and shapes of cooking vessels, each section or part having an out-ward portion or opening in its top extending outward from its inner end to form a common opening when the parts are together, concentric rings normally closing the said opening, and a damper applied in the outer end of each of the sections or parts for controlling the temperature within the attachment at any stage of adjustment, substantially as set forth.

3. An attachment for use in connection with a cooking-stove, consisting of a box-like structure composed of telescoping sections or parts, one of the sections having an end portion offset to receive the overlapping end portion of the other sections to admit of the top and sides of the sections coming flush and each of the sections having an out-ward portion or opening in its top extending outward from its inner end to form an opening common to each when the parts are together, said opening being adapted to be oblongated by drawing the sections apart, a concentric series of rings forming a top for the said opening when the sections are moved inward, and a damper at the outer end of each of the sections to admit

of controlling the temperature within the attachment when in active operation, substantially as specified.

708,974. RAIL-SOWER. JOHN R. JONES, Hazleton, Pa. Filed May 1, 1902. Serial No. 100,400. (No model.)

Claim.—1. The combination of rail ends having their webs cut away, and fish-plates, with a head within said cut-away portion of the rails and connected by the fish-plates.

2. The combination of rail ends having their webs cut away and fish-plates with a cylinder and piston bearing means within said cut-away portion of the rails and connected by the fish-plates.

3. The combination of adjacent rail ends with a cylinder and piston bearing means and vertical pivoting-supports on the rails for the cylinder and piston, as and for the purpose described.

4. The combination of adjacent rail ends having grooves let into them, with cylinder and piston bearing means mounted upon said grooves, substantially as described.

5. The combination of adjacent rail ends having webs cut away with grooves passing through said cut-away parts, cylinder and piston bearing means mounted on said grooves and fish-plates insulating them.

708,975. COUNTING APPARATUS. RALPH W. JOHNS, St. Louis, Mo. Filed Nov. 14, 1901. Serial No. 62,307. (No model.)

Claim.—In a block-ice-counting apparatus, the combination with a chute, of a pair of fingers swingingly suspended above said chute and a connection between said fingers adapted to cause either of them to be moved in a reverse direction when the other finger is raised or lowered, whereby one or the other of the fingers forms a barrier against the passage of ice through said chute, and a register having connection with said fingers, substantially as described.

708,276. COAL AND GRAIN CAR. BRUNER KILGORE, Buffalo, N. Y. Filed Dec. 31, 1901. Serial No. 91,999. (No model.)

Claim.—1. A freight-car comprising a separately-mounted carrying receptacle or tank having a pendant ring or extension around its discharge-opening and rails supported therefrom, a closure or plate fitting against the lower edge of said ring or extension and having lateral racks upon its upper surface, and rails or tracks upon its lower surface engaging with said racks, and an extending rod or shaft provided with pinions gearing with said racks, substantially as set forth.

2. A freight-car comprising a separately-mounted carrying receptacle or tank having a pendant ring or extension around its discharge-opening and rails supported therefrom, a closure or plate fitting against the lower edge of said ring or extension and having lateral racks upon its upper surface, and having pendant brackets or bearings upon its lower surface equipped with rails or tracks traveling upon said rails, substantially as set forth.

708,277. PUMPING APPARATUS. BERT KELLY, Duncannon, Pa. Filed Oct. 31, 1901. Serial No. 79,292. (No model.)

Claim.—1. A support, a trolley movable thereon, a basket supported from the trolley, connections for moving the trolley and for raising and lowering the basket, a vertically-movable tripping device mounted on the support and arranged to be engaged and moved downwardly by the trolley, and means for automatically lifting the tripping device when released; substantially as described.

2. In a trolley and basket system, a tripping-bar suspended by connections leading to a movable slide arranged to be engaged by the trolley, and weights arranged to return the tripping-bar to its upper position when the slide is released; substantially as described.

708,278. VEHICLE-TOY. GEORGE W. KENNEDY, New College, N. C. Filed Nov. 30, 1901. Serial No. 92,046. (No model.)

Claim.—1. In a vehicle-toy, the combination with suitable supporting means, of longitudinally-disposed ribs secured to the supporting means, stretcher device extending transversely across the ribs and having its ends projecting beyond the same, and a cover supported by the stretcher device and ribs.

2. In a vehicle-toy, a bow comprising spaced standards and a cross-bar connecting the upper ends of the standards and projecting beyond the outer faces of the same, spaced ribs supported upon the bow, cross-rods connecting the ribs, said rods having their ends projecting beyond the ribs, and a cover supported by the cross-bar and the ribs.

3. In a folding top for vehicles, the combination with a supporting-standard, of a rib pivoted to the standard and comprising a plurality of pivotally-connected arms, a runner slidably mounted on the standard, and links pivotally connected to the runner and to certain of the arms of the rib, said links being of different lengths, whereby when the runner is moved downwardly the top of the rib will be tilted together.

4. In a folding top for vehicles, the combination with a supporting-standard, of a rib pivoted to the standard and comprising a plurality of pivotally-connected arms, a runner slidably mounted on the standard, and links pivotally connected to the runner and to certain of the arms of the rib, said links being of different lengths, a brace having a pivotal connection with the runner, and a link connected to the runner and detachably engaging the standard to hold said runner against movement thereon.

5. In a folding top for vehicles, the combination with a supporting-standard, of a rib pivoted to the standard and comprising a plurality of pivotally-connected arms, a runner slidably mounted on the standard, links pivotally connected to the runner and to certain of the arms of the rib, said links being of different lengths, a brace having a pivotal connection with the runner, and a link connected to the runner and detachably engaging the standard to hold said runner against movement thereon.

6. In a vehicle-top, the combination with a standard, of a runner slidably mounted on the standard, a rib pivoted to the standard and comprising a plurality of pivotally-connected arms, transversely-disposed rods secured to the arms contiguous to their pivot-points, and a cover supported by said ribs.

7. In a vehicle-top, the combination with a bow having a pair of spaced standards, of ribs pivoted to opposite sides of the bow and contiguous to the upper ends of the standards, said ribs each comprising a plurality of pivotally-connected arms, runners slidably mounted on the standards, links pivotally connected to the runners and to certain of the arms of the ribs, cross-rods connecting the arms of the correspondingly-disposed ribs, and a cover supported by said ribs and rods.

8. In a vehicle-top, the combination with a bow comprising a pair of spaced standards and a cross-bar secured to the upper ends of the standards and projecting beyond the outer faces thereof, of ribs pivoted to the opposite sides of the bow contiguous to the upper ends of the standards, said ribs each comprising a plurality of pivotally-connected arms, runners slidably mounted on the standards, links pivotally connected to the runners and to certain of the arms of the ribs, cross-rods connecting the arms of the correspondingly-disposed ribs, and a cover supported by said ribs and rods.

nom and to certain arms of the ribs, cross-rods connecting the correspondingly-disposed ribs and projecting beyond the outer faces of the same, and a cover supported upon said ribs and rods.

708,279. MEASURING-CANOPY. JOHN H. KIMBALL, Cleveland, Ohio. Filed Jan. 24, 1902. Serial No. 91,688. (No model.)

Claim.—1. A canopy or cabinet of the character indicated, comprising a hopper having a downwardly-discharging outlet; a suitably-supported movable slide having a path below and in close proximity to the said outlet, and a measuring-rope arranged longitudinally of the path of the slide and closed at its inner end and pivoted, at the said end and at the top and transversely of the canopy, to the said slide, which canopy has the rear or body portion open at the top and larger transversely than its forward portion and has its forward portion in the form of a forwardly-projecting tubular handle which constitutes the outlet of the canopy and is arranged, at the bottom, flush or approximately flush with the bottom of the rear and body portion of the canopy.

2. A canopy or cabinet of the character indicated, comprising a hopper having a downwardly-discharging outlet; a suitably-supported movable slide having a path below and in close proximity to the said outlet and arranged to close the said outlet from below in its outer position; a measuring-rope arranged longitudinally of the path of the slide and pivoted, at its inner end and at the top and transversely of the canopy, to the said slide; a bearing arranged to be engaged by the under side of the canopy when the slide is in its inner and normal position, and another bearing located forward of and below the first-mentioned bearing and arranged to be engaged by the said under side of the canopy when the canopy has tilted downwardly by gravity upon the rotation of the slide into its forward or outer position.

3. A canopy or cabinet of the character indicated, comprising a hopper having a downwardly-discharging outlet; a suitably-supported movable slide having a path below and in close proximity to the said outlet and arranged to close the said outlet from below in its outer position, and a measuring-rope arranged longitudinally of the path of the slide and pivoted at its inner end and at the top and transversely of the canopy to the said slide, the measuring-rope having its front wall provided with a hole to accommodate the location and operation of the said canopy and the forward slide, and a cross-bar arranged a suitable distance rearward of the said front wall and having a hole arranged to accommodate the location and operation of the canopy and the said slide, and the hole in the front wall of the casing extending below the hole in the said cross-bar, and the arrangement of parts being such that the canopy shall be in registry with the outlet of the hopper when the forward slide is in its inner and normal position and rest upon the bottom of the hole in the said cross-bar, and shall tilt downwardly by gravity when the slide is actuated into its outer position and rest upon the bottom of the hole in the forward front wall in the outer position of the slide.

4. In a canopy or cabinet of the character indicated, the combination, with a hopper having a downwardly-discharging outlet; a suitably-supported movable slide having a path in a horizontal plane below and in close proximity to the said outlet and arranged to close the said outlet from below in its outer position and having two forwardly-extending arms arranged apart laterally, and a measuring-rope arranged longitudinally of the path of the slide and movable with the slide, of a slide supported from the inner end of the forward arms and adjustable toward and from the inner end of the canopy, a gage rigid with the said last-mentioned slide and arranged to regulate the capacity of the canopy, a screw arranged in a horizontal plane adjacent to the said gage-slide and longitudinally of the path of the canopy, means for preventing endwise shifting of the screw during the rotation of the canopy, and a nut rigid with the gage-slide and engaged by the said screw.

5. In a canopy or cabinet of the character indicated, the combination, with a hopper having a downwardly-discharging outlet, a suitably-supported movable slide having a path in a horizontal plane below and in close proximity to the said outlet and arranged to close the said outlet from below in its outer position and having two forwardly-extending arms arranged a suitable distance apart laterally, a measuring-rope arranged longitudinally of the path of the slide and movable with the slide, and a cross-bar arranged between the outer ends of said rigid with the

forward slide-arms and having its upper side somewhat below the upper side of the said arms so as to form a shelfway between the said ends of the said arms, of a slide resting upon the said cross-bar and extending between the forward arms and adjustable toward and from the inner end of the canopy, a gage rigid with the said last-mentioned slide and arranged to regulate the capacity of the canopy, a screw arranged in a horizontal plane below the said gage-slide and longitudinally of the path of the canopy, means for preventing endwise shifting of the screw during the rotation of the canopy, and a nut rigid with the gage-slide and engaged by the forward screw, and the forward cross-bar being adapted to accommodate the location and operation of the forward nut.

6. In a canopy or cabinet of the character indicated, the combination, with a hopper having a downwardly-discharging outlet, a suitably-supported movable slide having a path in a horizontal plane below and in close proximity to the said outlet and arranged to close the said outlet from below in its outer position and having two forwardly-extending arms arranged a suitable distance apart laterally, and a measuring-rope arranged longitudinally of the path of the slide and movable with the slide, of a slide supported from the said arms and adjustable toward and from the inner end of the canopy, a gage rigid with the said last-mentioned slide and arranged to regulate the capacity of the canopy, a screw arranged longitudinally of the path of the said gage-slide and provided with an annular groove, a nut rigid with the gage-slide and engaged by the forward screw, a cross-bar extending between the outer ends of said rigid with the forward slide-arms, and a plate attached to the said cross-bar and engaging the forward groove.

708,280. BICYCLE-STAND. LOUIS H. KROGER, New York, Cal. Filed Jan. 2, 1902. Serial No. 91,828. (No model.)

Claim.—1. A bicycle-stand comprising a base having a well or recess and a channel extended therefrom, a rod having members for engaging at opposite sides of a bicycle-wheel and an upper portion for engaging with the upper part of the wheel, and a rod arranged in said well or recess, upon which the first-mentioned rod is mounted, substantially as specified.

2. A base having a well or recess and a channel extended from said well or recess, a bar arranged in the well or recess, and a rod having coiled portions through which said bar passes, the said rod having outwardly-extending ends, substantially as specified.

3. The combination with a base having a well or recess and a channel extended therefrom, of a bar arranged in the well or recess, a metal plate arranged in the well or recess, and a rod mounted to swing on said bar, said rod having rearwardly-extending ends for engaging with said plate, substantially as specified.

708,281. LOCK. LOUIS LAMAR, Bridgeville, Mass. Filed Jan. 2, 1902. Serial No. 92,102. (No model.)

Claim.—1. In a lock of the class described, the combination of a catch member, a vertically-sliding dog engaging said catch member, and a cross-bar arranged between the outer ends of said dog and rigid with the dog.

axis bearing a trigger-arm engaging said dog, a rotatable key connected to said axis and bearing a key designed to engage said dog to lock it in either raised or lowered position, said key being constructed to be displaced to operate said trigger-arm to raise said dog to release said catch member, substantially as described.

2. In a lock of the class described, the combination with a catch member adapted to be secured to a door, of a sliding dog mounted to engage said catch member, a rotatable axis bearing a trigger-arm engaging said dog, a key connected to said axis and disposed at an angle thereto, said key being mounted in its displaced position to operate said trigger to disengage said dog, and a pivoted spring bearing two arms, one of which engages said key and the other bears on the head of said catch member, substantially as described.

708,282. CRUDE-OIL BURNER. JOHN A. LAUREN, WILLIAM A. JOHNSON, and LEE W. DUNLEY, Galveston, Tex. Filed Dec. 7, 1901. Serial No. 98,045. (No model.)

Claim.—1. A crude-oil burner comprising an outer casing, an escape-flue, a drip-pan in said casing and around which pan said flue passes, a drip-plate, to discharge into said drip-pan, means to feed oil to said drip-plate, and an air-inlet flue passing over and under said drip-plate and communicating with said escape-flue, substantially as described.

2. A crude-oil burner comprising a box or casing, an uptake-flue communicating with the lower portion thereof, a drip-pan disposed against the inner wall of said flue and above the bottom of said box or casing, a space being formed between said drip-pan and the proximate wall of said box or casing, a drip-plate above and discharging into said drip-pan and extending from said wall of said casing, whereby a downward-flue is formed under said drip-plate and around said drip-pan, said downward-flue communicating with said uptake-flue, and means to feed oil on said drip-plate, substantially as described.

3. A crude-oil burner comprising a box or casing, a flue communicating with the lower portion thereof, a head or spreader at the upper end of said flue, a drip-pan disposed against the inner wall of said flue and above the bottom of said box or casing, a space being formed between said drip-pan and the proximate wall of said box or casing, a drip-plate above and discharging into said drip-pan, and extending from said wall of said casing, whereby a flue is formed under said drip-plate and around said drip-pan, said flue communicating with said first-mentioned flue, a deflector above said drip-plate and means to feed oil on said drip-plate, substantially as described.

4. A crude-oil burner having a spreader-head and an uptake leading thereto, a drip-plate disposed at the intake of said flue, means to supply oil to said drip-plate, a drip-pan into which the drip-plate discharges, and a casing in which said drip-plate is inclosed, said casing having a downward-flue passing over and under said drip-plate, and communicating with the uptake-flue substantially as described.

708,283. DETONATOR FOR RAILWAYS. FRANK LEHMAN, Paris, France. Filed Mar. 21, 1901. Serial No. 92,108. (No model.)

Claim.—1. A detonator for railways, comprising a body portion or receptacle provided with a cover, and including the detonating substance mixed with an agglutinant to form a paste, and grains or particles of marble, glass or porcelain circumferentially arranged in said receptacle, the said grains being retained in position by the paste and being of such size as

to extend within a short distance of the top and bottom of the detonator, to insure the detonation by the crushing due to the wheel of the vehicle.

2. A detonator for railways, comprising a body having a cover and containing the detonating substance mixed with an agglutinant to form a paste, grains or particles of marble, glass or porcelain circumferentially arranged in the body and embedded in the paste, and spaced a short distance from the top and bottom of the detonator, and attaching devices secured to the detonator, the fastening means for the attaching devices being out of alignment with the said grains or particles to prevent accidental detonation.

3. A detonator for railways, comprising a body portion for containing the detonating substance mixed with an agglutinant, and a cover for the body, grains or particles of marble, glass or porcelain circumferentially arranged in said body and embedded in the detonating compound or paste, attaching devices connected with the detonator at points out of alignment with the said grains or particles, and a ring of elastic or flexible material interposed between the cover and the body of the detonator for the purpose of securing a tight joint.

4. A detonator, comprising a receptacle containing the explosive material, and a series of grains or particles of a hard and fragile material embedded in the explosive material and each spaced a short distance from the top and bottom of the receptacle, substantially as described.

5. A detonator, comprising a receptacle for the explosive material, a series of grains or particles of a hard and fragile material embedded in the explosive material within the receptacle, and each spaced a short distance from the top and bottom of the receptacle, and attaching devices secured in the receptacle at points out of alignment with the said grains or particles, substantially as described.

708,284. NECKTIE-HOLDER. PHILIP H. LEVIN, New York, N. Y. Filed Mar. 20, 1902. Serial No. 99,070. (No model.)

Claim.—In a necktie-holder, a clip consisting of a single length of wire bent to form jaw members, the wire at the lower portions of the jaws being curved outward, then upward as at 10, then laterally to form wing portions, the inner lower ends of the wings being engaged against the outer sides of the jaws 10, and then turned upward, and then downward, terminating in hooks, substantially as described.

708,285. FLESHING-MACHINE. WALTER R. LOHMEYER, Arlington, Mass., assignor to J. H. Shaw Company, Portland, Me., and Boston, Mass., a Corporation of Maine. Filed Feb. 11, 1902. Serial No. 98,887. (No model.)

Claim.—1. The combination with a pair of separated supporting-rolls, of a feed-roll movable toward and from a position between the supporting-rolls, and a knife-cylinder movable toward and from one of the supporting-rolls.

2. The combination with a pair of separated supporting-rolls, of a frame, a feed-roll and a knife-cylinder mounted together upon the frame, and means for moving the frame toward and from the supporting-rolls.

3. The combination with a pair of yieldable separated supporting-rolls, of a feed-roll movable toward and from a position between the supporting-rolls, and a knife-cylinder movable toward and from one of the supporting-rolls.

4. The combination with a pair of separated supporting-rolls, of a frame, a feed-roll and a knife-cylinder mounted together upon the frame, and yieldable means for moving the frame toward and from the supporting-rolls.

5. The combination with a pair of separated supporting-rolls, of a frame, a feed-roll and a knife-cylinder mounted together upon the frame, yieldable supports for the feed-roll upon the frame, and means for moving the frame toward and from the supporting-rolls.

6. The combination with a bed-roll, of a feed-roll and a knife-cylinder and means for moving the feed-roll and knife-cylinder toward and from the bed-roll and into or out of contact therewith.

7. The combination with a bed-roll, of a feed-roll and a knife-cylinder supported together upon oppositely-tilted pairs of pivoted links, and means for moving the feed-roll and knife-cylinder toward and from the bed-roll.

8. The combination with a bed-roll, of a feed-roll and a knife-cylinder supported together upon oppositely-tilted pairs of links pivoted above the rolls, and means for oscillating the links toward and from the bed-roll.

9. The combination with a bed-roll, of a feed-roll and a knife-cylinder supported together upon oppositely-tilted pairs of pivoted links, an additional support for the feed-roll and knife-cylinder below the links, and means for moving the feed-roll and knife-cylinder toward and from the bed-roll.

10. The combination with a pair of supporting-rolls comprising a bed-roll, of a feed-roll and a knife-cylinder supported together upon oppositely-tilted pairs of pivoted links, and means for moving the feed-roll and knife-cylinder toward and from the bed-roll.

11. The combination with a main frame, of a secondary frame movably mounted therein, a knife-cylinder and a feed-roll mounted upon the secondary frame, a bed-roll mounted upon the main frame, and means coacting with the secondary frame for moving it toward and from the bed-roll to bring the knife-cylinder and feed-roll into or out of contact with said bed-roll.

12. The combination with a main frame, of a pair of links pivoted at each side thereof, a secondary frame pivotally secured to the links, a knife-cylinder and a feed-roll mounted upon the secondary frame, a bed-roll mounted upon the main frame, and means coacting with the secondary frame for moving it toward and from the bed-roll.

13. The combination with a main frame, of a pair of links pivoted at the upper portion of said main frame and at each side thereof, a secondary frame pivotally secured to the links, a knife-cylinder and a feed-roll mounted upon the secondary frame, a bed-roll mounted upon the main frame, and means coacting with the secondary frame for moving it toward and from the bed-roll.

14. The combination with a main frame provided with tracks, of a secondary frame carrying rollers cooperating with the tracks, a knife-cylinder and a feed-roll mounted upon the secondary frame, a bed-roll mounted upon the main frame, and means coacting with the secondary frame for moving it toward and from the bed-roll.

15. The combination with a main frame provided with tracks, of a secondary frame carrying rollers cooperating with the tracks, supporting-links pivoted to the main frame and secondary frame, a knife-cylinder and a feed-roll mounted upon the secondary frame, a bed-roll mounted upon the main frame, and means coacting with the secondary frame for moving it toward and from the bed-roll.

16. The combination with a main frame, of a secondary frame mount-

ed thereon, a knife-cylinder and feed-roll mounted upon the secondary frame, the feed-roll being supported to swing about the knife-cylinder, a bed-roll mounted upon the main frame, yieldable means for forcing the feed-roll toward the bed-roll, and means coacting with the secondary frame for moving the knife-cylinder and feed-roll toward and from the bed-roll.

17. The combination with a main frame, of a secondary frame movably mounted thereon, a knife-cylinder and feed-roll mounted upon the secondary frame, the feed-roll being supported to swing about the knife-cylinder, a bed-roll mounted upon the main frame, means for adjusting the feed-roll toward the bed-roll, and means coacting with the secondary frame for moving the knife-cylinder and the feed-roll toward and from the bed-roll.

18. The combination with a main frame, of a secondary frame movably mounted thereon, a knife-cylinder and feed-roll mounted upon the secondary frame, a bed-roll yieldably mounted upon the main frame, and means coacting with the secondary frame for moving it toward and from the bed-roll to bring the knife-cylinder and feed-roll into or out of contact with said bed-roll.

19. The combination with a bed-roll, of a rotatable knife-cylinder, a shaft upon which the knife-cylinder is supported, arms turning about the shaft, and a feed-roll journaled in the arms.

20. The combination with a bed-roll, of a rotatable knife-cylinder, a shaft upon which the knife-cylinder is supported, arms turning about the shaft, a feed-roll journaled in the arms, and a spring connected with the arms and serving to force the feed-roll toward the bed-roll.

21. The combination with a bed-roll, of a rotatable knife-cylinder, a shaft upon which the knife-cylinder is supported, arms turning about the shaft, a feed-roll journaled in the arms, a rod pivotally connected with the arms and with a relatively fixed point, and means for adjusting the effective length of the rod.

22. The combination with a main frame, of bearings mounted near the front of the frame to slide therein, a bed-roll journaled in the bearings, a lever connected with at least one of the bearings, a rod connected with the lever and extending toward the rear of the frame, a spring carried by the frame and coacting with the rod, a knife-cylinder, and means for moving the knife-cylinder toward and from the bed-roll.

23. The combination with a pair of supporting-rolls, of a knife-cylinder movable toward and from the supporting-rolls, supporting means for the knife-cylinder, and a deflector situated between the rolls and a portion of the supporting means for the knife-cylinder.

708,286. PROCESS OF MAKING WEAVERS' DESIGNS. HARRY WASHINGTON, Shapley, England. Filed Jan. 2, 1901. Serial No. 41,990. (No specimens.)

Claim.—1. The process of making weavers' designs, consisting in projecting a design by a camera on a paper ruled in squares, then outlining said design on the ruled paper and stencilling in the ground by means of a stencil having holes whose centers are distant the length of the sides of the squares from each other or a multiple of that length, substantially as described.

2. The process of making weavers' designs, consisting in projecting a design by a camera upon a surface ruled in squares, then outlining said design on the ruled surface and stencilling in the ground in a series of different colors by the means of a series of separate stencils, having differently-arranged holes therein, which holes are arranged in the centers of the squares on the ruled surface, substantially as described.

708,287. DEVICE FOR AUTOMATICALLY DISTRIBUTING DISINFECTING FLUIDS. FRANK A. MARTIN, New York, N. Y., assignor to the West Disinfecting Company, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1900. Serial No. 27,946. (No model.)

Claim.—The combination with a reservoir having its cover spaced from the body of the reservoir, of a tilting discharging device, a support to which the tilting device is hinged, the said support having a sliding engagement together with the discharging device along the wall of the

reservoir intermediate of the cover and body and means for operating the tilting discharging device, substantially as set forth.

708,288. TAMPING-BAR. THOMAS HILLAR, STRATTON, II. Filed Aug. 24, 1901. Serial No. 73,196. (No model.)

Claim.—1. A tamping-bar comprising a handle formed with a reduced threaded extension at its inner end, a butt having a concave recess, a longitudinal groove having its walls diverging toward and merging into the concave recess, and a reduced plain end, and a union having a bore threaded at one end in which the reduced threaded extension of the handle is inserted, and plain at the other end in which the reduced end of the butt is inserted and rigidly secured.

2. A tamping-bar comprising a handle of truncated frusto-conical shape at its outer end, and formed with a reduced threaded extension at its inner end, a butt having a concave recess, a longitudinal groove having its walls diverging toward and merging into the concave recess, and a reduced plain end, and a union having a bore threaded at one end in which the reduced threaded extension of the handle is inserted, and plain at its other end in which the reduced end of the butt is inserted and rigidly secured.

708,289. PROCESS OF PRODUCING CAUSTIC. EDNA E. MOORE, Lynn, Mass., assignor to Moore Electrolytic Company, Portland, Me., and Boston, Mass., a Corporation of Maine. Filed Apr. 30, 1902. Serial No. 14,787. (No specimens.)

Claim.—1. The herein-described process of electrolyzing the chloride chlorates or sulfates of alkali metals consisting in bringing an aqueous solution thereof into contact with one face of a diaphragm of sufficient porosity to permit free flow of the solution; passing an electric current through said solution and diaphragm to an unexposed ferrous cathode in contact with the other face of the diaphragm; thereby converting the metal into hydrate by the water of the undecomposed percolated solution and confining the liberated hydrogen gas in contact with the outer face of the cathode and thereby excluding atmospheric air, whereby the cathode solution flows by gravitation from said cathode without evaporation and without the carbonating of the hydrate.

2. The herein-described process of electrolyzing the chloride chlorates or sulfates of alkali metals consisting in bringing an aqueous solution thereof into contact with one face of a diaphragm of sufficient porosity to permit free flow of the solution; passing an electric current through said solution and diaphragm to an unexposed ferrous cathode in contact with the other face of said diaphragm, thereby converting the metal into hydrate by the water of the undecomposed solution in the pores of said cathode; and excluding atmospheric air from the cathode and the solution thereby contained, to prevent the precipitation of foreign metals present in the form of chloride, chlorate hydrates or sulfates in the said solution.

3. The herein-described process of electrolyzing the chloride chlorates or sulfates of alkali metals consisting in bringing an aqueous solution thereof into contact with one face of a porous diaphragm of sufficient porosity to permit free flow of the solution; passing an electric current through said solution and diaphragm to an unexposed ferrous cathode in contact with the other face of said diaphragm, thereby converting the metal into hydrate by the water of the undecomposed percolated solution, and continuing the electrolysis of said undecomposed solution in the pores of said cathode, and confining the liberated hydrogen gas in a steamy bath in contact with the cathode to the exclusion of atmospheric air, substantially as described.

4. The herein-described process of preventing the precipitation of the hydrates of foreign alkalis or chloride chlorates, in the electrolysis of commercial salts, which consists in bringing a saline solution containing said alkalis or chlorides into contact with a diaphragm of sufficient porosity to permit free percolation of said solution, passing an electric current from an anode in said solution to an unexposed cathode outside said diaphragm and enveloping the cathode in a confined bath of gas and thereby preventing the evaporation of liquid contained on the cathode.

5. The herein-described process of preventing the carbonating of the hydrate resulting from the electrolysis of the chloride chlorates or sulfates of alkali metals, which consists in bringing a saline solution containing said alkalis or chlorides into contact with a diaphragm of sufficient porosity to permit free percolation of said solution, passing an electric current from an anode in said solution to an unexposed cathode outside

said diaphragm and entirely excluding atmospheric air from contact with the said hydrate.

6. The herein-described process of preventing the carbonating of the hydrate resulting from the electrolysis of the chloride chlorates or sulfates of alkali metals, which consists in bringing a saline solution containing said alkalis or chlorides into contact with a diaphragm of sufficient porosity to permit free percolation of said solution, passing an electric current from an anode in said solution to an unexposed cathode outside said diaphragm and enveloping the cathode containing said hydrate in a bath of hydrogen gas, and thereby preventing the contact of atmospheric air therewith.

7. The herein-described process of preventing the precipitation of the hydrates of foreign alkalis or chlorides, in the electrolysis of commercial salts, which consists in bringing a saline solution containing said alkalis or chlorides into contact with a diaphragm of sufficient porosity to permit free percolation of said solution, passing an electric current from an anode in said solution to an unexposed cathode outside said diaphragm and enveloping the cathode in a bath of the hydrogen gas liberated at the cathode and thereby preventing the evaporation of liquid contained on or in the cathode.

708,290. VACCINATION-SHIELD. HARRY E. MOLFORD, Philadelphia, Pa. Filed Nov. 2, 1901. Serial No. 60,908. (No model.)

Claim.—1. As a new article of manufacture, an integral shield having a dome-like center with an inclined annular wall, and extensions to which securing means may be applied, said extensions having slots arranged at divergent angles, substantially as described.

2. As a new article of manufacture, an integral shield having a dome-like portion with an annular inclined wall, and extensions to which securing means may be applied, said extensions having slots arranged at divergent angles for the passage or reception of such securing means, and an upturned flange at the outer ends of said extensions.

3. As a new article of manufacture, an integral shield having a dome-like center with an annular inclined wall, and extensions having divergent slots through which may be passed the securing means, and an upturned flange at the sides of said shield, said shield having a portion between the flange and the annular wall adapted to rest upon the body of the user.

4. As a new article of manufacture, an integral shield having a dome-like center with an annular inclined wall, and extensions having slots arranged at a divergent angle adapted to receive securing means, and an upturned flange surrounding said shield, substantially as described.

5. As a new article of manufacture, an integral shield having a dome-like center with an annular inclined wall, and extensions having slots arranged at a divergent angle for the reception of securing means, said dome-like center having ventilating-openings adjacent to its annular wall, and said shield being made of transparent celluloid, substantially as described.

708,291. STOPPER AND FITTING FOR BOTTLES. SYDNEY MYER and GEORGE EATON, London, England. Filed Dec. 2, 1901. Serial No. 68,267. (No model.)

Claim.—1. In a stopper for bottles and the like, the combination of a pendant bar provided with corrugations, a float movable on said bar, springs mounted on the upper part of said float for engaging the corrugations in the bar to prevent upward movement of the float, and pivoted parts on the lower portion of the float adapted to engage the corrugations in the bar for preventing movement of the float when the bottle is inverted, substantially as described.

2. A stopper for bottles and the like having openings at right angles to each other, a pendant bar having corrugations, and a float having locking members to engage said corrugations for preventing upward movement of the float when the bottle is inverted, substantially as described.

708,292. PIPE-WRENCH. ALBERT P. MOLLER, Independence, Kan. Filed Dec. 24, 1901. Serial No. 67,008. (No model.)

Claim.—1. In a wrench of the character set forth, a handle, plates arranged at opposite sides of the handle and having a depression in their inner sides, bits located in said depressions, and means for securing said plates to opposite sides of the handle and at the same time clamping the bits between the proximal sides of the plates and handle, substantially as set forth.

2. In a wrench substantially as set forth, a handle having shoulders at opposite sides, plates having side depressions and arranged at the sides of the handle provided with the shoulders, bits located in the depressions of the said plates and having their inner ends abutting against the aforementioned shoulders of the handle, and means for securing the plates to the handle and clamping the bits between proximal sides of the plates and handle, substantially as set forth.

3. In a wrench of the character described, a handle having shoulders at opposite sides, plates placed against opposite sides of the handle and having depressions in the outer ends of their inner sides, the inner ends of the depressions corresponding with the aforementioned shoulders, bits located in said depressions and having their inner ends abutting against the aforementioned shoulders and inner ends of the depressions, and means for securing the plates to the handle and clamping the bits between said handle and plates, substantially as set forth.

4. In a wrench, a handle, plates located at opposite sides of the handle and having projecting portions to overlap or embrace the upper and lower sides of said handle, bits located between the side plates and handle, and means for securing the side plates to the handle and at the same time clamping the bits, substantially as specified.

5. In combination, a handle, plates located at opposite sides of the handle and provided with bits and having a part widened and projecting above and below the handle, the upper being provided with lugs, a clasp-bolt for securing the plates to the handle, a chain adapted to make adjustable connection with said lugs, and a bolt for connecting the chain to the side plates and also serving to draw the latter close against the sides of the handle, substantially as set forth.

6. A wrench comprising a handle having its outer end beveled and channelled to provide a seat, plates located at opposite sides of the handle and provided with bits and having projecting lugs, means for securing the plates to the handle, and a chain secured at one end and adapted to have its lower end make adjustable connection with the lugs, substantially as set forth.

7. The herein-described wrench comprising a handle having its outer end reduced, beveled and channelled to provide a seat and having shoulders at the base of the reduced portion, plates located at opposite sides of the handle and having a recess and depression in their inner sides and having lugs at their upper edges, lustrated bits located in the depressions of the side plates and having their inner ends abutting against the aforementioned shoulders, means for securing the plates to the sides of the handle and clamping the bits between proximal sides of the plates and handle, and a chain secured at one end and adapted to make adjustable connection at its opposite end with the said lugs, substantially as set forth.

708,293. PENHOLDER. FRANK HESTER, NEW YORK, N. Y., assignor to Eagle Pen Company, New York, N. Y. Filed Feb. 14, 1902. Serial No. 24,000. (No model.)

Claim.—The described penholder, consisting of the tip B, the longitudinally-slitted chest-metal tube C secured to and surrounding said tip, and provided with the screw or lugs d, and the grip-sleeve mounted on

and movable lengthwise of the tube (1), and consisting of the sheet-metal tube (2) and the antistatic sheet or cover (3), these parts being constructed and arranged together for joint operation as herein shown and set forth.

708,294. CAMERA AND FOCUSING-FINDER THEREFOR. U. S. PATENT OFFICE, New York, N. Y. Filed July 25, 1901. Serial No. 12,205. (No model.)

Claim.—1. A combined camera and focusing-finder, comprising a camera provided with a movable lens, a box provided with an aperture, a lens-tube carrying a lens and slidably mounted within said aperture, said lens-tube being connected with said camera-lens, a series of mirrors inclined at different angles for leading the light back upon itself and projecting an image in a direction lateral to the normal direction of said light, and a screen for receiving said image.

2. A combined camera and focusing-finder, comprising a camera provided with a movable lens, a box provided with an aperture, a tube slidably mounted in said aperture and connected with said camera-lens, a lens mounted in said tube, a pair of mirrors inclined substantially at right angles to each other, for doubling the light back upon itself, another mirror parallel to one of the first-mentioned mirrors and inclined obliquely to the axis of said tube, and a screen for receiving an image.

3. A combined camera and focusing-finder, comprising a camera provided with a movable lens, a box provided with an aperture, a tube slidably mounted in the said aperture and connected with said camera-lens, a lens mounted in said tube, a pair of mirrors mounted in said box and inclined toward each other at an angle of forty-five degrees, a third mirror mounted in said box and parallel with one of said first-mentioned mirrors, but facing in a different direction to the direction in which said first-mentioned mirror faces, and a screen for receiving an image projected from the last mirror of the series.

4. A combined camera and focusing-finder, comprising a camera provided with a movable lens, a flattened box provided with an aperture at one of its ends and adjacent to one of its edges, a tube slidably mounted in said aperture and connected with said camera-lens, a lens mounted in said tube, a pair of mirrors mounted in said box adjacent to opposite edges thereof and inclined toward each other, another mirror adjacent to said tube and also adjacent to the edge of the box opposite said tube, and a screen for receiving an image; the arrangement being such that light entering through the tube is bent backward in a path parallel to its normal path, and caused to project an image.

708,295. METHOD OF TREATING GARBAGE. ROBERT E. NEWCOMB, Philadelphia, Pa. Filed Mar. 20, 1902. Serial No. 96,297. (No specimens.)

Claim.—The method herein described of treating garbage, said method consisting in first digesting the same to melt and free the grease, then expressing grease and other liquid matters therefrom, and then mixing the pressed mass with phosphoric and sulfuric acid, in quantities sufficient to decompose the solid matters by the heat developed by the reaction, and in the absence of externally-applied heat, substantially as specified.

708,296. CATTLE-PROBE. ARTHUR HUNTER, Fribourg, Switzerland. Filed June 10, 1901. Serial No. 94,573. (No model.)

Claim.—A cattle-probe comprising a shaft having an inclined cutting and piercing edge disposed at its outer end and extending back and outward beyond the longitudinal axis of the shaft, and provided with a longitudinal channel in the shaft extending rearwardly toward its handle end, substantially as described and for the purpose set forth.

708,297. AUXILIARY TROLLEY-CONTACT AND GLARY AND ICE CUTTING DEVICES. WALTER E. OLIPHANT, Mount Holly, N. J. Filed Sept. 12, 1901. Serial No. 78,208. (No model.)

Claim.—1. An ice-cutting trolley-wheel, having a peripheral groove or wire-cut, and openings extending from the bottom of said groove or wire-cut inward with respect to the axis of the wheel, and leading out through the side of said wheel, the edges of said openings which lie trans-

versely of the wire-cut being obliquely disposed with reference to said wire-cut, whereby a shearing cut is obtained.

2. An ice-cutting trolley-wheel, having a peripheral groove or wire-cut, and openings extending from the bottom of said groove or wire-cut inward with respect to the axis of the wheel, and leading out through the side of said wheel, said openings facing away from the bottom of the wire-cut whereby sharp ice-cutting edges are obtained across the bottom of said wire-cut and any possible packing of ice chips in the openings is avoided.

3. An ice-cutting trolley-wheel, having a peripheral groove or wire-cut, and openings extending from the bottom of said groove or wire-cut inward with respect to the axis of the wheel, and leading out through the side of said wheel, and continuously-facing openings or passages each starting at a point on one inner side wall of said groove or wire-cut near its bottom and curving downward through the bottom of the groove and out through the opposite side of the wheel, whereby ice-cutting edges are formed across the bottom of the groove and a discharge-passage for the cuttings provided which will conduct said cuttings clear of the wheel.

4. The improved trolley-pole appliance for electric cars, comprising a pole adapted to be supported upon the car, a wheel to contact with the electric conducting-wire, springs for holding said wheel normally in contact with said wire, a lever removably supported on said pole and having a long and a short arm, an ice-breaking wheel arranged upon said long arm, a spring, for holding said ice-breaking wheel against the wire, a stud, carrying said spring and a collar, separably secured to said pole and providing pivotal bearings for said stud, substantially as set forth.

5. An ice-cutting attachment for trolley-poles, comprising a lever having long and short arms and being provided with fulcrum means of attachment to a trolley-pole, an ice-cutting wheel on said longer arm, guiding means adapted to connect said short arm with the trolley-pole and hold it in a fixed plane with respect thereto, and a spring for holding the ice-breaking wheel against the trolley-wire.

6. The combination with a trolley-pole, of a lever fulcrumed thereon, an ice-cutting wheel on said lever adapted to engage the trolley-wire, guiding means connecting said lever with the trolley-pole at a point other than its fulcrum and holding the lever in a fixed plane, and a spring adapted to force the ice-cutting wheel against the trolley-wire.

7. An ice-cutting trolley-wheel having a peripheral groove with smooth transversely-rounded inner walls which in cross-section lie in a continuously-curving line and form a smooth wire-cut, ice-cutting edges transversely disposed in and between the inner faces of said groove or wire-cut and being in the same geometrical surface as the said walls of the groove or wire-cut and having every point equally distant as a line radiating from the axis of the wheel with the intersection of said line with the walls of the groove or wire-cut, whereby there are no projections into the said groove, said cutting edges being formed by openings from the groove inwardly into, through, and out of the body of the wheel, substantially as set forth.

708,298. CARRIAGE. HENRY & FACCINI, Walpole, N.H. Filed Mar. 12, 1902. Serial No. 75,551. (No model.)

Claim.—1. A machine for loading sugar-cane, comprising the framing, the main wheels provided with worm-wheels, the turn-table supporting said main wheels, the means carried on said turn-table and having drive-shafts provided with worms meshing with the worm-wheels of the supporting-wheels, the rings in which said turn-tables are supported and turned, the steering-drum, the cables connecting said drum with the opposite turn-tables, the endless carrier extended across the front of the machine, the elevator at one end of said carrier, the cutter at the upper end of the said elevator, the drive-shaft for the elevator, gearing between the drive-shaft and the cutter, and the motor connected with and operating the elevator drive-shaft, substantially as and for the purposes set forth.

2. A machine for loading cane, comprising the framing, the endless carrier extended across the front thereof, the elevator, means for operating the elevator and the carrier, the turn-table rings supported by the frame, the turn-tables turning in said rings, the steering device connected with said turn-tables, the main wheels supported in the turn-tables, and the motor supported by the turn-tables and connected with the main wheels, whereby to drive the same, substantially as set forth.

3. The combination in a machine, substantially as described, of the framing, having the turn-table rings, the carrier extended across the front of said frame, the turn-tables operating in their rings, means whereby said turn-tables may be turned in unison, and means for operating the main wheels, substantially as set forth.

4. A machine substantially as described, comprising the framing provided at its front side with the endless carrier and having the rearward extension and the cutter-wheel therein, the turn-table rings supported in the main frame, the turn-tables in said rings, means for turning said turn-tables in unison, the main wheels supported in the turn-tables and means carried by the turn-tables and connected with the main wheels whereby to drive the same, substantially as set forth.

5. The combination with the main frame and the carrier extended across the front side thereof and the elevator at one end of said carrier and provided at its end with a revolving knife, the engine geared with the carrier and elevator and arranged to operate the revolving knife, the turn-table rings, the main wheels supported by the turn-tables, the motors carried by the turn-tables and arranged to operate their respective main wheels and means whereby the turn-tables may be turned in unison, substantially as set forth.

6. The combination in a machine, substantially as described, of the endless carrier and elevator, a motor for operating said carrier and elevator, the main wheels, and means for operating said main wheels, each motor being independent of each other and of the motor for operating the carrier and elevator, substantially as set forth.

7. The combination in a machine, substantially as described, of the frame, the main wheels, the turn-tables supporting said wheels, means for adjusting said turn-tables, and means for operating the main wheels

independently of each other, all substantially as and for the purposes set forth.

708,299. HOIST. GEORGE HENRY, Oakwood, Tenn. Filed June 1, 1901. Serial No. 93,213. (No model.)

Claim.—1. A hoisting apparatus having a frame, a carriage movable therein, a U-shaped bar mounted on the carriage, and an ejector in the form of a lever fulcrumed on the bar and movable to engage an object on the carriage and start it off of the same.

2. A hoisting apparatus having a frame, a carriage movable therein, a U-shaped bar mounted on the carriage, an ejector in the form of a lever fulcrumed on the bar and movable to engage an object on the carriage and start it off of the same, and a bridge hingedly mounted on the front edge of the carriage and capable of swinging to vertical or horizontal position, for the purpose specified.

708,300. GARMENT-SUPPORTER. ARTHUR F. RICHARDSON and ROBERT STANLEY RICHARDSON, Philadelphia, Pa.; said Arthur F. Richardson assignor to said Robert Stanley Richardson. Filed Feb. 22, 1902. Serial No. 95,893. (No model.)

Claim.—1. In a garment-supporter, a body portion with a slot in the upper portion thereof, and with slots extending at an angle to the first-mentioned slot forming a finger and having formed in the lower portion thereof, a slot extending at an angle to second-mentioned slot.

2. In a garment-supporter, a body portion formed with a slot in the upper portion thereof, a finger projecting from said body portion forming slots on each side thereof and said body portion having formed in its lower part a slot adapted to receive a garment.

3. In a garment-supporter, a body portion, means for securing the same to elastic or other suitable material a finger on said body portion having an end which is curved from the plane of said body portion and said body portion being formed with a slot in its lower part adapted to receive the garment.

4. A garment-supporter, a body portion formed with a slot in its upper portion a finger on said body portion forming slots on each side thereof, said slots extending at an angle to the first-mentioned slot and said body portion being provided with a slot in its lower portion extending at a different angle to the slots above mentioned.

5. In a garment-supporter, a body portion, means for securing the same to elastic or other suitable material, a finger on said body portion forming slots on each side thereof an end of said finger being curved from the plane of said body portion and said body portion being formed with a slot in its lower part.

6. In a garment-supporter, a body portion, means for securing the same to elastic or other suitable material a finger on said body portion forming slots on each side thereof the lower portion of said body portion being formed with a slot and a bend in said body portion between said bend and said mentioned slot.

7. In a garment-supporter, a body portion, means for securing the same to elastic or other suitable material a finger on said body portion forming slots on each side thereof the lower portion of said body portion formed with a slot one wall of which is provided with a compound bend.

708,801. MOTOR-VEHICLE. PERIN POSTLUM, Chicago, Ill., assignor of two-thirds to Elmer Mayer and William F. Gony, Chicago, Ill. Filed Sept. 19, 1900. Serial No. 59,129. (No model.)

Claim.—1. In a motor-vehicle, the combination with a motor or engine, one or more traction-wheels, and a frame or support, of mechanism for transmitting movement to said wheel or wheels, comprising a drive-shaft, a counter-shaft, gear mechanism connecting said shafts, and clutches each having two members, a shifter-rod extended longitudinally and centrally in each of said shafts, for effecting the shift of one of each of clutch members, and controlling mechanism for effecting the simultaneous shift of said shifter-rods.

2. In a motor-vehicle, the combination with a motor or engine, one or more traction-wheels, and a frame or support, of mechanism for transmitting movement to said wheel or wheels, comprising a drive-shaft, a counter-shaft, gear mechanism connecting said shafts, and clutches each having two members, a shifter-rod extended longitudinally and centrally in each of said shafts, a cam on each of said rods for effecting the shift of one of each of said clutch members, and controlling mechanism for effecting the simultaneous shift of said shifter-rods.

3. In a motor-vehicle, the combination with a motor or engine, one or more traction-wheels, and a frame or support, of mechanism for transmitting movement to said wheel or wheels, comprising a drive-shaft, a counter-shaft, a series of clutches on said drive-shaft, a corresponding series of clutches on said counter-shaft, independent gear mechanism intermediate said clutches, each of said clutches having two members, a shifter-rod extended longitudinally through each of said shafts for effecting the shift of one member of each of said clutches, and suitable mechanism for controlling said shifter-rods.

4. In a motor-vehicle, the combination with a motor or engine, one or more traction-wheels, and a frame or support, of mechanism for transmitting movement to said wheel or wheels, comprising a drive-shaft, a counter-shaft, a series of clutches on said drive-shaft, a corresponding series of clutches on said counter-shaft, independent gear mechanism intermediate said clutches, each of said clutches having two members, a shifter-rod extended longitudinally through each of said shafts, a cam on said shifter-rod for effecting the shift of one of each of said clutch members, and mechanism for controlling said shifter-rods.

5. In a motor-vehicle, the combination with a motor or engine, one or more traction-wheels, and a supporting-frame of driving mechanism comprising a drive-shaft, a clutch composed of a collar fixedly held on said shaft, a flanged drum whereon a gear or sprocket is secured, a slightly-flexible shoe within said flange and connected with said collar by a pin or stud and slid adjacent one end of said shoe, and a pivoted arm arranged to engage both ends of said shoe to cause its expansion, said collar being arranged within said shoe, and mechanism for shifting said arm.

6. In a motor-vehicle, the combination with a motor or engine, one or more traction-wheels, and a supporting-frame, of driving mechanism comprising a drive-shaft, a clutch composed of a collar fixedly held on said

shaft, a flanged drum whereon a gear or sprocket is secured, a slightly-flexible shoe within said flange and pivoted to said collar, and an arm pivotally secured to one end of said shoe and arranged to engage the other end of said shoe to cause its expansion, and mechanism for shifting said arm.

7. In a motor-vehicle, the combination with a motor or engine, one or more traction-wheels, a supporting-frame, and gear mechanism for imparting movement to said wheel or wheels, comprising a clutch, of mechanism for controlling said clutch comprising a plurality of shifter-rods, a connector, a rack, a pinion, a pair of sprocket-wheels and chain, a shaft and a controller-lever secured thereto.

8. In a motor-vehicle, the combination with a motor or engine, one or more traction-wheels, and a frame or support, of mechanism for transmitting movement to said wheel or wheels, comprising a drive-shaft, a counter-shaft, a series of clutches on said drive-shaft, a corresponding series of clutches on said counter-shaft, independent gear mechanism intermediate said clutches, each of said clutches having two members, a shifter-rod extended longitudinally through each of said shafts for effecting the shift of one member of each of said clutches, and suitable mechanism for controlling said shifter-rods, comprising a connector, a rack and pinion and a hand wheel or lever.

9. In a motor-vehicle, the combination with a motor or engine, one or more traction-wheels, and a supporting-frame, of driving mechanism for imparting movement to said wheel or wheels comprising a drive-shaft, a counter-shaft, a series of clutches on said drive-shaft, a corresponding series on said counter-shaft, gear mechanism connecting the corresponding clutches on said shafts, each of said clutches comprising a collar fixedly held on a shaft, a flanged disk or drum whereon a gear or sprocket wheel is secured, a slightly-flexible shoe within said flange and pivoted to said collar, and an arm arranged to engage the ends of said shoe to cause its expansion, and controlling mechanism comprising a shifter-rod extended centrally through each of said shafts, a connector for said rods and a controller wheel or lever connected with said connector.

10. In a motor-vehicle the combination with a motor or engine, one or more traction-wheels, and a supporting-frame, of driving mechanism for imparting movement to said wheel or wheels comprising a drive-shaft, a counter-shaft, a series of clutches on said drive-shaft, a corresponding series on said counter-shaft, gear mechanism connecting the corresponding clutches on said shafts, each of said clutches comprising a collar fixedly held on a shaft, a flanged disk or drum whereon a gear or sprocket wheel is secured, a slightly-flexible shoe within said flange and pivoted to said collar, and an arm arranged to engage the ends of said shoe to cause its expansion, and controlling mechanism comprising a shifter-rod extended centrally through each of said shafts, a connector for said rods, a rack and pinion and a controller lever or wheel connected therewith.

708,802. METHOD OF RAISING SHEETS OF STONE. ALEXANDER W. FRATE, North Jay, Me., assignor of one-half to Samuel H. Venable and William H. Venable, doing business under the firm-name of Venable Brothers, Atlanta, Ga. Filed Sept. 26, 1901. Serial No. 79,897. (No model.)

Claim.—1. The method of raising a sheet of stone as herein described, consisting in drilling a hole to the depth necessary to secure the desired thickness of the sheet of stone to be raised; then initially starting a bed-seam in the rock by the explosion of a blasting charge, and subsequently extending the bed-seam by subjecting a strain or layer of the rock to fluid-pressure which is maintained in the initially-formed bed-seam, whereby said initial blast produces an enlarged area offering great purchase for the subsequently-effective fluid-pressure.

2. The method of raising a sheet of stone as herein described, which consists in drilling a hole in the rock; introducing a fluid-pressure pipe therein; sealing said hole around the pipe against the escape of fluid-pressure by interposing a soft-metal packing between the wall of the hole and the pipe; initially starting a bed-seam in the rock by the explosion of a blasting charge; and subsequently extending the bed-seam by introducing fluid-pressure through the pipe and into the initial bed-seam, as set forth.

708,803. FLY-TRAP. WILLIAM J. POEYER, Fremont, Neb. Filed Sept. 18, 1901. Serial No. 79,610. (No model.)

Claim.—1. A fly-trap comprising a frame, a handle therefor, sticky paper held on said frame, pins projecting from the frame and puncturing

the paper and crossed here on top of the paper into which the pins project.

2. A fly-trap comprising a frame, a handle therefor, sticky paper held on said frame, pins projecting from the frame and through the paper and crossed here on top of the paper, having sockets to receive the pins and provided on the upper sides of their ends with pads.

708,804. PENCIL. ROBERT R. RAKENYAW, Vienna, Austria-Hungary. Filed Aug. 9, 1902. Serial No. 67,903. (No model.)

Claim.—A pencil consisting of a lead or crayon, a sheet of flexible material having weakened lines rolled or wound thereon, and a flexible adhesive uniting the several convolutions of said material and of a character to resist relative longitudinal movement of said convolutions while permitting easy detachment of said material by unwinding, substantially as described.

708,805. FENCE. THOMAS BROWNE, London, Ohio. Filed June 26, 1901. Serial No. 66,570. (No model.)

Claim.—1. In fences, comprising a post having a foundation, anchor-blocks embedded in the ground at a distance from the post and at opposite sides thereof, a single wire passing around each of the said anchor-blocks and each twisted together above the anchor-blocks and having its ends extending above the ground where they are twisted together to form an eye, a stay formed of two wires twisted upon themselves and having their ends twisted together to form eyes and having their central portions maintaining the post, and a brace formed of two wires reversely twisted upon themselves passing over the top of the post where it is secured, and having its ends passed through the eyes of the anchor and stay-wires and twisted together.

2. The combination with a fence having a brace passing over the top thereof and having its ends secured to wires passing around anchor-blocks embedded in the ground, a stay embracing the post and having its ends secured to the said brace, of an additional brace formed of two wires twisted upon themselves and having their upper ends controlling the upper end of the post and their lower ends twisted together to form an eye, an anchor embedded in the ground, a wire passing around the said anchor and having its ends extending above the ground and twisted together to form an eye, which is secured to the eye of the said brace, and a stay formed of two wires having their lower ends embracing the lower portion of the post, and having one of their outer ends passing through the eye of the said brace, and then twisted upon the outer end of the other wire of the stay to form an eye.

708,806. SPIRIT-LEVEL. SAMUEL R. RICE, New York, N. Y. Filed July 28, 1901. Serial No. 79,944. (No model.)

Claim.—The combination with a straight-edge, of a plane body-plate, and a plane cap-plate fastened snugly together face to face, the body-plate being formed with two elongated depressions therein, said depressions extending approximately at right angles to each other and being immediately adjacent and the body-plate also having orifices respectively cutting or extending into said depressions, and the cap-plate having orifices registering with the orifices in the body-plate, the body and cap plate being fastened to the straight-edge and the straight-edge having openings respectively aligned with the openings in the body and cap plates, and spirit-tubes seated in the depressions in the body-plate and visible through the aforesaid orifices from both sides of the straight-edge.

708,807. COMPOSITE PRINTING-FORM. JAMES ROBINSON and ROBERT McGLASS, Dublin, Ireland. Original application filed Oct. 5, 1901, Serial No. 77,877. Divided and this application filed Jan. 10, 1902. Serial No. 69,512. (No model.)

Claim.—1. The combination with a "chase" or frame and cast lines of type imposed in said frame and provided with longitudinal slots, of "rules" and laterally-inclined tongues at the ends of said rules, substantially as and for the purpose specified.

2. The combination with a "chase" or frame and cast lines of type imposed in said frame and provided with transverse slots, of "rules" having their ends longitudinally split and having the tongues thus formed, laterally inclined in opposite directions, substantially as and for the purpose specified.

3. A printing-rule provided with laterally-extending inclined tongues.

4. A printing-rule provided with lateral inclined tongues extending in opposite directions.

708,808. SHADE-HOLDER FOR INCANDESCENT ELECTRIC LAMPS. EDGAR A. EMMERL, Wallingford, Conn. Filed Oct. 17, 1901. Serial No. 79,589. (No model.)

Claim.—A shade-holder for incandescent lamps, having a shade-ring and a clamping-ring made from a single piece of sheet metal, the said clamping-ring comprising two members extending in opposite directions, corresponding to each other in length, confined to lateral movement in a plane parallel with the plane of the shade-ring with which their adjustment is concentric, and connected with the clamping-ring by arms which are located in a plane parallel with the plane thereof, and each of which is furnished with a perforated ear, respectively receiving adjusting-screws also passing through the free ends of the said members of the clamping-ring, substantially as described.

708,809. OPEN-HEARTH STEEL-FURNACE. FRANCIS L. BARTON, Gates-Croft, and JOHN L. GIBBS, England, England. Filed Nov. 4, 1901. Serial No. 81,144. (No model.)

Claim.—In an open-hearth furnace for the manufacture of steel and characterized by a division of the hearth into compartments separated by dams one or more channels or gutters in the dams substantially as specified for the purpose set forth.

708,810. SHOES-BOOTS. GEORGE SCHMIDT, Baltimore, Md., assignor, by direct and mesne assignments, to the George Schmidt Manufacturing Company of Baltimore City, a Corporation of Maryland. Filed Jan. 29, 1901. Renewed Dec. 4, 1901. Serial No. 84,616. (No model.)

Claim.—1. In a shoe-heel, the combination of the heel proper; a gripping-finger pivoted on said heel; and a lever also pivoted on said heel and provided with a dotted and loosely connected to the adjacent end of said gripping-finger.

2. A shoe-heel, provided with upper lug-ear, *a, c,* and lower lug, *d;* a lever pivoted between said lug-ears and provided at one end with an elongated slot; and a gripping-finger pivoted to said lower lug, *d,* and provided with a bifurcated end which receives the dotted end of said lever, and also provided with a pin extending across its bifurcated end and fitted in the elongated slot of the lever end, as set forth.

708,811. STREET-RAILWAY SWITCH. GEORGE SCHMIDT, Philadelphia, Pa. Filed Nov. 15, 1901. Serial No. 82,685. (No model.)

Claim.—1. In a double track and groove railway-switch the combination of a pinless tongue for tongue-actuator and tongue motor, formed with perfectly-continuous heel, the full width of heel beveled downwardly on all edges and having a bearing on three of its edges at either of its positions, and a switch-bed with a continuous underfoot at its heel, a segmental underfoot at its point, to freely deviate the switch-tongue to the bed at both its ends, and two guard-angles formed and adjusted to give a side bearing to the tongue in either of its positions.

2. The tongue *A,* having two grooves *a',* and two tracks, and beveled from the top sixty degrees downwardly on all edges to a flat bed, and deviated therein, substantially as shown.

708,812. MINE-CLAMP. VERNER F. SHULA, Bergsfield, N. J. Filed Mar. 5, 1902. Serial No. 84,776. (No model.)

Claim.—1. A clamp for carpenter's benches, consisting of a frame adapted for attachment to a bench, a screw held to travel in the frame, a head-block having a suitable connection with the screw, guides for the head-block, a jaw removably carried by the head-block, a tension device carried by the jaw, acting to hold the jaw in the head-block, and a clamping-pin removably and rotatably mounted in the head portion of the said jaw, as and for the purpose specified.

2. A clamp for carpenter's benches, consisting of a frame adapted for attachment to an end of a bench, tracks adapted for attachment to the bottom of the bench, an angular head-block, the lower horizontal member whereof is adapted to travel on the tracks and is provided with an aperture, a screw passed through a threaded aperture in the frame and having swivel connection with the vertical portion of the head-block, and a jaw comprising a head having an inclined toothed side surface, a shank, the surface of which shank just below the toothed surface of the head is curved, and a spring attached at one end to the shank, its other end being free, which shank and spring are adapted to enter the aperture in the head-block, substantially as set forth.

3. The combination with a carpenter's bench having a longitudinal opening in one end and a series of apertures in longitudinal alignment with the said opening, which apertures incline from the bottom upward in direction of the end of the bench having the opening therein, angular tracks secured to the bottom of the bench, parallel with and adjacent to the side walls of the opening at the end of the bench, and a bar attached to the end of the bench, creating the opening therein, of an angular head-block the vertical member whereof is free to slide in said opening in the bench, the horizontal member being provided with a rectangular aperture, a screw passed through the threaded aperture in said bar, being connected with the vertical member of the head-block and free to turn therein, and a jaw consisting of a straight shank having an attached spring, the spring and shank being adapted to enter the aperture in the horizontal member of the head-block, and a head-portion continuous with the shank but of greater transverse width than the shank, which head-portion is provided with a horizontal aperture in one face and having an inclined toothed surface in its opposite face, the shank being provided at the toothed side of the jaw with a curved surface just below the teeth of the jaw, and a clamping-pin consisting of a shank adapted to enter the aperture in the jaw and turn therein, and a toothed head integral with the shank, as and for the purpose set forth.

4. In bench-clamps, the combination with a jaw, consisting of a shank and a head, the head having teeth at one side and an aperture at the opposite side, of a clamping-pin consisting of a shank adapted to turn loosely in the aperture in the jaw, and a head having points formed thereon, adapted to enter an article to be held by the jaw, for the purpose set forth.

708,813. BARREL-CLOSURE. WILLIAM W. RAY, Cleveland, Ohio. Filed Mar. 4, 1902. Serial No. 84,778. (No model.)

Claim.—A barrel-closure comprising the cover *7* having a catch thereon, holding means for one edge of the cover attached to the barrel, the plate *9* having a projecting reserved flange forming a hook, the angle-iron *10* engaging thereunder, and a clamping-lever pivoted to the angle-iron and engaging the catch to clamp the cover.

708,814. PROCESS OF MANUFACTURING ICE. SUMNER H. SMITH, Philadelphia, Pa. Filed Aug. 5, 1901. Serial No. 71,998. (No specimen.)

Claim.—1. The process of manufacturing ice which consists in forming a thin coating of ice upon a vessel submerged in a body of water, removing the coating of ice in small pieces which rise to the surface of the water, delivering a current of water at, and parallel to, the surface of the body of water and causing said current to pass over the entire surface of said body of water and carry off said pieces of ice; and then compressing said ice particles into blocks.

2. The process of manufacturing ice which consists in forming a thin coating of ice upon a moving vessel submerged in a body of water, removing the coating of ice in small pieces which rise to the surface of the water, delivering a current of water at, and parallel to, the surface of the body of water and causing said current to pass over the entire surface of said body of water and carry off said pieces of ice; and then compressing said ice particles into blocks.

3. The process of manufacturing ice which consists in forming a thin coating of ice upon a vessel submerged in a body of water, removing the coating of ice in small pieces which rise to the surface of the water, delivering a current of water at, and parallel to, the surface of the body of water and causing said current to pass over the entire surface of said body of water and carry off said pieces of ice; and then compressing the water from said ice particles, and finally compressing the latter into solid blocks.

4. The process of manufacturing ice which consists in forming a thin coating of ice upon a moving vessel submerged in a body of water, removing the coating of ice in small pieces which rise to the surface of the water, delivering a current of water at, and parallel to, the surface of the body of water and causing said current to pass over the entire surface of said body of water and carry off said pieces of ice; and then compressing said pieces of ice to a point where the surplus water may be separated and removed, and finally compressing the ice particles into solid blocks.

708,815. APPARATUS FOR MANUFACTURING ICE. SUMNER H. SMITH, Philadelphia, Pa. Filed Mar. 11, 1901. Serial No. 81,989. (No model.)

Claim.—1. The combination in an apparatus of the character described, of the freezing-tank, ice-forming means located within said tank, a receiving-tank, means for removing the ice from the freezing-tank by discharging a body of water at the surface of the liquid therein to create a surface current in said tank to cause said ice particles to overflow, an adjustable gate or weir for regulating the height of such overflow, and means comprising a collecting pipe or spout normally stationary and serving to gather only the upper layer of fluid or condensed steam containing the bulk of the ice particles.

2. The combination in an apparatus of the character described, of the freezing-tank, ice-forming means located within said tank, means for discharging the ice from said tank by a surface current created and maintained at the surface of the liquid therein, whereby said ice is caused to overflow, an adjustable gate or weir for regulating the height of such overflow, and means for conveying said ice to a compression-chamber, said means comprising a collecting pipe or spout normally stationary and serving to collect only the upper layer of the fluid or condensed steam which contains the bulk of the ice particles.

3. The combination in an apparatus of the character described, of the freezing-tank, ice-forming means located within said tank, a receiving-tank, a pipe within said receiving-tank for leading the ice particles away, an enlarged spout carried by said pipe and extending across the receiving-tank, and an adjustable gate or weir between the freezing-tank and the receiving-tank whereby the height of discharge from the freezing-tank may be regulated so that the ice particles may be delivered to the spout and the surplus water supplied into the tank.

4. The combination in an apparatus of the character described, of the freezing-tank, ice-forming means in said tank, a receiving-tank, a pipe within said receiving-tank having an enlarged spout adjacent to the discharge from the freezing-tank, adjusting means for said pipe, and a flexible connection for the lower portion of said pipe whereby adjustment of the same may be readily accomplished to insure the reception of the ice particles discharged from the freezing-tank, and the discharge of the surplus water into the receiving-tank.

5. The combination in an apparatus of the character described, of the freezing-tank, ice-forming means located within said tank, a receiving-tank, a pipe within said receiving-tank having an enlarged spout adjacent to the discharge from the freezing-tank, a perforated plate located between the freezing-tank and the receiving-tank over which the ice and water pass, said plate allowing the surplus water to pass into the tank while the ice particles with a minimum quantity of water will pass directly to the spout, means for raising and lowering said plate, and means for adjusting the spout from and toward the same depending upon the volume of material passing over it.

708,816. MACHINE FOR PREVENTING DEPOSITION OF FROST ON VEGETATION. STEPHEN B. SMITH, Orlando, Fla. Filed Aug. 18, 1901. Serial No. 73,126. (No model.)

Claim.—1. In an apparatus of the character described, the combination with a vehicle comprising a casing, of a steam-generating coil therein constituting a fire-box, a smoke-flue leading from the casing, a water-supply tank mounted on the casing and communicating with the coil at one end, and steam-distributing means communicating with the opposite end of the coil and located exterior to the casing.

2. In a device of the character described, the combination with a vehicle comprising a casing, of a steam-generating coil located within the casing and constituting a fire-box, a water-supply tank in communication with one end of the coil and supported directly upon the casing, whereby the water will be heated before being supplied to the coil, a smoke-flue leading from the casing, and a plurality of delivering devices communicating with one end of the coil and located exterior to the casing.

3. In a device of the character described, the combination with a vehicle comprising a casing having a fire-door at one end and a smoke-flue at its opposite end, of a steam-generating coil located within the casing and constituting a fire-box having its top and bottom and side walls and its rear and wall composed of tubing, a water-supply tank mounted on the casing and communicating with the coil at its lower end, and discharging devices located exterior to the casing and communicating with the upper end of the coil.

4. In a device of the character described, the combination with a vehicle comprising a casing having a fire-door at its front and end and a smoke-flue leading from its rear end, of a water-supply tank supported directly upon the casing, a steam-generating coil located within the casing and

constituting a fire-box open at its front and having its top and bottom and side walls and its rear wall composed of tubing, a valve-controlled pipe establishing communication between the water-tank and one end of the generating-coil located at the bottom of the fire-box, a branched pipe disposed upon the exterior of the casing and communicating with the upper end of the coil, and distributing devices carried by said branched pipe and located beyond the opposite sides of the vehicle.

5. In an apparatus of the character described, the combination with a vehicle comprising a casing, of a steam-generating coil therein constituting a fire-box, a smoke-flue leading from the casing, a water-supply tank communicating with the coil at one end, a plurality of pipes communicating with the opposite end of the coil and extended beyond the opposite sides of the vehicle, and independent rotary distributors disposed at the outer extremity of each of said pipes.

6. In an apparatus of the character specified, the combination with a steam-generator, of rotary steam-distributing means connected therewith, said means comprising a coupling carrying vanes, and a belt for connecting the coupling with the steam-supporting means, the head of the belt being provided with steam-escape openings.

708,817. POTATO-DIGGER. LEONARD STEVENS, Napton, Mich. Filed Mar. 31, 1902. Serial No. 100,778. (No model.)

Claim.—1. In a potato-digger, the combination with the main frame, of a rotary open-work cylinder mounted thereon, and furts radially adjustably connected to said cylinder and adapted to lift the potatoes from the ground and permit them to drop upon said cylinder and loosen and separate the soil from the potatoes, substantially as set forth.

2. In a potato-digger, the combination with a wheel-supported frame, of a rotary cylinder mounted thereon, means for rotating said cylinder, furts arranged concentrically about said cylinder, rims rotatably mounted upon the heads of said cylinder, bars connecting said heads and slidably connected with the rims of said furts whereby said furts may be adjusted radially with respect to said cylinder, substantially as set forth.

3. In a potato-digger, the combination with a rotary open-work cylinder, of rims mounted for radial adjustment upon the heads of said cylinder, furts pivoted in the heads of said cylinder, bars extending across said cylinder and pivoted in said rims and provided with holes through which the rims of the furts project, and means for locking the rims in adjustment, substantially as set forth.

708,818. GEAR TRANSMISSION. JAMES BURT, Littleport, N. D. Filed Feb. 28, 1902. Serial No. 96,712. (No model.)

Claim.—1. A gear transmission comprising a gear-wheel, and pinions in mesh at all times with the said gear-wheel and adapted to move in and out of mesh with each other, the pinions when in mesh locking the wheel and pinions together, to cause the pinions to swing bodily around with the gear-wheel, as set forth.

2. A gear transmission comprising a driven gear-wheel, a shaft on which the gear-wheel is mounted to turn loosely, an arm secured on the said shaft and carrying a pinion in mesh at all times with the said gear-wheel, and a second pinion at all times in mesh with the said gear-wheel, adapted to move in and out of mesh with the first-named pinion, as set forth.

3. A gear transmission comprising a driven gear-wheel, a shaft on which the gear-wheel is mounted to turn loosely, an arm secured on the said shaft and carrying a pinion in mesh at all times with the said gear-wheel, a second pinion at all times in mesh with the said gear-wheel,

adapted to move in and out of mesh with the first-named pinion, an arm mounted to swing loosely on the shaft carrying the said second pinion, and a spring connecting the arms with each other, as set forth.

4. A gear transmission comprising a driven gear-wheel, a shaft on which the gear-wheel is mounted to turn loosely, an arm secured on the said shaft and carrying a pinion in mesh at all times with the said gear-wheel, a second pinion at all times in mesh with the said gear-wheel, adapted to move in and out of mesh with the first-named pinion, an arm mounted to swing loosely on the shaft carrying the said second pinion, a spring connecting the arms with each other, and an obstruction adapted to be moved into the path of the said pivoted arm, as set forth.

5. A gear transmission comprising a driven gear-wheel, a shaft on which the gear-wheel is mounted to turn loosely, an arm secured on the said shaft and carrying a pinion in mesh at all times with the said gear-wheel, a second pinion at all times in mesh with the said gear-wheel, adapted to move in and out of mesh with the first-named pinion, an arm mounted to swing loosely on the shaft carrying the said second pinion, a spring connecting the arms with each other, an obstruction adapted to be moved into the path of the said pivoted arm, and means for locking the shaft against return movement toward the pivoted arm, as set forth.

6. A gear transmission comprising a loose gear-wheel, pinions in mesh at all times with the said gear-wheel, and arms on which the pinions are journaled, the arms being adapted to swing toward or from each other to bring the pinions in or out of mesh with each other, as set forth.

7. A gear transmission comprising a loose gear-wheel, pinions in mesh at all times with the said gear-wheel, and arms on which the pinions are journaled, the arms being adapted to swing toward or from each other to bring the pinions in or out of mesh with each other, one of the arms being secured to the shaft and the other being mounted to swing loosely on the shaft as a fulcrum, as set forth.

8. A gear transmission comprising a driven gear-wheel, a pinion in mesh with the said gear-wheel, carried by an arm mounted to swing, the axis of the gear-wheel and that of the arm coinciding, and a second pinion, adapted to move in mesh with the said first-named pinion and in mesh with the said gear-wheel, to lock the pinions against rotation and to cause the pinions and arm to bodily move with the gear-wheel, as set forth.

708,819. HEMOGLOBINOMETER. THOMAS W. TALLCOTT, Barga, Russia. Filed Jan. 14, 1902. Serial No. 98,974. (No model.)

Claim.—1. Means for determining the percentage of hemoglobin in blood by comparison, comprising a scale of colors varying in depth of color to indicate variations in the percentage of hemoglobin in blood, and a receiver for the blood to be compared, said receiver of a contrasting color and capable of absorbing the blood and have a meniscus.

2. Means for determining the percentage of hemoglobin in blood by comparison, comprising a scale of colors varying in depth of color to indicate variations in the percentage of hemoglobin in blood, and a receiver for the blood to be compared, said receiver of a contrasting color and of an indifferent material, and capable of absorbing the blood and have a meniscus.

3. Means for determining the percentage of hemoglobin in blood by comparison, comprising a scale of colors varying in depth of color to in-

dicate variations in the percentage of hemoglobin in blood, and a receiver of white filter-paper for the blood to be compared.

4. Means for determining the percentage of hemoglobin in blood by comparison, consisting of a colorimetric scale composed of separate elements differing in depth of color in accordance with percentages of hemoglobin, and sheets of white filter-paper divided transversely into sections by lines or perforations and having a line of perforations along one edge, the whole bound in book form, for the purpose set forth.

708,820. BOARDING SHOE. CHARLES TAYLOR, New York, N. Y. Filed Jan. 20, 1902. Serial No. 91,931. (No model.)

Claim.—1. In a machine for boarding shoe, the combination with a table for the passage of the shoe, of a movable stop for arresting the passage of the shoe upon the table, and a scraper traveling in the path of the stop for removing the shoe from the table.

2. In a machine for boarding shoe, the combination with a table for the passage of the shoe, of an intermittently-traveling stop moving over the table and adapted to suitably arrest the passage of the shoe, and a continuously-moving scraper traveling in the path of the stop for removing the shoe from the table.

3. A table and a rack or shoulder combined with a stop made to contact with the shoulder, and a scraper made to move continuously clear of the shoulder.

4. A device for boarding shoe comprising a table, a continuously-moving carrier or chain, a stop and a scraper actuated by the carrier and scraper for imparting to the stop a step-by-step motion.

5. A machine for boarding shoe comprising a table, a stop and a scraper made to pass over the table, and a flap alternately operated by said stop and scraper for discharging the shoe from the table in opposite directions.

6. In a machine for boarding shoe, a table for the passage of the shoe, a carrier, a stop and scraper carried thereby, a valve for feeding the shoe to the table, an actuating-lever for the valve, and legs actuated by the carrier and engaging the valve-actuating lever for suitably operating it.

7. In a device for boarding shoe, a table for the passage of the shoe, a carrier, a stop secured to the carrier and traveling in a step-by-step manner, a scraper connected to the carrier and operating in the passage of the stop in a continuous manner, and an intermittently-actuated shoe-feeding valve for suitably supplying the shoe to the table.

8. In a machine for boarding shoe, a table for the passage of the material, an intermittently-traveling stop operating upon the table, a continuously-moving scraper operating upon the table, and a shoe-directing flap shifted by the stop and the scraper for suitably directing the discharge of the shoe as it passes from the table.

9. In a machine for boarding shoe, a table for the passage of the shoe, a traveling stop moving over the table, a traveling scraper moving in the path of the stop, a shoe-directing flap arranged in suitable relation to said table, and an arm and shifting-lever connected with the flap and engaged and operated by the stop and scraper for suitably shifting the flap for directing the passage of the shoe when discharged from the table.

10. In a machine for boarding shoe, the combination with a table for the passage of the shoe, of an intermittently-operating means for feeding the shoe to the table, an intermittently-operating stop traveling over the table for interrupting the passage of the shoe, a continuously-moving scraper operating over the table for removing the shoe therefrom, and means operated by said stop and flap for directing the discharge of the shoe from the table.

708,821. TRACE-FASTENER. CALVERT W. TINKERFIELD and OLIVER H. TINKERFIELD, Memphis, Tenn. Filed Mar. 12, 1902. Serial No. 94,978. (No model.)

Claim.—1. In a trace-fastener, the combination with a whiffletree having a socket, of a spring trace-holder mounted upon the whiffletree and having an inwardly-extending trace-receiving loop, the inner end of which is movably mounted in the socket, and an inclined guide-finger projecting from the outer side of the trace-receiving loop.

2. In a trace-fastener, the combination with a whiffletree having a socket, of a trace-holder secured to the whiffletree on the inner side of the socket, said trace-holder having an inwardly-extending trace-receiving loop, the inner end of which is movably mounted in the socket, and an inclined guide-finger projecting from the outer side of the trace-receiving loop.

3. In a trace-fastener, the combination with a whiffletree having a pair of longitudinally-disposed sockets arranged in alignment, of a spring trace-holder secured to the whiffletree on the inner side of the inner socket, said trace-holder comprising a Shank disposed in spaced relation to the whiffletree and having a trace-receiving loop at its outer end that is movably located in the inner socket, and an inclined guide-finger projecting from the outer end of the loop and movable in the outer socket.

4. In a trace-fastener, the combination with a whiffletree having a socket, of a spring trace-holder mounted upon the whiffletree and having an inward trace-receiving loop that is movably mounted in the socket, and a stop extending across the socket and engaging the loop to limit the outward movement thereof.

5. In a trace-fastener, the combination with a whiffletree having a longitudinally-disposed socket, of a trace-holder mounted upon the whiffletree and comprising a fastening-rod passing through said whiffletree on the inner side of the socket, a coiled spring located at the end of the stem, a Shank arranged longitudinally of and in spaced relation to the whiffletree, an inner loop portion movably located in the socket, and an inclined guide-finger projecting from the outer end of the loop portion.

708,822. COVER MECHANISM FOR PIT-FURNACE. FRANK H. TREAT, Philadelphia, Pa. Filed Nov. 12, 1901. Serial No. 81,982. (No model.)

Claim.—1. A pit-furnace cover, a supporting-lever therefor, a cam device arranged to act upon the lever, and mechanism for moving the cover back and forth; substantially as described.

2. A pit-furnace cover supported upon a lever-arm, mechanism for moving the lever-arm and cover to and from the furnace, and a cam device arranged to act upon the lever-arm to raise and lower the cover; substantially as described.

3. A pit-furnace cover supported upon a lever, a movable track carrying the lever, mechanism for moving the track and cover back and forth, and a cam device arranged to act upon the lever; substantially as described.

4. A pit-furnace cover supported upon a lever, a track supporting the lever, a roller on the lever bearing upon the under face of a track having a cam-flocc portion, and mechanism for moving the track toward and from the furnace; substantially as described.

5. A pit-furnace cover mounted upon levers extending over and secured to a frame mounted upon a wheeled carrier, the inner ends of the levers extending downwardly and having rollers bearing upon the under face of tracks having cam-flocc, and a motive cylinder connected to the wheeled carrier; substantially as described.

708,828. FOUNTAIN-PEN. GEORGE WALL, New Plymouth, New Zealand, assignor of one-third to Robert Clinton Haglan, New Plymouth, New Zealand. Filed Sept. 24, 1901. Serial No. 74,416. (No model.)

Claim.—1. In a fountain-pen, the combination with the ink-duct, of a feed-tube having the curved portion *W*, having a substantially flat, straight feed-bar extension *W'*, a feed-duct of uniform diameter in said feed-tube and non-absorbent means for conducting ink from the feed-duct to the feed-bar extension, whereby ink is delivered to the end of the pen and the ink prevented from creeping forward along the pen, substantially as set forth.

2. A fountain-pen comprising a pen, an ink-tube, a feed-tube having the curved portion *W*, a feed-bar extension *W'*, a feed-duct in said tube and terminating in the extension and of uniform diameter throughout, and a non-absorbent ink-conductor in said feed-duct seated at one end in the feed-bar extension and its opposite end extending into the feed, that portion of said conductor within the feed-bar extension adapted to lie against the under side of the pen at the point of ink-supply, substantially as set forth.

3. A fountain-pen comprising an ink-tube a rigid feed-bar having a bent or convex-concave portion intermediate of its ends and provided with a feed-duct having its outlet on the upper face near the outer end of said bar, an ink-conductor composed of a braid of hair-like material extending from near the outer end of the feed-bar through the duct into the reservoir and having its outer end secured in the split end of the bar, and means for holding a pen in said outer end of the bar, for the purpose set forth.

4. A fountain-pen, comprising an ink-reservoir, a feed-bar having its outer end split longitudinally, said bar provided with an undulating feed-duct having its discharge on the upper face near the outer end of said bar, a filamentous ink-conductor extending through the duct into the reservoir and having its outer end secured in the split end of the bar, and means for holding a pen on the outer end of the bar, for the purpose set forth.

5. The combination with the feed-bar of a fountain-pen, of an ink-conductor consisting of a braid of hair-like material, for the purpose set forth.

6. The combination with its outlet on the upper face near the outer end of the bar, and an ink-conductor consisting of a braid of hair-like material secured to the outer end of the bar and extending through the feed-duct thereof, for the purpose set forth.

708,824. SEAL. GEORGE F. WAGGERS, Baltimore, Va. Filed May 24, 1901. Serial No. 61,749. (No model.)

Claim.—The improved seal having the form of a many-sided polygon and composed of wedge strips, or sections, laid horizontally and lapped upon each other as described, having lugs secured to the inner side of the polygonal wall, and a twist of cement-carrying lugs sealed vertically upon each lapping, and the cement cast applied to the vertical lugs and preventing an entrance surface, as shown and described.

708,825. MACHINE FOR BLOWING GLASS. GEORGE F. WAGGERS, Baltimore, Va. Filed Oct. 12, 1901. Serial No. 73,161. (No model.)

Claim.—1. In a glass-blowing mechanism, a shaping-pot mounted in the path of the blowpipe, and comprising a disk-shaped pot, water-pipes rising from the rim thereof, and cylindrical shells revolvably seated over the water-pipes, and means to conduct water to the pipes.

2. In a glass-blowing mechanism, a shaping-pot mounted in the path of the blowpipe and comprising a disk-shaped pot mounted to swing on a vertical support, a series of perforated water-pipes rising vertically from the rim of the pot, cylindrical shells having open lower ends, and their upper ends revolvably seated to the upper ends of the water-pipes, and a pipe to conduct water to the water-pipes.

3. In a glass-blowing mechanism, the combination of a pivotally-mounted blowpipe, and a shaping-pot in the path of the blowpipe, said shaping-pot comprising a body having a concave upper surface, a concave shaping-pot above the body, a series of perforated vertical water-pipes extending around the rim of the shaping-pot, and shells having open lower ends and closed upper ends revolvably seated to the upper ends of the water-pipes.

4. In a glass-blowing mechanism, the combination of a pivotally-mounted blowpipe, and a shaping-pot mounted to swing and to be moved vertically on its support, said shaping-pot comprising a body having a water-chamber having a concave cover, a shaper having a concave lower portion supported above the body, perforated vertical water-pipes rising through the rim of the shaper, and shells having open lower ends and closed upper ends revolvably seated to the upper ends of the water-pipes.

5. In a glass-blowing mechanism, the combination of a rotatably-mounted shaft, means to rotate the shaft about its axis to swing a blowpipe, a bearing-shoe rotatably projected transversely through the shaft, a blowpipe connected to said shoe, a valve in the shoe, a piston in the shoe, a pulley on the shaft, a pulley on the belt of the latter piston, and means to rotate the pulley.

6. In a glass-blowing mechanism, the combination of a rotatably-mounted shaft, means to rotate the shaft on its axis to swing a blowpipe, a bearing-shoe rotatably projected transversely through the shaft, a blowpipe connected to said shoe, a valve-chamber connected to and having communication with the shoe, and a valve in the valve-chamber to control the passage of air through the chamber, the shoe and the blowpipe.

7. In a glass-blowing mechanism, the combination of a rotatably-mounted shaft, means to rotate the shaft on its axis to swing a blowpipe, a bearing-shoe rotatably projected transversely through the shaft, a blowpipe connected to said shoe, a valve-chamber connected to and having communication with the shoe, a valve in the valve-chamber to control the passage of air through the chamber, the shoe and the blowpipe, and means on the shoe and shaft to rotate the blowpipe.

8. The combination with a shaft 20 and the blowpipe revolvably mounted thereon, of means for rotating the blowpipe on its axis, comprising suitable supports, a shaft 30 journaled therein, a pulley thereon, jointed supporting-arms connecting the shafts 20 and 30 and supporting an intermediate shaft 45, pulleys on the intermediate shaft, belts connecting the respective pulleys, a lower pulley slidingly mounted on the shaft 20, a beveled pulley integral with the sliding pulley, and a beveled pulley on the blow-pipe, substantially as specified.

708,826. VISE. FRANK I. WAGGERS, Baltimore, Md. Filed Sept. 21, 1901. Serial No. 74,008. (No model.)

Claim.—1. A vise, comprising two jaws, one jaw being formed with a transverse V-shaped recess, the walls of which are in double-slip form, and with a central notch leading from the recess to the end of the jaw and provided with longitudinal teeth, and the other with a transverse V-shaped recess having longitudinally-extending corrugations and with a central notch leading from the recess to the end of the jaw and having longitudinal teeth, as set forth.

2. A vise, comprising jaws having gripping-surfaces on both sides, the jaws being independently pivoted to permit of their being reversed, as set forth.

3. A vise comprising jaws, each having gripping-faces on both sides, cheeks carrying the jaws, and a pivot-plate on which the cheeks are independently pivoted to allow of reversing the jaws, as set forth.

4. A vise comprising jaws, each having gripping-faces on both sides, cheeks carrying the jaws, a pivot-plate on which the cheeks are independently pivoted to allow of reversing the jaws, a screw-rod screwing in one of the cheeks and engaging the other cheek, and a spring pivoted on one of the cheeks and extending with its free end between the other cheek and a removable pin on the cheek on which the spring is pivoted, as set forth.

5. A vise, comprising jaws having transverse and longitudinal roughened gripping-faces on one side and plain or smooth gripping-faces on the other side, a pivot-plate to which the cheeks of the jaws are independently pivoted to permit of their being reversed, and means for opening and closing said jaws, as set forth.

6. In a vise, the combination with two jaws having gripping-surfaces on both sides, and independently pivoted as to permit of their being reversed, and means for closing the jaws, of a spring carried by one of the jaws, and a removable stop on one jaw and against which and the other jaw the spring is adapted to engage, as set forth.

7. A vise, comprising two jaws having gripping-surfaces on both sides, cheeks carrying the jaws, a screw-rod working loosely in one cheek and screwing into the other, a pivot-plate to which the cheeks are independently pivoted, a pivoted spring carried by one cheek, and a removable pin carried by the cheek carrying the spring, as set forth.

708,827. ROAD-OLING MACHINE. THOMAS F. WHITE, Ohio. Filed Sept. 12, 1901. Serial No. 73,162. (No model.)

Claim.—1. In a road-olting machine, the combination with a storage-tank, of suitable hangers, a frame suspended by said hangers, a distributing-tank carried by the frame and in communication with the storage-tank, a distributing-pipe connected with the distributing-tank and supported on the frame, and means for vertically adjusting the frame and the device thereon.

2. In a road-olting machine, the combination with a tank, of front hangers, rear hangers having suitable guideways, a frame pivoted to the front hangers and confined in the guideways of the rear hangers, a distributing-pipe carried by the frame and having communication with the tank, and means for adjusting said frame and the device supported thereon.

3. In a road-olting machine, the combination with a suspended frame, and an elevated tank, of a perforated distributing-pipe carried by the frame and having a plug, connecting-pipes leading from the tank and communicating with the ends of the distributing-pipe, controlling-valves fitted in the connecting-pipes, levers independently mounted on the frame at points between the valves and disposed in close relation for simultaneous operation, and individual connections between the levers and the valves.

4. In a road-olting machine, the combination with a perforated distributing-pipe, of a gauge shaped circumferentially to said pipe and adjustable axially thereon, said gauge being provided on its under side with a series of transverse slots, and the upper side of said gauge being divided longitudinally and flanged to receive suitable transverse fasteners.

5. A road-olting machine, having a distributing-pipe provided with discharge-openings and dotted gauges arranged longitudinally on said distributing-pipe and adjustable axially thereon to change the relation of the slots in the gauges to the openings in the distributing-pipe, and gauges being adjustable independently one of the other.

6. A road-olting machine, having a distributing-pipe provided with discharge-openings, dotted gauges arranged longitudinally on said distributing-pipe and adjustable axially thereon, the gauges being adjustable independently one of the other, and means for clamping the gauges circumferentially around the distributing-pipe.

7. In a road-olting machine, the combination of a perforated distributing-pipe, means dividing said pipe into sections, valved feed-pipes arranged to control a liquid-supply to independent sections of said pipe, and a series of gauges having openings and arranged longitudinally of the perforated distributing-pipe, each gauge being adjustable axially on said distributing-pipe to vary the relation of its openings to the openings in the distributing-pipe.

8. In a road-olting machine, the combination with a suitable vehicle, and a tank, of the front and rear hangers, a frame pivoted to the front hangers and suspended in its operative position by the rear hangers, an adjusting-shaft having operative connection with the frame to adjust the latter vertically, and distributing device carried by said frame.

708,828. GRAIN-HUSKING HARVESTER. WILLIAM E. WHITELY, Springfield, Ohio. Filed Oct. 24, 1902. Serial No. 84,846. (No model.)

Claim.—1. In a grain-husking harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts to elevate the grain from the horizontal grain-conveying belt to the blower-deck, a blower mechanism, a blower-deck intermediate between the grain elevator and blower mechanism, a belt-adjuster mechanism, supported on the elevator portion of the machine independent of the blower mechanism, one member thereof having downwardly-projecting longitudinally and crosswise disposed teeth opening over and into the path of the belts of the grain, said member extending downward and obliquely over the forward end of the blower-deck and having an orbital reciprocal movement thereon.

rather than the movement of the heads of the grain in approximately the vertical plane of the member, the movement of the member in the lower portion of its orbit being stabbeward and binderward, whereby the butts of the grain are pierced, compressed and carried down the binder-deck toward the binder mechanism faster than the heads.

2. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts, a grain-binding mechanism arranged at the side of the machine and distant from the grain-elevator, a binder-deck intermediate between said grain elevator and binding mechanism for the reception of the cut grain from the elevator, a butt-adjuster mechanism, one member thereof consisting of an arm having downwardly-projecting teeth and located over the forward end of the binder-deck, means for moving said member alternately stabbeward and grainward, said member opening upon the top of the grain near the butts thereof and placing the grain at different points compressing it downward upon the binder-deck and positively moving it from the elevator to the binding mechanism; said butt-adjuster mechanism pivoted to swing parallel to the plane of the binder-deck that the grain may be bound centrally of its length, be it long or short.

3. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts, a binding mechanism, a binder-deck intermediate between the grain elevator and binding mechanism, a butt-adjuster mechanism connected with and supported upon the elevator portion of the machine independent of said grain-binder, one member of said butt-adjuster mechanism consisting of an arm having downwardly-projecting teeth lengthwise and crosswise disposed and located over the forward end of the binder-deck to pierce the grain downward near the butts and move it binderward, a crank connected to and driving said arm, the shaft of said crank horizontally disposed and extending over and above the path of the butts of the grain, said shaft supported by the elevator-frame portion of the machine and driven by means of gearing secured to the front end of one of the grain-moving roller-shafts; another member of said butt-adjuster mechanism consisting of a grain-depressor pivotedly supported and located upon one side of the mid-toothed arm member of the butt-adjuster, to hold the grain down onto the binder-deck and prevent its rising from its depressed condition where forced by said toothed arm member; said grain-depressor moving in unison with said toothed arm butt-adjuster member in adjustment over the binder-deck parallel to the plane thereof for the purpose shown and described.

4. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts, a binding mechanism, a binder-deck intermediate between the grain-elevator belts and binding mechanism, a butt-adjuster mechanism composed substantially of three coacting members, each pivotedly supported upon the elevator-frame-work of the machine independent of the grain-binder, one member thereof consisting of a wing-board extending from near the grain-delivery end of the elevator toward the binder mechanism along the path of the butts of the grain; another member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth on its under side and located over the forward end of the binder-deck, means for moving said member alternately stabbeward and grainward, said member opening over and above the path of the butts of the grain in one portion of its orbit, and into and with the grain near the butts in its return movement between the grain-delivery end of the elevator and the binding mechanism, the teeth of said arm placing the grain downward at different points and compressing it upon the binder-deck and finally moving it toward the binder mechanism; another member thereof consisting of a grain-depressor, its upper end pivotedly connected to a fixed portion of the machine and extending over the grain binderward, along the side of the teeth of the butt-adjuster arm.

5. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts, a binding mechanism, a binder-deck intermediate between said elevator-belts and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth on its under side and located over the forward end of the binder-deck, means for moving said member alternately stabbeward and grainward to pierce the grain downward at different points lengthwise near the butts, said arm and its teeth extending over a considerable portion of the grain lengthwise and crosswise to grasp the grain as it comes from the elevator and compress it down upon the binder-deck and positively move it binderward.

6. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts, a binder mechanism, a binder-deck intermediate between the elevator-belts and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a wing-board at the butts of the grain extending from the elevator to the binding mechanism, another member thereof consisting of a vertically-reciprocating arm having a series of teeth on its under side downwardly-projecting and longitudinally and crosswise disposed and located over the forward end of the binder-deck, means for moving said member alter-

nately stabbeward and grainward and extending over a considerable portion of the butts of the grain, the grainward end of said arm having a greater vertical movement than its stabbeward end in moving grainward over the grain; said toothed arm and its teeth compressing the grain down upon the binder-deck and moving it finally and positively from the grain-delivery end of the elevator over the binder-deck to the binding mechanism.

7. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts, a binding mechanism, a binder-deck intermediate between the elevator-belts and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth on its under side and located over the forward end of the binder-deck, means for moving said member alternately stabbeward and grainward, said member opening over and above the grain upon the binder-deck in one portion of its orbit and near the butts thereof, the teeth of said arm piercing the grain in its downward movement over the binder-deck at different points; said arm and teeth compressing the grain upon the binder-deck and moving it binderward, said butt-adjuster mechanism and grain-binding mechanism being each separately and independently adjusted in relation to each other for the purpose herein set forth and described.

8. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts, a binding mechanism, a binder-deck intermediate between the elevator-belts and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a wing-board at the butts of the grain and extending from the elevator to the binding mechanism over the binder-deck; another member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth on its under side and located over the forward end of the binder-deck, said member acting over and upon the grain near the butts thereof in one portion of its orbit between the elevator and binding mechanism in conjunction with said wing-board, and connected to and driven from the elevator portion of the machine by a suitable mechanism above and forward of the grain-path and independent of the grain-binder mechanism and binder-deck portions of the machine; said butt-adjuster member pivoted to swing parallel to the plane of the binder-deck to adjust the different lengths of grain centrally to the butt.

9. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts, a binding mechanism, a binder-deck intermediate between the elevator-belts and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a wing-board pivotedly connected at its upper end by a suitable mechanism to the forward upper portion of the elevator mechanism in front of the path of the grain and extending over the binder-deck binderward, to swing parallel to the plane of the binder-deck; another member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth on its under side and located over the forward end of the binder-deck, a horizontally-disposed crank-shaft to operate said arm, said shaft extending forward over the path of the grain on the binder-deck and connected by its crank to the grainward end of said toothed arm, a horizontal bearing for said shaft pivotedly connected to a part of the elevator-frame-work to allow the butt-adjuster mechanism to swing parallel to the plane of the binder-deck for the purpose of moving the grain centrally to the binding mechanism whether it be long or short, said crank-shaft having a gear secured thereto at its forward end and gears located on the front of the elevator-frame-work for driving said crank-shaft.

10. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts, a binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a binder-deck cover located over the path of the grain from the elevator to the binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth and located over the forward end of the binder-deck and connected to the grain-elevator portion of the machine, a crank mounted upon said elevator parts for operating said arm, another member thereof consisting of a grain-depressor alongside of the teeth of the arm butt-adjuster member to depress the grain down upon the binder-deck, said depressor being pivotedly connected to a fixed part of the machine at its grainward end over the grain-path and extending over the grain binderward to move parallel to the plane of the binder-deck in unison with said toothed arm member of the butt-adjuster throughout its movement in adjusting the different lengths of grain central to the binding mechanism.

11. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, a pair of grain-elevator belts, a binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth on its under side and located over the forward end of the binder-deck; a rotary crank mounted upon the elevator part of the machine connected to the grainward end of the arm for imparting a vertically-reciprocating, orbital mo-

tion to said arm, raising said arm and teeth above the grain and over it when moving in one portion of its orbit and into and compressing the grain in its return movement; said toothed arm member having a channel-shaped compressing portion above the points of its teeth to compress the grain downward on the binder-deck, a wing-board member of said butt-adjuster mechanism for the purpose of finally moving the grain from the grain-delivery end of the elevator to the binding mechanism under compression and a link connection between the stabbeward end of said arm and the wing-board.

12. In a grain-binding harvester, in combination, an elevating and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of an arm having a series of downwardly-projecting teeth on its under side, longitudinally and crosswise disposed thereto and located over the forward end of the binder-deck, a crank connected to the grainward end of said arm, the shaft of said crank horizontally disposed and extending forward of the grain-path, a vibrating link, the upper end of said link pivotedly connected to the stabbeward end of said arm, a wing-board member pivotedly attached to the elevator portion of the machine and extending binderward along the butts of the grain and pivotedly supporting said link, said crank and vibrating link operating to move the toothed arm member of the butt-adjuster vertically and orbitally over and above the path of the grain in one portion of its orbit toward the elevator and downward into and on the grain compressing it upon the binder-deck, and by the action of said crank finally moving the grain binderward in its return movement, a grain-depressor member of said butt-adjuster located upon one side of said toothed arm member, its grainward end pivotedly connected to a fixed portion of the machine, its stabbeward end extending binderward to hold the grain onto the binder-deck.

13. In a grain-binding harvester, in combination, an elevating and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism located at the forward end of the machine between the elevator and binding mechanism, one of its members consisting of a wing-board pivotedly connected to the elevator portion of the machine above the binder-deck and entirely independent of the binder adjustments, a vertically-inclined vibrating link pivotedly connected at its lower end to said wing-board, a toothed arm member of the butt-adjuster having an upwardly-extending portion pivotedly connected to the upper end of said link, said toothed arm member having downwardly-projecting teeth and located over the forward end of the binder-deck and operating over the grain near the butts in one portion of its orbit and into the grain to draw it down to the binder in its return movement; said vibrating link controlling all of the movements of the stabbeward end of said toothed arm member, a horizontal crank-shaft journaled over the path of the butts of the grain and supported upon the elevator portion of the machine and controlling all of the movements of the grainward end of said toothed arm.

14. In a grain-binding harvester, in combination, an elevating and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a vertically-reciprocating orbitally-moving toothed arm mechanism, said arm member having a series of downwardly-projecting teeth in the line of its length and crosswise thereto and located over the forward end of the binder-deck, means for moving said member alternately stabbeward and grainward, said member operating over and above the path of the grain and near the butts thereof in one portion of its orbit, a binder-deck cover terminating at its forward edge rearward of the forward edge of the binder-deck, the grainward end of said toothed arm intermittently occupying the open unobstructed space for its free action forward of the binder-deck over rearward of the butt-line of the grain between the elevator and binding mechanism, the grainward end of said arm moving above the topmost point of the elevator grain-delivery and in close proximity thereto, to grasp the highest flow of the grain as it comes from the elevator and force it downwardly to the binder-deck and compress it thereon, and finally moving said grain over the binder-deck binderward.

15. In a grain-binding harvester, in combination, a cutting apparatus, a horizontal grain-conveying belt, a pair of grain-elevator belts between which the grain is raised and moved, two upper rollers for said grain-belts, a stripping-roller in near proximity thereto, a binding mechanism, a binder-deck intermediate between the stripping-roller and grain-binding mechanism, a butt-adjuster mechanism working in cooperation with said elevating mechanism and stripping-roller, one member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth and located over the forward end of the binder-deck, a crank connected to and operating said arm, the shaft of said crank horizontally disposed and extending over and above the path of the butts of the grain, said shaft driven from one of said roller-shafts, said rollers and reciprocating arm operating to move the grain binderward, a single-piece metallic combination-box secured to the forward upper end of the elevator

portion of the machine forming a support for the forward ends of the upper roller-shafts of the upper and lower elevators and stripping-roller shaft, holding the same in working contact with each other and supporting said horizontally-disposed crank-shaft, a driving-gear mechanism for said arm member located on said combination-box and connecting to the forward end of said stripping-roller shaft, a wing-board pivotedly connected to the elevator portion of the machine independent of the binding mechanism and extending over the binder-deck binderward along the path of the butts of the grain.

16. In a grain-binding harvester, in combination, an elevating and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth and located over the forward end of the binder-deck, means for moving said member alternately stabbeward and grainward, said member operating over and in the grain near the butts thereof between the elevator and grain-binder, a vibrating link, the upper end of said link pivotedly connected to the stabbeward end of said toothed arm member to guide its movement, a wing-board member pivotedly connected to the elevator portion of the machine and extending along the butts of the grain over the binder-deck, and pivotedly supporting said vibrating link near its stabbeward end, a crank pivotedly connected to the grainward end of said arm, the shaft of said crank horizontally disposed and extending over and above the path of the butts of the grain to cause said toothed arm to rise above the grain in one portion of its orbit and descend into the grain upon the binder-deck and compress said grain upon the binder-deck in its return toward the binder, a driving mechanism for said crank secured to the forward end of one of the grain-moving roller-shafts.

17. In a grain-binding harvester, in combination, an elevating and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, one of its members consisting of a vertically-reciprocating arm having downwardly-projecting teeth and located over the forward end of the binder-deck, a rotary crank for operating said arm pivotedly connected to the grainward end of said arm below the main portion near the ends of the teeth, the crank-shaft being journaled low horizontally upon the elevator portion of the machine, said pivotal connection being below the arm to avoid height of the parts directly concerned.

18. In a grain-binding harvester, in combination, an elevating and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, a rotary crank, the shaft of said crank horizontally disposed and supported by the elevator-frame portion of the machine for said butt-adjuster, a gear-wheel journaled upon the elevator portion of the machine driving the shaft of said crank, the hub of said gear-wheel embracing said entire shaft of said crank and rigidly attached thereto forming a journal outside of the crank-shaft for the purpose of consuming space and using smaller parts.

19. In a grain-binding harvester, in combination, an elevating and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a wing-board pivotedly connected to the elevator portion of the machine and extending binderward over the binder-deck, another member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth and located over the forward end of the binder-deck, a driving-crank for operating said arm, a crank-shaft for said crank and gearing for driving the same; a pivotal frame C', forming a journal-bearing for said crank-shaft, a single-piece metallic box B of the elevator-frame-work to which said frame C' is pivoted to allow said butt-adjuster members to swing parallel to the plane of the binder-deck and to contain the same in their proper working relations to each other and to the binder-deck throughout the adjustments of said butt-adjuster members.

20. In a grain-binding harvester, in combination, a horizontal grain-conveying belt, an elevator, a grain-binder, a binder-deck intermediate between the elevator and grain-binder, a butt-adjuster mechanism, one member thereof consisting of a wing-board, its grainward end pivotedly connected to the elevator over the elevator-belts, said wing-board extending along and guiding the butts of the grain to the binder, a vibrating link pivotedly supported by said wing-board member, a vertically-reciprocating arm member having downwardly-projecting teeth and located over the forward end of the binder-deck, its stabbeward end pivotedly supported by said vibrating link, a crank-driving mechanism for operating said arm, a bearing pivoted to the elevator-frame in which the shaft of said crank is horizontally journaled, an adjusting-rod, its forward end pivotedly connected to said wing-board member and having notches in its rear end, a catch located on the binder-deck cover to engage with the notches on the rearward end of said adjusting-rod for the purpose of adjusting and positively locking said butt-adjuster mechanism in different positions for the purpose herein set forth and described.

21. In a grain-binding harvester, in combination, an elevating and binding mechanism, a binder-deck intermediate between the elevator and

binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a wing-board pivotally connected to the elevator part of the machine near the elevator-belt, another member thereof consisting of a vertically-reciprocating orbitally-moving arm having downwardly-projecting teeth longitudinally and crosswise disposed and located over the forward end of the binder-deck, a pivotal swinging-link connection between the stubbleward end of said arm and the wing-board to guide said arm in its adjustment over the binder-deck parallel to the plane thereof; a driving-crank pivotally connected to the grainward end of said arm to operate said arm, the cranked shaft of said crank horizontally journaled in a connecting-frame to the grainward end of said wing-board member, another member thereof consisting of a grain-depressor pivotally connected to a fixed part of the machine under which the grain is forced by said toothed arm member; an adjusting-rod connecting to one or more of said members and extending within reach of the operator, and held in adjustment by a connection to a fixed part of the machine controlling all of said members in their adjustments while working in unison with each other.

22. In a grain-binding harvester, in combination, an elevator and binding mechanism, a binder-deck intermediate between the elevating and binding mechanism, a butt-adjuster mechanism, an inclined shaft by which its principal members are pivotally connected to the elevating part of the machine and by means of which said members have adjustment over the binder-deck parallel to the plane thereof, a gear connection for operating one of the members of said butt-adjusting mechanism, said gear connection located on the elevating part of the machine and one member thereof being mounted on the upper end of and driven by said inclined shaft to allow said butt-adjuster to swing parallel to the plane of the binder-deck, a yoke-bracket G' pivotally surrounding the bearing of said inclined driving-shaft and holding said gear connection in engagement, a forwardly and rearwardly extending crank-shaft, the other member of said gear connection located on the forward end of said crank-shaft, a driving mechanism from one of the grain-moving rollers for said inclined driving-shaft, one member of the butt-adjuster consisting of a pivotal portion connected to said yoke-bracket, another member consisting of a toothed arm driven by said crank-shaft, said driving crank-shaft rotatably supported at its forward end by said pivoted member.

23. In a grain-binding harvester, in combination, an elevating and binding mechanism, a binder-deck intermediate between the elevating and binding mechanism, a butt-adjuster mechanism, an inclined pivot located outside the path of the grain and connected with the elevator part of the machine upon which two members of the butt-adjuster are arranged to swing together parallel to the plane of the binder-deck, one member consisting of a wing-board, and one of a vertically-reciprocating arm member having downwardly-projecting teeth and located over the forward end of the binder-deck, a driving-crank pivotally connected to the grainward end of said arm, a shaft for said crank horizontally disposed and extending over and above the path of the butts of the grain on the binder-deck, said crank and shaft mounted on said wing-board.

24. In a grain-binding harvester, in combination, an elevator and binding mechanism, a binder-deck between the elevator and binding mechanism over which the grain passes to the binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a wing-board at the butts of the grain extending from the elevator over the binder-deck toward the binding mechanism to control the butts of the grain andwise in their downward passage to the binding mechanism, another member thereof consisting of a vertically-reciprocating arm having a series of downwardly-projecting teeth both lengthwise and crosswise disposed and located over the forward end of the binder-deck, a crank pivotally connected to the grainward end of said arm to operate same, an upright vibrating link, the upper end of said link pivotally connected to the stubbleward end of said arm, the lower end of said vibrating link pivotally connected to said wing-board member; said butt-adjuster toothed arm member having an orbiting movement over and above the grain in one portion of its orbit near the butts and into and with the grain in its return movement, the grainward toothed end of said butt-adjuster arm rising to a higher altitude than its stubbleward toothed part in moving grainward over the grain to embrace it and bring it down to and over the binder-deck toward the binding mechanism.

25. In a grain-binding harvester, in combination, an elevator mechanism, a binder-deck to one side of said elevator, a grain-binding mechanism located stubbleward of said binder-deck, a stripping-roller located between the elevator and binder-deck to lift the grain from the upper end of the lower elevator-belt onto the binder-deck, a butt-adjuster mechanism composed of the following members: a wing-board member extending from the elevator along the path of the butts of the grain over the binder-deck toward the binding mechanism, a vertically-reciprocating arm member having downwardly-projecting teeth and located over the forward end of the binder-deck, a crank driven from one of the grain-moving rollers and pivotally connected to the grainward end of said arm, a vibrating link the lower end of said link pivotally connected to said wing-

board member, the upper end of said link pivotally connected to the stubbleward end of said arm, said toothed arm member of the butt-adjuster having a grainward upward movement by said crank over the grain in one portion of its orbit and down into the grain to move said grain binderward in its return movement; the movement of said toothed arm member of said butt-adjuster being orbiting, its grainward portion rising higher above the grain on the binder-deck than its stubbleward non-toothed portion to grasp and gather the upflowing grain from the elevator and to sweep said grain downward, said arm and teeth acting to compress the grain and compact it on the binder-deck and finally moving it binderward, as shown and described.

26. In a grain-binding harvester, in combination, an elevator and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, one of its members consisting of a channel-shaped arm having downwardly-projecting teeth upon its under channel side and located over the forward end of the binder-deck, means for moving said member alternately downward stubbleward, upward and grainward, the edges of said channel may engage with the grain and aid in compressing and holding it down to the binder-deck in conjunction with the teeth while being moved binderward.

27. In a grain-binding harvester, in combination, a grain elevator and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a flexibly-divided toothed arm to yield upwardly to compress large or small quantities of grain, said teeth operating on top of the grain near the butts between the elevator and binding mechanism and located over the forward end of the binder-deck, means for moving said member in an orbit downward, stubbleward, upward and grainward, to rise above the grain in one portion of its orbit and down onto and into the grain in its return motion compressing and moving the grain binderward.

28. In a grain-binding harvester, in combination, an elevator and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of an arm having downwardly-projecting teeth on its under side and located over the forward end of the binder-deck, means for moving said member orbitally over and above the grain in one portion of its orbit and into and with the grain in its return motion, said toothed arm member being composed of two parts pivotally connected together and elastically controlled for the purpose of adaptation to the varying quantities of grain to be acted upon.

29. In a grain-binding harvester, in combination, an elevator and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of an arm having downwardly-projecting teeth and located over the forward end of the binder-deck, means for moving said member alternately downward, stubbleward, upward and grainward, said member acting on top of the grain near the butts and over and above the grain in one portion of its orbit and into and with the grain in its return motion, another member of said butt-adjuster mechanism consisting of a wing-board pivotally connected to the elevator portion of the machine at its grainward end, a vibrating link, the upper end of said link rising above the flow of the grain and connected to and supporting the stubbleward end of said arm, the lower end of said link pivotally connected to said wing-board near its lower edge.

30. In a grain-binding harvester, in combination, an elevator and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism adjustably and pivotally connected to the upper part of the elevator, one member thereof consisting of an arm having downwardly-projecting teeth and located over the forward end of the binder-deck, means for moving said member alternately downward, stubbleward, upward and grainward, the orbit of the grainward end of said arm member having a point higher above the butts of the grain than the orbit of its stubbleward end, the teeth on the stubbleward end of said arm approaching nearer to the wing-board member at the butts to move the butt portion of the grain only so that the last movement of the stubbleward end of said toothed arm will act to turn the butts of the grain and force them around downward to the binding mechanism, straighten the stalks lengthwise to make a straight, square-butt gavel.

31. In a grain-binding harvester, in combination, an elevator and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism located and operating between the elevator and grain-binding mechanism, one member thereof consisting of an orbitally vertically-reciprocating arm having downwardly-projecting teeth and located over the forward end of the binder-deck, means for moving said member alternately stubbleward and grainward, said member moving over and above the grain near the butts thereof in one portion of its orbit and into and on the grain in its return movement, the grainward end of said toothed arm wider than its stubbleward end to act

over a greater area of grain at its grainward end near the elevator than at its stubbleward end for the purpose of moving a large mass of the grain from the elevator downward at each stroke to clear it, and its stubbleward end acting upon a smaller amount of grain to not clog the needle by the grain being pressed hard against it.

22. In a grain-binding harvester, in combination, a pair of grain-elevating belts, a grain-binding mechanism, a binder-deck intermediate between the elevator-belts and binding mechanism, a butt-adjuster mechanism, one member thereof consisting of a swinging wing-board at the butt of the grain, an inclined shaft pivotally connecting said board to the elevator part of the machine, another member thereof consisting of a vertically-reciprocating arm swinging with the wing-board and having a series of teeth downwardly projecting on its under side and located over the forward end of the binder-deck and extending over a considerable portion of the grain on the binder-deck at the butt-ends thereof, a pivotally-swinging link, the upper end of said link pivotally connected to the stubbleward end of said arm, the lower end of said link pivotally connected to and supported by said wing-board, a crank connected to and driving said arm, the shaft of said crank horizontally disposed and overhanging the path of the butt of the grain, a driving-gear located on the forward end of the shaft of said crank and connecting with one of the grain-moving roller-shafts, an adjusting-bar pivotally connected to said wing-board, a U-shaped grain-depressor, pivotally connected to fixed portion of the machine, the top portion of said depressor pivotally connected to said adjusting-bar and caused by means of said pivotal connections to swing parallel to the plane of the binder-deck in unison with the wing-board member and reciprocating toothed arm member throughout the various adjustments of all of said butt-adjuster parts.

23. In a grain-binding harvester in combination, a pair of grain-elevating belts, a grain-binding mechanism, a binder-deck intermediate between the elevator and binding mechanism on which the grain is received from the elevator, a butt-adjuster mechanism, one member thereof consisting of a swinging wing-board pivotally connected to the elevator part of the machine, and extending from the elevator along the path of the butt of the grain over the binder-deck to the binding mechanism, another member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth and located over the forward end of the binder-deck, a vibrating swinging link, the upper end of said link pivotally connected to the stubbleward end of said arm, the lower end of said link pivotally connected to and supported by said wing-board, a crank connected to and driving said arm, the shaft of said crank horizontally disposed, a pivotal frame C' pivotally connected to the elevator portion of the machine forming a bearing for said horizontally-disposed crank-shaft and pivotally supporting said wing-board member, a vertically-inclined shaft for driving said crank-shaft and forming the pivot for the frame C', a single-piece metallic box B on the front top end of the elevator having a journal-support for said vertically-inclined shaft, said shaft driven from a grain-moving roller-shaft by a gear connection, an adjusting-bar having notches in its rear end and pivotally connected to the wing-board member and extending toward the operator's seat, a catch located on and secured to the binder-deck cover to engage the notches on the rearward end of said adjusting-bar, all of said butt-adjuster parts coacting in their operation in all positions of adjustment for the purposes shown and described.

24. In a grain-binding harvester, in combination, an elevator and binding mechanism, a binder-deck intermediate between the elevator and binding mechanism, a butt-adjuster mechanism located and operating between the elevator and binder over the binder-deck to adjust the grain centrally to the binder mechanism; one member thereof consisting of a vertically-reciprocating arm having downwardly-projecting teeth and located over the forward end of the binder-deck, a crank connected to and driving said arm, the shaft or axle of said crank horizontally disposed across the path of the travel of the grain over the binder-deck, a vertically-inclined shaft in front of the grain-path pivotally supported by the elevator portion of the machine to drive said crank-shaft, a pivotal frame pivotally connected to the elevator part of the machine to support said crank-shaft, a wing-board pivotally connected to the elevator portion of the machine and extending along the butt of the grain over the binder-deck binderward, a grain-moving roller pivotally supported by the elevator portion of the machine to drive said butt-adjuster mechanism, said shafts geared together to effect continuous motion to said toothed-arm butt-adjuster mechanism through all of its adjustments parallel to the plane of the binder-deck; said vertically-inclined driving-shaft being the axial pivot on which the toothed arm member and wing-board portion of the butt-adjuster swing.

25. In a grain-binding harvester, in combination, a cutting apparatus, a horizontal grain-conveying belt, an elevator and binding mechanism, an orbitally-reciprocating grain-butt-moving arm located at the inner end of the cutting apparatus and meeting ends of the horizontal grain-conveying belt and lower end of the two grain-elevating belts, a rotary crank connected to and driving said arm, the shaft of said crank horizontally dis-

posed, a swinging link to control the movements of said butt-moving mechanism, the forward end of said link pivotally connected to the upper end of said arm, the rearward end of said link pivotally connected to a portion of the harvester-framing, and an oscillating reel-support having pivotal joints forming a bearing for the crank-shaft operating said arm.

26. In a grain-binding harvester, in combination, a grain cutting and elevating mechanism, an orbitally-reciprocating grain-butt-moving arm located at the inner end of the cutting apparatus and meeting ends of the horizontal grain-conveying belt and elevator-belts, a crank connected to and operating said arm, the shaft of said crank horizontally disposed, a swinging link to control the movements of said butt-moving arm, the forward end of said link pivotally connected with the upper end of said grain-butt-moving arm, the rearward end of said link pivotally connected to a portion of the harvester-framing, and an oscillating reel-support having pivotal joints forming a bearing for the crank-shaft operating said crank and butt-moving arm, and a tubular bearing for said crank-shaft passing through and supported by said pivotal joints.

27. In a grain-binding harvester, in combination, a grain-cutting and grain-elevating mechanism, an orbitally-reciprocating grain-butt-moving arm located at the inner end of the cutting apparatus and meeting ends of the horizontal grain-conveying belt and elevator-belts, a crank for operating said butt-moving arm, the shaft of said crank horizontally disposed, a swinging link to control the movements of said butt-moving arm, the forward end of said link pivotally connected to the upper end of said grain-butt-moving arm, the rearward end of said link pivotally connected to a portion of the harvester-framing, and an oscillating reel-support having pivotal joints and forming a bearing for said crank-shaft, a tubular sleeve-bearing for said crank-shaft passing through said pivotal joints, said crank-shaft in its tubular-bearing pivot having a toothed gear and a chain-wheel mounted thereon and connected thereto, a reel-support consisting of said crank-shaft and its tubular sleeve-bearing supported by said pivotal joints, said chain-wheel operating the reel mechanism and the toothed gearing giving motion to both the fork crank-shaft and reel-chain mechanism.

28. In a grain-binding harvester, in combination, a grain cutting and elevating mechanism, an orbitally-reciprocating grain-butt-moving arm located at the inner end of the cutting apparatus and meeting ends of the horizontal grain-conveying belt and elevator-belts, a crank connected to and operating said butt-moving arm, the shaft of said crank horizontally disposed, a swinging link to control the movements of said butt-moving arm, the forward end of said link pivotally connected to the upper end of said grain-butt-moving arm, the rearward end of said link pivotally connected to a portion of the harvester-framing, an oscillating reel-support having pivotal joints and a tubular sleeve-bearing for said crank-shaft, the center of said crank-shaft and its tubular sleeve-bearing and the oscillating reel-support and the base supporting said reel on the harvester part of the machine being coincident, said crank-shaft receiving its motion from the stubble side of the harvester which also communicates motion to the reel from the same fixed source of power-supply.

29. In a grain-binding harvester, in combination, a binding mechanism, a pair of grain-elevating belts, their rear sides wholly disconnected from each other and terminating in an open unobstructed space for the passage of grain longer than the width of said belts, a binder-deck between the elevator-belts and binding mechanism upon which the grain falls from the elevator, an orbitally-moving vertically-reciprocating grain-lifting toothed arm member at the rearward side of the grain-elevating belts and binder-deck, a driving-chain located at the rear of said elevator to impart motion to said toothed arm and also to the elevator mechanism substantially as specified.

708,829. MAGNETIC SEPARATOR. JAMES C. WILDER, East-point, Ga., assignor of one-half to Daniel C. Lytle, East-point, Ga. Filed Mar. 26, 1902. Serial No. 99,914. (No model.)

Claim.—In a device of the class specified, the combination with the first-mentioned having on its upper face two slots 7 and 8 arranged transversely of the natural flow of the material crossing the board, pole-pieces arranged in said slots with their working faces flush with that of the board, there being a plurality of sets of pole-pieces, each having oblique ends and the adjacent ends being arranged in such contiguity as to insure contact with said pieces of all of the material passing over the board, magnet-cores, side plates connected to the cores and to the pole-pieces, and core-windings connected in series, substantially as specified.

708,880. ADDING-MACHINE. EDWIN WHEWALL, Inland, Ill. Filed Mar. 12, 1898. Serial No. 95,005. (No model.)

Claim.—1. An adding-machine comprising adding-wheels, an actuating-shaft for each wheel arranged at right angles to the axis of the adding-wheel and a lock-releasing and gear-engaging bar, arranged parallel to said shaft, and a set of nine keys operating at right angles to the shaft and releasing-bar with a different throw upon the shaft for each key and an equal action upon the parallel bar for each key substantially as described.

2. An adding-machine comprising a series of adding-wheels of different denomination, shafts at right angles to the axes of the adding-wheels, nine gear-wheels for each shaft, a series of nine depressible keys bearing teeth adapted to engage the nine gear-wheels and having also cone projections, and a parallel push-bar having projections acted upon by the keys, and a device for unlocking the adding-wheels and engaging their actuating-gears, said device being operated by the push-bar substantially as described.

3. An adding-machine having each adding-wheel provided with an actuating-shaft for turning it arranged at right angles to the axis of the adding-wheel, and a lock-releasing and gear-engaging bar arranged parallel to said shaft, a set of nine keys operating at right angles to said shaft and bar and upon both of the same, and a set of steps located beneath the keys and at a distance below them varying in proportion to the value of the keys substantially as described.

4. In an adding-machine of the kind described, the combination with a series of spring-actuated depressible keys: of an actuating-shaft for the adding-wheels having small gear-wheels on said shaft corresponding to the keys and a lock-releasing and gear-engaging bar for the adding-wheel arranged parallel to said shaft and having a corresponding set of bearings for each key, the said keys being located between the said shaft and parallel bar substantially as described.

5. In an adding-machine of the kind described, the combination of a series of spring-actuated depressible keys each having teeth on one side and a cone projection on another, a shaft having a series of loose gears on the same provided with means for loosely connecting them to the shaft, a parallel push-bar with bearing-surfaces for the cones, the said bearing-surfaces being made as articulated blocks to turn in one direction but not

in the other, the said shaft and parallel bar being connected with the adding-wheel substantially as described.

6. In an adding-machine, the combination of an adding-wheel carrying a laterally-projecting flange with locking-notches in its inner edge and a rigid bevel-gear at its hub, a second bevel-gear adjustable on an axis at right angles to that of the adding-wheel, a rotary shaft carrying said adjustable bevel-gear, a locking-catch for the adding-wheel having a yoke connected by global-joints to the adjustable bevel-gear and a push-bar for shifting said locking-catch substantially as described.

7. In an adding-machine, the combination with the adding-wheel having a series of locking-notches opening toward the center of the wheel and a bevel-gear at the center, of a locking-catch and an adjustable bevel-gear both mounted to move together to unlock the wheel and engage its driving-gear by the same movement substantially as described.

8. In an adding-machine of the kind described, the carrying mechanism comprising a projection from the adding-wheel, said movable member acted upon thereby, said member being extended to and made to act upon the first of the series of keys of the next denomination so as to depress the said key at each complete revolution of the adding-wheel of lower denomination substantially as described.

9. In an adding-machine of the kind described, the carrying mechanism comprising an adding-wheel having a lateral projection, a hinged bar having a roller acted upon by said projection and a right-angled projecting fork at the end, and a depressible key connected to the adding-wheel as described and having a pin or bearing upon which said fork rests substantially as described.

10. In an adding-machine of the kind described, the combination of the adding-wheel having lateral projection, a hinged bar arranged to be acted upon by said projection and loosely connected to the first of the series of keys to depress it, and a sliding supporting-bar for said hinged bar arranged to be adjusted to separate the hinged bar from the range of action of the adding-wheel substantially as described.

11. The combination with the adding-wheel having notches on the inner periphery of its flange: of a locking-catch having a global fulcrum in the middle, a bar pivoted to the outer end of said catch and a rock-shaft with arms connected to all of said bars for simultaneously unlocking all the adding-wheels substantially as described.

12. In an adding-machine, the combination with the series of adding-wheels bearing numbers on their faces and means for clamping them at zero on the backward movement: of a corresponding series of friction-wheels arranged in the same plane and bearing respectively upon the peripheries of said adding-wheels, said friction-wheels being out of contact with the adding-wheels when in one position, and to simultaneously turn and set the adding-wheels when rotated substantially as described.

708,881. FRUIT CORER AND CUTTER. WILLIAM T. ASHBY, Schenectady, Tenn. Filed July 22, 1891. Serial No. 69,365. (No model.)

Claim.—In a fruit corer and cutter the combination of the frame having guideways therefor, a lateral extension on said frame, a stem with a screw-threaded upper portion vertically movable in an opening in the top of the frame, a plunger secured to the stem and movably mounted in said guideways, a cover with cutters secured to the plunger and vertically movable therewith, a slide secured to the frame in advance of the plunger to coast with the cover, a nut on the screw-threads of the stem for adjusting the movement of the cover, a lever mounted in a guide of the

frame and pivoted to the extension, and a vertically-throwing and vertically-movable link pivoted to said plunger and said lever, substantially as specified.

708,882. BELL. PHILIP C. ANDER, East Hampton, Conn., assignor to the Bell Brothers Manufacturing Company, East Hampton, Conn., a Corporation of Connecticut. Filed Apr. 25, 1892. Serial No. 104,004. (No model.)

Claim.—1. A bell provided with a gong having a contact-leaf formed integral with and struck out of the material of the gong.

2. In combination in a bell, a base-plate, striking mechanism, means for actuating said striking mechanism, a gong provided with a contact-leaf formed integral with and struck out of the material of the gong and adapted to be engaged by the striking mechanism.

3. In a bell, in combination, a striking mechanism and strikers, a gong operatively arranged with relation to the strikers and provided with a contact-leaf pressed out of the material of the gong and lying in the path of movement of the strikers, and means for actuating the strikers.

708,883. REDHEAD-JOINT. CHARLES A. BLAISE, Pitts, Ill., assignor to the F. H. Earl Manufacturing Co., Pitts, Ill. Filed May 22, 1891. Serial No. 61,000. (No model.)

Claim.—In a bolted-joint, the combination of a vertical frame member having an upwardly-inclined outwardly-tapered finger of approximately oval shape provided with inclined upper and lower faces and having an inclined outer face extending to the inclined face at the lower end of the finger, said finger being also provided with inwardly-borel side edges, a horizontal frame member approximately L-shaped in cross-section and having one of its sides or flanges arranged horizontally, and a socket-plate provided with a horizontal L-shaped socket to receive the horizontal member and provided with an outwardly-flared elliptical opening receiving the projecting finger and fitting down behind the side edges thereof and interlocked with the same and capable of being disengaged automatically from the finger when it is lifted vertically, each end of the elliptical opening conforming to the configuration of and adapted to fit against the upper end of the finger, whereby the socket-plate is capable of being reversed to arrange the horizontal flange of the horizontal frame member either at the top or bottom, substantially as described.

708,884. COMPASS-SAW. JOHN F. CARY, Madison, Wis., assignor to E. C. Atkins & Company, Indianapolis, Ind., a Corporation of Indiana. Filed Mar. 17, 1892. Serial No. 95,006. (No model.)

Claim.—1. The combination, in a saw, of a saw-handle, a blade-holder divided by a slit into two jaws and having a point or projection within said slit, a saw-blade having a notched and rounded rear end and the notches adapted to engage with said projection, and means

(in a thumb-bolt) for clamping the blade-holder jaws upon the saw-blade at any point of its adjustment.

2. The combination, in a saw, of a saw-handle, a blade-holder secured thereto having a projection adapted to engage with a notch in the saw-blade, a saw-blade having a rounded and notched rear end and an elongated perforation, and a bolt or screw passing through said blade-holder and blade, substantially as and for the purpose set forth.

3. The combination in a saw, of a saw-handle having a longitudinal perforation in that portion next to the blade-holder and a row of notches similarly disposed about said perforation, a blade-holder having a projection adapted to engage with one of said notches and a chuck adapted to pass through said perforation, a nut on said chuck, a saw-blade having a rounded and notched rear end and an elongated hole, the same being placed between the jaws of the blade-holder, said blade-holder being also provided with a projection adapted to engage with one of the notches in the saw-blade, and a bolt or screw passing through the blade-holder jaws and blade and clamping the same together, substantially as set forth.

708,885. MACHINES FOR PRINTING AND ENDOGRAPHING CHINESE. FRANK E. COTTRELL, Milwaukee, Wis. Filed Dec. 17, 1891. Serial No. 95,100. (No model.)

Claim.—1. In a check-printing machine, a series of movable type-block holders, a plurality of type-blocks fitted into slots in the same, each of said type-blocks having at least one more slot than type-block, means for normally keeping the holder in register whereby the empty slots are in line, mechanism for independently moving said type-blocks, whereby any one of their type-blocks may be brought in register with the empty slots of the type-holder in their normal position, a type-bed having a slot therein, in register with the empty line of slots in the holders and means for discharging the type-blocks into the empty bed-slot, substantially as set forth.

2. In a check-printing machine, a series of independent type-block holders, a plurality of type-blocks fitted into slots in the same, each of said type-blocks having at least one more slot in number than type-blocks, means for normally keeping a line of empty slots of the holders in register, mechanism for independently adjusting the aforesaid type-blocks, whereby any one of their type-blocks may be brought in register with the empty slots of the holders that are in their normal position, a type-bed, a slot in the latter in register with the line of slots in the holders and means for discharging the type-blocks from the holders into the printing-bed, another series of holders, a plurality of type permanently secured thereto, and means for connecting said holders to the aforesaid type-block holders whereby they are simultaneously actuated, substantially as set forth.

3. In a check-printing machine, a series of independent revolvable type-block holders, a plurality of type-blocks of various numerical denominations fitted into similar slots in the same, each of said type-blocks having a greater number of slots than type-blocks, means for normally keeping a line of empty slots of the holders in register, and a mechanism for releasing said holders from their normal position independently whereby any one of

their type-blocks in register with the line of empty slots of the type-blocks in their normal position, a type-bed having a slot similar to, and in register with the line of empty slots of the type-block holders when the latter are in their normal position, a push-rod adapted to be reciprocated through a line of empty slots of the type-blocks, and a second series of reversible figure-type-blocks having a plurality of type-figures secured thereto, each of which is connected to one of the reversible type-block carriers, whereby when any one of the latter are released to bring a type-block of any desired denomination to the normal line of the empty slots, the aforesaid type-block will be simultaneously revolved and bring a like amount in figure to a predetermined point on the same horizontal plane as the face of the type-block, a paper-carriage adapted to be reciprocated under the type-bed, and figure-type, and a printing-lever under the paper-carriage, substantially as set forth.

4. In a check-printing machine, two series of reversible type-blocks at a predetermined distance apart, one of said series carrying blocks of adjustable type having words in various numerical quantities upon the face thereof, and the other series of holders having the same numerical quantities in figures permanently secured thereto, means for simultaneously actuating the type-blocks, whereby the same numerical quantity in words and figures are brought to a common printing-plane, a type-bed adjacent to the type-blocks carrying the adjustable type-block, and means for discharging the latter into the type-bed, a paper-carrier adapted to be reciprocated under the common printing-plane of the two series of type-blocks, and means for impressing the type upon a blank, substantially as set forth.

5. In a check-printing machine, two series of reversible type-blocks at a predetermined distance apart, one of said series having blocks of type loosely fitted in slots therein, there being at least one more slot than type-blocks, and a series of steps upon the type-blocks corresponding to the type-slots, whereby the holder is checked in one direction at various distances, bolts arranged to oppose said steps and springs to actuate said holders in opposition to bolts, levers connected to the bolts, actuating-keys to the levers, mechanism for shifting certain of the levers whereby they engage different bolts, and another series of lever-arms connected to the aforesaid levers over the other series of type-blocks, a series of steps arranged upon the said type-blocks, bolts in opposition to the steps and connected to the lever-arms whereby both series of holders are simultaneously actuated, springs arranged to actuate the last-named holders, and means for returning both series of holders to their normal position simultaneously, a slotted type-bed adjacent to the first-named series of holders, a push-rod in the path of the slots, and at right angles thereto, and in line with the slotted type-bed, whereby the blocks of the type in the latter are pushed into the type-bed, a paper-carriage under the latter, and printing-strips arranged under the carriage in line with the type-bed, and a second series of type-blocks, means for automatically shifting the carriage in a longitudinal direction with relation to the type-bed and last-named series of type-blocks, substantially as set forth.

6. In a check-printing machine, a series of movable type-block holders, a plurality of type-blocks of various numerical denominations fitted into slots in the same, the first two of said type-blocks having type-blocks of fractional denomination of currency fitted therein, the remainder of said type-blocks being provided with a series of empty slots, means for normally keeping the holders in register whereby the empty slots and zero type-blocks of the fractional-currency holders are in line, mechanism for independently moving said type-blocks whereby any one of their type may be brought into register with the empty slots of the type-blocks in their normal position, a type-bed having a slot therein in register with the zero-blocks of the fractional-currency-type holders and the empty line of slots of the other type-blocks when said holders are in their normal position, and means for discharging their type into the empty bed-slot, substantially as set forth.

708,886. BANANA-CRATE. JOHN A. DAVENOR, Denton, N. H.
Filed Sept. 20, 1901. Serial No. 73,994. (No model.)

Claim.—1. A banana-crate composed of a pair of supporting-strips, a set of hoops placed one above another between the hoops and pivotally connected with the strips at opposite points of their perimeters by radially-disposed pivot-pins, a cork fastened to the hoops inside the same, and a detachable brace to hold the base-hoop at right angles with the supporting-strips.

2. A banana-crate composed of a set of hoops, a pair of supporting-strips pivotally conjoined to opposite sides of the hoops, a cork fastened to the upper hoops of the set and held therein above the lower or base

hoop, a brace to hold the lower hoop at right angles with the supporting-strips and other braces connecting the lower hoop with the hoop next above.

708,887. CAR-MOVER. JAMES W. DEAR, Dayton, Ohio, assignor of one-half to Philip W. Hinton and Jacob Kennel, Dayton, Ohio.
Filed Mar. 12, 1902. Serial No. 66,364. (No model.)

Claim.—Is a car-mover the combination of the frame provided with the central fulcrum with top bearing, and the hand-lever with concavity to ride the convex surface of said fulcrum, substantially as described.

708,888. SILE. FRANK J. HANCOCK, Buffalo, N. Y., assignor to Abraham J. Hines, Buffalo, N. Y. Filed Feb. 9, 1902. Serial No. 4,908. (No model.)

Claim.—1. An improved silo-tank consisting of a wooden tank having a series of manholes located one above the other, covers for the manholes, the meeting edges of the covers and manholes being oppositely beveled, cleats secured to the tank adjacent the manholes and serving to aid in holding the covers of the tank, said cleats being formed with double inclines, and a locking-bar pivoted to each of the covers and adapted to engage the inclines of the cleats to secure the covers in place.

2. A silo-tank comprising a wooden receptacle formed of staves, having a series of manholes, covers therefor, the meeting edges of the covers and manholes being oppositely beveled, double-inclined cleats secured to the tank above and below each manhole, and serving to aid in holding the cleats of the tank, a stud-bolt fixed centrally in the cover, and a locking-bar on said bolt and adapted to engage the cleats to bind the covers in the manholes, said locking-bars being adapted for but slight longitudinal play on the stud-bolt, whereby the elasticity of the material of said bar will aid in holding the cover in place.

708,889. TYPE-WRITING MACHINE. JAMES FRANK, New York, N. Y., and CARL GARRIGLASS, Greenville, N. J.; said Garriglass assignor to said Frank. Filed Aug. 12, 1900. Serial No. 24,867. (No model.)

Claim.—1. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and a rotary driving-shaft common to both spools, of worms mounted upon said shaft, a cam rotating with each spool, and a normally stationary mechanism arranged between the cam on each spool and said driving-shaft and including a pin to engage its associated worm, said mechanism being adapted to be actuated by said cam only when the latter is released by the ribbon, and to cause an engagement between said pin and said worm, and by the cooperation of said two last-mentioned devices to cause an endwise movement of said shaft and a reversal of the winding movement of the ribbon.

2. In a front-strike writing-machine, the combination of a platen, a pair of ribbon-spools arranged one at each side of the printing-point and forwardly of the platen, vertical shafts for said spools, gears upon said shafts, rearwardly-extending horizontal shafts having gears in mesh with said spool-shaft gears, a transverse horizontal shaft connected by gearing with said rearwardly-extending shafts, and means carried into action through the longitudinal movements of the ribbon for moving said transverse horizontal shaft into and out of engagement with said rearwardly-extending shafts.

3. In a front-strike writing-machine, the combination of a platen, a pair of ribbon-spools having upright axes arranged one at each side of the printing-point and forwardly of the platen, an arm mounted to rotate with

each spool and having a constant tendency away from the spool-axis and normally held in an inoperative position by the coils of ribbon, and a cam, pin mechanism, and a worm for causing the direction of longitudinal movement of the ribbon to be automatically reversed.

4. In a front-strike writing-machine, the combination of a platen, a pair of ribbon-spools having upright shafts arranged one at each side of the printing-point and forwardly of the platen, a ribbon-winding mechanism including a driving-shaft common to both spools, shafts extending at each side of the machine forwardly from said common driving-shaft and geared at their forward ends to said upright spool-shafts, and means actuated by the ribbon-winding mechanism for automatically reversing the longitudinal movement of the ribbon, said reversing means including an arm and a cam mounted to rotate with each spool and pin mechanism extending from said cam to said driving-shaft and operating to cause the latter to connect alternately with said spools to wind the same.

5. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and a common rotary driver therefor, of a cam mounted for rotation with each spool, normally inactive device adapted to be connected to said rotary driver for enabling said driver by means of its rotary movement to effect a reversal of the winding movement of the ribbon, and means controlled by the ribbon for enabling said cam intermittently to operate said inactive device and cause the latter to cooperate with said rotary driver.

6. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of horizontal spools mounted upon vertical shafts, of a vertically-movable cam mounted on the under side of each spool and rotating therewith, but normally held in an inactive position, and constructed to move automatically to an active position when the ribbon is unwound from the spool, and device operated by said cam through its rotation about the spool-axis for causing the direction of the ribbon-winding movement to be reversed.

7. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and a rotary driving-shaft common to both spools and capable of a worming movement, of a cam mounted for rotation with each spool, normally inactive device extending from said cam to said shaft, and means controlled by the ribbon for enabling said cam to operate said normally inactive device and cause the latter to cooperate with said shaft and thereby cause the shaft to worm and thereby become disconnected from one spool and connected to the other spool.

8. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and an endwise-movable driving-shaft common to both spools, of a cam mounted to rotate with each spool but normally held in an inactive position, and constructed to move automatically to an active position when the ribbon is unwound from the spool, and two sets of connections from said cam to said driving-shaft, each of said sets of connections being constructed to be operated by its cam and to then coast with said shaft to cause endwise movements of said shaft independently of the other of said sets of connections.

9. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools, of a cam mounted for rotation with each spool, a ribbon-controlled arm rotating with each spool and mounted independently of the cam but connected thereto, and device operated by said cam through their rotation about the spool-axis for causing the direction of the ribbon-winding movement to be reversed.

10. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools, of a pivoted arm arranged at the spool-axis and a cam mounted to rotate with each spool, said arm having a tendency away from the spool-axis but being normally held by the coils of the ribbon in an inoperative position, together with said cam, the latter being arranged upon the outside of the spool and connected to said arm, and device operated by said cam, when permitted to move to an active position by reason of the release of said arm from the control of the coils of the ribbon, for reversing the direction of the winding movement.

11. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and a self-shifting driving-shaft common to both spools, of a cam mounted to rotate with each spool, an arm independently mounted to rotate with each spool and connected to the cam, said arm and cam being held in inoperative positions by the coils of ribbon, and connection extending from said cam to said shaft and operated by said cam when the latter moves to active positions by reason of the release of said arm from the control of the ribbon-coils, for causing said shaft to disconnect itself from the full spool and reattach itself to the empty spool.

12. In a front-strike type-writing machine, the combination with a platen, of ribbon-winding mechanism, including a pair of spools having upright axes located upon opposite sides of the printing-point and forwardly of the platen, an elbow-lever pivoted upon the flange of each spool and comprising an upright arm arranged at or near the spool-axis and a horizontal arm extending beneath the lower spool-flange, a vertically-movable cam carried upon the under side of the spool-flange and normally sustained in an inactive position by the horizontal arm of said elbow-lever, the upright arm of which is forced toward the spool-axis by the coils of the ribbon, and means operated by said cam upon the descent thereof when the elbow-lever is released from the control of said ribbon, for causing the direction of the ribbon-winding movement to be reversed.

13. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools, of a normally inactive cam connected to each ribbon-spool and controlled by the ribbon, and device operated by said cam for causing the direction of the ribbon-winding movement to be reversed, each of said cams being provided with a dwell portion for maintaining said reversing device in operative position during further rotation of the spool at the reversing operation.

14. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools, of a cam mounted for rotation with each spool but normally held in an inactive position, and constructed to move automatically to an active position when the ribbon is unwound from the spool, and device operated by said cam through its rotation about the spool-axis for causing the direction of the ribbon-winding movement to be reversed, each of said cams being provided with a dwell portion for maintaining said reversing device in operative position during further rotation of the spool at the reversing operation.

15. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and a driving-shaft connected to both spools, of a cam arranged at each spool, normally inactive device extending from said cam to said shaft, and means controlled by the ribbon for enabling said cam to operate said normally inactive device and thereby cause the shaft to become disconnected from one and connected to the other spool, each of said cams being provided with a dwell portion for maintaining said reversing device in operative position during further rotation of the spool at the reversing operation.

16. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools, of an arm and a cam mounted to rotate with each spool, said arm having a tendency away from the spool-axis but being normally held by the coils of the ribbon in an inoperative position, together with said cam, and device operated by said cam, when permitted to move to an active position by reason of the release of said arm from the control of the coils of the ribbon, for reversing the direction of the winding movement, each of said cams being provided with a dwell portion for maintaining said reversing device in operative position during further rotation of the spool at the reversing operation.

17. In a front-strike type-writing machine, the combination with a platen, of ribbon-winding mechanism including a pair of spools having upright axes located upon opposite sides of the printing-point and forwardly of the platen, an elbow-lever pivoted upon a flange of each spool and comprising both an upright arm arranged at or near the spool-axis and a horizontal arm extending beneath said flange, a vertically-movable

can mounted upon the under side of the spool-hinge and normally contained in an inactive position by the horizontal arm of said elbow-lever, the upright arm of which is forced toward the spool-axis by the pull of the ribbon, and means operated by said cam upon the descent thereof when the elbow-lever is released from the control of said ribbon for causing the direction of the ribbon-winding movement to be reversed, each of said cams being provided with a dwell portion for maintaining said reversing devices in operative position during further rotation of the spool at the reversing operation.

18. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools, of a device mounted to rotate with each spool and to be held in an inactive position by the coils of the ribbon, a cam with which said spool device co-operates, and means controlled by said cam for causing the direction of the ribbon-winding movement to be reversed, the construction and arrangement being such that when said device is liberated from the coils of the ribbon it co-operates with said cam to enable the latter to cause an operation of said reversing means, and such that said reversing means move at once to an active position and remain there during the continued rotation of the spool in an unwinding direction at the reversing operation.

19. In a type-writing machine, and in an automatic ribbon winding and reversing mechanism, the combination with a pair of spools and a self-shifting driver connected to both spools, of a ribbon-controlled cam for each spool, and connections from said cams to said driver, the construction and arrangement being such that a cam is automatically called into operation by reason of the longitudinal movement of the ribbon, and through its said connections causes a shifting movement to be effected by said driver, each of said cams being provided with means for enabling said connections to remain in their active positions during a continued winding of the ribbon upon the full spool by said driver while the shift is being effected.

20. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and a common driver for the spools, of a pair of tripping members one of which is mounted upon said driver, and one of which constantly tends to engage the other, a releasable device normally preventing an engagement of said tripping members, and a ribbon-controlled device for forcing said releasable device to a releasing position.

21. In a type-writing machine, the combination of a pair of ribbon-spools, a self-shifting driver common to both spools and provided with a tripping device, a trip-pin normally tending to engage said tripping device, means normally holding said trip-pin out of operative position, and means rotating with one of said spools for moving said holding means to a position for permitting said trip-pin to move into engagement with said tripping device.

22. In a type-writing machine, the combination with a pair of ribbon-spools, of a self-shifting driver common to both spools and provided with a tripping device, a trip-pin normally tending to engage said tripping device, a device on the framework between the spool and the tripping device, and normally holding said trip-pin out of operative position, and means operable through the longitudinal movements of the ribbon for forcing said holding device to release said trip-pin.

23. In a type-writing machine, the combination with a pair of ribbon-spools, of a self-shifting driver connected to both spools and provided with a tripping device, a trip-pin normally tending to engage said tripping device, a device normally holding said trip-pin out of active position, a device mounted to rotate with each spool and to be held in inactive position by the coils of ribbon, and means called into action by said spool devices when released by the ribbon for forcing said pin-holding device to release said pin.

24. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver connected to both spools, a pair of tripping members one of which is mounted upon said driver, and one of which constantly tends to engage the other, a device normally preventing such engagement, a ribbon-controlled cam connected to a spool and rotating therewith, and means for enabling said cam to cause an engagement of said tripping members.

25. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver connected to both spools, a pair of tripping members one of which is mounted upon said driver, and one of which constantly tends to engage the other, a cam mounted so that it may rotate with a spool, and mechanism controlled by the said cam and extending to said last-mentioned tripping member, and including a device which normally prevents movement of the latter.

26. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver common to both spools, a pair of tripping members one of which is mounted upon said driver, and one of which constantly tends to engage the other, a cam mounted so that it may rotate with a spool, and a releasing device controlled by the said cam and extending to said last-mentioned tripping member, said cam being provided

with a dwell portion for holding said releasing device in operative position during the continued winding of the ribbon upon the other spool at the shifting movement of said driver.

27. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver common to both spools, two sets of tripping members, one member of each set being mounted upon said driver, and one member of each set being mounted on the framework and constantly tending to move into engagement with its mate, devices normally preventing such engaging movements, and means controlled by the ribbon for forcing said devices to releasing position.

28. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver common to both spools, two sets of tripping members, one member of each set being mounted upon said driver and one member of each set being mounted on the framework and constantly tending to move into engagement with its mate, a cam associated with each of the last-mentioned tripping members, one cam being connected to one spool and the other cam being connected to the other spool, devices engageable by said cams and normally holding said tripping members out of engagement, and means called into action by the longitudinal movements of the ribbon for enabling said cams to force said holding devices to release said tripping members.

29. In a type-writing machine, the combination with a pair of ribbon-spools, of a driving-shaft common to both spools, a pair of worms upon said shaft, a pair of tripping-pins tending normally to engage said worms, devices normally holding said tripping-pins out of engagement with said worms, said holding devices being arranged on the framework and normally disconnected from the spools, and means operating automatically through the longitudinal movements of the ribbon for forcing said holding devices to release said tripping-pins one at a time, whereby said shaft is caused to drive the spools alternately.

30. In a type-writing machine, the combination with a pair of ribbon-spools, of a driving-shaft common to both spools, a pair of worms upon said shaft, a pair of tripping-pins tending normally to engage said worms, devices normally holding said tripping-pins out of engagement with said worms, a cam arranged at each spool, and means called into action through the longitudinal movements of the ribbon for enabling said cams to force said holding devices to release said pins.

31. In a type-writing machine, the combination with a pair of ribbon-spools, of a driving-shaft common to both spools, a pair of worms upon said shaft, a pair of tripping-pins tending normally to engage said worms, a cam arranged at each spool, and an arm mounted to rotate with each spool and to be locked by the coils of the ribbon, said arm being constructed to co-operate with the cams when released by the ribbon, to enable the cams to release said tripping-pins.

32. In a type-writing machine, the combination with a pair of ribbon-spools, of a driving-shaft common to both spools, a pair of worms upon said shaft, a pair of tripping-pins tending normally to engage said worms, a cam arranged at each spool, and an arm mounted to rotate with each spool and to be locked by the coils of ribbon, said arm being constructed to co-operate with the cams, when released by the ribbon, to enable the cams to release said tripping-pins, and said arm being provided with dwell portions to enable said pins to remain in operative position during the winding movements of said shaft and the accompanying rotation of the spools.

33. In a type-writing machine, the combination with a pair of ribbon-spools, of a driving-shaft connected to both spools, a pair of worms upon said shaft, tripping-pins 140, springs 147, cams 128, connections from said cams to said tripping-pins, and arms 126 connected to said cams 128.

34. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver common to both spools, a pair of tripping members one of which is mounted upon said driver, a spring normally pressing one of said members toward the other, a second spring for opposing the first spring and normally holding said tripping members apart, and means controlled by said ribbon-winding mechanism for overcoming the opposition of said second spring and thereby releasing said spring-pressed tripping member, so that the latter may engage its mate.

35. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver common to both spools, a pair of tripping members one of which is mounted upon said driver, a spring normally pressing one of said members toward the other, a second spring for opposing the first spring and normally holding said tripping members apart, an arm mounted to rotate with each spool and to be locked by the coils of the ribbon, and means called into action when said arm is released by the ribbon, for overcoming the opposition of said second spring and thereby releasing said spring-pressed tripping member so that the latter may engage its mate.

36. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver common to both spools, a pair of tripping members one of which is mounted upon said driver, a spring normally pressing one

of said members toward the other, a second spring for opposing the first spring and normally holding said tripping members apart, a cam arranged at each spool, and means called into action by the longitudinal movements of the ribbon for causing said cam, during the unwinding movement of the spool, to overcome the opposition of said second spring and thereby release said spring-pressed member so that the latter may engage its mate.

37. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver common to both spools, a pair of tripping members one of which is mounted upon said driver, a spring normally pressing one of said members toward the other, a second spring for opposing the first spring and normally holding said tripping members apart, a cam arranged at each spool, and means called into action by the longitudinal movements of the ribbon for causing said cam, during the unwinding movement of the spool, to overcome the opposition of said second spring and thereby release said spring-pressed member so that the latter may engage its mate, said cam being provided with a dwell portion, so as to hold said second spring in an inoperative position during the winding action of said shaft and the accompanying spool movement.

38. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver common to both spools, a pair of tripping members one of which is mounted upon said driver, a spring normally pressing one of said members toward the other, a second spring for opposing the first spring and normally holding said tripping members apart, a cam arranged at each spool, and an arm mounted to rotate with each spool and to be incited by the coils of the ribbon, said arm being constructed to cooperate with the cam when released by the coils of the ribbon, to enable said cam to overcome the opposition of said second spring and thereby release said spring-pressed tripping member, so that the latter may engage its mate.

39. In a type-writing machine, the combination with a pair of ribbon-spools, of a driver common to both spools, two sets of tripping members, one member of each set being mounted upon said driver, springs for normally pressing one member toward the other member of each set, springs for opposing said trip-springs and normally holding said tripping members apart, and means controlled by said ribbon-winding mechanism for overcoming the opposition of said opposing springs and thereby releasing said spring-pressed tripping members so that they may engage their mates.

40. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools, and a driving-shaft, of a worm on said shaft, trip-pin 140, spring 147, lever 133 controlling said trip-pin, spring 149, cam 126, and arm 126 controlling said cam.

41. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and a driving-shaft common to both spools, of a pair of worms upon said shaft, trip-pins 140, springs 147, levers 133 controlling said trip-pins, springs 149, cam 126, and arm 126 controlling said cam.

42. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and a driving-shaft common to both spools, of a pair of worms upon said shaft, trip-pins 140, springs 147, levers 133 controlling said trip-pins, springs 149, pin 123, cam 126 mounted upon said spools, and other-levers 125, 126, also mounted upon said spools and controlling said cam.

43. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and a driving-shaft common to both spools, of a pair of worms upon said shaft, rods 138, springs 147, trip-pins 140, fingers 136, levers 133 controlling said trip-pins, cam 126, and arm 126 controlling said cam.

44. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools and a transverse driving-shaft common to both spools, of a pair of worms upon said shaft, rods 138, arm 126, trip-pin 140, bracket 141, fingers 136, levers 133, springs 149, cam 126, and other-levers 125, 126.

45. In a front-stroke type-writing machine, the combination with a platen, a carriage and a propelling-spring therefor, of ribbon-winding mechanism including a pair of spools arranged one at each side of the printing-point and forwardly of the platen, shafts 44, 45, 51, 52, 54, gears 47, 48, 49, 50, 54, 55, 56, 59, worms 146, pin 140, levers 133 controlling said trip-pins, cam 126, and other-levers 125, 126 controlling said cam.

46. In a front-stroke type-writing machine, the combination with a platen, a carriage and a propelling-spring therefor, of ribbon-winding mechanism including a pair of spools arranged one at each side of the printing-point and forwardly of the platen, shafts 44, 45, 51, 52, 54, gears 47, 48, 49, 50, 54, 55, 56, 59, worms 146, pin 140, springs 147, levers 133 controlling said pin, springs 149, cam 126, and other-levers 125, 126 controlling said cam.

47. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools, and a spool-winding mechanism, including a rotary driving-shaft common to both spools, of an inde-

pendent mechanism extending from each spool to said shaft but normally disconnected from both the spool and the shaft for causing the direction of the ribbon-winding movement to be reversed by the operation of said shaft when said mechanism is connected thereto; and means for causing said mechanism to be connected to said shaft.

48. In a type-writing machine, the combination with a ribbon-winding mechanism including a pair of spools, and a spool-winding mechanism including a rotary driving-shaft common to both spools, of an arm mounted to rotate with each spool and to be incited by the coils of ribbon, and an independent mechanism extending from said arm to said shaft but normally disconnected from both said devices, for causing the direction of the ribbon-winding movement to be reversed, said independent mechanism being automatically connected to said arm and to said shaft when the arm is released by the coils of ribbon.

49. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools, and a spool-winding mechanism including gears connected to said spools and also including an end-wise-movable driving-shaft provided with gears which are adapted to mesh with said spool-gears, of means for moving said shaft endwise to disengage one of said gears thereon from one spool-gear and to engage the other of said spool-gears thereon with the other spool-gear, said endwise-moving means including devices mounted upon said spools and constructed to be controlled by the ribbon, and also including devices extending from said spools to said shaft and normally disconnected from said ribbon-controlled devices but adapted to be incited upon by the latter when the spool becomes discharged of ribbon and is turned out upon said shaft and cause it to move endwise as it revolves.

50. In a type-writing machine, the combination with a ribbon-spool and a driver therefor, of a pair of normally disengaged tripping members, one of which is mounted upon said driver, devices extending from the other of said tripping members to said spool but normally disconnected from the spool, and means controlled by the ribbon for automatically acting on said devices and thereby causing said tripping members to become engaged to cause a shifting movement of said driver.

51. In a type-writing machine, the combination of a pair of ribbon-spools and a common driver therefor, of two sets of tripping members, one member of each set being mounted upon said driver, devices extending from the other tripping members to said spools but normally disengaged from the spools, and means controlled by the ribbon for automatically acting on said devices in alternation and thereby causing the tripping members of each set to become engaged in alternation and effect a back-and-forth shifting movement of said common driver.

52. In a type-writing machine, the combination with a pair of ribbon-spools and a rotary driving-shaft common to both spools, of a pair of worms upon said shaft, a pair of tripping-pins normally disengaged from said worms, and ribbon-controlled devices normally disconnected from said tripping-pins and mounted to rotate with said spools, the construction and arrangement being such that when either spool is discharged of ribbon the ribbon-controlled device thereon is automatically connected to its associated tripping-pin and the latter is engaged to its associated worm, whereby said shaft is caused to have an endwise movement.

53. In a type-writing machine, the combination with a pair of ribbon-spools of a rotary driving-shaft common to both spools, two worms upon said shaft, trip-pins normally disengaged from said worms, and an arm mounted to rotate with each spool and to be incited by the coils of ribbon, each of said arms being normally disconnected from its associated trip-pin, and the construction and arrangement being such that when said arm is released by the coils of ribbon it is automatically connected to said trip-pin and the latter is caused to engage said worm, whereby said shaft is caused to move endwise.

54. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of detachable spools, of automatically-operating means for causing the direction of the ribbon-winding movement to be reversed, said reversing means including an elbow-lever pivoted upon each spool and detachable therewith, one arm of said lever extending within the spool and being constructed to be incited by the coils of the ribbon, and the other arm thereof extending along the spool-flange, said last-mentioned arm being connected to the reversing device and being constructed to perform its reversing function when the first-mentioned arm is released by the coils of the ribbon.

55. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of interchangeable spools detachably mounted upon a pair of shafts, of a ribbon-controlled double cam mounted upon each spool and detachable therewith, and devices actuable by said cam for causing the direction of the ribbon-winding movement to be reversed, each of said cam being constructed to operate by a movement in one direction when its spool is placed upon one of said shafts, and by a movement in the other direction when its spool is placed upon the other of said shafts.

56. In a type-writing machine, the combination with a ribbon-wind-

ing mechanism, including a pair of interchangeable spools detachably mounted upon a pair of shafts, of a ribbon-controlled double cam mounted upon each spool and detachable therewith, and devices actuable by said cams for causing the direction of the ribbon-winding movement to be reversed, each of said cams being constructed to operate by a movement in one direction when its spool is placed upon one of said shafts, and by a movement in the other direction when its spool is placed upon the other of said shafts, and each cam being provided with a dwell portion between its ends, whereby said reversing devices are maintained in operative positions during the continued relative movements of the spools.

57. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of ribbons carried by upright shafts, a pair of horizontal shafts connected to said vertical shafts, and a driving-shaft for said horizontal shafts, of a pair of worms for said driving-shaft, a pair of devices extending from said worms to said spools and having trip-fingers for engaging said worms, and means arranged at the spools and normally disconnected from said trip-finger devices, for moving the latter so as to enable the trip-fingers to engage the worms.

58. In a type-writing machine, the combination with a ribbon-winding mechanism, including a pair of spools, of a ribbon-controlled cam mounted to rotate with each spool and having a dwell portion concentric to the spool-axis, and devices operated by said cam and held in working position by said dwell portions, for causing the direction of the ribbon-winding movement to be reversed.

59. In a type-writing machine, the combination with a carriage, a propelling-spring therefor, and a ribbon-winding mechanism operated by said carriage-spring and including a pair of spools, of an arm mounted to rotate with each spool and to be actuated by the coils of the ribbon and having a constant tendency outward or away from the spool-axis, mechanism operated by said arm for causing the direction of the ribbon-winding movement to be reversed, and a part-and-whole mechanism as 169, 170, arranged between said carriage-spring and said spools, for preventing an unwinding movement of the empty spools immediately after the reversing operation, by means of the outward pressure of said arms.

60. In a visible-writing machine, the combination with a platen and a type mechanism, of a ribbon-winding mechanism, including a pair of spools, an arm mounted to rotate with each spool and to be actuated by the coils of the ribbon thereon and having a constant tendency away from the spool-axis, devices operated by said arm for causing the direction of the ribbon-winding movement to be reversed, means arranged between the spools for moving the ribbon widthwise at each type-stroke to cover and uncover the printing-point, whereby a slack occurs at each type-stroke in the portion of ribbon extending between the spools, and means for frictionally opposing rotation of the spools, whereby after the reversing operation an unwinding movement of the empty spool is checked and the ribbon is rendered taut and enabled to move said arm toward the spool-axis during the initial winding movement of the empty spools and maintain them there.

61. In a type-writing machine, the combination with a platen and a type system, of a pair of ribbon-spools having upright axes arranged forwardly of the platen and one at each side of the type system, bearings 154, having ribbon-openings 155, and movable latched guards 160 overlying said openings.

62. In a type-writing machine having a top plate, as 2, the combination with a platen constructed to run over the top plate and a type system arranged forwardly of the platen, of a pair of ribbon-spools mounted upon vertical shafts and arranged above said top plate forwardly of the platen, and one at each side of the type system, and bearings 156 secured upon said top plate and having ribbon-openings 155 and releasable movable guards 160 overlying said pins.

63. In combination, a ribbon-spool carrying on its under side a cam which is adapted to move to and from the lower flange of said spool, means for guiding said cam in its movement, a pivoted arm arranged between the flange of the spool and adapted to be actuated by the coils of the ribbon, and means connecting said arm with said cam so that when the arm is moved toward the core of the spool by the winding of the ribbon it will raise and hold up said cam, but when the ribbon is unwound and releases said arm it will permit the cam to fall or drop away from the lower flange of the spool.

64. In combination with a ribbon-spool comprising a core and top and bottom flanges, two arms pivoted below the bottom flange, one arm extending through an opening up and between the flange of the spool and so as to be actuated by the coils of the ribbon, and the other arm extending horizontally, and a vertically-moving cam arranged exteriorly of and on the under side of said spool and connected to the last-mentioned arm.

65. In combination with a ribbon-spool comprising a core and upper and lower flanges, an elbow-lever pivoted on the under side of said lower flange and having a vertical cam which extends up substantially parallel with the core of the spool and a horizontal arm which extends substan-

tially parallel with the bottom flange of the spool and which is arranged anteriorly of said bottom flange, a vertically-movable cam connected to said horizontal arm, and means depending from the bottom flange of the spool for guiding the movement of said cam to and from said flange and for limiting its downward movement.

66. In combination with a ribbon-spool comprising a cylindrical core slotted off or flattened on one side and top and bottom flanges, an elbow-lever having a vertical arm adjacent said slotted-off or flattened side, said lever being pivoted on the under side of the lower flange and having a horizontally-arranged arm beneath said flange, a cam connected to the last-mentioned arm, and means depending from said flange for guiding said cam in its up-and-down movement relatively to said lower flange.

67. A ribbon-spool carrying on its under side a cam and also carrying a bent lever which is connected to said cam, one arm of said lever being adapted to be actuated by the coils of the ribbon to hold up the other arm and the said cam, and the said lever being adapted to release when the ribbon is unwound and to permit the said cam to descend or drop away from the spool.

68. A ribbon-spool having a bottom flange, a double cam having an intermediate dwell and mounted to move toward and away from said flange, and a ribbon-controlled lever pivoted to said spool and connected with said cam beneath the spool.

69. In combination, a ribbon-spool having a lower flange which is provided with a pair of depending cams in which is pivotally supported an elbow-lever comprising a horizontal arm 125 which extends outwardly from said pivot beneath the spool-flange, and a vertical arm 130 which extends upwardly through a hole formed in the spool-flange, a cam-plate 135 arranged beneath the lower spool-flange and provided upon its under side with a recess 120 which overhangs the outer end of the horizontal arm 125 of the elbow-lever, and shoulder means or pins 130 extending downwardly from the spool-flange and engaging perforations formed in the cam-plate.

708,840. ELECTRIC CONTROLLER. JOHN C. FILLARD, Philadelphia, Pa., assignor to The National Manufacturing Company of Pennsylvania, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 4, 1908. Serial No. 551,651. (No model.)

Claim.—1. The combination with an electric controller having contact-platen and an operating-arm for the same, of an over-ride and an under-ride switch, both of said switches being constructed to be closed by motion of said arm, substantially as described.

2. An electric controller having contact-platen, an operating-arm for the same, an under-ride switch, and an over-ride switch, one of said switches being operated by motion of the arm from its off to its on position and the other being operated by motion of said arm in the opposite direction, substantially as described.

3. The combination in an electric controller having contact-platen and an operating-arm, of two spring-controlled switches placed so as to be closed by motion of said operating-arm, one of said switches being provided with mechanism for automatically opening the controller-circuit when more than a predetermined quantity of current passes therethrough, the other having means for opening said current when the quantity of current in the same falls below a predetermined amount, substantially as described.

4. The combination with an electric controller having contact-platen and an operating-arm, of two manually-operated, mechanically-released switches, one of the same having means whereby it is closed by motion in one direction of the operating-arm and the other having means whereby it is closed by motion of said arm in the opposite direction, substantially as described.

5. The combination with an electric controller having contact-platen and an operating-arm, of an over-ride and an under-ride switch, the over-ride switch having mechanism whereby it is closed when the operating-arm is moved from its on to its off position and the under-ride switch having mechanism whereby it is closed when said arm is moved from its off to its on position, substantially as described.

6. The combination with an electric controller having contact-platen, and an operating-arm, of two switches each having operating-magnets, one arm pivoted to each of said switches and extending into the path of motion of the operating-arm, with means on each of said switches whereby said arm is permitted to close the same when said arm is moved in a definite direction, substantially as described.

708,841. METHOD OF IMPREGNATING PAPER OR PAPER-BOARD. ABRAHAM B. GLASS, Vienna, Austria-Hungary, assignor to Julius Reih, Vienna, Austria-Hungary. Filed Mar. 1, 1904. Serial No. 48,478. (No specimens.)

Claim.—The herein-described composition of matter for use as a de-oxidant, consisting of hydrate of calcium, dextrine, and flour or starch in or about the proportions set forth and water.

708,842. GOLF-PLANTER. LEVI P. GRAMER, Bismarck, N. Dak. Filed Feb. 20, 1908. Serial No. 54,572. (No model.)

Claim.—1. In a golf-planter, the combination with a wheel, of means for turning the wheel with a comparatively slow movement while traveling between cross-rows, and means for accelerating the motion of the wheel as a cross-row is neared.

2. In a golf-planter, the combination with furrow-openers, covering-wheel, seed-boxes, and wheel in the beam and check-row mechanism, of means actuated from the covering-wheel to turn the seed-wheel with a comparatively slow movement while traveling between cross-rows, and means actuated by the check-row mechanism for accelerating the movement of the seed-wheel as a cross-row is neared.

3. In a golf-planter, the combination with furrow-openers, covering-wheel and check-row mechanism, of seed-wheels having cabs each adapted to hold a single grain, means actuated from the covering-wheel to turn the seed-wheel a part only of the rotation needed to drop the number of grains required in a hill while the planter is traveling from one cross-row to another, and means actuated by the check-row mechanism for completing the hill-dropping movement of the seed-wheel as a cross-row is neared.

4. In a golf-planter, the combination with a seed-wheel, a drill-shaft geared to the seed-wheel and a check-row shaft, of a sprocket-wheel journaled loosely on the drill-shaft and having ratchet-teeth, a ratchet-wheel fastened to the drill-shaft and adapted to engage the sprocket-wheel, means for turning the sprocket-wheel and imparting motion therethrough to the ratchet-wheel, drill-shaft and seed-wheel, and an arm on the check-row shaft adapted to move the drill-shaft forward in advance of the travel of the sprocket-wheel when the check-row shaft is actuated.

5. In a golf-planter, the combination with a seed-wheel, a drill-shaft geared to the seed-wheel and a check-row shaft, of a sprocket-wheel journaled loosely on the drill-shaft and having ratchet-teeth, a ratchet-wheel fastened to the drill-shaft and adapted to engage the sprocket-wheel, means for turning the sprocket-wheel and imparting motion therethrough to the

ratchet-wheel, drill-shaft and seed-wheel, a finger extending from the drill-shaft, and an arm on the check-row shaft adapted to engage the finger and accelerate the rotation of the drill-shaft when the check-row shaft is actuated.

6. In a golf-planter, the combination with a seed-wheel, a drill-shaft geared to the seed-wheel and a check-row shaft, of a sprocket-wheel journaled loosely on the drill-shaft and having ratchet-teeth, a ratchet-wheel fastened to the drill-shaft and adapted to engage the sprocket-wheel, means for turning the sprocket-wheel and imparting motion therethrough to the seed-wheel, a plurality of fingers extending from the drill-shaft at regular intervals around the shaft, and an arm on the check-row shaft adapted to accelerate the rotation of the drill-shaft by forward pressure on one finger and adapted to limit the acceleration by forcing an obstruction to the finger following.

7. In a golf-planter, the combination with a seed-wheel, a drill-shaft geared to the seed-wheel and a check-row shaft, of a sprocket-wheel journaled loosely on the drill-shaft and having ratchet-teeth, a ratchet-wheel fastened to the drill-shaft and adapted to engage the sprocket-wheel, means for turning the sprocket-wheel and imparting motion therethrough to the seed-wheel, a finger extending from the drill-shaft and a lengthwise-yielding arm attached to the check-row shaft and adapted to engage the finger and accelerate the motion of the drill-shaft when the check-row shaft is actuated.

8. In a planter, the combination of a hollow shaft, a seed-exPELLING plunger in the shaft, a valve-plate at the lower end of the rear part of the shaft normally closing against the front wall of the shaft below the plunger when the plunger is raised, another valve-plate at the upper end of the rear part of the shaft normally closing against a wall of the shaft, a connection between the valves whereby they open and close together, and means for holding them open to convert the planter into a drill.

9. In a planter, the combination of a hollow shaft, a seed-exPELLING plunger in the shaft, a valve-plate at the lower end of the rear part of the shaft normally closing against the front wall of the shaft when the plunger is raised, another valve-plate at the upper end of the rear part of the shaft normally closing against a wall of the shaft, a link connecting one valve with the other in front of their pivots, hooks extending from the valves back of the pivots thereof, and a spring attached to the link and attachable to either of the hooks.

708,843. TRAIN-ORDER-RECEIVING BOX. IRA C. HARR, Los Angeles, Cal. Filed Dec. 12, 1904. Serial No. 55,099. (No model.)

Claim.—1. A signaling apparatus provided with a pivoted box for the reception of orders, said box being constructed to lock the apparatus in the danger position.

2. A signaling apparatus provided with a movable box for the reception of train-orders, said box being constructed to lock the apparatus in the danger position.

3. A signaling apparatus provided with an operating-lever and a box normally mounted above the path of said lever constructed to lock the lever in the danger position.

4. A signaling apparatus provided with an operating-lever, a frame

or desk adjacent thereto and an order-box movably connected with the frame or desk over the path of said lever to lock the same in the danger position.

5. A signaling apparatus provided with an operating-lever, a frame or desk having a guideway, an order-box upon said frame or desk and a spring-catch in the box to lock the lever in danger position.

703,844. MORTAR-BED. JOHN M. HOLLOWAY, Santa Barbara, Cal., assignor to Harry S. Holloway, Santa Barbara, Cal. Filed Oct. 19, 1901. Serial No. 78,288. (No model.)

Claim.—1. A portable mortar-bed, comprising a bottom and separate side pieces supported upon the ends, and pieces fitted between the side pieces and inclined inwardly and downwardly in opposite directions, and clamps embracing the bottom and side pieces.

2. A portable mortar-bed, comprising a bottom, side supporting the bottom and projected at opposite sides thereof, side pieces supported upon the corresponding projected ends of the side, and pieces held between the side pieces, and clamps embracing the bottom and the opposite side pieces.

3. A portable mortar-bed, comprising a bottom, opposite side pieces, and pieces held between the side pieces and inclined inwardly and downwardly in opposite directions, and clamps embracing the bottom and the side pieces, the upper portions of the clamps extending toward the upper edge of the end pieces to protect the same against displacement.

4. A portable mortar-bed comprising a bottom, opposite side pieces, and pieces held between the side pieces, and clamps embracing the bottom and side pieces, each clamp having a substantially L-shaped member to embrace the bottom and one side of the bed, an eye-rod having its eye detachably engaged with the upper end of the member, and a tie-plate connecting the other corresponding ends of the member and the rod.

5. A portable mortar-bed, comprising a bottom, opposite side pieces, and pieces held between the side pieces, and clamps embracing the bottom and side pieces, each clamp having a substantially L-shaped member to embrace one side and the bottom of the bed, the lower end of the rod being screw-threaded and projected beyond the opposite side of the device, and the upper end of the member being projected above the adjacent side piece and formed into a hook, an eye-rod having its eye engaged with the hook and its intermediate portion lying longitudinally across the upper edge of the adjacent side piece, the free end of the rod being screw-threaded and projected beyond the side of the device, a tie-plate connecting the screw-threaded ends of the L-shaped member and the eye-rod, and one fitted to the threaded ends of said member and rod.

6. A portable mortar-bed, comprising a bottom, opposite side pieces, and pieces held between the side pieces, clamps embracing the top and bottom of the opposite ends of the bed, and intermediate clamps embracing the bottom and opposite sides only of the device, the intermediate portion of the bed being constructed by the clamps.

7. In a portable mortar-bed, the combination with a bottom, opposite side pieces, and end pieces held between the side pieces, of opposite terminal clamps embracing the bottom and side boards, and an intermediate clamp, comprising a substantially L-shaped member to embrace the bottom and one side piece, and a clip having a lateral shoulder to embrace the upper edge of the opposite side, the L-shaped member having its lower part removably connected to the clip.

8. In a mortar-bed, the combination with supporting-ends, of bottom boards supported transversely thereon, the ends of the ends being projected beyond the opposite sides of the bottom, opposite side boards supported upon the projected ends of the ends and rising above the bottom boards, opposite end pieces held between the side pieces, opposite terminal clamps comprising L-shaped members to embrace the bottom and one side piece and having its upper end projected above the bed and provided with a hook, the opposite end of the member being screw-threaded and projected at the opposite side of the bed, an eye-rod having its eye engaged with the hook and its intermediate portion lying across the upper edge of the adjacent end piece, the free end of the rod being screw-threaded, a tie-plate having openings receiving the screw-threaded ends of the L-shaped member and the eye-rod, and one fitted to said screw-threaded ends, and an intermediate clamp comprising an L-shaped member embracing one side piece and the bottom of the device, and an inverted substantially

L-shaped clip embracing the upper edge of the opposite side piece and projected below the same, the adjacent end of the L-shaped piece being projected through the lower end of the clip, and a nut fitted to said projected end.

703,845. DOOR-CLOSING APPARATUS FOR VULGARIZERS. THOMAS H. HYER, Youngstown, Ohio, assignor of one-half to Albert Richards, Youngstown, Ohio. Filed Mar. 14, 1902. Serial No. 68,192. (No model.)

Claim.—1. In an apparatus of the class described, the door, operating mechanism constituting a support for the door in its closed position and comprising means for exerting a clamping-pressure thereon, and separate means for supporting the door in its opened position independent of said operating mechanism.

2. In an apparatus of the class described, the door, operating mechanism constituting a support for the door when closed and comprising means for exerting a clamping-pressure thereon, said door having operable connections with the operating mechanism, and separate means for supporting the door in its open position.

3. In an apparatus of the class described, the door, a counterbalancing device connected with the door and arranged to support it when opened, and operating mechanism constituting a support for the door when closed and comprising means for exerting a clamping-pressure thereon, said door having a separable connection with the operating mechanism.

4. In an apparatus of the class described, the door, a suitably-guided supporting-cable carrying a counterbalance and connected with the door, an operating mechanism constituting a support for the door when in its closed position and comprising means for exerting a clamping-pressure thereon.

5. In an apparatus of the class described, the door, power-actuated operating mechanism constituting a support for the door and comprising means for exerting a clamping-pressure thereon.

6. In an apparatus of the class described, the door, and power-actuated operating mechanism constituting a support for the door when closed and comprising means for exerting a clamping-pressure thereon, said door having a separable connection with the operating mechanism.

7. In an apparatus of the class described, suitably-actuated operating mechanism having a plurality of clamping-carriers, and the door supported by and having a separable connection with said carrier.

8. In an apparatus of the class described, a suitably-actuated operating mechanism having a plurality of clamping-carriers, and the door having a plurality of lugs arranged to be moved into and out of engagement with the said carrier.

9. In an apparatus of the class described, suitably-actuated operating mechanism having a plurality of movable clamping-carriers, a toggle device for adjusting said carriers, and the door having a separable connection with the said carrier.

10. In an apparatus of the class described, suitably-actuated operating mechanism having a plurality of movable clamping-carriers, a toggle device for adjusting said carriers, and the door having a separable connection with said carrier when in its closed position, and a separate counterbalancing support for sustaining the door when opened independent of the said carrier.

11. In an apparatus of the class described, suitably-actuated oper-

ating mechanism having a plurality of reciprocating headed rods constituting clamping-carriers, toggle devices for adjusting said rods, and the door having a plurality of lugs arranged to be moved into and out of engagement with the said carrier.

12. In an apparatus of the class described, an operating device having a plurality of reciprocating rods constituting clamping-carriers, said rods being provided at their outer ends with binding elements, and the door provided with a plurality of lugs arranged to be moved into and out of engagement with the said carrier, the ends of all of said lugs being disposed in the same direction and detachably taking over the rods at one side of the binding elements.

13. In an apparatus of the class described, operating mechanism comprising opposite duplicate sets of devices each including a pair of reciprocating rods in the same vertical plane and constituting clamping-carriers, said rods being provided at their outer ends with binding elements, and the door provided at diagonally opposite corners with lugs arranged to be moved into and out of engagement with the said carrier, the ends of all of said lugs being disposed in the same direction and detachably taking over the rods at one side of the binding elements.

14. In an apparatus of the class described, the operating mechanism including opposite pairs of reciprocating rods constituting clamping-carriers, a yoke connecting the rods of each pair, a toggle-link jointed to said yoke centrally between its ends, a suitably-actuated pressure-lever jointed to one end of the toggle-link, a power-actuator having rod connection with the pressure-lever, and the door detachably connected with the rods.

15. In an apparatus of the class described, operating mechanism including oppositely-arranged pairs of reciprocating rods constituting clamping-carriers, a yoke coupling together the rods of each pair, a toggle-link pivotally connected at one end centrally to the said yoke, a pressure-lever having a fulcrum-support and pivotally connected to the opposite end of the toggle-link, reciprocating adjusting-rods connected at one end to the said pressure-lever, and a cylinder and piston power-actuator including a pivotally-supported cross-head having pivotal connections at its ends with the said adjusting-rods, and the door detachably connected with the rods.

703,846. CURTAIN WEIGHT AND HOOK-REMOVER. THOMAS LIVERMORE, Reading, Pa., assignor of one-half to Adam H. Kellbach, Lancaster, Pa., and Benjamin D. Hestetter, York Springs, Pa. Filed Dec. 10, 1901. Serial No. 68,616. (No model.)

Claim.—1. The combination of an anchor plug, a frame consisting of a ring with depending members constructed to engage the plug, an internally-threaded hooking member carried by the ring portion of the frame, means for turning the hooking member, and a threaded tube passing through said hooking member and in line with the opening in the plug, substantially as described.

2. The combination of a plug having through it a tapered opening, a frame constructed to be attached to the plug, a threaded hooking member held in the frame, and a threaded tube passing through said hooking member and having means for the attachment of an air-supply pipe and having one of its ends constructed to enter the tapered opening in the plug, substantially as described.

3. A hollow threaded anchor plug having L-shaped openings into the interior thereof, a frame having members constructed to enter and be retained in said openings, a threaded hooking member with a handle carried by the frame, a threaded tube passing through said hooking member, said tube having a tubular projection from its side and being made to be forced into the opening through the plug when said hooking member is turned, substantially as described.

703,847. THERMOSTATIC FIRE-DOOR APPARATUS. JAMES T. HUBBARD, East Orange, N. J. Filed Apr. 2, 1902. Serial No. 74,284. (No model.)

Claim.—1. The combination with a self-closing door, of a detachable bolt-carrier, a retainer for said carrier, a bolt sliding in the carrier for holding the door in its open position, the carrier being capable of being manually moved to disengage it from the door and a device, releasable by heat for holding the bolt-carrier in the retainer, substantially as described.

2. The combination with a self-closing door, of a bolt for holding the door in an open position, a fixed support, a bolt-carrier detachably connected to the fixed support, and a device releasable by heat for holding the bolt-carrier in the fixed support, substantially as described.

3. The combination with a self-closing door, of a sliding bolt for holding the door in an open position, capable of being manually moved to disengage it from the door, a detachable carrier, in which the bolt is held for movement, and a device, releasable by heat for holding the carrier in place, substantially as described.

4. The combination with a self-closing door, a latch to hold the door in an open position, a retainer for the latch, normally holding it against movement with the door, the latch being capable of being manually moved in the retainer to disengage it from the door, and means releasable by heat for disengaging the latch from the retainer, substantially as described.

703,848. SAW JOINTER AND SAGE. CHAS. H. HOLLOWAY, Waukesha, Wis., assignor to Joseph H. Hestetter, Lancaster, Pa. Filed Nov. 20, 1901. Serial No. 68,616. (No model.)

Claim.—1. An instrument of the class described having an expandable and contractible file-guideway, and means for supporting the instrument upon a saw with said guideway in transverse relation thereon.

2. An instrument of the class described comprising elastically-connected sections each having a file-guiding shoulder, said shoulders being movable toward or from each other upon the relative movement of the sections.

3. An instrument of the class described comprising sections elastically connected and movable longitudinally upon each other, each of said sections having a file-guide shoulder, said shoulders being movable toward or from each other upon the movement of the sections, and means for holding the sections against relative movement.

4. An instrument of the class described, comprising sections arranged in alignment and elastically connected at their inner ends, file-guide shoulders carried by the sections, and movable toward and from each other upon the relative movement of said sections, saw-positioning devices carried by the sections, and located outside of the shoulders, and means carried by one section and engaging the other to hold said sections against relative movement.

5. An instrument of the class described, comprising elastically-connected sections arranged in alignment, one of said sections having a tongue that overlaps the other section and is provided with a longitudinal slot, and a screw passing through the slot and engaging the adjacent section to hold said sections against relative movement, said instrument having a transversely-disposed file-guide member, a portion of which is located in each section.

6. In an instrument of the class described, a body, a gage-plate mounted upon the body and comprising sections movable toward and from each other, and guide-shoulders located at the outer ends of the gage-plate and movable toward and from each other.

7. In an instrument of the class described, a body having an expandable and contractible file-guide outlet, and an expandable and contractible gage-plate mounted upon the body in the outlet thereof.

8. In an instrument of the class described, a body comprising sections movable toward and from each other and having engaging guide-shoulders, movable thereon, and a gage-plate located between the guide-shoulders and comprising sections, one of said gage-plate sections being mounted on each body-section and movable thereon.

9. In an instrument of the class described, a body, an expandable and contractible gage-plate carried by the body and comprising separate sections, and means for elevating and depressing each section independently of the other.

10. In an instrument of the class described, an expandable and contractible body having an expandable and contractible file-guide outlet, a

gape-plate carried by the body and located in the neck thereof, said gape-plate comprising separate sections, each section having a stem that is slidably mounted upon the body, and operating means engaging said stems to move the same and thereby elevate or depress the sections.

11. In an instrument of the class described, a body comprising sections movable toward and from each other, a gape-plate comprising separate sections mounted upon and movable with the body-sections, and means carried by each body-section and engaging the gape-section carried thereby to elevate and depress the same.

12. In an instrument of the class described, a body comprising sections movable toward and from each other, a gape-plate comprising overlapping separate sections mounted upon and movable with the body-sections, means for holding the body-sections against relative movement, operating devices carried by each body-section and engaging the gape-section to elevate and depress the same, and devices for locking the gape-sections against movement.

708,849. GARMENT-SUPPORTER. CLYDE S. SCHMIDT, Philadelphia, Pa., assignor of one-half to Eugene Stanley Richardson, Philadelphia, Pa. Filed Nov. 18, 1901. Serial No. 22,918. (No model.)

Claim.—1. In a garment-supporter, a body portion, finger projecting from opposite sides of said body at substantially one and forming slots, and finger projecting therefrom on opposite sides of said body and at substantially the opposite and forming slots.

2. In a garment-supporter, a body portion, finger projecting from one end thereof, finger projecting from the opposite end and finger projecting therefrom at a point between said first two mentioned ends of finger.

3. In a garment-supporter, a body portion formed with slots on both sides and near one end thereof and substantially parallel to each other, and the body portion being formed with slots near the other end on opposite sides of said body portion and substantially parallel to each other.

4. In a garment-supporter, a finger projecting from one end thereof, and substantially parallel to said body portion, a finger projecting from the opposite end thereof on the opposite side of first-mentioned finger and substantially parallel to said body portion and a finger projecting from said body portion at the point between the said first two mentioned fingers.

5. In a garment-supporter, a body portion, finger on opposite sides thereof and near one end thereof, finger on opposite sides thereof near the other end, and finger on opposite sides of said body portion at a point between the first-mentioned two ends of finger.

6. In a garment-supporter, a body portion formed with slots on both sides and near one end thereof and substantially parallel to each other and the body portion being formed with a slot near the other end and substantially parallel to the other slots.

708,850. GARMENT-SUPPORTER. CLYDE S. SCHMIDT, Philadelphia, Pa., assignor of one-half to Eugene Stanley Richardson, Philadelphia, Pa. Filed Feb. 21, 1902. Serial No. 25,022. (No model.)

Claim.—1. In a garment-supporter, a body portion formed with a slot in the upper portion thereof, an arm projecting therefrom, finger projecting from said body portion on opposite sides of said arm, the latter formed with a slot to receive the garment.

2. In a garment-supporter, a body portion formed with a slot in the upper portion thereof, an arm projecting therefrom, finger projecting from said body portion on opposite sides of said arm and forming slots between said fingers and said arm and on said portion on said arm forming a slot between the same and said arm.

3. In a garment-supporter, a body portion, an arm projecting therefrom, a band in said arm, said arm formed with slots on both sides thereof of adjacent said body portion and having a slot at the lower portion thereof and a band in said arm at the lower portion thereof extending in a direction opposite to the first-mentioned band.

4. In a garment-supporter, a body portion, an arm projecting therefrom having a slot situated in the lower portion thereof and having slots adjacent said body portion and said body portion being formed with a slot extending at an angle to said first-mentioned slot.

5. In a garment-supporter, a body portion formed with a slot therein, an arm projecting from said body portion and having slots on both sides thereof adjacent said body portion and having a slot formed in the lower portion thereof, the upper edge of said body portion being inclined with respect to said arm and said first-mentioned slot extending in a direction substantially parallel to that of the inclination of the upper edge of said body portion.

6. In a garment-supporter, a body portion formed with a slot, an arm projecting from said body portion and formed with slots on both sides thereof and having a slot in the lower portion, the slot in the body portion and in the lower portion of the arm extending at an angle to each other and both of the same extending at different angles with respect to the slots on both sides of the arm.

7. In a garment-supporter, a body portion having a slot therein, and an arm projecting therefrom, the lower portion of which is at an angle to the upper portion thereof, said arm being formed with slots on both sides and a slot in the lower portion and extending at an angle to the upper portion of said arm.

8. In a garment-supporter, a body portion having a slot therein, an arm projecting therefrom with a slot in the lower portion, and finger projecting from said body portion, the lower edge of which are curved away from the plane of said arm.

9. In a garment-supporter, a body portion formed with slots therein and a slot in the upper part thereof, extending at an angle to the first-mentioned slot, and having a slot below said first-mentioned slot adapted to receive a garment.

708,851. WARNING-BAG. THOMAS O'DONNELL, Kansas City, Mo. Filed Sept. 22, 1901. Serial No. 75,515. (No model.)

Claim.—In an apparatus of the character described, a steam-generator, a steam-bag, a plug seated in the neck of the steam-bag and provided with a pair of plungers communicating therewith, one of which has a nipple at each end, and the other a nipple at its outer end, a flexible distributing-tube within the bag and connected with the inner nipple of the plunger, a flexible tube connected to the other nipple of the same plunger and to the generator, a valve controlling said tube, and a flexible tube connected to the nipple at the outer end of the other plunger, and a valve controlling said tube, substantially as described.

708,852. WARNING-BAG. THOMAS O'DONNELL, Kansas City, Mo., assignor of one-third to Charles Rich Motz, Lawrence, Kans. Filed Nov. 2, 1901. Serial No. 25,023. (No model.)

Claim.—1. In a wheeled scraper, the combination with the wheel

axis and the wheel mounted on the axle thereof; of a pan pivotedly hung on the axle concentrically to the axis of the wheel, a hub-frame on the pan, adapted to automatically interlock with the axle to hold the pan to its upright position, and means for holding the pan from tilting over when it is set to its digging position and released from a locked engagement with the axle, for the purposes specified.

2. A wheeled scraper, comprising a wheeled supporting-axle, a pan pivotedly supported on each frame for slight longitudinal movement, a locking means carried on the pan adapted to automatically interlock with the supporting-axle to hold the pan in an upright position, said frame having a releasing or tripping handle, and a tilting frame carried on the pan, adapted to be swung in the plane of rotation of the wheel-rim and interlock with said rim on the forward rotation of the wheel, for the purposes specified.

3. The combination with the wheel and arched axle, said axle having rearwardly-extending apertured ends; of the pan or scoop, said pan having laterally-projecting plates, with which the apertured axle-ends engage, a swinging frame pivoted on the plates, said frame having members adapted when the frame is swung forward to engage with and grip the wheel-treads, a J-shaped frame pivotedly mounted on the pan to swing in a vertical plane, its outer extremities terminating in locking-lugs adapted to engage the wheel-axle and hold same, together with the pan, in an upright position, and means for holding the pan from tilting when dropped to its digging position, as set forth.

4. The combination with the wheel-carrying axle, the pan pivotedly suspended from the axle, an automatically-operating locking means carried on the pan for engaging the axle to hold the pan to its upright position, the pan-frame, the platform mounted on said frame, said frame having end members 18, the draft-frame 16, and the wheel-engaging frame 20, all being arranged substantially as shown and for the purposes described.

5. The combination with the wheel-carrying axle, the pan pivotedly suspended therefrom, the pan-frame pivotedly joined at the rear end to the pan, its forward end connecting with the draft-frame, the pan-locking device for engaging the axle, the platform mounted on the pivoted pan-frame, the gravity-acting end-gate, pivotedly supported on the pan-frame, the draft-frame 16, legs 18, and the frame 20, all being arranged substantially as shown and for the purposes described.

6. The combination with the wheel-carrying axle, the pan pivotedly suspended from the axle, an automatically-operating locking means carried on the pan for engaging the axle to hold the pan to its upright position, the pan-frame, the platform mounted on said frame, said frame having end members 18, the draft-frame 16, and the wheel-engaging frame 20, said frame 20, including the transversely-disposed end members, said members having movement in their longitudinal direction; and their ends terminating in wheel-engaging grips 20' 20'', all being arranged substantially as shown and for the purposes described.

708,853. APPARATUS FOR MANUFACTURING ICE. BENJAMIN E. BERRY, Philadelphia, Pa., assignor of forty-nine one-hundredths to Francis E. Richardson, Philadelphia, Pa. Filed Aug. 5, 1901. Serial No. 17,125. (No model.)

Claim.—1. The combination in an apparatus of the character described, of the freezing-tank, ice-forming means located within said tank, cutting means for removing the ice in small pieces which rise to the surface of the water within the freezing-tank, means for discharging a body of water into the freezing-tank at, and parallel to, the surface of liquid therein and means opposite said discharging means for permitting the overflow or withdrawal of water from the surface of the liquid in the tank whereby a surface current may be created and maintained that will pass over the entire surface of the liquid in the freezing-tank to cause the ice particles to overflow, and a compressor arranged to receive said overflowed ice particles.

2. The combination in an apparatus of the character described, of the freezing-tank, ice-forming means located within said tank, cutting means for removing the ice in small pieces which rise to the surface of the water within the freezing-tank, means for discharging a body of water into the freezing-tank at, and parallel to, the surface of liquid therein and means opposite said discharging means for permitting the overflow or withdrawal of water from the surface of the liquid in the tank whereby a surface current may be created and maintained that will pass over the entire surface of the liquid in the freezing-tank to cause the ice particles to overflow, a compressor, and means for conveying the particles of ice to said compressor.

3. The combination in an apparatus of the character described, of the freezing-tank, ice-forming means located within said tank, cutting means for removing the ice in small pieces which rise to the surface of the water within the freezing-tank, a receiving-tank, means for discharging a body of water into the freezing-tank at, and parallel to, the surface of liquid therein and means opposite said discharging means for permitting the overflow or withdrawal of water from the surface of the liquid in the tank whereby a surface current may be created and maintained that will pass over the entire surface of the liquid in the freezing-tank to cause the ice particles to overflow into the receiving-tank, a compressor, and means for conveying the particles of ice from the receiving-tank to said compressor.

4. The combination in an apparatus of the character described, of the freezing-tank, ice-forming means located within said tank, cutting means for removing the ice in small pieces so that it may rise to the surface of the water in the tank in which it is formed, a receiving-tank, means for discharging a body of water into the freezing-tank at, and parallel to, the surface of the liquid carrying the layer of ice particles and means opposite said discharging means for permitting the overflow or withdrawal of the water carrying the layer of ice particles whereby a surface current may be created and maintained, said current passing over the entire surface of the liquid in the tank to float off the ice particles contained therein and cause them to overflow into the receiving-tank, a compressor, and means for conveying the ice from the receiving-tank to the compressor whereby the surplus water may be eliminated and the particles of ice pressed into solid blocks.

5. The combination in an apparatus of the character described, of the freezing-tank, ice-forming means located within said tank, cutting means for removing the ice in small pieces so that it may rise to the surface of the water in the tank in which it is formed, a receiving-tank, a pump for discharging a supply of water into said freezing-tank, whereby a surface current extending the full width of said tank may be created and maintained to move the upper portion of the water carrying the ice particles and cause them to overflow into the receiving-tank, a pump for carrying the particles of ice from the receiving-tank to the compressor, and a connection between the pump for creating a surface current and the receiving-tank whereby the surplus

water discharged into the latter may be utilized to create the surface current within the freezing-tank.

6. In an apparatus of the character described, the combination of the freezing-tank, ice-forming means located therein, means for introducing a surface current of water into said tank to carry off the particles of ice floating on the surface of the water in the tank, a receiving-tank into which said ice is discharged, a pump for creating the current in the freezing-tank, a pipe for carrying off the surplus water from the receiving-tank leading to said pump, a valve outlet leading to said pipe, and means for controlling said valve outlet by the height of water within the receiving-tank.

7. The combination in an apparatus of the character described, of the freezing-tank, rotating cylinders within said tank upon which a coating of ice is formed, means for rotating said cylinders, scraping means carried in said tank for clearing the coating of ice from said cylinders, a receiving-tank, a pump for creating a surface current of water in the freezing-tank to carry off the particles of ice formed therein, a pipe leading from said pump having flattened discharge-nozzles leading to said tank, a compressor, a pipe leading from the receiving-tank to said compressor, a pump for carrying the particles of ice through said pipe to the compressor, a pipe leading from the receiving-tank to the current-producing pump, a valve outlet leading to said pipe, means regulated by the amount of water in the receiving-tank for controlling the valve of said outlet, and a perforated plate located within said receiving-tank and serving to prevent the carrying off of any ice particles with the surplus water discharged from said receiving-tank.

708,854. GLOVE-FRAME. WILLIAM H. BRIDGES, Buffalo, N. Y., assignor of one-third to John Milton Garrett, Buffalo, N. Y. Filed May 14, 1901. Serial No. 99,367. (No model.)

Claim.—1. In a cloth mechanism, the combination with the frame-plates, each provided with an elongated notch having beveled sides and complementary inner ends, of socket-plates each having inwardly-directed ribs provided with beveled sides and complementary grooves, the ribs of the socket-plates being adapted to slide within the elongated notches of the frame-plates whereby the complementary ends of the latter may coast with the complementary grooves of the former to form bearings for the main-spring-arms.

2. In a cloth mechanism, the combination with the frame-plates, each provided with an elongated notch having beveled sides and complementary inner ends, of socket-plates each having inwardly-directed ribs provided with beveled sides and complementary grooves, the ribs of the socket-plates being of the same thickness as the thickness of the frame-plates and adapted to slide within the elongated notches of the frame-plates whereby the complementary ends of the latter may coast with the complementary grooves of the former to form bearings for the main-spring-arms.

708,855. CURRENT-REGULATOR. WILLIAM J. WALKER, Port Huron, Mich., assignor of one-fourth to Bart H. Brewster, Washington, D. C. Filed Nov. 8, 1901. Serial No. 92,294. (No model.)

Claim.—1. In an apparatus of the character described, a pivoted vertically-swinging frame having a longitudinal partition dividing the same into separate channels, independent gates located at the upper ends of said channels, and a water-meter located in one channel.

2. In an apparatus of the character described, a frame comprising separate vertically-swinging sections pivoted at their upper ends, each section having a longitudinal partition dividing the same into separate channels, the channels of one section communicating with the corresponding channels of the succeeding section, gates located across the channels at the head of each section, and a water-meter mounted in one of the channels of each section.

3. In an apparatus of the character described, a frame pivotally supported at one end, means for raising and lowering the other end, and a meter located in the frame.

4. In an apparatus of the character described, a frame pivotally supported at one end and having a chamber at the other, means for admitting and expelling water from the chamber, and a meter located in the frame.

5. In an apparatus of the character described, the combination with a frame, of a support located at one end of the frame, a pivotal connection between the support and the adjacent end of the frame, an inclined chamber or

regul at the bottom of the opposite end of the frame, and means for admitting and expelling water from the chamber.

6. In an apparatus of the character described, a frame pivotally supported at one end, means for raising and lowering the other end, an abutment located against the movable end of the frame, and a meter located in the frame.

7. In an apparatus of the character described, a frame pivotally supported at its upper end, means for raising and lowering the lower end, an abutment located contiguous to the lower end of the frame, rollers carried by the frame and movably bearing against the abutment, and a meter located in the frame.

8. In an apparatus of the character described, a frame having side walls and a partition extending across the channel above the bottom, said bottom having the portion located beneath the partition raised to form a contracted passage-way, a meter provided with paddles movable through the passage-way, and inclined water-conduits opening into the passage-way contiguous to the front end thereof.

9. In an apparatus of the character described, the combination with a frame, of a meter located in the frame, said meter comprising an endless holding-cable, means for supporting one stretch of the cable within the frame, a series of paddles movable through the frame and engaging the holding-cable during their movement in one direction but detached from said cable during their return movement.

10. In an apparatus of the character described, the combination with a frame, of a meter located in the frame, said meter comprising an endless holding-cable having an upper and a lower stretch movable in opposite directions, one of said stretches being located within the frame, a series of paddles movable through the frame and detachably engaging the holding-cable during their movement in one direction but detached from said cable during their return movement.

11. In an apparatus of the character described, the combination with a frame, of a meter located in the frame, said meter comprising an endless holding-cable having an upper and a lower stretch movable in opposite directions, the lower stretch being located contiguous to the bottom of the frame, an endless drive-cable mounted between the stretches of the holding-cable, and paddles pivoted upon said drive-cable and detachably engaging the lower stretch of the holding-cable during their movement in one direction, but detached from said cable during their return movement.

12. In an apparatus of the character described, the combination with a frame, of a meter located in the frame, said meter comprising an endless holding-cable having an upper and a lower stretch movable in opposite directions, the lower stretch being located contiguous to the bottom of the frame, an endless drive-cable mounted between the stretches of the hold-

ing-cable, connections between the two cables to maintain their operative relation to each other, and paddles pivoted upon the said drive-cable and detachably engaging the lower stretch of the cable during their movement in one direction but detached from said cable during their return movement.

13. In an apparatus of the character described, a current-meter comprising a drive-cable, a holding-cable having a stretch located below the drive-cable, paddles pivotally mounted on the drive-cable, said paddles detachably engaging the holding-cable and projecting below the same, and means extending diagonally across each paddle from top to bottom, said means being disposed in intersecting relation.

14. In an apparatus of the character described, a current-meter comprising a drive-cable, a holding-cable having a stretch located below the drive-cable, paddles pivotally mounted on the drive-cable and having openings, said paddles detachably engaging the holding-cable and projecting below the same, valves biased upon the front faces of the paddles and normally closing the openings thereof, and means extending diagonally across each paddle, said means being disposed in intersecting relation and extending across the portion of the paddles projecting beneath the holding-cable.

15. In an apparatus of the character described, a current-meter including a pair of cables, each of which has stretches movable in opposite directions, paddles connected to one cable and having detachable engagements with one stretch of the other cable during the movement of said paddles in one direction but detached from said cable during their return movement, and means connecting the two cables to cause them to move in unison and maintain the paddles in fixed relation thereto while said paddles are connected to both cables.

16. In an apparatus of the character described, a frame comprising separate sections arranged in tandem relation, a support located at the front of each section, a pivotal connection between the front of each section and the adjacent support, and a meter located in each section.

17. In an apparatus of the character described, a frame comprising separate sections arranged in tandem relation, a support located at the front of each section, a pivotal connection between the front end of each section and the adjacent support, the rear end of each section abutting against the support of the next section, and a meter located in each section.

708,856. DRY CRO-CONCENTRATOR. ROBERT E. WALKER and ROBERT WALKER, Denver, Colo. Filed May 27, 1901. Serial No. 92,142. (No model.)

Claim.—1. In a dry cro-concentrator, the combination with a suitable stationary frame, of a vibratory apron-frame constructed to form an air-chamber, an endless traveling apron through which the air from the chamber passes, the apron closing said chamber at the top, an auxiliary air-chamber arranged in suitable proximity to the main air-chamber, means for introducing air under pressure to the auxiliary chamber, and means for vibrating the apron-frame.

2. In a dry cro-concentrator, the combination with a stationary frame, of an apron-frame mounted to vibrate thereon, means for vibrating the apron-frame, an endless traveling apron mounted on the frame which is constructed to form an air-chamber beneath the apron which closes the said chamber at the top, an auxiliary air-chamber mounted on the apron-

frame in proximity to the main air-chamber, delivery-pipes communicating with the auxiliary chamber and projecting into the main chamber below the apron, the said pipes having openings for the escape of air to the main chamber, and means for introducing air under pressure to the auxiliary air-chamber.

3. The combination of an endless traveling apron constructed to allow an air-blend to pass therethrough, a vibratory apron-frame having an air-chamber closed at the top by the apron, means for vibrating the apron-frame, an auxiliary air-chamber mounted on the vibratory frame, means for delivering air from the auxiliary chamber to the main chamber below the apron, and means for introducing air under pressure to the auxiliary air-chamber.

4. The combination of an apron-frame mounted to vibrate and provided with an air-chamber, means for vibrating the apron-frame, an endless traveling apron mounted on the frame and closing the air-chamber at the top, the apron being composed of suitable material to allow the air to pass therethrough, an auxiliary air-chamber, means for introducing air under pressure to said auxiliary chamber, and pipes leading from the auxiliary chamber and provided with openings for the escape of air below the apron, the said pipes being rotatable whereby the angle of the delivered air-jets may be varied at will.

5. The combination with a stationary frame, of a vibratory apron-frame mounted thereon and provided with an air-chamber, means for vibrating the apron-frame, an endless traveling apron mounted on said frame and closing the air-chamber at the top, an auxiliary air-chamber mounted on the apron-frame, means for introducing air under pressure to said auxiliary chamber, outlets from the auxiliary chamber to the main chamber, and means for controlling and regulating the exit of the air from the auxiliary chamber to the main chamber.

6. The combination with a stationary frame, of an apron-frame mounted to vibrate thereon, and provided with an air-chamber, means for vibrating the apron-frame, an endless traveling apron mounted on the vibratory frame, the apron being arranged to close the air-chamber at the top and constructed to allow air to pass therethrough, an auxiliary air-chamber provided with outlets to the main chamber, means connected with the auxiliary chamber for forcing air thereto, and slides located in the auxiliary chamber and adapted to be actuated from the outside of the chamber, for regulating the escape of air from the auxiliary to the main chamber.

7. The combination with a suitable stationary frame, of a vibratory frame, means for vibrating the last-named frame, longitudinal bars, means located at the extremities of the bars for adjusting the latter vertically, shoes attached to the vibratory frame in sliding engagement with the bars, and buffer-springs mounted on the bars and engaging one pair of shoes.

8. The combination with a suitable stationary frame, having dotted standards mounted thereon, of longitudinal bars, cross-bars to which the longitudinal bars are secured, vertically-movable boxes in which the cross-bars are mounted, the extremities of the cross-bars protruding into the slots of the standards, screws connected with the boxes of the cross-bars, nuts applied to the screws and engaging the top of the standards, a vibratory frame slidably mounted on the longitudinal bars, and means for vibrating said last-named frame.

9. In a dry cro-concentrator, the combination with a stationary frame, of an apron-frame mounted to vibrate thereon, means for vibrating the apron-frame and composed of two side plates, cross-plates connecting the side plates, a plate attached to the cross-plates and forming a bottom for an air-chamber, tracks attached to the side plates above the bottom and forming a support for the apron, and drums journaled in the side plates beyond the air-chamber, yielding flaps attached to the bottom plate and overlapping the drums for closing the air-chamber at the ends, and an endless concentrating-apron passing around the end drums and closing the air-chamber at the top.

10. The combination with a suitable stationary frame, of an apron-frame mounted to vibrate thereon, means for vibrating the last-named frame, a shaft journaled in the stationary frame, pinions operated from the shaft and connected with the apron-frame, drums journaled in the apron-frame at the extremities of the air-chamber and around which the apron passes, a blower connected with the air-chamber to deliver air thereto, an operating-shaft, a connection between said shaft and the blower for operating the latter at a high rate of speed, and a speed-reducing connection between the operating-shaft and one of the end drums for operating the apron at a comparatively lower rate of speed.

11. The combination with a suitable stationary frame, of a vibratory frame mounted thereon, means for vibrating the last-named frame, and provided with an air-chamber, drums journaled in the frame at the ends of the air-chamber, an endless traveling apron passing around the drums and closing the air-chamber at the top, a blower, a flexible connection between the blower and the air-chamber, an operating-shaft, a connection between said shaft for operating the blower at a high rate of speed, and a speed-reducing and speed-regulating connection between the shaft

and one of the end drums for operating the apron, said connection including two oppositely-arranged central pulleys, a belt connecting said pulleys, and suitable means for shifting the belt on the pulleys and maintaining it in the adjusted position.

12. The combination of a stationary frame, an apron-frame mounted to vibrate thereon and provided with an air-chamber, means for vibrating the apron-frame, and drums journaled in the frame, yielding flaps attached to the extremities of the air-chamber bottom and engaging the drums to close the air-chamber at the ends, and an endless traveling belt or apron engaging the drums and closing the air-chamber at the top, said apron being composed of material adapted to allow air under pressure to pass therethrough from the air-chamber below.

13. In a dry ore-concentrator, the combination with an air-chamber, of an endless apron arranged to close said chamber at the top, said apron comprising a body part of flumes or other material adapted to allow air to pass therethrough under pressure, rubber strips attached to the edges of the apron, each of said strips having two flanges extending approximately at right angles to each other, one of which flanges projects above the concentrating-surface of the apron and maintains the ore thereon, the other flange being secured to the edge of the apron, rods or reinforcing-pieces extending transversely across the apron on its inner surface, their extremities being attached to the outer edges of the apron, and strips composed of leather or other suitable material attached to the edges of the apron on its inner surface.

14. In a dry ore-concentrator, the combination with a stationary frame, an apron-frame mounted to vibrate thereon, means for vibrating the apron-frame, an endless traveling apron mounted on the last-named frame, and an oscillatory heater device engaging the concentrating-surface of the apron during its rearward travel, to remove the concentrate, said device being mounted on the vibratory frame, and a stationary part with which a part of the said device is connected for operating purposes.

15. In a dry ore-concentrator, the combination with a stationary frame, of an apron-frame mounted to vibrate thereon, means for vibrating the apron-frame, an endless traveling apron mounted on said last-named frame, a heater arranged to engage the concentrating-surface of the apron during its rearward travel for the purpose of removing its concentrate, said device including a transverse bar pivotally connected with the vibratory frame, a crank-arm attached to said bar, and a link attached to the stationary frame and connected with the arm of the heater-bar for operating purposes.

16. In a dry ore-concentrator, the combination with a stationary frame, an apron-frame mounted to vibrate thereon, means for vibrating the apron-frame, an endless traveling apron mounted on the last-named frame, and an oscillatory heater device engaging the concentrating-surface of the apron during its rearward travel, to remove the concentrate, said device being mounted on the vibratory frame, and suitable means for operating the heater device.

708,857. CORE-PLASTER. IRA A. WEAVER, Springfield, Ill., assignor to Sittley Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Nov. 15, 1901. Serial No. 28,772. (No model.)

Claim.—1. In a dropper for core-plaster, the combination with a seed-wheel having seed-receiving cells, of a stationary wall alongside one side of the line of travel of the cells, and an oscillating wall along the opposite side of the line of travel of the cells.

2. In a dropper for core-plaster, the combination with a seed-wheel having seed-receiving cells, of a stationary wall alongside one side of the line of travel of the cells, an oscillating wall along the opposite side of the line of travel of the cells, and extensions on the oscillating wall projecting toward the cells.

3. In a dropper for core-plaster, the combination of a seed-wheel having seed-receiving cells, a plate above the seed-wheel having a feeder extension disposed alongside the line of travel of the cells, a pivot for the feeder-plate concentric with the seed-wheel, means for rotating the seed-wheel and means for oscillating the feeder-plate.

4. In a dropper for core-plaster, the combination of a seed-wheel having seed-receiving cells, a feeder-plate pivoted concentric with the seed-wheel, flanges depending from the feeder-plate and a cam between the flanges to impart oscillating motion to the feeder-plate.

5. In a dropper for core-plaster, the combination of a toothed seed-wheel having seed-receiving cells, a feeder-plate pivoted concentric with the seed-wheel, flanges depending from the feeder-plate, a shaft below the seed-wheel a pin on the shaft to drive the seed-wheel and a cam on the shaft to oscillate the feeder-plate by engaging the flanges thereof.

6. In a dropper for core-plaster, the combination of an annular seed-wheel having seed-cells formed in its inner circumference, a stationary plate forming the inner wall of the cells, each plate being on a way from the cells throughout a part of its circumference and a stationary incline opposite the out-way space leading to free grain out of the cells and into the out-way space.

7. A cut-off for the seed-plates of plasters, comprising a housing, a cut-off having a cheek extending obliquely upward and backward through the housing, and a spiral spring in the housing tending to hold the operative end of the cut-off protruded from the housing.

708,858. STRIP-METAL-CASTING MACHINE. OTIS C. WHEAT, Minneapolis, Minn. Filed June 12, 1906. Serial No. 20,000. (No model.)

Claim.—1. A mold having an ingross and egress opening, a cover adapted to rotate over the mold, drive mechanism for rotating the mold and cover, a crucible connected with the mold, an ingate adapted to register with the mold and communicate with the crucible, a dam adjoining the ingate and an ejector positioned at said egress-opening for ejecting the cast strip; said crucible having mechanism by which molten metal is adapted to be continuously injected into the mold at the ingross-opening.

2. A machine of the dam set forth, consisting in combination of a mold journaled upon a support, an annular mold-cavity in said mold, a cover over said mold-cavity, means for rotating said mold and cover, an ingross and egress opening in the mold communicating with said cavity, a dam in said cavity adjoining said ingross-opening, an ejector positioned in said egress-opening, means for continuously injecting molten metal into said cavity and a speed-controller connected with the mold.

3. A casting-machine consisting in combination of a rotatable frame, including a mold-cavity, a transverse gate registering with said cavity, a notched dam carried by said gate, and a crucible and ladle having a system of valve-controlled passage-ways connecting with said gate and with a source of air-pressure.

4. A casting-machine consisting in combination of a rotatable frame, including a mold-cavity, a transverse gate registering with said cavity, a notched dam carried by said gate and a crucible and ladle carrying said

gate, having a system of valve-controlled passage-ways connecting with said gate and with a source of air-pressure.

5. A casting-machine, consisting in combination with the mold having an ingross mold-cavity, of drive mechanism for revolving said mold, a ladle and crucible both connected with a source of air-pressure by a system of valve-controlled passage-ways and a valve-controlled ingate carried by said crucible registering with said cavity, carrying a dam passing across said cavity.

6. A casting-machine, consisting of a mold having an ingross and egress opening, an inclined mold-cavity in said mold, means for rotating said mold, an ejector in said egress-opening; said mold consisting of a plurality of disks, concentric upon which said disks are journaled and to be revolved by said mechanism for adjusting the position of the concentricity of said disks so as to adjust the thickness of the mold-cavity.

7. A casting-machine, consisting of a system of vertical disks longitudinally adjacent, concentric mechanism for supporting said disks, lever mechanism connected to the concentric mechanism, a mold-cavity formed by the disks adapted to vary in size by operating the lever mechanism, a cover over said mold-cavity, an ingate registering with the cavity, a dam positioned in the cavity adjacent to the ingate, means for rotating the disks and cover and a crucible connected with the ingate and with a source of air-pressure by a system of valve-controlled passage-ways; said dam and ingate being separable from said disks.

8. A casting-machine, consisting in combination of the mold-frame, having a cavity, disks carried by a supporting-shaft and provided with mold-dams so combined and arranged as to form said cavity, a cover over said cavity, driving-mechanism for revolving said disks, a ladle and a crucible, both connected with a source of air-pressure by a system of valve-controlled passage-ways, having an ingate registering with said cavity, a notched dam adjacent to said ingate and positioned in said cavity, and a stationary ejector; said ingate and dam being movable upon a stationary frame.

9. The combination in a strip-metal-casting machine, of a number of disks fastened together and carried by a shaft, each having an adjusting mold-dam, driving means and adjusting mechanism for varying the thickness of the mold, a cover over the mold, an ejector fixed upon said frame and passing into said mold, a pair of guide-bars directed longitudinally toward said disks, a crucible with a ladle, both movable upon said guide-bars and carrying an ingate-block, and a dam which projects so as to register with the mold-cavity when the crucible is forward; said ladle and crucible being both connected with a source of air-pressure by a system of valve-controlled passage-ways, and a heater for said crucible; said disks, cover, dam, ingate-block and ejector being so arranged as to form a segmented mold.

10. A casting-machine, consisting in combination of a mold, having a mold-cavity, a cover over said cavity, a jacket carried by said mold adjoining said cavity, fluid feed and draining mechanism for said jacket, carried by a support, drive mechanism for revolving the mold-frame and cover, a crucible, having passage-ways respectively connecting with the mold-cavity and with a source of air-pressure, and a dam adjoining the passage-way registering with said cavity.

11. A casting-machine, consisting in combination of a journaled frame, including a mold-cavity, a journaled cover rotating over the mold-cavity, a water-jacket carried on the back of the frame adjoining the mold-cavity, an ingate registering with said cavity, a dam positioned in said cavity adjacent to said ingate; said dam and ingate being separable from said frame, an ejector having an inclined face passing out of said cavity, and means for rotating said frame and cover.

12. The combination with the mold, composed of disks, journaled together and including an annular mold-cavity, a segment of which is open, a cover over said cavity, a water-jacket carried by one of said disks, adjoining said cavity, of a movable valve-controlled ingate, transverse to said cavity, an ejector having a tapering edge interrupting said groove at said opening, a dam stopping said cavity adjacent to said ingate, and a crucible being connected with a source of air-pressure by a system of valve-controlled passage-ways, so as to continuously inject molten metal into the cavity.

13. A mold forming an inclined mold-cavity, a cover over said mold-cavity, a water-jacket carried by said mold adjoining said cavity, mechanism for adjusting said mold so as to vary the size of said cavity, an ejector arranged in the cavity and means for rotating said mold, in combination with a ladle, a crucible, an ingate and a dam; said ingate and dam being movably mounted upon a stationary frame and adjacent to said mold-cavity, and the ladle and crucible provided with heater and both constantly connected with a source of air-pressure by a system of valve-controlled passage-ways.

14. A casting-machine, consisting in combination of a rotatable journaled mold, including a mold-cavity, a cover over said cavity, a transverse gate registering with said cavity, and a notched dam carried by said gate, for the purpose specified.

15. A casting-machine, consisting of a revolving, jacketed mold, a crucible and a ladle, connected with a source of air-pressure by a system of valve-controlled passage-ways, parallel guides, longitudinally positioned with reference to said mold, said crucible and ladle being movably mounted upon said guides, an annular cavity in said mold, a cover over said cavity, an ingate carried by said crucible, adapted to register with said cavity and means for continuously revolving said mold and heating the crucible.

16. A machine of the class described consisting of a plurality of disks, concentric mechanism upon which said disks are journaled, an annular mold-cavity formed by said disks, lever mechanism carried by said concentric mechanism for adjusting the disks so as to vary the size of the mold-cavity, a dam in said cavity and means for revolving said disks and continuously injecting molten metal into and ejecting the cast strip from the cavity.

17. The combination of a number of adjacent disks, one of which carries a water-jacket, a water-supply pipe connected with said jacket; said disks arranged to form a mold-groove, a cover over said mold-groove, means for revolving the disks and cover, an ingate-block, a dam, an ejector, longitudinal guide-bars, a crucible, a ladle, a source of air-pressure to which said crucible and ladle are connected by a system of valve-controlled passage-ways; said crucible carrying said ingate and dam and movable upon said bars, means for locking said crucible with reference to the disks and a passage-way leading from the crucible to said ingate.

18. In a strip-metal-casting machine, the combination with the carrying-belt of a vertical disk-like frame journaled upon a shaft and having an annular mold-groove within, a cover over the mold-groove, driving mechanism for said mold and cover, speed-controlling mechanism connected with said driving mechanism, an ejector fixed in said groove carried by said shaft, a crucible movable forward and backward upon said bars having an ingate block and stop registering with and damming said mold-groove when the crucible is forward, mechanism by which the crucible is locked in position, said crucible connected with a source of air-pressure by a system of valve-controlled pipes, passage-ways connecting said crucible with said mold-groove, and a water-jacket carried by said disk-frame adjoining said mold-groove, with means for feeding fluid thereto and draining the same.

19. A casting-machine, consisting of revolvable disks concentrically journaled and adapted to form an annular mold-cavity, a dam passing across said cavity, a water-jacket carried by one of said disks adjoining said cavity, a cover over said cavity, adjusting mechanism connected to said disks, adapted to vary the size of the mold-cavity, a valve-controlled inlet leading to the cavity and a crucible connected with said inlet and to a source of air-pressure by a system of valve-controlled passage-ways; whereby molten metal is adapted to be continuously projected from the crucible into the cavity.

20. A casting-machine, consisting of revolvable disks, having adjoining mold-dams so arranged as to form a mold-cavity, a cover over said cavity, a water-jacket carried by said disks adjoining said cavity, means for revolving said disks, mechanism for adjusting the size of the mold-cavity by varying the position of the disks, mechanism by which the speed of the disks is governed, a stationary ejector extending into the mold-cavity, an ingate adapted to communicate with the mold-cavity and a dam adjoining the ingate adapted to stop the mold-cavity.

21. A strip-metal-casting machine, consisting of an annular mold, journaled upon a frame, a cover over the mold, a jacket carried by said mold, means for feeding cooling liquid to said jacket and draining it from the same, an ingate for receiving the molten metal into the mold, a dam adjoining said ingate, an ejector for ejecting the cast strip out of the mold, means for revolving said mold and cover and mechanism by which its speed is governed.

22. The combination of a mold, an annular groove in said mold, a cover adapted to revolve over the groove and positioned to form an ingross and egress opening for the groove, an ingate registering with the groove at the ingross-opening, an ejector entering the groove at the egress-opening, a dam adjoining the ingate, extending across the groove means for continuously projecting molten metal through the ingate into the groove and means for rotating the mold and cover.

23. A mold having a tapering mold-cavity therein, consisting of rotatory disks having mold-dams, means for rotating the disks, a jacket carried by said mold adjoining said cavity, a cover over the mold-cavity, a fluid ejector, driving mechanism for revolving said mold and cover, a speed-controller for said mechanism, a movable crucible and ladle, both connected with a source of air-pressure by a system of valve-controlled passage-ways, a heater for said crucible and an ingate carried by said crucible, having a notched dam passing across said mold-cavity.

24. A casting-machine, consisting of a mold journaled upon a support, having a mold-groove, a jacket adjoining said groove, a cover over said groove, means for feeding fluid to said jacket, a crucible and a ladle, both connected with a source of air-pressure by a system of valve-con-

traded passage-ways, a guideway upon which said crucible and ladle are movable toward the mold, a valve-controlled ingate carried by said crucible as to register with said groove, a dam adjoining said ingate, a blade-like ejector passing into the mold-groove, and positioned upon and carried by a fixed support as to eject the cast strip from the groove, driving means for said mold, speed-controlling means connected with said driving means, and a heater for the crucible, as shown, and for the purpose specified.

25. A casting-machine, consisting of a jacketed frame, rotatably journaled, having an annular mold-cavity positioned broadside toward the center of said frame and within the same, a cover over the mold-cavity, an ingate registering with said cavity at its edge, a notched dam adjoining said ingate and positioned in said cavity, a movable and independent carriage carrying said ingate and dam, an ejector having an inclined face in said cavity, and driving mechanism with means for controlling its speed.

26. A strip-metal-casting machine, consisting of a ladle in combination with a crucible, both connected with a source of air-pressure by a system of valve-controlled passage-ways, a heater for said crucible, an ingate-block, a dam, a mold-frame, having an annular mold-cavity within and positioned edgewise toward the front and back of said frame; said cavity being of tapering thickness longitudinally, an ejector in said cavity, a cover over said cavity and the driving mechanism for said frame and cover with means for controlling their speed; said ingate block and dam being so arranged as respectively to register with and intercept said cavity at its place of least thickness.

27. A machine of the class described, consisting of a mold, including a mold-cavity, a cover over said mold-cavity, drive mechanism for rotating said mold, an ingate registering with said cavity, a stop carried by said ingate and intercepting said cavity, a main receptacle, an egress passage-way from the main receptacle connecting with said ingate, an auxiliary receptacle, a passage-way between the receptacles, a valve in the passage-way between the receptacles, an air-supply reservoir, supply passage-ways between the reservoir and receptacles, valves interposed in said supply passage-ways and means for heating said receptacles.

28. A casting-machine consisting of a journaled mold having an annular mold-cavity, tapering in diametral cross-section, a water-jacket carried by said mold, a cover over the mold-cavity, mechanism for adjusting said mold and cover as to vary the size of the mold-cavity, means for rotating said mold and cover, and an ingate removable from the cavity, and a dam carried by said ingate.

29. A machine of the class described, consisting of a mold-frame, drive mechanism for rotating the frame, an annular mold-cavity, tapering in diametral cross-section to free the cast strip in the mold-frame, a cover over the mold-cavity, an ingate registering with said cavity, a dam adjoining the ingate and intercepting said cavity, a crucible by which the ingate is carried, a ladle, a connection between said crucible and ladle, ingate and egress passage-ways in said crucible and ladle, valve mechanism in said passage-ways and means for maintaining pressure in the crucible and ladle; whereby the metal gravitates from the ladle into the crucible and is projected through the ingate continuously.

30. A machine of the class described, consisting of a journaled mold, an annular mold-groove tapering in diametral cross-section to free the cast strip in said mold, a cover over the mold-groove, drive mechanism for revolving said mold and cover, an ingate registering with said groove, a stop carried by said ingate intercepting said groove, a main receptacle, an egress passage-way from the main receptacle connecting with said ingate, an auxiliary receptacle, a passage-way between the receptacles, a valve in the passage-way between the receptacles, an air-supply reservoir, supply passage-ways between the reservoir and receptacles, valves interposed in said supply passage-ways and means for heating said receptacles.

31. In a machine of the class described, a revolvable mold, an annular mold-cavity tapering in diametral cross-section in said mold to free the cast strip, a cover over the mold-cavity and a notched dam positioned in said cavity, for the purpose specified.

32. In a machine of the class described, a journaled mold, means for revolving said mold, an annular mold-cavity tapering in diametral cross-section to free the cast strip from the mold, a cover over said cavity, a dam intercepting said cavity, and speed-controlling mechanism connected to said driving mechanism.

33. In a machine of the class described, the combination of a revolvable mold, a water-jacket carried by said frame, a mold cavity tapering in diametral cross-section to free the cast strip in the mold, a cover over said cavity, a transverse gate registering with said cavity, a notched dam carried by said gate, drive mechanism for revolving the mold and mechanism for controlling the speed of the mold.

34. A casting-machine, consisting of a frame, an annular mold-groove, tapering in diametral cross-section to free the cast strip, in said frame, a cover over the mold-groove, drive mechanism for rotating said frame and cover, a plurality of receptacles adjoining the frame, an egress

passage-way in the bottom of each receptacle, valve mechanism in the receptacles for the ingate and egress of the metal, means for maintaining pressure in one of said receptacles as to eject molten metal continuously, means for heating the receptacles and a stop passing across said cavity, carried by said receptacle.

35. An apparatus, consisting in combination of a mold-frame journaled upon a support, means for rotating said frame, an annular mold-cavity tapering in diametral cross-section in the frame, a cover over said cavity, an ingate and egress opening in the mold-frame communicating with said cavity, an ejector positioned in the egress-opening and entering the cavity, a dam in said ingate-opening and a speed-controller in the drive mechanism.

36. A casting-machine, consisting of a frame, having a mold-cavity, means for rotating said frame, an ingate and egress opening in the frame communicating with said cavity, a cover over said cavity, a dam entering the cavity of the ingate-opening, an ejector entering the cavity at the egress-opening, a water-jacket carried by the frame adjoining the cavity and mechanism for feeding water into said jacket for cooling the frame; said cavity tapering in diametral cross-section from the ingate-opening toward the egress-opening to free the cast strip from the cavity.

37. A casting-machine, consisting in combination of a revolvable frame including a mold-cavity, a cover over said cavity, a transverse gate registering with said cavity, a notched dam carried by said gate and a crucible having a system of valve-controlled passage-ways connecting with said gate and with a source of air-pressure, said cavity tapering in diametral cross-section from the dam for the purpose of freeing the cast strip from the cavity.

38. A casting-machine, consisting in combination of a revolvable frame, an annular cavity tapering in diametral cross-section in said frame, a cover over said cavity, means for rotating said frame and cover, a transverse gate registering with said cavity at its place of least thickness, and a notched dam carried by said gate stopping said cavity.

39. A casting apparatus composed of a journaled frame, mechanism for rotating said frame, an annular mold-cavity tapering in diametral cross-section in the frame, a cover over said cavity, a ladle and crucible, both connected with a source of air-pressure by a system of valve-controlled passage-ways, a connection between said crucible and ladle, a valve-controlled ingate connecting said crucible with said mold-cavity and a dam carried by said crucible passing across said cavity.

40. In a strip-metal-casting machine on said bed, an annular groove in said frame, a cover over said groove, means for rotating said frame, an ejector passing into said groove and fixed upon a support, a crucible and ladle movable forward and backward upon said bed, an ingate-block, said groove tapering in diametral cross-section from the ingate-block to the ejector, a stop registering with and damping said groove when the crucible and ladle are forward; said ingate block and stop being carried by said crucible, mechanism for heating the crucible and ladle in forward position, and a system of valve-controlled passage-ways connecting said crucible and ladle with a source of air-pressure.

41. A casting-machine, consisting of a rotary mold-frame composed of vertical disks concentrically arranged and journaled, having faces so arranged as to form an annular mold-groove, an opening in said groove for the ingate and egress of the molten metal and the cast strip, respectively, an ejector intercepting said groove in said opening and an ingate registering with said groove in said opening; said groove tapering in diametral cross-section from the ingate to the ejector.

42. A casting-machine, consisting of a rotary mold composed of vertical disks, having faces so arranged as to form an annular mold-groove, a cover over said mold-groove, lever mechanism connected with said disks for adjusting the thickness of the mold-groove, a passage-way leading to the mold-groove, an ejector positioned in said passage-way and intercepting said groove and a dam blocking said groove at said passage-way; said groove tapering in diametral cross-section from the dam to the ejector.

43. A machine of the class described, consisting in combination of disks arranged to form an annular mold-groove, tapering in diametral cross-section, and having an ingate and egress opening, a cover over the mold-groove, an ejector intercepting said groove at said egress-opening, an ingate registering with said groove at said ingate-opening, a dam blocking said groove adjoining the ingate, and adjusting mechanism for said disks for varying the size of said groove.

44. A casting-machine consisting of a system of vertical disks longitudinally adjacent and concentrically journaled, a mold-cavity tapering in diametral cross-section formed by said disks, a cover over said cavity, lever mechanism connected to said disks, adapted to change the size of the mold and lock the disks in position, an ingate registering with said cavity, a dam positioned in the cavity adjacent to said ingate; said dam and ingate being removable from said disks, means for independently rotating said disks and cover and a crucible connected with said ingate and

with a source of air-pressure by a system of valve-controlled passage-ways.

45. A casting-machine, consisting in combination of a revolvable mold, an annular mold-cavity formed by said mold, a cover over the mold-cavity, an ingate and egress opening in said mold to said mold-cavity, a crucible adjoining the mold and registering with the ingate-opening, a ladle having an opening through which the metal may be passed, a valve in said opening; and a connection between the crucible and ladle, said crucible and ladle being connected with a source of air-pressure by a system of valve-controlled passage-ways.

46. A machine for casting metal strips, consisting in combination of a mold, an annular mold-cavity in said mold, means for rotating the mold, a cover over the mold-cavity, as positioned as to form an ingate and egress opening in the mold to the outside, means for rotating the cover, a dam intercepting said cavity at said egress-opening, a ladle, and a crucible, both the ladle and crucible being connected with a source of air-pressure by a system of valve-controlled passage-ways.

47. In a machine of the class described, a journaled mold including an annular mold-cavity, a cover adapted to rotate over the mold-cavity, an eccentric upon which the cover is journaled, an ingate registering with the mold-cavity, a notched dam adjoining the ingate, and means for rotating said mold and cover; said ingate and dam being removable from the mold-cavity.

48. A casting-machine, consisting of a journaled frame, an annular mold-cavity in said frame, a cover over said cavity, means for rotating said frame, a cover, an ingate, a dam adjoining said ingate and means for heating said frame and ingate; said ingate registering with said mold-cavity and consisting of a block and a nipple passing through the block; said block having its face contacting with the face of the mold-frame and the block and nipple composed of dissimilar metals to prevent cracking under the influence of heat.

49. In a machine of the class described, the combination with driving mechanism, of a plurality of independent disks, concentrically journaled, an annular cavity tapering in diametral cross-section to free the cast strip; a cover over the mold-cavity and a dam intercepting said cavity.

50. A casting-machine, consisting of a plurality of journaled disks, an annular groove formed by said disks, a cover over a segment of said groove, means for rotating said disks, a stationary ingate adapted to register with the covered portion of the groove, a notched dam adjoining the ingate and intercepting said groove, and an ejector having an inclined face intercepting the uncovered portion of the groove; said groove tapering in diametral cross-section from the dam to the ejector, whereby the cast strip is freed from the groove as the disks revolve.

51. A machine of the class described, consisting of a frame of disks 2, 3 and 4, so arranged as to form a mold-cavity, D, having the egress-opening E for the cast strip and tapering in diametral cross-section toward said opening from the place of ingate of the molten metal into the mold-cavity; a stationary support A upon which said disks are journaled; means for adjusting said disks; a water-jacket G; a crucible O adjoining said frame of disks; an ingate-block J, carried by said crucible; a dam L adjoining the ingate-block; an air-reservoir; valve mechanism connecting said reservoir with said crucible, adapted to project the molten metal from the crucible into the cavity in a continuous stream; a heater adjoining the crucible; an ejector F positioned in the egress-opening, corresponding in thickness and shape respectively with the thickness and curvature of the mold-cavity, mounted on the frame A and so arranged as to eject the cast strip from the cavity; mechanism H for rotating the disks, and a controller I, connected with the disks, for governing their speed, said frame of disks positioned adjoining and having its cavity registering with said ingate-block.

52. A casting-machine, consisting in combination with a revolvable mold, of an annular groove in said mold, a cover-disk over the groove, means for rotating said mold and disk, mechanism for governing the speed of the mold and disk, a chuck upon which the mold is journaled, an ejector fixed in said groove and carried by said disk, carrying mechanism adjoining the mold, a carriage movable forward and backward upon said carrying mechanism, a crucible mounted upon the carriage, an ingate block and stop carried by the crucible adapted respectively to register with and dam the mold-groove when the carriage is forward, means for heating the carriage in operative position and an air-reservoir to which the crucible is connected, adapted to project the molten metal from the crucible into the mold-groove in a continuous stream.

708,859. SPEED-CHANGING DEVICE. JAMES A. WHITE, Philadelphia, Pa., assignor of one-half to John W. Moore, Philadelphia, Pa. Filed Jan. 22, 1902. Serial No. 92,327. (No model.)

Claim.—1. A band having an inner face transversely tapered from one edge to the other, whereby it is adapted to a cone-pulley, said inner face being susceptible of longitudinal expansion and contraction, substantially as described.

2. A band having an inner face transversely tapered from one edge to the other, whereby it is adapted for application to a cone-pulley, said inner face being susceptible of longitudinal expansion and contraction in varying degree from the thinner to the thicker edge of the same, substantially as described.

3. The combination of a cone-pulley, a band applied thereto, said band being tapered in cross-section and susceptible of longitudinal expansion and contraction on its inner face, and a power-transmitting belt bearing externally upon said band, substantially as described.

4. The combination of a pair of cone-pulleys, a band applied to each of said pulleys, said band being tapered in cross-section and susceptible of longitudinal expansion and contraction on its inner face, and a power-transmitting belt bearing externally upon each of said bands, substantially as described.

5. A band for application to a cone-pulley, said band having on its inner face transverse blocks forming the bearing-surfaces of the band on the pulley, said blocks being tapered in thickness from one edge of the belt to the other, and also tapered in width at their bearing-edges from the thin end of the block to the thick end of the same, substantially as described.

6. A band for application to a cone-pulley, said band having on its inner face transverse blocks forming the bearing-surfaces of the band on the pulley, said blocks being tapered in thickness from one edge of the belt to the other, and also tapered in width at their bearing-edges from the thin end of the block to the thick end of the same, and having said bearing-edges covered with leather, substantially as described.

7. A band for application to a cone-pulley, said band having on its inner face transverse blocks forming the bearing-surfaces of the band on the pulley, said blocks being tapered in thickness from one edge of the belt to the other, and also tapered in width at their bearing-edges from the thin end of the block to the thick end of the same, and having said bearing-edges covered with leather, substantially as described.

8. The combination of a cone-pulley, a band adapted thereto and tapered in cross-section to conform therewith, a driving-belt applied to the outer face of said band but narrower than the same, and a shifting device acting only upon the band to shift the band and belt on the pulley, substantially as described.

9. The combination of two pulleys, one of which is conical, a driving-belt passing around both pulleys, and a loose intermediate compensating band on the conical pulley, substantially as and for the purpose set forth.

708,860. WASHING-MACHINE. JAMES W. WATSON, Fremont, Wash. Filed Jan. 7, 1902. Serial No. 92,792. (No model.)

Claim.—A washing-machine, comprising a scrub-board adapted to engage the edge of a tub, and provided upon its under side with a longitudinal groove, an oscillating rubber adjacent to said scrub-board, a longitudinal board partially buried within said groove, said board being pro-

vided with a longitudinal slot disposed parallel to the general direction of said groove, and also provided with a longitudinal flat plate extending throughout the entire length of said board, and provided at its extremity with a hook for engaging the edge of a tub, said hook being bent upward so that the top edge of the curb-board is substantially level with the top edge of the tub, and a thumb-screw engaging said slot and also engaging a curb-board for the purpose of clamping said longitudinal board within said groove, the arrangement being such that said longitudinal board is held in proper alignment by said groove and said thumb-screw.

708,861. THIRD-RAIL SYSTEM OF MAGNETO-ELECTRIC RAILWAY. WILLIAM H. WILSON, Buffalo, N. Y. Filed Aug. 19, 1891. Serial No. 74,672. (No model.)

Claim.—1. In an electric railway, a third rail, a conductor-conduit arranged beneath said rail and parallel thereto, means for connecting during the passage of the car the third rail to the conductor, an electromagnet on the car to operate said connecting means, means for energizing said magnet, and a trolley-wheel journaled on said electromagnet and arranged to make contact with the third rail.

2. In an electric railway, a third rail, a conduit arranged beneath said rail and parallel thereto, means for making connection temporarily during the passage of the car between said conductor and said third rail, a bar-electromagnet supported on the car, coils arranged on the ends of the said bar-magnet, means for energizing said coils, and a contact trolley-wheel journaled on said bar-magnet and arranged to make contact with the third rail.

3. In an electric railway, a third rail, a conduit arranged beneath said third rail and parallel thereto, a main conductor arranged in said conduit and suitably insulated therein, means for making connection between the third rail and the main conductor during the passage of the car, a trolley-wheel hinged to the car, a bar-electromagnet contained in a fixed position in said shell and arranged at right angles to the third rail, coils on the end of said bar-magnet, means for energizing said coils, a trolley-wheel arranged in said shell and adapted to make constant contact with the third rail, said trolley-wheel being journaled by ball-bearings on the bar-magnet.

4. In an electric railway, a third rail, a conduit arranged beneath said third rail and parallel thereto, the third rail forming the top of the conduit, a main conductor arranged in said conduit and suitably insulated, means for temporarily making connection during the passage of the car between the under surface of the third rail and the main conductor, a trolley-wheel provided with end plates and a supporting-arm, a hinged connection between said supporting-arm and the car or truck, a bar-magnet having regular ends fitted to the end plates and arranged at right angles to the third rail, coils on the ends of said bar-magnet, means for energizing said coils, a contact trolley-wheel by ball-bearings, internal flanges on the trolley-wheel forming cups, corresponding cups threaded to fit the bar-magnet, jam-nuts also threaded to fit said bar-magnet, and suitably connecting the trolley-wheel to the motor.

5. In a magneto-electric system of propelling cars, a conduit, a main conductor suitably insulated in said conduit, a sectional third rail forming the top of the conduit composed of insulated sections and forming a temporary conductor parallel with the main conductor, intermediate conductors journaled on the under surface of the third rail, a bar-magnet arranged on the car at right angles to the third rail for magnetically influencing the intermediate conductors temporarily to make contact between the main conductor and the third rail, a contact trolley-wheel journaled on said bar-magnet, suitable wiring on the car, and a motor on the car.

6. In a combined conduit and third rail for an electric-railway system, a rail-base of U shape having outwardly-extending flanges at its base, an intermediate U-shaped piece fitted to said base and having outwardly-extending flanges, both connecting the intermediate piece to the base, a third rail forming the top of the conduit having an upwardly-extending rib-section, outwardly-extending flanges and downwardly-extending flanges on the ends of said outer flanges, insulating material arranged beneath said third-rail section and the intermediate piece, both for securing the third-rail section to the intermediate piece, means for insulating said rails, and a main conductor suitably insulated and arranged in said conduit.

7. In an electric railway, a car, a third rail, a conduit beneath said rail and parallel thereto, a main electric conductor within said conduit, an electro-bar-magnet placed in a horizontal position below the car with its pole ends arranged at right angles to and above the rail and its middle portion centrally over the rail, said bar-magnet held stationary in a metal frame and hinged to the car-truck, means for adjusting a trolley-wheel to the central surface portion of said bar-magnet, means for proper wiring of said magnet, means for proper insulation, means for conducting the electric current from the main conductor upward through the rail and said bar-magnet to the car, means for conducting the magnetic current downward from the consequential pole or middle portion of said bar-magnet through the rail; substantially as shown and described.

8. In an electric railway, a third rail, a closed conduit within said rail, a main electric conductor in said conduit, a sectional metallic cover to combined rail and conduit, forming a temporary conductor parallel with the main conductor, intermediate conductors journaled to lower side of said temporary conductor, said intermediate conductors held in a normal non-contacting position, an electro-magnet and trolley arranged at right angles to the third rail, and in metallic contact with the temporary conductor, coils on the ends of said electro-magnet, means for energizing said coils direct from the main conductor and means for magnetically influencing the temporary conductor direct from the consequential pole of the electro-magnet.

9. In an electric railway, a combined third rail and closed conduit, a main conductor in said conduit properly insulated, intermediate magnets in the conduit, means for magnetically influencing the intermediate magnets from the temporary conductor by induction, said temporary conductor being suitably insulated from each other and the main rail, a three-pole magnet on the car, magnetic means extending from the three-pole magnet in metallic contact with third rail for closing electric circuit between the temporary conductor and main conductor, magnetic means for forming a metallic contact between the intermediate magnets and the main conductor, means for forming a metallic contact between the temporary conductor and main conductor, the car, a motor on car and suitable wiring on car.

10. In a magneto-electric system for propelling railway-cars, a closed conduit, a main electric conductor within said conduit suitably insulated, a sectional third rail forming the top of the conduit composed of insulated sections and forming a temporary conductor parallel with the main conductor, intermediate conductors journaled on the under surface of said rail and always in continuous metallic contact with the main, said intermediate conductors operated by magnetic induction, a three-pole electro-bar-magnet contained in a shell frame and in a fixed position at right angles to the third rail, a trolley-wheel journaled on said bar-magnet in metallic contact with the temporary conductor, coils on said magnet, means for energizing said electro-magnet direct from the main conductor, a car, a motor on the car, suitable wiring on the car, means for conducting the electric current from the main conductor to a storage battery on the car and means for energizing the coils or electro-magnet from the storage battery.

REISSUES.

12,002. LUBRICATOR. JAMES J. TUNNEY, Pittsburg, Pa. Assignor to John Jenkins, Pittsburg, Pa. Filed Feb. 25, 1892. Serial No. 59,642. Original No. 679,944. (Filed July 28, 1891.)

Claim.—1. In a lubricator, a casing adapted to contain oil and to be secured to a revolving body, a hollow body secured to the casing, a tube longitudinally slidably connected to the hollow body, said body and tube being provided with lateral ports adapted to register and permit oil in the casing to pass into the interior of the tube, said tube conducting

the oil toward the axis of the revolving body, and its extreme outer end being telescopic with the hollow body.

2. In a lubricator, a casing adapted to contain oil and to be secured to a revolving body, a hollow body secured to the casing, a tube longitudinally slidably connected to the hollow body, said body and tube being provided with lateral ports adapted to register and establish communication between the interior of the casing and of the tube, and to pass out of registry whereby said communication is broken, said tube conducting the oil toward the axis of the revolving body and its extreme outer end being telescopic with the hollow body.

3. In a lubricator, a casing adapted to contain oil and to be secured to a revolving body, a hollow body secured to the casing, a tube longitudinally slidably connected to the hollow body, said body and hollow body being provided with lateral ports adapted to register and establish communication between the interior of the casing and of the tube, and means for causing the sliding of said tube, said tube conducting the oil toward the axis of the revolving body and its extreme outer end being telescopic with the hollow body.

4. In a lubricator, in combination with a fitting adapted for attachment to a revolving body, a casing secured to said fitting, a nipple connected to the upper end of said casing and having arranged therein parts, a hollow stem in which are arranged openings extending transversely thereto and adapted to register with the ports formed in the nipple, a weight arranged on said stem, and a spring enclosing the said stem between said nipple and weight.

5. In a lubricator, in combination with a fitting adapted for attachment to the hub of a pulley, a casing secured to said fitting, a nipple connected to the upper end of said casing and having arranged therein parts, a hollow stem in which are arranged openings extending transversely thereto and adapted to register with the ports formed in the nipple, a weight arranged on said stem, a spiral spring enclosing the said stem between said nipple and weight, and a screw-threaded cap adapted to hold said nipple in position.

6. In a lubricator, in combination with a fitting adapted for attachment to the hub of a pulley, a casing secured to said fitting, a nipple secured within the casing carrying a head and having formed therein a port, slots arranged in said nipple, a stem having a central opening and transversely-extending parts communicating therewith, pins arranged on said stem adapted to operate in said slots, a weight secured to said stem, a spiral spring enclosing said stem, and a cap arranged upon the upper end of said spherical casing and engaging the head of the nipple.

7. In a lubricator, the combination with a cone-shaped fitting adapted for attachment to the hub of a pulley, a spherical casing secured to said cone-shaped fitting, a nipple connected to the upper end of said spherical casing and having arranged therein parts, a hollow stem in which are arranged openings extending transversely thereto and adapted to register with the ports formed in the nipple, a weight arranged on said stem, a spiral spring enclosing the said stem between said nipple and weight, and a screw-threaded cap adapted to hold said nipple in position, substantially as described.

8. In a lubricator, in combination with a cone-shaped fitting adapted for attachment to the hub of a pulley, a spherical casing secured to said cone-shaped fitting, a nipple secured within the casing carrying a head and having formed therein a port, slots arranged in said nipple, a stem having a central opening and transversely-extending parts communicating

therewith, pins arranged in said stem adapted to operate in said slots, a weight secured to said stem, a spiral spring enclosing said stem, and a cap arranged upon the upper end of said spherical casing and engaging the head of the nipple, all parts being arranged and operating substantially as described.

12,008. PROCESS OF HEATING METAL PARTS. ROBERT DUNN, Ltd., Tipton, near Birmingham, England. Assignor to Charles A. Schmitt, Berlin, Germany. Filed Oct. 1, 1899. Serial No. 22,522. Original No. 685,200. (Filed Apr. 12, 1898.)

Claim.—1. The process of heating parts of metallic objects consisting in subjecting the same to the heat resulting from the chemical reaction taking place in an ignited mass of finely-divided aluminum and an oxygen or sulfur bearing compound, substantially as described.

2. The process of heating parts of metallic objects consisting in enclosing them in a mass of finely-divided metallic aluminum, and a sulfur or oxygen bearing metallic compound, igniting the mass and after the reaction has propagated itself through the whole mass removing the slag formed thereby, as specified.

12,004. HOT-AIR SIDE-WALL REGISTER. GEORGE ALLEN, Toledo, Ohio. Filed May 21, 1900. Serial No. 106,440. Original No. 697,940. (Filed Aug. 24, 1899.)

Claim.—1. A side-wall hot-air register comprising a casing having an opening in its front for escape of hot air, an adjustable swinging door adapted to tightly close said opening in one position, and to be swung inward to more or less close the casing and deflect more or less hot air into the room, and a grating extending across the throat of the casing below the door and front opening in casing, said door being adapted to be held in various adjusted positions by contact with the grating, substantially as and for the purpose described.

2. In a side-wall hot-air register, a casing having front-opening at bottom and an unobstructed opening in its front side for escape of hot air, and a detachable front frame surrounding the opening in the casing, a swinging door adapted to tightly close said opening in one position, and to be swung inward to more or less close the casing and deflect more or less hot air into the room, the upper edge of the door being confined at the top of the front opening, and a grating extending from the lower edge of said front opening inwardly to the rear side of the casing, substantially as described.

3. A hot-air side-wall register comprising a casing having a hot-air inlet at bottom, and a hot-air-escape opening in its front side, a grating within the casing extending from the lower edge of the front opening to the rear of casing and adapted to prevent articles falling through the casing; and a swinging door having its upper edge confined at the upper edge of the front opening in the casing, and adapted to be swung inwardly over the grating and upheld thereon, substantially as and for the purpose described.

4. In a hot-air side-wall register, a casing having a large hot-air inlet at bottom, a smaller hot-air outlet at top, and a hot-air-escape opening in its front side; a grating within the casing extending from the lower

June 24, 1908.

edge of the front opening to the rear of casing adapted to prevent articles falling into the fire, a detachable front frame fitted to the front of casing and surrounding the front opening therein, a swinging door having its upper edge loosely confined at the upper edge of the front opening in the casing and adapted to be swung more or less inwardly over the grating and to be upheld thereon, substantially as described.

5. A side-wall hot-air register comprising a casing having an opening in its front for escape of hot air, an adjustable grating swinging door adapted to tightly close said opening in one position, and to be swung inward to more or less close the casing and deflect more or less hot air into the room, and a grating extending across the throat of the casing below the door and front opening in casing and by which the door is kept in position within the casing, substantially as described.

6. A hot-air side-wall register comprising a casing having a hot-air inlet at bottom, and a hot-air-escape opening in its front side, a grating within the casing extending from the lower edge of the front opening to the rear of casing and adapted to prevent articles falling through the casing; a swinging door having its upper edge confined at the upper edge of the front opening in the casing and adapted to be swung inwardly over the grating and upheld thereon, a ventilating air-chamber between the lower part of the frame and casing below the front opening, and air-spaces at the sides of the casing communicating with said ventilating-chamber, substantially as described.

7. The combination of a casing having an opening in its front side, and an adjustable swinging door adapted to close said opening or to be adjusted inwardly as to direct or deflect more or less air into the room; with the adjustable swinging valve in the casing below said door, and means for adjusting said valve, substantially as described.

8. The combination of a casing having an opening in its front, a grate located in said casing at the lower edge and in rear of said opening, and a door adapted to close said opening or to be adjusted inwardly over and supported by said grate as to direct or deflect more or less air into the room; with the valve in the casing below said grating, and means for adjusting said valve, substantially as described.

9. The combination of the casing having an opening in its front; with an adjustable door-damper for closing said opening, an upwardly-curved flange fixed within the casing having a series of notches adapted to engage the lower edge of the door and hold the same more or less open when swung inward over the flange, and a regulating-valve below the front opening and means for adjusting said valve.

10. The combination of the casing having an opening in its front, a door for closing said opening, and a grate located within the casing at the lower edge of said opening and extending across the casing, provided with a curved flange having a series of notches adapted to be engaged by the lower end of the door and hold the same more or less open; with a regulating-valve below the grating, and means for adjusting said valve, substantially as described.

11. In a hot-air register, the combination of the casing having a sloping top, an opening in said top communicating with a superimposed fire, an opening in the front wall of the casing, a grating extending from the lower edge of said front opening to the rear side of the casing and provided with a notched flange, a frame fitted around the front end of the casing, and an adjustable door having its upper end loosely engaged in a recess between the upper end of the casing and the frame, its lower edge being adapted to engage any of the notches in the flange for the purpose of adjusting the door, substantially as described.

12. In a hot-air register, the combination of the casing having a sloping top, an opening in said top communicating with a superimposed fire, an opening in the front wall of the casing, a grating extending from the lower edge of said front opening inwardly and upwardly to the rear side of the casing and provided with a notched flange, a frame fitted around the front end of the casing, and an adjustable door having its upper end loosely engaged in a recess between the upper end of the casing and the frame, its lower edge being adapted to engage any of the notches in the flange for the purpose of adjusting the door; with a valve in the casing below the grate, and means for operating said valve, and a ventilating air-chamber between the frame and the casing below the front opening in the latter, and air-spaces at the sides of the casing communicating with said ventilating-chamber, all substantially as described.

13. In a hot-air register, the combination of the casing having an opening therein at the front, and an adjustable door-damper for closing said opening; with a grating in the casing having a curved flange provided with a series of notches adapted to be engaged by the lower edge of the door when the latter is swung inward and hold the door more or less open and support the same, substantially as described.

14. In a hot-air register, the combination of the casing having an opening in its front, an adjustable swinging door for closing said opening, and a grating located at the lower edge of said opening and extending

across the interior of the casing provided with a curved flange on one end having a series of notches adapted to be engaged by the lower end of the door to support the latter and hold the same more or less open, substantially as described and for the purpose set forth.

15. In a hot-air register, the combination of the casing having an opening in its front, an adjustable inwardly-swinging door-damper for closing said opening, a regulating-valve below the opening, and means for adjusting said valve; said casing being provided with air-spaces at each side and an air-space below the opening therein communicating with the room and with said side air-spaces, for the purpose of ventilating the room, substantially as described.

16. In a hot-air register, the combination of the casing having an opening in its front, an adjustable swinging door for closing said opening, an air-chamber below the opening communicating with the room and with air-spaces at each side of the casing, and a grating located at the lower edge of said opening and extending across the casing, provided with a flange on one end having a series of notches adapted to be engaged by the lower end of the door and support the latter and hold the same more or less open; with the regulating-valve below the grate and means for adjusting said valve, substantially as described.

DESIGNS.

85,968. HANDLES FOR SPOONS, FORKS, OR SIMILAR ARTICLES. EDWARD GUNN and CHARLES A. GUNN, Providence, R. I., assignors to Watson & Howell Company, Attleboro, Mass. Filed May 10, 1908. Serial No. 107,002. Term of patent 7 years.

Claim.—The design for the handle of a spoon, fork, or similar article, as herein shown and described.

85,964. HANDLES FOR SPOONS, FORKS, OR SIMILAR ARTICLES. ALBERT E. HANAWAY, North Attleboro, Mass., assignor to E. Hanaway & Company, North Attleboro, Mass., a Firm. Filed May 21, 1908. Serial No. 100,001. Term of patent 7 years.

Claim.—The design for the handle of a spoon, fork, or similar article, as herein shown and described.

June 24, 1908.

U. S. PATENT OFFICE.

2957

85,965. HANDLES FOR SPOONS, FORKS, OR SIMILAR ARTICLES. ALBERT E. HANAWAY, North Attleboro, Mass., assignor to E. Hanaway & Company, North Attleboro, Mass., a Firm. Filed May 21, 1908. Serial No. 100,002. Term of patent 7 years.

Claim.—The design for the handle of a spoon, fork, or similar article, as herein shown and described.

85,966. FOOT OF BUCKLE-TYPE. HENRY BAKER, Chatham, N. Y., assignor to American Type Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 20, 1908. Serial No. 100,111. Term of patent 14 years.

Claim.—The design for a foot of buckle-type as herein shown and described.

85,967. FOOT OF BUCKLE-TYPE. HENRY BAKER, Chatham, N. Y., assignor to American Type Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 20, 1908. Serial No. 100,100. Term of patent 14 years.

Claim.—The design for a foot of buckle-type as herein shown and described.

85,968. TRIMMING. GEORGE E. TAYLOR, New York, N. Y., assignor to the Knickerbocker Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Apr. 24, 1908. Serial No. 100,101. Term of patent 14 years.

Claim.—The design for a trimming substantially as shown and described.

TRADE-MARKS

REGISTERED JUNE 24, 1902.

88,497. **PIREX.** THE PYREXAN STEEL PIPE MANUFACTURING CO., Camden, N. J., and New York, N. Y. Filed May 12, 1902.

LITTLE GEN
709

The words "LITTLE GEN" and the number "709." Used since February 20, 1902.

88,488. **PIREX.** THE PYREXAN STEEL PIPE MANUFACTURING CO., Camden, N. J., and New York, N. Y. Filed May 12, 1902.

The facsimile-signature of the old firm "R. EVERBROOK & Co." Used since June 1, 1899.

88,499. **DRUM-SHIELDS.** THE CAMFIELD BROS. CO., Bridgeport, Conn., and New York, N. Y. Filed May 7, 1902.

The representation of two drum-shields, one partly overlying or overlapping the other. Used since July 1, 1901.

88,500. **DRUM-SHIELDS.** THE CAMFIELD BROS. CO., Bridgeport, Conn., and New York, N. Y. Filed May 7, 1902.

The representation of two drum-shields, one overlying and partly concealing the other, the outer or top shield having the lower end of one section turned up, exposing the inner face of both sections of the top shield. Used since July 1, 1901.

88,501. **COGNATE.** CHARLES COLLIER, Paris, France. Filed May 14, 1902.

LE MYSTÈRE

The words "Le Mystère." Used since January 16, 1900.

88,502. **COGNATE.** ROYAL WINDMILL COGNAC CO., Worcester, Mass. Filed May 14, 1902.

ROYAL BLUE

The words "ROYAL BLUE." Used since May 5, 1902.

88,508. **COGNATE.** ROYAL WINDMILL COGNAC CO., Worcester, Mass. Filed May 14, 1902.

PING PONG

The words "PING PONG." Used since May 1, 1902.

88,504. **SHIRTLESS.** RALPH HALL, Boston, N. C. Filed May 12, 1902.

JUNE 24, 1902.

U. S. PATENT OFFICE.

2939

The head of what is known as the "Told Woman." The face is exposed in front view. A cardstock contains the head, with intermediate representation of the folds of a veil or drapery. Used since January, 1902.

88,505. **SHIRTLESS.** RALPH HALL, Boston, N. C. Filed May 12, 1902.

A representation of a Chinaman and a bear dancing. Used since January, 1902.

88,506. **SHIRTLESS AND SHIRTLESS.** GEORGE L. HARTWELL, New York, N. Y. Filed May 12, 1902.

A representation of two Chinese dogs rampant, the larger one sitting upon his hind legs crouching on attack by the other, which crouches in a position ready to spring at the larger one, and a circle surrounding the same. Used since 1900.

88,507. **SHIRTLESS, SHIRTLESS, AND DRILL.** EDWARD L. GERRARD, New York, N. Y. Filed May 1, 1902.

The representation of two winged dragons supporting a double medallion, with rampant lions appearing at the upper extremities of each arm of the medallion. Used since April 12, 1902.

88,508. **COTTON FABRIC.** WARR, HANNEY & CO., London, England. Filed May 1, 1902.

A representation of a dragon surrounding a bank of clouds, with its tail raised vertically, and a man mounted upon the dragon waving a hand upon his head and carrying about a blessing torch. Used since A. D. 1901.

88,518. FURNITURE AND FIXTURES. The Bureau of
Insurance Company, Inc., New York. Filed May 11, 1908.

88,510. COLLAPSEABLE TUBES, TIALK, BOXES, VACCINATION-
SHIELDS, AND WRAPPING-SHIELDS. TRANSPARENT CELLULOSE PRO-
TECTIVE COMPANY, Newark, N. J. Filed Apr. 28, 1922.

The word "CRYSTALLOID." Used since March 1, 1901.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

TALBOT v. MONELL.

Decided May 2, 1901.

1. MOTION TO SUPPRESS TESTIMONY—CONSIDERATION POSTPONED UNTIL FINAL HEARING.

Where a motion to suppress testimony involves a consideration of the entire record, such as is necessarily given at final hearing upon the question of priority, *Held* that a decision upon the matter will be postponed until that time.

2. INTERFERENCE—TESTIMONY—DEPOSITION IN ANOTHER PROCEEDING—DISCREDITING WITNESS.

Where for the purpose of discrediting a witness in an interference a deposition given by him in another interference is introduced, *Held* proper, but *Held*, further, that the deposition cannot be accepted as proper evidence to establish the facts stated in it.

3. SAME—SAME—DEPOSITIONS IN DIFFERENT PROCEEDINGS NOT ACCEPTED.

Where a party to one interference introduces in evidence the deposition of one of the witnesses given in another interference for the purpose of discrediting him, *Held* that this does not justify the opposing party in introducing the depositions of other witnesses in that other interference for the purpose of establishing the facts alleged by those witnesses.

APPEAL ON MOTION.

MANUFACTURE OF OVER-SEA-TH STEEL.

Application of Benjamin Talbot filed December 6, 1900, No. 38,974. Patent granted Ambrose Monell June 19, 1900, No. 652,226.

Mr. Charles N. Butler for Talbot.

Messrs. Bakewell & Bakewell for Monell.

ALLEN, Commissioner:

This case comes up on appeals by both parties from the decision of the Examiner of Interferences on a motion by Monell to suppress certain evidence on behalf of Talbot and on a motion by Monell that he be permitted to take surrebuttal testimony.

It seems that Monell introduced in evidence a copy of a deposition made by Talbot in a previous interference, *Talbot v. Wellman*, and in rebuttal Talbot introduced in evidence a copy of a deposition of one Barton, a witness in that previous interference, and also produced a witness, Roberts, who gave testimony which Monell does not consider proper rebuttal. Monell asked that the copy of Barton's testimony be stricken out and that the deposition of Roberts be also suppressed. The Examiner of Interferences denied the motion to suppress, but held that Monell should be permitted to take the testimony of one expert witness in surrebuttal of Roberts's testimony.

2000—13—11

To pass upon the question whether or not the evidence should be suppressed would require such a consideration of the very voluminous record in this case as will necessarily be given at final hearing, and for that reason a final disposition of the matter should be postponed until that time. (*Knight v. Morgan*, 83 O. G., 187.) Monell may raise the question at that time, and matter which is not proper evidence or which is not proper rebuttal will be disregarded in disposing of the case.

The Examiner of Interferences seems to have regarded the deposition of Barton as proper evidence in this case. Without going into the record sufficiently to finally settle the questions at issue, it may be said that it is difficult to see the principle upon which that deposition can be admitted as evidence. Monell was not a party to the interference in which Barton testified and Barton is not a witness in the present interference. In so far as Monell is concerned, therefore, Barton's deposition may be looked upon as an *ex parte* affidavit, since Monell has had no opportunity for cross-examination. The issues of an interference are not to be proved by *ex parte* affidavits. (*Nielson v. Bradshaw*, 91 O. G., 644.)

It is true that Monell introduced as an exhibit a copy of Talbot's deposition in that prior interference; but that seems to have been merely for the purpose of discrediting Talbot as a witness in this case and not as itself constituting evidence in this case. Talbot seems to have been cross-examined in this case as to the statements made in the prior interference for the purpose of showing contradictions. It is a well-settled principle of law that matter of this kind may be referred to for the purpose of discrediting a witness even where it is not itself proper evidence upon the facts of the case under consideration. The mere introduction of Talbot's deposition for that purpose does not warrant the consideration of the depositions of other witnesses in the prior interference merely because they were taken in the same case and bound in the same volume.

Since the deposition of Roberts will not at this time be suppressed, the holding that Monell should be permitted to take the testimony of a witness in surrebuttal is equitable. The propriety of the evidence presented will be considered at final hearing.

The decision of the Examiner of Interferences is affirmed.

2005

DITTGEN S. PARMENTER.

Decided June 9, 1902.

1. BURDEN OF PROOF—APPEAL—RIGHT TO MAKE CLAIM NOT INVOLVED.

Where a party to an interference is given the benefit of the date of an earlier application filed by him under Rule 116 and on a motion to shift the burden of proof the Examiner decides that the early case discloses the invention, *Held* that this is not a favorable decision upon his right to make the claim from which no appeal can be taken, but is merely a ruling as to his record proofs from which an appeal may be taken to the Commissioner.

2. BURDEN OF PROOF—CONTINUOUS APPLICATIONS—FAILURE TO CLAIM.

Where on a motion to shift the burden of proof it is argued that a party is not entitled to the benefit of the date of an earlier application because the claim was not made therein and because there was included a disclaimer of it, *Held* that this relates to his right to make the claim and not to the disclosure in the early case, which is the only thing considered under Rule 116.

APPEAL on motion.

OSCAR FOURCER.

Patent granted to John J. Dittgen November 30, 1901, No. 693,296; application filed May 4, 1899, No. 715,515. Application of Orville L. Parmenter filed January 9, 1901, No. 42,672.

Mr. George E. Parkinson for Dittgen.
Mr. H. E. Peck for Parmenter.

ALLEN, Commissioner.

This is an appeal by Dittgen from the decision of the Primary Examiner denying his motion to shift the burden of proof. Parmenter has filed a motion to dismiss the appeal on the ground that it is taken from a favorable decision on the question of Parmenter's right to make the claims.

Parmenter's application containing the claims of the issue was filed on June 9, 1901, and the application upon which Dittgen's patent here involved was granted was filed on May 4, 1899. Dittgen would therefore have been made the senior party to the interference if it had not been that Parmenter's earlier application, No. 693,416, filed October 13, 1898, was held to disclose the invention in controversy. The later case purports to be a division of the earlier, and in declaring the interference the Examiner made Parmenter the senior party by reason of his first application.

Dittgen moved to shift the burden of proof, and the Examiner denied the motion, saying that Parmenter's first application disclosed the invention and that he had the right to claim it therein.

In support of his motion to dismiss this appeal Parmenter calls attention to the well-settled rule that no appeal can be taken from a decision that a party has the right to make the claim, and he argues that the decision of the Examiner in this case was of that character.

A consideration of the entire case shows clearly that Dittgen has made no contention that Parmenter has no right to make the claims. That question was not raised by his motion and is not raised by this appeal. For the purposes of the motion it is admitted that Parmenter is entitled to make the claims in his application No. 42,672 here involved, and that is the only case in which he attempts to make them. Dittgen has merely raised

[Vol. 99. No. 13.]

the question whether as a matter of proof Parmenter is entitled to the date of his earlier application No. 693,416, which does not claim the invention. (*Bundy v. Rumbarger*, 93 O. G., 3002.) This is a question which is reviewable by the Commissioner upon appeal. (*Brill and Brill v. Hunter*, 96 O. G., 641.)

The motion to dismiss is denied.

Considering the question of burden of proof, it is found upon examination that no one figure of the drawings in Parmenter's application No. 693,416 discloses the entire combination set forth in the claims constituting the issue. The specification, however, makes it clear that Parmenter intended to make the cigar-pockets as set forth in the issue, and when taken with the drawings the description constitutes a complete disclosure of the invention. In that original application Parmenter disclosed several modifications of his invention, and it is clear from his description that in one form he intends that the face and back of the pocket and end flap shall be formed from a single piece of stiff paper bent upon itself, each pocket having the body portions of this paper formed with interned folds. He shows the thin paper folded in different ways, one being the single fold on each side whereby the inner edges are closely adjacent, as stated in the issue. He furthermore does not make each pocket separately, but indicates that they are formed together, with cuts in the material between the pockets, so that they may be easily torn apart. He shows this in original Figure 9 as applied to one modification and makes it clear that it is to be applied to the form in which the face and back are made from a single piece folded upon itself. When this is done, the structure set forth in the issue is produced. It must be held, therefore, that the invention was disclosed in Parmenter's original case and that the Examiner was right in refusing to shift the burden of proof.

Dittgen refers to the fact that Parmenter did not in his original case make claim to the invention in controversy and argues that he filed a distinct disclaimer of it. It is not necessary for the application to have made the present claims in order to give Parmenter the benefit of its date, since Rule 116 says nothing of the date when the claim is made. It is not clear how even a disclaimer could deprive him of the benefit of the disclosure in that case when he afterward makes claim to the matter. If he is permitted to make the claim at all, he is entitled to the earliest date upon which he disclosed it. The Examiner has not found that he is estopped from making the claim, and it does not appear from an inspection thereof that the alleged disclaimer filed as an amendment on May 13, 1899, identifies the particular invention here in controversy.

The decision of the Primary Examiner refusing to shift the burden of proof is affirmed.

BRILL AND ADAMS v. UEBELACKER.

Decided June 19, 1902.

1. SUPPRESSION OF TESTIMONY—EVIDENCE AS TO OTHER MATTERS THAN THE ISSUE.

Where a motion to add certain counts to the issue of an interference is denied and the party thereafter reads those counts into the record and proceeds to take testimony as to them, *Held* that the testimony will upon motion be stricken out.

2. TESTIMONY MUST BE CONFINED TO ISSUE—PRIORITY.

The issue in an interference proceeding is prescribed by the Office, and the testimony taken must be confined to the question of priority of invention of this issue.

3. INTERFERENCE—ISSUE MUST REMAIN FIXED—AMENDMENT BY PARTIES.

It is necessary to orderly procedure that the issue remain fixed throughout the interference proceeding. To permit a party to change the issue at will, to add to it so as to include matter not covered by it originally, would lead to the greatest confusion.

4. TESTIMONY—MOTION TO EXTEND TIME—EXCUSE FOR DELAY.

Where a party delays taking his testimony until the last of the time allowed him and gives no good reason for the delay, *Held* that a motion for an extension of time will be denied.

APPEAL on motion.

CAR-TRUCK.

Applications of John A. Brill and Walter S. Adams filed, respectively, April 4, 1900, No. 11,563, and March 23, 1900, No. 2,651. Application of Charles F. Uebelacker filed August 23, 1898, No. 689,506.

Mr. Jos. L. Levy and Messrs. Wilkinson & Fisher for Brill and Adams.

Messrs. Duell, Megrath & Warfield for Uebelacker.

ALLEN, Commissioner.

This case comes up on an appeal by Brill and Adams from a decision of the Examiner of Interferences granting a motion by Uebelacker that certain parts of the testimony taken in behalf of Brill and Adams be stricken from the record and also on a motion by Brill and Adams that their time for taking rebuttal testimony be extended for a period of fifteen days after the decision on this appeal and that they be permitted to take further testimony during the time for taking rebuttal testimony.

It appears that on April 24, 1902, Brill and Adams moved that an amendment—

... be admitted in their pending application, Serial No. 11,563, dated April 4, 1900, notwithstanding that said application is involved in the above-entitled interference. (Vis: Intf. No. 91,370.)

In the amendment accompanying said motion two claims were proposed. On April 24 said motion was denied by the Commissioner. On the same day, April 24, 1902, Brill and Adams filed a motion for the redeclaration of the interference to include two additional counts, these counts being substantially the same as those in the proposed amendment accompanying the motion above referred to. On the same day this motion was also denied by the Commissioner.

In spite of this denial of permission to incorporate the two new claims in their application and in the interference in which this application is involved Brill and Adams proceeded to read these claims in evidence as proposed counts 2 and 3 of the issue and to take testimony relating to these counts, whereupon Uebelacker brought the present motion to strike out this part of Brill and Adams's testimony.

The issue in an interference proceeding is prescribed by the Office, and testimony must be confined to priority of invention of the subject-matter of this issue. If for any reason the issue as stated by the Office does not include all of the pat-

[Vol. 99.

entable matter which is common to the cases involved in the interference, there are ways provided by means of which the issue may be restated to include this matter, so that all questions may be settled in one proceeding. It is necessary that the issue once settled should remain fixed throughout the proceeding. To permit a party to change the issue at will, to add to it so as to include matter not covered by it originally, would cause the greatest confusion. It would be impossible for the parties to confine their testimony to any specific issue, because they would never know when a new issue would be formed. The record would be loaded with irrelevant matter, and interference proceedings, as stated in *Huber v. Aiken* (88 O. G., 1335)—might become an intolerable burden to the parties.

In the case now under consideration the attempt of Brill and Adams to introduce the new counts is especially to be condemned, because these very claims had been refused admission upon motions brought for the purpose of securing such admission. It is an attempt which, if successful, would be subversive of good practice, rendering an orderly course of procedure impossible.

It is true that in certain cases it is better to postpone the consideration of questions relating to the suppression of testimony until final hearing. (*Valley v. Wurts*, 84 O. G., 986; *Knight v. Morgan*, 82 O. G., 187.) The present case, however, is not one of these. The motion to strike out the testimony was properly granted.

There is also in this case a motion by Brill and Adams that their time for taking rebuttal testimony be extended for a period of fifteen days after the date of this decision and that they be permitted to take additional testimony during this period.

It appears that the times for taking testimony in this case have been several times extended. On April 4, 1902, a stipulation was filed that the time for taking testimony-in-chief on behalf of Brill and Adams be extended until April 16, 1902, and that the other times be correspondingly extended. This stipulation contained the following statement:

It is understood and agreed that no further extension of time for taking testimony will be asked for or granted.

On the same day, April 4, 1902, new times were set for taking testimony by the Examiner of Interferences in accordance with this stipulation.

On April 14, 1902, Brill and Adams filed motions to redeclare the interference and for a stay of proceedings. The stay of proceedings was granted on April 15, 1902, and the other motion denied on April 19, 1902. Brill and Adams had therefore one day left in which to take their testimony. Upon appeal to the Commissioner from the decision of the Examiner of Interferences denying their motion to redeclare the interference this decision was affirmed, and it was stated that they should complete their proofs in the one day remaining to them for this purpose, either on the 28th, 29th, or 30th of April.

There appears to be no reasonable excuse for the delay in taking testimony by Brill and Adams, and they are not entitled to the relief now sought for.

No. 13.]

No reason appears why they should not have taken their testimony within the period set for that purpose. Instead of doing this they waited until the time had nearly expired and then by filing motions for redeclaration obtained a stay of proceedings and a further delay. This case is one of those discussed in *Keller v. Wethey v. Roberts*, (81 O. G., 881,) in which it was stated that—

the rule for extension of times for taking testimony is a salutary one, made in the interest of all parties. When there is an obvious disregard of the rule, there is nothing left to do but to abolish the rule or compel its observance, and there is only one way to accomplish the latter, which is to refuse to permit testimony to be taken when it is not observed.

The decision of the Examiner of Interferences granting Uebelacker's motion to strike out the testimony objected to is affirmed.

The motion by Brill and Adams for an extension of time for taking testimony in rebuttal and for taking additional testimony is denied.

EX PARTE THE CLARK CAST STEEL CEMENT COMPANY.

Decided June 10, 1902.

LABEL—REGISTRATION REFUSED—SKILL OF TYPE-SETTER.

A label for cement printed in three kinds of type, including the fanciful words "Cast Steel" and having a monogram of the letters "C S" placed between two of the lines of printing. Held not registrable, because it involves merely the expected skill of the type-setter, and its production was not the result of the creative powers of the mind.

ON appeal.

LABEL FOR CEMENT.

Application filed April 11, 1902, No. 2,724.
Mr. Walter A. Holden for the applicant.

ALLEN, Commissioner:

This is an appeal from the refusal of the Examiner to register a label to be used on cement.

The label comprises the words "Cast Steel Cement for Perfecting Iron and Steel Castings" and the monogram of the letters "C S."

The words of the label are printed in three parallel lines, each line being printed in a different style of type. The monogram is placed between the first line, which consists of the words "Cast Steel Cement" and the second line consisting of the words "For Perfecting." The letter "S" in the monogram has a peculiar curl at the lower end, which encircles the lower portion of the letter "C."

The Examiner states that—

registration has been refused for the reason that the label is not an artistic production—

and cites in support of this holding the decision of the Supreme Court of the United States in *Higgins v. Koufel*, (35 O. G., 1139) and the decision in *ex parte Mahn*, (29 O. G., 1910) and *ex parte Houghton*, (99 O. G., 1423.)

The appellant states in his brief that—

the questions of law in this case are not disputed, and are well founded in the decisions quoted in the record. The questions of fact, however, appear to be whether or not the coined or fanciful words "Cast Steel" and the monogram of the entwined letters "C S," are an artistic reproduction or intellectual production. That the remaining portion of the label "Cement for Perfecting Iron and Steel Castings" is the descriptive part is not disputed.

Upon a careful consideration of the label sought to be registered it is held that the Examiner's ac-

tion was correct in refusing registration on the ground that it does not constitute an artistic production.

It cannot be said that this label is "the result of intellectual labor founded on the creative powers of the mind." (*Ex parte Baldwin*, 98 O. G., 1706.) The label has no originality, but is merely the result of the expected skill of the printer.

The decision of the Examiner is affirmed.

MOSHER v. TULLY AND CLARK.

Decided June 10, 1902.

1. INTERFERENCE—MOTION TO REOPEN—SHOWING IN EXCESS FOR DELAY.

On a motion to reopen an interference which has been decided to take more testimony good reasons must be shown why it was not sooner produced and why the new evidence could not have been discovered by the exercise of reasonable diligence.

2. SAME—SAME—SAME.

Where a witness testifies as to the making of a certain device and the opposing party after closing his proof in rebuttal and two months after a decision has been rendered on priority moves to reopen the interference to permit him to show that the device was inoperative. Held that the motion will be denied in the absence of a satisfactory showing why the evidence was not produced at the proper time.

ON motion.

CHLORINATION-BARREL.

Application of De Witt C. Mosher filed November 9, 1900, No. 35,983. Application of Bryan Tully and Edie Clark filed October 22, 1900, No. 33,350.

Messrs. Foster & Freeman for Mosher.
Mr. H. S. Batley, Mr. John Knowles, and Mr. H. F. Clark for Tully and Clark.

ALLEN, Commissioner:

This is a motion by Tully and Clark to suspend proceedings and to restore jurisdiction of the above-entitled interference to the Examiner of Interferences for the purpose of consideration by him of a motion to reopen the case and to set times for the taking of additional testimony.

It appears from the record that a decision has been rendered by the Examiner of Interferences awarding priority of invention to Mosher and that an appeal by Tully and Clark from this decision is now pending before the Examiners-in-Chief. The Examiner's decision was rendered March 8, 1902, and on May 10, 1902, the present motion was filed.

In support of the motion the attorney for Tully and Clark has filed affidavits by himself and three other persons—namely, Miller, Worley, and Hilleary—that a certain filter made by MacNeill, Mosher's assignee, in April, 1901, was a failure and inoperative, and therefore did not constitute a reduction to practice of the invention.

The testimony in behalf of Mosher was begun, as appears from the record, on April 18, 1901, and concluded on April 30, 1901. The testimony for Tully and Clark was taken immediately thereafter, April 25 to April 30, 1901.

In the testimony for Mosher the fact was brought out that a certain chlorination-barrel built in conformity to his invention was installed in the Stand-

[Vol. 99.

No. 13.]

ard Mill at Colorado City. Mosher was questioned on direct examination as to the construction of this barrel and as to the persons to whom he had disclosed his invention. It is clear, therefore, that Tully and Clark had notice of this filter at the time when Mosher's testimony was taken and had opportunity at that time by cross-examination to elicit any details as to its construction and operation. Indeed, it is not improbable that the fact that Miller, Worley, and Hilleary had been employed in the Standard Mill might have been discovered and their testimony taken in behalf of Tully and Clark at the time set for that purpose.

There is nothing in the affidavits to show why the testimony which it is now desired to take could not have been discovered earlier. As stated above, after Mosher's testimony was taken Tully and Clark had notice of the filter constituting Mosher's reduction to practice, and no reason is given why the proposed new testimony could not have been found at that time.

Knowles, one of the attorneys for Tully and Clark, states in his affidavit:

I used every effort to ascertain just what was the exact construction and condition of the filter which had been built and claimed as embodying Mosher's invention; that I have never let up in my efforts to learn what, if any, repairs, changes, or alterations had been made from time to time therein, and whether the same was successful as an experiment and really amounted to an actual reduction to practice of the invention; that all of my efforts, up to a few days ago, have proven unsuccessful; that within a few days only, it was learned that W. C. Miller, of Victor, Colorado, W. Worley of Colorado City, Colorado, and George F. Hilleary of Colorado City, Colorado, had worked at the Standard Mill located at Colorado City, Colorado, at the time it is alleged the said Mosher filter was installed and operated in said mill.

What the character of the efforts made by Knowles does not appear, nor is any reason given why the facts set forth in his affidavit as quoted above could not have been discovered before the case had progressed to final hearing and judgment. That Knowles was aware of the fact that there might be other evidence produced is evident from his statement that he has made continuous efforts to produce the same. Good reasons must be shown, therefore, why it was not discovered earlier or could not be discovered by the exercise of reasonable diligence. There is no such showing in the present case.

The motion is denied.

EX PARTE MORRISON.

Decided June 10, 1902.

1. AMENDMENT—DELAY—MUST BE PROPER ACTION TO SAVE FROM ABANDONMENT.

An applicant is as much entitled to file an amendment on the last day of the year allowed by law to prosecute the case as he is to file it on any other day during the year; but the amendment at either time must be such an action as the condition of the case requires. Its deficiencies cannot be excused by the fact that it is filed on the last day.

2. SAME—SAME—APPLICANT ASSUMES RISKS.

When an applicant waits until the last day of the year to file an amendment, he assumes all risks, and an action which would be insufficient if made earlier cannot be held sufficient because it is too late for the applicant to correct his error.

3. SAME—REFUSAL TO REOPEN—DIVISION REQUIRED.

Where an amendment is presented which if entered would necessitate a requirement for division, held that it should not be entered notwithstanding the fact that it is presented only one day before the case will become abandoned through a lack of prosecution.

[Vol. 99.

ON petition.

BOUNDARY BATTERY.

Application of William Morrison filed May 19, 1900, No. 17,306.

Mr. C. C. Bulkley for the applicant.

ALLEN, Commissioner:

This is a petition from the refusal of the Examiner to enter and consider a certain amendment filed in the above-entitled application and from his action holding the said application to be abandoned.

The records show that after several actions by the Office and the applicant a substitute specification containing two claims for a single invention was filed on February 1, 1901.

On February 15, 1901, an official letter was mailed the applicant in which certain objections were made to the specification and to the claims. On February 15, 1902, an amendment was filed correcting certain of the objections to the specification, canceling the claims, and substituting others in lieu thereof. The new claims were held by the Examiner to cover three independent inventions.

On March 1, 1902, the Examiner properly refused to enter this amendment on the ground that its entry would only necessitate the requirement of division. (*Ex parte Tschirner*, 97 O. G., 187.) It was further held that the application became abandoned on February 15, 1902, through failure to properly amend within one year from the date of the last Office action.

The petitioner states with reference to the practice laid down in *ex parte Tschirner*, *supra*:

Now it may be the settled practice to refuse to enter amendments which would necessitate a requirement for division, and it is admitted that ordinarily there could be no objection to so doing.

It is urged by the petitioner, however, that in *ex parte Tschirner* the facts were different from those now under consideration, in that the refusal to enter the amendment in the Tschirner application could not harm that application, while in the present case the application necessarily becomes abandoned.

The difference in the facts presented in the two cases is more apparent than real. An applicant is as much entitled to file an amendment on the last day of the year allowed by law to prosecute the case as he is to file the amendment on any other day during the year; but the amendment at either time must be such an action as the condition of the case requires. (*Ex parte Vaughan*, 97 O. G., 937.) If the action be not such an one, the fact that it is made on the last day of the year does not excuse its deficiencies. When an applicant waits until the last day of the year to file an amendment, he assumes all risks, and an action which would be insufficient if made earlier cannot be held to be sufficient for this reason.

The Examiner's action was right, and the petition is denied.

The Examiner concludes his statement as follows:

The claims proposed have been carefully looked into, and although certain references are very close, it is believed each is allowable.

No. 13.]

The present application, however, must be limited to either claim 1, or claim 4, or claims 2 and 3; and if claim 1 is selected, a full disclosure of its subject-matter must appear in the present specification.

The circumstances of this case are such as to entitle the applicant to favorable consideration if he will promptly file a proper amendment, accompanied by a petition for revival.

PERRUSSEL v. WICHMANN.

Decided June 19, 1902.

1. INTERFERENCE—MOTIONS—DELAY—RULES 100 AND 122.

The fact that a motion to dissolve under Rule 122 is pending does not prevent the filing of a motion to amend under Rule 100 or excuse delay in filing such a motion.

2. SAME—SAME—PRIORITY OF ANOTHER MOTION NO EXCUSE.

A delay of four months in filing a motion to amend under Rule 100 cannot be excused upon the ground that the party did not know whether or not the amendment would be necessary until a final decision was rendered upon a motion to dissolve which was pending.

3. SAME—AMENDMENT RULE 100—INVENTION MUST BE DIFFERENT.

Where one application includes the claims of the issue and others which differ so slightly therefrom that the decision as to the issue will settle the question of priority as to the others, held that it is not necessary to make those other claims counts of the interference and that an amendment by the other party including those claims under Rule 100 should not be admitted.

APPEAL OR MOTION.

MANUFACTURE OF SALICYLIC ACID.

Application of Michel Perrussel filed July 16, 1901, No. 68,504. Application of Georg Wichmann filed March 19, 1901, No. 51,935.

Mr. A. C. Fraser & Co. for Perrussel.
Messrs. Housson & Housson for Wichmann.

ALLEN, Commissioner:

This is an appeal by Perrussel from a decision of the Examiner of Interferences refusing to transmit to the Primary Examiner his motion to amend his application under Rule 100.

It appears that the interference was declared upon an issue embracing a single count, this count being the same as a claim made by each party. The interference was declared September 10, 1901, and the preliminary statements were approved November 25 of the same year. On December 16, 1901, a stipulation was made by the parties that the time for filing motions to dissolve under Rule 122 should be extended to December 26, 1901. The motion now under consideration was brought May 7, 1902.

It appears, therefore, that since the twenty-day limit from the date of approval of the preliminary statements within which time motions to amend

may be brought under Rule 100 a period of four months has elapsed. Perrussel attempts to excuse this delay by a showing that on December 23, 1901, he filed a motion to dissolve the interference on the ground, among others, that the failure of the Examiner to include the claims of Wichmann which Perrussel now seeks to add to his case by amendment as counts of the issue constituted such irregularity as would preclude proper determination of the question of priority and that he did not have notice that he should amend under Rule 100 until he received the Commissioner's decision on this motion.

This excuse is clearly insufficient. Rule 100 and Rule 122 may be readily understood. They provide courses to be followed under different circumstances. The fact that a motion is pending under one of those rules does not prevent the filing of a motion under the other nor excuse delay in such filing. (*Hall v. Latta*, 50 O. G., 1431.)

The delay in filing the present motion is alone a sufficient reason for refusing its transmittal to the Primary Examiner. An inspection of the claims which it is sought to introduce reveals another. These claims do not state a different invention from that covered by the issue in the sense that a determination of the question of priority of invention of the issue can have no bearing on these claims. They do cover the same invention as the issue in language slightly more specific; but it is clear that the determination of priority of invention of the issue will settle the same question as to these claims. It is not necessary, therefore, to include these claims as counts of the issue. The purpose of Rule 100 is to enable a party to an interference to claim a patentable invention which he shows and describes, but does not claim, which invention is claimed by the other party. Under this rule it is permissible to add claims which would not be affected by the determination of priority upon the issue as first stated.

It is necessary that such claims be included in the issue in order that the whole matter may be disposed of in one proceeding; but where the proposed claims vary from the issue in scope merely, the invention covered by them being the same, there is no necessity for including them in the issue, since such claims may be added by the prevailing party by amendment after the determination of the interference.

The decision of the Examiner of Interferences is affirmed.

[Vol. 92. No. 13.]

Preliminary statement, <i>in re Bacon</i>	303		
Printing-press, <i>Whitlock and Huson v. Scott</i>	1235		

	Page.		Page.
Trade-mark, the word "Tunnel" and the representation of a tunnel for footwear, <i>ex parte Crowley</i>	303	Type-writing machine, <i>Dudley v. Blickensderfer and Barnes v. Sedgwick</i>	303
Treating tobacco, <i>Petrie v. De Schweinitz</i>	445	<i>Ex parte Fox and Barrett</i>	303
Tubular cream-separator, <i>Frederick v. Frederick and Frederick</i>	1237	*Valid patent, <i>Busch v. Jones et al.</i>	303
Tubular knit goods, <i>Benger v. Burson</i>	1204	* <i>Carnegie Steel Company, Limited, v. Cambria Iron Company</i>	1036
Tubular structure, <i>ex parte King</i>	1100	*Void patent, <i>Busch v. Jones et al.</i>	303

DIGEST OF DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS

IN THE MATTER OF

PATENTS, TRADE-MARKS, ETC.

OFFICIAL GAZETTE—APRIL-JUNE, 1907.

VOL. 2006-3

DIGEST OF DECISIONS.

[Decisions of the United States courts are indicated by an asterisk (*) and of the Secretary of the Interior by a dagger (†).]

ABANDONED APPLICATIONS.

- 1. INSUFFICIENT ACTION.**
Where the Examiner called attention to a formal defect in the application and the applicant while admitting the defect made no effort for six years to correct it, but merely wrote letters in regard to it, *Held* that the application is abandoned. [*Ex parte* Beck, 2101.]
- 2. SAME.**
Where several claims are rejected by the Examiner and at the end of the time allowed by law for action the applicant requests reconsideration of some claims and says he intends to file an affidavit under Rule 75 as to others, *Held* not such action as the condition of the case requires and that it is abandoned. [*Ex parte* Spiller, 2260.]

ABANDONMENT.

(See Amendments, 1, 5; Reopening of Rejected Cases, 2.)

ACCESS TO PENDING APPLICATIONS.

(See Reference to Another Pending Application, 2, 3.)

ACTION ON THE MERITS.

(See Examination of Applications.)

AFFIDAVIT.

(See Abandoned Applications, 2; Interference, 49.)

AMENDMENTS.

(See Interference, 5, 14, 15, 70, 71; Reopening of Rejected Cases.)

- 1. EXTENSION OF TIME FOR FILING—SECTION 4904, REVISED STATUTES.**
A request for an extension of time for filing an amendment cannot be granted when the period extends over the statutory limit within which the application must be prosecuted under the provisions of section 4904 of the Revised Statutes in order to save it from abandonment. [*Ex parte* Bauerhammer, 442.]
- 2. NEW MATTER AFFECTING CLAIM—QUESTION RELATED TO MERITS—APPEAL IN FIRST INSTANCE TO EXAMINERS-IN-CHIEF.**
Where in the answer to a petition brought on another point the Examiner calls attention to a certain amendment made to the specification and states that if revealed in the case he will be compelled to reject the claims which now stand allowed, as in his opinion the alleged new matter affects the claim, *Held* that as this question relates to the merits of the case and is therefore appealable in the first instance to the Examiners-in-Chief no opinion in regard to it is expressed. [*Ex parte* Henry, 1170.]
- 3. DELAY—MUST BE PROPER ACTION TO SAVE FROM ABANDONMENT.**
An applicant is as much entitled to file an amendment on the last day of the year allowed by law to prosecute the case as he is to file it on any other day during the year; but the amendment at either time must be such an action as the condition of the case requires. Its deficiencies cannot be excused by the fact that it is filed on the last day. [*Ex parte* Morrison, 2220.]
- 4. SAME—APPLICANT ASSUMES RISK.**
When an applicant waits until the last day of the year to file an amendment, he assumes all risks, and an action which would be insufficient if made earlier cannot be held sufficient because it is too late for the applicant to correct his error. [*Id.*]
- 5. REFUSAL TO ENTER—DIVISION REQUIRED.**
Where an amendment is presented which if entered would necessitate a requirement for division, *Held* that it should not be entered notwithstanding the fact that it is presented only one day before the case will become abandoned through a lack of prosecution. [*Id.*]

ANSWER TO APPEAL.

(See Reference to Another Pending Application, 1.)

ANTICIPATION.

(See Invention; Process, 1, 2, 4, 5.)

- 1. COMBINATION—REJECTION UPON TWO REFERENCES—OSONE APPARATUS.**
A claim covering an osoneiser in combination with a particular apparatus for producing currents of high frequency *Held* lacking in patentable novelty in view of two prior patents, one showing an osoneiser in combination with one form of high-frequency apparatus and the other showing the particular high-frequency apparatus claimed in combination with different translating devices. [*Ex parte* Verley, 1681.]
- 2. PATENTABILITY—OSONE APPARATUS.**
An apparatus for producing osone by the use of electrical currents of high frequency *Held* not patentable in view of certain patents to Tesla cited. (Decision of the Commissioner, 90 O. G., 1681, affirmed.) [*In re* Verley, 2222.]
- 3. COMBINATION—PARTS OLD IN SEPARATE PATENTS.**
Where the claim covers an osone apparatus in combination with particular means for producing currents of high frequency, *Held* anticipated by two patents, one disclosing the high-frequency apparatus used with electric lights and the other disclosing an osone apparatus supplied by a different form of high-frequency apparatus. [*Id.*]

APPARATUS.

(See Process, 2, 4.)

APPEAL TO THE COMMISSIONER OF PATENTS.

(See Interference, 62.)

APPEAL TO THE EXAMINERS-IN-CHIEF.

(See Amendments, 2; Interference, 9, 14, 15, 24, 27, 46; Reference to Another Pending Application, 1; Reopening of Rejected Cases, 2.)

DISCOVERY OF NEW GROUNDS FOR REJECTION—PRACTICE.
If the Examiner discovers new reasons for rejection after appeal has been taken, he should direct the attention to it of both the appellant and the Examiners-in-Chief. The appellant may then elect to proceed with the appeal or to withdraw it. [*Ex parte* Henry, 16 O. G., 835.] [*Ex parte* Dolan, 2211.]

APPEAL TO THE SECRETARY OF THE INTERIOR.

- 1. JUDICIAL QUESTION—CERTIFICATE OF CORRECTION ON PATENT.**
An appeal to the Secretary of the Interior from the decision of the Commissioner of Patents refusing to indorse a certificate of correction upon a patent because of an alleged mistake by the Patent Office dismissed for the reason that the decision was a judicial determination by the Commissioner. [*In re* Macosochie Solderless Tinning Company, Limited, 1172.]
- 2. SAME—SAME.**
The question whether a certificate of correction shall be indorsed upon a reissue patent imposes the duty of deciding in the first place whether the reissue was improperly granted and if so in what the error consists. These are judicial questions not subject to superintendence and direction by the Secretary of the Interior. [*Id.*]

APPEAL TO THE SUPREME COURT OF THE UNITED STATES.

(See Jurisdiction of the United States Courts, 7.)

APPLICATIONS.

(See Abandoned Applications; Division of Application; Examination of Applications; Foreign Patents, 1.)

APPLICATION FOR AN ENGLISH PATENT.

(See Foreign Patents.)

ASSIGNERS.

(See Jurisdiction of the United States Courts, 1; Testimony, 1.)

ASSIGNMENTS.

1. **SUBJECT TO LICENSE—ISSUING PATENT TO ASSIGNEE.**
Where an instrument is recorded in this Office transferring the invention "subject to a license," *Held* that the patent will not be issued to the assignee.
[*Ex parte Eickemeyer*, 1022.]

2. **SAME—EFFECT OF LICENSE.**
Where an instrument transfers an invention "subject to" a previous instrument referred to as a license, *Held* that without an inspection of the first instrument it cannot be determined whether or not the second conveys the entire title.
[*Id.*]

BAR TO PATENT.

(See Foreign Patents.)

BURDEN OF PROOF.

(See Interference, 33, 41, 62, 63.)

CAVEAT.

RETURN OF FEE—ERROR IN JUDGMENT.
Where a caveat is filed which fails to clearly disclose the invention, *Held* that the fee will not be returned as paid by mistake. An error in judgment does not warrant the return of a fee.
[*Ex parte Landenberger*, 1800.]

CERTIFICATE OF CORRECTION.

(See Appeal to the Secretary of the Interior.)

CITATION OF DECISION.

(See Reference to Another Pending Application, 1, 3.)

CLASSIFICATION OF INVENTIONS.

(See Division of Application, 2.)

COMBINATION.

(See Anticipation, 3.)

COMMISSIONER OF PATENTS.

(See Interference, 43, 62.)

COMPLETE DEVICE.

(See Interference, 30.)

CONCEALMENT OF INVENTION.

(See Delay in Filing Applications; Interference, 11, 12, 13, 47, 48.)

CONCEPTION OF INVENTION.

(See Interference, 19, 35, 62; Testimony, 2.)

CONSTRUCTION OF CLAIMS.

(See Construction of Specifications and Patents, 2.)

SPECIFICATION CONSIDERED—CLAIM BROAD IN TERMS.
The second claim apparently extends to the art of mixing all molten metals; but the claim of a patent must always be explained by and read in connection with the specification, and when so considered this claim clearly includes metal from blast-furnaces. It is not rendered void by the possibility of its including cupola metal.
[**Carnegie Steel Company, Limited, v. Cambria Iron Company*, 1900.]

CONSTRUCTION OF RULES.

(See Abandoned Applications, 3; Division of Application, 5; Examination of Applications; Interference, 7, 9, 14, 26, 47, 48, 62, 63, 70, 71; Motion to Amend Application; Petition to the Commissioner; Reopening of Rejected Cases, 2.)

CONSTRUCTION OF SPECIFICATIONS AND PATENTS.

(See Construction of Claims; Disclaimers; Particular Patents; Process, 1, 2, 3, 4; Stipulation.)

1. **PROCESS—DRY-PRESSING—OPERATION OR EFFECT OF MACHINE—CLAIM INVALID.**
A claim for a process of dry-pressing which includes subjecting a collection of sheets of paper to pressure without the use of fuller-boards, tying them into a bundle while under pressure, removing them from the press, and allowing them to remain tied until fixed, *Held* to describe merely the operation and effect of the machine and to be invalid.
[**Busch v. Jones et al.*, 220.]

2. **SUFFICIENCY OF DESCRIPTION—PATENT ADDRESSED TO THOSE SKILLED IN THE ART.**
The specification of the patent is not addressed to lawyers or even to the public generally, but to the manufacturers of steel, and any description which is sufficient to apprise them in the language of the art of the definite feature of the invention and to serve as a warning to others of what the patent claims as a monopoly is sufficiently definite to sustain the patent.
[**Carnegie Steel Company, Limited, v. Cambria Iron Company*, 1900.]

3. **SAME—NEED NOT DESCRIBE WHAT IS OLD IN THE ART.**
A patentee in describing his invention may assume that what is already known in the art is understood and may begin at the point where his invention begins and describe what he has made that is new and what it replaces of the old.
[**Id.*]

CONSTRUCTION OF STATUTES.

(See Amendments, 1; Foreign Patents; Jurisdiction of United States Courts, 2.)

CONTRACTS.

(See Jurisdiction of United States Courts, 1, 5.)

DAMAGES AND PROFITS.

(See Suits for Infringement.)

DATE OF FILING APPLICATION.

(See Interference, 44.)

DECISION OF THE COMMISSIONER OF PATENTS AFFIRMED.

(See Anticipation, 2; Interference, 42.)

DELAY.

(See Abandoned Applications, 1; Interference, 21, 22, 23.)

DELAY IN FILING AMENDMENT.

(See Amendments, 2, 4, 5; Motion to Amend Application.)

DELAY IN FILING APPLICATIONS.

(See Diligence; Interference, 11, 12, 13, 40.)

INTERFERENCE—DILIGENCE.

Where during a delay of six years P. was poor, but concealed his invention and failed to make efforts to interest others in it to assist him in securing a patent or in making practical use of it, *Held* that mere poverty cannot excuse an absence of all effort for such a length of time.
[**Petrie v. De Schweinitz*, 1367.]

DEPOSITIONS.

(See Interference, 60, 61.)

DESCRIPTION.

(See Construction of Specifications and Patents, 2, 3.)

DILIGENCE.

(See Delay in Filing Application; Interference, 1, 2, 11, 12, 13, 16, 22, 33, 56, 67, 68, 70.)

1. **LACK OF—POVERTY.**
Mere poverty cannot excuse an absence of all effort in regard to an invention for a period of six years.
[**Petrie v. De Schweinitz*, 446.]

2. **SAME—FAILURE TO PRACTICALLY USE INVENTION.**
Where a party claims to have had a complete knowledge of a process involving the use of bacterial food and had one form of such food, *Held* that his failure to practically use the process for several years is not to be excused upon the allegation that he was trying to find a food which could be obtained at all seasons.
[*Id.*]

DISCLAIMERS.

(See Interference, 62.)

1. **PROPERLY ADMITTED AFTER ARGUMENT.**
Where after the argument the plaintiff was permitted to file a disclaimer to certain statements in the specification which were broader than the claims when construed as contended for, *Held* that the admission of the disclaimer was proper.
[**Carnegie Steel Company, Limited, v. Cambria Iron Company*, 1900.]

2. **MAY REFER TO SPECIFICATION AS WELL AS CLAIM.**
The power to disclaim is a beneficial one and ought not to be denied except where it is resorted to for a fraudulent and deceptive purpose. A disclaimer may extend to a part of the specification as well as to a distinct claim.
[**Id.*]

3. **CANNOT CHANGE INVENTION CLAIMED—REBURE.**
A disclaimer the purpose of which is to re-form or alter the description of the invention or convert the claim for one thing into something else is objectionable, since patents can only be amended for mistakes of this kind by a reissue.
[**Id.*]

DISCLOSURE OF INVENTION.

(See Division of Application, 3; Interference, 35, 56, 62.)

DIVISION OF APPLICATION.

(See Amendments, 5.)

1. **PARTS OF TYPE-WRITER CARRIAGE.**
Division properly required between parts of a type-writer carriage, since it appears that the various devices have acquired a distinct status in the art and are separate subjects of manufacture and sale.
[*Ex parte Fox and Barrett*, 622.]

2. **CLASSIFICATION.**
The mere fact that inventions would be separately classified in this Office is not in itself sufficient to warrant a requirement for division; but in the present case the classification has followed the lines established by inventors and manufacturers and is evidence of the fact that the devices have acquired such a distinct status in the art as warrants not only such separate classification, but also separate applications for invention included therein.
[*Id.*]

3. **MACHINE AND ARTICLE—UNNECESSARY DRAWINGS AND DESCRIPTION SHOULD BE CANCELLED.**
Where division is required between a machine and the article made by it and the claims are limited to the article, *Held* drawings and description of the machine which are unnecessary to a complete disclosure of the article under the disclosure prolix and should be canceled.
[*Ex parte King*, 1100.]

4. **PROCESS AND ARTICLE OF MANUFACTURE.**
Division properly required between a claim for an *ax* as an article of manufacture and claims for a method of finishing axes, which method is applicable to other articles and does not necessarily result in the particular product.
[*Ex parte Powell*, 1284.]

5. **TWO SPECIES—LIMITATION BEFORE ACTION ON MERITS.**
When an application contains a generic claim and claims for two distinct species, a requirement that the claims be limited to a single species is equivalent to a requirement for division under Rule 41. This limitation should be made prior to any action on the merits.
[*Ex parte Worden*, 1022.]

6. **RAILROAD-CAR—LOOK FOR WINDOWS IN SAME.**
Held that division was properly required between claims to the railroad-car and claims covering the combination between the car, the window-cash, and a look for the same, since the devices are recognized by inventors and manufacturers as separate and independent articles of manufacture and sale, and from this it results that these devices possess a capacity for independent use.
[*Ex parte Brill*, 2610.]

7. **FILTER AND COFFEE-CARTRIDGE.**
Division was properly required between the claims which cover a particular structure of "percolator-cartridge" for use in a coffee-filter for making drip-coffee and claims covering combinations between the cartridge and the particular filter, for the reason that each of the inventions is independent of the other in that they possess the capacity for separate use.
[*Ex parte Brown*, 2230.]

8. **SHOE-SEWING MACHINE.**
Where the stitch-forming mechanism and the combined awl and feeding mechanism of a shoe-sewing machine have not acquired a distinct status in art and manufacture and are not separately classified in this Office, *Held* that division should not be required notwithstanding the fact that the mechanisms are capable of separate use.
[*Ex parte Smith*, 2547.]

9. **COMBINATION CLAIM AND CLAIM TO A SPECIFIC ELEMENT.**
Held that division was properly required between a combination including a buoy as one of the elements and a claim to a specific form of buoy where that buoy is capable of use in other relations.
[*Ex parte Moriarty*, 2540.]

DOUBLE USE.

(See Invention.)

DRAWINGS.

(See Division of Application, 3.)

1. **SUBSTITUTE—REFUSAL TO ADMIT.**
Where the drawing in the case shows the invention clearly and properly, *Held* that a substitute drawing should not be admitted.
[*Ex parte Cooper*, 609.]

2. **FIGURES COMPLETELY SHOWING THE ARTICLE OF MANUFACTURE CLAIMED AMPLY SUFFICIENT.**
It is not necessary to retain in the drawing of an application for a patent on an article a figure to illustrate a process or step in its manufacture when the completed article defined in the claim is clearly shown in another figure and the disclosure is amply sufficient to enable any one skilled in the art to make and construct the same.
[*Ex parte Henry*, 1170.]

EXAMINATION OF APPLICATIONS.

(See Amendments, 2, 4; Inoperativeness; Rejection of Claims.)

1. **ACTION ON MERITS—RULE 64—PRACTICE.**
When the invention can be understood, the case should receive action throughout on its merits. (Rule 64.)
[*Ex parte Springborn*, 607.]

2. **SAME—SAME—SAME.**
To merely state that there is patentable subject-matter presented in the application is not sufficient under the last clause of Rule 64 to warrant the Examiner in insisting upon formal requirements before the case receives action on its merits. Requirements in matters of form will be insisted upon only in those cases in which the examination on the merits is completed. The case, except for formal matters, must be ready for allowance or for appeal.
[*Id.*]

(See Interference, 13.)

EXTENSION OF TIME.

(See Amendments, 1.)

FEES.

(See Caveat.)

FOREIGN PATENTS.

1. SECTION 4887, REVISED STATUTES—BAR TO PATENT HERE. Where an application is filed in this country on April 23, 1898, for an invention patented in England and it appears that the application and provisional specification were filed in the British Patent Office on May 1, 1897, the complete specification was filed February 23, 1898, and was accepted June 1, 1898, and the patent was sealed and delivered August 16, 1898, *Held* that the application here cannot be allowed in view of section 4887, Revised Statutes. [*In re Swinburne*, 1085.]
2. SAME—DATE OF BRITISH APPLICATION—PROVISIONAL SPECIFICATION. The time of filing the application in the British Patent Office accompanied only by the provisional specification must be taken as the date of the application for the foreign patent within the meaning of section 4887, Revised Statutes. [*Ex parte Smith*, 35 O. G., 391, cited with approval.] [*Id.*]
3. SAME—SAME—ORIGINAL PAPER REQUESTING PATENT. Independent of the form or function of either specification that may be filed in connection with it the instrument entitled the application throughout the British patent law remains the initiatory step in the proceeding to obtain a patent under that law and must therefore fix the date from which the limitation of section 4887, Revised Statutes, begins to run. [*Id.*]
4. SAME—PROVISIONAL SPECIFICATION AND CAVEAT COMPARED. *Held* that the original paper called the "application" is not a mere introduction to the provisional specification and that the provisional specification is not the equivalent of a caveat under the United States law. [*Id.*]

FORFEITED APPLICATIONS.

(See Interference, 33.)

FORMER DECISION CONSTRUED.

(See Interference, 22.)

FORMER DECISION REVERSED.

(See Suits for Infringement.)

FUNCTION.

(See Process, 5.)

GRANT OF PATENT.

(See Assignments.)

HEARING.

(See Interference, 23, 30.)

IMPERFECT DEVICE.

(See Reduction to Practice, 5, 7, 8, 9.)

INFRINGEMENT.

(See Jurisdiction of the United States Courts, 1; Particular Patents, 3; Suits for Infringement.)

INJUNCTION.

(See Jurisdiction of the United States Courts, 1.)

INOPERATIVENESS.

(See Interference, 40, 69; Rejection of Claims.)

1. DUE TO DEFECTS—DEFECTS SHOULD BE POINTED OUT. If a device is inoperative, it is because of some defect in principle or mechanical construction and not because similar devices have not been made operative, and the Examiner should point out the real reasons why he regards the device as inoperative. [*Ex parte Gibson*, 327.]
2. OBJECTION OF NOT WELCOME—SHOULD NOT BE MADE DOGMATICALLY. As a matter of practice this Office should not arbitrarily place upon the applicant the burden of proving that the device is operative without stating the reasons why it is regarded as inoperative, since the objection of inoperativeness is not a welcome one and should not be made dogmatically. [*Id.*]

INTERFERENCE.

(See Delay in Filing Application; Diligence; Motion to Amend Application; Reduction to Practice; Testimony; Trade-Marks, 8.)

1. MOTION TO REOPEN—NEWLY-DISCOVERED EVIDENCE—DILIGENCE. Where an interference is reopened to permit the taking of the testimony of a single witness and after the case is again closed a motion is made to take the testimony of other witnesses to corroborate him, *Held* that the motion should be denied in the absence of a showing that the testimony could not have been produced by the exercise of diligence. [*Dudley v. Bickensderfer and Barnes v. Sedgwick*, 328.]
2. NEW TRIAL—SAME—REASONABLE DILIGENCE. A new trial will not be granted on the ground of newly-discovered evidence where that evidence could have been discovered before trial by the exercise of reasonable diligence. [*Id.*]
3. PRIORITY—STIPULATION. A stipulation that S. completed the invention in June and July does not prove that he completed it before June 9, when H. filed his application. [*Silverman v. Hendrickson*, 445.]
4. SUPPLEMENTAL OATH—EX PARTE MATTER. The question whether or not a party should be called upon for a supplemental oath is an *ex parte* matter not open to argument in an interference proceeding. [*Id.*]
5. AMENDMENT—ADDITION OF NEW COUNTS—CONSENT OF PARTIES. Where before testimony is taken both parties by common consent wish to present certain claims as additional counts of the interference and file amendments embodying those claims, *Held* that the interference will be remanded to the Primary Examiner to determine if the claims are allowable and should be included in the interference. [*Reese v. Fenwick*, 608.]
6. SETTLING ALL QUESTIONS AT ONCE. It is the general policy of the Office to have all questions which may be brought in issue between the parties settled in one interference where possible. [*Id.*]
7. MOTION—EXAMINER SHOULD DECIDE ALL GROUNDS. Where a party made a motion to dissolve on all of the grounds mentioned in Rule 123 and the Primary Examiner decided only two of those grounds, *Held* on appeal that the case will be remanded to the Examiner with instructions to decide all grounds alleged. [*Oldham and Padbury v. Peck v. Clement v. Richards*, 670.]
8. PRELIMINARY STATEMENT—SEALED AGAINST INSPECTION WHERE NOT USED. Where the junior party's statement fails to overcome the filing date of the senior party, the preliminary statement of the senior party should remain sealed and should be placed in the confidential archives of the Office and should not be open to inspection either before or after the grant of the patent. [*In re Bacon*, 861.]
9. MOTION TO AMEND—RULE 100—APPEAL LIES FIRST TO THE EXAMINER-IN-CHIEF—PRACTICE. Where a motion is made by one party to an interference to amend his application under the provisions of Rule 100 and the Examiner denies said motion on the ground that the moving party has no right to make the claims, *Held* that said decision involves a question of merits and an appeal therefrom lies in the first instance to the Examiner-in-Chief. [*Berry v. Fitzsimmons*, 328.]

10. PRIORITY—PRIVATE USE OF INVENTION.

Where T. made an electric measuring instrument embodying the invention in controversy in 1894 and placed it in his private experimental room, where it was seen only by employees, but where it was used frequently in making measurements, and T. did not manufacture it or apply for a patent until 1896, after he knew of W.'s patent upon it, *Held* that W. is entitled to the decision on priority. [*Citing Mason v. Hepburn*, 84 O. G., 147; 13 App. D. C., 50.]

[*Thomson v. Weston*, 304.]

11. DELIBERATE CONCEALMENT OF INVENTION—FORFEITURE OF RIGHTS IN FAVOR OF ONE PARTY.

Where a party deliberately conceals his invention after completion without reasonable excuse and is stimulated to make application for a patent only by the publication of a patent to another and later inventor, *Held* that he has forfeited his rights in favor of the later and more diligent inventor and that the length of the concealment is not material. [*Id.*]

12. SAME—SAME.

By deliberate concealment or suppression of the knowledge of his invention the inventor subordinates his claim, in accordance with the general policy of the law in the promotion of the public interest, to that of another and bona fide inventor who during the period of inaction and concealment shall have given the benefit of the discovery to the public. [*Id.*]

13. EXPERIMENTAL DEVICE—LONG DELAY AFTER TEST AS EVIDENCE.

The circumstances of private and partial test accompanied by long delay thereafter have justly been given great weight as indicating with certainty that the device was experimental merely and not satisfactory. [*Id.*]

14. DISSOLUTION IN VIEW OF REFERENCES—REMEDY—APPEAL OR AMENDMENT.

Where an interference is suspended under Rule 123 and a decision is rendered dissolving the interference in view of newly-discovered references, *Held* that the parties may appeal to the Examiner-in-Chief within the limit of appeal or may permit the decision to become final and then amend the claims to avoid the references. [*Davis v. Swift*, 1168.]

15. APPEAL—AMENDMENT NOT PERMITTED.

Where a party has appealed to the Examiner-in-Chief from a decision dissolving the interference, *Held* that he cannot amend his claims until that appeal is disposed of either by a decision or by being withdrawn. [*Id.*]

16. PRIORITY—DILIGENCE.

Prior conception without prior reduction to practice will not avail unless there has been diligence in the elaboration of the idea looking toward reduction to practice. [*Silverman v. Hendrickson*, 1171.]

17. CONSTRUCTIVE REDUCTION TO PRACTICE—SUBSTITUTE APPLICATION.

Where H. filed an application for a patent on the invention in controversy on June 3, 1897, and at a later date filed the application here involved as a substitute for that earlier one, *Held* that he is under the well-settled rule entitled to June 3, 1897, for a constructive reduction to practice. [*Id.*]

18. EVIDENCE.

The allegation on behalf of S. that he reduced the invention to practice in the summer of 1897 does not show that he reduced it to practice before June 9. [*Id.*]

19. UNSATISFACTORY EVIDENCE—DISCREDITING CIRCUMSTANCES.

Where the evidence is very unsatisfactory and uncertain, but shows S. to have been active in experimentation on the general lines of this invention in February, 1897, and that he then filed an abortive application not disclosing this invention and does not allege reduction to practice until the summer of 1897, *Held* that he has not satisfactorily shown conception in February. [*Id.*]

20. REDUCTION TO PRACTICE—SIMPLE DEVICE—ILLUSTRATIVE MODEL AND PERFECTED DEVICE.

The ticket-holder in controversy is an exceedingly simple invention consisting mainly in the folding of a small piece of paper, and there can scarcely be any practical difference between what is designated as an illustrative model and the perfected device. *Held*, therefore, that the making of such a holder by Hauser was a reduction to practice. [*Loomis v. Hauser*, 1172.]

21. SAME—SAME—MERE CONSTRUCTION SUFFICIENT.

Some devices are so simple and their purpose and efficiency so obvious that the complete construction of one of a size and form intended for and capable of practical use may well be regarded as a sufficient reduction to practice without actual use or test in an effort to demonstrate their complete success or probable commercial value. [*Citing Mason v. Hepburn*, 84 O. G., 147; 13 App. D. C., 50.] [*Id.*]

22. SAME—LINDENMAYER v. HOFFMAN DISTINGUISHED.

This case distinguished from *Lindenmayer v. Hoffman*, (95 O. G., 984,) wherein the inventor expressly admitted that his device was not fit for practical use. [*Id.*]

23. TRANSMITTAL OF MOTION TO DISSOLVE.

A motion to dissolve an interference brought after the twenty-day limit allowed by the rule for such motions should be transmitted when the delay is slight and it appears that no testimony has been taken and that a motion to dissolve on another ground is already before the Primary Examiner. [*Arbeter v. Lewis*, 1232.]

24. EXCUSE FOR DELAY.

If reasons exist why an interference should not be continued, it is for the interest of all concerned that all such reasons be considered at the same time. Hence the matter submitted in excuse of the delay will not be so closely scrutinized as when presented at a later stage of the proceedings. [*Id.*]

25. THE RESTORATION OF JURISDICTION FOR ONE SPECIFIC PURPOSE DOES NOT OPERATE FOR ALL PURPOSES.

Where a motion is brought to restore jurisdiction to the Examiner of Interferences after the limit of appeal has expired in order that he may consider a motion to transmit a motion for dissolution and the motion is granted for that sole purpose, *Held* that the jurisdiction of the Examiner of Interferences was not restored for all purposes. [*Denger v. Hurson*, 1264.]

26. PRIORITY—APPEAL AFTER LIMIT HAS EXPIRED.

Where after the limit of appeal on the question of priority has expired a motion to dissolve is transmitted to the Primary Examiner and decided by him, *Held* that the party is not entitled thereafter to take an appeal as to priority. [*Id.*]

27. SAME.

While it may have been necessary in justice to both parties to finally determine whether or not an interference in fact existed or whether or not either of the parties had a right to make the claim, the necessity for an appeal to the Examiner-in-Chief from a decision awarding priority on the record is not apparent. Such a course would only operate to delay the final determination of the case. [*Id.*]

28. MOTION FOR DISSOLUTION—NEW FACTS DISCOVERED—PRACTICE.

Upon the discovery of new facts after a motion to transmit a motion for dissolution is granted "the Primary Examiner may consider such facts, provided due and timely notice thereof be given to the party opposing the motion to dissolve." [*Wells v. Pucker*, 90 O. G., 1947.] [*Whitlock and Huron v. Scott*, 1265.]

29. SAME—SAME—NOTICE TO OPONENT.

If notice of the new facts be served on the opposing party at least five days before the day set for hearing, such notice should be considered as "due and timely." [*Id.*]

30. SAME—SAME—SAME—DELAY NOT PERMITTED.

Unless the practice of giving "due and timely notice" on the discovery of new facts is enforced a postponement of the time of hearing becomes necessary, and therefore a delay of proceeding might be obtained by the observance of this practice by the moving party. It is therefore held that such a delay should not be permitted except upon a showing of facts that the new motion could not have been earlier presented. [*Citing Summers v. Hart*, 98 O. G., 3285.] [*Id.*]

31. SECOND MOTION TO DISSOLVE—REFUSAL TO TRANSMIT—DELAY UNAVOIDABLE.

Where a second motion to transmit a motion for dissolution is brought before the Examiner of Interferences on the ground of the discovery of new references, *Held* that the consideration of unavoidable delay should be controlling with the Examiner of Interferences, for the granting of the second motion for dissolution necessarily results in a second hearing of the motion for dissolution by the Primary Examiner and the same would be gained by a different means. [*Id.*]

32. SAME—DELAY NOT UNAVOIDABLE.

Where after a period of three months has elapsed from the date of the decision of priority on the record and it appears that the new references were discovered after a very short search on the morning of the day of hearing among the records of this Office in places where they might be expected to have been found, *Held* that the delay in discovering the new references was not unavoidable. [*Id.*]

33. UNSUPPORTED TESTIMONY OF A PARTY.

That the unsupported evidence of a party will not be accepted or acted upon as sufficient proof of the conception of an invention is a well-settled principle, the reasons for which apply with equal force to its reduction to practice. [*Petrie v. De Schweinitz*, 1267.]

34. EVIDENCE AS TO PAST STATEMENTS—COMPETENCY.

Evidence that a party at a certain time stated that he had reduced the invention in controversy to practice while admissible as tending to establish the fact of conception is clearly incompetent to prove the independent fact of reduction of that conception to practice. [*Id.*]

35. NOTICES—RULE 97 REQUIRES DISCLOSURE BY TITLE OF INVENTION.

The requirement of Rule 97 that the notices of interference should disclose "the invention claimed" means that the invention claimed should be disclosed by its title. [*Hoffmeyer v. Kahn*, 1034.]

36. MOTION TO DISSOLVE—NON-COMPLIANCE WITH RULES.

A motion to dissolve an interference brought after testimony has been taken and unaccompanied by a motion to transmit to the Primary Examiner and by no excuse for the delay is not brought in accordance with the rules and has no standing. [*Frederick v. Frederick and Frederick*, 1263.]

27. SAME—JOINT APPLICATION AND SOLE APPLICATION OF ONE OF JOINT APPLICANTS.

When an interference is declared between a joint application and a sole application of one of the joint applicants, the question of priority necessarily resolves itself into a determination as to whether the entity composed of the joint applicants ever made the invention at all. A motion to dissolve, therefore, which sets up as a reason for dissolution that the record shows that the joint applicants never made the invention is irregular, since it seeks to obtain a decision on the very question which is to be decided at final hearing. [Id.]

28. BURDEN OF PROOF—RENEWAL OF FORFEITED CASE—APPLICANT AGAINST PATENTEE.

Where an application is allowed and becomes forfeited through a failure to pay the final fee within six months and during the time that it is forfeited an application is filed by another party covering the same invention and a patent is granted thereon, *Held* that in an interference between the patent and a renewal of the first application the burden of proof is upon the applicant notwithstanding the earlier date of his first application. [Ascendo v. Russell, 5319.]

29. PRIORITY—UNSUCCESSFUL DEVICE.

Where S. alleges the earlier date of conception and reduction to practice, but the evidence shows that his first machines were unsuccessful and that he did not construct a satisfactory machine until after he had seen M.'s invention, *Held* that the decision awarding priority to M. must be affirmed. [Swihart v. Mauldin, 5222.]

40. SAME—DELAY IN APPLYING FOR PATENT—CONDUCT INCONSISTENT WITH CLAIM.

Where S. was engaged in the special work of devising means to remedy imperfections in scales of the class in controversy, having taken out several patents upon that line, and where he claims to have completed the particular invention in issue, *Held* that his failure to apply for a patent until six months after he had seen M.'s device is peculiarly significant. [Id.]

41. SAME—BURDEN OF PROOF—CONCURRENT DECISIONS.

Where an appellant comes to the court as the junior applicant and with three concurrent decisions of the tribunals of the Patent Office against him, *Held* that the presumption is strongly against his claim as the prior inventor. [Id.]

42. SAME—IDENTITY OF INVENTIONS NOT CONSIDERED.

The court will not except in extreme cases go behind the declaration of interference in order to determine the question of identity of the inventions claimed by the parties. [Id.]

43. ADDITION OF NEW PARTY—DECISION RENDERED ON PRIORITY.

After a decision by the Examiners-in-Chief and the Commissioner upon the question of priority of invention it is too late to add a new party to the interference. [Corry and Barker v. Trout, 5547.]

44. RECORD DATE—TWO APPLICATIONS DISCLOSED INVENTION.

Where W. had two applications pending in either of which the claims in controversy could be made and he elects to make them in the later case, *Held* that he is entitled to the date of his earlier case as his record date upon the question of priority. [Patten v. Wiesenfeld, 5547.]

45. IRREGULARITY—MERE TECHNICAL OBJECTIONS.

Where priority was awarded to W. by reason of a prior application not directly included in the interference and P. moves to dissolve on the ground of irregularity, alleging that the earlier case should have been positively included in the interference, *Held* that the motion relates to a technicality rather than to the merits and was properly denied. [Id.]

46. REJECTED CLAIMS—COPENING APPLICATIONS.

Where the claims of an application are rejected upon reference and without overcoming the rejection the applicant petitions to have an interference declared with a patent to another party granted while his application was pending, *Held* that his remedy is by an appeal from the rejection when it shall have been repeated. [Ex parte Holland, 5548.]

47. RULE 105—CONCEALING PART OF INVENTION FROM OPPONENT—PROCESS AND PRODUCT.

Where an interference is declared as to a process and one of the parties has claims to the product which is the necessary result of the process, *Held* that he will not be permitted to conceal his product claims from his opponent by filing certified copies of the parts of his application relating to the process under Rule 105. [Ex parte Powrie, 5549.]

48. SAME—ADDITIONAL STEP TO PROCESS—INDEPENDENT INVENTION.

Where an interference is declared as to a process and one of the parties has claims to an additional step performed after the process as set forth in the issue is completed and the opposing party does not disclose that step, *Held* that the additional step may be concealed from the other party to the interference under Rule 105. [Id.]

49. MOTION TO DISSOLVE—AFFIDAVITS AS TO OPERATIVENESS.

Where on a motion to dissolve the question as to the operativeness of one of the inventions is raised, *Held* that affidavits supporting or traversing the allegation may be received and considered. [Dickinson v. Thibodeau v. Hildreth, 5550.]

50. PRIORITY.

Where Roe conceived the invention in November, 1898, made a machine embodying it in August, 1899, and operated it at that time in such manner as to show its practicability, and in March, 1900, first used it in a mill and made the first commercial test of it, *Held* that he is entitled to the decision on priority as against Hanson, who conceived in April, 1899, and reduced to practice in July, 1899. [Roe v. Hanson, 5550.]

51. REDUCTION TO PRACTICE—COMMERCIAL USE UNNECESSARY.

Where Roe in August, 1899, completed the shifting device for the saws of a gang-edger and embodied it in a full-sized machine adapted for practical use and then tested it, but did not place it in a sawmill and test it commercially until March, 1900, *Held* a reduction of the invention to practice in August, 1899. [Id.]

52. PRIORITY—DILIGENCE.

Where Roe conceived the invention in November, 1898, completed drawings in April, 1899, and then commenced work on a machine which was completed in August, 1899, and it appears that he was a very busy man and devoted all of the time that he could spare to work upon this invention, *Held* that he was not lacking in diligence. [Id.]

53. SAME—DELAY IN COMMERCIAL USE.

Where Roe completed his machine in August, 1899, and wished to place it in the sawmill which he was then building for his company, but was not permitted to do so, and where he placed it in the next mill built in March, 1900, *Held* that there was no unreasonable delay by him in making commercial use of his invention. [Id.]

54. SAME—EXHIBIT—REDUCTION TO PRACTICE.

Where a certain exhibit contains a chamber as a material part thereof, which is so connected and associated with the other parts that it would probably have a material effect upon the operation of the device, *Held* that this chamber cannot be ignored in order that the exhibit may be considered as a reduction to practice. [Blackford v. Wilder, 5769.]

55. SAME—SAME.

Where B. contends that a certain exhibit if operated at this time would contain oil in the trough and that therefore it must be held that it contained oil in 1896 when operated, *Held* that a demonstration of the burner at this time even if satisfactory would not be sufficient, since B. should have shown by his proofs that it did contain oil and that he appreciated the fact at the time. It is not sufficient that he supposes now that an operation took place which he did not appreciate at the time. [Id.]

56. SAME—EVIDENCE OF CONCEPTION AND DISCLOSURE.

Where the testimony shows a conception and disclosure of one specific form of the invention, *Held* sufficient to establish a conception and disclosure of the generic invention based upon another specific form. [Glaughter v. Halle, 5771.]

57. SAME—REDUCTION TO PRACTICE.

Where one specific form of the invention embodied in a machine is shown to have worked practically and successfully, *Held* to constitute a reduction to practice of the invention notwithstanding the fact that this form is shown to have been capable of improvement. [Hien v. Buhoup, 51 O. G., 5068.]

58. SAME—DILIGENCE.

Where H. was the first to conceive the invention defined in all the counts and the first to reduce the invention to practice as to all the counts save one and exercised due diligence in reducing to practice the invention defined in the remaining count, *Held* that priority of invention as to all the counts should be awarded to H. [Id.]

59. MOTION TO SUPPRESS TESTIMONY—CONSIDERATION POSTPONED UNTIL FINAL HEARING.

Where a motion to suppress testimony involves a consideration of the entire record, such as is necessarily given at final hearing upon the question of priority, *Held* that a decision upon the matter will be postponed until that time. [Talbot v. Monell, 5565.]

60. TESTIMONY—DEPOSITION IN ANOTHER PROCEEDING—DISCREDITING WITNESS.

Where for the purpose of discrediting a witness in an interference a deposition given by him in another interference is introduced, *Held* proper, but *Held*, further, that the deposition cannot be accepted as proper evidence to establish the facts stated in it. [Id.]

61. SAME—DEPOSITIONS IN DIFFERENT PROCEEDINGS NOT ACCEPTED.

Where a party to one interference introduces in evidence the deposition of one of the witnesses given in another interference for the purpose of discrediting him, *Held* that this does not justify the opposing party in introducing the depositions of other witnesses in that other interference for the purpose of establishing the facts alleged by those witnesses. [Id.]

62. BURDEN OF PROOF—APPEAL—RIGHT TO MAKE CLAIM NOT INVOLVED.

Where a party to an interference is given the benefit of the date of an earlier application filed by him under Rule 115 and on a motion to shift the burden of proof the Examiner decides that the early case discloses the invention, *Held* that this is not a favorable decision upon his right to make the claim from which no appeal can be taken, but is merely a ruling as to his record proofs from which an appeal may be taken to the Commissioner. [Ditgen v. Farmer, 5566.]

63. SAME—CONTINUOUS APPLICATIONS—FAILURE TO CLAIM.

Where on a motion to shift the burden of proof it is argued that a party is not entitled to the benefit of the date of an earlier application because the claim was not made therein and because there was included a disclaimer of it, *Held* that this relates to his right to make the claim and not to the disclosure in the early case, which is the only thing considered under Rule 115. [Id.]

64. SUPPRESSION OF TESTIMONY—EVIDENCE AS TO OTHER MATTERS THAN THE ISSUE.

Where a motion to add certain counts to the issue of an interference is denied and the party thereafter reads those counts into the record and proceeds to take testimony as to them, *Held* that the testimony will upon motion be stricken out. [Brill and Adams v. Uebelsacker, 5568.]

65. TESTIMONY MUST BE CONFINED TO ISSUE—PRIORITY.

The issue in an interference proceeding is prescribed by the Office, and the testimony taken must be confined to the question of priority of invention of this issue. [Id.]

66. ISSUE MUST REMAIN FIXED—AMENDMENT BY PARTIES.

It is necessary to orderly procedure that the issue remain fixed throughout the interference proceeding. To permit a party to change the issue at will, to add to it so as to include matter not covered by it originally, would lead to the greatest confusion. [Id.]

67. TESTIMONY—MOTION TO EXTEND TIME—EXCUSE FOR DELAY.

Where a party delays taking his testimony until the last of the time allowed him and gives no good reason for the delay, *Held* that a motion for an extension of time will be denied. [Id.]

68. MOTION TO REOPEN—SHOWING IN RECORD FOR DELAY.

On a motion to reopen an interference which has been decided to take more testimony good reasons must be shown why it was not sooner produced and why the new evidence could not have been discovered by the exercise of reasonable diligence. [Monter v. Tully and Clark, 5569.]

69. SAME—SAME.

Where a witness testifies as to the making of a certain device and the opposing party after closing his proof in rebuttal and two months after a decision has been rendered on priority moves to reopen the interference to permit him to show that the device was inoperative, *Held* that the motion will be denied in the absence of a satisfactory showing why the evidence was not produced at the proper time. [Id.]

70. MOTIONS—DELAY—RULES 100 AND 102.

The fact that a motion to dissolve under Rule 100 is pending does not prevent the filing of a motion to amend under Rule 100 or excuse delay in filing such a motion. [Parrissel v. Wichmann, 5570.]

71. AMENDMENT RULE 100—INVENTION MUST BE DIFFERENT.

Where one application includes the claims of the issue and others which differ so slightly therefrom that the decision as to the issue will settle the question of priority as to the others, *Held* that it is not necessary to make those other claims counts of the interference and that an amendment by the other party including those claims under Rule 100 should not be admitted. [Id.]

INVENTION.

(See Anticipation, 1, 2; Patentability.)

1. ANTICIPATION—DOUBLE USE.

Held that the substitution of one old form of high-frequency apparatus for another in the production of ozone involves mere double use and not invention. [Ex parte Verley, 1891.]

2. SAME—SUGGESTION OF COMBINATION IN PRIOR ART.

Held that there was no invention in using a Horvian exciter in an ozone apparatus when it had been used in other devices to obtain electric currents of high frequency and an ozone patent had described the use of devices of that class with an oscillator. [In re Verley, 5567.]

JOINT APPLICATIONS.

(See Interference, 37.)

JURISDICTION.

(See Interference, 35.)

JURISDICTION OF THE COMMISSIONER OF PATENTS.

(See Appeal to the Secretary of the Interior.)

JURISDICTION OF THE UNITED STATES COURTS.

1. QUESTION UNDER PATENT LAWS—CONTRACT—INFRINGEMENT. Where the defendant gave to the complainant an exclusive license under his patent and subsequently gave a license to a third party in the same territory, alleging that the first license is void for failure to comply with its terms, *Held* that a bill to recover damages for infringement and for an injunction raises a question under the patent laws which is within the jurisdiction of the United States courts and is not merely a question of contract. [Examiner Wooden Pipe Company v. Pacific Bridge Company et al, 5123.]

2. SAME—RIGHT UNDER PATENT.

To constitute an action arising under the patent laws of the United States, the plaintiff must set up some right, title, or interest under the patent laws, or at least make it appear that some right or privilege will be defeated by one construction or sustained by the opposite construction of those laws. [Id.]

3. SAME—REMEDY IN STATE COURT INADEQUATE.

Before it can be held that the allegations of the bill oust the jurisdiction of the United States court it must at least appear that the plaintiff has another remedy by an action in a State court, and where an action in that court would be inadequate or would involve questions under the patent law jurisdiction of the United States court is not ousted. [Id.]

4. SAME—REMEDY FOR INFRINGEMENT.

Where the only remedy which an alleged licensee had against a violation of his license by the patentee was to prosecute the patentee as an infringer of his rights under the patent, *Held* that the question is one arising under the patent laws and is within the jurisdiction of the United States courts. [Id.]

5. CONTRACT CONCERNING PATENTS—SUIT FOR INFRINGEMENT.

The jurisdiction of the Federal courts cannot be invoked primarily for the determination of the rights of parties to a contract concerning patents; yet when the bill is an ordinary one for infringement and the answer puts in issue the title of the plaintiff to see the jurisdiction is not ousted by the mere allegation that the license has been revoked. [Id.]

6. CASE DISMISSED ON MOTION OF COURT.

It is the duty of the circuit court on its own motion to dismiss the case whenever at any time it shall appear that its jurisdiction has been improperly invoked. [Id.]

7. APPEAL TO SUPREME COURT FROM CIRCUIT COURT—QUESTION OF JURISDICTION.

On an appeal directly to the Supreme Court from a decision of the circuit court it must appear either that the question of jurisdiction was certified or that the decree appealed from shows upon its face that the sole question decided was one of jurisdiction. A statement to that effect in allowing an appeal is, however, a sufficient certificate that the question is one of jurisdiction. [Id.]

LABELS.

1. PRINTED MATTER—NOT REGISTRABLE.

A label which contains nothing more than an arrangement of printed matter naming and describing a medicine, together with directions for its use and the name and residence of the manufacturer, is not an artistic production and is not registrable. [Ex parte Houghton, 1891.]

2. ARBITRARY WORD—NOT ARTISTIC.

A label containing a new arbitrary word may be an intellectual production; but such a word does not render the label artistic. [Id.]

3. ABSENCE OF ARTISTIC MERIT.

In the absence of artistic merit there is no provision for the registration of a label under the statute relating to copyrights, under which statute such registration is granted. [Id.]

4. REGISTRATION REFUSED—SKILL OF TYPE-SETTER.

A label for cement printed in three kinds of type, including the fanciful words "Cast Steel" and having a monogram of the letters "C S" placed between two of the lines of printing, *Held* not registrable, because it involves merely the expected skill of the type-setter, and its production was not the result of the creative powers of the artist. [Ex parte Clark Cast Steel Cement Company, 5567.]

LICENSES.

MOTION TO AMEND APPLICATION.

(See Interference, 9, 70.)

INTERFERENCE—DELAY—PRIORITY OF ANOTHER MOTION TO EXAMINE.

A delay of four months in filing a motion to amend under Rule 109 cannot be excused upon the ground that the party did not know whether or not the amendment would be necessary until a final decision was rendered upon a motion to dissolve which was pending. [Perrussel v. Wichmann, 2970.]

MOTION TO DISSOLVE INTERFERENCE.

(See Interference, 7, 22, 24, 25, 26, 29, 30, 31, 32, 33, 37, 45, 59, 70.)

PARTICULAR PATENTS.

1. JONES—PROCESS OF DRY-PRESSING—No. 204,741—FUNCTION OF MACHINE.

Claim 5 of Letters Patent No. 204,741, granted to Joshua W. Jones, for a process of dry-pressing and removing type indentations from printed sheets *Held* invalid, as covering merely the function of the machine. (Decision below, 16 App. D. C., 22, reversed.) [Busch v. Jones et al., 2980.]

2. SAME—BOOKBINDER'S DRY-PRESS—No. 204,741—ANTICIPATION—CLAIM VALID.

Claims 1, 2, 3, and 4 of Patent No. 204,741 for a bookbinder's dry-press and sheet-ble *Held* valid notwithstanding the existence of devices of the same general character used in various arts for compressing and tying various materials. [Id.]

3. JONES—MIXING PIG METAL—No. 404,414—VALID AND INFRINGED.

Letters Patent No. 404,414, granted to William R. Jones on June 4, 1890, for a method of mixing molten pig metal, *Held* valid and infringed. (Decision below, 98 F. R., 859, reversed.) [Carnegie Steel Company, Limited, v. Cambria Iron Company, 1992.]

PATENTABILITY.

(See Anticipation.)

PATENTS.

See Assignments; Construction of Specifications and Patents, 2; Particular Patents.

PETITION TO THE COMMISSIONER OF PATENTS.

1. QUESTION MUST BE TWICE BROUGHT UPON.

A petition should not be brought until the case has been twice acted upon with reference to the point involved in the petition. (Rule 142.) [Ex parte Haug, 97 O. G., 192.] [Ex parte Rhone, 2980.]

2. SAME.

A petition taken to the Commissioner from the first action of an Examiner *Held* to be premature and is dismissed. [Id.]

3. SAME—REASONS FOR WITHDRAWING OBJECTION MUST BE STATED.

Petitions taken without a request for reconsideration accompanied by a statement of reasons why the objection should be withdrawn which will inform the Examiner of the applicant's position place much unnecessary labor on the Commissioner and cause delay. [Id.]

POVERTY.

PRACTICE IN THE COURTS.

(See Interference, 42.)

PRELIMINARY STATEMENTS.

(See Interference, 8.)

PRESUMPTION.

(See Interference, 41.)

PRIORITY OF INVENTION.

(See Interference, 10, 11, 12, 13, 16, 18, 19, 25, 26, 31, 43, 50, 52, 53, 55, 66; Invention, 2.)

PRIVATE USE.

(See Interference, 10.)

PROCESS.

(See Construction of Claims; Construction of Specifications and Patents, 1; Drawings, 2; Division of Application, 4.)

1. ANTICIPATION—ONE STEP NEW.

Where the patented process of mixing molten metal drawn from several blast-furnaces includes retaining at all times a substantial quantity of molten metal in the mixer and this step is what adds value to the process and makes it a success, *Held* not anticipated by mixing devices in which the metal might be retained when the users did not contemplate such use or understand its advantages. [Carnegie Steel Company, Limited, v. Cambria Iron Company, 1992.]

2. SAME—SAME—RESULT LOWS SOUGHT FOR.

Where the manufacturers of steel had spent years in endeavoring to find out a process for accomplishing the results of this invention which is but a step from what they already knew, it is surprising with the wisdom which comes after the fact that they did not discover it. [Id.]

3. SAME—NOT ANTICIPATED BY APPARATUS.

To anticipate a process patent it is necessary not only to show that the prior patent might have been used to carry out the process, but that such use was contemplated or that it would have occurred to an ordinary mechanic in operating the device. [Id.]

4. SAME—APPARATUS AND PROCESS DISTINGUISHED.

A mechanical patent is anticipated by a prior device of like construction and capable of performing the same function, but it is otherwise with a process patent. A process patent can only be anticipated by a similar process. [Id.]

5. SAME—FUNCTION OF MACHINE.

If a process is the mere function of a machine, another machine capable of performing the same function might be an anticipation; but this is not because a process can be anticipated by a mechanism, but because the mere function of a machine is not patentable as a process at all. [Id.]

PROCESS AND PRODUCT.

(See Interference, 47, 48.)

PROVISIONAL SPECIFICATION.

(See Foreign Patents.)

REDUCTION TO PRACTICE.

(See Interference, 2, 12, 17, 18, 19, 20, 21, 22, 24, 25, 26, 30, 31, 32, 33, 34, 35, 37, 38, 43, 44, 45; Testimony, 2.)

1. EXPERIMENTAL PRODUCTION OF COMPOSITION.

Where the issue is for adulterated cornstarch-pith saturated with oil and it appears that S. produced the pith and in experimenting with it saturated small quantities with oil, but made no practical use of it to determine its properties and value, *Held* not a reduction to practice. [Silverman v. Hendrickson, 443.]

2. MUST BE PRACTICAL USE OF COMPOSITION.

It is not necessary to a reduction to practice that S. should have thought of all uses to which the composition could be applied and have actually employed it practically for those uses, but merely that he should have tested it to determine its qualities, so as to demonstrate its practical utility for some purpose. [Id.]

3. INTERFERENCE—COMPLETE DEVICE.

Some inventions are so simple that no actual test is required when the device is a complete construction of full size and form. (Citing *Mason v. Hepburn*, 84 O. G., 147.) [Loomis v. Hauser, 448.]

4. SAME—SAME—HAND-MADE ENVELOPE.

An envelop constructed by hand made from a sheet of light brown paper, which on inspection is clearly seen to be capable of securely holding tickets, for which use the invention is intended, though never put into commercial use, *Held* to constitute a full and complete reduction to practice. [Id.]

5. SAME—ABSENCE OF PRINTED MATTER.

A poster-ticket holder made from a sheet of ordinary paper and constructed as stated in the issue *Held* a reduction to practice, although the advertisements, program, time-table, and diagram of seats usually found on such holders were not printed thereon. [Id.]

6. INTERFERENCE—DEVICE COMPLETE, BUT UNSATISFACTORY.

Where twelve complete scales embodying every feature of the interference issue were made and shipped to customers for test in practical use and they were all returned as unsatisfactory, *Held* not a reduction to practice of the invention. [Swihart v. Mauldin, 505.]

7. SAME—CONSTRUCTION OF DEVICE NOT SUFFICIENT UNLESS SATISFACTORY.

The mere construction of a device embodying the elements of the issue cannot be accepted as a reduction to practice unless that device proves so satisfactory in use as to demonstrate the practicability of the invention. [Id.]

8. SAME—DEVICES COVERED BY MECHANICAL SKILL.

The fact that an unsuccessful device could have been made successful by mere mechanical skill does not make that device constitute a reduction to practice, since until made operative it does not demonstrate the practicability of the invention any more than would drawings or a model. [Id.]

9. SAME—MACHINE AS A WHOLE NOT SUCCESSFUL.

Where the mechanism of the claim operates successfully, it is not necessary that all parts of the machine in which it is used shall be mechanically perfect; but where the mechanism claimed is the part which proves defective *Held* not a reduction to practice. [Id.]

REFERENCES.

(See Interference, 16; Reopening of Rejected Cases, 1, 2.)

REFERENCE TO ANOTHER PENDING APPLICATION.

1. CITATION OF DECISION OF EXAMINERS-IN-CHIEF.

Where in his answer to an appeal to the Examiners-in-Chief the Primary Examiner refers to a decision by that tribunal in regard to another pending application holding that a similar invention was not patentable, *Held* that the reference will be accepted from the answer. [Ex parte Morley, 295.]

2. SAME—ACCESS TO OTHER CASE FILES.

An applicant should be fully informed of the reasons for rejection and given an opportunity to meet them, and therefore in the treatment of one case reference should not be made to another case filed by a different party to which the applicant cannot have access. [Id.]

3. CITATION OF MANUSCRIPT DECISIONS—KNOWLEDGE OF INVENTION NECESSARY.

Manuscript decisions of the Examiners-in-Chief and of the Commissioner may be cited in support of some contention of law if it can be done without disclosing the applicant's invention or making it necessary for the party against whom they are cited to understand the inventions in order to appreciate the pertinence of the decisions to the matter under consideration. [Id.]

REJECTION OF CLAIMS.

(See Inoperativeness; Reference to Another Pending Application, 2.)

1. INOPERATIVENESS—AEROPLANE—FAILURE OF EXAMINER TO STATE REASONS.

Where an Examiner rejects claims for an aeroplane on the ground of inoperativeness upon the allegation that there is no instance in the history of the art of a successful ascent and prolonged flight without the aid of a gas-field, *Held* that he has not complied with the rule which requires him to state his reasons for rejection. [Ex parte Gibson, 297.]

2. SAME—FAILURE OF OTHERS TO ACCOMPLISH RESULT.

This Office was created and exists for the sole purpose of encouraging inventors to furnish means to accomplish results which have not before been accomplished, and therefore it cannot consistently refuse a patent upon the sole ground that no one has heretofore succeeded in accomplishing the result had in view. [Id.]

REOPENING OF REJECTED CASES.

1. SHOWING INSUFFICIENT.

Where the claims in a case were properly finally rejected and the applicant thereafter sought to amend and as a reason for not amending earlier alleged that prior to final rejection he had been intent in framing claims upon a different view of the invention and references and because the view of the invention contained in the amended claims did not then present itself, *Held* that the showing does not warrant reopening the case for further prosecution before the Examiner. (Citing *ex parte Beckwith*, 95 O. G., 1451.) [Ex parte Raymond, 1990.]

2. ADMISSION OF AMENDMENT FOR PURPOSE OF APPEAL.

Where the new claims sought to be entered after final rejection are not merely those rejected in better form, but differ as to their merits, *Held* that they cannot be admitted under Rule 66 for the purpose of appeal. [Id.]

3. FINAL REJECTION—NO APPEAL TAKEN WITHIN THE STATUTORY TIME LIMIT—APPLICATION ABANDONED.

Where the final rejection was made on February 27, 1900, and no appeal therefrom was taken within the time limit allowed by the statute, all the intermediate actions being limited to proceedings relative to the admission of an amendment canceling the rejected claims and substituting others in lieu thereof, *Held* that it would be useless to admit claims for the purpose of appeal, as the application is abandoned. [Id.]

SPECIFICATIONS.

(See Construction of Specifications and Patents, 2, 3.)

STATE COURTS.

(See Jurisdiction of United States Courts, 2.)

STIPULATION.

(See Interference, 2.)

1. CONTRARY TO EVIDENCE—NOT BINDING AFTER NOTICE.

Where a stipulation was signed to the effect that the amount of molten metal in the defendant's mixer varies from nothing to its full capacity, but upon the facts being more fully ascertained notice was given by the plaintiff that the stipulation is so far as it was contrary to the evidence would be repudiated, *Held* that the stipulation is not binding. [Carnegie Steel Company, Limited, v. Cambria Iron Company, 1992.]

2. MAY BE REPUDIATED UPON PROPER NOTICE.

While a stipulation is undoubtedly admissible in evidence, it ought not to be used as a pitfall, and where the facts subsequently developed show with respect to a particular matter that it was inadvertently signed counsel may upon giving notice in sufficient time to prevent prejudice to the opposite party repudiate any fact inadvertently incorporated therein. [Id.]

SUBSTITUTE APPLICATION.

(See Interference, 17.)

SUITS FOR INFRINGEMENT.

(See Jurisdiction of United States Courts, 1, 2, 3, 4, 5.)

INFRINGEMENT—ACCOUNTING BASED ON INVALID CLAIM—DECISION REVERSED AND CASE REMANDED.

Where the lower court held all claims of the patent to be valid and infringed, but the accounting was based upon the infringement of claim 5 and that claim is found on appeal to be invalid, *Held* that the decision below must be reversed and the case remanded for proceedings in accordance with this opinion. [Busch v. Jones et al, 280.]

TESTIMONY.

(See Interference, 1, 2, 23, 24, 27, 29, 30, 31, 32, 33, 34.)

1. FAILURE OF INVENTOR TO TESTIFY.

The failure of an inventor to appear and testify in his own behalf is capable of an unfavorable inference; but where he has assigned his invention and is not friendly with the assignee it is not entitled to much weight. [Silverman v. Hendrickson, 445.]

2. INTERFERENCE—TESTIMONY OF INVENTOR INCOMPETENT—CORROBORATION.

Considering the natural bias of a party and the incentive to color the testimony in his own interest, the rule that his testimony upon a point will not be accepted as sufficient is so universally accepted that it may be said that his testimony is incompetent until corroborated. [Petrie v. De Schweinitz, 445.]

3. SAME—EVIDENCE—REDUCTION TO PRACTICE—CONCEPTION.

Where P. alleged that he successfully performed the process of the issue at a certain time and witnesses state that he then told them that he had performed the process, but they did not see it performed, *Held* not a corroboration as to reduction to practice, but merely as to conception. [Id.]

TITLE TO PATENT.

(See Assignments.)

TRADE-MARKS.**1. REGISTRATION MUST AGREE WITH MARK AS USED.**

The law is very clear that the mark which is shown and described in the registration must be the same as the mark which is actually used. There is no provision for the registration of a mark not in actual use or which differs from that in actual use. (Citing *ex parte Hall*, 98 O. G., 2174.) [Ex parte Crowley, 280.]

2. INVARIABILITY.

There is no provision in the law for registration of a mark which may be varied as circumstances may render it necessary or desirable. To use such a variable mark would defeat the very purpose for which a trade-mark is intended. [Id.]

3. VARIANCE BETWEEN SHOWING AND STATEMENT OF USE.

When the facsimile shows the mark as comprising the word "Tunnel" together with certain pictorial representations, and it is stated that the word "Tunnel" alone may be used, *Held* that registration should be refused. [Id.]

4. LIMITATION OF SHOWING AND DESCRIPTION.

Held, further, that if the registration is intended to cover the word "Tunnel" alone the pictorial representation should be erased from the drawing and the description thereof canceled. If, on the contrary, it is intended to cover the mark as it is shown in the facsimile, the statement of essential features and the description should be made to conform to such showing. [Id.]

5. "DEFIANCE"—ARBITRARY, NOT GEOGRAPHICAL.

The word "Defiance" *Held* registrable as a trade-mark for paper, since its geographical significance due to its use as the name of a town does not overshadow its original meaning of a challenge and take from it its arbitrary significance. [Ex parte Byron Weston Company, 351.]

6. LONG USE—GEOGRAPHICAL SIGNIFICANCE AFTERWARD ACQUIRED.

Where a mark is arbitrary and distinctive when adopted, but has since become prominent geographically as the name of a place, *Held* that in justice the applicant cannot be deprived of his mark unless its geographical significance is so great as to make it certain that it would be understood in that sense by the purchasing public. [Id.]

7. THE WORDS "RED RIVER SPECIAL" HELD NOT REGISTRABLE.

The words "Red River Special" *held* not to be registrable as a trade-mark for agricultural machinery on the ground that the words "Red River" are geographical and the word "Special" is indicative of grade or style, and therefore the mark is not as an entirety indicative of origin or ownership. (Brown v. Trade-Mark, sec. 344, 347; *ex parte Buffalo Pitts Co.*, 99 O. G., 2038.) [Ex parte Nichols and Shepard Company, 1618.]

8. INTERFERENCE—BURDEN OF PROOF—REGISTRATION UNDER THE ACT OF 1870.

Where in a trade-mark interference one of the applicants had in 1870 registered the mark under the invalid Trade-Mark Act of 1870, *Held* that he is not entitled to the date of that registration in deciding upon whom the burden of proof shall be placed. [Vanden Bergh and Company v. Belmont Distillery Company, 1624.]

9. REGISTRATION AS EVIDENCE OF OWNERSHIP.

Under the present trade-mark law registration is *prima facie* evidence of ownership, and therefore the opposing party must show use in the United States before its date; but this does not apply to registration under the old law, which has been held unconstitutional. [Id.]

10. SAME—PRESENT LAW AND OLD LAW COMPARED—USE NOT REQUIRED.

Registration under the act of 1870 has merely the effect of a printed publication and conveys no presumption of use in this country, since that act did not require use as a condition precedent to registration. [Id.]

11. "FELT-LENS"—DESCRIPTIVE.

The word "Felt-Lens" as a trade-mark for sweat-pads used in connection with harness for horses refused registration on the ground that it is either descriptive or deceptive. [Ex parte McClain, 2101.]

12. "SOLID-COMFORT" FOR FURNACES—NOT DESCRIPTIVE—REGISTRABLE.

The words "Solid Comfort" *held* to be registrable as a trade-mark for furnaces on the ground that even though these words may convey the idea that persons using these furnaces will experience that degree of comfort known as "solid comfort" they are not descriptive of the quality or construction of the furnaces. They merely suggest a remote result which may be brought about by the use of the furnaces. [Ex parte Fiebigler, 2101.]

13. "ALABAMATUBE" REFUSED REGISTRATION.

The word "Alabamatube" can mean nothing different from the two words "Alabama tube"—that is, a tube produced in Alabama. The word is geographically descriptive and cannot be registered as a trade-mark for tubes. [Ex parte Alabama Tube and Iron Company, 2221.]

14. "MAPLE-LEAF" ANTICIPATED BY "SILVER LEAF."

A trade-mark consisting of the words "Maple Leaf" and the representation of maple-leaves refused registration upon a registered mark consisting of the words "Silver Leaf" and the representation of maple-leaves. [Ex parte Vogel and Son, 2221.]

15. IDENTITY OF MARKS—APPEARANCE AS WELL AS SOUND TO BE CONSIDERED.

In determining the question whether or not one mark so nearly resembles the other as to cause confusion in the minds of the public the appearance of the marks is as important as the sound of the words used therein when those words are spoken. [Id.]

VALIDITY OF PATENT.

ALPHABETICAL LIST OF PATENTEES

FOR

THE QUARTER ENDING JUNE 30, 1902.

[Claims and drawings of Designs do not appear in the Monthly Volumes. Separate indexes for Designs, Trade-Marks, Labels, Prints, and Disclaimers follow this.]

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Specification.	Drawing.	Volume.	Page.
A. B. Pitkin Machinery Company. (See Shay, Jeremiah M., assignor.)						
A. G. Spanning & Bros. (See Pierce, George L., assignor.)						
A. H. Nissen Machine Company. (See Nissen and Olson, assignors.)						
A. R. Miller Boring Co. (See Miller, Albert R., assignor.)						
Abbe, Ernst, assignor to Firm of C. Zeiss, Jena, Germany. Lens system.	697,930	Apr. 22	2085	648	99	573
Abbe, Max F., New York, N. Y. Ball grinding-mill.	702,767	June 17	2700	880	99	2708
Abbott, Everett L., New York, N. Y. Abdominal bandage.	698,488	Apr. 22	2709	880	99	880
Abbott, Harry W., Chicago, Ill., assignor to Porter Safety Seal Company. Sealing implement.	702,251	June 10	1016	427	99	2516
Abbott, Henry, New York, N. Y., assignor to Calculagraph Company, New York, N. Y., and East Orange, N. J. Calculagraph.	697,483	Apr. 15	1905	694	99	408
Abbott, Henry, New York, N. Y., assignor to Calculagraph Company, East Orange, N. J., and New York, N. Y. Calculagraph.	697,487	Apr. 15	1906	694	99	408
Abd, Richard, Annon, assignor to F. Krupp, Essen, Germany. Apparatus for boring shafts.	698,105	Apr. 22	2620	720	99	720
Abell, William F., Derby, England. Baby furniture.	702,021	May 12	1850	299	99	1850
Abendroth, Arthur, Berlin, Germany. Proportionate-distribution valve system for pumps.	702,908	June 24	2975	685	99	2777
Aber, Edgar, Jacksonville, Tex. Veneer basket.	701,935	June 3	700	154	99	2805
Abercrombie, William B., assignor to Wheeler & Wilson Manufacturing Company, Bridgeport, Conn. Binder for sewing machines.	698,384	Apr. 22	2721	880	99	887
Abern, George F., assignor of one-half to H. J. Fitch, Boston, Mass. Steering-lock for vehicles.	697,980	Apr. 15	2400	545	99	504
Abraham, Thomas, Hopedale, assignor to Morse Twist Drill and Machine Company, New Bedford, Mass. Box and cover.	702,904	June 24	2975	685	99	2777
Account, Audit & Assurance Company. (See Kittredge, Anson O. and E. R., assignors.)						
Acetylene House Lighting Company. (See Dolan, Edward J., assignor.)						
Acetylene Manufacturing Company. (See Montel, Leo, assignor.)						
Acheson, Edward G., Buffalo, N. Y. Terminal for electric furnaces.	701,935	June 10	1200	267	99	2805
Acheson, Edward G., Buffalo, assignor to International Acheson Graphite Company, Niagara Falls, N. Y. Graphitizing electrodes.	702,768	June 17	2701	881	99	2708
Acherman, Albert A. (See Warren and Acherman.)						
Acherman, Harmon F., Cleveland, Ohio. Mopping device.	701,935	June 10	1200	267	99	2805
Acklin, Alfred M., Pittsburg, Pa. Apparatus for feeding and tempering foundry-sand.	698,787	Apr. 1	744	160	99	159
Acklin, Alfred M., Pittsburg, Pa. Drive mechanism for crushing-rolls.	697,511	Apr. 8	1720	365	99	365
Acklin, Alfred M., Pittsburg, Pa. Casting apparatus.	697,769	Apr. 15	2668	573	99	573
Acklin, Alfred M., Pittsburg, Pa. Apparatus for feeding and tempering foundry-sand.	698,471	May 6	656	159	99	1311
Acklin, Alfred M., Pittsburg, Pa. Conveyor-belt apparatus.	702,273	June 10	1775	405	99	2480
Acklin, Alfred M., Pittsburg, Pa., assignor to Hoyl and Patterson. Conveyor.	702,905	June 24	2978	685	99	2777
Acklin, Alfred M., Pittsburg, Pa., assignor to Hoyl and Patterson. Flight for conveyors.	702,905	June 24	2978	685	99	2777
Acme Ball Bearing Caster Company. (See Hagood, George B., assignor.)						
Acme Fuse Box Company. (See Dorsey, Charles J., assignor.)						
Acme Harvester Company. (See Green, Henry, assignor.)						
Acme Harvester Company. (See Peck, Ezra A., assignor.)						
Acme Specialty Manufacturing Company. (See Sparmaker, Frank P., assignor.)						
Acme Sucker Rod Company. (See Wright, Orson J., assignor.)						
Acree, William T., Gainesboro, Tenn. Fruit cover and cutter.	702,381	June 24	2769	885	99	2805
Action Gesellschaft für Anilin-Fabrikation. (See Hausdorf, Robert, assignor.)						
Adams, Albert E. (See Hengstfeld and Adams.)						
Adams, Alonzo B., Boston, Mass. Ticket-holder.	702,045	June 10	1273	312	99	2407
Adams, Archibald C., et al. (See Winkelman, Benjamin, assignor.)						
Adams, O. C., et al. (See Miller, Benjamin F. D., assignor.)						
Adams, Daniel L., Reading, Pa. Sand-molding machine.	697,628	Apr. 15	2080	802	99	530
Adams, Frank E., Plymouth, Mich. Rope-fastener.	701,977	June 3	1	1	99	2100
Adams, Frank E., assignor to E. Franklin, Chicago, Ill. Machine for mounting ornamental composition directly upon circular picture-frames. (Reissue.)	11,960	Apr. 8	1087	426	99	426
Adams, George B., Irvington, N. J. Glass.	699,128	May 6	1	1	99	1177
Adams, George E., New Britain, Conn. Metallic envelop-closure.	697,980	Apr. 22	2669	646	99	675
Adams, Joseph P., Garfield, Wash. Bag-holder.	702,905	June 24	2978	685	99	2873
Adams, Louis G., et al. (See Mathias, Theodore M., assignor.)						
Adams, Marcellin O. (See Adams, Stephen J., assignor.)						
Adams, Stephen J., assignor to M. C. Adams, Pittsburg, Pa. Sand-molding apparatus.	697,325	Apr. 8	1261	417	99	417
Adams, Stephen J., assignor to M. C. Adams, Pittsburg, Pa. Sand-molding apparatus.	697,326	Apr. 8	1267	418	99	418

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Vol.	Page.	Vol.	Page.
Adams, Stephen J., assignor to H. C. Adams, Pittsburg, Pa. Forming sand molds	697,287	Apr. 6	3570	415	99	415
Adams, Stephen J., assignor to H. C. Adams, Pittsburg, Pa. Forming sand molds	697,288	Apr. 6	3574	415	99	415
Adams, Thomas E., Cleveland, Ohio. Alternating-current regulator	698,085	Apr. 20	3544	1115	99	1115
Adams and Westlake Company. (See Kueker, John A., assignor.)						
Adcock, William, assignor of one-half to J. Lee, Akron, Ohio. Wall-paper cleaner	701,970	June 3	3	1	99	210
Addy, Charles J., et al. (See Mead, Albert G., assignor.)						
"Addy" Manufacturing Company. (See Brow, James E., assignor.)						
Adler, Augusta, Tacoma, Wash. Adjustable counter-stool	697,911	Apr. 15	3583	313	99	313
Adolfsson, Anders E., Sundbyberg, Sweden. Acetylene-gas-generating apparatus	698,083	May 13	1500	314	99	149
Adrian Gas Machine Manufacturing Company. (See Lane and Desvoport, assignors.)						
Adroit, Georges, and P. Pons, Marseilles, France. Steam-reintegrator	695,340	Apr. 20	3534	303	99	303
Agarter, Jacob, San Francisco, Cal. Screw-propeller	701,948	May 27	4115	347	99	347
Agilis Co. (See Kueker, John A., assignor.)						
Agnew, O. W., St. Paul, Minn. Milk-can	701,955	May 30	4122	389	99	120
Ahlborn, Eduard, Hildesheim, Germany. Flooding regenerative heater for liquids	698,082	Apr. 1	689	311	99	311
Ahlen, William. (See Hunt and Ahlen.)						
Ahrens, Carl F. W., Bridgeport, Conn. File-cabinet	701,003	May 27	3577	344	99	130
Ahrens, Ella H., Philadelphia, Pa. Combined table and guard attachment for sewing machines	701,094	June 10	3575	315	99	315
Aiken, Robert H., Winthrop Harbor, Ill. Ice-crusher	701,001	May 27	3575	344	99	130
Aikens, James K., et al. (See McGarvey, Edward, assignor.)						
Aikens, J. K., et al. Philadelphia, Pa. Device for applying and removing electric-light bulbs	697,951	Apr. 20	3580	342	99	342
Aikens, James M., Gary, Ill. Pneumatic conveyor	698,081	Apr. 1	347	30	99	30
Aktion-Gesellschaft-Schaller Gruben-und Hüttenverein. (See Holthaus, Johann, assignor.)						
Albaugh, Benjamin F., Covington, Ohio. Smoothing-iron	701,255	June 10	356	313	99	313
Albaugh Bros., Dover and Company. (See Barrow, Charles E., assignor.)						
Albee, Washington L., assignor of one-half to Schoellkopf & Company, Buffalo, N. Y. Preparing skins for tanning	702,594	June 17	3592	122	99	57
Albert, Friedrich, Nuremberg, Germany. Pulley	699,434	May 6	558	99	15	15
Albertson, John A., Lancaster, Pa. Telegraph-sounder	698,085	Apr. 20	3587	1115	99	1115
Albrecht, Christian A., Berlin, Germany. Tool for cutting cast type-lines in linotype machines	698,082	Apr. 1	348	30	99	30
Albrecht, Christian A., Berlin, Germany. Tool for cutting cast type-lines in linotype machines	698,082	May 13	1203	314	99	14
Albrecht, John, San Francisco, Cal. Pumping apparatus						
Albrecht Company. (See Bell, Arthur F. L., assignor.)						
Albrecht, John, San Francisco, Cal. Pumping apparatus	697,700	Apr. 15	3583	340	99	340
Alden, Arthur M., Waukegan, Ill. Oil						
Alden, F. C. (See Hunt, George A., assignor.)						
Alden Type Machine Company. (See Johnson and Low, assignors.)						
Alden Type Machine Company. (See Low and Breakay, assignors.)						
Alden, William E., Springfield, Mass. Machine for making buttons or other articles	697,180	Apr. 6	1415	330	99	330
Aldrich, Albert B., Lexington, Ky. Respirometer	698,087	May 13	977	330	99	330
Alexander, Sidney. (See Alexander, Tony, assignor.)						
Alexander, Tony, Bismarck, Minn., assignor of one-half to G. Alexander, New Orleans, La. Support for overhead carriers	702,507	June 24	3590	690	99	690
Alexander, Tony, Bismarck, Minn., assignor of one-half to G. Alexander, New Orleans, La. Elevated-cable system of transportation	702,508	June 24	3590	697	99	697
Alger, John L., Medford, Mass. Lock-nut	701,880	June 3	448	185	99	185
Alhart, Clarence E., assignor of one-half to H. B. Carlton, Rochester, N. Y. Soap-bubble blower	697,038	Apr. 8	1254	357	99	357
Allen, Hugh F. (See Borch, Gustav L. C., assignor.)						
Allegretti, Tony L., Chicago, Ill. Lather bag	702,739	June 17	3594	551	99	551
Allen and Van Nest Company. (See Allen and Salmon, assignors.)						
Allen, Charles E., Wadsworth, Ohio. Automatic injector	697,770	Apr. 15	3525	573	99	573
Allen, Charles F., Hueneme, Cal. Vaginal syringe	701,194	May 27	3513	940	99	940
Allen, Charles F., Hueneme, assignor of one-half to L. B. Hogue and W. C. Hewitt, Santa Paula, Cal. Driving-gear	698,704	Apr. 1	180	120	99	120

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	De't	Vol.	Page
Albano, Samuel B., deceased, Galveston, Tex.; C. A. Dorrestein, administrator. Fiber-separating machine.	699,980	May 13	970	288 287 286	90	1291
Albrecht, G. Frank. (See Edwards, Thomas E., assignor.)						
Allyn, Eunice O. (See Graham, Joseph R., assignor.)						
Almender, Ferdinand A. Glendale, Pa. Drawing implement.	697,594	Apr. 15	3254	308	90	515
Almendar, John F., and A. T. Van Tine, Contrahs, Wash. Tables.	697,778	Apr. 15	3501	374	90	520
Altman, Israel H., New York, N. Y. Rocker-facsimile.	701,610	June 17	2488	388	90	2644
Altman, Israel H., New York, N. Y. Rocker-facsimile and tire therefor.	701,570	June 3	3	1	90	2109
Altpeper, Louis F. and E. C. Chicago, Ill. Vehicle wheel and tire therefor.	698,028	Apr. 22	3194	680	90	177
Altpeper, Robert G. (See Altpeper, Louis F. and E. C.)						
Alvey, Benjamin H., assignor to Alvey-Verguson Co., Louisville, Ky. Skid.	700,308	Apr. 22	2698	580	90	1695
Alvey, Ferguson Co. (See Alvey, Benjamin H., assignor.)						
Alvord, Elmer E., assignor of one-half to M. J. Doyle, Danbury, Conn. Hat-paring machine.	700,308	May 20	2698	580	90	1695
Als, Urban B., assignor of thirteen-twentieths to A. M. and F. Denhard and W. E. Engel, Baltimore, Md. Non-refillable bottle.	701,957	June 10	1929	397	90	2266
Almgren, Joseph B. de, London, England. Extracting precious metals from their ores.	701,008	May 27	3321		90	1075
Almgren, John F., Madisonville, Ohio. Stamp machine and affixer.	701,943	May 27	4119	943	90	1075
Ambscher, Jacob F. (See Obermayer and Ambscher.)						
Amber, James A., Watck, Mass. Stencil-printing machine.	698,998	Apr. 1	1	1	90	2
Amber, Levi, Lebanon, Pa. Culinary vessel.	700,393	May 20	2827	673	90	1720
Amborn, George, Jr., assignor to J. H. Williams and Company, Brooklyn, N. Y. Chain wrench.	698,779	Apr. 22	4211	907	90	1021
Amborn, George, Jr., assignor to J. H. Williams and Company, Brooklyn, N. Y. Chain pipe-wrench.	698,780	Apr. 22	4214	908	90	1022
Ambrose, George E. (See Morford and Ambrose.)						
Ambrosini, Carl A., East Orange, N. J., assignor of one-half to C. H. and J. E. Wenger. Adjustable form for stair-builders.	699,037	Apr. 22	5048	1119 1117	90	1120
Ambuhl, Andrew, Decatur, Ill., assignor to Geo. W. Danaher Company, Keokuk, Iowa. Pick-up tong for live wires.	700,008	May 13	1901	389	90	1580
Amburn, Otto F., Galva, Ill., assignor to J. T. Clark and J. G. Martin, Big Rapids, Mich. Collar or cuff button.	701,244	May 27	4121	948	90	2075
Amsel, Otto F., New York, N. Y. Mordanting animal fiber.	700,264	May 20	2828		90	1695
American Bicycle Company. (See Copeland, James B., assignor.)						
American Bicycle Company. (See Dannenberg and Morgan, assignors.)						
American Bicycle Company. (See Morgan, Ralph L., assignor.)						
American Brake Company. (See Wabler, Henry A., assignor.)						
American Can Company. (See Hodgson, John G., assignor.)						
American Can Company. (See Leavitt, Frank M., assignor.)						
American Can Company. (See Livingston, Andrew W., assignor.) (Reissue.)						
American Can Company. (See Norton, Lawrence A., assignor.)						
American Can Company. (See Slooper, Charles W., assignor.)						
American Can Company. (See Williams, Harry B., assignor.)						
American Can Company. (See Wing, John F., assignor.)						
American Chemical Fire Extinguisher Company. (See Martin, Robert M., assignor.)						
American Cotton Company. (See Swenson, Magnus, assignor.)						
American Cotton Improvement Company. (See McFarlane, Charles J., assignor.)						
American Electric Telephone Company. (See Chapman, Henry P., assignor.)						
American Electric Telephone Company. (See Yaxley, Ernest E., assignor.)						
American Fanbelt Company. (See Handy, Louis H., assignor.)						
American Furnace Company. (See Wilmoth, William F., assignor.)						
American Key Can Company. (See Wiedenbasser, Alois, assignor.)						
American Lithographic Company. (See Imhof, Joseph A., assignor.)						
American Locomotive Company. (See Flayer, John, assignor.)						
American Loom Company. (See Martin, Fay H., assignor.)						
American Manufacturing Co. (See Hogan, Bertie F., assignor.)

American Wireless Telephone and Telegraph Company of et. (See Shoemaker, Harry, assignor.)						
Amerman, Isaac W., and R. L. Johannes, Nevada, Mo. Invalid reclining-chair.	701,220	June 10	957	215	90	2267
Amae, William H., Watsonville, Cal. Refrigerator-cases.	700,720	May 27	3143	714	90	1973
Amae, William H., Watsonville, Cal. Refrigerator-cases.	700,721	May 27	3145	714	90	1974
Ama, Max. (See Brumlinger, Julius, assignor.)	699,941	May 13	1980	388	90	1516
Amadeo, Charles G., Greenwich, Mass. Convertible tool.						
Amatuzi-Osborn Co. (See Osborn, Henry C., assignor.)						
Amavala, Robert G., Camden, N. J., assignor to C. H. Graham and G. D. Boston, Philadelphia, Pa. Electrochemical.	702,700	June 17	2705	681	90	2702
Anderson, John M., assignor of one-half to A. Anderson, Boston, Mass. Rail-head.	697,582	Apr. 22	2921	647	90	623
Anderson, Albert. (See Anderson, John M., assignor.)						
Anderson, Alfred E., assignor to Maseell and M. I. Schlesinger, New York, N. Y. Automatic pumping mechanism.	697,395	Apr. 25	2925	680	90	613
Anderson, Carl O., assignor to E. Herman, Des Moines, Iowa. Clothes-line reel and stretcher.	700,008	May 13	1902	390	90	1582
Anderson, Charles, assignor to S. Iskander, Chicago, Ill. Dish-making machine.	698,998	Apr. 8	1022	227	90	226
Anderson, Charles A. M., London, England. Garment-stretcher.	698,997	Apr. 26	9778	1040	90	1020
Anderson, Edward W. (See Homer and Anderson.)						
Anderson, Erasmus, Cambridge, Mass. assignor to A. L. Wood, Boston, Mass. Car-ventilator.	697,121	Apr. 8	1260	211	90	217
Anderson, Ernest D., New York, N. Y. Gas-lighter.	698,627	Apr. 22	3530	690	90	229
Anderson, Frank A. (See Carroll, William H., assignor.)						
Anderson, Frank C., assignor of two-thirds to G. W. Eapt and G. P. Giler, Cincinnati, Ohio. Railway-rail joint.	700,714	May 27	3125	715	90	1975

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Cl. C.	Cl. D.	Vol.	Page.
Anderson, Frank C., assignor of one-half to A. R. Lloyd and G. P. Glitz, Cincinnati, Ohio. Frog-operating mechanism.....	700,385	June 24	2223	743	90	2227
Anderson, Frank H., Walhalla, N. D. Pedal-balance.....	701,345	May 27	4123	943	90	2076
Anderson, Frank O., Jamestown, N. Y. Drawer-support.....	702,330	June 17	1997	493	90	2225
Anderson, George H., J. W. Stevens, and A. Lutz, assignors to United States Sanitary and Utility Sewage Disposal Company of New Jersey, New York, N. Y. Sewage-disposal plant.....	701,337	June 7	903	213	90	2227
Anderson, Gustave E., assignor of one-half to Fairmount Machine Company, Philadelphia, Pa. Self-closing elevator-gate.....	699,335	Apr. 23	2723	333	90	337
Anderson, Huldah, et al. (See Nilsson, Lars G., assignor.).....	700,335	May 20	2604	333	90	1333
Anderson, James V., Clarkson, Nebr. Wire-stretcher.....	700,335	May 20	2604	333	90	1333
Anderson, John, et al. (See Norstrom, Nils E., assignor.).....	700,335	May 20	2604	333	90	1333
Anderson, John, assignor to Draper Company, Hopkinton, Mass. Gear-molding apparatus.....	699,333	Apr. 20	4133	333	90	343
Anderson, John A., Munson, Ill. Planter.....	699,340	Apr. 20	2623	303	90	333
Anderson, Mildred, Olyphant, Pa. Hose-supporter.....	697,335	Apr. 15	2623	303	90	313
Anderson, Oskar H., Stockholm, Sweden, assignor, by mesne assignments, to Silicate Brick Syndicate, Montreal, Canada. Manufacture of artificial stone or brick and the preparation of lime therefor.....	702,311	June 17	2437		90	2343
Anderson, Samuel C. (See Griffin and Anderson.).....	697,335	Apr. 15	1997	493	90	2225
Anderson, Theodore M., New Whetson, Wash. Heating-stove.....	699,330	Apr. 20	2623	303	90	333
Anderson, William B., Pontiac, Mich. Account-file.....	702,307	June 17	2603	303	90	2374
Andlauer, Raymond. (See Fink and Andlauer.).....	702,307	June 17	2603	303	90	2374
André, William E., assignor to Nelson & Kreuter, Chicago, Ill. Mangle.....	697,034	Apr. 3	1333	237	90	333
Andrew, Walter E. (See Saylor, Franklin G., assignor.).....	697,034	Apr. 3	1333	237	90	333
Andrews, Arthur H., and E. T. Morrison, Harrisburg, Pa. Lace-fastener.....	694,304	Apr. 1	4	1	90	3
Andrews, Jacob B., Bath, Me. Combined windlass and warping-winch.....	699,135	Apr. 20	2640	733	90	733
Andrews, James C., assignor to Bay State Cornst. Co., Springfield, Mass. Cornst.....	699,340	Apr. 20	2623	303	90	333
Andrews, John and S., Belfast, Ireland. Aging and bleaching flour.....	11,334	May 27	4130	333	90	333
Andrews, John M., Andrews, Tenn., assignor of two-fifths to A. P. and C. P. Roberts. Pneumatic straw-stacker. (Reissue).....	699,333	Apr. 20	2723	333	90	337
Andrews, Sydney. (See Andrews, John and S.).....	699,333	Apr. 20	2723	333	90	337
Andriano, Albert K., San Francisco, Cal. Secret-service telephone system.....	701,791	June 3	911	303	90	2343
Andros, Randall B., assignor of one-half to C. A. Rideout, Boston, Mass. Automatic corkscrew.....	702,333	June 17	2373	333	90	2733
Angell, Joseph F., Pine Bluff, Ark. Jewelry-display tray.....	701,333	June 3	731	133	90	2333
Anger, John E. (See Stanley and Anger.).....	701,333	June 3	731	133	90	2333
Anger, Walter A. (See Bronckle and Anger.).....	701,333	June 3	731	133	90	2333
Aniline Colour and Extract Works, formerly John R. Geigy. (See Ris, Christopher, assignor.).....	701,333	June 3	731	133	90	2333
Aniline Colour and Extract Works, formerly John R. Geigy. (See Sandmeyer, Traugott, assignor.).....	701,333	June 3	731	133	90	2333
Ank, George A., Mount Carroll, Ill. Folding table, shelf, or desk.....	701,333	June 3	731	133	90	2333
Annan, Roger F. (See Rawlings, Budd M., assignor.).....	701,333	June 3	731	133	90	2333
Anshutz, Frank, Allegheny, assignor to J. C. Bartlett Company, Pittsburg, Pa. Stove range, &c.....	702,374	June 10	1777	433	90	2431
Ansonia Electrical Company. (See Spencer, Albert F., assignor.).....	699,333	Apr. 1	333	217	90	333
Anthony, Edgar W., Brookline, assignor to Smith and Anthony Company, Boston, Mass. Stove-shelf.....	702,731	June 17	2703	333	90	2703
Anthony, Mary. (See Northrop, Herbert N., assignor.).....	702,731	June 17	2703	333	90	2703
Antiqua Company. (See Mann, Henry A., assignor.).....	702,731	June 17	2703	333	90	2703
Antidale, Edwin S., Chicago, Ill. Book-holder.....	699,333	May 13	333	233	90	1333
Antidale, Egbert M. (See Watkins, Henry, assignor.).....	699,333	May 13	333	233	90	1333
Appel, Daniel, Cleveland, Ohio, assignor to Union Paper Bag Machine Company, Philadelphia, Pa. Paper-bag machine.....	700,337	May 30	2333	333	90	1733
Appel, Daniel, Cleveland, Ohio, assignor to Union Paper Bag Machine Company, Philadelphia, Pa. Paper-bag-making appliance.....	700,337	May 30	2333	333	90	1733
Appel, Daniel, Cleveland, Ohio, assignor to Union Paper Bag Machine Company, Philadelphia, Pa. Paper-bag-delivery device.....	700,733	May 27	2143	713	90	1334
Appert, Léon, Paris, France. Roller for rolling and ornamenting sheet or plate glass.....	697,333	Apr. 3	1533	234	90	333
Apple, Vincent G., Dayton, Ohio. Magneto-electric generator.....	697,333	Apr. 20	2603	333	90	374
Apple, Vincent G., assignor to Dayton Electrical Manufacturing Company, Dayton, Ohio. Speed-regulator.....	699,333	Apr. 20	2774	1333	90	1333
Appleby, John F., Chicago, Ill. Mower.....	699,337	Apr. 20	2641	731	90	737
Appleby, John F., assignor to Deering Harvester Company, Chicago, Ill. Automatic grain-binder.....	697,430	Apr. 15	1333	433	90	434
Appleby, John F., Chicago, assignor to Harvester King Company, Harvey, Ill. Reaping-machine.....	701,331	May 27	4133	331	90	2377
Appleyard, William P., New Haven, Conn., assignor to Metal Plated Car and Lumber Company. Machine for covering strips of timber with metal.....	702,433	May 20	2633	333	90	1333
Arbogast, Charles V. (See Arbogast, John I., C. V., F. J., P. R., and F. L.).....	699,333	Apr. 20	2633	333	90	1333
Arbogast, Francis J. (See Arbogast, John I., C. V., F. J., P. R., and F. L.).....	699,333	Apr. 20	2633	333	90	1333
Arbogast, Frederick L. (See Arbogast, John I., C. V., F. J., P. R., and F. L.).....	699,333	Apr. 20	2633	333	90	1333
Arbogast, John I., C. V., F. J., P. R., and F. L., Pittsburg, Pa. Manufacturing hollow glassware.....	699,333	Apr. 20	2633	333	90	1333
Arbogast, Philip B. (See Arbogast, John I., C. V., F. J., P. R., and F. L.).....	699,333	Apr. 1	333	33	90	37
Archambeault, Arthur L., Stockton, Cal. Winker-stay fastener and holder.....	699,030	Apr. 20	2623	1117	90	1133
Archer, Gaines B., Birmingham, Ala. Oil-can.....	700,111	May 10	1333	333	90	1374
Arcoval, Vittorio, Spoleto, assignor to C. Olivetti, Ivrea, Italy. Electrical measuring instrument.....	701,133	May 27	2613	333	90	2334
Arkell Safety Bag Company. (See Blanchard, Francis L., assignor.).....	701,133	May 27	2613	333	90	2334
Ariedter, Fritz, New York, N. Y., and H. Ariedter, Garston, England. Making resin case.....	697,333	Apr. 3	1333	234	90	333
Ariedter, Herman. (See Ariedter, Fritz and H.).....	697,333	Apr. 3	1333	234	90	333
Armeny, Gyula, New York, N. Y. Diamond-cross-cutting machine.....	694,333	Apr. 1	4	1	90	3
Armour, James A., Sedgwick, Kans. Wire stretcher and cutter.....	702,133	June 10	1513	333	90	2433
Armstrong Bros. Tool Co. (See Welter and Armstrong, assignors.).....	702,133	June 10	1513	333	90	2433
Armstrong, Charles M., Hopkinsville, Ky. Tobacco-steamer.....	700,034	May 10	1034	333	90	1333
Armstrong, Edwin J., Erie, Pa. Governor.....	701,037	June 3	703	133	90	2333
Armstrong, Edwin J., Erie, Pa. Valve mechanism.....	701,037	June 3	703	133	90	2333
Armstrong, John. (See Welter and Armstrong.).....	701,037	June 3	703	133	90	2333
Armstrong, John, London, England. Apparatus for obtaining zinc or other volatile metals from ores or mattes.....	701,037	June 3	703	133	90	2374

UNITED STATES PATENT OFFICE, 1902

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			U. S.	For.	U. S.	For.
Baker, Samuel A., Springfield, Vt. Drilling-machine	699,243	Apr. 22	3022	752	30	757
Baker and Shevlin Company. (See Baker, James H., assignor.)	701,247	May 27	4135	949	30	2575
Baker, Wallace L., Palmersville, Ohio. Trolley	699,000	Apr. 29	3040	11125	30	1140
Baker, William H., Boston, Mass. Mangle	699,480	Apr. 29	2995	11110	30	870
Baker, William J., Cleveland, Ohio. Screw-plate	702,102	June 24	3075	774	30	2254
Baker, William S. G., Baltimore, Md. Car-track	700,227	June 17	2927	514	30	2211
Baldin, Thore A., De Soto, Wis. Truss-fastener	699,222	Apr. 22	4709	1021	30	1021
Baldin, Lillian M., Tiffin, Ohio. Pumps	700,001	May 20	3021	904	30	1812
Baldin, Samuel W. (See Pumps and Balns.)	702,129	June 24	3487	935	30	2575
Baldwin, Georg, Weimar, Germany. Combination garment	702,170	June 24	3416	935	30	2575
Baldt, Frederick, Sr., Chester, Pa. Casting chisel	702,171	June 24	3480	934	30	2575
Baldt, Frederick, Sr., Chester, Pa. Casting chisel	702,172	June 24	3500	935	30	1935
Baldt, Frederick, Sr., Chester, Pa. Molding	699,692	May 6	397	122	30	122
Baldwin, Charles E., Brooklyn, N. Y. Box	699,703	Apr. 1	330	184	30	184
Baldwin, Cyrus W., deceased, Yonkers, N. Y.; M. E. Baldwin, administrator, assignor to Otis Elevator Company, East Orange, N. J. Elevator	697,905	Apr. 29	3030	642	30	674
Baldwin, Edwin E., Swatford, Conn. Piston (See Baldwin, Cyrus W.)	699,703	Apr. 29	4021	950	30	1022
Baldwin, M. E., administrator. (See Baldwin, Cyrus W.)	700,670	May 20	3034	610	30	1754
Baldwin, Mary E., Detroit, Mich. Calculator	700,580	May 20	3022	625	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201
Baldwin, William D., New York, and A. Sundt, Yonkers, N. Y., assignors to Otis Elevator Company, East Orange, N. J. Shifting device for piers, &c.	700,000	May 20	2990	604	30	1201

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Pat.	Vol.	Page.
Barnack, Rudolph M. von. (See Krauss and Barnack.)	701,128	May 27	3222	904	99	3257
Barnes, Paul B. T., Brooklyn, N. Y. Fish-hook	698,927	Apr. 22	3224	780	99	780
Barnard, Morris, and B. T. Vent, Buffalo, N. Y. Fastener for ends of cord, &c.	701,128	May 27	3224	904	99	3257
Barnston Electric Manufacturing Company. (See Gardner, Edgar R., assignor.)	697,393	Apr. 22	3222	840	99	840
Barnstein, William, New York, N. Y. Vell-fastener	697,393	Apr. 22	3222	811	99	811
Bart, William, Brooklyn, N. Y. Device for justifying lines of type or matrices	698,222	Apr. 22	3227	811	99	811
Bartley, George R., Princeton Junction, N. J. Mail-bag deliverer and catcher	700,045	May 13	3222	780	99	780
Berry, Charles H., Manchester, England. Steam-trap	700,045	May 13	3222	780	99	780
Berry, Elmer E., Hamilton, Ohio. Condition-stuffing device	700,045	May 13	3222	780	99	780
Berry, John W., assignor to Tacoma Automatic Sales Co., Tacoma, Wash. Split-pal- ley hanger	699,125	Apr. 22	3221	811	99	811
Berthson, Ferdinand, Morgan Park, Ill. Mitten	699,125	May 6	3227	811	99	811
Berthson, Henrik A., Stockholm, Sweden. Four-stroke petroleum-motor	700,285	May 20	3227	811	99	811
Bertrand, Ernst, Kladno, Austria-Hungary, assignor to Wellman-Seaver Engineering Company, Cleveland, Ohio. Blast-furnace	699,922	Apr. 22	3222	770	99	770
Best, Charles J., Denver, Colo. Treating ores	701,124	May 27	3224	904	99	3257
Best, Daniel, San Leandro, Cal. Carburetor	699,922	May 13	3222	814	99	1487
Best, Ezra, et al. (See Best, William H., assignor.)	699,922	May 13	3222	814	99	1487
Best, John H., et al. (See Best, William H., assignor.)	699,922	May 13	3222	814	99	1487
Best, William H., Los Angeles, Cal., assignor of two-thirds to J. H. and E. Best, Quincy, Ill. Apparatus for supplying oil and hydrocarbon	702,222	June 17	3222	814	99	3211
Bethlehem Steel Company. (See King, John F., assignor.)	700,402	May 20	3222	820	99	1798
Bethlehem Steel Company. (See King and Hammer, assignors.)	697,950	Apr. 22	3222	840	99	876
Bethlehem Steel Company. (See Mitchell, Leighton N. D., assignor.)	701,422	June 3	3224	71	99	2170
Bettendorf, William P., Davenport, Iowa. Car-bolster	697,950	Apr. 22	3222	71	99	2170
Bettini, Gianni, New York, N. Y. Phonograph or graphophone	701,422	June 3	3224	71	99	2170
Bettmann, Charles F., and S. Talkington, New Albany, Ind. Wrench	697,950	Apr. 15	3222	7	99	437
Betz, Frank J., East Orange, assignor of one-half to C. C. Copeland, South Orange, N. J. Slide-opening	699,922	Apr. 15	3222	7	99	1181
Betz, John A., Smith Center, Kans. Cultivator	699,922	Apr. 15	3222	7	99	1181
Beys, Alois, Chicago, Ill. Wagon-b-cloak-hoy holder	699,922	Apr. 15	3222	7	99	1181
Bianchini, Guglielmo, Milan, Italy. Apparatus for treatment of grain preparatory to grinding	700,072	May 20	3227	610	99	1795
Biedenkopf, George, New York, N. Y. Sky-light-opener	701,125	May 27	3222	904	99	3257
Bidstrup, Nils P. (See Marchbank and Bidstrup.)	701,125	May 27	3222	904	99	3257
Bielefelder Maschinenfabrik vormals Ditzkopf & Co. (See Knoch and Pischel, as- signors.)	699,421	May 6	3227	810	99	1222
Birley, Henry A., Portsmouth, assignor of one-half to W. C. Sanford, Columbus, Ohio. Shaving	702,111	June 24	3227	770	99	2225
Birnbaum, Charles, Newark, assignor to A. Dagerdon, Jersey City, N. J. Egg-separator	699,421	May 6	3227	810	99	1222
Biscove, Leonard & Co. (See Fox, Thomas.)	699,421	May 6	3227	810	99	1222
Bischoff, Lyman G., St. Joseph, Mo. Photographic flash-light machine	700,473	May 20	3222	611	99	1795
Bislet, Edward, assignor to Dubala Watch Case Company, Brooklyn, N. Y. Watchcase	701,971	June 3	3224	107	99	2227
Bittling, John A., Rockland, Mass. Hypodermic syringe	698,212	June 17	3227	808	99	2247
Bittsburgh, John, assignor, by means assignments, to M. H. Bittsburgh, Bristol, N. I. Top-roll mangle	701,971	June 3	3224	107	99	2227
Bischoff, Mary H. (See Bittsburgh, John, assignor.)	701,971	June 3	3224	107	99	2227
Binder, Carl. (See Storck, Ernst, assignor.)	701,971	June 3	3224	107	99	2227
Bispart, Achill, Newark, N. J. Vell-fastener	697,951	Apr. 15	3222	808	99	514
Bird and Son, F. W. (See Hanson, John B., assignor.)	698,170	Apr. 22	3222	728	99	728
Biron, Simon, assignor to F. Katz, Brooklyn, N. Y. Match-box	698,222	Apr. 6	3227	811	99	811
Birge, William H., Franklin, Pa. Neck-clip	698,222	Apr. 6	3227	811	99	811
Birmingham, Grant C., Milwaukee, Wis. Oak-veneer	698,222	Apr. 6	3227	811	99	811
Bischo, Fred Y. (See Smith and Bischo.)	702,171	June 10	3224	1614	99	2222
Bischoff, August, assignor to Basle Chemical Works, Basle, Switzerland. Making ethylic and benzolic acids	702,171	June 10	3224	1614	99	2222
Bishop, Benjamin M., assignor of one-half to F. S. White, Housingsale, N. J. Endless belt feed or carrying apparatus	702,074	May 20	3220	611	99	1798
Bishop, McKendree F., and M. A. Tollins, San Jose; said Tollins assignor to said Bishop and I. W. Winans, Plymouth, Cal. Tilt-up-compensator	698,227	Apr. 1	3217	317	99	822
Bishoprich, Nicholas J. (See Haworth, William H., assignor.)	698,227	Apr. 1	3217	317	99	822
Bissell, Leavitt F., and J. Sullivan, Chicago, Conn. Tobacco-drying device	698,227	June 24	3222	608	99	2221
Bittner, Harry, Berwyn, assignor to Windsor Bros. Co., Chicago, Ill. Operating device for elevator-doors	698,227	May 6	3227	101	99	1225
Black, Alonso C., assignor of one-half to J. Senneca, Keokuk, Iowa. Attachment for washboards, &c.	698,022	Apr. 22	3222	1120	99	1122
Black, Amos R., Lamar, Colo. Salty hay-rake	697,027	Apr. 8	3211	920	99	327
Black, David G., Brooklyn, N. Y. Safety-rum for electric circuits	698,047	May 13	3222	922	99	1222
Black, Elizabeth J. (See Best, William H., assignor.)	697,704	Apr. 15	3222	577	99	722
Black, George F. (See Connolly, James A., assignor.)	697,704	Apr. 15	3222	577	99	722
Black, Henry C., Oakland, Cal. Can-body-slicing machine	697,722	Apr. 15	3227	577	99	722
Black, Henry C., Oakland, Cal. Can-body forming and soldering machine	700,220	May 27	3227	327	99	1221
Black, Henry C., Oakland, Cal. Can-and-soldering machine	700,220	May 27	3227	327	99	1221
Black, Henry C., Oakland, Cal. Can-testing apparatus	697,722	Apr. 15	3227	577	99	722
Black, Henry C., assignor to A. Johnson, Oakland, Cal. Combined bottomer and crimper for can-bodies	697,722	Apr. 15	3227	577	99	722
Black, Howard. (See Howe, Peter, assignor.)	702,212	June 17	3227	822	99	2247
Black, Julius, Toledo, Ohio, assignor to Blacker Manufacturing Company, Saratoga, Mich. Garment-hanger	698,027	Apr. 1	3222	124	99	122
Black, William C., and H. P. Baubler, Columbus, Ohio. Collar-protector	702,212	June 17	3227	822	99	2247
Black, William C., Columbus, Ohio, assignor to E. J. Black. Milk-cooler	702,212	June 17	3227	822	99	2247
Blackard, Harry V., Omaha, Ill. Chair	702,212	June 17	3227	822	99	2247
Blackburn, Charles B., and G. J. Porter, Wolverhampton, England. Tap for cutting screw-threads	702,212	June 17	3227	822	99	2247
Blackburn and Company, V. M. (See Wilmarth, Edwin B., assignor.)	697,727	Apr. 15	3214	222	99	2222
Blackman, Edward L., Brooklyn, N. Y. Sash-cord fastener	697,727	Apr. 15	3214	222	99	2222
Blackman, John J., New Britain, Conn. Dovetailing-machine	697,727	Apr. 15	3214	222	99	2222

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Page	Page	Vol.	Page
Blackman, William A. (See Walker and Blackman.)						
Blackmore, Henry S. Mount Vernon, N. Y. Making gas-purifying agents.	697,351	Apr. 15	3071		90	341
Blackmore, Henry S. Mount Vernon, N. Y. Reducing metals and producing alloys therefrom.	698,388	May 4	325		90	1285
Blackmore, Henry S. Mount Vernon, N. Y. Making sulfuric acid. (Reissue.)	11,085	May 27	4758		90	2025
Blackstone, Clarence W. (See Knapp and Blackstone.)						
Blackwell, Edwin O. Wyand, Tenn. Assignor of one-half to J. S. Irvine, Canfield, and F. Baker, Middleburgh, Victoria, Australia. Lock-stitch mechanism for sewing-machines.	700,151	May 12	1345	147	90	1284
Blair, David W., assignor of one-half to J. C. McCoy, North Amboy, N. J. Mechanical crane.	697,708	Apr. 15	3071	301	90	305
Blair, George W., Pittsburgh, and F. O. Hock, Jacksonville, Fla. Method of ornamenting.	697,098	Apr. 15	3071		90	314
Blair, Thomas H., Northboro, Mass. Hydrocarbon-lamp.	700,475	May 30	3072	612	90	1725
Blaisdell, Byron R., Chicago, Ill. Bedstead.	698,349	Apr. 28	3067	770	90	772
Blake, Charles C., Brookline, Mass. Electrical annunciator.	698,140	May 4	305	7	90	1131
Blake, Louis L. (See Runt and Blake.)						
Blakely, Oliver, Leray, Mo. Wall-paper-display rack.	698,470	May 4	305	125	90	1255
Blakely, Charles A., assignor to F. H. Earl Manufacturing Co., Plano, Ill. Bedstead-joint.	700,388	June 24	3073	580	90	1807
Blakely, James H., Homestead, assignor of one-half to J. Blakely, Oakmont, Pa. Automatic drip for steam-lines.	697,388	Apr. 15	3073	600	90	341
Blakely, James. (See Blakely, James H., assignor.)						
Blakely, William H., Jr., New York, N. Y. Process of effecting the drying of non-drying oils and product produced by such process.	700,173	June 10	1345		90	3480

Blakeman, William N., Jr., New York, N. Y. Pigment and producing same.	700,177	June 10	1345		90	3480
Blakeman, William N., Jr., New York, N. Y. Process of treating pigments and products produced by such process.	700,178	June 10	1345		90	3480
Blakely, James W., assignor of two-thirds to W. G. Stansfield, Bradford, England. Improved condenser gas-burner.	698,423	Apr. 28	3068	141	90	371
Blanchard, Allen L., Chicago, Ill. Railway-ticket.	698,130	May 4	305	24	90	1181
Blanchard, Charles H. (See Mills and Blanchard.)						
Blanchard, Francis L., assignor to Arkell Safety Bag Company, New York, N. Y. Lining for barrels or similar receptacles.	698,780	Apr. 28	3069	1008	90	1084
Blanchard, George B., Tacoma, Wash. Rail-road.	698,380	Apr. 28	3069	771	90	771
Blanchard, George B., Tacoma, Wash. Cross-bond for rails.	698,381	Apr. 28	3069	771	90	771
Blanchard, William N. Southbridge, Mass. Fly-wheel.	698,070	Apr. 28	3069	1181	90	1148
Blanchet, Arthur. (See Tracy and Blanchet.)						
Blanchi, Ernesto. (See Margliore and Bianchi.)						
Blanchi, Paolo. (See Margliore and Bianchi.)						
Blaney, Thomas. (See McCullough, Blaney, and Baron.)						
Blanchard, David S., Newtonville, Mass. Door-holder.	701,180	May 27	3069	300	90	3069
Blanton, Edward, Jr., Wallingford, Pa. Assignor to Blanton Patents Syndicate, Liverpool, London, England. Cam-follower for shafts of stamp-mills.	698,408	Apr. 1	19	5, 6	90	7
Blanton Patents Syndicate. (See Blanton, Edward A., Jr., assignor.)						
Blatchley, Malborne E., assignor to H. O. Tunkles, Whitehall, Ill. Lock.	697,382	Apr. 15	3074	685	90	341
Blondale, Charles G., Detroit, Mich. Trolley-stand.	698,386	May 4	304	108	90	1285
Blonin Brothers Manufacturing Company. (See Arnold, Philip C., assignor.)						
Blin, Emil E. (See Mallet and Blin.)						
Blin, Donald H., assignor to Holtzer-Cabot Electric Company, Brookline, Mass. Sparking device.	700,005	June 17	3075	104	90	3077
Block, David L., assignor of one-half to J. Lederer, New York, N. Y. Shirt.	698,385	May 4	304	104	90	1285
Block, David L., assignor of one-half to J. Lederer, New York, N. Y. Gas-pressure regulator.	700,478	May 30	3074	300	90	1725
Block, Sam. (See Bunn, William F., assignor.)						
Blome, Herman, Oakland, Cal. Broom-holder.	698,948	Apr. 1	371	60	90	31
Blood, Benjamin F., deceased, Forest Grove, Oreg.; J. S. Blood, administratrix. Swage-block.	700,794	May 27	3128	718	90	1875
Blood, Charles W. H., assignor to S. A. Woods Machine Company, Boston, Mass. Feed-rolls. (Reissue.)	11,054	May 12	1345	620	90	1285
Blood, Julia S., administratrix. (See Blood, Benjamin F.)						
Bloom, Louis, assignor of one-half to F. Klot, Buffalo, N. Y. Combined shade-roller and curtain-pole bracket.	698,380	Apr. 28	1044	300	90	340
Bloomer, William, New York, N. Y. Suspender-rod.	700,386	June 17	3077	400	90	2077
Bloomer's Slide Company. (See Bath, Abraham, assignor.)						
Bloome, Marguerite, Paris, France. Amalgamating apparatus.	700,175	June 10	1345	304	90	3481
Blumel, Charles W., F. H., and E. A., London, England. Stowaway mud-guard for vehicles or the like.	700,328	June 24	3077	300	90	3001
Blumel, Ernst A. (See Blumel, Charles W., F. H., and E. A.)						
Blumel, Frank H. (See Blumel, Charles W., F. H., and E. A.)						
By, Norman, Crowpoint, N. Y. Outer-lens.	698,704	Apr. 1	720	178	90	103
Bydenburgh, Charles M., Riverhead, N. Y. Cranberry-picker.	700,185	May 30	3040	600	90	1000
Bye, Harry C. (See Koch, Gustave, assignor.)						
Boardman, James, Philadelphia, Pa. Assignor to Boardman Manufacturing Company, Wilmington, Del. Scaffold.	700,314	June 24	3069	600	90	3000
Boardman Manufacturing Company. (See Boardman, James, assignor.)						
Boas, David L., Lebanon, Pa. Car-coupling.	698,428	Apr. 28	3069	301	90	371
Boas, Emil, Dinseldorf, Germany. Apparatus for manufacturing conical tubes.	698,171	Apr. 28	3069	720	90	700
Boat, Henry L., assignor to Veeber Manufacturing Company, Hartford, Conn. Clothing-machine.	698,424	Apr. 28	3069	301	90	371
Böcher, Carl, Altona-Ottensen, Germany. Apparatus for cooling or heating beverages.	700,371	June 24	3071	600	90	3700
Bockhop, Rudolf A., Lexington, Ky. Check.	700,120	June 10	1345	304	90	3481
Boden, George, Watertown, assignor to Oakville Company, Watertown, Conn. Safety-pin.	700,018	June 24	3069	300	90	3000
Boden, George, Watertown, assignor to Oakville Company, Watertown, Conn. Safety-pin.	700,017	June 24	3069	300	90	3000
Böckinger & Böckner, O. H. (See Böckner, Max, assignor.)						
Böckner, Julius. (See Böckner, Wilhelm, and J.)						
Böckner, Wilhelm and J., Philadelphia, Pa. Nebulizer.	698,380	Apr. 28	1044	1000	90	1000
Böckner, Frank, Waltham, Mass. Nail-holding implement.	698,380	Apr. 1	305	100	90	100
Böckner, Hermann, Hawcrick, assignor of one-half to F. Pransa, Lagrange, Tex. Fire-escape.	698,381	Apr. 1	305	100	90	100

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Page	Page	Vol.	Page
Böckner, Gustav, Milwaukee, Wis. Demagnetizer.	698,098	May 12	1420	300	90	1000
Bogardorfer, Conrad, Long Island City, N. Y. Candle-holder.	697,127	Apr. 1	1401	311	90	310
Bogda, William L., Columbus, Minn. Corn-planter.	698,348	Apr. 1	378	60	90	30
Böhlander, W. F. (See Oredisch, Henry S., assignor.)						
Böhler, Edward, Lancaster, Pa. Garment-fastening.	698,071	Apr. 29	3070	1121	90	1120
Böhs, Frank C. (See Warner, Isaac M., assignor.)						
Böhs, Frank C. and T. B. Bohman, Stockholm, Sweden. Axial-flow turbine.	698,705	Apr. 1	700	121	90	120
Böhr, Henry D., et al. (See Warner, Cornelius, assignor.)						
Böhner, Henry D., assignor of one-half to A. F. Miller, Defiance, Ohio. Collapsible crane.	698,405	Apr. 28	3065	600	90	374
Boland, Christopher G. (See Collins, Patrick J., assignor.)						
Bols, William A., Pittsburgh, Pa., assignor to Westinghouse Machine Company, Chicago, Ill. for supporting cores in molds.	700,050	June 17	3069	300	90	3007
Bols, William A., Pittsburgh, Pa., assignor to Westinghouse Machine Company, Chicago, Ill. for supporting cores in molds.	701,394	June 2	19	30	90	1111
Bolan, Brantley W., Roseland, Tex. Fly-lock.	700,705	June 17	3720	604	90	3700
Bolans, Harry W., Fort Washington, Wis. Chair.	700,705	June 17	3720	604	90	3700
Bolans, Harry W., Fort Washington, Wis. Chair-splider.	698,380	Apr. 1	1040	300	90	341
Bolding, Arthur J., San Francisco, Cal. Voting-machine.	700,311	May 30	3011	374	90	1100
Bollinger, Simon, South Whitley, Ind. Stovepipe-chimble.	698,421	Apr. 28	3069	600	90	370
Bollinger, William A. (See Tracy and Bollinger.)						
Bolton, Walter E., Brockton, Mass. Mallet.	700,119	May 12	1380	600	90	1070
Bolton, James D., assignor of one-half to W. W. McAniff, Fall River, Mass. Machine for copying patterns for jacquard-cards.	698,708	Apr. 1	307	125	90	120
Bolton, John T., assignor of one-fourth to T. McAniff, Fall River, Mass. Machine for copying patterns for jacquard-cards.	700,175	June 24	3070	304	90	3070
Bols, George, New York, N. Y. Wardrobe.	700,380	June 24	3070	300	90	3001
Boman, Chas. W., New York, and J. M. Reed, Brooklyn, N. Y.; said Reed assignor to said Boman. Can for holding coarse emery or the like.	698,448	May 4	304	137	90	1280
Bongers, Johan A., Stockholm, Sweden, assignor to De Laval Steam Turbine Company. Support for steam-turbine wheels.	697,180	Apr. 2	1402	310	90	310
Bongers, Johan A., Stockholm, Sweden, assignor to De Laval Steam Turbine Company. Support for steam-turbine wheels.	697,970	Apr. 28	3045	640	90	3077
Bonhard, Karl, Aix-la-Chapelle, Germany. Draft-gage.	700,384	June 17	3070	304	90	3077
Bonner, Emil, Brooklyn, N. Y. Door-strike.	700,384	June 17	3070	304	90	3077
Bond, Albert, Matisk, Mass., assignor of one-half to J. W. Currier, North Troy, Vt. Wrench.	698,448	May 4	304	137	90	1280
Bond, John W., et al. (See Bond, Clarence F., assignor.)						
Bond, Nathan O., Hyannis, Mass. Blind-fastening device.	700,380	June 17	3070	300	90	3007
Bonds, George W., Fresno, Cal. Gas-generator for gas-engines.	700,785	May 27	3155	710	90	1870
Bons, John A., Mayers, Oreg. Food-cutter.	700,080	June 24	3041	700	90	3000
Bonschke, Edward H., Rockville, Pa. Cultivator.	698,404	Apr. 1	31	6	90	7
Bongart, William H., Champlain, Ill. Curtain-actuator.	701,088	June 10	970	315	90	3000
Bonham, Guy L., Dorchester, Pa. Train-pipe coupling.	700,040	June 24	3040	740	90	3070
Bonham, William, Philadelphia, Pa. Car-fender.	697,971	Apr. 28	3040	690	90	3070
Bonaffon, Samuel A., Erie, Pa. Envelope.	697,780	Apr. 15	3021	120	90	307
Bonard, Jean B. G., Ostend, Belgium. Pyroxylin compound.	698,470	May 4	370	120	90	1215
Bonner, William H., Newton, Mass. Railway tariff-book.	698,470	May 4	370	120	90	1215
Bonsack, James A. (See Hochstetler, Henry C., assignor.)						
Boscher, Flavio J. (See Hankins and Boscher.)						
Boek, Solon D., Bagley, Minn. Rotary engine.	698,380	Apr. 28	3069	310	90	300
Boeck, Thomas E., Boston, N. J. Rope-laying machine.	697,437	Apr. 15	1361	430	90	437
Boord, Thomas E., Connelville, Pa. Paper-hanger's tool.	700,380	June 10	1361	430	90	3510
Boormans, David, and A. P. Sharp, said Sharp assignor to W. H. Olson and J. H. Walton, Altona, Pa. Washing-machine.	700,380	June 10	1361	430	90	3510
Booth, Franklin F. (See Kins and Booth, assignor.)						
Booth, William, San Francisco, Cal. Oil-burner for furnaces.	698,581	Apr. 28	3064	313	90	300
Borch, Gaston L. C., assignor of one-half to H. F. Allen, Duluth, Minn. Piano attachment.	700,720	May 27	3128	717	90	1870
Bordier, Marcel, La Rochelle, France. Coin-controlled ticket-delivering device.	700,970	June 2	711	187	90	3007
Borgström, Arthur H., Helsingfors, Russia. Means for ventilating milk and cream during the process of separation.	698,720	May 12	1360	300	90	1447
Borland, Bruce, Cambridge, Mass. Means for compressing or liquefying gases.	698,380	Apr. 28	3069	310	90	300
Borman, Thomas C., Summit, Minn. Nut-lock.	700,770	June 17	3720	600	90	3707
Borrmann, Carl, New Haven, Conn., assignor to E. & H. T. Anthony & Co., New York, N. Y. Photographic shutter.	698,178	Apr. 28	3065	704	90	700
Borrmann, Carl, New Haven, Conn., assignor to E. & H. T. Anthony & Co., New York, N. Y. Camera.	698,178	Apr. 28	3065	704	90	700
Borus, Anatole. (See Beck and Borus.)						
Borton, Stockton, Providence, R. I., and O. B. Brush, Bridgeport, Conn., assignors to Willcox & Gibbs Sewing Machine Company, New York, N. Y. Driving mechanism for sewing-machines.	698,380	Apr. 28	1040	300	90	340
Bouch, Frank, Crescent City, assignor of one-half to W. P. Butler, San Francisco, Cal. Vehicle.	697,380	Apr. 1	1040	300	90	340
Bouchard, Rufus E., Syracuse, N. Y. Apparatus for treating garbage.	700,137	May 27	3127	710	90	1870
Bouley, Lee W. (See Leach, Johnston, and Bouley.)						
Boss, William, St. Paul, Minn. Lawn-mower.	701,315	May 27	4100	300	90	3070
Bosert Electric Construction Company. (See Bosert, William F., assignor.)						
Bosert Electric Construction Company. (See Smith and Bosert, assignor.)						
Bosert, William F. (See Smith and Bosert.)						
Bosert, William F., assignor to Bosert Electric Construction Company, Utica, N. Y. Making conduit outlet-cases.	698,380	Apr. 1	300	125	90	120
Bosert, William F., assignor to Bosert Electric Construction Company, Utica, N. Y. Interior-conduit outlet-box.	698,710	Apr. 1	301	125	90	120
Bosert, William F., assignor to Bosert Electric Construction Company, Utica, N. Y. Interior-conduit outlet-box.	701,137	May 27	3000	300	90	3000
Bosert, William F., assignor to Bosert Electric Construction Company, Utica, N. Y. Interior-conduit outlet-box.	700,470	May 30	3075	315	90	1007
Boschard, Theodore, Brooklyn, N. Y. Fan-shelling machine.	698,407	Apr. 28	3060	344	90	370
Boston, Charles F., Milton, assignor of one-half to G. E. Sober, Lewisburg, Pa. Magnetic feeder for looms.	698,407	Apr. 28	3060	344	90	370
Boston Chemical Fire Engine Manufacturing Company. (See Lombard and Banning, assignors.)						
Boston Roller Chain Iron Company. (See Smith, Alta F., Jr., assignor.)						
Botstrom, Ernst A., Atlanta, Ga. Docking and tarring level.	700,717	May 30	3120	711	90	1884

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Pat.	Inv.	Vol.	Page.
Bostwick, Robert G. (See Woodbridge, William H., assignor.)						
Bostwick, Walter W. (See Nichols, Frank L., assignor.)						
Boswell, Henry L., Cleveland, Ohio, assignor of one-eighth to F. Wetz, Chicago, Ill.	701,020	June 3	2801	73	90	2176
Bostrander, Abraham, Utica, N. Y., assignor of one-half to J. B. Smith, New York, N. Y.	695,560	Apr. 20	3804	771	90	781
Botsman, Elias H. (See Walker, James H., assignor.)						
Bots, Fracille, East Tawas, Mich. Washing-machine	698,580	Apr. 1	639	193	90	140
Bouchet, Stephane, Thainin, St. Louis, France. Liquid motor	698,085	Apr. 20	4194	988	90	945
Boudet, Arthur D., assignor to J. L. Vimeau, Paris, France. Shirt-band stiffener	700,018	May 12	1705	368	90	1889
Bouley, Pierre, Waverlyville, Cal. Machine for moving boulders, &c.	698,385	Apr. 20	3808	771	90	791
Boug, Anthony E. (See Ellis and Boug.)						
Bourban, Andrew R., Chicago, Ill. Electrical railway traction apparatus	698,090	Apr. 20	3190	709	90	79
Boussager, Emile, St. Louis, Mo. House-tennis racket	700,097	June 17	2805	801	90	2877
Boussier, Emile, St. Louis, Mo. House-tennis racket	697,791	Apr. 15	2808	801	90	887
Bourquet, Auguste, Vetroy, France. Saw-protecting hood	698,380	Apr. 20	3807	812	90	885
Bourque, Auguste O., Bristol, R. I. Vulcanizing rubber	697,790	Apr. 15	2808	809	90	887
Bourque, Dora, Hamilton, Ont. Coal-controlled reading apparatus	700,910	June 24	2804	809	90	2901
Boston, George D., et al. (See Amwaka, Harry S., assignor.)						
Boston, N. S. (See Damsy and Cort, assignors.)						
Bowden, Frederick H., et al. (See Grooming, Frederick, assignor.)						
Bowditch, John F., Boston, Mass. Brush	700,300	June 17	2805	815	90	2923
Bowen, David A., assignor to D. M. Coleman and E. G. Kerr, Johnstown, Pa. Post-hole digger	701,940	June 10	1377	985	90	2883
Bowen, Howard, Upper Sandusky, Ohio. Fence	698,520	June 10	357	985	90	1885
Bowen, Philip A., Milwaukee, Wis. Bookbinder's press-punch	700,120	June 17	2805	814	90	2927
Bowen, Walter C., San Francisco, Cal. Soap cake	700,581	June 17	2805	814	90	2919
Bowers, Clyde C., Chasler, Iowa. Triplicate	700,105	May 20	3000	445	90	1480
Bowers, John E. (See Cochran, William R., Jr., assignor.)						
Bowes, John J., Jr., Pensacola, Fla. Hose-coupling	698,305	May 8	448	108	90	1208
Bowyer, James, and H. Bookhills, Sunderland, England. Spool-holder for sewing-machines	700,167	May 20	2801	445	90	1889
Boyle, Robert C. M., Boston, Mass. Binaural stethoscopes	700,793	May 27	3190	719	90	1877
Bowman, Allan K., Pittsburg, Pa. Tobacco-pipe	698,480	May 6	673	185	90	1315
Bowyer, Eva M., Chicago, Ill. Supporting device	700,280	June 17	2805	812	90	2925
Boyd, Adam S., and G. Tamm, Savannah, Ga. Pipe cutter and wrench	700,910	June 24	2804	809	90	2901
Boyd, Burton K., Rochester, Mich. Knockdown crane	701,824	June 10	951	219	90	2883
Boyd, David, Louisville, Ky. Plug-chaser	698,174	Apr. 20	3807	795	90	793
Boyd, George H., Worcester, Mass. Wrench	700,280	June 24	2804	809	90	2901
Boyd, George W., Washington, D. C. Drip attachment for dispensing apparatus	698,451	May 6	670	184	90	1214
Boyd, George W., Washington, D. C. Drip attachment for dispensing apparatus	700,181	June 10	1081	254	90	2401
Boyd, John, Bothwell, Scotland. Knee-brake for stopping spinning-spindles	701,120	May 27	3040	905	90	2599
Boyer, Edward C., and F. Radford, Dayton, Ohio. Car-pusher	697,194	Apr. 8	1898	241	90	245
Boyer, Fernand, Paris, France. Apparatus for the manufacture of knot-stitch carpets	698,880	Apr. 20	4787	1054	90	1083
Boyer, Joseph, St. Louis, Mo., assignor to Chicago Pneumatic Tool Company. Pneumatic hammer	697,790	Apr. 15	2804	800	90	887
Boyer, William E., et al. (See Geddes, Charles A., assignor.)						
Boyes, Ebenezer, Peckham, England. Means for roasting coffee	697,190	Apr. 8	1898	212	90	219
Boykin, Robert S., Mobile, Miss. Nut-lock	697,510	Apr. 8	1727	299	90	890
Boyle, Frank J., Galveston, Tex. Adjustable hame-fastener	698,420	May 6	673	187	90	1205
Boyd, Robert L. (See Wells and Boyer.)						
Boyd, Robert L., assignor to Reed and Barton Corporation, Taunton, Mass. Insulating-handle connection	700,097	June 10	1488	380	90	2495
Boyd, George H., Taunton, Mass. Producing anti-oxidal castings	697,979	Apr. 20	3551	680	90	677
Brack, William, Villaret, Switzerland. Watch-dial	701,190	June 10	1398	985	90	2885
Brackley, Orville J., assignor to himself, T. F. Ryan, and D. A. Mather, Butler, Pa. Pump	701,120	May 27	3041	906	90	2600
Braden, Francis J., St. Germain, France. Non-refillable bottle	700,580	June 17	2805	810	90	2923
Bradford, William A., and J. R. Smalley, assignors to Elevator Supply & Repair Company, Chicago, Ill. Door-opening mechanism	700,084	May 20	2804	801	90	1775
Bradford, Henry B., Jr. (See Elberhard and Bradford.)						
Bradford, Oscar. (See Caldwell, William L., assignor.)						
Brendley, Charles W., Lyons, N. Y. Sugar-leaf puller and topper	698,304	Apr. 8	3001	385	90	945
Brendley, Christopher C., Syracuse, N. Y. Thrill-coupling	697,190	Apr. 8	1898	214	90	319
Brendley, Christopher C., Syracuse, N. Y. Thrill-coupling	697,380	Apr. 15	2928	807	90	844
Brendley, Christopher C., Syracuse, N. Y. Thrill-coupling	697,304	Apr. 15	2928	807	90	844
Brendley, John, Birmingham, England. Machinery for manufacturing tube-bands	701,973	June 3	713	187	90	2887
Bradhaw, Charles E., Cleveland, Ohio. Combination hair drier and comb						
Bradt, Charles E., et al. (See Reynolds, Samuel D., assignor.)						
Bradt, Samuel E., et al. (See Reynolds, Samuel D., assignor.)						
Brady, Thomas H., New Britain, Conn. Electrical apparatus	698,485	May 6	677	187	90	1210
Bragdon, Charles M., assignor to S. E. Preston, Bangor, Me. Cigar or cigarette holder	700,105	June 10	1398	385	90	2495
Braine, Hancock F., et al. (See Randolph, Leonard M., assignor.)						
Braine, Leonard F., et al. (See Randolph, Leonard M., assignor.)						
Brake, Archibald, Toronto, Canada. Mold for casting brake-shoes	697,794	Apr. 15	2808	802	90	890
Brannwell, Clarence C., Hydeport, Mass. Driving mechanism for motor-vehicles	701,180	June 3	657	181	90	2880
Brann, Joseph G., St. Louis, Mo. Apparatus for distributing hydrocarbon under pressure to hydrocarbon-lamps	698,584	Apr. 20	3807	814	90	889
Brann, Joseph G., St. Louis, Mo. Hydrocarbon-lamp	700,581	June 24	2810	809	90	2902
Brandle, Henry. (See Smith, John, assignor.)						
Brander, William, Chatham, Canada. Band-cutter and feeder for thrashing-machines or grain-separators	698,305	May 12	1202	380	90	1202
Brandt, Charles, New York, N. Y. Packet-closing device	701,074	June 3	715	180	90	2880
Brandt, Edward J., Watertown, Wis. Coin-delivery machine	700,174	June 24	2801	805	90	2879
Brandt, Edward J., Watertown, Wis. Coin-delivery machine	701,175	June 24	3004	912	90	2880
Brashe, Otto O., Brakine, Minn. Force-pump	698,494	May 6	670	185	90	1317
Brault, John V., and B. Homans, Belleville, Ill. Coaling for nails	698,790	Apr. 1	780	180	90	100
Braun, Charles A., assignor to F. K. Gustin, Chicago, Ill. Toy bank	698,580	Apr. 20	3801	804	90	889
Braun & Company, F. W. (See Longman and Calkins, assignors.) (Belgium.)						
Braun, Frederick W. (See Calkins, Albert C., assignor.)						
Braun, Louis, assignor of one-half to J. Buelhach, New York, N. Y. Vault-light	698,385	Apr. 12	1205	380	90	1447

Alphabetical list of patentees, April to June, inclusive--Continued.

[illegible]

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Col.	Page	Vol.	Page
Brough, Henry G., Leland, Iowa. Vehicle-trail.	701,984	June 10	1879	288	98	2888
Brough, John F., New York, N. Y. Shoe-polisher.	698,719	Apr. 1	604	126	98	121
Brous, George M., Houlton, Oreg. Starting or stopping mechanism.	701,327	June 8	18	3	98	2412
Brow, James B., New York, N. Y., assignor to "Adek" Manufacturing Company. Machine for perforating paper, etc.	698,940	May 13	1048	284	98	1288
Brown, Alexander T., Syracuse, N. Y. Power-transmitting mechanism.	702,980	June 10	1788	608	98	2488
Brown, Arthur M. (See Brown, Daniel L., assignor.)						
Brown, Charles F. (See Melavin, John H., assignor.)						
Brown, Charles F. (See Read, William, assignor.)						
Brown, Charles N., Syracuse, N. Y. Machine for double-seaming metal sheets.	701,041	May 27	2738	840	98	1888
Brown, Charles N., Boston, assignor to J. S. Wilson, Chelsea, Mass. Shuttle for looms.	702,981	June 10	1789	608	98	2488
Brown, Chauncy B. (See Brown, James E. and C. B.)						
Brown, Cyril P., Springlake, Mich. Folding bed.	698,988	Apr. 28	2888	818	98	888
Brown, Daniel, Cranston, R. I. Gun-lock.	698,440	Apr. 28	2884	848	98	878
Brown, Daniel, Cranston, R. I. Shot-spreader.	698,487	May 8	888	188	98	1218
Brown, Daniel L., assignor of one-half to A. M. Brown, Birmingham, Ala. Mining-car.	700,713	May 20	8128	713	98	1888
Brown, David. (See Masscar, John R., assignor.)						
Brown, Edmund L., Martinsville, Ind. Machine for splitting bark-strips.	700,880	May 20	2880	888	98	1488
Brown, Edmund L., Martinsville, Ind. Machine for cutting bark into strips.	700,887	May 20	2881	888	98	1488
Brown, Francis C., Brooklyn, N. Y. Fountain-pen.	697,975	Apr. 28	2884	881	98	877
Brown, Francis W., Cohoes, N. Y. Belt.	701,141	May 27	2844	807	98	2048
Brown, Frank E., Anamosa, Iowa. Ice-skate.	702,988	June 10	2818	880	98	2488
Brown, Frank H., et al. (See Winkler, William, assignor.)						
Brown, Frank R., Unga, Alaska. Clamp for rock-drills.	698,880	Apr. 28	4788	1488	98	1884
Brown, Franklin, assignor to C. Rastain, Philadelphia, Pa. Packing.	698,844	Apr. 1	874	88	98	88
Brown, Fred, assignor to J. Wadsworth, Paterson, N. J. Picker-operating mechanism for swivel-loom.	701,984	June 8	448	181	98	2880
Brown, Frederick W., Berlin, N. H. Adjustable wrench.	698,073	Apr. 28	2871	1281	98	1148
Brown, Garrett. (See Butcher, James M., assignor.)						
Brown, George R., Pledger, Tex. Proportionate scale.	697,818	Apr. 8	1788	288	98	888
Brown, Harold P. (See Hobbs, Charles M., assignor.)						
Brown, Harry F., Chicago, Ill. Water-meter.	701,875	June 8	718	188	98	2888
Brown, Hayes. (See Steele and Brown.)						
Brown, Henry A., Macon, Ga. Garment-stretcher.	701,148	May 27	2844	807	98	2048
Brown, Herman E., Coldwater, Mich. Making dolomite sandstone.	697,819	Apr. 8	1740	288	98	888
Brown, James E. and C. B., Bradford, Pa. Vehicle-body.	698,488	May 8	888	188	98	1218
Brown, James J., London, England. Apparatus for sampling grain or seed.	702,988	June 10	2814	881	98	2488
Brown, Jesse J., Macon, Mo. Dental lathe.	698,713	Apr. 1	808	178	98	181
Brown, Jessie, et al. (See Arnold, Cyrus M., assignor.)						
Brown, John, Norwood, assignor to L. C. Smith, Brookline, Mass. Glazing-machines.	698,781	Apr. 28	4588	1088	98	1088
Brown, John G., Jerseyville, Ill. Dehorning instrument.	700,188	May 20	2888	488	98	1488
Brown, John W., Jr., Philadelphia, Pa. Tapping-machine.	701,143	May 27	2844	808	98	2048
Brown, John W., Jr., Philadelphia, Pa. Electric controller.	702,984	June 10	2815	881	98	2488
Brown, Jonathan T., Marblehead, assignor to O. A. Miller, Brockton, Mass. Hinged last.	698,788	May 13	1887	284	98	1488
Brown, Joseph, Lorain, Ohio. Grinding-mill.	698,441	Apr. 28	2887	848	98	877
Brown Knitting Company. (See Geo. Albert, assignor.)						
Brown, Lemuel, Saugatuck, Mich. Life-boat.	702,988	June 10	2811	888	98	2488
Brown, Norman E., St. Joseph, Mich. Hoop-forming machine.	698,448	Apr. 28	2888	848	98	877
Brown, Paul T. (See Kidd, Frank L., assignor.)						
Brown, Perry, Wilmington, Del. Seal-lock.	700,288	May 20	2888	888	98	1888
Brown, Perry, Wilmington, Del. Pedestal.	700,884	May 27	2841	788	98	1848
Brown, Roy W., and C. A. Rhine, assignors to Union Electric Manufacturing Company, Milwaukee, Wis. Rheostat.	701,013	May 27	2713	881	98	1888
Brown and Sharpe Manufacturing Company. (See Davenport, William S., assignor.)						
Brown, Sidney G., Putney, England. Telegraphic apparatus.	702,288	June 10	1888	488	98	2488
Brown, Sidney G., Putney, England. Electric telegraphy.	702,688	June 17	2441	887	98	2887
Brown, Theodore H., assignor to New Broom and Supply Company, Viroqua, Wis. Broom-swing device.	697,280	Apr. 8	1741	288	98	881
Brown, Theodore P., and P. Wells, Worcester, Mass. Double-bellows action for pneumatic piano-players.	701,288	June 8	441	188	98	2888
Brown, Volney C., Balley's Harbor, Wis. Wrench.	697,321	Apr. 8	1748	288	98	881
Brown, Volney E., Woodstock, Ill. Composition for cleaning metals.	697,978	Apr. 28	2887	888	98	877
Brown, Arthur W., Princeton, N. Y., assignor to S. S. White Dental Manufacturing Company, Philadelphia, Pa. Dental-engine wall-bracket.	698,548	Apr. 1	875	84	98	88
Brown, Richard B., Brooklyn, N. Y. Telescoping wicket for counter guard-walls.	698,544	Apr. 1	877	84	98	88
Brownell, Frank A., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic camera.	698,991	Apr. 28	4784	1088	98	1084
Brownell, Willard H., Battlecreek, Mich. Eraser-tip for pencils.	698,748	May 13	1181	278	98	1488
Browning, Clarence P., Manhasset, N. Y. Color-printing.	698,285	Apr. 28	2884	778	98	778
Browning, John M., Ogden, Utah. Recoil-operated firearm.	701,288	June 8	18	4	98	2112
Browning, John M., Ogden, Utah. Sight for firearms.	701,288	June 8	18	4	98	2112
Brownell, Lawrence H., Brewster, N. Y. Machine for cleaning bricks.	698,887	Apr. 28	4197	987	98	888
Brownell, Lawrence H., Brewster, N. Y. Axle-nut wrench.	701,144	May 27	2847	808	98	2041
Bruckman, John. (See McFarland, James D., Jr., assignor.)						
Bruff, Wilbur C. (See Reagan, Edgar, assignor.)						
Brunau, Sven, Köping, Sweden, assignor to De Laval Steam Turbine Company. Electric pumping-engine.	701,288	June 8	488	108	98	2888
Brundage, Edwin L., East Orange, N. J. Horse-collar.	698,148	May 8	31	6	98	1188
Bruner, Martin, Buckland, Ohio. Self-lubricating axle.	697,088	Apr. 8	1213	880	98	888
Bruner, Jacob, and H. J. Root, Shelbyville, Ind. Furniture-coupling.	702,088	June 17	2448	887	98	2848
Bruner, John N., St. Paul, Minn. Hat-fastener.	698,448	Apr. 28	2881	847	98	877
Brunswick-Balke-Collender Company. (See Banninger, Moses, assignor.)						
Brunswick-Balke-Collender Company. (See Matthes, Julius H., assignor.)						
Brunton, George W., Springfield, Ohio. Corn-planter.	700,781	May 27	2848	781	98	1878
Brush, Otis B. (See Borton and Brush.)						
Brushaber, Louis E. C., Brooklyn, N. Y. Apparatus for consuming smoke.	697,088	Apr. 8	1214	880	98	888
Bryan, Bernard W., Buckhurst Hill, England. Planimeter.	700,788	May 27	2849	788	98	1878

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			1st	2nd	Vol.	Page
Bryan, George F., assignor to E. R. Mallory and F. Gerlach, trustees, Chicago, Ill. Gas- stirrer.	699,970	May 13	1000	384	99	1267
Bryan, John C., Augusta, Ga. Shuttle-check for looms.	699,945	May 8	994	125	99	1260
Bryan, William W. (See Lee and Bryan.)						
Bryant, Charles A., Wakefield, Mass., assignor to Consolidated Safety Pin Company, Bloomfield, N. J. Clamp.	702,771	June 17	9738	685	99	2707
Bryce Brothers Company. (See Schaub, Henry, assignor.)						
Bryson, Thomas M., Atlanta, Ga. Link-belt tire.	699,088	Apr. 29	5109	1180	99	1180
Buck, William C., Peterborough, Canada. Eccentric-chain lift-pump.	697,799	Apr. 15	2640	985	99	582
Buchanan, George F., Allentown, Pa. Keyboard for violins.	700,495	May 20	2640	981	99	1728
Bucher, Peter, Mannheim, Germany. Acetylene-gas-generating apparatus.						
Bucher, Hans T. (See Schraube and Bucher.)						
Buchner, Max, Mannheim, Germany. Reduction of azo compounds.	700,671	May 20	2011		99	1269
Buchner, Max, Mannheim, Germany. Reduction of nitro compounds.	700,672	May 20	2012		99	1269
Buchner, Max, Mannheim, Germany. Manufacture of ceramic products.	700,673	May 20	2014		99	1269
Buchner, Max, Mannheim, assignor to C. F. Buchringer & Soehne, Mannheim-Waldhof, Germany. Electrolytic reduction of nitro or other compounds.	700,670	May 20	2006	680	99	1269
Buck, Harold W., Schenectady, N. Y., assignor to General Electric Company. Magnetic clutch.	701,930	June 3	26	5	99	2112
Buck, Hiram M., and W. H. Scripps, Baltimore, Md. Arc-light hanger-board.	699,708	Apr. 29	4935	1008	99	1085
Buck, Sterling P., Front Royal, Va. Adjustable bushing.	700,014	May 13	1705	328	99	1269
Buck, William C., Peterborough, Canada. Eccentric-chain lift-pump.	699,994	Apr. 1	418	97	99	21
Buckeye Iron and Brass Works. (See Hubbell, Joseph H., assignor.)						
Buckeye Malleable Iron and Coupler Company. (See Thuma, James, assignor.)						
Buckeye Manufacturing Company. (See Henneghin, Herbert H., assignor.)						
Buckeye Manufacturing Company. (See Lambert, John W., assignor.)						
Buckley, James F., Dartford, assignor to Company of Allen and Hanbury, Limited, London, England. Molding-press.	702,125	June 10	1000	385	99	2428
Buckley, James F., Detroit, Mich. Manufacture of bent tubing.	702,125	June 10	1001	343	99	2440
Buckley, John D., and E. H. Phinney, Brunswick, Me. Acetylene-gas generator.	702,772	June 17	9738	686	99	2707
Buckley, Thomas J., and F. R. Place, Chicago, Ill. Pressure-regulator.	697,708	Apr. 15	2644	540	99	582
Bucklin, Charles B., Baltimore, Md. Can-steaming machine.	697,222	Apr. 8	1743	329	99	291
Buckman, George, Burlington, N. J. Machine for making cushions.	702,240	June 10	1897	438	99	2512
Buchwalter, John R., Elizabethtown, Pa. Straw-stacker.	699,798	Apr. 29	4937	1004	99	1085
Budd, Charles D., St. Louis, Mo. Conduit.	699,908	Apr. 29	4706	1056	99	1085
Buechner, Frank A., assignor to Buechner Manufacturing Company, Battle Creek, Mich. Picture-frame.	699,995	Apr. 8	1008	225	99	245
Buechner Manufacturing Company. (See Buechner, Frank A., assignor.)						
Buell, William E. (See Frazzetta, Charles L., assignor.)						
Buehlbach, Joseph. (See Braun, Louis, assignor.)						
Buetner, Richard, Brooklyn, and E. Marx, New York, N. Y. Pocket-spectacle.	700,798	May 27	2177	728	99	1269
Buffalo Pitts Company. (See Vranek, Edward J., assignor.)						
Bufford, George W., assignor to J. H. Williams and Company, Brooklyn, N. Y. Pipe- wrench.	697,977	Apr. 22	2607	680	99	695
Bufford, George W., assignor to J. H. Williams and Company, Brooklyn, N. Y. Chain wrench.	699,794	Apr. 29	4939	1004	99	1085
Buham, Herbert H., Abington, Mass. Cooler.	702,177	June 24	2004	306	99	2220
Buhlmann, Georg, Berlin, Germany. Manufacturing incandescent mantles.	699,108	Apr. 22	2604	708	99	730
Buhrer, Harry C., Chicago, Ill. Car-bolster.	702,701	June 17	2686	685	99	2428
Buhrer, Casper, Sandusky, Ohio. Metallic railway-tie.	702,420	June 17	2013	686	99	2428
Bullard, Edgar R., Springfield, Mass. Camera.	699,698	Apr. 29	4193	987	99	949
Bundy, Edward W. (See Rawdon and Bundy.)						
Bundy, John J., San Antonio, Tex. Auger.	699,444	Apr. 29	2648	387	99	598
Bunker, Hollis P. (See Mack and Bunker.)						
Bunn, W. T. (See Dunn, William D., assignor.)						
Bunn, William D., assignor of one-half to W. T. Dunn, Newbern, Tenn. Combined trace- holder and detaching means.	699,090	Apr. 29	5111	1180	99	1180
Bunting, William, Jr., Brooklyn, Mass. Water-closet.	702,598	June 17	2675	515	99	2214
Bursey, Charles J. T., Syracuse, N. Y. Apparatus for manufacturing charcoal.	701,145	May 27	2048	686	99	2421
Burdett-Bowditch Manufacturing Company. (See Bowditch, Harold, assignor.)						
Burdick, Leo J., Sturgis, Mich. Box.	699,090	Apr. 8	1008	226	99	247
Burdick, Leo J., Sturgis, Mich. Registering mechanism.	699,090	Apr. 29	4901	989	99	949
Bural, Valentin C., G. Randon, and G. Remy, Havre, France. Apparatus for torrefying coffee.	699,445	Apr. 29	2644	387	99	598
Bureau, Alvan R., Salem, Oreg. Burial-vault.	700,734	May 27	2177	724	99	1269
Burford, Jonathan H. (See Bell and Burford.)						
Burgess, Lillian A., San Francisco, Cal. Combined skirt and drawers.	702,477	May 20	2675	619	99	1727
Burge, John, and E. B. Cornell, Smithfield, W. Va. Car-coupling.	699,499	May 6	695	129	99	1215
Burger, Franz, and H. H. Williams, Fort Wayne, Ind.; said Burger assignor of one-half of his right to said Williams. Vertical-tube steam-boller.	699,714	Apr. 1	997	127	99	122
Burger, Franz, and H. H. Williams, Fort Wayne, Ind.; said Burger assignor of one-half to said Williams. Grate-bar for forced-blast furnaces.	699,927	Apr. 8	1007	226	99	247
Burgess, John A., Bradford, Canada. Purifying acetylene gas.	701,905	June 10	1220	228	99	2220
Burgess, Thomas F., Denver, Colo. Combined picture-exhibitor and phonograph.	699,290	Apr. 22	2608	617	99	611
Burges and Bell. (See Byrce, William H., assignor.)						
Burgess, John, Rio Janeiro, Brazil. Steam-turbine. (Reissue.)	11,390	June 10	1994	422	99	2222
Burke, Charles G., Brooklyn, N. Y., assignor of one-half to J. Q. A. Whittemore, Boston, Mass. Telephone system.	701,794	June 3	914	324	99	2220
Burke, Eugene, Lakeview, Oreg. Pencil-sharpener.	697,222	Apr. 8	1744	329	99	291
Burke, James J., Hartford, Conn. Screw-cutting tool.	699,446	May 6	695	122	99	1200
Burke, Thomas G. (See Ward, Eliza L., assignor.)						
Burket, Henry K., Omaha, Neb. Burial-robe.	702,773	June 17	9738	686	99	2708
Burkhardt, Edward G. (See Stumer and Burkhardt.)						
Burley, Josiah, Baltimore, Md. Curtain-fixture.	702,297	June 17	2677	543	99	2214
Burley, Thomas S. (See Van Loven, Thomas F., assignor.)						
Burnett, Cuthbert, Grange, near Durham, England. Apparatus for washing coal, coke, &c.	700,725	May 27	2178	725	99	1269
Burroughs, Arthur M., Gardner, Me. Map-wringer.	699,973	Apr. 29	4973	1121	99	1142
Burroughs, Williams & Company. (See Vancian, Samuel M., assignor.)						
Burns, Allen D. (See Hyde and Burns.)						
Burns, Charles F., Kalamazoo, Mich. Vehicle running-gear.	697,200	Apr. 15	2646	385	99	582
Burns, Edith L., Norman, Okla. Tur. Curtain-bracket.	699,795	Apr. 29	4940	1004	99	1085
Burns, Edward, Sebring, Iowa. Draft-overseer.	700,290	May 20	2604	682	99	2428

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Pat.	Pub.	Vol.	Page.
Barnes, Edward A., Hartford, Conn. Contribution box	697,251	Apr. 8	1225	254	90	225
Barnes, George J. (See Chandler, Daniel L., assignor.)						
Barnes, Henry B., assignor of one-fourth to E. A. Munn, San Chabro, Wis. Fruit jar	702,705	June 17	2625	290	90	2690
Barnes, Henry H., Hastings, assignor to Battle Creek Iron Works Company, Limited, Battlecreek, Mich. Machine for finishing metal articles	699,613	May 6	915	214	90	1265

Cliff, Edward. (See Tucker, Benjamin V., assignor.)						
Cliff, Edward, Newark, N. J., assignor to Cliff and Garbert Company, New York, N. Y.	699,990	May 13	1010	267	90	1282
Clifford, Edward, Newark, N. J., assignor to Vase and Cliff Manufacturing Company, New York, N. Y. Car-truck	702,173	May 20	2685	473	90	1282
Clifford, Dennis P., Chicago, Ill. Attachment for rocking-chairs	702,990	June 17	2685	555	90	2685
Clifford, George Q., et al. (See Slater, Frank W., assignor.)	702,173	May 20	2687	499	90	1282
Clifton, Eugene H., Lansdale, Pa. Lawn-mower						
Clifton, Walter. (See Anghey and Clifton.)						
Climax Kila Company. (See Dachs, William, assignor.) (Reissue.)						
Cline, Albert F. (See Topf, Willie W., assignor.)						
Clinch, Elmer E., assignor to Ocala Foundry and Machine Works, Ocala, Fla. Tooth and base for phosphate logs	692,974	Apr. 20	2708	619	90	2708
Clopton, John R., Bastrop, Tex. Acetylene-gas generator	696,990	Apr. 1	300	261	90	1282
Clois, Charles, Webster City, Iowa. Grain-cleaning screen	696,990	Apr. 20	2614	770	90	770
Clonga, William F., Everett, assignor of two-thirds to G. Gosper, Cambridge, Mass.	702,990	June 10	1900	494	90	2614
Coolman, Boston, Mass. Valve-controlling mechanism for radiators	699,990	May 6	300	57, 60	90	1282
Clover, Benton L., and A. Grabowski, Chicago, Ill. Ore-concentrator	702,990	June 17	2686	570	90	2686
Closson, Richard, assignor to Liverpool Milk Company, Limited, Liverpool, England. Scraper for rollers	702,990	June 17	2686	570	90	2686
Camp, David, and W. Hoffmaster & Louis Inc. Sewage-disposer	702,990	June 17	2686	570	90	2686
Clymer, William R. (See Fishel and Clymer.)						
Custer, Thomas, Youngstown, Ohio. Distress-signal	701,190	May 27	2686	{ 611 612 }	90	2686
Coath, David D., Raanong, India. Railway or tramway vehicle	701,490	June 3	242	75	90	217
Cobough, Ephraim B., Middletown, Pa. Knife	700,617	May 30	2610	679	90	2610
Cobb, David C., Elizabethtown, Pa. Folding lawn-swing	697,193	Apr. 8	1414	{ 215 216 }	90	215
Cochran, William J., San Francisco, Cal. Wood-turning machine	697,207	Apr. 15	2670	630	90	2670
Cochran, William E., Jr., Delphos, Ohio, assignor of two-thirds to J. B. Bowers, Decatur, Ind. Sorens	696,616	Apr. 20	4618	1017	90	1017
Cochrane, Beakbird H. B., Canal Winchester, Ohio. Artificial denture	697,990	Apr. 20	2673	687	90	2673
Cochrill, Thomas C. (See Tanachok and Cochrill.)						
Cockburn, Francis B., Plainfield, assignor to Miles-Bonnet-Pond Company, Jersey City, N. J. Variable-speed gear	701,540	June 3	690	130	90	2610
Cockrell, Benito C., Washington, D. C. Stopper for vessels	690,697	May 13	1080	897	90	1080
Cody, Frederick A. and B. D., Chicago, Ill. Hydrocarbon-lighting system	702,400	June 17	2686	490	90	2686
Cody, Martin, New York, N. Y. Pump	702,990	June 10	1700	609	90	2686
Cody, Robert D. (See Cody, Frederick A. and B. D.)						
Coe, Charles T., New York, N. Y. Grate	700,610	May 20	2680	{ 673 674 }	90	2680
Coffman, George W., Garden City, Kans. Type-writing machine	702,700	June 17	2686	595	90	2686
Coggin, Daniel L., Waverly, Neb. Flour-boiling stove	699,745	May 13	1102	270	90	1414
Cogswell, Henry J., assignor to Hartford Accumulator Company, Hartford, Conn. Stor- age battery	699,990	May 13	1090	280	90	1282
Cohen, George W., assignor of nine-tenths to J. E. O'Whelan, C. L. Stevens, R. B. Buttton, A. H. McKee, G. F. Nantz, J. Wolf, Albany, W. O. Mahoney and G. O. Mor- gan, Pittsburg, Pa. Railway safety-block system	697,994	Apr. 15	2670	{ 694 695 }	90	694
Cohen, Harry E. (See Foster and Cohen.)						
Cohen, Isaac, Philadelphia, Pa. Machine for folding and rolling cloth	699,990	Apr. 20	2669	644	90	2669
Cohen, Jacob. (See Post, William I., assignor.)						
Cohen, Jacob, New York, N. Y. Watch-protector	702,777	June 17	2704	680	90	2704
Cohen, Joseph, Brooklyn, assignor to City Button Works, New York, N. Y. Garment- clasp	699,990	Apr. 1	451	97	90	2686
Cohen, Louis, and J. Gross, Schenectady, Mexico. Ore-concentrator	702,541	June 17	2686	510	90	2686
Colborne, Oliver, Chicago, Ill. Car-truck	697,970	Apr. 8	1216	391	90	2686
Colburn, Abbott B. (See Hanson, Nathan C., assignor.)						
Colburn, Henry J., Toledo, Ohio. Glass-blowing machine	699,977	Apr. 20	4612	{ 1017 1018 }	90	1017
Colburn, Leslie H., assignor to Toledo Glass Co., Toledo, Ohio. Glass-blowing machine	699,990	Apr. 20	4616	{ 1018 1019 }	90	1018
Cole, Arthur, Hood River, Ore. Washie-frame	70					
Cole, Everson P. (See Henderson, William G., assignor.)	701,194	May 27	2684	923	90	2684
Cole, James H., Chicago, Ill. Padlock	699,990	May 6	490	102	90	1282
Cole, William F., Waco, Tex. Fire-arm	701,730	June 3	260	235	90	260
Cole, William F., assignor to Franger Elevator Company, Worcester, Mass. Hydraulic- valve mechanism	700,740	May 27	2120	{ 737 738 }	90	2120
Colman, Almon, et al. (See Cohen, William F., assignor.)						
Colman, David N., et al. (See Bowen, David A., assignor.)						
Colman, Thomas, Jr., Charleburg, W. Va. Mechanism for feeding glass to molds	700,694	June 17	2687	685	90	2687
Colman, Thomas, Jr., and C. Bunyon, Charleburg, W. Va. Apparatus for feeding glass	700,695	June 17	2688	685	90	2688
Colman, Walter R., New Durp, N. Y. Fan	697,140	Apr. 15	2035	{ 440 442 }	90	2035
Colman, William H. (See Mottley, Patrick R., assignor.)						
Cole, Joseph, Glenwood Springs, Colo. Distillation	699,970	Apr. 20	4670	1120	90	4670
Cole, George, et al. (See Cole, George, et al.)	699,990	May 6	610	141	90	610
Collett, Samuel D., New York, N. Y., assignor to Elevator Supply & Repair Company. Elevator signal device	700,610	May 20	2680	609	90	2680
Colley, William F., Dublin, Co. Rooster	699,160	Apr. 20	5110	1120	90	5110
Collier, Arthur T., St. Albans, assignor of one-half to E. O. Goss and A. R. Williams, London, England. Air-tube for pneumatic tires	702,990	June 17	2686	671	90	2686
Collins, Louis, assignor of two-thirds to A. E. Parker, Cripple Creek, Colo., and J. M. Thrale, Wellington, Kans. Ore bucket, dumper, and chute	700,741	May 27	2064	780	90	2064
Collinsbourne, Albert E., et al. (See Doria, Norton, assignor.)						
Collins, Caleb G., et al., assignor to G. A. Brown, New York, N. Y. Rendering machine with rollers	700,047	June 10	1870	603	90	1870
Collins, Frank W., Rockville, Md. Shipping package	701,540	June 10	1904	494	90	1904
Collins, Ernest B., Denver, Colo. Stopper device for stationary washbasins	699,970	Apr. 20	4670	1120	90	4670

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Pat.	Des.	Vol.	Page.
Collins, Ira W., Kirkville, Mo. Wearing-apparel.	697,999	Apr. 15	999	999	99	999
Collins, James H., Nashville, Tenn. Fruit-drier tray.	697,997	Apr. 8	1994	1994	99	997
Collins, John E., Hartford, Conn. Safety attachment for trunks or boxes.	698,000	May 18	1976	1976	99	1999
Collins, Patrick J., assignor of one-half to C. G. Boland, Scranton, Pa. Motor-generator.	702,497	June 17	997	997	99	999
Collins, Timothy J., Toledo, Ohio. Hydraulic barber-chair.	697,498	Apr. 15	999	999	99	991
Colwell, Bernard, Chicago, Ill. Lifting-truck.	701,774	June 17	978	978	99	979
Columbia Brake & Supply Company. (See Price, William G., assignor.)	699,999	May 19	1999	1999	99	1999
Colvin, Michael R., Worcester, Mass. Gas stop-cock.	699,998	May 8	991	991	99	1994
Combs Shirt Coat Company. (See Burt, James H., assignor.)	701,999	June 15	979	979	99	999
Common, Andrew A., Baling, England. Telescope.	701,998	June 15	979	979	99	999
Compagnie Continentale d'Industries et de Chauffage (Système Frank et Pottré).	701,997	June 15	979	979	99	999
Compagnie pour la Fabrication des Compresseurs et Matériel d'Usines à Gaz, Société Anonyme. (See Brown and Blanchot, assignors.)	701,996	June 15	979	979	99	999
Company of Allen and Hanbury. (See Buckley, James F., assignor.)	701,995	June 15	979	979	99	999
Compton, Melvin D., East Orange, N. J., assignor to F. Fuller, trustee, New York, N. Y. Acetylene-gas generator.	699,999	Apr. 29	999	999	99	991
Computing Scale Company. (See Mauldin, James L., assignor.)	701,994	June 15	979	979	99	999
Computing Scale Company. (See Oates, Orange O., assignor.)	701,993	June 15	979	979	99	999
Computing Scale Company of America. (See Hayden, Annie B., assignor.)	701,992	June 15	979	979	99	999
Condemner, George. (See Oates, Orange O., assignor.)	701,991	June 15	979	979	99	999
Conditio, Jacobine B. (See Davis, Charles M., assignor.)	697,994	Apr. 29	999	997	99	999
Conklin, Oliver F., and J. L. Wilson, Dayton, Ohio. Electric motor.	697,993	Apr. 29	999	997	99	999
Conley, John R. (See Conley, Thomas and J. R.)	697,992	Apr. 29	999	997	99	999
Conley, Michael R., New York, N. Y., assignor to Electric Furnace Company. Electric furnace.	701,994	June 8	997	997	99	994
Conley, Thomas and J. R., Pittsburgh, Pa. Guide for punching-press.	701,993	June 8	997	997	99	994
Connecticut Trust and Safe Deposit Company et al. (See Parkhurst, Edward G., assignor.)	701,992	June 8	997	997	99	994
Connolly, James A., assignor of one-half to G. F. Mack, Hamilton, Ohio. Guard-bearing for couch-rolls.	701,991	May 12	1947	1947	99	1995
Connolly, William, Toledo, Ohio. Rod-coupling.	701,990	Apr. 30	999	999	99	1997
Conner, George F., Port Huron, Mich. Band-cutter for threshing-machines.	701,989	June 19	1999	1999	99	1999
Conner, Harrison W., Boston, Mass. Combined range and water-heater.	701,988	June 19	1999	1999	99	1999
Conner, David, et al. (See Johnson, Lafayette W., assignor.)	701,987	June 19	1999	1999	99	1999
Conner, William F., New York, N. Y. Tag or check.	699,970	May 6	999	999	99	1999
Conrad, George W., assignor to Troy Bending Company, Troy, Ohio. Vehicle-pole.	701,970	May 6	999	999	99	1979
Conrad, William B., Nyack, and J. E. Cameron, Brooklyn, N. Y. Machine for stitching fabric.	697,993	Apr. 29	999	999	99	999
Conrad, Rudolph, Erie, Pa. Governor.	697,992	Apr. 29	999	999	99	999
Conrad, Solomon, Cookport, Pa. Street-sweeper.	701,990	May 27	997	997	99	1999
Conroy, Jacob A., et al. (See Forster, Frank L., assignor.)	701,989	May 27	997	997	99	1999
Conroy, Mary, et al. (See Forster, Frank L., assignor.)	701,988	May 27	997	997	99	1999
Consolidated Car-Hauling Company. (See McElroy, James F., assignor.)	701,987	May 27	997	997	99	1999
Consolidated Passenger Company. (See Long, Thomas, assignor.)	701,986	May 27	997	997	99	1999
Consolidated Railway Electric Lighting and Equipment Company. (See Kennedy, Patrick, assignor.)	701,985	May 27	997	997	99	1999
Consolidated Safety Pin Company. (See Bryant, Charles A., assignor.)	701,984	May 27	997	997	99	1999
Continuous Rail Joint Company of America. (See Charlton, Richard B., assignor.)	701,983	May 27	997	997	99	1999
Converse, Atherton D., Winchendon, Mass. Stop-motion for mechanical toys.	701,982	June 19	1999	1999	99	1999
Converse, Vernon G., Pittsburgh, Pa. Insulator.	701,981	June 19	1999	1999	99	1999
Converse, Vernon G., Pittsburgh, Pa. Insulator.	697,981	Apr. 15	999	999	99	997
Conway, John P., New York, N. Y. Garment-supporting appliance.	701,114	June 24	999	999	99	999
Conwell, James E., assignor to Wilke Manufacturing Company, Anderson, Ind. Oil-storage case.	699,984	Apr. 29	999	999	99	991
Cooper, Silas J., Chicago, Ill. Acropiline.	701,997	June 2	999	999	99	991
Cook, Adolphus H. and G. E. Alms, and W. H. Hood, Hagerman, Canada. Stationary frame.	701,996	June 2	999	999	99	991
Cook, Anna E. and F. J. Lawrenceburg, Ind. Revolving chimney-cap.	701,995	June 2	999	999	99	991
Cook, Charles F. H., Piquette, Conn. Adjustable window-curtain support.	701,994	June 2	999	999	99	991
Cook, Chester R. (See Cook and Hood.)	701,993	June 2	999	999	99	991
Cook & Co., S. A. (See Maca, Frank, assignor.)	701,992	June 2	999	999	99	991
Cook, Edgar H., Brooklyn, N. Y. Weighing-machine.	699,999	May 29	999	999	99	1999
Cook, Frank B., Chicago, Ill. Polarized electromagnetic apparatus.	699,998	May 19	1999	1999	99	1999
Cook, Frank D., Turin, Cal. Cultivator attachment.	699,997	May 6	997	997	99	1999
Cook, Frederick J. (See Cook, Anna E. and F. J.)	699,996	May 6	997	997	99	1999
Cook, Howard, assignor of two-thirds to R. F. Smith and W. W. Tucker, Vicksburg, Mich. Roller-feed-regulating valve and device for operating same.	699,995	May 6	997	997	99	1999
Cook, John, and A. H. Hagwall, Chicago, Ill. Combined ladder and base-mounting-controlling apparatus.	701,115	June 24	999	999	99	999
Cook, John H., Brooklyn, N. Y., assignor to H. B. Newhall, Plainfield, N. J. Conveyor.	701,114	June 24	999	999	99	999
Cook, Samuel J., assignor to H. B. Newhall, Plainfield, N. J. Conveyor.	701,113	June 24	999	999	99	999
Cook, Samuel J., et al. (See Howard-Sherman, Charles H., assignor.)	701,112	June 24	999	999	99	999
Cook, Frank J., Columbia Falls, Mont. Combined rule and square.	701,111	June 24	999	999	99	999
Cook, Charles A., assignor to Cox Brothers, Troy, N. Y., and R. L. McDonald & Co., St. Joseph, Mo. Tab for connecting connection to garments.	701,110	June 24	999	999	99	999
Cox, Isaac A., Ellettsville, N. Y. Filter.	701,109	June 24	999	999	99	999
Cox, Arthur W., Chicago, Ill. Metal window.	701,108	June 24	999	999	99	999
Cox, J. E., et al. (See Turner and Mitchell, assignors.)	701,107	June 24	999	999	99	999
Cox, Henry, assignor of one-half to G. W. Ballard, Selma, Ala. Mechanism for operating winding machine.	699,944	Apr. 9	1999	1999	99	949
Cox, Vincent J. (See Dugan and Cooper.)	699,943	Apr. 9	1999	1999	99	949
Cox, William, assignor to Cox Brothers, Troy, N. Y., and R. L. McDonald & Co., St. Joseph, Mo. Tab for connecting connection to garments.	701,106	June 24	999	999	99	999
Cox, William, assignor to Cox Brothers, Troy, N. Y., and R. L. McDonald & Co., St. Joseph, Mo. Tab for connecting connection to garments.	701,105	June 24	999	999	99	999
Cox, Joseph H., Windsor, Colo. Hay-stacker.	699,942	Apr. 9	1999	1999	99	949
Cox, Troy, New Hartford, Ohio. Switch-operating device.	699,941	Apr. 9	1999	1999	99	949

UNITED STATES PATENT OFFICE, 1902.

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Pg's	Vol.	Pg.
Copeland, Charles C. (See Bette, Frank J., assignor.)	697,999	Apr. 8	1994	943	99	945
Copeland, James B., Hartford, Conn., assignor to American Mayole Company, Jersey City, N. J., and New York, N. Y. Transmitting-gear	697,998	May 20	2040	974	99	1994
Copeland, Robert J., Toronto, Canada. Cabinet-dock	697,997	Apr. 15	2091	999	99	999
Corbett, William H., Portland, Oreg. Clutch	697,996	Apr. 15	2010	444	99	699
Corbin, Albert F., assignor to Corbin Cabinet Lock Company, New Britain, Conn. Mail-box	697,995	Apr. 15	2010	444	99	699
Corbin Cabinet Lock Company. (See Corbin, Albert F., assignor.)	697,994	Apr. 15	2010	444	99	699
Corbin, Wilbur R. (See Corbin and Corbin.)	697,993	Apr. 15	2010	444	99	699
Corby, Charles I. (See Corby, William S. and C. I.)	701,118	June 24	2000	777	99	2007
Corby, William S. and C. I., Washington, D. C. Machine for working and shaping dough	701,118	June 24	2000	777	99	2007
Cordan, William. (See Holden, Sylvanus L., assignor.)	701,117	June 24	2000	777	99	2007
Corry, William F., et al. (See Foulton, Peter, assignor.)	701,116	June 24	2000	777	99	2007
Cory, William H. (See Dancy and Cory.)	701,115	June 24	2000	777	99	2007
Cornell, Evan W., assignor of one-half to E. M. Dole, Adrian, Mich. Lighting attachment for gas-burners	701,114	June 24	2000	777	99	2007
Cornell, Samuel B. (See Burge and Cornell.)	701,113	June 24	2000	777	99	2007
Cornely, Robert, Paris, France. Machine for fixing spangled material to textile fabric	701,112	May 20	2000	777	99	1999
Corning, Thomas J., Sterling, Ill. Baling-press	699,991	May 12	1994	985	99	1999
Cornwall, Bruce. (See Rice, Alphonse R., assignor.)	699,990	May 12	1994	985	99	1999
Cornwall, Frederick R., St. Louis, Mo., assignor to Chicago Railway Equipment Company, Chicago, Ill. Slide bearing for railway-cars	699,989	Apr. 22	2260	735	99	790
Cornwall, Frederick R., et al., assignor to Enterprise Manufacturing Company of Pennsylvania, Philadelphia, Pa. Malleable-iron	699,988	Apr. 22	2260	735	99	790
Corrington, Murray. (See Dugan and Corrington.)	699,987	Apr. 22	2260	735	99	790
Corrington, Murray, New York, N. Y. Automatic fluid-pressure brake apparatus	699,986	Apr. 22	2260	735	99	790
Corry, Michael. (See Barber and Corry.)	699,985	Apr. 22	2260	735	99	790
Cortelyou, William C., Oshkosh, Ill. Combined shirt-cloak and waist-retainer	699,984	Apr. 22	2260	735	99	790
Cortelyou, William C., Oshkosh, Ill. Combined shirt-cloak and waist-retainer	699,983	Apr. 22	2260	735	99	790
Cortland Carriage Goods Company. (See Brown, Omar C., assignor.)	699,982	Apr. 22	2260	735	99	790
Cortis, Eugene D. (See Brown, Omar C., assignor.)	699,981	Apr. 22	2260	735	99	790
Cory, Colin. (See Barber and Corry.)	699,980	Apr. 22	2260	735	99	790
Cosgrove, Thomas, Kansas City, Mo. Combined rail-joint and tie-plate	701,110	June 24	2011	995	99	2009
Cosgrove, Thomas, Kansas City, Mo. Combined rail-joint and tie-plate	699,999	May 12	1999	995	99	1919
Cosser, Thomas, Orono, Scotland. Printing-machine	701,117	May 20	2073	471	99	1999
Cota, Aurelio, et al. (See Edwards, Isaac L., assignor.)	701,116	May 20	2073	471	99	1999
Cota, Louis M., et al. (See Edwards, Isaac L., assignor.)	701,115	May 20	2073	471	99	1999
Cotta, Charles, Shannon, Ill. Automobile	701,114	May 20	2073	471	99	1999
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,999	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,998	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,997	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,996	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,995	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,994	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,993	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,992	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,991	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,990	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,989	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,988	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,987	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,986	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,985	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,984	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,983	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,982	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,981	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,980	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,979	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,978	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,977	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,976	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,975	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,974	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,973	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,972	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,971	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,970	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,969	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,968	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,967	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,966	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,965	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,964	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,963	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,962	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,961	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,960	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,959	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,958	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,957	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,956	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,955	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,954	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,953	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,952	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,951	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,950	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,949	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,948	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,947	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,946	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,945	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,944	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,943	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,942	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,941	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,940	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,939	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,938	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,937	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,936	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,935	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,934	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,933	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,932	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,931	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,930	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,929	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,928	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,927	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,926	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,925	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,924	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,923	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,922	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,921	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,920	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,919	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,918	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,917	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,916	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,915	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,914	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,913	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,912	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,911	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,910	May 12	1994	991	99	1994
Cottrell, Charles F., Westbury, N. Y., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Blast-delivery apparatus for printing-machines	699,909	May 12	1994			

UNITED STATES PATENT OFFICE, 1909.
Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Pat.	Vol.	Page
Crowther, Edgar F., Vicksburg, Miss. Journal-box and roller-bearing for railway-car wheels.	702,170	May 20	2079	475	00	1088
Cuddeback, Charles V. Lima, Pa. Feed.	699,091	Apr. 1	780	378	00	140
Cuddeback, Gustavus L., New York, N. Y. Hydraulic dredger, excavator, and elevator.	697,704	Apr. 15	1460	580	00	580
Cuddeback, Gustavus L., New York, N. Y. Hydraulic dredge.	702,408	May 20	2541	520	00	1720
Cuddeback, Gustavus L., and J. Dyer, New York, N. Y. Apparatus for raising liquids.	702,405	May 24	2522	740	00	2201
Cullman, J. S., et al. (See Egan, James W., assignor.)						
Culver, John W., assignor to National Computing Scale Company, Cleveland, Ohio. Spring-balance computing scale.	702,287	June 24	2046	000	00	2704
Culver, Charles, Brandon, Canada. Ore separating and classifier.	702,281	June 10	1013	280	00	1005
Cumbe, Ernest R. (See McCreavey, Kirby, and Cumbe.)						
Cumner, William H., Toledo, Ohio. Electro-magnetic switch system for electric railways.	701,995	June 2	720	100	00	2220
Cumner, William H. (See Cumner, William H., assignor.)	697,280	Apr. 8	1725	590	00	590
Cunningham, George W., and F. E. Warren, Westchester, N. L., assignors to Parker Mills. Fall River, Mass. Loom for weaving bordered fabric.	702,005	May 19	2460	000	00	2022
Cunningham, John E., St. Albans, Vt. Horsehoe-call.	699,093	May 12	1271	312	00	1670
Cunningham, John N., Washington, D. C. Belt and shirt-waist connector.	697,280	Apr. 8	1727	590	00	590
Cunningham, Nora L., et al. (See Cunningham, Walter C., assignor.)						
Cunningham, Walter C., assignor to N. L. Cunningham, St. Paul, Minn., and O. P. Higgins, Ottumwa, Iowa. Manufacturing smoking-pipes.	702,703	June 17	2600	000	00	2021
Cunningham, William J., Philadelphia, Pa. Machine for washing or sterilizing bottles.	697,301	Apr. 5	1267	844	00	240
Curley, Terence F. (See Hilker, John H., assignor.)	697,214	Apr. 15	2000	201	00	207
Curline, James L., Danville, N. Y. Machine for washing or sterilizing bottles.						
Curran, Arthur D., et al. (See Huff, Henry H., assignor.)						
Curran, Michael P., et al., trustees. (See Welts, George G., assignor.)						
Currier, Charles W., Columbus, Ohio. Gas-burner.	701,932	June 2	40	8	00	2117
Currier, Jeremiah H., assignor of one-third to C. Sale, Louisville, Ky. Combined air-iron and vapor-dryer.	700,120	May 20	2020	070	00	1007
Currier, John W. (See Bond, Albert, assignor.)						
Currier, John W., Boston, Mass. Mail-box.	699,721	Apr. 1	680	120	00	120
Curry, Andrew J., assignor of one-half to N. J. Holloway, St. Louis, Mo. Hand-truck.	699,220	Apr. 20	680	770	00	770
Curry, Hill M., California, Pa. Plumb-bob.	702,220	June 10	1707	411	00	2400
Curry, James, Rockford, Ill. Automatic hydraulic fire-extinguishing system.	699,095	May 12	1002	280	00	1400
Curtis, Charles G., New York, N. Y., assignor, by mesne assignments, to Curtis Steam Turbine Company. Electric steam turbine.	700,744	May 27	2001	721	00	1000
Curtis, Charles L. (See Lapeard, George, assignor.)						
Curtis, Edmund A., Chicago, Ill. Car-truck.	699,287	Apr. 1	680	90	00	90
Curtis Steam Turbine Company. (See Curtis, Charles G., assignor.)						
Curtis, Timothy A., Newark, N. J. Tape-measure.	699,180	May 6	40	14	00	1100
Curtis, Robert P., Columbus, Ohio. Physician's examining chair and table.	699,720	Apr. 1	680	120	00	120
Cushing, Alvin H., Springfield, Mass. Burglar-proof device for safe doors.	700,127	June 24	2000	811	00	2004
Cushing, Clarence F., North Abington, Mass., assignor to Standard Shoe Machinery Company, East Orange, N. J. Sole-rounding machine.	700,094	May 20	2000	075	00	1012
Cutler, Henry H., Chicago, Ill. Controller for electric vehicles.	697,990	Apr. 20	2000	075	00	075
Cutler, Henry H., Chicago, Ill. Controller for electric vehicles.	697,987	Apr. 20	2000	080	00	084
Cutler, Henry H. (See Hutchins and Cyr.)	702,400	June 17	2000	404	00	2000
Cyr, Joseph T. (See Hutchins and Cyr.)						
Cyr, Joseph T., assignor to Crumpton & Knowles Loom Works, Worcester, Mass. Fin-wheel and star-wheel motion.	699,910	May 12	1200	801	00	1000
D. H. Seidler Carriage Company. (See Barnack, Jonathan H., assignor.)						
D. F. Dudley & Son Company. (See Cahoon, Nelson, assignor.)						
D'Homergue, John R., Pittsburgh, Pa. Frame for doors, windows, &c.	699,901	Apr. 20	2417	720	00	720
D'Orlovsky, Julia. (See Vallich and D'Orlovsky.)						
Dalena, John, Piqua, Ohio. Draft attachment for draftstresses.	699,720	Apr. 20	2000	100	00	701
Dahl, Charles A., Lynn, assignor to Reeco Buttonhole Sewing Machine Company, Boston, Mass. Eye-hole-sewing machine.	699,271	May 6	680	100	00	100
Dahl, Olaus A., Nash, N. D. Chain.	701,204	June 2	61	9	00	2117
Dalman, Hans von, Vienna, Austria-Hungary. Detonating composition.	702,287	June 10	1200	000	00	2000
Dalman, James, Aberdeen, Scotland. Bottle-closure.	699,207	Apr. 20	2004	1000	00	1000
Dakin, S. H. (See Sykes, Charles D., assignor.)						
Dallinger, Frank W., Cambridge, Mass. Apparatus for making coffee, &c.	699,405	May 6	694	201	00	1200
Dallmeyer, Thomas H. (See Hill, Frederick H., assignor.)						
Dally, Charles A., Carnest, Pa., assignor of one-half to H. H. Whitaker, Wheeling, W. Va. Feed-burner.	701,200	June 2	604	300	00	2201
Dalmer, Richard. (See Vander and Dalmer.)						
Dalrymple, John B., Boston, Mass. Hammock-sling.	699,418	Apr. 1	40	9	00	12
Dalshimer, Simon, Baltimore, Md. Box.	699,100	Apr. 20	2014	704	00	720
Daly, J. E. (See Clark, Harry A., assignor.)						
Danabous Brule Boon Company. (See Russell, John T. W., assignor.)						
Danabrun, Maggie, Dan Mohon, Iowa. Adjustable invalid mattress.	699,908	Apr. 1	770	175	00	100
Daney, James, and W. H. Cort, assignors of one-third to H. S. Bouton, Chicago, Ill. Hammer.	702,705	May 27	2600	720	00	1000
Dando, Anna K., and F. H. Stahr, Scranton, Pa. Miner's safety-lamp.	702,407	May 20	2540	520	00	1720
Daniel, Charles, Bloomore, Kans. Combined tail and rein guard.	697,428	Apr. 15	2018	444	00	400
Daniel, Charles T., Kansas City, Mo. Letter-file, &c.	699,200	May 6	604	30	00	1207
Dankels, Fred H., and H. W. Wyman, assignors to American Steel & Wire Company, Worcester, Mass. Ball-bond.	699,170	Apr. 20	2000	700	00	704
Danley, William E. (See Wooley, Danley, and Young.)						
Danley, Willis W., Chicago, Ill., assignor to American Pneumatic Service Company, Boston, Mass. Reamer system.	702,120	June 24	2004	770	00	2000
Dannenberg, Otto F., and E. L. Morgan, Toledo, Ohio, assignors to American Bicycle Company, Jersey City, N. J., and New York, N. Y. Engine controlling mechanism.	702,410	June 17	2600	404	00	2000
Danner, Ada L. (See Thompson and Danner.)						
Danah, Eddy-Riffel, Syndicate. (See Danamann, Julius A. N., assignor.)						
Darling, James D., assignor to Harrison Bros. & Co., Incorporated, Philadelphia, Pa. Making alkaline cyanide.	699,400	Apr. 20	2070	000	00	000
Darling, James D., assignor to Harrison Bros. & Co., Incorporated, Philadelphia, Pa. Making cyanide.	699,400	Apr. 20	2070	000	00	000

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Des.	Vol.	Page.
Darling, James D., assignor to Harrison Bros. & Co., Incorporated, Philadelphia, Pa. Making alkaline cyanide	700,064	Apr. 20	3977	90	894
Darling, John, Rutherglen, Scotland. Automatic car-coupling	700,065	May 20	3941	975	90	1214
Darling, John, Gallowater, Rutherglen, assignor to Darling's Patent Automatic Coupling, Limited, Glasgow, Scotland. Automatic car-coupling	700,066	Apr. 20	3938	(1124) (1125)	90	1144
Darling, Winfield, South Oyster, N. Y. Egg-tray	700,700	June 17	3735	680	90	2710
Darling's Patent Automatic Coupling. (See Darling, John, assignor.)						
Darlington, Thomas, South Melbourne, Victoria, Australia. Means for ventilating buildings	697,315	Apr. 15	3999	(891) (892)	90	897
Darr, Abraham L., assignor to W. A. and H. E. Darr, Carroll, Iowa. Detachable fastener for window-cashes	700,060	June 10	1494	295	90	947
Darr, Harry E. et al. (See Darr, Abraham L., assignor.)						
Darr, Winfield A., et al. (See Darr, Abraham L., assignor.)						
Darrin, David H., Cranford, N. J., assignor to E. McLean, Brooklyn, N. Y. Damper-controller	697,795	Apr. 13	3935	(880) (881)	90	888
Darrin, David H., New York, and W. M. Dollar, Buffalo, N. Y., assignors to Howard Iron Works. Hoisting apparatus	699,095	Apr. 20	3979	(895) (897)	90	894
Dassori, Frederick. (See Kleinschmidt, Edward E., assignor.)						
Daubech, William J. (See Wehmeier and Daubech.)						
Daughtry, William R., Montgomery, Ala. Holder for handles of kitchen utensils	701,305	June 3	40	9	90	2117
Davenport, Frank W., Providence, R. I. Educational device	701,997	June 20	1392	994	90	2999
Davenport, Hudson A. (See Lane and Davenport.)						
Davenport, William H., Norwich, Conn. Breakdown gun	701,185	May 27	3999	913	90	2949
Davenport, William H., Norwich, Conn. Locking-key for firearms	701,186	May 27	3970	913	90	2949
Davenport, William H., assignor to Brown and Sharpe Manufacturing Company, Providence, R. I. Slotting mechanism for screw-machines	700,121	June 24	2400	730	90	2930
Davidson, George P., Port Chester, N. Y. Plane	695,414	Apr. 1	40	10	90	12
Davidson, John A., Decatur, Ill. Banana-crate	702,295	June 24	3790	971	90	2995
Davidson Rubber Company. (See Baltzer, Cyrus J., assignor.)						
Davidson, William K. L., Southwick, England. Photographic-plate holder	701,205	June 3	40	9	90	2117
Davis, James, Glasgow, Scotland. Feed-water filter and heater	700,060	May 20	3942	(975) (976)	90	1214
Davies, Charles G., Benton Harbor, Mich. Machine for molding bricks or blocks	700,746	May 27	3999	(733) (734)	90	1297
Davies, John L., Highbury, England. Electric-arc lamp	701,014	May 27	3939	(893) (894)	90	1299
Davies, Rowland, Utica, Wis. Thrashing-machine	702,345	June 10	1395	(425) (426)	90	2945
Davis, Albert D., Yonkers, assignor of one-half to F. W. Livermore, New York, N. Y. Photographic camera	702,305	June 10	1396	490	90	2999
Davis, Alexander C., Lafayette, Ind. Scarecrow	697,078	Apr. 8	1216	291	90	299
Davis, Augustine, Chicago, Ill. Acetylene-gas generator	701,222	June 10	1394	(292) (297)	90	2997
Davis, Augustus H., assignor of one-half to J. E. Barnett, Crawfordsville, Ind. Carpet-stretcher	699,105	Apr. 20	3123	1123	90	1199
Davis, Calvin E., assignor to South Bend Iron Works, South Bend, Ind. Molding apparatus	699,351	Apr. 1	395	97	90	95
Davis, Calvin E., assignor to South Bend Iron Works, South Bend, Ind. Making pattern-plates	702,299	June 24	3947	(994) (995)	90	2994
Davis, Calvin E., assignor to Oliver Chilled Plow Works, South Bend, Ind. Clamp	699,311	May 15	1999	291	90	1995
Davis, Charles E., assignor of one-third to H. D. Harrower, New York, N. Y. Geographical timepiece	701,295	June 10	1399	297	90	2997
Davis, Charles M., Cambridgeport, assignor of one-half to J. E. Condinho, East Cambridge, Mass. Marine railway	699,792	Apr. 1	894	140	90	129
Davis, Cleland, U. S. Navy. Golf-ball	697,516	Apr. 15	3957	992	90	995
Davis, Cleland, U. S. Navy. Golf-ball	702,299	June 24	3992	992	90	2995
Davis, Eugene M., Dunkirk, N. Y. Bicycle-gear	697,078	Apr. 8	1219	291	90	299
Davis, Ewing O., New Geneva, Pa. Rail-joint	701,160	May 27	3973	913	90	2947
Davis, Frank R., Audubon, Iowa. Hog-trough	697,399	Apr. 8	1894	297	90	299
Davis, Fred D. (See Lancaster, Charles F., assignor.)						
Davis, George, Lyons, N. Y. Device for warming bridle-bits	701,191	May 27	3973	914	90	2947
Davis, Isaac, New York, N. Y. Garment	700,747	May 27	3913	734	90	1299
Davis, Isaac, New York, N. Y. Garment	700,908	May 27	3901	902	90	1949
Davis, John H., Chicago, Ill. Drying-rack	701,545	June 3	470	105	90	2904
Davis, John T., San Francisco, Cal. Well-boring apparatus	701,547	June 3	474	107	90	2905
Davis, Leonard D., Erie, Pa. Piercing and shaping metallic ingots	697,395	Apr. 20	3999	999	90	994
Davis, Noah, New York, N. Y., assignor to Standard Center and Wheel Company. Center	699,799	May 15	1999	294	90	1999
Davis, William, County of Middlesex, England. Chimney and ventilator	694,724	Apr. 1	699	140	90	129
Davis, William C. (See Hanchett and Davis.)						
Davis, William C., Denver, Colo. Apparatus for roasting and cooling ores	700,125	May 15	1391	(449) (450) (451)	90	1299
Davis, William M., assignor to Stromberg-Carlson Telephone Manufacturing Company, Chicago, Ill. Telephone-exchange system	697,999	Apr. 20	3995	990	90	995
Davis, William M., assignor to Stromberg-Carlson Telephone Manufacturing Company, Chicago, Ill. Clearing-out signaling apparatus	697,999	Apr. 20	3995	990	90	995
Davis, William M., assignor to Stromberg-Carlson Telephone Manufacturing Company, Chicago, Ill. Multiple-switchboard telephone-exchange system	697,991	Apr. 20	3991	990	90	997
Davis, William M., assignor to Stromberg-Carlson Telephone Manufacturing Company, Chicago, Ill. Telephone-exchange system	697,999	Apr. 20	3995	990	90	997
Davis, William M., assignor to Stromberg-Carlson Telephone Manufacturing Company, Chicago, Ill. Telephone-exchange system	697,998	Apr. 20	3995	991	90	995
Davis, George B. (See Cheney, Davison, and Skinner.)						
Davison, James W., Caryville, Mass. Device for adjusting belts to pulleys	697,454	Apr. 15	3914	445	90	999
Davison, Tom C., assignor of sixty-two and one-half per cent. to E. A. Smith, Omaha, Neb. Railway-ticket	702,295	June 27	3979	(997) (998)	90	2994
Dawson, Clarence L., assignor of one-half to W. H. Graham, Jacksonville, and F. M. Cuddy, Clinton, Ill. Universal printing-machine	699,496	May 4	999	199	90	1299
Dawson, Edward P., assignor of one-third to H. W. Pierce, Butte, Mont. Friction-gear	701,199	May 27	3974	914	90	2947
Dawson, Henry A. (See Dawson, Henry T. and H. A.)						
Dawson, Henry T. and H. A., Canterbury, England. Electrical ignition apparatus	701,297	June 3	44	20	90	2115
Dawson, John W., Bradford, England. Apparatus for judging the color and density of photographic negatives or like bodies	699,999	Apr. 1	870	294	90	129

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Cl. 1	Cl. 2	Vol.	Page.
Day, Charles B., East Orange, N. J. Flushing apparatus.....	701,242	June 3	475	107	99	2200
Day, Charles H., et al. (See Marks, Joseph P., assignor.)						
Day, Charles M., assignor to Draper Company, Hopedale, Mass. Molding apparatus....	697,124	Apr. 8	1417	364	99	220
Day, Charles M., assignor to Draper Company, Hopedale, Mass. Loom shipper mechanism.....	702,243	June 10	1906	426	99	2515
Day, Horace G., Steubenville, Ohio. Can-opener.....	701,250	June 3	725	162	99	2200
Day, Maxwell W., Schenectady, N. Y., assignor to General Electric Company. Control-ling electric motors.....	694,940	Apr. 8	1035	340	99	221
Day, William A., Kearney, Neb. Adding and subtracting machine.....	694,415	Apr. 1	44	10	99	13
Day, William A., Clay Center, Neb. End-gate-rod fastener.....	694,590	Apr. 1	973	217	99	206
Day, William A., Southsea, England. Means for operating tramway or similar points from vehicles.....	697,090	Apr. 15	2022	510	99	515

Dayton Electrical Manufacturing Company. (See Apple, Vincent G., assignor.)						
Dayton Manufacturing Company. (See Kirby, John, Jr., assignor.)						
Dayton Paper Novelty Company. (See Haas, Walter G., assignor.)						
Dayton, Wilbur O., Chicago, Ill. Clothes-line prop.....	695,200	Apr. 22	8739	220	99	640
De Baun, Edwin, Passaic, N. J. Shoe-polisher.....	702,250	June 10	1795	411	99	2425
De Camp, William S., Chillicothe, Ohio. Angle-cock adjuster for air-brakes.....	694,503	Apr. 1	773	176	99	164
De Force, Mary A., Corry, Pa., assignor of two-thirds to D. Pierce and G. A. Williams, Jamestown, N. Y. Flower-stand.....	699,184	May 6	51	14	99	1153
De Freitas, William, New York, N. Y. Tube-clamp.....	697,390	Apr. 8	1795	224	99	324
De Groot, George F., and I. L. Thompson, Morristown, N. J., assignors of one-third to P. Farrelly, New York, N. Y. Collection-recording mechanism.....	702,010	May 13	1716	324	99	1541
De Haven, Hugh, Brooklyn, N. Y. Bala-tie.....	701,250	May 27	4140	924	99	2200
De Haven, Lewis L. (See Bander, Daniel W., assignor.)						
De Kaulstner, Gustave, Brussels, Belgium. Dyeing.....	702,126	June 24	2408	780	99	2201
De Knight, Victor P., assignor to Victor P. De Knight Gun Company, Washington, D. C. Automatic rapid-fire gun.....	693,107	Apr. 22	2219	704	99	722
De La Mare, Thomas, Tooele, Utah. Axle-spindle.....	697,455	Apr. 15	2015	445	99	408
De Lacy, George S., New York, N. Y. Tank for storing aerated liquids under pressure.....	697,518	Apr. 15	2020	522	99	522
De Lany, Emma, Philadelphia, Pa. Waist-lengthening device.....	699,504	Apr. 1	775	176	99	164
De Lapp, Fred M., Chicago, Ill. Railway-track lubricator.....	699,707	May 13	1187	276	99	1421
De Laval Steam Turbine Company. (See Borgren, Johan A., assignor.)						
De Laval Steam Turbine Company. (See Brunau, Sven, assignor.)						
De Laval Steam Turbine Company. (See Olsson, George O. M., assignor.)						
De Long, Charles E., Hot Springs, Ark. Single-trigger mechanism for double guns.....	699,201	May 6	305	70	99	1207
De Long, Joseph J., Brooklyn, N. Y. Shade-roller bracket.....	701,104	May 27	2079	515	99	2040
De Man, Alphonse, New York, N. Y. Building-block.....	701,105	May 27	2080	515	99	2040
De Mars, William O., Cleveland, Ohio. Puncture-healing composition.....	699,028	Apr. 29	8055	198	99	1145
De Mayo, Joseph, Mount Vernon, N. Y. Coat.....	699,498	May 6	708	166	99	1201
De Merrill, Richard N. (See Palmer, Merritt W., assignor.)						
De Meulenaer, Emile, Brussels, Belgium. Apparatus for the reception of sound-signals for nautical purposes.....	701,126	May 27	2080	515	99	2040
De Moulins, Edmond and U. S., Greenville, Ill. Automatic water-cooler for initiating purposes.....	699,493	Apr. 29	2080	515	99	2040
De Moulins, Ulysses S. (See De Moulins, Edmond and U. S.)						
De Rochemont, Perkins H., Chattanooga, Tenn. Center-iron and lap-ring.....	701,126	May 27	2080	515	99	2040
De Rochemont, Perkins H., assignor to C. Harro, Chattanooga, Tenn. Combined clip and lap-link.....	701,126	June 3	207	222	99	2200
De Vos, Albert H., Chicago, Ill. Hammering and cording attachment for sewing-machines.....	694,417	Apr. 1	40	10, 11	99	14
De Voll, Charles H., Oakland, Cal. Hydrocarbon-lamp.....	699,213	May 13	1181	272	99	1420
Deana, J. B. (See Honta, George W., assignor.)						
Deana, William A., Chicago, Ill. Envelop.....	701,250	June 3	47	10	99	2122
Deana, Albert L., et al. (See Olsen, Peter, assignor.)						
Dear, James W., assignor of one-half to F. W. Hittigman and J. Kennel, Dayton, Ohio. Car-mover.....	702,257	June 24	2701	671	99	2202
Dearholt, John H. (See Geschwender and Dearholt.)						
Dearing, David M., assignor of one-half to H. W. Scott, Jackson, Mich. Antislipping device.....	697,125	Apr. 8	1420	315	99	220
Deaton, Noah G., Buford, Ga. Collar-fastener.....	702,045	June 24	2224	746	99	2201
Decker, Delbert H., et al. (See Woods, Granville T. and L., assignors.)						
Decker, George W., Beranton, Pa. Lubricating attachment for car-axles.....	701,255	June 10	1906	426	99	2515
Decker, Harrison, Columbia Falls, Mont. Wrench.....	699,577	Apr. 22	2711	620	99	220
Dearing Harvester Company. (See Appleby, John F., assignor.)						
Dearing Harvester Company. (See Ellis, George H., assignor.)						
Dearing Harvester Company. (See Packer, George W., assignor.)						
Dearing Harvester Company. (See Rand, Charles A. A., assignor.)						
Dearing, Isaac W., et al. (See Redding, Jerome, assignor.)						
Dearing, Mark L., New York, N. Y., assignor to Standard Oil Company, Bayonne, N. J. Apparatus for shaping metal receptacles.....	701,549	June 3	420	107	99	2207
Dearing, Mark L., New York, N. Y., assignor to Standard Oil Company, Bayonne, N. J. Shaping metal receptacles.....	701,550	June 3	420	108	99	2210
Dearing, Mark L., New York, N. Y., assignor to Standard Oil Company, Bayonne, N. J. Shaping metal receptacles.....	701,551	May 27	2075	514	99	2047
Deeter, Edward D., Milford, Ind. Combined air and water pump.....						
Degordon, Adolph. (See Blarbaum, Charles, assignor.)						
Dehner, Otto, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Co., New York, N. Y. Fatty compound of iodine and sulfur and making same.....	699,900	Apr. 1	974	222	99	222
Dehner, Gerhard, Wiesbaden, Germany. Device for electrically connecting rails.....	697,517	Apr. 15	2020	522	99	522
Deinlein, Karl, assignor to Rhodawerke, Actiengesellschaft in Pilsen, Pilsen, Austria-Hungary. Gun-carriage.....	700,114	May 13	1591	420	99	1576
Deinlein, Karl, assignor to Rhodawerke, Actiengesellschaft in Pilsen, Pilsen, Austria-Hungary. Gun-carriage.....	700,097	May 20	2045	577	99	1214
Deinlein, Karl, assignor to Rhodawerke, Actiengesellschaft in Pilsen, Pilsen, Austria-Hungary. Recoil apparatus for ordnance.....	701,261	June 3	424	205	99	2208
Deisler, Robert, Treptow, near Berlin, assignor to C. R. Schalka, Berlin, Germany. Heating metal parts. (Reissue).....	12,022	June 24	2220	746	99	2202
Deitch, Edward J., New York, N. Y. Portable jewel-case, &c.....	701,259	June 3	42	10, 11	99	2115
Delafon, Philippe, Paris, France. Electric battery.....	702,544	June 17	2225	520	99	2216
Delaney, James A., Orange, Mass. Grave-marker.....	702,004	May 27	2028	524	99	1242
Della Torre, Frank, and D. B. Banks, Baltimore, Md. Aligning, securing, and bending of rail ends.....	700,004	May 27	2020	520	99	1247
Dellamore, Albert, Los Angeles, Cal. Waste-pipe connection for closet-bowls.....	699,497	May 6	701	166	99	1201
Demarest, Cornelius T., Hackensack, N. J. Boiler-tube cleaner.....	697,251	Apr. 8	1720	324	99	224
Demarest, Cornelius T., Hackensack, N. J. Sad-iron handle.....	702,220	June 10	1790	411	99	2425
Demarest, David C., Angels Camp, Cal. Guide for stamp-stems.....	695,276	Apr. 22	2712	620	99	220

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Pat.	Dr.	Vol.	Page.
Diaz, Albert B., Brooklyn, N. Y. Camer. (Reissue)	11,928	May 6	987	288	88	1296
Dithridge, Edward, Ellwood City, Pa. Enameling-fork for bath-tubs	700,081	May 12	1728	284	88	1248
Dixon, Charles W., assignor of one-half to T. Pascoe, Pittsburg, Pa. Ceiling-block	699,914	May 12	1887	284	88	1267
Dixon, George W. (See Kendrick and Dixon.)						
Dixon, Laurens P., assignor to Yost-Miller Company, Toledo, Ohio. Incandescent-lamp socket	699,394	Apr. 29	2740	288	88	840
Dixon, Robert M., East Orange, N. J. System of operating fans by power for ventilating passenger-cars	699,947	Apr. 8	1088	241	88	281
Dixon, William, Newark, N. J. Polishing-brush	699,788	Apr. 1	987	141	88	126
Doak, John S., Fort Worth, and A. G. Farrington, Yoakum, Tex. Boll-weevil or other insect destroyer	699,419	Apr. 1	80	11	88	14
Dobson, Alexander, Beaverton, assignor of one-half to W. Irwin, Toronto, Canada. Fast-press	701,211	June 8	88	11	88	2119
Dodd, Sydney H., et al. (See Greening, Frederick, assignor.)						
Dodd, Willis G., San Francisco, Cal. Ore-concentrator	701,289	June 10	1088	288	88	2888
Doddridge, John S., et al. (See Meyer, Ralph J., assignor.)						
Doddridge, Lillian S., et al. (See Meyer, Ralph J., assignor.)						
Dodge, Frank, Boston, Mass. Cloth-cutting machine	699,908	Apr. 29	4806	1888	88	1887
Dodge, James M., assignor to Link Belt Engineering Company, Philadelphia, Pa. Conveyor-belt	700,888	May 20	2888	588	88	1881
Dodge, James M., and A. D. Shaw, assignors to Link Belt Engineering Company, Philadelphia, Pa. Feeding mechanism for conveyors	700,347	June 10	1888	488	88	2516
Dodge, Lewis H., et al. (See Fowler, Rufus B., assignor.)						
Dodge, Philip T., Washington, D. C., assignor to Mergenthaler Linotype Company. Linotype-machine	699,836	Apr. 1	777	178	88	105
Dodge, Philip T., Washington, D. C., assignor to Mergenthaler Linotype Company. Linotype-machine	697,488	Apr. 15	2017	445	88	488
Dodge, Philip T., Washington, D. C., assignor to Mergenthaler Linotype Company. Linotype-machine	700,088	May 12	1728	288	88	1848
Dodge, Philip T., Washington, D. C., assignor to Mergenthaler Linotype Company. Linotype-machine	702,781	June 17	2728	688	88	2710
Dodge, Philip T., Washington, D. C., assignor to Mergenthaler Linotype Company. Linotype-machine	702,788	June 17	2742	681	88	2710
Dodge, Philip T., Washington, D. C., assignor to Mergenthaler Linotype Company. Linotype-machine	702,788	June 17	2744	681	88	2711
Dodge, Willie A., et al. (See Fowler, Rufus B., assignor.)						
Dodgson, Frank L., Rochester, and M. Orrington, New York, assignors to International Pneumatic Railway Signal Company, Rochester, N. Y. Pneumatic railway switch and signal apparatus	702,981	June 24	2084	688	88	2788
Dodson, Joseph H., et al. (See Pockham, Charles V., assignor.)						
Doerr, Lawrence, East Jordan, Mich. Spraying-machine	699,998	May 6	288	71	88	1287
Doering, August R., Philadelphia, Pa. Game apparatus	697,487	Apr. 15	2015	445	88	488
Doerner, William H., and J. A. Whalen, Cumberland, Md. Car-door and grain-door combined	697,880	Apr. 15	2072	688	88	588
Dolan, Edward J., Philadelphia, Pa., assignor, by mesne assignments, to Acetylene House Lighting Company. Acetylene-gas generator	699,948	Apr. 8	1088	241	88	281
Dolber, George A. (See Dennis, George G., assignor.)						
Doldt, John E., Providence, R. I. Map or chart case	699,288	May 6	810	71	88	1288
Dolan, R. M. (See Cornell, Evan W., assignor.)						
Doll, William, San Francisco, Cal. Fire-extinguishing device	697,811	Apr. 15	2088	511	88	517
Dollar, William M. (See Darrin and Dollar.)						
Dolphin, Harold E., Crossington, near Liverpool, England. Apparatus for aerating or agitating liquids	699,384	May 6	811	71, 72	88	1288
Donnan, Lewis B., Elbridge, N. Y. Music-roll	697,881	Apr. 15	2072	688	88	588
Donaldson, William R., et al. (See Rice, John V., Jr., assignor.)						
Doney, Alfred, Pen Argyll, assignor of one-third to L. W. Moran, Scranton, Pa. Bicycle-brake	699,181	Apr. 29	2888	788	88	701
Doney, John, Pen Argyll, Pa. Feed-screw adjustment	697,888	Apr. 8	1780	284	88	284
Donkers, Louis B., Antwerp, Belgium. Machine for kneading and washing margarin or other similar substances	701,673	June 2	845	70	88	2180
Donley, William H., Springfield, Mass. Mouthpiece for boiler-furnaces	699,800	May 6	704	102	88	1288
Donne, Leon, Chicago, Ill., assignor to L. and F. Ingersoll, Pittsburg, Pa. Mechanism for transferring boats	697,802	Apr. 8	1540	244	88	247
Donnell, James W., et al. (See Olson, Peder, assignor.)						
Donnell, James W., Evanston, assignor to Hall's Safe & Lock Company, Chicago, Ill. Vault	701,688	June 2	740	188	88	2888
Donnelly, George, Diamond, Ind. Safety attachment for elevators	694,788	Apr. 1	688	141	88	126
Donohue, James S., Washington, assignor to F. I. Moran, Georgetown, D. C. Smoke-consumer	700,048	June 24	2888	788	88	2888
Donovan, Alfred, assignor of two-thirds to J. and D. Myers and J. G. Plagano, Atlantic City, N. J. Butter-cutter	699,801	May 6	705	104	88	1288
Donovan, Joseph S., New York, N. Y. Game	701,171	May 27	2888	817	88	2888
Donovan, Michael J., assignor of one-third to L. M. Schenker, Vicksburg, Miss. Draft attachment for railway-cars	700,088	May 20	2888	678	88	1815
Dopbald, Frank E., Palmyra, Ill. Jar-closure	702,412	June 17	2041	488	88	2841
Dortland, W. A. N. (See Ritter, Isaac, Jr., assignor.)						
Dorn, Johann, Spital-on-the-Pyhrn, Austria-Hungary. Water-gage	697,985	Apr. 29	2008	681	88	688
Dorn, Rufus H., Los Angeles, Cal. Miter-box	697,308	Apr. 8	1841	845	88	247
Dorner, Peter. (See Monahan and Dorner.)						
Dorr, Andrew M., and J. Spang, Boston, Mass., assignors to Chemical and Electrical Ore Reducing Company, of West Virginia. Treating ores	699,488	May 6	681	144	88	1288
Dorr, Andrew M., and J. Spang, Boston, Mass., assignors to Chemical and Electrical Ore Reducing Company, of West Virginia. Apparatus for treating ores	699,487	May 6	684	144	88	1287
Dorrestein, C. A., administrator. (See Allison, Samuel B.)						
Dorris, George F., assignor of one-half to St. Louis Motor Carriage Co., St. Louis, Mo. Automobile	699,908	Apr. 29	2888	1888	88	1887
Dovey, Charles J., Baltimore, Md. Flural-fuse cut-out	700,416	May 20	2847	584	88	1788
Dovey, Charles J., Baltimore, Md., assignor to Acme Fuse Box Company. Flural-fuse cut-out	697,888	Apr. 15	2088	688	88	688
Dorton, John H. (See Joy and Dorton.)						
Doty, Alphonso H., Owatonna, Minn. Match-box holder	699,888	May 12	1084	241	88	1848
Douge, Jules, Paris, France. Preparation of colloid for the manufacture of artificial silk	699,188	May 6	88		88	1188

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr. & C.	Vol.	Page.
Dudley, Cory W., Chicago, Ill. Support for punching-bags	698,905	Apr. 22	3743	696	90	641
Duff, Edward J., Liverpool, England. Gas-producer	697,999	Apr. 8	1826	423	90	422
Duff, Edward J., assignor of one-half to United Alkali Company, Limited, Liverpool, England. Gas-furnace for steam-boilers	701,861	June 10	1081	380	90	2220
Duffield, Albert E. W., Newcastle, Pa. Curtain-fixture	697,989	Apr. 15	2074	694	90	599
Duffin, James F., Averyville, assignor to Kingman Flow Company, Peoria, Ill. Harrow-tooth fastener	698,473	Apr. 29	2636	980	90	685
Duffy, Edward S., Chicago, Ill. Clamp for washbowls, &c.	698,428	Apr. 1	55	13	90	15
Duffy, James F., Chicago, Ill. Apparatus for refining, aging, mellowing, and purifying alcoholic liquors	698,198	Apr. 20	2370	737	90	709
Duffy, James F., Chicago, Ill. Refining, aging, mellowing, and purifying alcoholic liquors	698,194	Apr. 20	2371	738	90	709
Duffy, John M., Philadelphia, Pa. Fastening for articles of clothing	701,313	June 3	58	13	90	2120
Dugger, William T., assignor of one-half to B. Block, St. Joseph, Mo. Suspender-buckle. Dämmer, Hermann. (See Schrier and Dämmer.)	701,099	June 3	742	164	90	2204
Dunbar, Alexander, Liverpool, England. Machinery for jointing or finishing stove-blanks for casks	702,980	June 24	3084	697	90	2787
Dunbar, Harold F., Turners Falls, Mass. Paper-stop	701,175	May 27	2005	916	90	2051
Duncan, Alfred D., Galveston, Tex., and W. H. Water, Chicago, Ill. Retort hydrocarbon-burner	702,090	June 17	2479	588	90	2026
Duncan, Charles B., assignor to J. O. Henderson, New York, N. Y. Compressed-air heater. Duncan, Frederick E., Akron, Ohio. Means for adjusting dynamos or motors on their bed-plates	699,106	May 6	58	14	90	1187
Duncan, Frederick E., Akron, Ohio. Brush-holding ring for dynamos or motors	697,985	Apr. 22	2012	661	90	689
Duncan, John R., assignor of one-half to Specialty Manufacturing Company, Indianapolis, Ind. Can-capper	700,128	May 20	2005	477	90	1628
Duncan, John W., et al. (See Le Marr, Samuel E., assignor.)	701,170	May 27	2006	919	90	2028
Duncan, Joseph E., et al. (See Le Marr, Samuel E., assignor.)	700,080	May 20	2000	678	90	1816
Duncan, Nelson L., Fayetteville, Ark. Account-book	698,987	Apr. 29	4214	980	90	928
Duncan, Thomas, Fort Wayne, Ind., assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,988	Apr. 29	4216	981	90	928
Duncan, Thomas, Fort Wayne, Ind., assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,989	Apr. 29	4220	982	90	928
Duncan, Thomas, Fort Wayne, Ind., assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,940	Apr. 29	4222	983	90	924
Duncan, Thomas, Fort Wayne, Ind., assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,941	Apr. 29	4223	984	90	924
Duncan, Thomas, Fort Wayne, Ind., assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,942	Apr. 29	4224	985	90	925
Duncan, Thomas, Fort Wayne, Ind., assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,943	Apr. 29	4225	986	90	925
Duncan, Thomas, Fort Wayne, Ind., assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,944	Apr. 29	4226	987	90	926
Duncan, Thomas, Fort Wayne, Ind., assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,945	Apr. 29	4227	988	90	927
Duncan, Thomas, Fort Wayne, Ind., assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,946	Apr. 29	4228	989	90	927
Duncan, Thomas, Oakpark, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electrical measuring instrument	698,947	Apr. 29	4229	990	90	927
Duncan, Thomas, Oakpark, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,948	Apr. 29	4230	991	90	928
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,949	Apr. 29	4231	992	90	928
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,950	Apr. 29	4232	993	90	929
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,951	Apr. 29	4233	994	90	929
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,952	Apr. 29	4234	995	90	929
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,953	Apr. 29	4235	996	90	929
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Direct-current meter	698,954	Apr. 29	4236	997	90	929
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Alternating-current meter	698,955	Apr. 29	4237	998	90	930
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Alternating-current motor-meter	698,956	Apr. 29	4238	999	90	931
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Induction motor-meter	698,957	Apr. 29	4239	1000	90	931
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Induction motor-meter	698,958	Apr. 29	4240	1001	90	932
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Motor-meter	698,959	Apr. 29	4241	1002	90	932
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Motor-meter	698,960	Apr. 29	4242	1003	90	933
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Polyphase motor-meter	698,961	Apr. 29	4243	1004	90	934
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Motor-meter	698,962	Apr. 29	4244	1005	90	934
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,963	Apr. 29	4245	1006	90	935
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,964	Apr. 29	4246	1007	90	935
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Motor-meter	698,965	Apr. 29	4247	1008	90	936
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Alternating-current meter	698,966	Apr. 29	4248	1009	90	937
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Alternating-current meter	698,967	Apr. 29	4249	1010	90	938
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,968	Apr. 29	4250	1011	90	940
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Electric meter	698,969	Apr. 29	4251	1012	90	940

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	D-T	Vol.	Page.
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,970	Apr. 20	696	940	90	970
III. Alternating-current meter						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,971	Apr. 20	696	940	90	971
III. Alternating-current meter						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,972	Apr. 20	697	939	90	972
III. Alternating-current meter						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,973	Apr. 20	690	930	90	973
III. Electric meter						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,974	Apr. 20	692	931	90	974
III. Alternating-current meter						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,975	Apr. 20	697	931	90	975
III. Electric meter						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,976	Apr. 20	690	932	90	976
III. Electric meter						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,977	Apr. 20	694	932	90	977
III. Electric meter						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,978	Apr. 20	694	934	90	978
III. Electric meter						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,979	Apr. 20	695	934	90	979
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,980	Apr. 20	698	934	90	980
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,981	Apr. 20	697	935	90	981
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,982	Apr. 20	690	935	90	982
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,983	Apr. 20	694	935	90	983
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,984	Apr. 20	696	935	90	984
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,985	Apr. 20	690	936	90	985
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,986	Apr. 20	692	937	90	986
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,987	Apr. 20	695	937	90	987
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,988	Apr. 20	697	937	90	988
III. Induction motor-meter						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,989	Apr. 20	696	938	90	989
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,990	Apr. 20	698	938	90	990
III. Electrical measuring instrument						
Duncan, Thomas, assignor to Siemens & Halske Electric Company of America, Chicago.	692,991	Apr. 20	692	939	90	991
III. Electric meter						
Dunham, Emil von, Frankfurt-on-the-Main, assignor to Farbwerke, vorm. Meister, Lucius & Brüning, Höchst-on-the-Main, Germany. Modified milk and obtaining same.	700,001	May 20	2001		90	1001
Dunham, Daniel, and V. J. Cooper, London, England. Lead-pencil	700,002	May 20	2002	975	90	1002
Dunham, Sylvester C., Vail, Iowa. Hay-stacker	700,003	May 27	2004	994	90	1003
Dunham, William G., Brooklyn, N. Y., assignor of one-half to E. J. Manville Machine Company, Waterbury, Conn. Necktie-band fastener	697,995	Apr. 15	2004	995	90	994
Dunlap, Alfred. (See Lindley, John T., assignor.)						
Dunlap, Herbert R., et al. (See Sharp, Samuel J., assignor.)	696,787	Apr. 1	690	102	90	102
Dunlap, William O., Portales, N. Mex. Ter. Wire-reeling machine	701,177	May 27	2005	919	90	2005
Dunn, Emanuel W., San Jose, Cal. Oil-burner	692,108	Apr. 20	691	705	90	704
Dunn, Louis, Minneapolis, Minn. Safety device for point-switches	692,995	May 6	212	72	90	1293
Dunn, Thomas F., Boston, Mass. Necktie						
Dunne, Leopold A. (See Gerstmayr, Anton, assignor.)	692,994	Apr. 20	691	1003	90	1000
Dunningham, Charles E., Wellington, New Zealand. Brooch						
Duplex Printing Press Co. (See Higgins, Eugene, assignor.)						
Duplex Printing Press Company. (See Warner, Austin P., assignor.)						
Duplex Roller Bussing Company. (See Molatire, Clarence E., assignor.)						
Durand, Ernest F., Paris, France, assignor to Union Special Sewing Machine Co., Chicago, Ill. Trimming attachment for sewing-machines	692,925	Apr. 20	694	1081 1082	90	1080
Durand, Albert E., Staplehurst, Nehr. Buckle	692,928	May 6	705	164	90	1290
Derr, Fritz, Schlachtenberg, Germany. Double-cylinder hydrocarbon-motor	694,508	May 6	707	164	90	1290
Durston, Alfred H., Syracuse, N. Y. Gun-cleaning tool	702,280	June 20	1232	449	90	2021

Dyson, Orion E., Chicago, Ill. Soft-tread horseshoe	699,373	May 6	661	108	99	1299
Dysterad, Emil, Monterey, Mexico. Clutch	699,461	May 6	641	147	99	1299
E. C. Atkins & Company. (See Carey, John F., assignor.)						
E. C. Atkins & Company. (See Meyer, George, assignor.)						
E. & H. T. Anthony & Co. (See Bornmann, Carl, assignor.)						
E. J. Manville Machine Company. (See Dunham, William G., assignor.)						
Eagan, John H. D., Philadelphia, Pa. Car-coupling	699,595	May 6	710	185	99	1293
Eagle Chemical Works. (See Schwartz, Louis, assignor.)						
Eagle Pencil Company. (See Roman, Cass W., assignor.)						
Eagle Pencil Company. (See Fischer, Frederick J. W., assignor.)						
Eagle Pencil Company. (See McIntyre, Frank, assignor.)						
Earl, Oliver C., Allegheny, Pa. Bolt	699,617	May 6	980	214	99	1297
Earnshaw, Richard J. (See Manual and Nottingham, assignors.)						
Eastern Carbon Works. (See Mills, William, assignor.)						
Eastman, Albert G. (See Eastman, Franklin G. and A. G.)						
Eastman, Franklin G., Cambridge, and A. G. Eastman, Brookline, Mass. Window-screen.	699,187	May 6	84	18	99	1187
Eastman Kodak Company. (See Brownell, Frank A., assignor.)						
Eastman Kodak Company. (See Forchman, Joseph, assignor.)						
Eastwood, Arthur C., assignor to Electric Controller and Supply Company, Cleveland, Ohio. Electric controller	699,598	May 6	719	198	99	1298
Eaton, Arthur W., Boston, Mass., assignor to United Shoe Machinery Company, Paterson, N. J. Sewing-machine	701,982	June 10	1088	261	99	1349
Eaton, Asahel K., Brooklyn, N. Y. Removing scale oxid from the surface of iron or steel.	702,050	June 10	1281		99	1409
Eaton, Carl D., and A. L. Norton, Allen, Mich. Fly-paper holder	702,547	June 17	2890	681	99	1617
Eaton, Hiram W., Jr., and A. Benson, Bradford, Pa. Sand-reel for oil or Artesian wells.	701,215	June 8	68	14	99	1193
Eaton, John, Stockport, assignor of four-fifths to R. J. C. Mitchell, Waterfoot, England. Apparatus for producing pile or nap fabrics	702,554	June 17	2875	684	99	1739
Eaton, William G., and W. A. Reed, assignors to Flegg Manufacturing Company, Boston, Mass. Stopping or starting device	697,707	Apr. 15	2679	551	99	1554
Eaton, William S., Sag Harbor, N. Y. Routing or engraving machine	699,980	Apr. 8	1088	248	99	1298
Eaton, William S., Sag Harbor, N. Y. Routing or engraving machine	699,981	Apr. 8	1088	248	99	1298
Eaton, William S., Sag Harbor, N. Y. Engraving-machine	699,982	Apr. 8	1190	244	99	1294
Ebs, Hermann E., assignor to Vereinigte Maschinenfabrik Augsburg und Maschinenbaugesellschaft Nürnberg A. G., Nürnberg, Germany. Water-cooled valve	699,674	Apr. 20	2897	299	99	1299
Ebs, Hermann E., assignor to Vereinigte Maschinenfabrik Augsburg und Maschinenbaugesellschaft Nürnberg, A. G., Nürnberg, Germany. Piston for gas or other motors	700,308	May 20	2954	596	99	1291
Eberhardt, Elmer G. (See Eberhardt, Henry E., F. L., and E. G.)						
Eberhardt, Fred L. (See Eberhardt, Henry E., F. L., and E. G.)						
Eberhardt, Fred L., and H. F. Summa, assignors to Gould & Eberhardt, Newark, N. J. Gear-cutting engine	700,194	May 20	2907	477	99	1298
Eberhardt, Henry E. and F. L., Newark, N. J., and E. G. Eberhardt, Ithaca, N. Y., assignors to Gould & Eberhardt, Newark, N. J. Crank-placer or analogous tool	700,979	May 20	2907	688	99	1298
Eberhardt, John, Chicago, Ill. Electric arc lamp	697,977	Apr. 8	1980	295	99	1291
Eberhardt, Ulrich, Newark, N. J. Band-sifter	700,751	May 27	2826	729	99	1290
Eberole, Mary. (See Eberole, Samuel, assignor.)						
Eberole, Samuel, assignor to E. Eberole, Clearspring, Md. Tongue-support	702,201	June 10	1800	411	99	1406
Eberts, Heinrich, Osnabrück, Germany. Landing-pin	700,195	May 20	2901	478	99	1298
Eberwein, Paul, Jackson, Mich. Dust-collector	702,194	June 24	2908	781	99	1298
Eber, Peter, Columbus, assignor, by mesne assignments, to H. Mack, Plain City, Ohio. Fire-extinguisher	699,475	Apr. 20	2895	681	99	1298
Echemendia, Leandro. (See Figueroa and Echemendia.)						
Eckert, Herman F. (See Fisher and Eckert.)						
Economy Furnace Company. (See Gallagher, George B., assignor.)						
Eeroyd, Samuel, Choriton-cum-Hardy, near Manchester, and E. E. Marsden, Bidebury, near Manchester, England. Apparatus for unbalancing raw cotton	697,439	Apr. 15	2899	446	99	1294
Eddins, Edward R., St. Louis, Mo. Roller-setting	702,414	June 17	2945	496	99	1306
Eddy, Richard H., Providence, R. I. Syringe	699,728	Apr. 1	681	149	99	1297
Eder, Reinhold, assignor to E. Schuster, Berlin, Germany. Lathing-machine	699,476	Apr. 20	2895	681	99	1298
Edgar, Ellis F., Westbridge, N. J. Roller	699,595	Apr. 20	698	1084	99	1291
Edge, William, Brooklyn, assignor to A. H. Benjamin, New York, N. Y. Staple forming and driving mechanism	702,081	June 10	1985	281	99	1297
Edgerly, Isaiah I., Swampscott, Mass. Clothes-line reel	699,477	Apr. 20	2895	681	99	1298
Edgerton, Arthur D., assignor of one-half to H. C. Campion and J. W. Jennings, Philadelphia, Pa. Storage battery	702,201	June 10	1800	410	99	1291
Edison Storage Battery Company. (See Edison, Thomas A., assignor.)						
Edison, Thomas A., Llewellyn Park, N. J. Electric meter	702,081	June 24	2948	780	99	1298
Edison, Thomas A., Llewellyn Park, N. J., assignor to Edison Storage Battery Company. Reversible galvanic battery	702,183	May 18	1984		99	1299
Edison, Thomas A., Llewellyn Park, N. J., assignor to Edison Storage Battery Company. Reversible galvanic battery	702,187	May 18	1985	481	99	1299
Edison, Thomas A., Llewellyn Park, N. J., assignor to Edison Storage Battery Company. Reversible galvanic battery	702,188	May 18	1985	481	99	1299
Edison, George A., and A. H. Myers, Spokane, Wash. Trussed scaling-ladder	701,204	June 8	986	206	99	1298
Edmonds, Thomas H., Washington, D. C. Bicycle package-carrier	699,574	May 6	489	108	99	1298
Edmondson, Gilbert W., Champaign, Ill. Door-calendar	702,202	June 10	1801	412	99	1298
Edmonds, John, Waltham, Mass. Apparatus for destroying gases	699,587	May 19	1579	215	99	1471
Edson, Eugene R., Cleveland, Ohio. Condensing apparatus	699,226	May 6	214	78	99	1298
Edson, Eugene R., Cleveland, Ohio. Obtaining gelatin-yieldable liquids	699,728	Apr. 1	681	149	99	1297
Edwards, Arthur W., Sacramento, Cal. Acetylene-gas apparatus	702,240	June 24	2948	782	99	1298
Edwards, Charles, Brooklyn, N. Y. Type-writing clavier	702,088	June 10	1985	281	99	1298
Edwards, Charles, Brooklyn, N. Y. Mechanical base-ball pitcher	702,908	May 27	2938	804	99	1297
Edwards, Eugene O., assignor to Fountain City Drill Company, La Crosse, Wis. Teeth for seeders and cultivators	702,415	June 17	2949	497	99	1298
Edwards, Ezra, Webster City, Iowa. Ferrule for awl or knife handles	697,629	Apr. 15	2898	446	99	1294
Edwards, George and J., Stockport, England. Hat-rest	699,794	May 12	1294	297	99	1451
Edwards, Isaac L., assignor of two-thirds to E. A. Sanders, L. M. and A. Cota, Aurora, Ill. Trolley-wire hanger	702,907	May 27	2939	805	99	1298

Engel & Gross. (See Fisher, Barthold, assignor.)						
Engel, William E., et al. (See Ah, Urban B., assignor.)						
Engelhardt, Charles, Ridgefield, N. J. Repair-plug for boilers	701,001	June 3	744	164	90	2864
Engelmann, Gustav, Selma, Tex. Sulky-lifter	693,555	Apr. 1	288	99, 70	90	66
England, Sydney J., Belfast, Ireland. Shirt	697,622	Apr. 15	2076	584	90	899
Engleking, Henry F., Chicago, Ill. File	698,748	May 13	1188	276	90	1481
English, Edwin E., Joliet, Ill., assignor of two-thirds to T. McPherson, J. Tanner, L. Raymond, and R. Meyer, Paterson, N. J. Pocket coin-holder or bank	702,398	June 10	1968	412	90	2496
English, Frank, Boston Harbor, Mich. Collapsible road	701,317	June 3	70	15	90	2128
Englund, Axel H., assignor to Protected Rail Road Company, Philadelphia, Pa. Railroad	698,618	May 6	681	216	90	1897
Engwall, Axel G. (See Cook and Engwall.)						
Ensign, George L. (See Chapman, Ensign, and Weir.)						
Entenman, Lina. (See Keller and Soller, assignors.)						
Enterprise Manufacturing Company of Pennsylvania. (See Corral, Francisco J. del, assignor.)						
Enterprise Manufacturing Company of Pennsylvania. (See Fellows, Edwin C., assignor.)						
Entwistle, Thomas C., Lowell, Mass. Crool for warping-machines	698,189	May 6	80	16	90	1128
Enzinger, Karl, assignor to Filter, Brautech,ische Maschinen-Fabrik, Akt. Ges. vorm. L. A. Enzinger, Worms, Germany. Filtering-press	702,081	June 10	1288	214	90	2496
Eppach, Anton, Providence, R. I. Foot-clip for treadles of sewing-machines	698,610	May 6	573	212	90	1294
Equitable Auto-Truck Power and Burner Company. (See Badger, George L., assignor.)						
Erick, George, Brooklyn, assignor of one-half to G. Grob, Glendale Station, N. Y. Curtain-pole ring	698,397	May 6	715	108	90	1294
Erickson, Hartvig, Chicago, Ill. Egg-case	698,481	Apr. 29	2888	617	90	1761
Erickson, Hartvig, Chicago, Ill. Box-assembling machine	698,428	Apr. 29	2897	624	90	891
Erickson, Samuel E., and F. Peterson, Chicago, Ill. Burglar-alarm	701,428	June 3	488	109	90	2210
Erickson, John E., Chicago, Ill. Safety appliance for elevators	698,575	May 6	484	108	90	1270
Erisman, Olen, assignor to F. M. Pratt, Decatur, Ill. Apparatus for separating solvents from oil	698,585	Apr. 29	2747	387	90	843
Ernewein, Frank J., assignor to A. J. Elias, Buffalo, N. Y. Slio	702,328	June 24	2728	371	90	2028
Ernst, Louis, Reading, Ohio. Game	698,588	Apr. 1	573	231	90	1296
Ernst, W. H., et al. (See Hendershot, Amos M., assignor.)						
Erick, Charles W., North Tonawanda, N. Y. Spring-frame for bicycles	694,276	May 6	485	108	90	1270
Errington, Franklin A., New York, N. Y. Stud-setting machinery	702,324	June 24	2640	689	90	2728
Ervin, Ida, Big Spring, Tex. Dish-washer	698,523	Apr. 1	205	70	90	66
Erwin, James B., Milwaukee, Wis. Cover-wrench	700,728	May 27	2883	728	90	1281
Esty Sprinkler Company. (See Esty, William, assignor.)						
Esty, William, Leominster, N. H., assignor to Esty Sprinkler Company. Automatic fire-extinguisher	698,684	Apr. 1	287	212	90	129
Etheridge, Harry, McKeesport, Pa. Lamp hood and switch	697,708	Apr. 15	2474	528	90	824
Ettor, Henry M., Marion, Pa. Pump-head	700,484	May 20	2888	617	90	1761
Etschbauer, Elias, et al. (See Wina, David F., assignor.)						
Euler, George W., assignor to R. O. Meyer, Richmond, Va. Electrotherapeutic apparatus	701,125	May 27	4915	988	90	2028
Eurich, Felix V., Paris, France. Wrench	697,341	Apr. 8	1598	380	90	283
Evans, Roy C. W., New York, N. Y. Wheel or rail tread	700,128	May 20	2888	478	90	1899
Evans, Howard. (See Behrend, Samuel E., assignor.)						
Evans, Howard. (See Wills, Edwin O., assignor.)						
Evans, John W., Los Angeles, Cal., assignor of one-half to G. A. Benwell, Jr., Denver, Colo. Waste-oil-filtering apparatus	700,128	May 15	2888	478	90	1899
Evans, Jonathan K., Dickinson Run, Pa. Draft-beam for cars	702,128	June 10	1640	287	90	2496
Evans, Morris E., et al. (See Savage, Thomas A., assignor.)						
Evans, Myron E., New York, N. Y. Band-blasting apparatus	698,688	May 13	1274	228	90	1471
Evans, N. P. (See Kennedy, David J., assignor.)						
Evans, Quinby N., Brooklyn, N. Y. Air-moistening apparatus	701,222	June 3	695	109	90	2211
Evans, Samuel J., Roanoke, Va. Umbrella-rib and stretcher-joint	698,227	Apr. 29	2838	779	90	795
Evans, William D., and J. T. Marshall, Eupora, Miss. Scale attachment	702,344	June 24	2627	688	90	2728
Evans, William J. (See Klepetho and Evans.)						
Evans, William L., Jr., Washington, Ind. Door-hinge	702,344	June 24	2627	688	90	2728
Evans, William O., Antioch, Cal. Cultivator	698,312	Apr. 29	2414	1508	90	1089

Alphabetical list of patents, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Pat.	Off.	Vol.	Page
Fawkes, Wilbert C., Sioux City, Iowa. Washing-machine	701,187	May 27	4000	1000	90	2000
Fay, Charles P., assignor to J. Stevens Arms & Tool Company, Chicopee Falls, Mass. Breech-block and lever connection	702,116	May 13	1000	400	90	1277
Fearley, Eli O. (See Jackson and Fearley.)						
Febiger, Henry B., Philadelphia, Pa. Apparatus for extinguishing fire in closed compartments	702,713	June 17	2611	371	90	2000
Febiger, Henry B., Philadelphia, Pa. Extinguishing fire in closed compartments	702,714	June 17	2612	371	90	2001
Fecker, Gottlieb, assignor to Warner and Swasey Company, Cleveland, Ohio. Binocular glasses	701,000	June 10	1000	301	90	2000
Fedeler, John H., New York, N. Y. Steam-turbine	700,214	May 20	2000	540	90	1000
Federal Appliance and Manufacturing Company. (See Simpson, Edward C., assignor.)						
Federal Automatic Machine Company. (See Schroeder, George C., assignor.)						
Federal Gine Company. (See Kelsey, Lovell L., assignor.)						
Federal Refining Company. (See Spreckels and Kern, assignors.)						
Federigo, Del. (See Giorgetti, Fuyal, and Federigo.)						
Fee, Ellsworth L., Warren, Ind. Instantaneous vapor-burner	702,004	May 20	2004	370	90	1016
Fehr, William, assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa. Gripping mechanism for feeding metal strips, &c.	699,500	May 6	715	167	90	1294
Feld, Alexander J., Raleigh, N. C. Extractor for plug-tobacco, &c.	702,204	June 10	1000	410	90	2007
Felbel, Jacob. (See Stickney, Barnham C., assignor.)						
Felbel, Jacob, New York, N. Y., and C. Gabrielson, Greenville, N. J.; said Gabrielson assignor to said Felbel. Type-writing machine	699,700	May 13	1200	207	90	1400
Felbel, Jacob, New York, N. Y., and C. Gabrielson, Greenville, N. J.; said Gabrielson assignor to said Felbel. Type-writing machine	702,200	June 24	2700	370	90	2000
Felkin, A. C. and M. L. (See Scott, Charles C., assignor.)						
Fellows, Edwin C., assignor to Enterprise Manufacturing Company of Pennsylvania, Philadelphia, Pa. Electric controller	702,040	June 24	3707	370	90	2000
Fellows, Joseph, Philadelphia, Pa. Clamp	702,410	June 17	2000	407	90	2000
Felmler, John H., Pittsburg, Pa. Wrapping-machine	699,700	May 13	1200	207	90	1400
Fels and Co. (See Watson, William S., assignor.)						
Felsing, Samuel D., and E. G. Gustafson, Crookston, Minn. Wheeled straw-stacker	699,004	Apr. 8	1100	200	90	200
Felt, Erick P., Albia, assignor of one-half to C. H. Miles, Bemidji, Minn. Graphophone	701,007	June 8	700	107	90	2000
Felt, Frank B., Chicago, Ill., assignor of one-half to M. Greene, Marshalltown, Iowa. Re-tort for generating oxygen	702,000	June 17	2000	400	90	2000
Fenner, George P., New London, Conn. Sheet-delivery apparatus	699,014	Apr. 20	4010	1000	90	1000
Fenner, George P., New London, Conn. Printing-press	701,000	June 2	707	100	90	2007
Fenner, Irvin R. and W. D., San Francisco, Cal. Artificial limb	701,210	June 2	70	10	90	2120
Fenner, William D. (See Fenner, Irvin R. and W. D.)						
Fenner, William H., Chicago, Ill. Fine-fuel furnace	699,100	Apr. 20	2000	744	90	700
Fenner, William H., Chicago, Ill. Fine-fuel combustion	699,101	Apr. 20	2000	745	90	700
Fenton, Theodore C., U. S. Navy. Superposed turret	699,701	May 13	1201	270	90	1001
Ferber, Anthony. (See Foster and Ferber.)						
Ferguson, David L., Tharon, N. C. Toy boat	697,700	Apr. 15	2470	300	90	200
Ferguson, George, New York, N. Y. Non-refillable bottle	701,000	June 10	1000	200	90	2001
Ferguson, William, assignor one-half to A. Pfenbach, Pittsburg, Pa. Whiffletree-chip	699,100	Apr. 20	2000	747	90	700
Ferguson, Alan R., Mount Vernon, N. Y. Lock	697,014	Apr. 15	2000	510	90	510
Fernand, Joseph J. (See Howe and Fernand.)						
Ferre, Frank L., New York, N. Y. Line-grip	702,104	June 10	1000	200	90	2001
Ferrell, Albert T., Saginaw, Mich. Feeding device for bean-sorting machines	701,004	June 10	1000	200	90	2001
Ferrell, Albert T., Saginaw, Mich. Brush attachment for grain-cleaning machines	701,000	June 10	1000	200	90	2001
Ferrell, Albert T., Saginaw, Mich. Blast-regulator for grain-cleaners	701,000	June 10	1000	200	90	2001
Ferrea, Jeffrey T., Anderson, Ind., assignor to J. W. Saffee Manufacturing Company, Anderson, Ind., and Chicago, Ill. Shipping-package	697,000	Apr. 15	2000	447	90	400
Ferris, Henry L., assignor to Hunt, Helm, Ferris & Company, Harvard, Ill. Wire-stretcher	702,000	June 10	1000	410	90	2007
Ferry, Thomas, Cleveland, Ohio. Nut-tapping machine	699,000	Apr. 20	4001	1007	90	2007
Fettner, William H., Sycamore, Ohio. Grinding-machine	702,700	June 17	2700	370	90	2007
Fetzer, William. (See Moshring and Fetzer.)						
Fetzer, William, Middletown, Ohio. Grain-drill	702,210	May 20	2000	540	90	1000
Field, Charles C. (See Pullman and Field.)						
Field, Frederick F., Providence, R. I. Fanest	699,577	May 6	400	110	90	1271
Field, Willard F., Boston, Mass. Car-fender	699,010	Apr. 20	4010	1000	90	1000
Fisher, John F., Dundee, Ill. Nut-lock and key	702,000	June 10	1000	410	90	2007
Fisher, Henri E. L. (See Garnet and Fisher.)						
Figueredo, Emilio, and L. Rahamondia, New York, N. Y. Bottle-filling machine	699,000	Apr. 8	1111	207	90	200
Filley, Christopher G. (See Jenkins, William E., assignor.)						
Filter, August, Hanover, Germany. Bread-cutter	699,010	Apr. 20	4001	1000	90	1000
Filter, Brautechnische Maschinen-Fabrik, Act. Ges. vorm. L. A. Kautinger. (See Kautinger, Karl, assignor.)						
Finch, John W., Leland, Minn. Wagon-body	702,000	May 20	2000	540	90	1000
Fink, John C., Steelton, Pa. Writing attachment	701,007	June 10	1000	200	90	2001
Fink, Joseph H., Kansas City, Mo., and R. Andlauer, Kansas City, Mo. Vapor-stove	701,000	June 2	700	107	90	2101
Finnegan, John, assignor to J. Devlin & Co., Philadelphia, Pa. Clipping for railings, &c.	699,000	May 20	2000	540	90	1000
Finnery, James J., Chicago, Ill. Flash-valve	700,000	May 20	2000	540	90	1000
Finnery, James J., Chicago, Ill. Flash-valve	700,000	May 20	2000	540	90	1000
Finnery, James J., assignor of one-half to J. H. Chandler, Chicago, Ill. Flash-valve	700,000	May 20	2000	540	90	1000
Firm, Joseph L., assignor to Goss Printing Press Company, Chicago, Ill. Printing-machine	701,000	June 2	700	107	90	2101
Firm, Joseph L., assignor to Goss Printing Press Company, Chicago, Ill. Printing-press	701,000	June 2	700	107	90	2101
Fischer, Bruno, Osnabrück, Germany. Machine for skiving leather	699,010	Apr. 20	4001	1000	90	1000
Fischer, Frederick J. W., Rockaway, assignor to Eagle Penell Company, New York, N. Y. Pen	699,004	May 6	400	100	90	1200
Fischer, Harry A., et al. (See Fischer, Louis H., assignor.)						
Fischer, Max H., East Orange, N. J. Gun	702,000	May 20	2000	540	90	1000

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Pat.	Des.	Vol.	Page.
Fischer, Sigfried M., et al. (See Nilson, Lars G., assignor.)	698,917	Apr. 29	698	1088	99	1089
Fish, Joseph F., assignor of one-half to J. Keller, Chicago, Ill. Sandal	702,715	June 17	2612	999	99	2614
Fishbeck, Fred, assignor of one-half to C. Leiser, Pittsboro, Wis. Weather-strip for doors	701,319	June 2	73	15	99	2124
Fishell, Eugene M., and W. R. Clymer, assignors to National Carbon Company, Cleveland, Ohio. Primary battery	701,399	June 10	1041	294	99	2941
Fisher, David A., Hamilton, Mont. Tilting gate	701,380	June 2	73	15	99	2124
Fisher, Charles, Lyons, assignor of one-half to G. A. Horn, Newark, N. Y. Combined end-board and boat for wagons	700,788	May 27	2620	790	99	1091
Fisher, Frank H., Brooklyn, N. Y. Box-plaiting device						
Fisher, H. Clarence, et al. (See Hall, Edward W., assignor.)						
Fisher, Lucius G. (See Banner, Lorenzo D., assignor.)						
Fisher, Robert J., Athens, Tenn., and H. F. Eckert, Cleveland, Ohio, assignors to Fisher Typewriter Company, Athens, Tenn. Card or sheet holding attachment for type-writing machines	700,126	May 15	1295	492	99	1299
Fisher Typewriter Company. (See Fisher and Eckert, assignors.)						
Fisher, William P., and H. P. Ladington, Muncie, Ind. Fruit-jar or bottle machine	701,198	May 27	4022	994	99	2027
Fisk, Eugene B., West Nashville, Tenn. Horseshoe	702,294	June 10	1909	412	99	2405
Fisk, Henry M., Wheaton, Ill. Combination drop and jack for telephone-switchboards	699,619	May 6	923	216	99	1293
Fisk, John M., Malone, N. Y. Nursery milk-warmer and night-lamp	697,595	Apr. 15	2673	595	99	600
Fiska, Bradley A., U. S. Navy. Telescope-mount	699,990	May 6	261	72, 74	99	1249
Fiska, Bradley A., U. S. Navy, assignor to Western Electric Company, Chicago, Ill. Electrical steering apparatus for ships	697,995	Apr. 15	2693	995	99	600
Fitch, Eugene, Astoria, N. Y., assignor to Union Typewriter Company, Jersey City, N. J. Adding-machine	702,029	June 10	1294	214	99	2409
Fitta, Joseph D. (See Stanton, John W., assignor.)						
Fitzgerald, Daniel F., P. M. Seifert, and M. Kimmel, said Seifert assignor of one-half his right to W. L. Wallace, Walkerton, and I. J. Krugbaum, Tyler, Ind. Non-refillable bottle	700,734	May 27	2620	740	99	1091
Fitzgerald, Jacob. (See Hoyer, Charles, assignor.)						
Fitzgerald, Richard. (See Hibbard, Maury W., assignor.)						
Fitzhugh, Cameron S., Waco, Tex. Fan	698,498	Apr. 1	61	14	99	14
Flaccus, Charles L. (See Greenwood, William J., assignor.)	697,615	Apr. 15	2694	512	99	519
Flagg, Alice A., Jeffersonville, Va. Hand chopping-knife	700,216	May 20	2620	541	99	1094
Flagg, Fred P., Worcester, Mass. Ball-cock	700,795	May 27	2621	740	99	1091
Flagg Manufacturing Company. (See Eaton and Reed, assignors.)						
Flanders, John E., Stargis, Mich. Type-writer attachment	699,919	Apr. 29	4994	1095	99	1091
Fleckenstein, Leonard E., Easton, Md. Can-filling machine						
Fleischer, Emil, Dresden-Strehlen, assignor to J. E. Goldschmid, Frankfurt-on-the-Main, Germany. Making water-gas	701,593	June 2	208	110	99	2612
Fleming, David E., Hillsdale, Mich. Adjustable window-screen	702,094	June 10	1474	299	99	2409
Fleming, Richard, Lynn, Mass., assignor to General Electric Company. Electric indicating instrument	698,427	Apr. 1	98	14	99	17
Fleming, Robert. (See Somerswober, William, assignor.)						
Fleming, Thomas V. (See Craig and Fleming.)						
Fleming, William, Chicago, Ill. Balling-machine	698,000	Apr. 1	512	113	99	111
Flemming, Carl E., Schönbühls, Germany. Machine for boring brush-blocks and seating in the brushes	698,099	Apr. 29	4994	1097	99	1097
Fletcher, Edward. (See Tipping and Fletcher.)						
Flindall, John, Chicago, Ill. Toy	697,998	Apr. 15	2693	945	99	601
Flinn, R. J. (See Aborn, George P., assignor.)						
Flint, Almon H., Motra, N. Y. Sleigh	699,600	Apr. 29	2615	999	99	600
Flint, Charles E., trustee. (See Lawson, Henry J., assignor.)						
Flint, James J., assignor to Flint-Lomax Electric and Manufacturing Company, Denver, Colo. Electric switch	702,394	June 10	1909	441	99	2409
Flint-Lomax Electric and Manufacturing Company. (See Flint, James J., assignor.)						
Flora, Ellsworth E., Chicago, Ill., assignor to Farrand Organ Company, Detroit, Mich. Self-playing instrument	700,412	May 20	2601	994	99	1721
Florence Manufacturing Company. (See Schwartz, Herman M., assignor.)						
Flowers, Alonzo H., Westville, Fla. Lifting device	701,199	May 27	4027	995	99	2027
Floer, Barthold, Eckersdorf, assignor of one-half to Engel & Gross, Bremen, Germany. Joining device for cast-iron pipes	697,997	Apr. 15	2693	995	99	601
Flood, Charles. (See Kish and Flood.)						
Flood, James H., assignor to H. W. Gossard Company, Chicago, Ill. Cornet	700,217	May 20	2621	541	99	1094
Fogel, Edward A., Burlington, Iowa. Combined lock and latch	699,201	May 6	269	74	99	1249
Folding Wheel Carriage Company. (See Fanning, Charles E., assignor.)						
Foley, Daniel J., Cambridge, Mass. Shoe-cleaner	702,029	June 10	2606	751	99	2409
Foley, John E., Pontiac, Mich. Vehicle-hub	702,548	June 17	2691	991	99	2617
Folger, Henry C., H. Moriarty, and E. B. Jacobson, West Somerville, Mass.; said Jacobson assignor to said Folger and Moriarty. Sparking plug	698,070	Apr. 1	519	120	99	112
Folk, Joseph J. (See Folk, Theodore F. and J. J.)						
Folk, Theodore F. and J. J., Burton, Okla. Ter. Draft-equalizer	698,990	Apr. 29	4997	1095	99	1098
Folkers, George A. W. (See Folkers, John H. L., and G. A. W.)						
Folkers, John H. L. and G. A. W., Oakland, Cal. Device for filing saws	701,700	June 2	701	199	99	2607
Folk, William, Cincinnati, Ohio. Bookbinding	699,991	Apr. 29	4995	1095	99	1098
Fonda, Isaac I., Hopedale, Mass. Elevator-guard	701,095	June 10	1475	293	99	2409
Foot, Charles B., Jr., Cincinnati, Ohio. Bash-tightening device	697,999	Apr. 15	2693	997	99	604
Foot, Charles B., Jr., Cincinnati, Ohio, assignor of one-half to W. Macleod, Newport, Ky. Locking device	697,998	Apr. 15	2697	995	99	604
Foot, Ernest N. (See Grump, Ira E., assignor.)						
Forbes, George, Westminster, England. Range-finder	701,190	May 27	4026	995	99	2026
Forbes, John W., New Britain, Conn. Eyeglass	701,476	June 2	922	75	99	2126
Ford, Clement, Axminster, England. Rail for cycles, &c	702,093	June 10	2607	751	99	2409
Ford, Fred H., assignor of one-half to J. H. Hill, Jacksonville, Fla. Lifting-jack	698,999	Apr. 29	4999	1096	99	1098
Ford, John F. (See McVesty and Ford.)						
Ford, Thomas F., Hackensack, N. J. Controlling device	701,701	June 2	702	199	99	2607
Fordyce, Edmund A., Chicago, Ill. Pneumatic-despatch tube	698,990	Apr. 29	4995	1095	99	1098
Forster, James E., Toronto, Canada. Music-teaching apparatus	698,510	May 6	719	167	99	1264
Forst, Joseph. (See Forst, Philipp, assignor.)						
Forst, Philipp, assignor of one-half to J. Forst, Brooklyn, N. Y. Beer-tapping device	698,999	Apr. 29	4999	1096	99	1098

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Pat.	Vol.	Page.
Forman, Walter A., Brooklyn, N. Y. Safety attachment for elevators.	999,511	May 6	770	144	90	1185
Forney, Matthias N., New York, N. Y. Means for counterbalancing the momentum of reciprocating elements.	701,977	June 3	254	78	90	2123
Forshelm, Joseph, New York, assignor to Eastman Kodak Company, Rochester, N. Y. Panoramic camera.	822,101	May 6	61	15, 17	90	1106
Forstner, Hugo W., Chicago, Ill., assignor to American Pneumatic Service Company, Boston, Mass. Pneumatic-despatch system.	701,329	June 10	1042	284	90	2241
Forster, Frank L., assignor of one-half to J. A. and M. Ousey and A. H. Hildreth, Shelbyville, Ind. Door slide or guide for furniture.	702,243	June 10	1910	426	90	2616
Forster, Friedrich W., Burlington, Iowa. Wheelwright-machine.	697,464	Apr. 15	9020	443	90	446
Forster, John T., Dandenong, Victoria, Australia. Lap-rope.	702,297	June 10	1223	413	90	2468
Forstyth, Wilbur D., and E. F. Bell, assignors to Union Boiler Tube Cleaner Company, Pittsburg, Pa. Boiler-tube cleaner.	822,126	Apr. 22	2260	745	90	730
Forstyth, William, Belvidere, Ill. Needle-bar-guiding mechanism for sewing-machines.	693,664	Apr. 22	2011	864	90	691
Fort, Victor, Paris, France. Gas lighting or extinguishing device.	702,198	June 10	1644	363	90	2464
Fortney, Mariano, Venice, Italy. Stage illumination with indirect light.	693,024	Apr. 22	4222	1035	90	1032
Foss, Benjamin F., Albion, Mo. Lengthening attachment for bits.	693,001	Apr. 22	2014	922	90	690
Foster, Arthur L. (See Pratt, John C., assignor.)	693,513	May 6	732	165	90	1225
Foster, Burton G., Verona, N. Y. Thrill-coupling.	702,093	May 20	2020	579	90	1217
Foster, Eugene S. (See Foster, Malcolm C. and E. S.)	693,523	May 6	480	110	90	1271
Foster, Francis A., Saint City, Iowa. Elevator-tension beam.	701,702	June 3	725	170	90	2200
Foster, Frank W., Melrose, Mass. Round-shaking grate.	702,022	June 10	2042	700	90	2728
Foster, James F., and A. Forster, assignors to S. Shepard and Company, Buffalo, N. Y. Culinary sifter or strainer.	693,003	Apr. 22	2017	923	90	690
Foster, Malcolm C. and E. S., Hawarden, Iowa. Post-driving apparatus.	693,495	Apr. 22	2019	924	90	692
Foster, Oscar S., Utica, N. Y. Cover-fastener for bedsteads.	693,495	Apr. 22	2019	924	90	692
Foster, William E., Utica, N. Y. Taper for furnaces.	693,915	May 12	1223	254	90	1207
Foster, William L. (See Hatch, Valentine, assignor.)	693,120	Apr. 22	2025	706	90	735
Fountain City Drill Company. (See Edwards, Eugene O., assignor.)	702,220	May 20	2073	541	90	1204
Fournier, Eugene, Paris, France. Disinfecting apparatus.	700,120	May 20	2007	479	90	1040
Fouts, Albert, Alexandria, assignor of one-half to H. A. Moore, Indianapolis, Ind. Dumping-vehicle.	701,121	May 27	4020	925	90	2020
Fowler, Alfred B., Central Falls, R. I., assignor to United Shoe Machinery Company.	700,319	May 20	2073	541	90	1205
Fowler, N. J. Buffing-roll.	700,735	May 27	2022	740	90	1201
Fowler, Alfred B., Central Falls, R. I., assignor to United Shoe Machinery Company.	700,735	May 27	2022	740	90	1201
Fowler, N. J. Machine for making insoles.	697,297	Apr. 15	2022	740	90	691
Fowler, Charles V., Los Angeles, Cal. Apparatus for moving heavy bodies.	693,208	May 6	205	74, 75	90	1240
Fowler, Edward C., Forestville, assignor of one-half to W. E. Simonds, Canton, Conn. Nail-puller.	693,208	Apr. 22	4024	1067	90	1066
Fowler, Edward C., Forestville, assignor of one-half to W. E. Simonds, Canton, Conn. Nail-puller.	700,735	May 27	2022	740	90	1201
Fowler, Frank L., assignor of two-thirds to T. A. Royal, Jr., and I. Kanton, Philadelphia, Pa. Trolley-pole.	697,297	Apr. 15	2022	740	90	691
Fowler, George H., and W. D. Howe, Cortland, N. Y. Grinding-wheel.	693,208	May 6	205	74, 75	90	1240
Fowler, Harry, Crandall, Ind. Axle-skein.	693,208	Apr. 22	4024	1067	90	1066
Fowler, Richard E., New York, N. Y. Metal-wire-winding device.	702,126	June 24	2412	926	90	2202
Fowler, Rufus E., Worcester, Mass., assignor to W. A. and L. H. Dodge, Keene, N. H. Window-screen.	693,208	Apr. 22	4024	1067	90	1066
Fox, Charles H., Cincinnati, Ohio. Steam-generator for locomotive service.	700,220	May 20	2073	541	90	1205
Fox, Ernest C., Cleveland, Ohio. Register.	702,022	June 10	2042	700	90	2728
Fox, John H., Portoria, Ohio. Magazine torpedo-case.	693,208	Apr. 22	1114	247	90	2207
Fox, John H., New York, N. Y. Bottle-capping machine.	702,126	June 24	2412	926	90	2202
Fox, John H., New York, N. Y. Salts-injector for siphon-filling machines.	702,126	June 24	2412	926	90	2202
Fox, John H., New York, N. Y. Carbonator for beverages.	702,126	June 24	2412	926	90	2202
Fox Machine Company. (See Barrett, Glenn J., assignor.)	693,208	Apr. 22	4024	1067	90	1066
Fox, Thomas J., assignor to Bigelow, Kennard & Co., Boston, Mass. Chiming mechanism for clocks.	693,208	Apr. 22	4024	1067	90	1066
Foy, Alphonse L., New York, N. Y. Wheel for roller-skates.	697,297	Apr. 15	2022	740	90	691
Fraily, Casper H., and G. F. Miller, Alma, Neb. Converting motion.	697,297	Apr. 15	2022	740	90	691
Frane, Emil, London, England. Apparatus for measuring and drawing liquids.	697,297	Apr. 15	2022	740	90	691
Franchot, Richard, Niagara Falls, N. Y. Making paris-green.	693,208	Apr. 22	4024	1067	90	1066
Francis, Albert J. (See Kohlberg and Francis.)	697,297	Apr. 15	2022	740	90	691
Francis, Emil J., Collingsdale, Pa. Knitting-machine.	697,297	Apr. 15	2022	740	90	691
Francis, Otto, Freiburg, Germany. Double door.	693,208	Apr. 22	4024	1067	90	1066
Frank, Adolf, Hamburg, Germany. Small-arm.	701,121	June 3	70	16	90	2124
Frank, Willis J., Alcester, S. D. Hay-rack lifter.	702,022	June 10	2042	700	90	2728
Frankenthal, David, Frankfurt-on-the-Main, Germany. Mattress.	702,126	June 24	2412	926	90	2202
Frankish, Charles, Ontario, Cal. Fastener for hose-couplings.	701,702	June 10	1644	363	90	2464
Franklin, Herbert H., Syracuse, N. Y. Casting apparatus.	702,126	June 24	2412	926	90	2202
Franklin, John, Norwood, Ohio. Stopper for gas-mains.	702,126	June 24	2412	926	90	2202
Franklin, Samuel. (See Adams, Frank E., assignor.) (Retained.)	701,220	June 3	70	16	90	2125
Frantz, Jacob, Philadelphia, Pa. Wheat-steamer.	701,220	June 3	70	16	90	2125
Frantz, Peter, Sterling, Ill. Bale-tie machine.	701,220	June 3	70	16	90	2125
Frash, Hans A., New York, N. Y. Making caustic alkali.	697,297	Apr. 15	2022	740	90	691
Frash, Hans A., Hamilton, Canada. Recovering metals by electrolysis.	697,297	Apr. 15	2022	740	90	691
Fraser, Ethelbert M., Yonkers, N. Y., assignor to Otis Elevator Company, East Orange, N. J. Electric transmission of power.	697,297	Apr. 15	2022	740	90	691
Fraser, William, Blackpool, England. Mechanical stoker.	701,126	May 27	4024	1067	90	2202
Fraser & Geyer Co. (See Fraser, William G., assignor.)	702,022	June 10	2042	700	90	2728
Fraser, William G., assignor to Fraser & Geyer Co., New York, N. Y. Fountain-pen.	701,126	May 27	4024	1067	90	2202
Fréchette, Louis, Montreal, Canada. Horn-rotating mechanism.	702,022	June 10	2042	700	90	2728
Frack, William, Chicago, Ill. Tablet-machine.	702,022	June 10	2042	700	90	2728
Frackelbach, George A., Pawtucket, R. I. Thread-dressing machine.	693,208	Apr. 22	4024	1067	90	1066
Fredericks, John G., Reading, Pa. Spinning-machine.	693,208	Apr. 22	4024	1067	90	1066
Fredericks, Lewis F., Galesburg, Ill. End-gate and fastening character.	702,022	June 10	2042	700	90	2728
Frederickson, Kate, assignor of one-half to H. W. Perry, Chicago, Ill. Playing-card.	702,022	June 10	2042	700	90	2728
Frederiksen, Anton, Copenhagen, Denmark. Lock.	693,208	Apr. 22	4024	1067	90	1066
Frederickson, Anton, Bridgeport, Conn. Heraldic press.	693,208	Apr. 22	4024	1067	90	1066
Frederickson, Anton, Bridgeport, Conn. Heraldic press.	693,208	Apr. 22	4024	1067	90	1066
Free, Arden H., Peekskill, N. Y. Type-writer.	693,208	Apr. 22	4024	1067	90	1066

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Page	Vol.	Page	Vol.
Free, William C., Chicago, Ill. Take-up for sewing-machines.....	699,673	May 13	1047	264	90	1495
Freeborn, John W., Huron, Ohio. Tur. Flag-cane.....	699,997	Apr. 8	1125	267	90	297
Freeman, Delbert O., assignor of one-half to Rex Acetylene Generator Company, Kingston, N. Y. Gas-purifier.....	701,704	June 3	WR	179	90	2990
Freeman, John W., assignor of one-half to S. B. A. Haynes, Denver, Colo. Combination door knob and bell.....	700,493	May 20	2704	649	90	1793
Freeman, John W., assignor of one-half to S. B. A. Haynes, Denver, Colo. Combined door knob and bell.....	700,631	May 20	2827	684	90	1804
Freeman, Laurens R. (See Bowley and Freeman.).....						
Freeman, Stuart B., St. Louis, Mo. Water-tube boiler.....	699,997	Apr. 20	695	303	90	699
Freeman, Thomas R., and T. H. Henderson, Portsmouth, Va. Self-extinguishing non-explosive lamp.....	699,994	Apr. 1	877	303	90	193
Freshky, Benjamin F., et al. (See Reynolds, Charles J., assignor.).....						
Frémery, Max. (See Bromart, Frémery, and Urban.).....						
French, Frederick R., San Francisco, Cal. Conveying apparatus.....	700,331	May 20	2975	548	90	1995
French, George H., et al. (See Harris, William L., assignor.).....						
French, George H. R., et al. (See Harris, William L., assignor.).....	699,379	May 6	971	111	90	1291
French, Joseph, Woonsocket, R. I. Clutch and stop mechanism.....						
French, Joseph, Woonsocket, R. I. Printing and faking device for postmarking and canceling machines.....	703,414	May 20	2993	695	90	1771
French, Peter W. (See Hunt, Nathaniel F. T., assignor.).....						
Fresh Air and Safety Bath Fastener Company. (See Williams, Robert, assignor.).....	702,120	June 10	1230	345	90	2441
Fretwell, William A., South Boston, Va. Manufactured tobacco.....						
Freville, Albert B. (See Reader and Freville.).....						
Frey, Frank C. (See Weber and Frey.).....	700,957	May 20	2993	973	90	1913
Frey, Frederick G., Jr., St. Louis, Mo. Initial finger-ring.....	702,993	June 17	2979	693	90	2949
Frick, Abraham O., assignor to Frick Company, Waynesborough, Pa. Automatic skinning-regulator for ice-making apparatus.....	702,990	June 10	1214	414	90	2990
Frick, Fred, Waynesborough, Pa. Electric clock.....						
Friedman, Samuel, et al. (See Hummel, Louis, assignor.).....	700,799	May 27	2939	793	90	1999
Friedrich, John O., Bordentown, N. J. Button.....	699,995	Apr. 1	573	313	90	193
Friel, Patrick H., Kenosha, Wis. Die for covering tubes.....	697,394	Apr. 8	1795	395	90	295
Frisbee, Walter W., Boston, Mass. Puzzle.....						
Frisbie, William L., assignor to L. B. Baker Manufacturing Company, Racine, Wis. Lawn-rake.....	697,137	Apr. 8	1493	237	90	293
Fritz, Otto, Nuremberg, assignor to C. A. Kapsler and W. Schleming, Munich, Germany. Making cement.....	699,993	Apr. 20	2993	-----	90	793
Fritsch, Herbert L., Boston, Mass. Stop-ladder.....	700,093	May 13	1741	691	90	1243
Froehlich, Henry, Lahua, Hawaii. Machine for unloading cane-cars.....	701,093	June 10	1477	393	90	2493
Froment, René, Paris, France. Electric-arc lamp.....	699,307	Apr. 1	779	177	90	195
From, Ellis F., Washington, D. C. Telephone-circuit system.....	699,129	May 6	64	17	90	1299
From, Harrison C., assignor to Goodyear Tire and Rubber Company, Akron, Ohio. Rubber-tread horseshoe.....	701,997	June 3	995	293	90	2994
From, Harry W., Detroit, Mich. Railway-car bolster.....	697,499	Apr. 15	2999	449	90	697
From, Jacob F. (See Leo, Alla E., assignor.).....						
Fry, Fred H., Fort Worth, Tex. Type-writer.....	699,990	May 6	313	73	90	1990
Fry, Charles A., Monongahela, Pa. Metallic tie and rail-joint combined.....	701,194	May 27	2997	999	90	2999
Fryer, James, Buxton, England. Window.....	699,499	Apr. 1	65	15	90	19
Fryer, Josephine, Chelsea, Mass. Hook and eye.....	699,193	May 6	66	17	90	1193
Fryk, Olof, Ragby, and L. E. Johnson, Richburg, N. D. Track-jack.....	699,999	Apr. 1	293	293	90	199
Fuhrmann, Franz, Berlin, Germany. Making magnesium peroxid compound.....	699,999	Apr. 20	2749	-----	90	999
Fulagar, Hugh F., Heaton, Newcastle-upon-Tyne, England. Compound steam-turbine.....	699,997	Apr. 1	691	394	90	199
Fullard Manufacturing Company. (See Fullard, William, assignor.).....						
Fullard, William, Colwyn, assignor to Fullard Manufacturing Company, Philadelphia, Pa. Plate-printing and embossing press.....	702,767	June 17	2793	694	90	2713
Fullaway, Richard H., Los Angeles, Cal. Hydrocarbon-burner.....	699,990	May 6	474	111	90	1279
Fuller, Albert F., Newark, N. J., assignor to J. E. Mergott Company. Catch for purse or bag frames.....	697,997	Apr. 13	2993	449	90	697
Fuller, Albert F., Newark, N. J., assignor to J. E. Mergott Company. Purse or bag frame catch.....	699,993	Apr. 20	2993	693	90	693
Fuller, Charles E. (See Scott, James A., assignor.).....						
Fuller, Frank, trustee. (See Compton, Melvin D., assignor.).....						
Fuller, John E., Mansfield, Mass. Attachment for uterine packers.....	700,120	May 13	1979	693	90	1991
Fuller, Louis C., Kansas City, Mo. Gas-lamp.....	701,393	June 3	79	19	90	2139
Fullman, James H. G., Pittsburg, Pa. Outlet-box for electric wires and conduits.....	699,931	May 6	673	113	90	1233
Fulton Iron Works. (See O'Neil, John F., assignor.).....						
Funch, Lafayette, Farmington, Cal. Can-holder.....	700,393	May 20	2999	343	90	1993
Fugua, O. C. (See Graham, Eliza, assignor.).....						
Furish, Zachary T., assignor to North Brothers Manufacturing Company, Philadelphia, Pa. Means for securing handles or rests to tools.....	701,139	May 27	4993	993	90	2993
Furman, John C., assignor of one-fourth to J. W. Jones, Strattonville, and I. M. Shannon, Clarion, Pa. Safety device for gas-lines.....	702,125	June 10	1949	393	90	2995
Furmidge, Samuel, St. Louis, Mo., assignor to Furmidge Spring Wheel Company, Pierre, S. D. Wheel.....	701,795	June 3	795	171	90	1999
Furmidge Spring Wheel Company. (See Furmidge, Samuel, assignor.).....						
Furst, Samuel. (See Lehotaky and Furst.).....						
Fust, Paul A., et al. (See Klein, John, assignor.).....						
Fuyat, Toussaint J. (See Giorgetti, Fuyat, and Federigo.).....						
Fyfe, Robert, New York, N. Y. Non-refillable and non-rupturable vessel for liquids.....	699,917	Apr. 1	1939	994	90	213
G. & J. Tire Company. (See Weidely, George A., assignor.).....						
Gabel, John G., Holton, Kans. Cigar-packing machine.....	699,993	Apr. 1	937	293	90	193
Gabriel, Charles R., assignor to Gorham Manufacturing Company, Providence, R. I. Coupling for candlesticks, &c.....	699,931	Apr. 20	4993	1993	90	1993
Gabrielson, Carl. (See Felbel and Gabrielson.).....						
Gachet, Laurent, Paris, France. Railway signal apparatus.....	699,990	Apr. 20	2994	779	90	799
Geartner, Rudolf, assignor to Karlsruher Kautlin-Industrie-Gesellschaft, Karlsruhe, near Carlsruhe, Austria-Hungary. Insulator for high-potential currents.....	699,999	Apr. 8	1117	397	90	297
Galante, Jules R. (See Wilcox and Galante.).....						
Gall, John F., assignor to Simmons Manufacturing Company, Kenosha, Wis. Automatic brake and power-shifting mechanism.....	700,419	May 20	2995	995	90	1791
Galarno, William, Bay City, Mich. Vegetable-puller.....	697,493	Apr. 15	2995	449	90	697

Alphabetical list of patents, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			1st	2nd	Vol.	Page.
Gale, Andrew, Chicopee, Mass. Seed-planter.....	693,937	Apr. 29	693	1007	99	1005
Gale, Charles E., Minneapolis, Minn. Tread-power.....	693,938	Apr. 29	6715	821	99	995
Gale, Georgiana O. (See Gale, Henry A., assignor.)						
Gale, Henry A., assignor to G. C. Gale, Hartford, Conn. Machine for edging and matching lumber.....	693,111	Apr. 29	693	707	99	705
Gallagher, Bernard, Lynn, Mass. Trolley-wheel-turning machine.....	693,939	May 6	676	112	99	1123
Gallagher, George S., assignor to Economy Furnace Company, New York, N. Y. Furnace.....	697,385	Apr. 15	696	596	99	606
Gallagher, Thomas M., Old Orchard, assignor to Soule-Gallagher Iron & Steel Company, St. Louis, Mo. Bolster.....	693,940	Apr. 29	697	1007	99	1005
Gallagher, Thomas M., Old Orchard, assignor to Soule-Gallagher Iron & Steel Company, St. Louis, Mo. Body-bolster for railway-cars.....	693,941	Apr. 29	697	1008	99	1004
Gallant, Achille, West Hoboken, N. J. Regulator for controlling the descent of elevator-cars.....	702,942	June 24	702	604	99	2000
Galloway, Oscar E. (See Cooper, William M., assignor.)						
Galopin, Paul. (See Tommasina, Thomas, assignor.)						
Galpin, George D., et al. (See Winkler, William, assignor.)						
Galvin, Thaddeus, Detroit, Mich. Ball-caster.....	701,193	May 27	699	992	99	2001
Galway, John J., assignor of one-half to K. McDonald, Duluth, Minn. Chain retaining and releasing means.....	702,543	June 17	702	992	99	2017
Gambie, Elsworth. (See Latta, Elsworth M., assignor.)						
Gammeter, John R. (See Wilcox and Gammeter.)						
Gane, Robert E. A., Pankov, Germany. Ignition material for matches.....	693,944	Apr. 29	693		99	999
Garbell Bros. Co. (See Garbell, Max, assignor.)						
Garbell, Max, Philadelphia, Pa., assignor to Garbell Bros. Co. Machine for making buttons.....	693,945	Apr. 1	693	99	99	99
Gardner, Thomas W. (See Garrison, Edward W., assignor.)						
Gardner, Charles W., Portland, Oreg. Gold-separator.....	702,546	June 17	702	970	99	2007
Gardner, Edgar S., Boston, Mass., assignor to Bernsten Electric Manufacturing Company, Portland, Me. Manufacturing incandescent electric lamps.....	697,459	Apr. 15	699	469	99	697
Gardner, George E., assignor of one-half to F. J. Hastings, Haverhill, Mass. Shoe-turning device.....	702,198	June 29	702	990	99	2005
Gardner, Jefferson M., New London, Conn. Cotton-seed dehusker.....	693,950	Apr. 6	1117	245	99	2007
Gardner, Michael M., Cranston, R. I. Cigar-bunching machine.....	693,974	May 13	1949	246	99	1945
Garland, Ernest C., Chelsea, assignor of one-half to W. A. Stevens, East Boston, Mass. Combined valve and switch apparatus.....	693,955	Apr. 1	693	199	99	99
Garma, William, Los Angeles, Cal. Apron and apron-tilt.....	693,512	May 6	705	199	99	1995
Garrett, John M. (See Stevens, William H., assignor.)						
Garrett-Cromwell Engineering Company. (See Sundt, Oscar, assignor.)						
Garrett, Frank W., Johnstown, Pa., assignor to Lorain Steel Company. Trolley for electric railways.....	702,956	June 24	702	701	99	2700
Garrigan, Thomas J., Boston, Mass. Candle.....	701,597	June 3	504	111	99	2012
Garrison, William F., assignor to Guild & Garrison, Brooklyn, N. Y. Vacuum-pump.....	693,959	Apr. 29	693	997	99	999
Garrison, William F., assignor to Guild & Garrison, Brooklyn, N. Y. Valve for vacuum-pumps.....	702,954	June 10	1419	216	99	2017
Garriss, E. H. (See Sprague, George F., assignor.)						
Garrity, James J., Pinola, Cal. Tube-machine.....	702,197	June 10	1401	270	99	2005
Gaska, Albert, Roadburg, Wis. Spark arrester and extinguisher.....	693,960	Apr. 6	1120	245	99	2007
Gaska, William H., Philadelphia, assignor, by mesne assignments, to J. Elwood Lee Company, Conshohocken, Pa. Hermal tram.....	693,970	Apr. 29	693	779	99	779
Garco-Daniel Company. (See Ambuhl, Andrew, assignor.)						
Garver, Edward A., and D. V. Stout, Chicago, Ill. Wheelbarrow.....	693,980	Apr. 29	693	1005	99	1004
Garvey, Francis J., Chicago, Ill. Fall.....	701,705	June 3	700	171	99	2070
Gaskins, George H., Portsmouth, Va. Machine for polishing rings.....	693,514	May 6	705	199	99	1995
Gasson, Emil G., Sioux City, Iowa. Safety-fanest and water-controlling connection.....	693,721	Apr. 1	695	142	99	147
Gatch, Milton W., Cincinnati, Ohio. Forker.....	697,570	Apr. 15	697	690	99	690
Gate City Stone Works. (See Wilson, Charles F., assignor.)						
Gatemann, William, Newton, Wis. Attachment for finger-bars of mowers or harvesters.....	702,959	May 13	1709	401	99	1846
Gates, John, Tufnell Park, England. Carving or copying machine.....	693,969	Apr. 29	693	1009	99	1009
Gates, Louis W. (See Gates, William and L. W.)						
Gates, William, Woodbridge, and L. W. Gates, Orange, assignors of two-fifths to J. H. Barnes, Norwich, Conn. Valve.....	702,417	June 17	2032	495	99	2007
Gates, William H., assignor to himself and R. P. Green, Worcester, Mass. Breakdown.....	693,194	Apr. 29	693	705	99	770
Gatling, Richard J., St. Louis, Mo. Motor-plow.....	693,989	Apr. 1	702	172	99	195
Gatrell, Ottmar A., Columbus, Ohio, assignor to P. C. Houston, Jamestown, N. Y. Voting-machine.....	701,224	June 3	50	17,12	99	2125
Gavitt, Harry E., Topeka, Kans. Horse-tail holder.....	697,562	Apr. 6	1399	299	99	299
Gay, Chauncy W., West Springfield, Mass. Creasing or scoring and watermarking mechanism for paper-box machinery.....	702,965	June 10	1949	645	99	2005
Gay, Edgar A., Rochester, N. Y., assignor to Song Company, Chicago, Ill. Hinge for furniture.....	694,671	Apr. 1	691	120	99	113
Gay, George L., Spokane, Wash. Wrapping-machine.....	697,517	Apr. 15	697	514	99	509
Gaynor, Thomas F., et al. (See Gaynor, Timothy J., assignor.)						
Gaynor, Timothy J., assignor of one-half to T. F. Gaynor and W. L. Lightford, Indianapolis, Ind. Seed-planter.....	693,604	Apr. 29	693	605	99	601
Gearing, Charles M., Brownwood, Tex., assignor of three-fourths to C. W. Brown, A. Grivot, and A. C. Leandry, New Orleans, La. Gas generating and burning furnace.....	702,422	June 17	2032	495	99	2007
Gebbia, Frank. (See Doyle and Gebbia.)						
Gebhard, Lawrence G., and J. M. Rowley, Buffalo, N. Y. Hydrocarbon vaporizer or burner.....	697,518	Apr. 15	697	515	99	511
Gebhard, Lawrence G., and J. M. Rowley, Buffalo, N. Y. Bag-fastener.....	697,710	Apr. 15	6479	654	99	655
Gebhardt, Victor, St. Louis, Mo. Fishing-bait holder.....	693,604	May 6	320	79	99	1241
Gecynski, Samuel, Berlin, Germany. Cloth-cutter.....	702,722	June 17	2725	694	99	2712
Geddes, Charles A., assignor to G. F. Laubenstein and W. E. Boyer, Philadelphia, Pa. Soda-water-dispensing apparatus.....	702,770	June 17	2821	695	99	2800
Gee, Albert, assignor to Brown Knitting Company, Philadelphia, Pa. Attachment for making open or lace work in straight-knitting machines.....	702,966	June 24	2820	704	99	2825
Gee, Albert, assignor to Brown Knitting Company, Philadelphia, Pa. Attachment for making open or lace work in straight-knitting machines.....	702,967	June 24	2820	704	99	2825
Gedding, Gustave P., et al. (See Shoemaker, Harry, assignor.)						
Gedding, Adam, Philadelphia, Pa. Cart shovel and scraper.....	697,565	Apr. 6	1399	299	99	299

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr.	Vol.	Page.
Geisselheimer, William, assignor to S. Schauer & Sons, New York, N. Y. Apparel-belt	693,005	Apr. 28	2823	004	5	21
Geisselheimer, Henry, and T. Van Aller, Schenectady, N. Y., assignors to General Electric Company. Soldering-iron	693,006	Apr. 1	28	15	5	22
Gelly, Joseph C., Paris, France. Hydraulic motor	693,009	Apr. 1	724	123	5	23
General Chemical Company. (See Hart, Edward, assignor.)						
General Electric Company. (See Bassett and Hill, assignors.)						
General Electric Company. (See Batchelder, Asa F., assignor.)						
General Electric Company. (See Berg, Ernst J., assignor.)						
General Electric Company. (See Buck, Harold W., assignor.)						
General Electric Company. (See Case, Frank E., assignor.)						
General Electric Company. (See Day, Maxwell W., assignor.)						
General Electric Company. (See Everest, Augustine R., assignor.)						
General Electric Company. (See Fleming, Richard, assignor.)						
General Electric Company. (See Geisselheimer and Van Aller, assignors.)						
General Electric Company. (See Harthan, Charles E., assignor.)						
General Electric Company. (See Haskins, Caryl D., assignor.)						
General Electric Company. (See Hewlett, Edward M., assignor.)						
General Electric Company. (See Huthamer, Robert E., assignor.)						
General Electric Company. (See Kastenhuber, Edwin G., assignor.)						
General Electric Company. (See Kray, Joseph F., assignor.)						
General Electric Company. (See Lunt, Alexander D., assignor.)						
General Electric Company. (See Mackintosh, Frederick, assignor.)						
General Electric Company. (See Moody, Walter S., assignor.)						
General Electric Company. (See Nowotny, John S., assignor.)						
General Electric Company. (See Oxley, Eustace, assignor.)						
General Electric Company. (See Palmer, George E., assignor.)						
General Electric Company. (See Potter, William B., assignor.)						
General Electric Company. (See Priest and Schermerhorn, assignors.)						
General Electric Company. (See Read, Robert H., assignor.)						
General Electric Company. (See Robinson, Lewis T., assignor.)						
General Electric Company. (See Rypinski, Maurice C., assignor.)						
General Electric Company. (See Sargent, Howard E., assignor.)						
General Electric Company. (See Saxon, Louis, assignor.)						
General Electric Company. (See Steinmetz, Charles P., assignor.)						
General Electric Company. (See Stern, George, assignor.)						
General Electric Company. (See Stevens, George E., assignor.)						
General Electric Company. (See Thomson, Elihu, assignor.)						
General Electric Company. (See Thomson and Callan, assignors.) (Release.)						
General Electric Company. (See Williams, Thomas W., assignor.)						
General Electric Company. (See Woodbridge, Jonathan E., assignor.)						
General Incandescent Arc Light Company. (See Ball, Henry P., assignor.)						
Geneva Automobile and Manufacturing Company. (See Thompson, Alfred, assignor.)						
Gent, John R. (See Green, Gent, and Popenhusen.)	693,103	May 8	421		20	1173
Gentzsch, Adolf, Vienna, Austria-Hungary. Insulating composition and producing same.	693,107	Apr. 1	285	70	20	57
Geo. W. Caswell Company. (See Hastings and Harrington, assignors.)						
George, Francis, Valparaíso, Cal. Automatic ash-lock	702,044	June 17	2423	371	20	2383
George Frost Company. (See Phelps, George H., assignor.)	697,471	Apr. 15	2330	480	20	405
George Schneider Manufacturing Company of Baltimore City. (See Schneider, George, assignor.)						
Gerbing, Max P., Westworth, Mo. Car-wheel	693,916	May 13	1930	254	20	1307
Gercke, William H., San Francisco, Cal. Drawer-guide	700,080	May 13	1745	401	20	1242
Gerlach, Fred, trustee, et al. (See Bryan, George F., assignor.)	701,285	June 3	24	15	20	2122
Gerling, Charles E., Burlington, Iowa. Body-kneader	697,122	Apr. 8	1234	217	20	322
Gerling, Charles E., Edwardsville, Ill. Seed or potato planter	702,720	June 17	2323	604	20	2323
Germer, Edward G., Erie, Pa. Stove	701,197	May 27	4030	335	20	2031
Germot, Antoine, Amiens, and H. E. L. Piévet, Paris, France. Treating metallic sulfide	693,280	May 13	1275	245	20	1473
Gernand, William H., Alvin, Ill. Machine for husking corn	701,197	May 27	4030	335	20	2031
Gernert, John M., and J. F. Aten, Bellevue, Ohio; said Gernert assignor to said Aten. Double ironing-board	693,000	Apr. 28	2423	004	20	031
Gerrard, Edward, assignor to National Dry Kiln Company, Indianapolis, Ind. Dry-kiln	702,721	June 17	2327	604	20	2327
Gerrish, Edward W., assignor of one-half to T. W. Gardiner, Lynn, Mass. Last-awing machine						
Gerstnayer, Anton, assignor of one-half to L. A. Dunne, Chicago, Ill. Nut-cracking machine						
Gesellschaft für Huberpressung Gesellschaft mit Beschränkter Haftung. (See Huber, Carl, assignor.)						
Gestetner, David, London, England. Stencil-printing apparatus	700,031	May 13	1745	401	20	1247
Gourink, Bernard A., Cleveland, Ohio. Press for expressing juice from fruit or other material	702,130	June 24	2327	512	20	2327
Ghagan, John J., Newark, N. J. Circuit-controller	697,394	Apr. 15	2334	085	20	034
Giacomini, Achilles, San Francisco, assignor to A. White, Vallejo, Cal. Button-sewing machine	701,371	June 10	1931	222	20	2222
Giacomini, Achilles, San Francisco, assignor to A. White, Vallejo, Cal. Starting or stopping mechanism	701,373	June 10	1934	227	20	2244
Gibbons, Samuel J., Mount Pleasant, Pa. Window-lock	702,123	June 10	1934	271	20	2223
Gibbons, Pierce F., assignor of two-thirds to E. G. Barfus and C. E. Koster, Chicago, Ill. Mechanical boiler-cleaner	702,320	June 24	2327	701	20	2720
Gibbs, Harry D. (See Smith and Gibbs.)						
Gibbs, Henry, assignor to W. D. Allen Manufacturing Company, Chicago, Ill. Hose-nose	693,334	May 6	422	113	20	1223
Gibbs, Lucius T., New York, assignor to Vehicle Equipment Company, Brooklyn, N. Y. Wheel-hub	702,001	May 13	1745	404	20	1545
Gibbs, Harry J. (See Smith, Claude R., assignor.)						
Gibson, Charles G., Sioux City, Iowa. Dilator	702,725	June 17	2323	604	20	2713
Gibson, O. B., Thayer, Iowa. Device for brushing flies from cattle and trapping same	701,573	June 10	1935	227	20	2244
Gibson, Winfield H., Homestead, and H. Weesling, Hopechurch, Pa. Producing silica bricks	701,707	June 3	771		20	2270
Gibson, Winfield H., Homestead, and H. Weesling, Hopechurch, Pa. Silica brick	701,708	June 3	771		20	2270
Giesler, Arthur, assignor to Stillwell-Bierce & Smith-Valle Co., Dayton, Ohio. Turbine-water-wheel system	702,000	June 24	2323	724	20	2223
Glass, Henry, Chicago, Ill. Cooking utensil	697,472	Apr. 15	2330	480	20	405

Alphabetical list of patentees, April to June, inclusive--Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Page.	Page.	Vol.	Page.
Gibson, William, Chicopee, Mass. Spinning-spindle.....	701,395	June 3	905	906	90	2904
Gibson, William, Chicopee, Mass., assignor of one-half to M. A. Remick, Augusta, Me. Spinning-spindle.....	701,709	June 3	773	171	90	2970
Gilbert, Charles L., Cleveland, Ohio. Telescopic case.....	693,683	Apr. 29	3916	595	90	2920
Gilbert, Clark, Bridgeport, Ohio. Electric arc lamp.....	693,331	Apr. 29	4940	1095	90	1094
Gilbert, Manley I., Wethers, Mass. Parallel railway-rail bearing.....	697,351	Apr. 8	1340	297	90	304
Gilbert, Wilbur F., assignor to F. & F. Corbin, New Britain, Conn. Window-stop-adjusting device.....	697,139	Apr. 8	1435	317	90	292
Gilbert, Wilbur F., assignor to F. & F. Corbin, New Britain, Conn. Door-knob.....	699,515	May 6	735	169	90	1993
Giles, Isaac W., New Bedford, assignor to Atlas Tack Company, Fairhaven, Mass. Eyelet.....	702,199	June 10	1665	371	90	2466
Gill, Arthur B. (See Preston and Gill.)						
Gill, Edwin R., Englewood, N. J., assignor, by mesne assignments, to Otis Elevator Company. Elevator.....	701,396	June 3	35	18	90	2126
Gill, John E., Franklin, Pa. Device for lubricating car-journals.....	701,030	May 27	3749	595	90	1993
Gill, John E., Franklin, Pa. Car-axle lubricator.....	701,030	May 27	3750	595	90	1993
Gillarduzzi, Arcangelo, Philadelphia, Pa. Band-saw guide and tension device.....	697,711	Apr. 15	2421	354	90	650
Gillenwater, Edward, et al. (See Richards, Jesse D., assignor.)						
Gillman, Luke, Woonsocket, R. I. Kettle.....	702,035	June 10	1413	316	90	2417
Gilletta, Halbert P., assignor to J. H. Gillette, Rochester, N. Y. Microscope.....	694,599	Apr. 1	990	305	90	198
Gilletta, Julia E. (See Gillette, Halbert P., assignor.)						
Gilligan, Michael J., et al. (See Linscott, William D., assignor.)						
Gillinder, Frederick R. (See Stutz, Frederick, assignor.)						
Gilling, Charles J., Chicago, Ill. Tire for vehicle-wheels.....	701,355	June 3	905	111	90	2926
Gilman, Edward R., assignor to Iron Old Manufacturing Company, New York, N. Y. Garbage or refuse can.....	697,438	Apr. 15	2040	490	90	490
Gilmore, Charles E., assignor to Winslow Bros. Co., Chicago, Ill. Mechanism for operating elevator-doors.....	699,205	May 6	321	75, 77	90	1941
Gilmore, Charles E., assignor to Winslow Bros. Co., Chicago, Ill. Mechanism for operating elevator-doors.....	699,940	May 13	1377	319	90	1473
Gilmore, Ira F., Bloomington, Ill. Wireless piano.....						
Gilmore, Thomas N. (See McCoy and Gilmore.)						
Gilmore, Winfield S., New York, N. Y. Package-carrier.....	700,336	May 20	2923	343	90	1993
Gilpatrick, Nehemiah, St. Johnsbury, Vt. Impact-engine.....	693,371	Apr. 29	3535	730	90	730
Gilson, John, Fort Washington, Wis. Grinding-machine.....	701,031	May 27	3751	595	90	1993
Giltz, Goodlow P., et al. (See Anderson, Frank C., assignor.)						
Giorgetti, Giovanni, Boston, T. J. Fayet, Hudson, and D. Federigo, Boston, Mass. Phon-pump.....	697,385	Apr. 15	2997	599	90	604
Giovanna, George, New York, N. Y. Parser and cutter.....	702,419	June 17	2097	493	90	2549
Giroux, Joseph L., Jerome, Ariz. Ter. Steam-generator.....	702,530	June 17	2998	599	90	2517
Gisler, August, Ocosingo Island, off Costa Rica. Brush.....	699,753	May 13	1305	290	90	1425
Giwitz, Albert F., Redcloud, Neb. Wrench.....	693,675	May 13	1054	246	90	1425
Gladwell, Arthur. (See Colard, George, assignor.)						
Gladwin, Edmund C., Oakland, Cal. Mustache-guard.....	702,790	June 17	2797	694	90	2714
Gladwin, Edmund C., Oakland, Cal. Mustache-guard.....	697,713	Apr. 15	2429	354	90	657
Gladwin, Edmund C., Oakland, Cal. Mustache-guard.....	697,674	Apr. 15	2049	491	90	490
Gladwin, Edmund C., Oakland, Cal. Mustache-guard.....						
Glascock, Charles O. and J. W., Muncie, Ind. Baby-walker.....						
Glascock, John W. (See Glascock, Charles O. and J. W.)						
Glass, Abraham R., assignor to J. Back, Vienna, Austria-Hungary. Impregnating paper or pasteboard.....	702,341	June 24	2999		90	2949
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,951	May 27	4195	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,952	May 27	4196	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,953	May 27	4197	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,954	May 27	4198	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,955	May 27	4199	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,956	May 27	4200	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,957	May 27	4201	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,958	May 27	4202	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,959	May 27	4203	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,960	May 27	4204	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,961	May 27	4205	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,962	May 27	4206	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,963	May 27	4207	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,964	May 27	4208	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,965	May 27	4209	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,966	May 27	4210	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,967	May 27	4211	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,968	May 27	4212	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,969	May 27	4213	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,970	May 27	4214	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,971	May 27	4215	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,972	May 27	4216	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,973	May 27	4217	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,974	May 27	4218	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,975	May 27	4219	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,976	May 27	4220	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,977	May 27	4221	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,978	May 27	4222	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,979	May 27	4223	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,980	May 27	4224	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,981	May 27	4225	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,982	May 27	4226	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,983	May 27	4227	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,984	May 27	4228	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,985	May 27	4229	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,986	May 27	4230	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,987	May 27	4231	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,988	May 27	4232	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,989	May 27	4233	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,990	May 27	4234	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,991	May 27	4235	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,992	May 27	4236	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,993	May 27	4237	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,994	May 27	4238	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,995	May 27	4239	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,996	May 27	4240	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,997	May 27	4241	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,998	May 27	4242	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	701,999	May 27	4243	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,000	May 27	4244	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,001	May 27	4245	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,002	May 27	4246	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,003	May 27	4247	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,004	May 27	4248	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,005	May 27	4249	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,006	May 27	4250	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,007	May 27	4251	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,008	May 27	4252	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,009	May 27	4253	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,010	May 27	4254	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,011	May 27	4255	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,012	May 27	4256	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,013	May 27	4257	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,014	May 27	4258	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,015	May 27	4259	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,016	May 27	4260	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,017	May 27	4261	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,018	May 27	4262	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,019	May 27	4263	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,020	May 27	4264	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,021	May 27	4265	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,022	May 27	4266	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,023	May 27	4267	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,024	May 27	4268	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,025	May 27	4269	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,026	May 27	4270	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,027	May 27	4271	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,028	May 27	4272	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,029	May 27	4273	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,030	May 27	4274	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,031	May 27	4275	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,032	May 27	4276	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,033	May 27	4277	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,034	May 27	4278	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,035	May 27	4279	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,036	May 27	4280	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,037	May 27	4281	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,038	May 27	4282	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,039	May 27	4283	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,040	May 27	4284	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,041	May 27	4285	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,042	May 27	4286	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,043	May 27	4287	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,044	May 27	4288	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,045	May 27	4289	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,046	May 27	4290	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,047	May 27	4291	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,048	May 27	4292	995	90	2993
Glass, Percy R., Quincy, assignor to Peerless Machinery Company, Boston, Mass. Eye-letting-machine.....	702,049	May 27	4293	995	90	

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Pat.	Des.	Vol.	Page.
Goodhead, George E., Winchester, Ill. Telephone-circuit.....	699,076	May 12	1085	246	99	1498
Gooding, Charles B. (See Emerson, William W., assignor.)						
Gooding, Charles B. (See Lincoln, Luther, assignor.)						
Gooding, William G. (See Lytle, James D., assignor.)						
Goodman, Charles H. (See Nivison, William E., assignor.)						
Goodsell, Clayton A., Harvard, Ill. Snap-fastener.....	702,940	June 24	2081	708	99	2760
Goodson, George A., New York, N. Y. Squirt-preventer for type-casting machines.....	702,941	June 24	2082	708	99	2761
Goodson, George A., Minneapolis, Minn., assignor to Goodson Graphotype Company, New York, N. Y. Differential letter-space register for composing-machines.....	694,728	Apr. 1	697	744	99	180
Goodson, George A., Minneapolis, Minn., assignor to Goodson Graphotype Company, New York, N. Y. Matrix for type-founding.....	694,729	Apr. 1	648	145	99	126
Goodson, George A., Minneapolis, Minn., assignor to Goodson Graphotype Company, New York, N. Y. Font of type.....	694,734	Apr. 1	643	145	99	126
Goodson Graphotype Company. (See Goodson, George A., assignor.)						
Goodwin, Charles H. (See Arner and Goodwin.)						
Goodwin, Hannibal, deceased, Newark, N. J.; R. Goodwin, executrix. Camera.....	700,140	May 12	1974	484	99	1891
Goodwin, Landon R., Arlington, assignor of one-half to J. B. Bray, Newark, N. J. Lift-ing-jack.....	696,386	Apr. 1	237	71	99	67
Goodwin, Rebecca, executrix. (See Goodwin, Hannibal.)						
Goodwin, Thomas J., Lampasas, Tex. Ventilator-fine.....	700,768	May 27	2260	748	99	1895
Goodyear India Rubber Glove Manufacturing Company. (See Eggers, Anton C., assignor.)						
Goodyear Tire and Rubber Company. (See Burrows, Joseph A., assignor.)						
Goodyear Tire and Rubber Company. (See Frost, Harrison C., assignor.)						
Goodman, Frederick R., Binghamton, N. Y. Xylophone-player.....	702,025	May 12	1778	405	99	1849
Gordon, Albert A., Jr. (See Wyman and Gordon.)						
Gordon, Frederick W. (See Hanson and Gordon.)						
Gordon, Frederick W., assignor to Pratt & Whitney Company, Hartford, Conn. Change-gearing.....	700,008	Apr. 22	2422	695	99	680
Gordon, Frederick W., assignor to Pratt & Whitney Company, Hartford, Conn. Vari-ble-speed gearing.....	701,875	June 10	1980	225	99	2645
Gordon Hollow Blast Grate Company. (See Sprague, Rufus F., assignor.)						
Gorham, John G., Mansfield, Ohio. Screw-driver.....	697,596	Apr. 15	1998	890	99	664
Gorham Manufacturing Company. (See Gabriel, Charles E., assignor.)						
Gorin, Fred F., Chicago, Ill. Cash-register.....	697,476	Apr. 15	2044	421	99	660
German, William, Pittsburg, Pa. Heating-furnace.....	702,720	June 17	2080	605	99	2636
Gernsack, John R., Philadelphia, Pa. Wire-twisting pliers.....	699,164	May 6	68	17	99	1160
Geshorn, Alfred F., Canton, Ohio. Curtain-hanger.....	702,480	June 17	2080	480	99	2636
Goss, Edgar O., et al. (See Collier, Arthur T., assignor.)						
Goss Printing Press Company. (See Firm, Joseph L., assignor.)						
Goss Printing Press Company. (See Goss, Samuel G., assignor.)						
Goss, Samuel G., assignor to Goss Printing Press Company, Chicago, Ill. Casting-box for stereotyping.....	697,141	Apr. 8	1487	213	99	260
Goss, Samuel G., assignor to Goss Printing Press Company, Chicago, Ill. Means for driving printing-presses.....	702,421	June 17	2080	420	99	2636
Goss, Edward L., Chanute, Kans., assignor of one-half to L. A. Laughlin, Kansas City, Mo. Continuous automatic air-brake system.....	701,267	June 2	98	12, 13	99	2126
Goss, Edward L., Chanute, Kans., assignor of one-half to L. A. Laughlin, Kansas City, Mo. Continuous automatic air-brake system.....	701,268	June 2	98	19	99	2126
Goucher, Henderson E., Butler, Pa. Snap-lock.....	697,967	Apr. 15	2000	960	99	664
Gould, Charles A. (See Hutchins, Stainer, assignor.)						
Gould Coupler Company. (See Richards, Willard F., assignor.)						
Gould & Eberhardt. (See Eberhardt, Henry E., F. L., and E. G., assignors.)						
Gould & Eberhardt. (See Eberhardt and Emma, assignors.)						
Gould, Frank C. (See Tracy and Gould.)						
Gould, Fred L., assignor to Gould Traction Car Company, Seattle, Wash. Traction de-vice.....	699,690	Apr. 29	4937	932	99	990
Gould, Ovid H., Montreal, Canada. Package-carrier.....	699,990	Apr. 29	4940	1090	99	1095
Gould Storage Battery Company. (See Chamberlain, Rufus N., assignor.)						
Gould Storage Battery Company. (See Richards, Willard F., assignor.)						
Gould Traction Car Company. (See Gould, Fred L., assignor.)						
Gowing, Earle H. (See Nagle, Augustus F., assignor.)						
Gowing, Earle H., Reading, Mass. Furnace.....	700,086	May 12	1780	690	99	1890
Grabia, Harry, Milwaukee, Wis. Sad-iron.....	702,480	June 17	2080	480	99	2636
Grabowski, Anton. (See Clover and Grabowski.)						
Graciano, Lando C., San Jose, Cal. Hydrocarbon-burner.....	699,991	Apr. 8	1121	240	99	260
Graft, Louis J., Pittsburg, Pa. Curtain-pole.....	702,720	June 17	2080	605	99	2636
Grafton, Alonso, Dekalb, assignor to A. G. Leonard, trustee, Chicago, Ill. Pegging-ma-chine.....	699,790	Apr. 29	4930	964	99	990
Graft, James A., et al. (See Lambert, Henry C., assignor.)						
Graham, Charles H., et al. (See Lorrain, Harry B., assignor.)						
Graham Combined Guard-Rail and Frog Brace Company. (See Graham, John E., as-signor.)						
Graham, Elias, assignor of one-half to O. C. Fuqua, Casey, Ill. Gate.....	699,990	Apr. 1	290	71	99	67
Graham, James, Carnoustie, and R. H. Tait, Birling, Scotland. Automatic self-in-sulating life-preserver.....	701,260	June 2	98	19	99	2126
Graham, James L., Allegheny, Pa. Valve for automatic water-heaters.....	699,790	May 12	1992	960	99	1426
Graham, John E., assignor to Graham Combined Guard-Rail and Frog Brace Company, Roanoke, Va. Rail-brace.....	697,421	Apr. 8	1990	424	99	660
Graham, Joseph B., assignor of one-half to R. O. Alys, Des Moines, Iowa. Tail-board fac-toring for wagons.....	700,410	May 20	2080	410	99	1780
Graham, Levi P., Decatur, Ill. Corn-planter.....	699,764	May 12	1990	221	99	1426
Graham, Levi P., Decatur, Ill. Corn-planter.....	701,712	June 2	777	173	99	2671
Graham, Levi P., Decatur, Ill. Corn-planter.....	702,967	June 24	2080	964	99	2607
Graham, Levi P., Decatur, Ill. Corn-planter.....	702,968	June 24	2080	974	99	2608
Graham, Lonelle F., San Jose, Cal. Railway-indicator.....	700,697	June 24	2080	697	99	2636
Graham, Walter H., et al. (See Dawson, Clarence L., assignor.)						
Graham, William S., assignor to Parlin & Orendorf Company, Canton, Ill. Corn-planter.....	697,412	Apr. 8	1990	424	99	660

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Pat.	Vol.	Page.
Grall, Joseph G., Detroit, Mich., assignor, by mesne assignments, to Robert Mitchell Machinery Company. Button-fly-scalloping machine.	700,141	May 12	1977	64	90	1288
Grange, Wallace S., Kirkland, Ill. Letter-file and cabinet.	700,417	May 20	2640	88	90	1289
Granger, John, assignor to himself and J. Gutherland, Springer, N. Mex. Ter. Rain-holder.	701,022	May 27	3754	99	90	1290
Grant, James M., Bab, Ark. Cotton-chopper.	698,122	May 6	99	12	90	1190
Grant, Mary A., St. Anthony, Idaho. Oak-pan.	701,122	May 27	4041	99	90	1291
Grape, George H., Wellington, New Zealand. Hoe.	701,220	June 3	95	20	90	1292
Grasse, Oronzio F. de Paris, France. Book for corsets.	700,121	June 24	2620	114	90	1293
Grasselli Chemical Company. (See Lema, Louis P., assignor.)						
Gravel, Edwin L., Carthage, N. Y. Signal for composite telegraphic and telephonic transmission.	700,911	May 27	3515	107	90	1294
Gravel, Edwin L., Carthage, N. Y. Signaling and telephoning apparatus.	700,912	May 27	3516	107	90	1295
Graves, George W., Rochester, assignor of one-half to J. F. Mills, Jr., Fort Chester, N. Y. Burner for heating ovens.	699,040	Apr. 22	2620	66	90	698
Graves, George W., Rochester, and J. F. Mills, Jr., Fort Chester, N. Y. Gas stove or range.	698,009	Apr. 22	2627	96	90	699
Graves, Salathiel V., Morrell, Mo. Insect-destroyer.	701,560	June 3	307	112	90	1212
Gray, Alexander, Newcastle-upon-Tyne, assignor of one-half to T. Thompson, Blackheath, England. Apparatus for purifying water for steam-generators.	697,365	Apr. 15	2701	60	90	695
Gray, Almon J., Peoria, Ill., assignor of one-half to H. A. Gray, St. Paul, Minn. Game-cock.	701,224	May 27	4102	96	90	1296
Gray, Almon J., Peoria, Ill., assignor of one-half to H. A. Gray, St. Paul, Minn. Game-cock.	700,224	May 20	2625	542	90	1297
Gray, Edward N., Chicago, Ill. Bush-holder.	11,225	May 12	2625	464	90	1298
Gray, Frank, Chicago, Ill. Valve and alarm. (Release.)				465	90	
Gray, Howard H., Huntington, Ind. Lawn-sprinkler.	702,722	June 17	2760	62	90	2714
Gray, Isaac V. (See Warfel, Henry O., assignor.)						
Gray, John, Newcastle-upon-Tyne, England. Linotype or similar composing-machine.	702,942	June 24	2825	62	90	2827
Gray, John, Sr., assignor of one-half to C. S. Campbell, Washington, D. C. Boring-tool.	698,908	Apr. 1	977	215	90	297
Gray, Joseph W., Fowler, Ind. Repeater for telegraph-lines.	700,027	May 12	1781	497	90	1299
Gray, Norman A. (See Gray, Almon J., assignor.)						
Gray, Richard, Bloomington, Ill. Metal arch.	701,024	May 27	3754	99	90	1290
Gray, Robert K., London, England. Ball.	702,942	June 24	2827	702	90	2721
Gray, Edward F., Titusville, Fla. Producing tanning agents from the saw-palmetto.	704,024	June 24	2820		90	2825
Gray, William S. (See Upton and Gray.)						
Green, E. H. R. (See Busbol, O. A. Ernst, assignor.)						
Green, George A., assignor to J. S. Wright, Duxbury, Mass. Telegraph-sounder.	697,610	Apr. 15	2625	515	90	261
Green, Henry, Pekin, assignor to Acme Harvester Company, Peoria, Ill. Bundle-carrier for harvesters.	697,142	Apr. 8	1420	319	90	264
Green, James O., and H. T. Martin, Whitewater, Wis. Converting peat into fuel.	700,120	May 20	2620		90	1240
Green, Robert M., Jr., assignor to R. M. Green & Sons, Philadelphia, Pa. Syrup-cock for soda-water fountains.	702,121	June 20	1221	245	90	2441
Green, Robert M., Jr., assignor to R. M. Green & Sons, Philadelphia, Pa. Soda-water apparatus.	702,122	June 20	1222	245	90	2441
Green, Robert M. and Robert M., Jr., Philadelphia, Pa. Soda-water apparatus.	702,123	June 20	1223	245	90	2442
Green, Samuel E. (See Stoneham, Orville A., assignor.)						
Green & Sons, Robert M. (See Green, Robert M., Jr., assignor.)						
Green, William M., Evanston, J. R. Gent, Chicago, and H. A. Foppenhausen, Evanston, Ill. Furnace.	697,220	Apr. 15	2627	516	90	261
Greene, Benjamin P. (See Gates, William H., assignor.)				517	90	
Greene, Edgeworth, Montclair, N. J., assignor, by mesne assignments, to American Rubber Works Company. Pneumatic vehicle-tire.	697,221	Apr. 15	2614	517	90	262
Greene, Edwin R., Providence, R. I. Electric fly-trap.	698,274	Apr. 22	2645	921	90	263
Greene, F. B. (See Mann, Charles E., assignor.)						
Greene, John, assignor of one-half to J. J. T. Reese, Reese, N. C. Lumber-measure.	702,220	June 10	1222	271	90	2445
Greene, Marritt. (See Felt, Frank R., assignor.)						
Greening, Frederick, Plumstead Common, assignor to F. H. Bowden, London, and S. H. Dodd, Blackheath, England. Manufacture of electrically-insulating and waterproofing materials.	701,712	June 3	720		90	2272
Greenland, Gustave, Braddock, Pa. Match-box.	697,245	Apr. 8	1602	220	90	229
Greenman, William J., Cortland, N. Y. Extensible window-screen.	702,220	May 20	2620	620	90	1212
Greenwood, William J., Tharston, assignor to C. L. Finco, Pittsburg, Pa. Press-mold for hollow articles.	698,420	Apr. 1	97	15	90	12
Greer, Fredric, Chicago, Ill. Medical battery.	698,677	May 12	2625	247	90	1402
Gregory, Fred L., Chicago, Ill. Ignition system.	698,622	Apr. 1	940	214	90	128
Gregory, Joseph H., Morris Plains, N. J. Shaft-support for vehicles.	698,622	Apr. 20	2617	622	90	622
Greist, John M., New Haven, Conn. Tuck-creaser for sewing-machines.	698,011	Apr. 22	2620	622	90	622
Greitz, Gustav, Gutsenberg, N. J., assignor to A. Hollander, New York, N. Y. Necktie-fastener.	698,210	Apr. 1	725	179	90	127
Greiner Art Company. (See Greiner, Prosper M. O., assignor.)						
Greiner, Prosper M. O., New York, N. Y., assignor to Greiner Art Company. Photographic fabric and preparing same.	698,222	Apr. 1	422		90	22
Greiner, John, et al. (See Wilma, Ferdinand, assignor.)						
Grevel, August, Cologne, Germany. Air-escape valve.	698,012	Apr. 22	2622	622	90	622
Gridley, Charles A., et al. (See Hamford, Orin A., assignor.)						
Gridley, George O., Windsor, Vt. Stay-bolt and making same.	698,075	May 12	1620	247	90	1402
Griffith, James R., Norwalk, and H. Morehouse, East Norwalk, Conn. Mast-beam trimmer.	702,270	June 17	2620	671	90	2744
Griffin, Arthur L. (See Boers and Griffin.)						
Griffin, Ernest F., Finchley, and W. E. Higgs, London, England. Press for working sheet metal.	697,477	Apr. 15	2622	422	90	471
Griffin, Ernest F., Finchley, and W. E. Higgs, London, England. Sheet-metal box w	697,478	Apr. 15	2615	417	90	462
Griffin, John, Scottville, Mich. Milk-pail.	701,221	June 3	99	11	90	2120
Griffin, John R., and E. C. Anderson, Van Alstyne, Tex. Compress and packer.	702,221	June 10	1220	272	90	2447
Griffin, Michael J., Holpehn, Mass. Buckle.	701,221	June 3	99	112	90	2112
Griffin, Percy, Orange, N. J. Brick.	697,214	Apr. 15	2622	422	90	424
Griffin, William H., Jersey City, N. J. Window shade and curtain holder.	702,222	June 24	2621	675	90	2227
Grigg, Joseph, Colorado, assignor to United Manufacturing Company, Waverly, N. Y. Soap-book.	701,222	June 3	99	112	90	2120
Grinn, Gustav H., Rutland, Vt. Water-reservoir for ranges.	702,222	June 24	2622	675	90	2227
Grinn, Hugo, Erfurt, Germany. Mustard-pot.	702,222	June 24	2621	675	90	2227
Grippa, William H., Newark, N. Y. Apparatus for applying fillers to floors.	698,227	May 6	922	92	90	1222

INDEX OF PATENTS ISSUED FROM THE

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			1st	2nd	Vol.	Page.
Griswold Dental Bridge Company. (See Griswold, William E., assignor.)						
Griswold, William E., assignor to Griswold Dental Bridge Company, Denver, Colo. Dental impression-cup	708,645	June 17	2688	371	26	2688
Griswold, William E., assignor to Griswold Dental Bridge Company, Denver, Colo. Dental tool	708,648	June 17	2688	371	26	2688
Griswold, William E., assignor to Griswold Dental Bridge Company, Denver, Colo. Dental fastening and bridgework	708,657	June 17	2688	371	26	2741
Griswold, William E., assignor to Griswold Dental Bridge Company, Denver, Colo. Securing device for dental bridgework	708,671	June 17	2688	371	26	2745
Griswold, William M., Monroe, W. Va. Clevis	708,680	June 24	2688	371	26	2887
Griswold, William W. (See Bolton, James D., assignor.)						
Grivet, Adolph, et al. (See Gearing, Charles M., assignor.)						
Grob, George. (See Erich, George, assignor.)						
Grobbel, Joseph A., assignor to Kurehede Manufacturing Company, New York, N. Y. Tubular braid	692,480	Apr. 20	2618	365	26	300
Grooddyka, John, Danville, Ill. Churn	697,304	Apr. 2	2525	345	25	347
Groombridge, Charles, assignor of one-half to W. A. South, London, England. Propeller for air-ships	697,400	Apr. 6	2525	345	25	404
Gross, John. (See Cohen and Gross.)						
Gross, Louis N., Cleveland, Ohio. Waistband	701,280	June 2	2681	371	26	2130
Gross, Rudolph, Brenham, Tex. Pedal attachment	701,714	June 2	2681	371	26	2579
Grote Bottle Machine Company. (See Grote, Ludwig, assignor.)						
Grote, Ludwig, London, England, assignor to Grote Bottle Machine Company, Jersey City, N. J. Machine for making glass bottles	700,101	May 20	2590	400	25	1040
Grotke, August, assignor of one-half to H. Kraemer, Wanne, Germany. Shaft-door and stage locking device	701,800	June 2	2681	371	26	2035
Grove, David, Berlin, Germany. Apparatus for purifying air	690,106	May 6	2570	345	25	1180
Grove, Frank E., Franklin, Pa. Type-writer copy-holder	700,117	May 13	2594	400	25	1577
Gruber, Mauritian. (See Barnard, Charles M., assignor.)						
Grumobaum, Henry, New York, N. Y. Bottling-machine	690,917	May 13	2541	385	25	1207
Grummt, Ernst M., Gelsenau, Germany. Agricultural utensil	700,120	May 20	2595	401	25	1041
Grundy, Thomas, assignor of one-half to R. Potter, Auckland, New Zealand. Combined safety clothes-line and peg holder or clamp	697,404	Apr. 6	2525	345	25	404
Gushwender, Henry, and J. H. Dearholt, Ontario, Wis. Feeder for roller-mills	694,973	Apr. 1	2485	331	24	114
Gubing, Frank. (See Asenbach and Gubing.)						
Guenther, Henry L., Chinook, Wash. Machine for capping and compressing cans	695,701	Apr. 20	2572	364	25	900
Guernsey, Anna C., Des Moines, Iowa. Advertising and selling machine	695,702	Apr. 20	2572	364	25	900
Guerra, Asterio. (See Marx and Guerra.)						
Guth, Oswald, New York, N. Y. Tongue for photographic plates	702,190	June 24	2640	314	26	2087
Gusgnon, Francois. (See Roussy de Sales and Gusgnon.)						
Guild & Garrison. (See Garrison, William F., assignor.)						
Guild, Georgiana, Providence, R. I. Chart for recording ancestry	690,730	May 12	2586	390	25	1454
Gullott, Eugene H. (See Iross, Fred A., assignor.)						
Gullmartin, James, Boston, Mass. Dividing apparatus	690,530	Apr. 1	250	71	25	97
Gulraud, Gustave, Orippeocreek, Colo., assignor to R. McKnight, Philadelphia, Pa. Treating ores containing silica or silicates	702,940	June 24	2638	305	26	2791
Gulland, Charles, Pittsburg, Pa. Pressure-regulator	690,708	Apr. 20	2581	385	25	905
Gullickson, Fred E., Cashton, Wis. Device for stripping tobacco from laths	701,204	June 2	2681	371	26	2130
Guliver, Harry, South Yarra, Victoria, Australia. Railway signaling and communication apparatus	690,811	Apr. 1	2575	370	25	107
Gundel, George H., Rochester, N. Y. Vegetable-strainer	700,122	May 20	2595	401	25	1041
Gundry, James E., Rankin, Mich. Pitman connection	690,594	Apr. 20	2547	381	25	1000
Guenther, Friedrich, Beckinghausen, Germany. Self-closing door for mines	690,875	Apr. 20	2547	381	25	900
Gustafson, Axel R., assignor to Electric Laundry Machinery Co., Chicago, Ill. Machine for shaping and smoothing collars or like articles	701,715	June 2	2681	371	26	2072
Gustafson, Axel R., assignor to Electric Laundry Machinery Co., Chicago, Ill. Machine for shaping collars or other like articles	701,716	June 2	2681	371	26	2072
Gustafson, Elias G. (See Felsing and Gustafson.)						
Gustaf, Frederick K. (See Braun, Charles A., assignor.)						
Gustorf, Albert, Neum, Germany. Roofing-tile	702,920	June 20	2630	305	26	2487
Gutheiser, Phoenix M., Liberty Corner, N. J. Trace	690,918	May 12	2540	385	25	1200
Gwinn, George W., Baltimore, Md., assignor to Raymond Button Company of Baltimore City. Garment-fastener	702,754	June 17	2680	360	26	2000
H. C. White Co. (See White, Hawley C. and H. C., assignors.)						
H. Haller Manufacturing Company. (See Hobbs, George P., assignor.)						
H. W. Gernard Company. (See Forster, Leona S., assignor.)						
Hann, Gustavus. (See Nielsen and Hansen, assignors.)						
Hann, Walter G., Dayton, Ohio. Paper box	700,410	May 20	2595	400	25	1720
Hann, Walter G., assignor of one-half to Dayton Paper Novelty Company, Dayton, Ohio. Paper pall	697,005	Apr. 6	2507	340	25	404
Habermeyer, Theodore H., Fort Wayne, Ind. Valve mechanism for engines	700,000	June 17	2591	470	25	2000
Habeck, Michael, Brooklyn, N. Y. Window	690,200	May 12	2540	385	25	1200
Hachenberg, Julius, Hoboken, N. J. Manufacture of celluloid articles	690,212	May 6	2520	370	25	1200
Hackett, Julia E. (See Musler, Nelson, assignor.)						
Hackett, James L., et al. (See Lecomme, Jean M. A., assignor.)						
Hadaway, John B., Brockton, Mass. Stitch-separating machine	690,870	May 12	2541	387	25	1407
Hadaway, John B., Brockton, Mass. Stitch-separating machine	700,912	May 27	2620	305	26	1200
Haeckle, Friedrich, Pasing, Germany. Making leaf metal	690,900	May 12	2540	385	25	1200
Hager, James, Jr., Augusta, Ky. Sheet-metal button and blank therefor	701,717	June 2	2681	371	26	2072
Hager, John W., Bellefonte, Pa. Vehicle-axle attachment	702,004	June 17	2685	370	26	2007
Haffner, Bertha, Woono, Mo. Cake-pan	702,200	June 10	2681	370	26	2007
Hagan, Coleman, et al. (See Hagan, Ira E., assignor.)						
Hagan, Frederick W., et al. (See Hagan, Ira E., assignor.)						
Hagan, Ira E., assignor of three-fifths to F. W. and C. Hagan, North Lenoire, I. H. Hagan, Jr., Elsworth Falls, O. D. Page, Bangor, P. M. Hagan and L. F. Crane, Crane, Mo. Measuring instrument	697,205	Apr. 6	2500	335	25	300
Hagan, Christian, Erfurt, Germany. Locomotive-engine	690,576	Apr. 20	2540	381	25	900

UNITED STATES PATENT OFFICE, 1908.

49

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Draw.	Vol.	Page.
Haggen, Christian, Erfurt, Germany. Locomotive with driven boggy.....	690,517	May 6	730	170	30	1286
Haggen, Christian, Erfurt, Germany. Driving-axle for locomotives.....	700,000	May 13	1700	171	30	1281
Hage, Robert R., and H. P. Walker, Twin Valley, Minn. Reversible device for engines.....	700,000	May 20	2000	407	30	1212
Hagemeister, Amos, Abbeville, N. D. Straw-stacker.....	693,512	Apr. 1	700	180	30	127
Hagerty, Ida, Austin, Tex. Tongue-scraper.....	697,900	Apr. 8	1700	300	30	300
Hagstedt, Hans J., Bistrick, Wis. Egg-crater.....	690,000	Apr. 20	4000	1000	30	1000
Hagge, John. (See Loeb and Hagge.)						
Haigh, Noel H., Oldham, and T. Sugden, East Dulwich, England. Steam-trap.....	701,000	May 27	2700	300	30	2000
Haigh, William C., Chorlton-cum-Hardy, near Manchester, England. Coin-controlled toy.....	697,070	Apr. 15	2000	400	30	471
Haines, George W., assignor to Houser & Haines Manufacturing Company, Stockton, Cal. Threshing-machine.....	700,001	June 24	2000	700	30	2007
Haines, Samuel A., Garrett, Tex. assignor to W. H. Spake, Anaheim, Cal. Wrench.....	697,040	Apr. 15	2000	607	30	644
Haire, James A., Weyauwega, Wis. Pipe-puller.....	700,001	June 24	2000	607	30	2000
Haldeman, William L. (See Christ and Haldeman.)						
Hale, Henry S., Philadelphia, Pa., assignor to Hale and Kilburn Manufacturing Company, Car-seat.....	701,000	June 2	500	110	30	2012
Hale, John A., Rockville, Ind. Saw-handle clamp.....	690,000	Apr. 20	4000	1070	30	1007
Hale and Kilburn Manufacturing Company. (See Britton, George W., assignor.)						
Hale and Kilburn Manufacturing Company. (See Hale, Henry S., assignor.)						
Hale, Will E., et al. (See Roake, John E., assignor.)						
Haley, Jonathan, Akron, Ohio. Bottle or jar press.....	697,915	Apr. 15	2004	607	30	604
Haley, Jonathan, Akron, Ohio. Tumbler-press.....	700,000	June 17	2000	470	30	2070
Haley, Thomas S., New Haven, Conn. Feeding device for metal-working machines.....	700,000	May 20	2004	540	30	1007
Haley, William L., Alvin, Tex. Milk-cooler.....	700,104	June 10	1004	500	30	2400
Hall, Burleigh O. (See Perry, James S., assignor.)						
Hall, Charles M., Niagara Falls, N. Y. Paint.....	701,710	June 2	707		30	2270
Hall, Edward A., et al. (See Shank, Augustus W., assignor.)						
Hall, Edward W., Rutherford, N. J., assignor to himself, H. C. Fisher and J. L. Oberly, New York, N. Y. Invisible-impression printing.....	690,000	Apr. 1	400	100	30	30
Hall, Edwin, assignor to Le Roy Flow Company, Le Roy, N. Y. Clevis for plows or the like.....	690,007	Apr. 20	4001	1070	30	1007
Hall, George, Fostoria, Ohio. Station-annunciator for railway-cars.....	690,001	Apr. 20	2010	300	30	300
Hall, J. L., et al. (See Barnes, James P., assignor.)						
Hall, James. (See Macchillo and Hall.)						
Hall, James, Radcliffe, England. Friction-clutch.....	690,110	Apr. 20	2000	700	30	700
Hall, Joseph, Leeds, England. Mechanism for measuring and recording measurements of material.....	697,000	Apr. 8	1004	300	30	300
Hall, Roderic F., East Orange, N. J., assignor to Western Electric Company, Chicago, Ill. Lead-pen.....	690,000	May 6	607	70,70	30	1000
Hall, Samuel J., et al. (See Nathan, Theodore N., assignor.)						
Hall Signal Company. (See Salmon, Wilmer W., assignor.)						
Hall, Thomas. (See Yarrington and Hall.)						
Hall, William G., Grafton, W. Va. Flow attachment.....	700,007	June 17	2001	671	30	2000
Hall, Zachary T., Philadelphia, Pa. Handle for washboilers.....	697,000	Apr. 8	1004	300	30	300
Hall's Safe & Lock Company. (See Donnell, James W., assignor.)						
Hallcock, Parker S., Akron, Ohio. Means for teaching writing.....	690,000	Apr. 20	4000	1070	30	1007
Halsell, William H. A., and S. Lapham, Charleston, S. C. Cooling-tower.....	690,010	Apr. 20	2000	607	30	600
Halsford, George W., Leslie, Mich. Horn-shoe-calk sharpener.....	700,000	May 20	2001	600	30	1000
Halsford, Thomas J. (See Moody, Winfield H., assignor.)						
Ham, Albert W., Lansingburg, N. Y. Trolley-catcher.....	700,700	May 27	2041	700	30	1000
Ham, Herbert H., New York, N. Y. Cork-extractor.....	700,001	June 10	1000	300	30	2001
Hamann, Carl H. O., Bielefeld, near Hamburg, Germany. Differential gearing.....	700,700	June 17	2700	600	30	2710
Hamblly, Margaret, et al. (See Vernon, Charles W., assignor.)						
Hamblly, Matthew C. F., et al. (See Vernon, Charles W., assignor.)						
Hamel, Joseph L., Grafton, N. D. Door-closing and holding device.....	690,000	Apr. 20	4004	1071	30	1007
Hamel, Norbert D., West Garden, Mass. Combined bevel-protractor, square, and pitch-board.....	700,000	May 20	2000	544	30	1007
Hammer, John C., Radcliffe, England. Apparatus for drying yarn.....	700,000	June 10	2000	500	30	2000
Hamill, Robert. (See Wilson, David Y., assignor.)						
Hamilton, Charles A., Coventry, England. Carbureting device for internal-combustion motors.....	690,000	May 6	200	70	30	1000
Hamilton, Charles E. (See Osted and Hall, assignors.)						
Hamilton, Clarence J., assignor to C. J. Hamilton & Son, Plymouth, Mich. Sight for firearms.....	690,000	Apr. 6	1100	300	30	300
Hamilton, Edward D., Vancouver, Wash. Washing-machine.....	700,104	May 20	2104	600	30	1411
Hamilton-Foster Fog Signal Company. (See Hope-Jones, Robert, assignor.)						
Hamilton, Frederick A. E., Beverly, assignor to H. Hunt, Boston, Mass. Hinge-joint for connecting rod-sections.....	700,004	June 10	1000	370	30	2007
Hamilton, John. (See Fawcett, James F., assignor.)						
Hamilton, Joseph, assignor to James Dunlop Carpet Company, Philadelphia, Pa. Yarn-printing machine.....	690,000	May 10	1004	307	30	1110
Hamilton, Paul H., assignor of one-half to J. Goepfinger, Youngstown, Ohio. Fluid-pressure regulator.....	700,070	June 17	2000	670	30	2700
Hamilton, Robert, Commerce, Tex. Window attachment.....	700,000	June 24	2000	607	30	2000
Hamilton, Robert, Commerce, Tex. Shears.....	700,000	June 24	2004	607	30	2000
Hamilton, Robert A., Brooklyn, N. Y. Thread-cutting appliance.....	700,100	June 24	2041	614	30	2007
Hamilton & Son, C. J. (See Hamilton, Clarence J., assignor.)						
Hamilton, Thomas C., Bokes Creek, Ohio. Latch.....	690,000	Apr. 20	6004	1071	30	1000
Hamilton, William J., Carbondale, assignor of two-fifths to T. B. Hughes, Scranton, Pa. Coal-separator.....	700,004	June 24	2000	600	30	2000
Hammer, Martha V., assignor of one-half to H. W. Miller, Thelma, Va. Game apparatus.....	697,000	Apr. 8	1000	400	30	400
Hammer, Sigard A. S. (See Neiss and Hammer.)						
Hammer, Jacob. (See Katina, Albert, assignor.)						
Hammer, John and E. M., Tacoma, Wash. Dress-skirt hater.....	690,001	Apr. 1	204	70	30	30

Hess, Julius C., Cleveland, Ohio. Burial-vault.	699,099	Apr. 29	2999	1129	99	1149
Hewitt, Garrett W., assignor to Hewitts Novelty Company, Indianapolis, Ind. Safety speed-limiting means.	702,491	May 20	2799	699	99	1794
Hewitts Novelty Company. (See Hewitts, Garrett W., assignor.)						
Hewitts, Earl, and A. Peterson, Brussels, Belgium. Manufacture of spherical maps.	701,300	June 3	114	99	99	2129
Hewitts, Bernhard, Austin, Ill. Track-landing device for locomotives.	702,494	May 27	2541	999	99	1994
Hewitts, Louis C., Reims, France. Photographic plate for reproducing ink impressions.	702,494	June 17	2999	699	99	2979
Henry, Harvey J., Madison, Ohio. Gas-burner for stoves.	699,215	Apr. 1	799	181	99	181
Henry, James. (See Eyer, Frank A., assignor.)						
Henry, J. H. (See Skinner, John J., assignor.)						
Henry, John C., deceased, Denver, Colo.; S. A. Henry, executrix, assignor to Stanley Electric Manufacturing Company. Electric controller.	699,991	May 13	1930	299	99	1991
Henry, John C., deceased, Denver, Colo.; S. A. Henry, executrix, assignor to Stanley Electric Manufacturing Company. Electric railway.	702,497	June 17	2971	679	99	2971
Henry, Sule A., executrix. (See Henry, John C.)						
Henry, Robert W., Oremerville, Ind. Cultivator.	699,199	Apr. 29	2495	799	99	779
Henry, William K., assignor to P. & F. Corbin, New Britain, Conn. Brush.	699,245	Apr. 29	4991	1073	99	1073
Henstock, Edward W., Chester, England. Pedal for velocipedes.	700,499	May 20	2714	999	99	1795
Hercules Woodware Company. (See Bell, Joseph, Jr., assignor.)						
Herdon, Henry, Wellsboro, Pa. Roller-die.	699,216	Apr. 1	704	181	99	181
Hertz, Heinrich, Bonn, Germany. Manufacture of water and fat proof paper with glazed surface.	697,997	Apr. 8	1545	349	98	349
Hesley, Patrick H. (See Chambers, Joseph, assignor.)						
Hesk, Frank, New York, N. Y. Machine for teaching type-writing.	699,114	Apr. 29	2944	719	99	799
Herman, Frank, et al. (See Miller, Benjamin F. D., assignor.)						
Herman, H. (See Anderson, Carl O., assignor.)						
Herman, Heinrich, Crafton, Pa. Circuit-controller.	699,099	May 13	1613	299	99	1991
Herold, Friedrich, Berlin, Germany. Photographic-printing frame.	699,015	Apr. 29	2999	697	99	694
Herrick, Gerard P., New York, N. Y. Blast-furnace.	697,999	Apr. 8	1999	299	98	2991
Herrick, Harrison R., Merrimack, N. H. Saw-handle fastening.	701,301	May 27	4044	999	99	2041
Herrington, Florence L., assignor to G. L. McAlpin, New York, N. Y. Cigar-bunch-wrapping machine.	699,299	Apr. 29	4975	1099	99	1099
Herrington, Fredrick J., Pittsburg, Pa. Non-refillable bottle.	700,770	May 27	2999	747	99	1999
Herron, Charles. (See De Rochemont, Perkins H., assignor.)						
Herschmann, Arthur, New York, N. Y. Vehicle.	699,499	Apr. 29	2991	997	99	994
Herschmann, Arthur, New York, N. Y. Braking device for compensating gears.	699,494	Apr. 29	2999	1073	99	1099
Herschberger, Charles H., Leray, Va. Currycomb.	699,016	Apr. 29	2997	997	99	994
Hervey, James J., Randolph, Cal. Cylindrical tank.	700,197	May 20	2109	499	99	1949
Hervey, Walter, Chamon, Ill. Tube-cutter.	700,199	May 20	2111	499	99	1949
Hernberg, Richard, Berlin, Germany. Furnace for burning fine fuel.	700,499	May 20	2719	991	99	1799
Hernig, Gustavus A., San Francisco, Cal. Grazing apparatus.	699,999	Apr. 1	299	79	99	99
Hess, John J., West, N. Y. Calf-washer.	697,999	Apr. 8	1911	294	98	291
Hess, Edward B., Brooklyn, assignor to Mechanical Improvements Company, New York, N. Y. Writing-machine.						
Hess, Edward B., Brooklyn, assignor to Mechanical Improvements Company, New York, N. Y. Writing-machine.	700,997	May 20	2995	999	99	1995
Hess, Edward B., Brooklyn, and J. H. Stoughton, Yonkers, assignors to Mechanical Improvements Company, New York, N. Y. Time-stamp.	700,999	May 20	2999	999	99	1999
Hess, John, Milwaukee, Wis. Newspaper-daily.	700,971	May 27	2999	799	99	1999

Hirner, Emil A., Allentown, Pa. Manufacture of striped hosiery.....	693,924	May 13	1616	370	90	1200
Hirsch, Samuel L., Cincinnati, N. Y. Chicken-brooder.....	701,040	May 27	2725	625	90	2001
Hirt, Ludwig, Grovesbroich, Germany. Centrifugal machine.....	693,281	May 6	205	86	90	1500
Hirt, Charles H., assignor to Springfield Metallic Canst Company, Springfield, Ohio. Burial-canister.....	693,000	Apr. 1	94	20	90	20
Hitt, Joseph E. (See Hitt, Robert G., assignor.).....						
Hitt, Robert G., Atlanta, assignor of one-fourth to J. E. Hitt, Augusta, Ga. Tag.....	695,695	Apr. 1	540	120	90	115
Hornstedt, John M., St. Paul, Minn., assignor to F. B. and E. J. Fargo, Leavenworth, Wis. Horse-collar-blocking machine.....	701,200	June 20	1905	241	90	2020
Hoag, Chester R., assignor to Whithead & Hoag Company, Newark, N. J. Letter or space indicating scale for type-writing machines.....	693,104	May 6	741	173	90	1200
Hoag, Ira G., Los Angeles, Cal. Train-order box in connection with semaphores.....	692,755	May 13	1203	220	90	1430
Hoag, Ira G., Los Angeles, Cal. Train-order box.....	700,205	May 27	2725	625	90	1905
Hoag, Ira G., Los Angeles, Cal. Train-order box.....	700,243	June 24	2920	540	90	2020
Hoagland, John, Clarkburg, W. Va. Molding-machine.....	700,205	June 24	2921	540	90	2021
Hoar, James F., Brooklyn, assignor to C. F. Wyckoff, Ithaca, and J. R. Chisholm, New York, N. Y. Internal-combustion engine.....	700,400	June 17	2975	474	90	2075
Hoar, John H., Denver, Colo. Smoke-preventer.....	697,925	Apr. 5	1245	295	90	20
Hobbs, Mica D., Edwardsville, Ill., assignor of one-half to C. A. Robbins, Winterset, Iowa. Rotary engine.....	700,000	May 20	2974	600	90	1705
Hobbs, Charles H., Baltimore, Md., assignor of one-half to H. P. Brown, Montclair, N. J. Third-rail construction for electric railways.....	700,000	May 20	2920	540	90	1200
Hobbs, George P., assignor of one-half to H. Haller Manufacturing Company, Limited, New Orleans, La. Packaging sheet-metal sections.....	695,220	May 6	297	90	90	1200
Hobrecht, Albert, Ensenada, Mexico. Automatic water-balance.....	697,000	Apr. 5	1247	295	90	205
Hochrism, Gustav F. (See Pumps and Hochrism.).....						
Hochstet, Aaron L., Madison, Wis. Wheel.....	697,341	Apr. 5	1773	397	90	397
Hodges, Chester A., Vinton, Iowa. Butter-priming apparatus.....	701,241	May 27	2724	624	90	2025
Hodges, Abel B. W., Grand Forks, Canada. Furnace-charging system.....	695,225	May 6	740	174	90	1200
Hodges, Chancery W., assignor to Michigan Specialty Company, Limited, Battlecreek, Mich. Harness-hook.....	695,970	Apr. 5	1120	281	90	201
Hodges, James W., Jersey City, N. J., assignor of one-half to H. C. Vom, New York, N. Y. Steam-trap.....	695,770	May 5	70	20	90	1120
Hodges, John D., assignor of two-thirds to D. W. Hewitt and E. Butler, Jr., St. Louis, Mo. Car-fender.....	701,500	June 5	210	114	90	2015
Hodgins, Philip E., and G. E. Kenney, London, England. Type-distributing machine.....	701,201	June 10	1905	242	90	2027
Hodgkinson, Edmund H., County of Middlesex, England. Belt, rope, or chain gearing.....	701,505	June 24	2920	700	90	2070
Hodgson, John G., Maywood, Ill., assignor, by mesne assignments, to American Can Company, Jersey City, N. J. Machine for manufacturing half-sared cans, pails, or other vessels.....	701,205	June 24	2924	510	90	2020
Hodgson, George F., Chicago, Ill. Filter.....	701,700	June 5	270	179	90	2017
Hoe and Company, E. (See Spelthover, William, assignor.).....						
Hoe and Company, E. (See Tucher, Edwin D., assignor.).....						
Hoe, Robert. (See Reed, George F., assignor.).....						
Hoe, Robert. (See Rosen, Oscar, assignor.).....						
Hochstein, Philipp. (See Brantigan and Hochstein.).....						
Hoen, Albert B. (See Barth and Hoen.).....						
Hoen, Ernst A. (See Gorton, Arthur B., assignor.).....						
Hoevel, Francis G., Brooklyn, N. Y. Gas-heater.....	695,017	Apr. 20	2080	690	90	694
Hoevel, Francis G., Brooklyn, N. Y. Gas-heater.....	697,057	Apr. 5	1245	295	90	205
Hoy, John, San Francisco, Cal. Bed-bottom.....	700,000	May 27	2720	617	90	1907
Hoy, John, San Francisco, Cal. Bed-bottom.....	700,000	May 20	2975	600	90	1700
Hoy, Edward von, New York, N. Y. Fishing-rod.....	700,404					
Hoffman, John W., et al. (See Harrison, Frank G., assignor.).....	695,000	Apr. 20	2080	690	90	694
Hoffman, Nellie F., Arlington, S. D. Oven.....						
Hoffman, Richard J. (See Krueger and Hoffman.).....						
Hoffman, William W., and F. W. Powers, West Lafayette, assignors to Electric and Steam Railway Supply Co., Lafayette, Ind. Railway-switch.....	695,200	Apr. 20	2073	1050	90	2201
Hoffmann, Ernest G., Chislehurst, England. Machine for grinding balls.....	700,000	June 24	2920	700	90	2070
Hoffmann, Peter, Greenfield, Iowa. Grain-threshing machine.....	700,007	May 13	1770	411	90	1820
Hofmeister, William. (See Olney and Hofmeister.).....						
Hogg, Bertha F., and J. C. Hogg, assignors to American Manufacturing Co., Erie, Pa. Sectional ladder.....	700,000	May 20	2971	600	90	1700
Hoggins, Francis M., (See Haggner, Willie A., assignor.).....						
Hogstra, August, Oshkosh, Iowa. Pipe-lifting mechanism.....	697,205	Apr. 15	2080	690	90	694
Hogstra, Anton, Oshkosh, Iowa. Pipe-lifting machine.....	697,710	Apr. 15	2081	690	90	695
Holmes, Gustavus E., and O. M. Holmes, assignors to Stromberg-Carlson Telephone Manufacturing Company, Chicago, Ill. Annunciator.....	695,010	Apr. 20	2080	690	90	694

Alphabetical list of patents, April to June, inclusive—Continued

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			U. S.	For.	Vol.	Page.
Hoppen, John J., Springfield, Ohio. Rotary sweeper	692,442	Apr. 1	92	20	90	28
Hoppen, John J., Springfield, Ohio. Meter-box connection	692,174	May 6	92	20	90	1170
Hornet, Charles L., Brooklyn, assignor to R. H. Williams, New York, N. Y. Wheel	692,728	May 12	1210	222	90	1222
Hörner, Otto, Dresden, Germany. Draft-regulator for locomotives	702,925	June 10	1297	297	90	2222
Hörner, John H. (See Hörner, Simon D. and J. M.)						
Hörner, Simon D. and J. M., Newton, Tex. Mud or sand head for vehicles	701,222	June 2	121	25	90	2124
Horn, Frank O. (See Blair and Horn.)						
Horn, George A. (See Fisher, Charles, assignor.)						
Hornaday, Elmer, assignor of two-fifths to G. W. Shannett, Colfax, Iowa. Computing measuring cabinet	692,224	Apr. 1	227	72	90	22
Horne, John W., Des Moines, assignor to McNulty Brothers, Marshalltown, Iowa. Metal door-mat. (Retains)	11,222	May 12	2222	222	90	1212
Horsman, Charles W., Jersey City, N. J., assignor to himself, R. E. and H. J. Knapp. Brooklyn, N. Y. Moving trains (See Horrocks, William, assignor.)	701,042	May 27	2700	224	90	2222
Horrocks Desk Company. (See Horrocks, William, assignor.)						
Horrocks, William, assignor to Horrocks Desk Company, Harkimer, N. Y. Type-writer cabinet	692,222	Apr. 1	120	72	90	70
Horsing, Bernard F. (See Stein, Peter, assignor.)						
Hortsmann, Richard, and W. Wenzel, Berlin, Germany. Type-writing machine	692,222	May 2	170	27	90	1242
Horton, Emma, Elmira, N. Y. Mechanical mow-mower	227,242	Apr. 2	174	227	90	227
Hose, Lucy E., Cleveland, Ohio. Carbon-oil heater	692,222	Apr. 20	2222	270	90	222
Hosford, Charles B. (See Hapley and Hosford.)						
Hoskins, George J., Sydney, New South Wales, Australia. Apparatus for making cores	692,172	May 6	22	22	90	1122
Hosmer, George H., Niagara Falls, N. Y., and E. W. Anderson, Washington, D. C. Reminding device	702,022	June 24	2222	722	90	2222
Hossett, Benjamin D., et al. (See Livingston, Thomas, assignor.)						
Hotchkins, Henry S. (See Pearson, John H., assignor.)						
Houdyshell, Aaron C., Tama, Iowa. Shock-loading apparatus	702,702	June 17	2702	227	90	2712
Houde, Alfred, Rennes, France. Rolling-shoe	692,221	Apr. 22	2222	722	90	221
Hough, William J., Albany, N. Y. Catch-basin for sewers	692,172	May 6	22	22	90	1122
Houghton, William J., Norfolk, Wash. Conduit	697,222	Apr. 15	2224	222	90	272
House, Henry A., Jr., Hamstead, England. Automatic fuel-regulator	692,022	Apr. 1	442	102	90	22
House & Holmes Manufacturing Company. (See Holmes, George W., assignor.)						
Houston, David H., Hunter, N. D. Photographic-roll holder	702,122	May 12	1222	441	90	1272
Houston, Preston O. (See Gairdner, Ottmar A., assignor.)						
Hoyer, Jess O., Birmingham, N. Y. Folding box	700,022	May 12	1721	412	90	1224
Harvey, Charles C. (See Lea, George, assignor.)						
Howard, Archibald, and G. F. Lam, Ogdensburg, N. Y. Releasing hitching-strap	701,222	May 27	4171	222	90	2224
Howard and Bullock American Machine Company. (See Riley, Charles E., assignor.)						
Howard, Clarence W., Kirkwood, Ill. Typoid or stand	697,122	Apr. 2	1227	221	90	222
Howard, Clarence W., Kirkwood, Ill. Typoid or stand	697,127	Apr. 2	1222	221	90	222
Howard, Daniel. (See Hapley and Hosford.)						
Howard, Frank W., assignor to E. S. Scarborough, Brooklyn, N. Y. Filling-machine for sand-bolting tanks	692,722	Apr. 1	222	122	90	122
Howard, George H. and J. Langhart, Jr., McKeesport, Pa. Wrench	692,712	Apr. 1	224	122	90	112
Howard, George H., Washington, D. C. Label	702,222	June 10	1212	227	90	2212
Howard, George H., et al. (See Howard-Sherman, Charles H., assignor.)						
Howard, Harry E., Chicago, Ill. Curtain-stretcher	692,222	May 12	1072	221	90	1212
Howard, Harry E., Chicago, Ill. Portable trestle	702,221	June 27	2222	274	90	2222
Howard Iron Works. (See Darrin and Doller, assignors.)						
Howard, Lyman D., assignor to J. A. Jeffrey, Columbus, Ohio. Chain	702,274	June 27	2270	272	90	2722
Howd, Charles B., assignor to Balala Corset Company, Chicago, Ill. Garment-closure	702,222	Apr. 22	2212	222	90	272
Howden, James, Glasgow, Scotland. Steam-superheater	692,222	Apr. 22	2212	222	90	272
Howe, Allyn E., New York, N. Y. Speed-regulator for rotary shafts	702,221	June 24	2222	221	90	2211
Howe, Henshick, Otum, N. Y. Land-pulverizer	702,222	June 17	2222	227	90	2741
Howe, Henshick, Otum, assignor of one-half to F. F. Harris, Soli, N. Y. Antifriction roller-bearing	702,221	May 20	2212	222	90	2242
Howe, John B., and J. J. Fernandez, Danbury, Conn. Bicycle	702,122	June 24	2212	222	90	2222
Howe, Maynard L., Stockton, Cal. Self-feeder for threshers	697,022	Apr. 2	1242	222	90	222
Howe, Thomas J., Oronotus, Minn. Combined churn and butter-worke	702,712	May 27	2222	222	90	1221
Howe, William D. (See Fowler and Howe.)						
Howell, Charles W., Jr., Newark, N. J., assignor to Wagner Typewriter Company, New York, N. Y. Carriage-back mechanism for type-writing machines	702,222	June 24	2222	722	90	2724
Howell, Edward W., assignor to himself and F. B. Thurman, Denver, Colo. Delivery-apparatus for printing-presses	692,222	Apr. 1	727	122	90	122
Howell, Edward W., assignor to H. L. May, New York, N. Y. Rebagging apparatus	702,222	June 20	2222	222	90	2212
Howell, William, Brooklyn, N. Y. Child's teaching-rattle	692,227	May 12	1222	222	90	1227
Howes, Omar C., assignor to Cortland Carriage Goods Company, Cortland, N. Y. Propelling and brake mechanism for vehicles	692,222	Apr. 2	1122	224	90	222
Howland, Adin T., et al. (See Harry William L., assignor.)						
Howland, Channoy W., Geneva, N. Y., assignor to Standard Optical Company. Machine for marking or cutting lenses	724,222	May 27	2777	224	90	2222
Howland, Edwin, Boston, Mass. Strap and waste for water-pipes	702,222	June 24	2222	222	90	2212
Howard-Sherman, Charles H., assignor of one-fourth to G. H. Howard, Washington, D. C., and S. G. Cook, London, England. Main gun-carrot	697,222	Apr. 15	2702	222	90	227
Howles, John B., Sugar Grove, Pa. Spring-kings	711,244	June 2	122	22	90	2224
Howse, George L., assignor of two-thirds to B. Metcalf, Astoria, Mich. Voting-machine	702,221	May 27	2222	222	90	1227
Howy, George O., and J. J. Peiffer, Shamokin, Pa. Nut-lock	692,227	Apr. 22	2222	222	90	1221
Howy, Julius H., Asburg, Denmark. Fastening for doors or such like	692,222	Apr. 22	2222	222	90	222
Howy, Daniel, South Norwalk, Conn., assignor of one-half to National Lock Washer Company, Newark, N. J. Wash-lock	692,712	Apr. 1	722	122	90	122
Howy, Daniel, South Norwalk, Conn., assignor of one-half to National Lock Washer Company, Newark, N. J. Lock-washer	692,222	Apr. 1	222	122	90	122

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			U. S.	U. S.	U. S.	U. S.
Irvine, John S., et al. (See Blackwell, Edwin O., assignor.)						
Irvine, Thomas A. Horney, assignor to D. McVean, Chateaufort, London, England. Extraction of copper by the wet method	699,990	May 4	271		90	170
Irvine, David H., assignor of one-half to J. Chase, Boston, Mass. Bottle-cleanser	700,000	May 15	2710		90	170
Irvine, James A., Philadelphia, Pa. Toy top	699,990	Apr. 22	2620		90	170
Irvine, Herbert A., Galveston, Ill. Buffer for cutler-guards	700,000	May 1	2620		90	170
Irvine, Thomas H., Jersey City, N. J., and H. J. Miller, Brooklyn, N. Y. Carbonating-machine	697,730	Apr. 15	2497	900	90	200
Irvine, Wilson. (See Dobson, Alexander, assignor.)						
Isaac, Marcus C., Chicago, Ill. Fish-brush	700,130	June 15	1207	277	90	200
Isbell, Charles W., New York, N. Y. Gas-stove	698,590	May 15	1440	265	90	170
Israel, Elijah F., assignor of one-half to R. C. and G. W. Israel, Wichita, Kans. Seed-planter	711,200	June 3	280	114	90	200
Israel, George W., et al. (See Israel, Elijah F., assignor.)						
Israel, R. C., et al. (See Israel, Elijah F., assignor.)						
Ivan, Harry, assignor to C. M. Rogers and L. C. Rollo, Chicago, Ill. Mechanical movement.	710,000	June 17	2601	973	90	200
Ivan, Harry, assignor to C. M. Rogers and L. C. Rollo, Chicago, Ill. Mechanical movement.	710,000	June 17	2601	973	90	200
J. C. Bartlett Company. (See Ambata, Frank, assignor.)						
J. E. Margott Company. (See Fuller, Albert F., assignor.)						
J. Ellwood Lee Company. (See Garson, William H., assignor.)						
J. Ellwood Lee Company. (See Jones, Louis E., assignor.)						
J. H. Sears Company. (See Lombard, Walter E., assignor.)						
J. H. Williams and Company. (See Ambora, George J., assignor.)						
J. H. Williams and Company. (See Buford, George W., assignor.)						
J. L. Thomson Manufacturing Company. (See Thomson, Judson L., assignor.)						
J. M. Atkinson Company. (See Pimlott, William E., assignor.)						
J. Stevens Arms & Tool Company. (See Fay, Charles P., assignor.)						
J. T. Robertson Company. (See Kendrick, Dyer T., assignor.)						
J. W. Sefton Manufacturing Company. (See Ferris, Jeffrey T., assignor.)						
Jack, Robert E., Oshkosh, assignor of one-half to H. Dierker, Hortonville, Wis. Ogar-clipper and match-lighter	700,221	May 20	2600	547	90	170
Jackson, Charles E., Rockford, Ill. Switch-operating apparatus	699,227	May 6	271	27	90	170
Jackson, Edward K., London, England. Bridge for musical instruments	698,905	Apr. 20	2670	1070	90	170
Jackson, Edwin H., Chicago, Ill. Detachable fastener for hinges	699,200	May 6	700	170	90	170
Jackson, Frederick W., Chicago, Pa. Sand pump and boiler	702,241	June 17	2623	973	90	200
Jackson, George A., et al. (See Ridlon, Charles A., assignor.)						
Jackson, George W., assignor to Interlocking Steel Sheeting Company, Chicago, Ill. Metal sheet-piler	697,245	Apr. 15	2598	620	90	170
Jackson, George W., et al. O. Fanning, Manchester, England. Multicolor-printing machine	697,497	Apr. 15	2598	620	90	170
Jackson, James E., et al. (See Kitch and Jackson.)						
Jackson, James E., Lynn, Mass., assignor by mesne assignments, to United Shoe Machinery Company, Paterson, N. J., and Boston, Mass. Pulling-over machine	700,200	May 20	2600	547	90	170
Jackson, Joseph H., Chicago, Ill. Heel for boots or shoes	710,127	June 15	1203	247	90	200
Jackson, Peter H., San Francisco, Cal. Sidewalk trap-door	699,495	May 6	690	120	90	170
Jackson, Samuel, Fayetteville, N. Y. Hoisting and conveying machine	701,207	June 15	1000	240	90	170
Jackson, William B., Denver, assignor to Smoke Extensior and Fume Condenser Company, Pueblo, Colo. Apparatus for condensing smoke, fumes, and gases	701,200	May 27	2604	620	90	170
Jackson, William B., et al. (See Hagan, Charles A., assignor.)						
Jacob, Albert. (See Ambata, Frank, assignor.)						
Jacob, Arthur I., assignor to Sewing Machine Manufacturing Company, Hartford, Conn. Combined spool-holder and tension lever for sewing machines. (Reissue)	11,990	May 27	2174	902	90	200
Jacob, Harry B., Castleton, Vt. Drill	702,277	June 15	1203	247	90	200
Jacob, John, Chicago, Ill. Window-cash ventilator	700,000	May 27	2600	547	90	170
Jacobs, Olaus B., Roland, Iowa. Gate	700,130	June 15	1203	247	90	200
Jacobs, William A., et al. (See Zengel, Joseph, assignor.)						
Jacobs, William S., et al. (See McCombs, Joseph C., assignor.)						
Jacobson, Edward B. (See Folger, Moriarty, and Jacobson.)						
Jacobson, Edward B., assignor, by mesne assignments, to T. H. Nelson, Boston, Mass. Electric massage-machine	699,000	Apr. 20	2598	620	90	170
Jacobson, Louis. (See Weinberg, Bernhard, assignor.)						
Jacoby, William, assignor of seventeen-twentieths to J. E. and P. Snyder, J. A. Wilson, Fula, Minn., and M. Redinger, Prospect, Ill. Magazine-hammer	701,721	June 3	616	180	90	170
Jacobs, Harry B., Castleton, Vt. Drill	702,277	June 15	1203	247	90	200
Jacobs, John, Chicago, Ill. Window-cash ventilator	700,000	May 27	2600	547	90	170
Jacobs, Olaus B., Roland, Iowa. Gate	700,130	June 15	1203	247	90	200
Jacobs, William A., et al. (See Zengel, Joseph, assignor.)						
Jacobs, William S., et al. (See McCombs, Joseph C., assignor.)						
Jacobson, Edward B. (See Folger, Moriarty, and Jacobson.)						
Jacobson, Edward B., assignor, by mesne assignments, to T. H. Nelson, Boston, Mass. Electric massage-machine	699,000	Apr. 20	2598	620	90	170
Jacobson, Louis. (See Weinberg, Bernhard, assignor.)						
Jacoby, William, assignor of seventeen-twentieths to J. E. and P. Snyder, J. A. Wilson, Fula, Minn., and M. Redinger, Prospect, Ill. Magazine-hammer	701,721	June 3	616	180	90	170
Jacobs, Harry B., Castleton, Vt. Drill	702,277	June 15	1203	247	90	200
Jacobs, John, Chicago, Ill. Window-cash ventilator	700,000	May 27	2600	547	90	170
Jacobs, Olaus B., Roland, Iowa. Gate	700,130	June 15	1203	247	90	200
Jacobs, William A., et al. (See Zengel, Joseph, assignor.)						
Jacobs, William S., et al. (See McCombs, Joseph C., assignor.)						
Jacobson, Edward B. (See Folger, Moriarty, and Jacobson.)						
Jacobson, Edward B., assignor, by mesne assignments, to T. H. Nelson, Boston, Mass. Electric massage-machine	699,000	Apr. 20	2598	620	90	170
Jacobson, Louis. (See Weinberg, Bernhard, assignor.)						
Jacoby, William, assignor of seventeen-twentieths to J. E. and P. Snyder, J. A. Wilson, Fula, Minn., and M. Redinger, Prospect, Ill. Magazine-hammer	701,721	June 3	616	180	90	170
Jacobs, Harry B., Castleton, Vt. Drill	702,277	June 15	1203	247	90	200
Jacobs, John, Chicago, Ill. Window-cash ventilator	700,000	May 27	2600	547	90	170
Jacobs, Olaus B., Roland, Iowa. Gate	700,130	June 15	1203	247	90	200
Jacobs, William A., et al. (See Zengel, Joseph, assignor.)						
Jacobs, William S., et al. (See McCombs, Joseph C., assignor.)						
Jacobson, Edward B. (See Folger, Moriarty, and Jacobson.)						
Jacobson, Edward B., assignor, by mesne assignments, to T. H. Nelson, Boston, Mass. Electric massage-machine	699,000	Apr. 20	2598	620	90	170
Jacobson, Louis. (See Weinberg, Bernhard, assignor.)						
Jacoby, William, assignor of seventeen-twentieths to J. E. and P. Snyder, J. A. Wilson, Fula, Minn., and M. Redinger, Prospect, Ill. Magazine-hammer	701,721	June 3	616	180	90	170
Jacobs, Harry B., Castleton, Vt. Drill	702,277	June 15	1203	247	90	200
Jacobs, John, Chicago, Ill. Window-cash ventilator	700,000	May 27	2600	547	90	170
Jacobs, Olaus B., Roland, Iowa. Gate	700,130	June 15	1203	247	90	200
Jacobs, William A., et al. (See Zengel, Joseph, assignor.)						
Jacobs, William S., et al. (See McCombs, Joseph C., assignor.)						
Jacobson, Edward B. (See Folger, Moriarty, and Jacobson.)						
Jacobson, Edward B., assignor, by mesne assignments, to T. H. Nelson, Boston, Mass. Electric massage-machine	699,000	Apr. 20	2598	620	90	170
Jacobson, Louis. (See Weinberg, Bernhard, assignor.)						
Jacoby, William, assignor of seventeen-twentieths to J. E. and P. Snyder, J. A. Wilson, Fula, Minn., and M. Redinger, Prospect, Ill. Magazine-hammer	701,721	June 3	616	180	90	170
Jacobs, Harry B., Castleton, Vt. Drill	702,277	June 15	1203	247	90	200
Jacobs, John, Chicago, Ill. Window-cash ventilator	700,000	May 27	2600	547	90	170
Jacobs, Olaus B., Roland, Iowa. Gate	700,130	June 15	1203	247	90	200
Jacobs, William A., et al. (See Zengel, Joseph, assignor.)						
Jacobs, William S., et al. (See McCombs, Joseph C., assignor.)						
Jacobson, Edward B. (See Folger, Moriarty, and Jacobson.)						
Jacobson, Edward B., assignor, by mesne assignments, to T. H. Nelson, Boston, Mass. Electric massage-machine	699,000	Apr. 20	2598	620	90	170
Jacobson, Louis. (See Weinberg, Bernhard, assignor.)						
Jacoby, William, assignor of seventeen-twentieths to J. E. and P. Snyder, J. A. Wilson, Fula, Minn., and M. Redinger, Prospect, Ill. Magazine-hammer	701,721	June 3	616	180	90	170

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Draw.	Vol.	Page.
Johnson, Mary E., excavator. (See Berglund, Nils, assignor.)	692,121	May 1	10	10	1190	
Johnson, Mary E., excavator. (See Mousberg, Oscar, assignor.)	692,121	May 1	10	10	1190	
Johnson, Montgomery H., Utica, N. Y. Junction or fuse box	692,122	May 13	1444	1444	1190	
Johnson, Moses C., Hartford, Conn. Speed-controlling and reversing mechanism	692,123	May 13	1444	1444	1190	
Johnson, Moses C., Hartford, Conn. Speed-controlling and reversing mechanism	692,124	May 13	1444	1444	1190	
Johnson, Moses C., Hartford, Conn. Clutch	692,125	May 13	1444	1444	1190	
Johnson, Nels A. (See Krelund, John A., assignor.)	692,126	May 13	1444	1444	1190	
Johnson, Nicholas P. (See Peabody and Johnson.)	692,127	May 13	1444	1444	1190	
Johnson, Peter C., Seaford, near Liverpool, England. Ship's davit or hoist-lowering device	701,040	May 27	9777	9777	1204	
Johnson, Robert W., New Brunswick, N. J. Bandage	700,998	May 27	9777	9777	1204	
Johnson, Robert W., New Brunswick, N. J. Surgical absorbent dressing	700,999	May 27	9777	9777	1204	
Johnson, Robert W., New Brunswick, N. J. Bandage	700,999	May 27	9777	9777	1204	
Johnson, Van Wert B., Washington, D. C. Chute	692,128	Apr. 1	1444	1444	117	
Johnson, Warren B., assignor to Johnson Electric Service Company, Milwaukee, Wis. Apparatus for applying fluid-pressure	692,129	Apr. 1	1444	1444	117	
Johnson, William, Brooklyn, N. Y. Carousal	697,254	Apr. 8	1444	1444	117	
Johnson, William A., Herold, W. Va. Steam-engine	692,130	Apr. 20	1444	1444	117	
Johnson, William H., Haverhill, Mass. Golf-club holder	692,131	May 6	1444	1444	117	
Johnson, Allen, Ottumwa, Iowa. Making hollow balls	692,132	Apr. 20	1444	1444	117	
Johnson, Andrew J., Liverpool, England. Envelop and blank therefor	692,133	May 13	1444	1444	117	
Johnson, Chauncey C., Scranton, Pa. Insulator and attachment for electric wires	697,255	Apr. 15	1444	1444	117	
Johnson, Edward D., New York, N. Y. Oyster-trimming machine	692,134	May 6	1444	1444	117	
Johnson, H. G., et al. (See Sloan, James W., assignor.)	692,135	June 17	2009	2009	1204	
Johnson, William A. (See Landis, Johnston, and Bosley.)	692,136	May 13	1444	1444	117	
Johnson, William E., Conowingo, Md. Sand pump and bailer	692,137	May 13	1444	1444	117	
Johnson, William G., Woodbury, N. J., assignor to Steel Machine Company. Envelop printing press	692,138	May 13	1444	1444	117	
Johnstone, Antoine P., assignor of one-half to G. A. McAllister, Gibbstown, N. J. Weighing and measuring machine	692,139	May 6	1444	1444	117	
Jolly, Angeline, Columbia, Ind. Cooking-stove attachment	701,073	June 24	2075	2075	1204	
Jonah, William W. (See Kelling, Baltimore, Md. Machine for producing bottle-sealing caps)	692,140	Apr. 15	1444	1444	117	
Jones, James C., Rochester, Mich., assignor to United States Register Company, Ltd. Red-hot register	692,141	May 6	1444	1444	117	
Jones, Benjamin. (See Jones, John E. and E.)	692,142	June 17	2009	2009	1204	
Jones, Charles B., St. Albans, W. Va. Rail-joint	701,080	June 8	1444	1444	117	
Jones, Charles H., Wood Green, England. Construction of courses or tracks for cycling	701,081	June 8	1444	1444	117	
Jones, Davis R., assignor of one-half to H. H. Carr, Rockymount, N. C. Collapsible barrel	692,143	May 20	1444	1444	117	
Jones, Edward A., Pittsfield, Mass. Beating-machine	692,144	Apr. 1	1444	1444	117	
Jones, Everly A. (See Finney and Jones.)	692,145	June 10	1944	1944	1204	
Jones, Francis W., assignor to Transfer Tube Company, New York, N. Y. Pneumatic transfer-tube system	692,146	Apr. 1	1444	1444	117	
Jones, Frank, Liverpool, England. Cradles for underground roadways	692,147	Apr. 1	1444	1444	117	
Jones, Frederick H., Haverhill, Mass. Pyrites	692,148	Apr. 15	1444	1444	117	
Jones, George C., Montgomery, Mo. Cultivator	697,256	May 20	1444	1444	117	
Jones, Henry T., Long Island, Queens county, N. Y. Seal-lock	701,082	June 24	2075	2075	1204	
Jones, Henry T., Chicago, Ill. Sofa-bed	701,083	June 24	2075	2075	1204	
Jones, Herbert C., Chicago, Ill. Sofa-bed	701,084	June 24	2075	2075	1204	
Jones, Herbert C., Chicago, Ill. Upholstering-machine	701,085	June 24	2075	2075	1204	
Jones, Herbert C., Chicago, Ill. Upholstering-machine	701,086	June 24	2075	2075	1204	
Jones, Herbert C., Chicago, Ill. Upholstering-machine	701,087	June 24	2075	2075	1204	
Jones, James A., Logansport, Ind. Machine for cleaning blackboard-erasers	692,149	Apr. 15	1444	1444	117	
Jones, James C., Buffalo, Ky. Vial-carrying frame	692,150	Apr. 1	1444	1444	117	
Jones, James H. (See Knox and Jones.)	692,151	Apr. 1	1444	1444	117	
Jones, James W., et al. (See Furman, John C., assignor.)	692,152	Apr. 1	1444	1444	117	
Jones, James R., Jackson, Miss. Planter and cultivator	692,153	Apr. 1	1444	1444	117	
Jones, James R., Jackson, Miss. Planter and cultivator	700,998	May 20	1444	1444	117	
Jones, James R., Jackson, Miss. Planter and cultivator	700,999	May 20	1444	1444	117	
Jones, John R., Hazleton, Pa. Rail-joint	701,088	June 24	2075	2075	1204	
Jones, John R. and R. Wood, Ind. Sheet-metal-bending-machine	692,154	May 6	1444	1444	117	
Jones, Louis E., assignor to J. H. Wood Lee Company, Conshohocken, Pa. Dismantling device	701,089	June 8	1444	1444	117	
Jones, Oliver, Kansas City, Kans. Bolt-lock	701,090	May 20	1444	1444	117	
Jones, Samuel A., Dushier, Ohio. Mail-box	701,091	June 10	1944	1944	1204	
Jones, Theodore N., assignor of one-half to P. C. Loveland, Orono, Colo. Automatic bucket-dumping apparatus	701,092	June 2	1444	1444	117	
Jones, Thomas D., Syracuse, N. Y. Spike-tooth harrow	701,093	June 2	1444	1444	117	
Jones, Thomas K. (See Shoemaker, Franklin T., assignor.)	700,999	May 20	1444	1444	117	
Jones, Thomas W., Brooklyn, N. Y. Register	692,155	Apr. 20	1444	1444	117	
Jones, Willard, Lisbon, Mo. Strainer	692,156	June 17	2009	2009	1204	
Jones, William E. E., London, England. Railway coupling apparatus	701,094	June 24	2075	2075	1204	
Jones, William E., Marshall, Mo. Swinging gate	701,095	June 24	2075	2075	1204	
Jones, William T., New Westminster, Canada, assignor of one-half to H. Doyle, San Francisco, Cal. Wood-turning machine	692,157	Apr. 1	1444	1444	117	
Jones, Willie S., and E. W. Webb, Chicago, Ill. Car-coupling	701,096	June 24	2075	2075	1204	
Jordan, Arthur C., Amelia, Va. Paper box	692,158	Apr. 20	1444	1444	117	

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Draw.	Vol.	Page.
Jordan, Frederick G., Spokane, Wash. Making cement	701,097	June 10	1944	1944	1204	
Jordan, James Jr., and P. J. Egan, Hartford, Conn. Curtain-fixture	701,098	June 2	1444	1444	117	
Jordan, Ralph W., St. Louis, Mo. Counting apparatus	701,099	June 24	2075	2075	1204	
Joseph McWilliams and Company. (See Platt, Richard F., assignor.)	692,159	Apr. 2	1444	1444	117	
Joy, James, and J. M. Dorton, Orrick, Mo. Stovepipe attachment	692,160	Apr. 2	1444	1444	117	
Joyce, James A. (See Larned, Parker, and Joyce.)	692,161	May 13	1444	1444	117	
Judson, Whitcomb L., Chicago, Ill. Chain-making machine	692,162	May 13	1444	1444	117	
Judson, Whitcomb L., Chicago, Ill. Tread for wheels	701,100	May 20	1444	1444	117	
Julian, Gideon, assignor, by name assignments, to Julian Manufacturing Company, Boston, Mass. Cementing-machine	692,163	Apr. 20	1444	1444	117	
Julian Manufacturing Company. (See Julian, Gideon, assignor.)	692,164	June 2	1444	1444	117	
Jung, Peter, New Orleans, La. Mosquito-bar or canopy support	11,321	Apr. 20	1444	1444	117	
Jung, John A., Syracuse, assignor of one-half to D. H. Burrell & Company, Little Falls, N. Y. Baking-powder. (Reissue)	697,257	Apr. 2	1444	1444	117	
Kacmarowski, Albert, Kalisch, Prussia. Centrifugal machine	697,258	Apr. 2	1444	1444	117	
Kable, James C. (See Hammond and Kable.)	692,165	May 6	1444	1444	117	
Kall, Jackson L., assignor to Winslow Bros. Co., Chicago, Ill. Door-operating mechanism for elevators	692,166	May 6	1444	1444	117	
Kalmer, Charles B. (See Parsons and Kalmer.)	692,167	May 6	1444	1444	117	
Kalmer, Frederick C., Chicago, Ill. Gearing for washing-machines	692,168	May 6	1444	1444	117	
Kalmer, Frederick C., Chicago, Ill. Wash-tub	701,101	June 10	1944	1944	1204	
Kalmer, Emil F., Fresno, Cal. Shade-roller bracket	692,169	Apr. 1	1444	1444	117	
Kalmer, Frank E. (See Waldmann and Kalmer.)	692,170	Apr. 1	1444	1444	117	
Kalamoon Railway Supply Company. (See Bushnell, William E., assignor.)	692,171	Apr. 1	1444	1444	117	
Kalbach, Adam M., et al. (See Livingston, Thomas, assignor.)	692,172	Apr. 1	1444	1444	117	
Kalle and Company. (See Paul, Carl, assignor.)	692,173	Apr. 1	1444	1444	117	
Kalling, Lewis. (See Jones, Albert, assignor.)	692,174	Apr. 15	1444	1444	117	
Kalling, Lewis, Baltimore, Md. Bottle-sealing device	692,175	Apr. 15	1444	1444	117	
Kalman, August, Babenstein, Austria-Hungary. Manufacture of post-fiber pulp	701,102	June 2	1444	1444	117	
Kaltenbach, Augustus. (See Clawson and Kaltenbach, assignors.)	701,103	June 2	1444	1444	117	
Kamber, Frank J., Colorado Springs, Colo. Pencil-holder	692,176	May 13	1444	1444	117	
Kammerer, William. (See Thourer, Frederick, assignor.)	700,999	May 13	1444	1444	117	
Kanda, Coleman de, Budapest, Austria-Hungary. Electric motor-car or locomotive	692,177	Apr. 22	1444	1444	117	
Kane, Oliver B. (See Cain and Kane.)	692,178	Apr. 22	1444	1444	117	
Kap, Axel, Bagby Bend, Minn. Flow	692,179	Apr. 22	1444	1444	117	
Kaplan, C. A., et al. (See Frik, Otto, assignor.)	692,180	Apr. 2	1444	1444	117	
Kaplan, Bernard, Newark, N. J. Matrix for making gramophone, sonophone, or similar records	692,181	Apr. 2	1444	1444	117	
Kaplan, Samuel W., Hartford, Conn. Combined combing and shearing machine	692,182	May 6	1444	1444	117	
Kappler, Charles J., et al. (See Warner and Ellis, assignors.)	692,183	May 20	1444	1444	117	
Karlshof Knoll-Industrie-Gesellschaft. (See Geister, Rudolf, assignor.)	700,999	May 20	1444	1444	117	
Karlson, Albert, Kansas City, Kans. Combined fastener and corner-stay for beer-cases	692,184	May 6	1444	1444	117	
Karr, Francis, Holland, Mich. Hammer for supporting bed-bottoms	692,185	Apr. 1	1444	1444	117	
Kaschnabach, John. (See Spont, Christian & E., assignor.)	692,186	Apr. 1	1444	1444	117	
Kaschnabach, Edwin G., Bloomfield, N. J., assignor to General Electric Company. Electrical switch	692,187	Apr. 1	1444	1444	117	
Katz, Frank. (See Biren, Simon, assignor.)	692,188	May 6	1444	1444	117	
Katzen, Albert, assignor of one-half to J. Hammer, Erie, Pa. Collapsible baby-carriage	692,189	June 24	2075	2075	1204	
Kauscher, Robert, Rochester, N. Y. Floatable caisson for cleaning ships' sides and bottoms	701,104	June 24	2075	2075	1204

Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,099	Apr. 1	1035	309	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,100	Apr. 1	1036	310	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,101	Apr. 1	1037	311	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,102	Apr. 1	1038	312	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,103	Apr. 1	1039	313	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,104	Apr. 1	1040	314	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,105	Apr. 1	1041	315	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,106	Apr. 1	1042	316	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,107	Apr. 1	1043	317	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,108	Apr. 1	1044	318	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,109	Apr. 1	1045	319	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,110	Apr. 1	1046	320	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,111	Apr. 1	1047	321	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,112	Apr. 1	1048	322	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,113	Apr. 1	1049	323	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,114	Apr. 1	1050	324	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,115	Apr. 1	1051	325	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,116	Apr. 1	1052	326	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,117	Apr. 1	1053	327	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,118	Apr. 1	1054	328	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,119	Apr. 1	1055	329	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,120	Apr. 1	1056	330	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,121	Apr. 1	1057	331	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,122	Apr. 1	1058	332	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,123	Apr. 1	1059	333	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,124	Apr. 1	1060	334	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,125	Apr. 1	1061	335	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,126	Apr. 1	1062	336	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,127	Apr. 1	1063	337	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,128	Apr. 1	1064	338	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,129	Apr. 1	1065	339	90	120
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company. Golf-ball	694,130	Apr. 1	1066	340	90	

Alphabetical list of patients, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Type.	Pgs.	Vol.	Page.
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,814	Apr. 20	2898	874	50	100
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,815	Apr. 20	2894	874	50	100
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,816	Apr. 20	2895	874	50	100
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,817	Apr. 20	2896	874	50	100
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,818	Apr. 20	2897	874	50	100
Manufacturing golf-balls.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,819	Apr. 20	2898	1187	50	114
Manufacturing golf-balls.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,820	Apr. 20	2899	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,821	Apr. 20	2900	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,822	Apr. 20	2901	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,823	Apr. 20	2902	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,824	Apr. 20	2903	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,825	Apr. 20	2904	1187	50	114
Manufacture of playing-balls.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,826	Apr. 20	2905	1187	50	114
Manufacture of golf-balls.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,827	Apr. 20	2906	1187	50	114
Golf-club.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,828	Apr. 20	2907	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,829	Apr. 20	2908	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,830	Apr. 20	2909	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,831	Apr. 20	2910	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,832	Apr. 20	2911	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,833	Apr. 20	2912	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,834	Apr. 20	2913	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,835	Apr. 20	2914	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,836	Apr. 20	2915	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,837	Apr. 20	2916	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,838	Apr. 20	2917	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,839	Apr. 20	2918	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,840	Apr. 20	2919	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,841	Apr. 20	2920	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,842	Apr. 20	2921	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,843	Apr. 20	2922	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,844	Apr. 20	2923	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,845	Apr. 20	2924	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,846	Apr. 20	2925	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,847	Apr. 20	2926	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,848	Apr. 20	2927	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,849	Apr. 20	2928	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,850	Apr. 20	2929	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,851	Apr. 20	2930	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,852	Apr. 20	2931	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,853	Apr. 20	2932	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,854	Apr. 20	2933	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,855	Apr. 20	2934	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,856	Apr. 20	2935	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,857	Apr. 20	2936	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,858	Apr. 20	2937	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,859	Apr. 20	2938	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,860	Apr. 20	2939	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,861	Apr. 20	2940	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,862	Apr. 20	2941	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,863	Apr. 20	2942	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,864	Apr. 20	2943	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,865	Apr. 20	2944	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,866	Apr. 20	2945	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,867	Apr. 20	2946	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,868	Apr. 20	2947	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,869	Apr. 20	2948	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,870	Apr. 20	2949	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,871	Apr. 20	2950	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,872	Apr. 20	2951	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,873	Apr. 20	2952	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,874	Apr. 20	2953	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,875	Apr. 20	2954	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,876	Apr. 20	2955	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,877	Apr. 20	2956	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,878	Apr. 20	2957	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,879	Apr. 20	2958	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,880	Apr. 20	2959	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,881	Apr. 20	2960	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,882	Apr. 20	2961	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,883	Apr. 20	2962	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,884	Apr. 20	2963	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,885	Apr. 20	2964	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,886	Apr. 20	2965	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,887	Apr. 20	2966	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,888	Apr. 20	2967	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,889	Apr. 20	2968	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,890	Apr. 20	2969	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,891	Apr. 20	2970	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,892	Apr. 20	2971	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,893	Apr. 20	2972	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,894	Apr. 20	2973	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,895	Apr. 20	2974	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,896	Apr. 20	2975	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,897	Apr. 20	2976	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,898	Apr. 20	2977	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,899	Apr. 20	2978	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,900	Apr. 20	2979	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,901	Apr. 20	2980	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,902	Apr. 20	2981	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,903	Apr. 20	2982	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,904	Apr. 20	2983	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,905	Apr. 20	2984	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,906	Apr. 20	2985	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,907	Apr. 20	2986	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,908	Apr. 20	2987	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,909	Apr. 20	2988	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,910	Apr. 20	2989	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,911	Apr. 20	2990	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,912	Apr. 20	2991	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,913	Apr. 20	2992	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,914	Apr. 20	2993	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,915	Apr. 20	2994	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,916	Apr. 20	2995	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,917	Apr. 20	2996	1187	50	114
Playing-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,918	Apr. 20	2997	1187	50	114
Golf-ball.						
Kempshall, Eleazer, Boston, Mass., assignor to Kempshall Manufacturing Company.	698,919	Apr. 20	2998	1187	50	114
Playing-ball.						

UNITED STATES PATENT OFFICE, 1902. 67

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Draw.	Vol.	Page.
King, Robert W., Toronto, Canada. Automatic smoker and smoke-consumer.	708,088	June 24	2885	709	99	2949
King, William H. (See King, Charles W. and W. H.)						
King, William L., Ottumwa, Iowa. Horn-socket.	698,490	Apr. 1	198	24	99	57
Kingman, Barton E. (See McLaughlin, Harry, assignor.)						
Kingman Plov Company. (See Duffin, James F., assignor.)						
Kingsland, William, London, England. Connection of strainers to motor-vehicles for mechanically operating electric switches.	698,935	Apr. 29	4098	1081	99	1105
Kinsard, John M., Cleveland, Ohio. Measuring-cabinet.	708,570	June 24	3938	948	99	3917
Kinsner, Duke M., and W. W. Jones, Clinton, Mass. Shoe-fastener.	701,980	June 10	1004	840	99	29
Kinsney, Clement L. V., assignor to Newark Machine Company, Newark, Ohio. Mock.	698,448	Apr. 1	440	105	99	
Kinsney, Clement L. V., assignor to Newark Machine Company, Newark, Ohio. End-gate for manure-spreader or similar beds.	698,448	Apr. 1	441	105	99	9
Kinsney, Israel, Toronto, Canada. Knife.	701,997	June 24	8115	718	99	3820
Kinsney, Israel, Toronto, Canada. Pocket-knife.	701,998	June 24	8115	717	99	3820
Kinsley, Richard R., assignor to National Burial Device Company, Coldwater, Mich. Burial device.	700,948	May 27	3951	984	99	1908
Kinsley, Henry H., Shushone, Idaho, assignor of one-third to M. Tinker, St. Paul, Minn. Collapsible box.	698,451	Apr. 1	104	24	99	5
Kistner, Joseph H., and W. H. Romig, Harrisburg, Pa. Sliding-door fastener.	698,980	Apr. 8	1149	268	99	
Kistner, Charles J., New York, N. Y. System of electric railways of the sectional type of conductors or rails.	700,196	May 13	1906	443	99	1877
Kistner, Charles J., New York, N. Y. Electric railway.	700,197	May 13	1915	444	99	1880
Kistner, Charles J., New York, N. Y. Electric railway.	700,198	May 13	1916	445	99	1883
Kistner, Charles J., New York, N. Y. Electric railway.	700,199	May 13	1916	445	99	1883
Kistner, Charles J., New York, N. Y. Electric railway.	700,199	May 13	1917	446	99	1883
Kistner, Charles J., New York, N. Y. Electric railway.	700,199	May 13	1917	447	99	1883
Kitt, Herbert, and H. J. Leonard, Sharpsburg, assignors of one-third to F. P. Booth, Pittsburg, Pa. Wrench.	700,460	May 20	3951	981	99	178
Kivall, John, assignor of one-half to J. Schroeder, Worcester, Mass. Device for removing broken bars.	700,011	June 10	1990	960	99	3909
Kipp, Oliver G., Rochester, Ill. Labor-saving.	698,101	May 8	119	30	99	110
Kipp, Bruce, Moorhead, Minn. Merry-go-round.	698,894	Apr. 29	3975	798	99	9
Kirby, Frank H. (See McClave, Kirby, and Cumbe.)						
Kirby, John, Jr., assignor to Dayton Manufacturing Company, Dayton, Ohio. Globe-holder attachment for gas-fixtures.	698,644	Apr. 1	480	106	99	1
Kirby Lumber Company. (See Woodman, George A., assignor.)						
Kirby, William A., Newbury, N. Y. Gearing for moving-machines.	702,448	June 17	8085	978	99	3970
Kirk, William L., Dubois, Pa. Saw-clamp.	701,897	June 10	1085	840	99	29
Kirkpatrick, Elliott C. (See Denton and Press, assignors.)						
Kirkpatrick, John J. (See Lishman, Houghton, and Kirkpatrick.)						
Kirris, Linden, Kansas City, Mo. Two-row cultivator.	700,387	May 20	8400	540	99	170
Kirschner, Michael, Lynchburg, Va. Rolling-press.	701,975	June 8	830	119	99	29
Kirschner, Michael, Lynchburg, Va. Bale-covering.	701,976	June 8	835	117	99	29
Kiss, Ernest J., Fort Wayne, Ind. Amalgamator.	698,428	Apr. 1	105	35	99	9
Kistler, Willoughby F., Bartaak, Ohio. Stove.	697,091	Apr. 8	1243	920	99	9
Kittae, Isidor, Philadelphia, Pa. Machine for producing matrices for stereotype-plates.	698,998	Apr. 29	4098	1081	99	1105
Kittae, Isidor, Philadelphia, Pa. Pyroxylin compound.	701,897	June 8	830	119	99	29
Kittae, Isidor, Philadelphia, Pa. Insulating electric conductors.	700,196	May 13	1906	443	99	1877
Kittredge, Anson O. and E. R. Tandy, H. J., assignors to Account, Audit & Assurance Company, Limited, New York, N. Y. Book-section having wide and narrow leaves.	697,495	Apr. 15	8070	681	99	47
Kittredge, Anson O. and E. R. Tandy, H. J., assignors to Account, Audit & Assurance Company, Limited, New York, N. Y. Sheet for serial binders.	700,398	May 20	8400	540	99	170
Kittredge, Anson O., Springfield, Mass., and E. R. Kittredge, assignors to Account, Audit & Assurance Company, New York, N. Y. Book-section having wide and narrow leaves.	702,013	June 10	1087	840	99	29
Kittredge, Ernest R. (See Kittredge, Anson O. and E. R.)						
Kitta, Charles A., deceased; H. W. Kitts, administratrix, assignor to Steam Carriage Coiler Company, Oswego, N. Y. Steam-generator.	698,498	Apr. 29	4098	1081	99	1105
Kitta, Harriet W., administratrix. (See Kitta, Charles A.)						
Kitzler, Rudolph A. (See Symak and Kitzler.)						
Kiverson, Carl O. (See Olson, John H., assignor.)						
Kiva, Pauline A., Melbourne, Victoria, Australia. Appliance for assisting the hearing.	698,713	Apr. 29	4098	1081	99	1105
Kiss, Wilhelm, Magdeburg, Germany. Bicycle-lock.	698,714	Apr. 29	4100	1082	99	1106
Kiss, Franz, Wilhelmshaven, Germany. Axle.	702,101	June 10	1498	8	99	24
Klein, Franz E., Dresden, Germany. Long-throw conductor.	701,877	June 3	582	117	99	29
Klein, Frederick, New York, N. Y. Non-refillable bottle.	697,285	Apr. 15	7928	905	99	6
Klein, George J., Washington, D. C. Controller.	698,641	Apr. 29	4097	1080	99	10
Klein, John, Desloge, assignor of two-thirds to P. A. Foss and C. D. McIlure, St. Louis, Mo. Ore-classifier.	698,739	Apr. 1	689	167	99	1
Klein, John B., Oil City, Pa. Speed-regulator for explosive-engines.	697,409	Apr. 8	7947	437	99	6
Klein, Max, Denver, Colo. Horse-dogging.	700,897	May 20	8411	687	99	17
Klein, Ulrich, Brookline, Mass. Artificial cerebrum.	700,899	June 17	8777	686	99	27
Kleinewaters, Johannes, assignor to J. Kleinewaters Schmo, Orefield, Germany. Calves' separator.	700,898	May 20	8411	686	99	17
Kleinewaters Schmo, Joh. (See Kleinewaters, Johannes, assignor.)						
Kleinewaters Schmo, Joh. (See Kleinewaters, Wilhelm, assignor.)						
Kleinewaters, Wilhelm, Orefield, assignor to Firm of J. Kleinewaters Schmo, Orefield, Prussia, Germany. Marcellizing.	698,086	Apr. 29	3951	971	99	6
Kleinschmidt, Carl, assignor to E. H. Kleinschmidt, Seattle, Wash. Wood-preserving compound.	697,693	Apr. 29	3955	989	99	5
Kleinschmidt, Edward E., New York, assignor to F. Danzer, Brooklyn, N. Y. Apparatus for twisting macaroni.	698,119	Apr. 29	3955	715	99	7
Kleinschmidt, Emma H. (See Kleinschmidt, Carl, assignor.)						
Kleist, Eugene de, North Tonawanda, N. Y. Antismal merial instrument.	700,791	May 27	3979	988	99	19
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	21
Klopper, Wilhelm, Elber, Austria-Hungary. Shot-machine.	701,338	June 8	140	39	99	

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			1	2	3	4
Kling, Isaac, Louisville, Ky. Compound or multiple cylinder engine.	701,334	May 27	948	947	11	1771
Kling, Matthias, Oberndorf, Germany. Door check and closer.	701,335	May 27	948	947	11	1771
Kling, Carl F. A., Indianapolis, Ind. Air-shut.	701,336	June 3	141	141	11	1771
Kling, Frederick C., Louisville, Ky. Shipping vessel for ice-cream.	697,499	Apr. 15	2031	2031	11	1771
Knapp, Charles H., Paterson, N. J. Machine for folding cloth blanks.	698,199	May 6	114	114	11	1771
Knapp, Edwin C., Syracuse, N. Y. Polarized magnet.	698,207	Apr. 28	938	937	11	1771
Knapp, Fred H., and C. W. Blackstone, Chicago, Ill. Can labeling and wrapping machine.	698,208	Apr. 28	938	937	11	1771
Knapp, George W., Baltimore, Md. Assignor to National Enameling & Stamping Co. Machine for bulging sheet-metal vessels.	697,497	Apr. 15	938	937	11	1771
Knapp, Gilman C., Barre, Cal. Saving-machine.	701,337	May 27	948	947	11	1771
Knapp, Herbert J., et al. (See Horning, Charles W., assignor.)	701,338	May 27	948	947	11	1771
Knapp, Sherwood R., et al. (See Horning, Charles W., assignor.)	701,339	May 27	948	947	11	1771
Knapp, Wellington K., Grand Rapids, Mich. Folding ironing-table.	701,340	May 27	948	947	11	1771
Knauer, Albert P., and H. Outwald, Milwaukee, Wis. Roller.	701,341	May 27	948	947	11	1771
Knecht, Edmund, Manchester, England. Reserve and discharge on textile fabrics.	698,209	Apr. 28	938	937	11	1771
Kneha, Wilhelm, and F. Pischel, assignors to Hiesfelder Maschinenfabrik vormals Dürkop & Co., Bielefeld, Germany. Cash-register.	698,210	Apr. 28	938	937	11	1771
Kneip, Frederic R., Boston, Mass. Apparatus for cutting and polishing precious stones.	701,342	May 27	948	947	11	1771
Knell, Andrew, Jr., Baltimore, Md. Water-chest flushing tank or cylinder.	701,343	May 27	948	947	11	1771
Knibb, Francis O. G., London, and T. R. Fowler, Woodford, England. Book-cover.	701,344	May 27	948	947	11	1771
Knight, Ellsworth L., Richmond, W. Va. Tube-expander.	698,211	Apr. 28	938	937	11	1771
Knight, John, Chicago, Ill. Lock-terminator.	698,212	Apr. 28	938	937	11	1771
Knight, Walter A., Madisonville, Ohio. Warehouse-truck.	698,213	Apr. 28	938	937	11	1771
Knappe, Oliver C., Norristown, Pa. Axle-bearing.	698,214	Apr. 28	938	937	11	1771
Knoche, Louis H., San Jose, Cal. Movable-stand.	701,345	May 27	948	947	11	1771
Knowlton, Dallas, Washington, D. C. Vending-machine.	701,346	May 27	948	947	11	1771
Knowlton, Dallas, Washington, D. C. Vending-machine.	701,347	May 27	948	947	11	1771
Knowlton, Dallas, Washington, D. C. Coin-controlled mechanism for vending machines.	701,348	May 27	948	947	11	1771
Knowlton, John D., Westbrook, assignor to Sanford Mills, Sanford, Me. Machine for cutting loops of pile fabric.	701,349	May 27	948	947	11	1771
Knox Automobile Company. (See Knox and Jones, assignors.)	698,215	Apr. 28	938	937	11	1771
Knox, Harry A., Springfield, Mass. Brake.	698,216	Apr. 28	938	937	11	1771
Knox, Harry A., and J. H. Jones, assignors to Knox Automobile Company, Springfield, Mass. Braking-rod for motor-vehicles.	698,217	Apr. 28	938	937	11	1771
Koch, Gustav, assignor to E. G. Hys, New York, N. Y. Shopper for bottles, etc.	698,218	Apr. 28	938	937	11	1771
Koch, Henry, assignor to Regina Music Box Company, Rahway, N. J. Fan-governor.	698,219	Apr. 28	938	937	11	1771
Koch, Albert, St. Louis, Mo. Paper-box machine.	698,220	Apr. 28	938	937	11	1771
Kocher, Henry W., Detroit, Mich. Running-gear for vehicles.	698,221	Apr. 28	938	937	11	1771
Köster, Louis F., Jr., Charleston, S. C. Attachment for lamps.	698,222	Apr. 28	938	937	11	1771
Kotler, Friedrich W., assignor to Kaiserhof & Blech, Vienna, Austria-Hungary. Machine for opening tubes with annular corrugations for rendering them flexible.	698,223	Apr. 28	938	937	11	1771
Kohl, William F. (See Heidecke and Kohl.)	698,224	Apr. 28	938	937	11	1771
Kohlman, Reynold, Philadelphia, Pa. Ribbon-loom.	698,225	Apr. 28	938	937	11	1771
Kohlman, Reynold, Philadelphia, Pa. Ribbon-loom.	698,226	Apr. 28	938	937	11	1771
Kohlhepp, John W., and A. J. Francis, Chicago, Ill. Machine for lacinating or slitting entrails.	698,227	Apr. 28	938	937	11	1771
Kohn, Franz, Pilsen, Germany. Side coupling for railway-cars.	698,228	Apr. 28	938	937	11	1771
Kohner, Alexander B., New Orleans, La. Refrigerator attachment.	698,229	Apr. 28	938	937	11	1771
Kohner, Alexander B., New Orleans, La. Refrigerator.	698,230	Apr. 28	938	937	11	1771
Kohomo Rubber Company. (See Neary, John, assignor.)	698,231	Apr. 28	938	937	11	1771
Kolars, Charles O. (See Ward, Willis J., assignor.)	698,232	Apr. 28	938	937	11	1771
Koh, Henry M., and C. Pohl, Philadelphia, Pa. Revolver.	698,233	Apr. 28	938	937	11	1771
Koller, Elizabeth, Bloomville, Ohio. Pin-holder.	698,234	Apr. 28	938	937	11	1771
Konovsky, John R., assignor to one-half to W. A. Schrock, San Francisco, Cal. Compact toy joint for hand-saws.	698,235	Apr. 28	938	937	11	1771
Korva, Anna H., Hartfordville, Ind. Valve for water-tight steam engines.	698,236	Apr. 28	938	937	11	1771
Kopp, Andrew, New Orleans, La. Pottery-lifter.	698,237	Apr. 28	938	937	11	1771
Koppenhagen, Benno, Untermeuburg, Germany. Device for facilitating taking pills.	698,238	Apr. 28	938	937	11	1771
Korinek, Joseph, Chicago, Ill. Holding-tool for air-brake pistons.	698,239	Apr. 28	938	937	11	1771
Kostinski, Wladyslaw T., Brooklyn, N. Y. Non-refillable and lock-seal bottle.	698,240	Apr. 28	938	937	11	1771
Kotnick, Wladyslaw T., Brooklyn, N. Y. Metallic seal.	698,241	Apr. 28	938	937	11	1771
Kosow, Henry C., Milwaukee, Wis. Metallic seal.	698,242	Apr. 28	938	937	11	1771
Kottich, Frank, Little Rock, Ark. Can-opener.	698,243	Apr. 28	938	937	11	1771
Kotten, Herman G., New York, N. Y. Pneumatic-surface frame.	698,244	Apr. 28	938	937	11	1771
Koss, Frank, Lorain, Ohio. Hydraulic motor.	698,245	Apr. 28	938	937	11	1771
Kramer, H. (See Grothe, August, assignor.)	698,246	Apr. 28	938	937	11	1771
Kraft, Robert, Karlsruhe, Germany. Turf-matrix pulp for stereotyping.	698,247	Apr. 28	938	937	11	1771
Kraft Combination Telephone Company. (See Laing, Theodore R., assignor.)	698,248	Apr. 28	938	937	11	1771
Krag, Erik L. (See Krag, Frants K., assignor.)	698,249	Apr. 28	938	937	11	1771
Krag, Erik L. (See Sedgwick, Frederick, assignor.)	698,250	Apr. 28	938	937	11	1771
Krag, Frants K., assignor to E. L. Krag, Chicago, Ill. File for bills, etc.	698,251	Apr. 28	938	937	11	1771
Krag, Frants K., Chicago, Ill. Assignor to E. L. Krag, New York, N. Y. Lock for loose-leaf binders.	698,252	Apr. 28	938	937	11	1771
Krakus, Harry T., assignor to National Malleable Castings Company, Cleveland, Ohio. Car-coupling.	698,253	Apr. 28	938	937	11	1771
Kravis, Hubert. (See Miller, Ernest W., assignor.)	698,254	Apr. 28	938	937	11	1771
Kravis, Hubert, Brooklyn, N. Y. Electrical outlet-box.	698,255	Apr. 28	938	937	11	1771
Krapf, Benjamin G., Topeka, Kans. Machine for separating and cleaning corn cobs.	698,256	Apr. 28	938	937	11	1771
Krausmiller, Louis R., Chicago, Ill. Surgical instrument.	698,257	Apr. 28	938	937	11	1771
Kraus, Charles. (See Kraus, Rudolf, assignor.)	698,258	Apr. 28	938	937	11	1771
Kraus, Rudolf, assignor of one-half to C. Kraus, New York, N. Y. Machine for forming plastic patterns on wall-paper.	698,259	Apr. 28	938	937	11	1771
Kraus, Constantin, and H. H. von Bernack, assignors to Farbwerke, vorm. Meister, Löblich & Brüning, Höchst-am-Main, Germany. Mating rollers and miller for hydric.	698,260	Apr. 28	938	937	11	1771
Kraus, Norman C., Walton, Ind. Cornstalk-cutting.	698,261	Apr. 28	938	937	11	1771
Krayer, Joseph F., Philadelphia, Pa. Assignor to General Electric Company. Switch for electric lamps.	698,262	Apr. 28	938	937	11	1771
Krebs, Arthur C., assignor to Ste. Aus des Anciens Etablissements Peugeot et Lenoir, Paris, France. Motor-vehicle.	698,263	Apr. 28	938	937	11	1771

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			1	2	1	2
Kreger, John G. (See Druser and Kreger.)	701,350	June 10	1005	988	90	2674
Kreher, Richard, Bradenton, Fla. Check or pump valve	701,351	June 10	1005	988	90	2674
Kreighbaum, Ira J., et al. (See Fitzgerald, Seth, and Kimmel, assignors.)	701,352	June 10	1005	988	90	2674
Kreitz, Forrest M., assignor to W. H. Miller and W. J. Ray, South Bethlehem, Pa. Air-brake for railway-cars	701,353	June 10	1005	988	90	2674
Kramer, Christoph, Wiesbaden, Germany. Apparatus for the recovery of this or the like	701,354	June 10	1005	988	90	2674
Kramer, Philip J., Somerton, Ohio. Folding frame for trucks	701,355	June 10	1005	988	90	2674
Kramer, John A., Danmore, Pa. Drop-bottom for ash-pans	701,356	June 10	1005	988	90	2674
Kraus, Herman R. (See Farrel and Kraus.)	698,264	Apr. 28	938	920	90	2718
Kretzer, Henry F., St. Louis, Mo. Insulator	698,265	Apr. 28	938	920	90	2718
Kriwanek, John, San Francisco, Cal. Reading-stand	697,297	Apr. 8	1034	936	90	2695
Krohn, Leo J., Grand Junction, Colo. Account-file	697,298	Apr. 8	1034	936	90	2695
Krommshor, Charles W., Chicago, Ill. Book-holder	697,299	Apr. 15	1035	936	90	2717
Kronmeyer & Oldenburch Company. (See Oldenburch, Ernest, assignor.)	697,300	Apr. 15	1035	936	90	2717
Krohn, Sanford R., assignor of two-thirds to F. W. Rodel and G. T. Seabury, Chayenne, Wyo. Variable-speed gear	697,301	Apr. 8	1034	936	90	2695
Kroger, Henry, and R. J. Hoffman, Minneapolis, Minn.; said Hoffman assignor to said Kroger. Life-guard for fishing-rods	697,302	Apr. 28	938	971	90	2695
Kruer, Max C., assignor by name assignment, of one-half to McGuire Manufacturing Company, Chicago, Ill. Combined rheostat and heater	701,357	May 30	1037	936	90	2695
Krug, August, assignor to Hiesfelder Maschinenfabrik Adolph Winter, Steinhilber, Germany. Galvano-electric therapeutic chain	701,358	May 27	1035	936	90	2695
Krumm, Olaus J. C. and C. A. Christensen, Norway. Time-recorder	698,273	Apr. 1	981	75, 76	90	2718
Krumm, Christian A. (See Krumm, Olaus J. C. and C. A.)						
Krumm, Sidney, et al. (See McGuire, Edward, assignor.)						
Krupp, Fried. (See Bach, Julius, assignor.)						
Krupp, Fried. (See Hartmann, Oskar, assignor.)						
Krupp, Fried. (See Nagel, Friedrich, assignor.)						
Krupp, Fried. (See Pann, Friedrich, assignor.)						
Krupp, Fried. (See Votek, Hermann, assignor.)						
Krusa, John H., Pueblo, Colo. Self-loading hatch	698,284	Apr. 1	948	135	90	1118
Kuback, Charles. (See Lippman, Jonathan K., assignor.)						
Kubersky, Martin T. A., Berlin, Germany. Electricity-operated plow	698,285	Apr. 1	110	36	90	90
Kucha, Michael, assignor of one-half to C. O. Cross, St. Louis, Mo. Combined feeder and brake	701,361	June 8	146	31	90	2125
Kuehne, Henry O., Middle Village, assignor to Crematory Company of New York, New York, N. Y. Furnace for cremating or incinerating human bodies	697,346	Apr. 15	1039	936	90	2695
Kuempel, Frederick, assignor of one-half to I. Lincoln, Buffalo, N. Y. Railway-car	701,360	June 24	1035	790	90	2694
Kuhn, David I., deceased, Verona, Pa.; J. L. Kuhn, administrator. Combined folding cut and tent	701,359	June 17	1036	934	90	2695
Kuhn Formaldohyde Generating Company. (See Kuhn, Richard F., assignor.) (Reissue.)						
Kuhn, John L., administrator. (See Kuhn, David I.)						
Kuhn, Richard F., Alexandria, Va., assignor to Kuhn Formaldohyde Generating Company. Formaldohyde-lamp. (Reissue.)	11,988	May 13	1031	964	90	1695
Kuhns, John F., assignor to National Tag Co., Dayton, Ohio. Pin-clip	698,272	Apr. 1	104	75	90	70
Kull, Albert L., Camden, N. J. Automobile	700,784	May 27	1034	784	90	1905
Kull, Albert L., Camden, N. J. Buffer for explosive or other engines	700,785	May 27	1035	784	90	1905
Kull, Albert L., Camden, N. J. Driving mechanism for automobiles	700,786	May 27	1035	784	90	1905
Kippers, Wilhelm, Berlin, Germany. Device for cleaning and rubbing collectors of electric motors and dynamo-machines	698,198	May 6	117	30, 31	90	1119
Kirschbitt Manufacturing Company. (See Groth, Joseph A., assignor.)						
Kristner, Curtis W., et al. (See Kuhn, John L., assignor.)						
Kurtz, Max, Kodes, Mo. Insect-exterminator	701,368	June 3	147	31	90	2119
Kurtz, Charles F., Cleveland, Ohio. Show-case or show-front	702,444	June 17	1100	478	90	2677
L. B. Baker Manufacturing Company. (See Frisbie, William L., assignor.)						
L. S. Starrett Company. (See Simpson, Robert J., assignor.)						
La Caze, Henry, Auburn, N. Y. Machine for grinding bearings	697,300	Apr. 15	1039	936	90	2695
La Clair, Edmund F., Avon, Conn. Horse-shoe-nail	700,057	May 13	1038	415	90	1495
La Follette, William, Halesburg, Iowa. Check-row planer	698,280	May 13	1077	389	90	1895
La Rue, Oliver, Holton, Ind. Fumigating poultry-roof	701,371	June 24	1019	717	90	2695
La Société Anonyme de Machines Industrielles. (See Mettewie, Rodet, and Beuch, assignors.)						
La Société Anonyme des Etablissements Malloet et Min. (See Malloet and Min, assignors.)						
Labadie, William D., South Bend, Ind., assignor of one-half to J. G. Duck, Milwaukee, Wis. Collar or cylinder drainer	698,310	May 13	1034	373	90	1285
Labach, Louis, Bridgeville, Mass. Lock	702,321	June 24	1036	943	90	2695
Leary, Anderson B., Washington, D. C. Fish-hook	698,317	May 6	516	119	90	1285
Lechman, Nick, Coney Island, N. Y. Pressure-railway	698,360	May 15	1035	935	90	1285
LeComme, Jean M. A., assignor of two-thirds to W. Lander, Brooklyn, N. Y., and J. L. Hackett, Louisville, Ky. Device for purifying water	698,367	Apr. 1	980	107	90	90
Leota, Jean A., Paris, France. Machine for treating vegetable-stems	701,367	May 27	1030	933	90	2695
Leota, Jean A., Paris, France. Scutching or fiber-preparing machine	701,368	May 27	1030	933	90	2695
Leotz, Louis, and H. Brinck, Geneva, Switzerland. Keyhole-guard	701,369	May 27	1031	930	90	2695
Ledd, Sherman W., Beverly, assignor to United Shoe Machinery Company of the State of New Jersey, Boston, Mass. Lacing-machine	698,340	Apr. 1	984	147	90	1495
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,369	May 27	1030	933	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,370	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,371	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,372	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,373	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,374	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,375	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,376	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,377	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,378	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,379	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,380	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,381	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,382	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,383	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,384	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,385	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,386	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,387	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,388	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,389	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,390	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,391	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,392	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,393	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,394	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,395	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,396	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,397	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,398	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,399	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,400	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,401	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,402	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,403	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,404	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,405	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,406	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,407	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,408	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,409	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,410	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,411	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,412	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,413	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,414	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,415	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,416	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,417	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,418	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,419	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,420	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,421	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,422	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,423	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,424	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,425	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,426	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,427	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,428	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,429	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,430	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,431	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,432	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,433	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,434	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,435	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,436	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,437	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,438	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,439	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,440	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,441	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,442	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,443	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,444	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,445	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,446	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,447	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,448	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,449	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,450	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,451	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,452	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,453	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,454	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,455	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,456	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,457	June 10	1035	935	90	2695
Leffert, Ernest R., Galesburg, Ill. Building-tile	701,458	June 10	1035	935	90	2695

Leisner, Abram L. (See Klenbogen and Levi.)						
Leisner, Harry. (See Lamphugh and Levi.)						
Leisner, Ivan, and C. Menching, assignors to Lovinstain, Limited, Manchester, England. Black sulfur dye and making same.	703,290	June 10	1499	280	90	1499
Leisner, Limited. (See Lovinstain and Menching, assignors.)						
Leisner, Edwin D., Monticello, Wis., and J. W. Polchow, Apple River, Ill. Keyless pin or bolt.	700,739	May 27	2299	739	90	2299
Leisner, Robert W., Somerset, Ohio. Snap-hook.	701,239	June 3	121	121	90	121
Leisner, Alexander, Hagerman, Germany. Applicator.	701,239	June 3	121	121	90	121
Leisner, Felix. (See Hinkley, Johannes, assignor.)						
Leisner, Frank L., Duluth, Minn. Cutter.	701,239	May 27	2799	280	90	2799
Leisner, Frank L. (See Schoenberg and Levi.)						
Leisner, Isaac, Philadelphia, Pa. Necktie-box, &c.	701,141	June 24	2499	739	90	2499
Leisner, Isaac, assignor to Royal Metal Manufacturing Company, New York, N. Y.	697,599	Apr. 15	2791	280	90	2791
Leisner, William J., Wilkesbarre, Pa. Game-counter.	701,439	June 3	279	279	90	279
Leisner, Edwin C., Detroit, Mich. Hoe.	703,039	June 17	2791	280	90	2791
Leisner, Elgie J., Middleport, N. Y. Can-loading machine.	697,599	Apr. 15	2791	280	90	2791
Leisner, Frank S., Baltimore, Md. Automatic switch.	697,599	Apr. 15	2791	280	90	2791
Leisner, George, Chicago, Ill. Lady's skirt.	697,599	Apr. 15	2791	280	90	2791
Leisner, George, Chicago, Ill. Spring-press for bicycle seats or handle-bars.	697,599	Apr. 15	2791	280	90	2791
Leisner, Lorenzo D., Adams, N. Y. Ventilated box.	703,105	June 10	1499	280	90	1499
Leisner, Philip M., New York, N. Y. Necktie-holder.	703,337	June 10	1215	417	90	1215
Leisner, Robert L., San Francisco, Cal. Bicycle-tire.	697,599	Apr. 15	2791	280	90	2791
Leisner, Thomas, Smithfield, Pa. Quilting-frame.	701,239	June 3	121	121	90	121
Leisner, Thomas E., A. J. Ray, and M. E. Watson, Fort Worth, Tex. Burner for crude oil.	701,239	June 3	121	121	90	121
Leisner, Thomas H., London, England. Acetylene-gas generator.	695,975	Apr. 23	2499	280	90	2499
Leisner, Warwick J. (See Place and Lewis.)						
Leisner, Bell Company. (See Rockwell, Edward D., assignor.)						
Leisner, Bureau. (See Whitten, Arthur M., assignor.)						
Lichtenstein, Edm. H., New York, N. Y. Toilet-powder box.	697,739	Apr. 15	2811	280	90	2811
Lichter, Halva, New York, N. Y. Calendar.	700,039	May 13	1794	416	90	1794
Lichter, Gustav, Maurer, N. J. Wall or fence.	701,239	June 3	121	121	90	121
Lichter, Henry, Hilarow, England. Apparatus for hardening rotary cutters.	695,191	Apr. 23	2499	715	90	740
Lichter, Arthur, Frankfurt-on-the-Main, assignor to Farbwerke, vorm. Meister, Leuchner & Co., Höchst-am-Main, Germany. Isovaleramide derivative and making same.	697,739	Apr. 15	2812	280	90	2812
Lichter, George W., Atlanta, Ga. Safety-pin.	703,337	June 10	1215	417	90	1215
Lichter, Wm. L., et al. (See Gaynor, Timothy J., assignor.)						
Lichte, Isaac P., assignor to Gruesell Chemical Company, Cleveland, Ohio. Making nitro-pot.	697,731	Apr. 15	2814	280	90	2814
Lichter, George M., Haverstraw, N. Y. Bicycle.	703,337	June 10	1215	417	90	1215
Lichter, Charles, Chicago, Ill. Railway-crossing.	695,209	Apr. 23	2499	715	90	775
Lichter, Irvin. (See Kumpel, Frederick, assignor.)						
Lichter, Luther, assignor of one-half to C. B. Gooding, Boston, Mass. Drawing motion metal from receptacles.	697,691	Apr. 15	2803	280	90	2803
Lichter, Winifred K., Worcester, Mass. Operating and latch-releasing mechanism for sliding doors.	703,337	June 10	1215	417	90	1215
Lichter, John A., and M. Watson, Two Harbors, Minn. Ore-chute and trap-door.	703,337	June 10	1215	417	90	1215
Lichter, Henry E., Grunthard, Kans. Dental appliance.	703,337	June 10	1215	417	90	1215
Lichter, August, Moline, Ill., assignor to Moline Plow Company. Lister-outfitter.	703,337	June 10	1215	417	90	1215
Lichter, John O. H. (See Johnson, Karl A., assignor.)						
Lichter, Ernst, Brooklyn, N. Y. Adjustable table or desk.	697,691	Apr. 15	2803	280	90	2803
Lichter, Clarence A., New York, N. Y. Package.	703,337	June 10	1215	417	90	1215
Lichter, Thomas, and L. L. White, Wilkesbarre, Pa. Lamp-hanger.	703,337	June 10	1215	417	90	1215
Lichter, John, assignor to Lindsey Wagon Company, Laurel, Minn. Logging-truck. (Reissue.)	11,977	May 13	2804	404	90	1004
Lichter, John, assignor to Lindsey Wagon Company, Laurel, Minn. Hand-carrier. (Reissue.)	11,977	May 13	2804	404	90	1004

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Pat.	Des.	Vol.	Page.
Lichter, John T., Allentown, Pa. Steam and oil separator.	695,971	May 13	1091	280	90	1019
Lichter, Reuben J., Northampton, England. Reversing device.	695,971	May 13	1091	280	90	1019
Lichter, George, Salsotte, Mo. Draft-equalizer.	697,739	Apr. 15	2815	280	90	2815
Lichter, Bait Engineering Company. (See Dodge, James M., assignor.)						
Lichter, Bait Engineering Company. (See Dodge and Shaw, assignors.)						
Lichter, Bait Machinery Company. (See Holmes, George L., assignor.)						
Lichter, William. (See Mitchell and Licht.)						
Lichter, Crampton L., et al. (See Rogers, Charles W., assignor.)						
Lichter, Guy C., et al. (See McGarvey, Edward, assignor.)						
Lichter, William D., Piedmont, assignor of four-tenths to G. C. Hunt, Rapid City, S. D.	697,549	Apr. 8	1790	280	90	280
Lichter, C. D. Hooker, and M. J. Gilligan, Piedmont, S. D. Engine.	697,549	Apr. 8	1790	280	90	280
Lichter, Charles, Vicksburg, Minn. Combined feed-water siphon and trap.	697,549	Apr. 8	1790	280	90	280
Lichter, Joseph, Manchester, Va. Machine for grinding calendar-rolls.	703,337	June 10	1215	417	90	1215
Lichter, Jonathan K., assignor to C. K. Kuch, Battleground, Mich. Malted-sweet feed and making same.	703,337	June 10	1215	417	90	1215
Lichter, Frederick W., assignor, by name assignments, of one-half to T. J. Landrum, Louisville, Ky. Churn.	697,549	Apr. 8	1790	280	90	280
Lichter, David, assignor to Mansfield Cash and Package Carrier Co., Mansfield, Ohio. Cash-carrier.	697,549	Apr. 8	1790	280	90	280
Lichter, Arthur. (See Tolls and Licht.)						
Lichter, Process Manufacturing Company. (See Lichten, Houghton, and Licht.)						
Lichter, Walter W. L., Corvallis, England, T. W. Houghton, Colleybuck, and J. J. Krippl, Colleybuck, Ireland, assignors to Lichten Process Manufacturing Company, Limited, Corvallis, England. Kef for bleaching, &c.	703,337	June 10	1215	417	90	1215
Lichter, Kate E., Clifton Springs, N. Y. Metallic pill-bottom.	697,549	Apr. 8	1790	280	90	280
Lichter, George, assignor of one-half to C. L. Curtis, Brooklyn, N. Y. Bottle-stopper.	700,344	May 20	2431	528	90	1705
Lichter, George, assignor to C. L. Curtis, Brooklyn, N. Y. Bottle-stopper.	700,344	May 20	2431	528	90	1705
Lichter, Clayton P., Detroit, Mich. Basket.	701,239	June 3	121	121	90	121
Lichter, Charles E., assignor to S. Mordant and Company, Limited, London, England. Pen-cases.	701,239	June 3	121	121	90	121
Lichter, Daniel B., Chicago, Ill. Carriage.	697,549	Apr. 8	1790	280	90	280
Lichter, Morris. (See Richter, Henry, assignor.)						
Lichter, Frederick W. (See Davis, Albert D., assignor.)						
Lichter, Malt Company. (See O'Brien, Richard, assignor.)						
Lichter, Thomas, Hamburg, assignor of one-half to A. M. Kallbach, Lancaster, and B. D. Hestetter, York Springs, Pa. Combined spigot and bung remover.	703,337	June 10	1215	417	90	1215
Lichter, Andrew W., Alameda, Cal. Can-heading machine.	703,337	June 10	1215	417	90	1215
Lichter, Andrew W., Alameda, Cal. Assignor to American Can Company, New York, N. Y. Automatic can-heading machine. (Reissue.)	11,979	May 13	2805	404	90	1005
Lichter, Joseph, Quincy, assignor of one-half to M. H. Hays, Boston, Mass. Reversing mechanism.	703,337	June 10	1215	417	90	1215
Lloyd, Aaron E., et al. (See Anderson, Frank C., assignor.)						
Lloyd, Thomas W. (See Sheward and Lloyd.)						
Lloyd, Car Wheel Company. (See Stuart, Joseph, assignor.)						
Lloyd, Car Wheel Company. (See Tolsin, Robert C., assignor.)						
Lloyd, Emil R., St. Louis, Mo. Carving-machine.	701,239	June 3	121	121	90	121
Lloyd, Albert V., Lakewood, N. H., assignor of two-thirds to F. L. Packard, Brookton, and H. S. Slater, Brookton, Mass. Carver.	703,337	June 10	1215	417	90	1215
Lloyd, Eugene O. (See Powell, William G., assignor.)						
Lloyd, Fred M., Victor, N. Y. Sleeve for protecting insulator-pins.	697,549	Apr. 8	1790	280	90	1790
Lloyd, Fred M., Victor, N. Y. Insulator-pin.	703,337	June 10	1215	417	90	1215
Lloyd, Fred M., Victor, N. Y. Washing-insulator.	703,337	June 10	1215	417	90	1215
Lloyd, Fred M., Victor, N. Y. Insulator and manufacturing same.	703,337	June 10	1215	417	90	1215
Lloyd, Fred M., Victor, N. Y. Machine for folding collar-blanks, &c.	701,239	June 3	121	121	90	121
Lloyd, Sylvanus D., Bridgeport, Conn., assignor of one-half to M. McVey, Jr., New York, N. Y. Match-sets.	695,499	Apr. 23	2499	280	90	2499
Lloyd, William H., et al. (See Nokes and Mortenson, assignors.)						
Lloyd, Hilton M., Henderson, Ky. Gate.	701,239	June 3	121	121	90	121
Lloyd, Edward M., Jr., Darby, assignor to F. C. Thomson & Company, Philadelphia, Pa. Conveyor-chain for match-machines.	695,499	Apr. 23	2499	280	90	2499
Lloyd, Edward M., Jr., Darby, assignor to F. C. Thomson and Company, Philadelphia, Pa. Conveyor-chain for match-machines.	695,499	Apr. 23	2499	280	90	2499
Lloyd, James E. (See West, Charles O., assignor.)						
Lloyd, Jasper, Laurel, Ind. Tap-faucet.	703,337	June 10	1215	417	90	1215
Lloyd, Philo J., Washington, D. C. Gaskets and seal for hydrocarbon-liquid containers.	695,129	May 6	1291	280	90	1291
Lloyd, Vernon H. (See Richardson, Leonard W., assignor.)						
Lodwick, William B. (See Burton and Lodwick.)						
Lod, John G., and J. Haggis, St. Louis, Mo. Smelting boiler-furnace.	695,977	Apr. 23	2499	280	90	2499
Lod, John G., and J. Haggis, St. Louis, Mo. Smelting boiler-furnace.	701,239	June 3	121	121	90	121
Lod, Gustave A., Philadelphia, Pa. Gas and air mixer.	695,999	Apr. 1	234	127	90	127
Lod, Emil C., Pittsburg, Pa. Draftman's instrument.	695,999	Apr. 1	234	127	90	127
Lod, Charles H., Cleveland, Ohio. Bottle making and washing machines.	703,337	June 10	1215	417	90	1215
Lod, Andrew, Elkhart, Ind. Lubricating device.	703,337	June 10	1215	417	90	1215
Lod, George, Norwalk, assignor to W. B. Mowery and S. Shurek, Bellevue, Ohio. Trolley-wheel.	695,999	Apr. 1	234	127	90	127
Lod, George A., Chicago, Ill. Gas-escape.	695,999	Apr. 1	234	127	90	127
Lod, Maurice B., New York, N. Y. Mule marking and reading instrument.	695,999	Apr. 1	234	127	90	127
Lod, Richard D., St. Louis, Mo. Gas-escape.	703,337	June 10	1215	417	90	1215
Lod, Leonard J., Luak, Wyo. Combined applicator and syringe.	703,337	June 10	1215	417	90	1215
Lod, Joseph H., Bradford, Pa. Derrick-frame and joint-coupling therefor.	697,549	Apr. 8	1790	280	90	280
Lod, Hermann, Liddy, New York, N. Y. Stopper for jars.	697,549	Apr. 8	1790	280	90	280
Lod, Jerome, assignor to Societe des Produits Chimiques, Paris, France. Manufacturing starch.	703,337	June 10	1215	417	90	1215
Lod, Levi W., Boston, assignor to Lowell Storage Battery Company, Pittsfield, Mass. Storage battery.	703,337	June 10	1215	417	90	1215
Lod, Levi W., assignor to F. W. Jewell, Boston, Mass. Storage battery.	703,337	June 10	1215	417	90	1215
Lod, Nathaniel, and J. O. Knepper, Boston, Mass. Assignors to Boston Chemical Fire Engine Manufacturing Company. Pressure-reducing device.	703,337	June 10	1215	417	90	1215
Lod, Walter E., Arlington, Mass., assignor to J. H. Sears Company, Portland, Me., and Boston, Mass. Fishing-machine.	703,337	June 10	1215	417	90	1215
Lod, John J., and A. C. Collins, assignors, by name assignments, to F. W. Brown & Company, Los Angeles, Cal. Asphyx's furnace. (Reissue.)	11,979	Apr. 1	1005	280	90	1005

			Page.	Vol.	Page.	Vol.
Long & Alister Company. (See Long, John M. W., assignor.)						
Long, David H., Buffalo, N. Y., assignor to J. B. Colt Company. Acetylene-gas generator.	699,928	May 6	928	24	92	1282
Long, Ferdinand F., Hastings, Mo. Steth.	699,940	May 10	940	121	92	1282
Long, Frederic H., Chicago, Ill. Metallurgical filter.	700,004	June 10	1004	281	92	2400
Long, Frederic H., Chicago, Ill., assignor to R. J. Beatty, trustee, Muncie, Ind. Electrolytic converter.	699,994	May 23	994	294	92	1285
Long, Frederic H., Chicago, Ill., assignor to Mystic Reduction Company. Bleaching paper-pulp, &c.	700,140	June 10	1440	280	92	2445
Long, James C. (See Morris, Harry P., assignor.)						
Long, John M. W., assignor to Long & Alister Company, Hamilton, Ohio. Dish plow.	699,994	Apr. 6	1197	197	92	995
Long, Stephen H. (See Rogers, Christopher L., assignor.)						
Long, Thomas, Boston, Mass., assignor to Consolidated Fastener Company, Portland, Me. Mechanism for opening and shutting for attaching buttons, &c.	700,790	May 27	790	773	92	1995
Long, Timothy, Cleveland, Ohio. Holding and conveying machine.	699,920	Apr. 20	920	973	92	920
Long, William J., and J. B. Nollner, Windham, Pa. Electric rail-road.	700,346	May 20	346	333	92	1700
Longard, Clarence O., Halifax, Canada. Wrench.	699,692	May 13	1090	290	92	1419
Longard, Clarence O., Halifax, Canada. Pipe-wrench.	699,692	May 13	1090	290	92	1419
Longard, Clarence O., Halifax, Canada. Heater.	700,731	May 27	731	730	92	1995
Longenecker, Charles K., Brooklyn, assignor of one-half to J. Scholl, New York, N. Y. Land-roller.	699,994	May 13	1095	297	92	1414
Loomis, Alva A., Boston, Ohio. Road-scraper.	700,090	May 13	1795	416	92	1287
Loomis, Eugene O., New York, assignor to Lister for heater or transportation tickets.	700,107	June 10	1400	280	92	2400
Loomis, George D., Lima, Ohio. Steam-power well-drilling machine.	699,990	Apr. 20	990	973	92	920
Loren, Isaac, New York, assignor to J. A. Chambers, trustee, Pittsburgh, Pa. Looming device.	700,004	May 20	1004	281	92	2400
Loren, George W., Chicago, Ill. Reducing valve.	700,004	May 20	1004	281	92	2400
Lord, Harry S., Bath, Me. Shanks and roller conveyor.	700,995	May 27	995	995	92	1995
Lord, Hugh C., Erie, Pa. Package for fragile articles.	700,997	June 17	997	940	92	2791
Lorenz, Anton, West New York, N. J. Window.	700,356	May 27	356	355	92	1995
Loring Coss & Company. (See Scaria, Frederick, assignor.)						
Loring, Simon A., Portland, Ind. Seed-dropper.	699,990	May 6	130	28	92	1291
Lothrop, Alvin M., et al. (See Taber, Mott B., assignor.)						
Lothrop, Llewellyn D., et al. (See Redding, Jerome, assignor.)						
Loudon, James F., East Orange, N. J. Revolving device.	699,491	May 6	491	190	92	1290
Loudon, William, Philadelphia, Pa. Pump-lifter.	700,811	May 20	811	480	92	1440
Loudon, William, Philadelphia, Pa. Pulley.	700,818	May 20	818	480	92	1440
Loudon, William, Philadelphia, Pa. (See Loudon, Frank A. L., assignor.)						
Lova, Henry E., Wilmington, Del. Woman's drawers.	701,744	June 3	744	190	92	2661
Love, Isaac, and W. Ray, Panama, Mo. Railway-ladders.	697,345	Apr. 4	1795	416	92	920
Love, William, Bryn Mawr, Pa. Pipe-wrench.	701,690	June 3	690	35	92	2170
Lovely, Arthur H., Galia, N. J. Air-chamber.	700,819	May 20	819	690	92	1995
Lovely, Clinton C., Providence, R. I. Combined pencil holder and sharpener.	699,190	Apr. 20	190	714	92	740
Loveland, Palmer C. (See Jones, Theodore H., assignor.)						
Lovell, Charles L. (See Pack, Ira F., assignor.)						
Low, Abbot A. (See Hill and Elvett, assignors.)						
Low, Abbot A. (See Johnson and Low.)						
Low, Abbot A., and J. Breaker, Brooklyn, assignors to Alden Type Machine Company, New York, N. Y. Type-distributing apparatus.	699,420	May 6	420	121	92	1290
Low, Amanda. (See Love, Jacob P., assignor.)						
Love, Jacob P., assignor to A. Love, Belleville, Ohio. Safety attachment for vehicles.	700,997	May 27	997	995	92	1995
Love, John M., assignor of one-third to G. L. Row, Butler, Ind. Pump-handle.	699,791	Apr. 20	4410	975	92	1001
Love, John M., assignor of one-third to G. L. Row, Butler, Ind. Pump-rod sampling.	699,791	Apr. 20	4480	975	92	1001
Lowell, Grant S., Salina, Kans. Windmill.	699,990	Apr. 20	990	790	92	977
Lower, William S. (See Smith, George H., assignor.)						
Lovings, David A., London, England. Magazine-camera.	700,790	May 27	790	790	92	1995
Loy, Joseph, New York, N. Y. Incandescent gas-lamp.	700,070	June 10	070	280	92	2400
Loygorri y Murrieta, Cristobal G., Madrid, Spain. Compound faucet for fluids.	697,990	Apr. 15	990	590	92	990
Lubbers, John H., New Kensington, assignor to J. A. Chambers, trustee, Pittsburgh, Pa. Apparatus for drawing glass.	700,013	June 10	1013	280	92	2400
Lubbers, John H., New Kensington, assignor to J. A. Chambers, trustee, Pittsburgh, Pa. Drawing glass.	700,014	June 10	1014	280	92	2400
Lubbers, John H., New Kensington, assignor to J. A. Chambers, trustee, Pittsburgh, Pa. Glass-drawing apparatus.	700,015	June 10	1015	280	92	2400
Lubbers, John H., New Kensington, assignor to J. A. Chambers, trustee, Pittsburgh, Pa. Drawing glass.	700,016	June 10	1016	280	92	2400
Lubbers, John H., New Kensington, assignor to J. A. Chambers, trustee, Pittsburgh, Pa. Apparatus for drawing glass.	700,017	June 10	1017	280	92	2400
Lubbers, John H., New Kensington, assignor to J. A. Chambers, trustee, Pittsburgh, Pa. Apparatus for drawing glass.	700,018	June 10	1018	280	92	2400
Lubbers, John H., New Kensington, assignor to J. A. Chambers, trustee, Pittsburgh, Pa. Apparatus for drawing glass.	700,019	June 10	1019	280	92	2400
Lubbers, John H., New Kensington, assignor to J. A. Chambers, trustee, Pittsburgh, Pa. Apparatus for drawing glass.	700,020	June 10	1020	280	92	2400

McCleary, Edgar M., Booneville, Iowa. Damper	698,095	Apr. 22	2049	671	90	701
McCleary, William E., Hopedale, Mass. assignor to Draper Company, Portland, Me., and Hopedale, Mass. Molding apparatus	697,546	Apr. 15	2109	702	90	625
McClendon, James H., Everett, Mass. Roller	698,729	Apr. 29	4005	978	90	1009
McClendon, Joseph J., Coldwater, Mich. Artificial building-stone	700,201	May 27	2604	914	90	2014
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,202	May 27	2605	915	90	2015
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,203	May 27	2606	916	90	2016
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,204	May 27	2607	917	90	2017
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,205	May 27	2608	918	90	2018
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,206	May 27	2609	919	90	2019
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,207	May 27	2610	920	90	2020
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,208	May 27	2611	921	90	2021
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,209	May 27	2612	922	90	2022
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,210	May 27	2613	923	90	2023
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,211	May 27	2614	924	90	2024
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,212	May 27	2615	925	90	2025
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,213	May 27	2616	926	90	2026
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,214	May 27	2617	927	90	2027
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,215	May 27	2618	928	90	2028
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,216	May 27	2619	929	90	2029
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,217	May 27	2620	930	90	2030
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,218	May 27	2621	931	90	2031
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,219	May 27	2622	932	90	2032
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,220	May 27	2623	933	90	2033
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,221	May 27	2624	934	90	2034
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,222	May 27	2625	935	90	2035
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,223	May 27	2626	936	90	2036
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,224	May 27	2627	937	90	2037
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,225	May 27	2628	938	90	2038
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,226	May 27	2629	939	90	2039
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,227	May 27	2630	940	90	2040
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,228	May 27	2631	941	90	2041
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,229	May 27	2632	942	90	2042
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,230	May 27	2633	943	90	2043
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,231	May 27	2634	944	90	2044
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,232	May 27	2635	945	90	2045
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,233	May 27	2636	946	90	2046
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,234	May 27	2637	947	90	2047
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,235	May 27	2638	948	90	2048
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,236	May 27	2639	949	90	2049
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,237	May 27	2640	950	90	2050
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,238	May 27	2641	951	90	2051
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,239	May 27	2642	952	90	2052
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,240	May 27	2643	953	90	2053
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,241	May 27	2644	954	90	2054
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,242	May 27	2645	955	90	2055
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,243	May 27	2646	956	90	2056
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,244	May 27	2647	957	90	2057
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,245	May 27	2648	958	90	2058
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,246	May 27	2649	959	90	2059
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,247	May 27	2650	960	90	2060
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,248	May 27	2651	961	90	2061
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,249	May 27	2652	962	90	2062
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,250	May 27	2653	963	90	2063
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,251	May 27	2654	964	90	2064
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,252	May 27	2655	965	90	2065
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,253	May 27	2656	966	90	2066
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,254	May 27	2657	967	90	2067
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,255	May 27	2658	968	90	2068
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,256	May 27	2659	969	90	2069
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,257	May 27	2660	970	90	2070
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,258	May 27	2661	971	90	2071
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,259	May 27	2662	972	90	2072
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,260	May 27	2663	973	90	2073
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,261	May 27	2664	974	90	2074
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,262	May 27	2665	975	90	2075
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,263	May 27	2666	976	90	2076
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,264	May 27	2667	977	90	2077
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,265	May 27	2668	978	90	2078
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,266	May 27	2669	979	90	2079
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,267	May 27	2670	980	90	2080
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,268	May 27	2671	981	90	2081
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,269	May 27	2672	982	90	2082
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,270	May 27	2673	983	90	2083
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,271	May 27	2674	984	90	2084
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,272	May 27	2675	985	90	2085
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,273	May 27	2676	986	90	2086
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,274	May 27	2677	987	90	2087
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,275	May 27	2678	988	90	2088
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,276	May 27	2679	989	90	2089
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,277	May 27	2680	990	90	2090
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,278	May 27	2681	991	90	2091
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,279	May 27	2682	992	90	2092
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,280	May 27	2683	993	90	2093
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,281	May 27	2684	994	90	2094
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,282	May 27	2685	995	90	2095
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,283	May 27	2686	996	90	2096
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,284	May 27	2687	997	90	2097
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-justifying machine	702,285	May 27	2688	998	90	2098
McClintock, Frank, Mount Vernon, assignor, by memo assignments, to E. C. Hoyt and F. Rosen, New York, N. Y. Type-						

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Pat.	Index	Vol.	Page
Michel, Albert J., Scranton, Pa. Car-repairer	699,999	Apr. 20	9998	1091	99	1115
Michelbacher, Heinrich, and H. Christian, Vienna, Austria-Hungary. Shoe-straining device	700,000	May 12	1000	410	99	1205
Michigan Specialty Company. (See Hodges, Chauncey W., assignor.)						
Michigan Stove Company. (See Keap, William J., assignor.)						
Mickle, Philip, Troy, N. Y. Fiber-crozier	698,304	Apr. 20	9995	791	99	800
Mietaschki, Otto, Wiesenthal, Germany. Means for automatically coupling or uncoupling trucks	699,040	Apr. 20	9974	677	99	702
Miller, Robert H., assignor to P. Harris, Columbus, Ga. Guano-distributor	699,097	May 6	946	219	99	1570
Millbank, Robert. (See Latham, James R., assignor.)						
Millbauer, Joseph. (See Lamcke, Charles F., assignor.)						
Miles, Charles H. (See Felt, Erick P., assignor.)						
Miles, Horine, Old Orchard, and C. H. Blanchard, St. Louis, Mo. Thill-coupling	701,967	June 3	132	39	99	2140
Miles, Willis C., Jersey City, N. J. Lock water-closet seat	697,934	Apr. 8	1943	393	99	570
Milholand, Frederick E., Brooklyn, N. Y. Linotype-galley	701,968	June 3	132	39	99	2140
Millan, Thomas, Stretton, Ill. Tamping-bar	700,398	June 24	3690	339	99	2030
Miller, Charles W., Columbus, Ohio. Stamp and envelop moistener	701,911	June 10	1197	297	99	2030
Miller, Robert, Dunedin, New Zealand. Wave-motor	702,977	June 17	2990	399	99	2031
Miller, Thomas D., Springfield, Mass., assignor to Springfield Engine Stop Company, New York, N. Y. Shut-off device for motors	702,100	June 10	1493	397	99	2030
Miller, Adam E., assignor to Shaw Walker Company, Muskegon, Mich. Card-index-filing tray	701,798	June 3	946	197	99	2031
Miller, Albe D., Portland, Ind. Clover-harvester	701,912	June 10	1197	339	99	2030
Miller, Andrew D. (See McCormick and Miller.)						
Miller, Andrew D., Mount Pleasant, Pa. Fluxing and separating compound	700,999	May 20	2779	-----	99	1770
Miller, Andrew D., Mount Pleasant, Pa. Treating ore	700,999	May 20	2780	695	99	1770
Miller, August F. (See Becker, Henry D., assignor.)						
Miller, August F., et al. (See Weaver, Cornelius, assignor.)						
Miller, August F., et al., assignor to F. Herman and C. O. Adams, Wooster, Ohio. Music-box turner	699,549	May 6	798	185 187	99	1390
Miller, Charles A., Marshalltown, Iowa. Elliptical spring	697,995	Apr. 15	3795	612	99	690
Miller, Charles A., Reading, Pa. Adjustable ratchet device	698,219	Apr. 20	3497	754	99	778
Miller, Charles J., Philadelphia, Pa. Finishing the surface of leather	702,460	June 17	3119	461	99	2031
Miller, Darwin V., Westport, N. Y. Box for beer, &c.	701,494	June 3	305	97	99	2137
Miller, George C. (See Robinson and Miller.)						
Miller, George F. (See Fraley and Miller.)						
Miller, Harry W. (See Hammack, Martin V., assignor.)						
Miller, Henry J. (See Irwin and Miller.)						
Miller, Herman R., Milwaukee, Wis. Photographic instrument	697,798	Apr. 15	2294	599	99	595
Miller, John A., Omaha, Nebr. Guiding device for trolleys	698,305	Apr. 20	3599	791	99	800
Miller, John C., Canton, Ohio. Cooling and aerating device	700,581	May 20	2799	699	99	1770
Miller, John E., Canton, Ohio. Cooling and aerating device	702,737	June 17	3034	611	99	2030
Miller, John E., Denver, Colo. Badge-medallion	702,098	June 10	1299	399	99	2030
Miller, John E., Washington, Del. Leather-working machine	699,997	Apr. 20	4998	1091	99	1114
Miller, John M., Crestline, Kans. Holder for dust pans, brooms, and dust-brushes	697,941	Apr. 15	3649	-----	99	590
Miller, Joseph B., Richmond, Ind. Fire-extinguishing compound						
Miller, Kemper B., assignor to Kellogg Switchboard & Supply Company, Chicago, Ill. Combined lock and trip	697,918	Apr. 15	3599	473	99	494
Miller, Ludvig M., assignor of one-half to G. Marin, Winneconne, Wis. Saw-filing device	699,906	May 4	129	35	99	1904
Miller, Martin R., Omaha, Nebr. Automatic cream-cooler	700,148	May 12	1990	497	99	1995
Miller, Oliver A. (See Brown, Jonathan T., assignor.)						
Miller, Robert, Corland, N. Y. Needle-holder	699,998	Apr. 15	3794	512	99	690
Miller, Samuel, New York, N. Y. Power-transmitter	700,199	May 20	2799	699	99	1770
Miller, Samuel J. (See McCormick and Miller, assignors.)						
Miller, Sidney W., Chicago, Ill. Device for charging or discharging liquid tanks	702,099	June 10	1299	399	99	2030
Miller, Stanley Q., assignor to J. W. Wainmaker, Philadelphia, Pa. Time-stamp	702,299	June 10	1794	394	99	1979
Miller, Thomas W., Akron, Ohio. Hollow seamless rubber article	699,998	Apr. 8	1197	390	99	200
Miller, Walter H. (See Aylworth and Miller.)						
Miller, William. (See Atkinson, Henry C., assignor.)						
Miller, William N., et al. (See Kreitz, Forrest H., assignor.)						
Millot, Liberty, Hagerman, Idaho. Strengthening clay hydraulic pipe, vases, crockery-ware, &c.	697,442	Apr. 15	2940	994	99	990
Millhagen, John M. A. (See Meyer, Emil, assignor.)						
Millman, James W., and H. Ballinga, Birmingham, England. Machine for grinding and polishing steel or other metallic parts	697,393	Apr. 8	1954	415 416	99	415
Millman, Frank A., Warren, Ohio. Chair-support	702,998	June 24	3168	739	99	2030
Miller, Peter D., Buffalo, assignor to Automatic Trolley Catcher and Controller Company, Syracuse, N. Y. Trolley-catch device	699,592	Apr. 20	2939	992	99	997
Mills, Anson C., Jackson, and G. R. Lamb, Hudson, Mich. Wire-fence machine	699,993	Apr. 20	2999	992	99	998
Mills, Francis A., assignor of one-half to G. B. Emmons, Methuen, Mass. Picker-stick buffer for looms	702,995	May 27	3099	999	99	1999
Mills, George E., et al. (See Pennington, Edward J., assignor.)						
Mills, John E., Chicago, Ill. Lathe attachment	697,995	Apr. 8	1944	399 399	99	779
Mills, John F., Jr. (See Graves, George W., assignor.)						
Mills, John F., Jr. (See Graves and Mills.)						
Mills, Robert W., Boston Harbor, Mich. Made-rack	699,999	Apr. 8	1199	991	99	999
Mills, William, assignor to Eastern Carbon Works, Jersey City, N. J. Carbon brush and making same	701,999	June 3	194	99	99	9199
Miner, Albert B., assignor to A. H. Miller Seating Co., Canal Dover, Ohio. Folding opera chair	700,451 701,914	June 17 May 27	2190 4994	491 994	99	2061 2095
Miner, Thomas J., Denver, Colo. Condall						
Miner, William H. (See Calvert, Alon, assignor.)						
Miner, John L. (See Conklin and Miner.)						
Miner, William H., Plainfield, N. J. Electric synchronous apparatus	702,499	June 17	3199	499	99	2030
Miner, William H., Plainfield, N. J. Electric synchronous apparatus	702,499	June 17	3199	499	99	2030
Miner, William H., Plainfield, N. J. Electric synchronous apparatus	702,494	June 17	3199	499	99	2030
Miner, William C., Stanton, Mich., assignor of one-third to J. W. Tokins, Aberdeen, Wash. Railway spike	699,992	Apr. 20	4999	9999	99	1999
Miner, William H. (See Hennessy and Moore, assignors.)						
Minier, Peter G., assignor of one-fourth to I. R. Titus, Huntington, W. Va. Door-hanger	702,997	June 3	3199	199	99	2030
Minington, Philip W., et al. (See Dear, James W., assignor.)						
Mininewski, Josef, et al., Luga, Russia. Drawing frame	701,919	June 10	1199	999	99	2030
Minns, Arthur E., Brooklyn, N. Y. Ventilator for the surfaces of ranges	699,999	Apr. 20	4994	1999	99	1111
Minwagen, John J., Chicago, Ill. Nursing-bottle	701,999	May 27	2994	994	99	2031
Misko-Cutlery Company. (See Miskolczy, Joseph, assignor.)						
Miskolczy, Joseph, assignor to Misko-Cutlery Company, New York, N. Y. Finishing or polishing metals	699,199	Apr. 20	2999	713	99	791

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Pat.	Dr.	Vol.	Page.
Mimotte, Manuel L., Saltillo, Mexico. Canteen.....	699,497	May 12	1090	257	90	1414
Minkotex Cream Company. (See Small, George D., assignor.)						
Mitch, Joseph, et al. (See Polmeteer, Andrew J., assignor.)						
Mitchell, Abbott B., et al. (See Roberts, Henry P., assignor.)						
Mitchell, Fred L., New York, N. Y. Combined box or chest and table.....	700,295	May 20	2496	555	90	1709
Mitchell, Fred L., New York, N. Y. Collapsible camp-stove.....	700,296	May 20	2498	556	90	1709
Mitchell, George E., Chicago, Ill., and W. Link, New York, N. Y. Portable bicycle-track.	697,948	Apr. 15	2420	584	90	890
Mitchell, George L., assignor of one-half to J. M. Glenn, Cincinnati, Ohio. Wire-coupling.....	698,197	Apr. 22	2370	715	90	741
Mitchell, George R. (See Turner and Mitchell.)						
Mitchell, James. (See Norcross and Mitchell.)						
Mitchell, James A., New York, N. Y. Milk-modifying pump.....	696,594	Apr. 1	989	190	90	175
Mitchell, James A., Hilldale, Mich. Fence-post.....	702,290	June 10	1707	304	90	2476
Mitchell, James H., Philadelphia, Pa. Differential and reversing gear.....	698,126	Apr. 22	2371	716	90	741
Mitchell, John E., St. Louis, Mo. Dust-collector.....	702,212	June 10	1698	419	90	2909
Mitchell, John H., Washington, D. C., assignor of one-half to H. K. and H. A. Emery and W. V. Cox, executors and trustees of M. G. Emery, deceased. Antiskipping hoof-pad.	702,140	May 12	1998	457	90	1895
Mitchell, Robert J. O. (See Eaton, John, assignor.)						
Mitchell, Thomas W., Omaha, Nebr. Car-journal box.....	697,947	Apr. 15	2399	640	90	646
Mitchell, Thomas W., Omaha, Nebr. Rod-packing.....	702,278	June 17	2361	520	92	2921
Mitchell, William S. (See Clarke, John S., assignor.)						
Mixell, Leighton N. D., Bethlehem, assignor to Bethlehem Steel Company, South Bethlehem, Pa. Breech mechanism for guns.....	702,455	June 17	2126	468	90	2692
Mize, William P., Moss, Tex. Fertilizer-distributor.....	700,533	May 20	2724	686	90	1780
Moss, John T., Adelaide, South Australia, Australia. Non-reverting water-wheel.....	699,844	May 12	1895	360	90	1476
Modry, August M., Brooklyn, N. Y. Electric elevator.....	698,904	Apr. 8	1170	261	90	296
Moe, Samuel A., Minneapolis, Minn. Combination-tool.....	699,207	May 6	140	25	90	1204
Moehring, Christ, and W. Fetzer, Middletown, Ohio; said Moehring assignor to said Fetzer, Sender.....	700,936	May 27	2619	680	90	1995
Moffat, George, Philadelphia, Pa., assignor to James Smith and Company, Incorporated, Charleston, W. Va. Steam-trap.....	697,246	Apr. 8	1725	400	90	493
Moffatt, Limited. (See Hutchings, James, assignor.)						
Moffitt, Alexander, California, Pa. Car-window.....	698,980	Apr. 22	2396	1091	90	1114
Möhrer, Paul F. v., J. P. and J. Hopp, Philadelphia, Pa. Acetylene-gas generator.....	698,208	Apr. 22	2390	722	90	800
Molden, Frederick W., Huron, S. D. Vehicle-curtain attachment.....	699,987	May 12	1695	375	90	1896
Moline Flow Company. (See Lindgren, August, assignor.)						
Möller, Georg, Copenhagen, Denmark. Party-line telephone apparatus.....	698,207	Apr. 22	2392	723	90	800
Moller, Jacob A., Jr., New York, N. Y. Granulating attachment for salt-shakers.....	700,594	May 20	2726	687	90	1780
Molnar, Sándor, assignor of one-half to J. Marmorstein, New York, N. Y. Valved stopper for receptacles, &c.....	702,210	June 17	2600	643	90	2722
Molynaux, Burton S., Buffalo, N. Y. Oil-controlled tire-inflator.....	700,796	May 27	2601	757	90	1907
Monahan, Louis J., and O. Kieren, Oakbrook, assignors of one-third to E. H. Steiger, Fremont, Wis. Machine for making twine.....	697,411	Apr. 8	1985	429	90	428
Monck, Ludwig, Regents Park, London, England. Gas-producer.....	697,987	Apr. 15	2705	613	90	680
Monck, Ludwig, London, England. Obtaining zinc by electrolysis.....	701,215	May 27	4085	985	90	2906
Monck, Ludwig, London, England. Apparatus for obtaining zinc by electrolysis.....	701,216	May 27	4087	985	90	2906
Monahan, Michael, and P. Dörner, Dixon, Ill. Fruit-can opener.....	699,638	May 12	1978	301	90	1456
Monfort, Abram C., East Providence, R. I. Track-laying device for railways.....	702,221	June 10	1707	305	90	2476
Monjo, Edward A., Elizabeth, N. J. Gas-blower.....	700,595	May 20	2727	687	90	1781
Montal, Leo, New York, N. Y., assignor to Acetylene Manufacturing Company, New York, N. Y., and Jersey City, N. J. Acetylene-gas generator.....	699,287	May 6	282	91	90	1264
Montgomery, Franklin M. (See Turrell and Montgomery.)						
Montgomery, Harry C., assignor to S. W. Parsons, Cleveland, Ohio. Automatic fire-extinguisher.....	700,276	May 20	2154	494	90	1051
Montgomery, Marshall, Philadelphia, Pa. Portable hose adapted for couplings, &c.....	702,723	June 17	2657	612	90	2908
Montgomery, Robert F., Erie, Canada. Drum-supporter.....	702,456	June 17	2129	464	90	2693
Montgomery, Thomas H. (See Montgomery, William W., assignor.)						
Montgomery, William G., assignor of one-half to H. F. Peck, Erie, Pa. Stove-damper.....	702,212	June 10	1698	419	90	2909
Montgomery, William W., assignor of one-half to T. H. Montgomery, Chicago, Ill. Conductor for concrete.....	702,212	June 10	1698	419	90	2909
Montreuil, Charles J., London, France. Apparatus for elliptical turning and boring.....	701,217	May 27	4086	986	90	2907
Moody, Rufus M., Aberdeen, Wash. Marking-machine.....	701,221	May 27	2605	678	90	2910
Moody, Walter C., Richmond, N. Y., assignor to General Electric Company. Fan-motor attachment.....	701,214	June 10	1695	398	90	2900
Moody, Winfield H., assignor to T. J. Hakstad, Dallas, Tex. Burglar-alarm.....	701,728	June 3	646	107	90	2906
Moon, Edward W., et al. (See Harting, Stephen D., assignor.)						
Moon, George R., Columbus, Ohio. Heating-stove.....	702,204	June 24	2144	722	90	2911
Moore, Alfred L., Moline, Ill. Wagon-skate.....	698,944	Apr. 22	2398	1094	90	1094
Moore, Charles B., Newton Center, and G. B. Tutman, Wollaston, Mass. Feed-regulator.....	702,219	May 20	2126	424	90	1091
Moore, Charles E., Chicago, Ill., and C. J. Reilly, Syracuse, Ind. Apparatus for electrically operating tools.....	702,227	May 20	2604	684	90	1790
Moore, Daniel M., Newark, N. J. Electric-tube lighting.....	702,214	June 10	1696	410	90	2900
Moore, Daniel M., Newark, N. J. Electric-tube lighting.....	702,215	June 10	1696	420	90	2900
Moore, Daniel M., Newark, N. J. Electric-tube lighting.....	702,216	June 10	1644	480	90	2504
Moore, Daniel M., Newark, N. J. Electric-tube lighting.....	702,217	June 10	1645	481	90	2504
Moore, Daniel M., Newark, N. J. Automatic circuit-interrupter.....	702,218	June 10	1646	481	90	2504
Moore, Daniel M., Newark, N. J. Electric-tube lamp.....	702,219	June 10	1698	422	90	2504
Moore, Daniel M., Newark, N. J. Electric-tube lamp.....	702,220	June 10	1654	423	90	2505
Moore, Daniel M., Newark, N. J. Electric-tube lighting.....	702,221	June 10	1657	423	90	2505
Moore, Daniel M., Newark, N. J., assignor to Moore Electrical Company, New York, N. Y. Vacuum-tube set.....	699,208	May 6	141	26	90	1264
Moore, David O. (See Moore, George J. and D. O.)						
Moore, Edward J., Philadelphia, Pa. Steam-boller.....	700,699	May 12	1694	412	90	1599
Moore, Edwin A. (See Heywood, William A., assignor.)						
Moore Electrical Company. (See Moore, Daniel M., assignor.)						
Moore Electrolytic Company. (See Moore, Hugh K., assignor.)						
Moore, Eli W., assignor of one-half to F. W. Moore, Ann Arbor, Mich. Hay-press.....	700,697	May 20	2621	700	90	1946

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			1	2	Vol.	Page
Moore, Eas L., Chicago, Ill. Boiler	698,988	May 13	149	345	90	1497
Moore, George A., Brookline, Mass., assignor to Moore Talking Scale Company. Weighing-machine	702,985	June 24	2145	728	90	2011
Moore, George B., St. Louis, Mo. Display-rack	702,986	June 24	1760	285	90	2477
Moore, George J., and D. C. Graham, Mo. Apparatus for demonstrating the phenomena of electrical storms	702,989	May 20	2720	697	90	1791
Moore, George M., Buffalo, N. Y. Safety appliance for elevators	698,991	Apr. 29	3675	677	90	798
Moore, Harvey A., (See Fouts, Albert, assignor.)						
Moore, Hugh K., Lynn, Mass., assignor to Moore Electrolytic Company, Portland, Me., and Boston, Mass. Producing caustic	702,990	June 24	2997	928	90	2999
Moore, James F., Fairland, Ind. Tur. Chair	700,007	May 13	1897	419	90	1999
Moore, John D., New York, and F. M. Martin, Brooklyn, N. Y.; said Moore assignor to Clayton Fire Extinguishing & Disinfecting Company. Apparatus for generating sulfur dioxide	700,007	May 20	2720	698	90	1792
Moore, John D., New York, and F. M. Martin, Brooklyn, N. Y.; said Moore assignor to Clayton Fire Extinguishing & Disinfecting Company. Charging compartments with gas	700,008	May 20	2724	698	90	1793
Moore, John D., New York, and F. M. Martin, Brooklyn, N. Y.; said Moore assignor to Clayton Fire Extinguishing & Disinfecting Company. Extinguishing fire	700,009	May 27	2913	699	90	1899
Moore, John W., (See White, Joseph A., assignor.)						
Moore, Louis, Council Grove, Kans. Cook-bucket	700,006	May 27	2914	699	90	1899
Moore, Matthew R., assignor to Atlas Engine Works, Indianapolis, Ind. Dash-pot	697,944	Apr. 15	2881	688	90	1899
Moore, Peter N., (See Hennessey and Moore.)						
Moore, Pusey W., (See Moore, Ed W., assignor.)						
Moore, Robert B., San Francisco, Cal. Hooping-machine	702,004	June 10	1281	364	90	2999
Moore Talking Scale Company. (See Moore, George A., assignor.)						
Moore, Willard T., (See Foster and Beaumont, assignors.)						
Moore, William H. S., West Chicago, Ill. Combination-lock	699,945	May 13	1897	388	90	1479
Moore, William H., et al. (See Taber, Mott R., assignor.)						
Moran, James, New York, N. Y. Combination furniture	702,990	June 10	1710	355	90	2477
Moran, Mary C., Newton, Mass. Adjustable sleeve-form	700,000	May 20	2720	698	90	1792
Moran, Patrick I., (See Donohue, James B., assignor.)						
Moran, Thomas W., Louisville, Ky. Safety fuel-tank for automobiles	701,754	June 2	980	187	90	2999
Morand, Fausto, Rome, Italy. Electric furnace	701,818	May 27	4070	997	90	3099
Mordant and Company, S. (See Little, Charles E., assignor.)						
Morehouse, John W., Salt Lake City, Utah. Truck-wrench	698,979	Apr. 1	388	79	90	74
Morehouse, Harris. (See Griffith and Morehouse.)						
Morrell, Louis A., Paris, France. Manufacturing glass	697,990	Apr. 2	1767	691	90	690
Morrell, Louis A., Paris, France. Manufacturing glass	698,728	Apr. 29	4484	779	90	1999
Morrell, Louis A., Paris, France. Manufacturing glass	697,991	Apr. 2	1767	691	90	690
Morgan, Construction Company. (See Edwards, Victor E., assignor.)						
Morgan, Daniel F., Toledo, Ohio. Hand-protector	702,911	June 24	2976	921	90	2999
Morgan, David J., Barry, England. Hand-power brake for railway-wagons	698,979	May 6	148	38	90	1999
Morgan, Edward M., Westmount, Canada. Inhaler	702,144	June 10	1281	361	90	2445
Morgan, George J., and G. T. Tibbott, Shipley, England. Coin-operated vending-machine	698,728	Apr. 1	388	79	90	141
Morgan, George O., et al. (See Cohen, George W., assignor.)						
Morgan, Henry W., Rochester, N. Y. Rolling-machine	698,498	Apr. 1	130	28, 29	90	84
Morgan, John R., (See Wallace, John G., assignor.)						
Morgan, John W., San Antonio, Tex., assignor to Tennessee Felt Manufacturing Company, West Nashville, Tenn. Cotton-picker for forming mattress-bats	698,985	Apr. 29	3697	698	90	2999
Morgan, Ralph L., (See Dannenberg and Morgan.)						
Morgan, Ralph L., Toledo, Ohio, assignor to American Bicycle Company, Jersey City, N. J., and New York, N. Y. Pump for vehicles	697,000	Apr. 8	1264	298	90	399
Morgan, Thomas B., (See Walman, Seaver, and Morgan.)						
Moriarty, Harry. (See Foster, Moriarty, and Jacobson.)						
Moritz, Joseph F., Lawrence, Mass. Barrel-cover	698,904	May 13	1804	308	90	1498
Moritz, Joseph F., Lawrence, Mass. Barrel-cover	698,905	May 13	1805	308	90	1498
Moritz, Joseph F., Lawrence, Mass. Barrel-cover	700,008	May 13	1806	419	90	1999
Morison, Donald H., Hartlepool, England. Food-water cleaner	702,979	June 17	3088	920	90	2991
Morison, John. (See Wright and Morison.)						
Morison, John T., Pittsburgh, Pa. Compound trans-rod	702,984	June 10	1713	365	90	2477
Morris, Alfred J., Victoria, Canada. Chair	700,000	May 20	2720	698	90	1792
Morris, Arthur J., and L. W. Horstfeldt, Minneapolis, Minn.; said Morris assignor to said Horstfeldt. Hill-pull supporter	700,000	May 6	144	38	90	1999
Morris, Charles, Cincinnati, S. C. Morris, New York, N. Y., executrix. Hand-punch	698,930	May 6	144	38	90	1999
Morris, Sarah C., executrix. (See Morris, Charles.)						
Morris, Albert, Reservoir, Va. Fish-drying apparatus	700,000	June 10	1713	365	90	2477
Morris, Alexander G., Tyrone, Pa. Crusher	698,990	Apr. 29	4088	1098	90	1114
Morris, Charles A., Glenridge, N. J. Hoisting and dumping apparatus	698,990	May 13	1806	308	90	1498
Morris, Charles L., Fairbury, Nebr. Cream-separator	697,945	Apr. 15	2884	688	90	1899
Morris & Company. (See Morris and Staples, assignors.)						
Morris, Edgar R., (See Morris and Beaumont.)						
Morris, Emanuel S., St. Louis, Mo. Nut-lock	698,989	May 13	1806	308	90	1498
Morris, Harry P., assignor of one-half to J. C. Long, Chicago, Ill. Oil-atomizer	700,797	May 27	2907	798	90	2911
Morris, Jackson A. M., Leeper, Mo. Fan	701,078	May 27	2907	798	90	2911
Morris, John, Jr., Boston, England. Coupling for hose-pipes, &c.	700,798	May 27	2907	798	90	2911
Morris, John O., (See Phelps and Morris.)						
Morris, Lewis E., and E. H., and C. L. Schmecker, Dixon, Ill. Oil or gasless can	701,798	June 2	981	187	90	2999
Morris, Robert, Le Crosse, Wis. Yoke and draft-bar for couplings	700,897	May 20	2441	597	90	1710
Morris, Thomas G., Chicago, Ill. Floor-hinge	700,921	May 20	2186	694	90	1999
Morris, William M., Yardville, and E. M. Staples, Elizabeth, N. J., assignors to Morris & Company. Basket of textile material	701,985	June 2	980	187	90	2999
Morrison, Eugene T., (See Andrews and Morrison.)						
Morrison, Ezra L., et al. (See Lewis, John Y., assignor.)						
Morrison, James, Toronto, Canada. Compression-valve	702,978	June 17	2918	674	90	2997
Morrison, John C., et al. (See Derrigo, John T., assignor.)						
Morrison, John C., et al. (See Derrigo, John T., assignor.)						
Morrison, William, assignor to Helton-Upton Company, Chicago, Ill. Forming second-ary battery grids	701,915	June 10	1281	365	90	2477
Morrison, William, assignor to Helton-Upton Company, Chicago, Ill. Saw for making secondary-battery grids	701,916	June 10	1281	365	90	2477

UNITED STATES PATENT OFFICE, 1908.

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention	No.	Date	Monthly volume		Official Gazette	
			Spec.	Dr'g	Vol.	Page
Morrison, William, assignor to Helton-Upton Company, Chicago, Ill. Secondary battery	701,917	June 10	1282	366	90	2471
Morrison, William, assignor to Helton-Upton Company, Chicago, Ill. Means for preventing the distortion of secondary-battery plates during forming	701,918	June 10	1284	367	90	2471
Morrow, John. (See Markham, Andrew J., assignor.)						
Mors, Emilio L. P., Paris, France. Speed and direction changing mechanism	701,973	May 27	2908	678	90	2911
Morse Chain Company. (See Morse, Frank L., assignor.)						
Morse, Everett F., Transamberg, N. Y. Gaging temperatures of heated substances	698,978	Apr. 1	909	210	90	199
Morse, Everett F., Transamberg, N. Y. Apparatus for gaging temperatures of heated substances	698,979	Apr. 1	1008	294	90	512
Morse, Frank L., assignor to Morse Chain Company, Transamberg, N. Y. Chain-wheel	698,981	Apr. 29	4089	1098	90	1115
Morse, James W., Baton Rouge, La. Medium for polishing parts of boots or shoes	697,185	Apr. 8	1428	386	90	1999
Morse, James W., Baton Rouge, La. Medium for polishing parts of boots or shoes	697,186	May 6	1428	386	90	1999
Morse, John E. and Machine Company. (See Abraham, Thomas, assignor.)						
Morse, William and Company. (See Harvey, Minor, assignor.)						
Morrell, Arthur L., Milwaukee, Wis. Revolving chair	699,989	May 12	1491	348	90	1497
Morse, Leonidas W. (See Doney, Alfred, assignor.)						
Morse, Stephen B., Rahway, N. J. Lamp-burner	701,921	June 10	1295	260	90	2472
Mortenson, Morten. (See Nolan and Mortenson.)						
Morton Trust Company, trustees. (See Martin, Hiram P., assignor.)						
Morton, William G. (See Leach, Eugene W., assignor.)						
Mosbach, Henry, Jr., Philadelphia, Pa. Bicycle-support	701,370	June 3	125	29, 34	90	2149
Moschney, W. Gray. (See Mayo, David C., assignor.)						
Moss, Thomas F., New York, N. Y. Handle for a number of implements	698,986	Apr. 8	1171	269	90	269
Moss, Thomas F., New York, N. Y. Handle for a number of implements	697,988	Apr. 15	2705	511	90	680
Mosher, Charles D., New York, N. Y. Motor-vehicle	697,405	Apr. 15	2935	595	90	280
Mosher, De Witt C., Colorado City, assignor to C. M. MacNeill, Colorado Springs, Colo.	699,211	May 6	146	37	90	1295
Mosher, De Witt C., Colorado City, assignor to C. M. MacNeill, Colorado Springs, Colo.	699,212	May 6	147	37	90	1295
Mosher, John A., Chicago, Ill., assignor to Adams and Westlake Company. Acetylene-gas generator	701,986	June 1	577	193	90	2482
Mosher, John A., New York, N. Y. Electric ignition device	698,042	Apr. 29	3079	571	90	719
Moss, Eric, Fort Arthur, Tex. (See Ball, Walter J., assignor.)	698,988	Apr. 29	3098	594	90	309
Moss, Eric, Fort Arthur, Tex. (See Ball, Walter J., assignor.)	701,989	June 17	2880	699	90	2708
Mosberg & Co., the Manufacturing Company. (See Arnold, Lucien F., assignor.)						
Mosberg, Oscar F., assignor to M. E. Johnson, Fitchburg, Mass., executrix of Iver Johnson, deceased. Firearm-lock	697,216	Apr. 15	2128	472	90	495
Mosberg, Oscar F., assignor to M. E. Johnson, Fitchburg, Mass., executrix of Iver Johnson, deceased. Revolving firearm	697,217	Apr. 15	2128	472	90	495
Mosberg, French Co. (See Wardwell and Kicker, assignors.)						
Mossman, James, Westerville, Ohio. Combined wire stretcher, cutter, splicer, and staple-puller	699,213	May 6	146	37	90	1295
Mott, Charles P., Millford, Pa. Portable house	699,990	Apr. 8	1172	269	90	269
Mott, Charles P., Millford, Pa. Portable house	699,991	Apr. 1	508	160	90	163
Mott, Ernest, Jamaica, S. C. Cotton-baling machine	699,992	Apr. 1	508	160	90	163
Mouton, Thomas. (See Egan, James and Egan.)						
Moulton, Carrie E., Washington, D. C. Book-holder	699,218	Apr. 15	2128	472	90	495
Moulton, Carrie E., Washington, D. C. Window-bracket	699,219	May 6	146	37	90	1295
Mounce, Joseph L. (See Smith and Mounce.)						
Mountford, Sidney, New York, N. Y. (See Smith and Mounce.)	702,000	May 20	3068	701	90	1948
Mounette, Oliver J., Rockaway Beach, N. Y. Acetylene-gas generator	699,220	Apr. 29	3098	594	90	309
Mowery, William R., et al. (See Loff, George, assignor.)						
Moyer, Harry V., et al. (See Ratz, James E., assignor.)						
Mray, Charles J., Clarkson, N. Y. Horse-detacher	699,993	May 12	1999	288	90	1476
Muck, Ulmrich G. (See Mann and Muck.)						
Muckie, John B., et al. (See Muckie, Mark R., Jr., assignor.)						
Muckie, Mark R., Jr., assignor of one-third to J. S. Muckie and T. C. Smith, Philadelphia, Pa. Locking device for elevators	701,975	June 10	1284	364	90	2465
Muddox, H. C. (See Seave, Robert E., assignor.)						
Mueller, Adolph, et al. (See Savage, Thomas A., assignor.)						
Muehler, Joseph E., Cairo, Ill. Sifter	699,997	Apr. 8	1175	269	90	269
Muhler, John H., Bannock, Ind. Attachment for corn-plumbers	700,000	Apr. 29	3097	599	90	1798
Mullford, Harry K., Philadelphia, Pa. Vaccination-shield	702,001	June 24	3790	929	90	2881
Mulholland, Richard, Dunstable, Pa. Rubber-thud wheel	698,992	Apr. 1	549	186	90	119
Muller, Arthur, New Brunswick, N. J. Apparatus for unloading ships' cargoes	700,002	May 27	2905	709	90	1908
Muller, William G., Pomona, Cal. Shoe-dryer	700,003	May 29	1811	480	90	1880
Muller, Carl, Bremen, Germany. Hat-block	700,004	Apr. 8	1384	348	90	289
Muller, Charles E., Peterson, and J. E. Jackson, North Haledon, N. J. Stop-motion for looms	700,005	May 27	2915	681	90	1999
Muller, Ernest W., assignor to E. Krantz, Brooklyn, N. Y. Electrical outlet-box	699,995	May 27	181	32	90	1293
Muller, Frank, Philadelphia, Pa. Lock for milk-receptacles	700,006	June 1	549	187	90	1170
Muller, Frederick C., Brooklyn, N. Y. Electric railway-signal	700,007	June 1	549	187	90	2870
Muller, Hermann, Leipzig, Germany. Power-indicator	700,008	May 11	1938	497	90	1295
Muller, John D., New York, N. Y. Locking device for printing presses	699,996	Apr. 29	3040	1098	90	1111
Muller, John D., New York, N. Y. Apparatus for printing presses	699,997	Apr. 29	3040	1098	90	2882
Mulliken, Levin E., Trappe, Md. Combined lock and latch	697,188	Apr. 8	1428	387	90	1999
Mulliken, Levin E., Trappe, Md. Sand-drier	699,998	Apr. 1	285	80	90	74
Mumford, James A., New York, N. Y. Self-loading bucket for dredging	699,999	Apr. 1	287	80	90	74
Mumma, Ernest, Berlin, Prussia, to the Brit. Germany. Pipe-tee	697,187	Apr. 25	2935	595	90	280
Munns, Edwy A. (See Burns, Henry R., assignor.)						
Munro, R. E. (See West, Louis G. M., assignor.)						
Muns, Charles W., Detroit, Mich. Extension-table	702,009	May 15	2125	465	90	1999
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,010	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,011	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,012	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,013	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,014	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,015	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,016	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,017	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,018	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,019	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,020	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,021	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,022	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,023	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,024	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,025	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,026	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,027	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,028	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,029	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,030	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,031	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,032	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,033	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,034	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,035	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,036	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,037	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,038	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,039	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,040	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,041	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,042	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,043	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,044	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,045	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,046	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,047	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,048	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,049	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,050	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,051	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,052	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,053	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,054	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,055	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,056	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,057	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,058	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,059	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,060	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,061	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,062	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,063	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,064	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,065	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,066	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,067	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,068	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,069	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,070	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,071	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,072	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,073	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,074	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,075	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,076	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,077	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,078	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,079	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,080	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,081	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,082	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,083	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,084	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,085	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,086	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,087	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,088	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,089	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,090	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,091	May 29	3799	934	90	1798
Murdoch, James K., Detroit, assignor to Windsor Paper Company, St. Clair, Mich. Paper attachment	702,092	May 29	3799	93		

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr's	Vol.	Page.
Murphy, John. (See Thompson, Walter, assignor.)	702,007	June 17	2525	578	90	9008
Murphy, John F., Adrian, Mich. Dress shield.	699,699	Apr. 1	583	128	90	120
Murphy, John F., assignor of one-half to G. B. M. Senger and H. R. Clark, Adrian, Mich. Dress shield holder.	699,704	May 13	1280	286	90	1440
Murphy, Thomas J., Montreal, Canada. System of armature-winding for electric motors.	697,990	Apr. 15	2787	618	90	680
Murphy, William B., New York, N. Y. Glove-fastening.	698,945	Apr. 29	4084	1084	90	1064
Murray, Donald, New York, N. Y. Actuating mechanism for key-operated machines.	701,080	June 10	1187	280	90	2061
Murray, George C., Chicago, Ill. Bolster for railway-cars.	698,690	Apr. 1	535	127	90	190
Murray, John E., Washington, Pa. Educational device.	699,698	May 13	1100	328	90	1414
Murray, Michael W., Milton, Mass. Separable screen-hinge.	702,879	June 17	3019	874	90	2747
Murray, Thomas W. L., Newbern, Tenn. Stovepipe-ventilator.	697,519	Apr. 15	2127	478	90	486
Muscatello, Augusto, Berlin, Germany. Box or cage pile.	698,908	Apr. 29	4911	1064	90	1118
Musgrave, Herbert E., and G. A. Barnes, Bolton, England. Means for cutting cloth.	698,904	Apr. 29	4908	1064	90	1118

Musker, Charles and A., and W. G. Hay, Liverpool, England. Controlling the generation of steam.	700,498	May 20	2000	498	90	1748
Musker, Nelson, assignor of one-half to J. E. Hackel, Worcester, Mass. Bottle-labeling machine.	700,181	May 18	1904	458	90	1586
Mutual Electric Trust. (See Wright, Arthur, assignor.)	702,391	June 24	3701	988	90	2821
Mussey, William H., Dayton, Ohio. Motor-cyle.	696,598	Apr. 1	239	61	90	73
Myer, Sydney, and G. Myler, England. Scooper and fitting for bottles.	696,598	Apr. 1	239	61	90	73
Myers, A. Harry. (See Edmonson and Myers.)	698,795	Apr. 29	2696	708	90	1008
Myers, Daniel, et al. (See Donovan, Alford, assignor.)	698,795	Apr. 29	2696	708	90	1008
Myers, Emma E., Pittsburg, Pa. Metallic tie and rail-fastener.	698,795	Apr. 29	2696	708	90	1008
Myers, Emma E., Pittsburg, Pa. Railway-rail.	698,795	Apr. 29	2696	708	90	1008
Myers, Helen T., Colorado Springs, Colo. Cooling-tub.	698,795	Apr. 29	2696	708	90	1008
Myers, Henry B., Covington, Ky. Liquid-container.	698,795	Apr. 29	2696	708	90	1008
Myers, Jacob, et al. (See Donovan, Alford, assignor.)	698,795	Apr. 29	2696	708	90	1008
Mythic Reduction Company. (See Long, Frederic H., assignor.)	700,980	June 24	3149	734	90	2618
Nace, Florence M., San Francisco, Cal. Calendar.	700,545	May 20	2604	640	90	1794
Nadeau, Adolphe, Fitchburg, Mass. Combined chair and cradle.	697,990	Apr. 15	1088	270	90	871
Nadel, David, Berlin, Germany. Embroidering-machine.	697,970	Apr. 8	1054	271	90	873
Nadel, David, Berlin, Germany. Pattern mechanism for embroidering-machines.	700,461	June 17	2148	486	90	2608
Nadrowald, Johannes, Dresden, Germany. Turbine wheel.	700,972	May 27	2680	581	90	1970
Neef, Paul, Argentina, Kans. Apparatus for fixating ores.	701,319	May 27	4078	987	90	2007
Neef, Paul, New York, N. Y. Apparatus for the manufacture of coke.	697,680	Apr. 15	2006	508	90	588
Needing-Leslie Tiling Company. (See Leslie, Benjamin F., assignor.)	698,900	May 13	1088	270	90	1886
Negel, Friedrich, assignor to F. Krupp, Essen, Germany. Freight-car.	701,008	June 3	581	187	90	2080
Negel, Oskar, New York, N. Y. Making spelter.	700,546	May 20	2605	641	90	1794
Negle, Augustus F., Montclair, N. J., assignor to E. H. Gowing, Reading, Mass. Mechanical stoker.	702,076	June 24	3317	708	90	2644
Nelance, Charles, Cranford, N. J. Water-heater and steam-generator.	698,998	Apr. 1	507	127	90	181
Nemack, Thomas H. (See Hartley, Nemack, and Newhall.)	702,225	June 10	1984	484	90	2507
Nemeyer, Frank L., St. Joseph, Mo. Puzzle.						
Nash, F. W., et al. (See Smith, Edward A., assignor.)						
Nash, Lewis H., South Norwalk, Conn., and F. B. King, Brooklyn, assignors to National Motor Company, New York, N. Y. Water-motor.						
Nathan, Frederic L., J. M. Thomson, and W. Rinkoul, Waltham Abbey, England. Apparatus for the manufacture of nitroglycerin.						
Nathorst, Chas. E., et al. (See Johnson, Lafayette W., assignor.)						
National Bread Company. (See Lea, Joseph, assignor.)						
National Burial Device Company. (See Kinney, Richard E., assignor.)						
National Carbon Company. (See Fishell and Clymer, assignors.)						
National Carbon Company. (See Laughlin, Robert D., assignor.)						
National Carbon Company. (See Zellers, Mahlon M., assignor.)						
National Cash Register Co. (See Thompson, Ralph P., assignor.) (Reissue.)						
National Cash Register Company. (See Carney, Thomas, assignor.)						
National Cash Register Company. (See Carroll, Thomas, assignor.)						
National Cash Register Company. (See Chal, Joseph P., assignor.)						
National Cash Register Company. (See Marr, Alexander W., assignor.)						
National Compressing Scale Company. (See Colmer, John W., assignor.)						
National Dry Kilo Company. (See Gertard, Edward, assignor.)						
National Electric Hose Spraying Company. (See Weiss, George G., assignor.)						
National Enameling & Stamping Co. (See Knapp, George W., assignor.)						
National Folding Box & Paper Company. (See Lynch and Hibson, assignors.)						
National Foundry and Machine Company. (See Reeder and Previlla, assignors.)						
National Lock Washer Company. (See Hoyt, Daniel, assignor.)						
National Malleable Castings Company. (See Krashau, Harry T., assignor.)						
National Malleable Castings Company. (See Whitlock, Frederick B., assignor.)						
National Motor Company. (See Nash and King, assignors.)						
National Photomicrograph Company. (See Aylsworth and Miller, assignors.)						
National Specialty Manufacturing Co. (See Piper, Robert H., assignor.)						
National Tag Co. (See Kuhns, John P., assignor.)						
National Tube Company. (See Haggie, David, assignor.)						
Nawson, Joseph, Jersey City, assignor to Perfection Music Box Company, Newark, N. J. Note-theft or music-disk.	698,910	Apr. 1	997	288	90	811
Naylor, George. (See Myer and Naylor.)						
Neahr, Jacob E., Buffalo, assignor to Wagner Typewriter Company, New York, N. Y. Type-writing machine.	700,973	May 27	2688	582	90	1971
Neal, George P., Evansville, Ind. Automatic unlatching device for animals, and fire escape and extinguisher.	700,985	May 20	2177	486	90	1886
Neal, John N. (See Tripp, Darius N., assignor.)	698,988	Apr. 8	1179	284	90	870
Neale, Charles C., Minneapolis, Minn. Grain-sow indicator.						
Neale, George F., et al. (See Cohen, George W., assignor.)						
Neary, John, assignor to Kokomo Rubber Company, Kokomo, Ind. Apparatus for applying rubber tires to vehicle-wheels.	697,000	Apr. 8	1180	285	90	870
Neave, John H., Macclesfield, England. Making hats and articles produced thereby.	699,599	May 6	100	40	90	1908
Neef, William, Dreny, Tex. Wire-fence tool.	701,700	June 3	380	180	90	2008

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr's	Vol.	Page.
Nealey, Joseph P., Centralia, Wash. Adjustable fire-box for stoves.	698,818	Apr. 29	2980	704	90	811
Neely, Charles W., Philadelphia, Pa. Index-card for duplicate whist.	698,841	Apr. 29	4077	1003	90	1008
Neely, Samuel M., Chester, S. C. Cotton-press.	698,063	Apr. 29	3079	679	90	708
Neher, John F., Baginaw, Tex., and N. N. Neher, Stockton, Kans. Sash-fastener.	698,988	May 6	108	40	90	1908
Neher, Noah N. (See Neher, John F. and N. N.)						
Nehls, William A. (See Wilkinson and Nehls.)						
Nehring, Ulrich, New York, N. Y. Camera and focusing-finder therefor.	701,394	June 24	3704	988	90	2828
Neill, William J., New Britain, Conn. Combination-lock.	697,001	Apr. 15	2087	507	90	588
Nell, John W., Cincinnati, Ohio. Automatic pressure-governor.	698,671	Apr. 1	148	84	90	85
Nell, William, Newark, N. J. Air-brake connection.	701,378	May 27	4176	966	90	2005
Neill, James W., and J. H. Burdett, Salt Lake City, Utah. Recovering metals from ores.	700,588	June 17	2608	641	90	2008
Nelson, Thor H. (See Jacobson, Edward B., assignor.)						
Nelson, John, Larchmont, N. Y. Range-finder.	700,547	May 20	2606	641	90	1795
Nelson, John, Larchmont, N. Y. Range-finder.	697,741	Apr. 15	2080	504	90	588
Nelson, György, Lugos, Austria-Hungary. Beehive.	698,938	May 6	800	186	90	1941
Neller, Albert H., Mapleton, Minn. Cord-cutting knife for grain-binders.						
Nelson, Charles O., assignor of eleven-fifteenths to H. M. Capron, Winnetka, Ill. Bridge-ing for joists.	700,488	June 17	2180	486	90	2035
Nelson, John C., Dayton, Tenn. Car-coupling.	700,588	June 10	2608	641	90	2008
Nelson, John T., Sioux Falls, S. D. Corner-support for picture-frames.	700,548	May 20	2607	642	90	1795
Nelson, Knud, Chicago, Ill. Negative-plate holder for cameras.	698,741	Apr. 29	4485	979	90	1004
Nelson & Krenner. (See Andred, William E., assignor.)						
Nelson, Peter J. (See Marquette and Nelson.)						
Nelson, Peter J., Baltimore, Md. Construction of forts.	701,028	June 10	1140	281	90	2008
Neri, Aristide, Hoboken, N. J. Telephone.	697,988	Apr. 15	2187	473	90	487
Nernst Electric Light. (See Sheppard, Eustace G., assignor.)						
Nethery Hydraulic Valve Company. (See Nethery, Joseph W., assignor.)						
Nethery, Joseph W., Indianapolis, Ind., assignor to Nethery Hydraulic Valve Company, Indianapolis, Ind.; New York, N. Y., and Jersey City, N. J. Valve.	700,328	June 10	1985	484	90	2507
Nettleton, John L., Waterbury, assignor of one-half to R. Marsh, Thomaston, Conn. Window-shutter.	702,146	June 10	1656	358	90	2447
Neuens, Michael W., assignor to Western Implement Company, Port Washington, Wis. Grinding-machine.	700,528	May 20	2178	486	90	1008
Neuens, Michael W., assignor to Western Implement Company, Port Washington, Wis. Grinding-machine.	700,518	June 24	3678	922	90	2008
Neumann, John W., assignor of one-half to J. E. Norris, Louisville, Ky. Liquid-fuel burner.	698,408	Apr. 29	2708	680	90	845
Neumann, John W., assignor of one-half to J. E. Norris, Louisville, Ky. Liquid-fuel burner.	700,980	June 17	2980	704	90	2747
Neumann, John W., assignor of one-half to J. E. Norris, Louisville, Ky. Liquid-fuel burner.	698,478	Apr. 1	148	85	90	86
Neumeyer, Horace F., Macungie, Pa. Hose-nozzle.	698,584	May 6	801	186	90	1941
Neuray, Thomas, Liège, Belgium. Oil-filter.	700,514	May 20	2605	642	90	1794
Neuser, Henry. (See Neuser, John, assignor.)						
Neuser, John, Woden, Iowa, assignor to H. Neuser, Manitowish, Wis. Windmill.	698,400	Apr. 29	2708	680	90	845
New Brown and Supply Company. (See Brown, Theodore H., assignor.)						
New Haven Novelty Machine Company. (See Luke, Charles, assignor.)						
New Hest Machine Manufacturing Company. (See Hest, De Kerkse J. T., assignor.)						
New Idea Printing Machine Company. (See Williams, John F., assignor.)						
Newark Machine Company. (See Kinney, Richard E., assignor.)						
Newberry, Spencer B. (See Kelly and Newberry.)						
Newberry, Spencer B., assignor to Sandusky Portland Cement Company, Sandusky, Ohio. Measured-feed apparatus.	698,000	May 12	1101	288	90	1418
Newell, Augustus, Pasadena, assignor to Perfect Sliding Door Company, Los Angeles, Cal. Lock for sliding doors.	700,887	May 20	2180	486	90	1987
Newell, Frank C., Wilkesburg, assignor to Westinghouse Air Brake Company, Pittsburg, Pa. Automatic regulator for electric circuits.	698,473	Apr. 1	148	85	90	86
Newhall, Henry B. (See Cook, John H., assignor.)						
Newhall, John. (See Hartley, Nemack, and Newhall.)						
Newhouse, Oscar, San Francisco, Cal. Rendering sharp and even cutting edges of implements.	697,980	Apr. 15	2189	476	90	487
Newhouse, Ray C., Columbus, Ohio. Sand-blend.	698,408	May 6	801	186	90	1941
Newman, Frederick S., Springfield, Mass. Illustrating apparatus.	701,374	June 3	381	180	90	2008
Newman, Marshall P., Watertown, Mass. Hinge.	698,510	Apr. 29	2708	680	90	845
Newman, William D., Patoka, Ill. Bed-brace.	701,398	June 10	1141	288	90	2008
Newport, Rodman B., Philadelphia, Pa. Treating garbage.	700,528	June 24	3678	922	90	2008
Newton, Albert S., Providence, R. I. Sanitary trap.	698,817	Apr. 29	2984	704	90	2750
Newton, Guy D., Cleveland, Ohio. Pumping power for oil-wells.	701,497	June 3	382	180	90	2008
Newton, Herbert B. (See Ayer, Albert E., assignor.)						
Newton, Herbert B. (See Webster, Harold A., assignor.)						
Newton, Herbert B. (See Webster, Harold A., assignor.)						
Newton, William J., New York, N. Y. Electrical switch.	700,980	June 24	3180	704	90	2018
Nicholas, William F., Chicago, Ill. Flat-iron heater.	698,710	May 13	1108	288	90	1418
Nichols, Reuben, Auckland, New Zealand. Fire-escape and fire-alarm folding ladder.	700,078	May 13	1018	481	90	1476
Nichols, Blanche S., New Britain, Conn. Collar-foundation.	698,887	May 13	1400	388	90	1476
Nichols, Frank L., assignor of one-half to W. W. Bestwick, Brooklyn, N. Y. Gas-coupling.	700,878	June 10	1987	484	90	2008
Nichols, Seth A., Fowlerville, Mich. Hay-fork.	697,748	Apr. 15	2088	504	90	587
Nichols, William H., assignor of one-half to E. E. Lartabee, Bennington, Vt. Insulator.	697,001	Apr. 8	1179	285	90	871
Nicholson, Frank W., Jackson, Mich. Shade for photographic lenses.	698,980	Apr. 29	4040	1080	90	1117
Nickerson, Freeman, Jr., Fall River, Mass. Tail-board spring.	700,801	May 27	3619	780	90	1918
Niedermaier, Edward, Hamilton, Ohio. Underpart.	700,588	May 20	2608	641	90	2008
Niehau, Otto, West Seneca, Cal. Adjustable window-curtain.	700,708	May 20	2607	642	90	1794
Nielsen, Anton E., Brooklyn, assignor to Sterling Supply & Manufacturing Company, New York, N. Y. Fan-register.	700,708	May 20	2607	642	90	1794
Nielsen, Anton E., and F. Bentzen, assignors to G. Haas, Brooklyn, N. Y. Curved-hat-stay-hanging machine.	697,871	Apr. 15	2170	474	90	481
Nielsen, Christian, Sr., and Christian, Jr., Chicago, Ill. Game.	697,088	Apr. 15	2088	507	90	588
Nielsen, Herman, assignor of one-half to F. W. Ofeldt and Sons, South Brooklyn, N. Y. Pumping-engine.	700,974	May 27	3608	680	90	1971
Nielsen, Johannes, Glensgard, by Ringsted, Denmark. Variable mechanism for transmitting motion.	701,318	June 3	580	188	90	2008
Niese, Henry E., assignor to American Sugar Refining Company, New York, N. Y. Storage-tank.	698,180	Apr. 29	2979	717	90	708
Niggl, Emil, San Antonio, Tex. Cheese-cutter.	701,084	June 10	1188	280	90	2008

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Draw.	Vol.	Page.
Nightingale, Alvin E., Plymouth, Mass. Cranberry-sorting apparatus.	702,568	June 17	2873	541	90	2938
Nightingale, Joseph E., Danvers, Mass. Machine for measuring the areas of surfaces.	701,492	June 3	288	88	90	2129
Niles-Bement-Pond Company. (See Opebourn, Francis B., assignor.)						
Niles, Albert A., Danvers, Tex. Jeweler's tool.	699,788	Apr. 29	4488	980	90	1005
Niles, Axel H., and M. Olson, assignors to A. H. Niles Machine Company, Bridgeport, Conn. Wire straightening and cutting machine.	701,973	June 3	188	38	90	2148
Nileon, Lars G., assignor to S. M. and H. S. Fischer, New York, N. Y., and H. Anderson, Des Moines, Iowa. Oil-feeder.	702,515	June 17	2806	646	90	2794
Nileon, Nils, Wayzata, Minn. Automatic weighing scale.	702,498	June 17	2140	488	90	2268
Nileon, Oscar M., Mansfield, Ia. Evaporating apparatus.	698,798	Apr. 29	4499	919	90	1005
Nileon, Peter F., Jerome, Ariz. Tex. assignor, by mesne assignments, to Union Type-writer Company, Jersey City, N. J. Inkling device for type-writing machines.	702,740	June 17	2808	613	90	2688
Nim, Christian F. J., Hincley, Ill. Photographic camera.	702,584	June 17	2143	487	90	2636
Nivison, William E., Britton, assignor of one-half to C. N. Goodison, Algona, Iowa. Branch country. Filling chair.	702,077	June 24	2218	708	90	2844
Winn, Moses C., Fort Wayne, Ind. Mechanism for converting motion.	700,208	May 20	2428	888	90	1719
Noble, Andrew, assignor to W. G. Armstrong, Whitworth & Company, Limited, Newcastle-upon-Tyne, England. Automatic gun.	702,540	June 10	1721	289	90	2479
Noel, Sylvester D., Indianapolis, Ind. Crest-tile for roofs.	701,376	June 3	188	38	90	2148
Nolan, Patrick E., and M. Mortenson, assignors of three-fifths to D. E. Roberts, T. H. Wolford, and W. H. Locke, Superior, Wis. Dredging apparatus.	697,215	Apr. 8	1886	248	90	280
Nolder, James E. (See Long and Nolder.)						
Nolen, James G., Chicago, Ill. Combination telephone instrument.	697,082	Apr. 8	1184	288	90	271
Nolen, James G., Chicago, Ill. Thermo-electric switch.	697,530	Apr. 15	2140	478	90	487
Nolty, Augustine J., Memphis, Tenn. Folding crate.	697,388	Apr. 8	1798	408	90	408
Nonnenmacher, Clyde S., assignor of one-half to E. S. Richardson, Philadelphia, Pa. Garment-supporter.	702,389	June 24	2615	578	90	2646
Nonnenmacher, Clyde S., assignor of one-half to E. S. Richardson, Philadelphia, Pa. Garment-supporter.	702,390	June 24	2616	577	90	2646
Norcross, Frank C., and J. Mitchell, Lorain, Ohio. Blast-furnace.	700,549	May 20	2508	648	90	1788
Norcross, Orlando W., Worcester, Mass. Flooring for buildings.	698,548	Apr. 29	4008	888	90	913
Norcross, Orlando W., Worcester, Mass. Flooring for buildings.	698,549	Apr. 29	4011	888	90	913
Norcross, Orlando W., Worcester, Mass. Concrete column.	701,377	June 3	170	37	90	2148
Norden-Bittner Electric Company. (See Norden, Mortimer, assignor.)						
Norden, Jacob. (See Spies, Peter H. F., assignor.)						
Norden, Mortimer, assignor to Norden-Bittner Electric Company, New York, N. Y. Electric-lamp socket.	698,218	Apr. 29	3448	708	90	700
Norden, Mortimer, New York, and L. S. Crandall, Brooklyn, N. Y. Switchboard for illuminating electric-lamp signs.	702,148	June 10	1887	288	90	2447
Nordin, Olof, Söderstje, Sweden. Rail-joint connection.	698,584	May 6	184	40	90	1200
Nordyke & Harmon Company. (See Harmon, Daniel W., assignor.)						
Norman, William F., and J. H. Berghausen, Nevada, Mo. Metallic roof-cresting.	700,364	May 20	2408	688	90	1718
Norman, Joseph E., Watertown, N. Y. Air-brake.	697,008	Apr. 8	1188	287	90	271
Norris, Almon E., Cambridgeport, Mass. Friction-clutch.	697,371	Apr. 8	1888	271	90	273
Norris, Almon E., assignor to Rawson & Morrison Manufacturing Company, Cambridge, Mass. Hoisting-bucket.	698,348	May 6	404	98, 94	90	1288
Norris, Almon E., Cambridge, and J. Roughan, Boston, assignors to Rawson & Morrison Manufacturing Company, Cambridge, Mass. Hoisting-bucket.	698,000	Apr. 29	4061	1088	90	1117
Norris, George E., Detroit, Mich. Edge-troughing machine.	698,001	Apr. 29	4068	1087	90	1116
Norris, H. C., et al. (See Hubbell, Thomas J., assignor.)						
Norris, John E. (See Neumann, John W., assignor.)						
Norris, John W., Creston, Ill. Grapple.	698,544	Apr. 29	4014	287	90	913
Norris, William, assignor to T. Coulthard & Company, Limited, Preston, England. Motor-vehicle.	698,308	May 18	1888	204	90	1497
Norstrom, Nils E., Chicago, Ill. assignor of two-thirds to J. Anderson, Salford, and J. E. Richardson, Sterling, Kans. Automatic telephone-exchange.	701,480	June 3	264	58	90	2129
North Brothers Manufacturing Company. (See Furbish, Zachary T., assignor.)						
North & Todd Manufacturing Company. (See Smith, Clarence E., assignor.)						
North-Bow, Kent. (See Schaefer, Carl, assignor.)						
North, Theodore, assignor to Wilcox Manufacturing Company, Aurora, Ill. Trolley-cross-over.	701,988	June 10	1148	288	90	2688
North West State Company. (See Simpson, Frank H., assignor.)						
Northfield, Luke W. (See Merrill and Northfield.)						
Northridge, Hattie A., Brooklyn, N. Y. Mirror attachment for theater-chairs.	700,976	May 27	2888	588	90	1973
Northrop, Frank L., Saco, Me., assignor to Union Water Meter Company, Worcester, Mass. Disk water-meter.	702,341	June 10	1784	289	90	2480

Phillips, John R., Stamford, Conn. Folding road-carrier	697,272	Apr. 15	2722	612	90	624
Phillips, Simon O., Selkirk, N. J. Steam-heating apparatus	700,020	May 12	1222	425	90	1224
Phillips, Thomas H., St. David, Pa. Impact-tool	700,021	May 12	1222	425	90	1224
Phinney, Edward H. (See Buckley and Phinney.)						
Phoenix, William S. (See Bennett and Phoenix.)						
Phonetic, Giuseppe, Boston, Mass. Flour-mill	698,221	Apr. 22	2446	707	90	722

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr. & Vol.	Page.	Page.
Panko, Mendel, Woodhaven, N. Y. Making pebbled leather.	698,411	Apr. 23	3707	551	90	846
Patt, Richard F., assignor to Joseph McWilliams and Company, Louisville, Ky. Electrical controlling apparatus.	702,188	June 10	1573	385	90	8400
Pickard, Edward F., Buffalo, N. Y. Rotary engine.	702,075	June 17	2544	584	90	8070
Pickhardt, Emil, Islington, Mass. Garment-stretcher.	697,108	Apr. 8	1380	504	90	811
Pickop, George B., assignor to P. & F. Corbin, New Britain, Conn. Knot-attaching device.	697,100	Apr. 8	1474	320	90	393
Pickop, George B., assignor to P. & F. Corbin, New Britain, Conn. Sliding door.	698,592	Apr. 29	4705	1087	90	1086
Pickop, George B., assignor to P. & F. Corbin, New Britain, Conn. Detachable hinge.	699,970	May 13	1640	376	90	1888
Pickop, George B., and W. R. Corbin, assignors to P. & F. Corbin, New Britain, Conn. Beach-balance.	700,514	May 27	2841	707	90	1914
Piper, Ernest O., San Jose, Cal. Support and switch for electric dental instruments.	702,078	June 10	1443	384	90	3023
Pierce, Charles D., Jersey City, N. J. Portable tubular well and test boring machine.	698,480	Apr. 1	135	38	90	30
Pierce, Charles D., Cleveland, Ohio. Fan.	699,708	May 13	1110	261	90	1417
Pierce, Dennis, et al. (See De Forca, Mary A., assignor.)	702,074	June 10	1443	384	90	3023
Pierce, George H., Needham, Mass. Latch.	702,471	June 17	2155	491	90	3090
Pierce, George L., Brooklyn, N. Y., assignor to A. G. Spalding & Bros., Jersey City, N. J., and New York, N. Y. Hand-guard and wrist-supporter.	701,081	May 27	2823	577	90	2014
Pierce, Henry N., assignor to J. MacGregor, Lincoln, Me. Spool-machine.	701,081	May 27	2823	577	90	2014
Pierce, Howard W. (See Dawson, Edward P., assignor.)						
Pierpont, Frank H., Hordley, England, assignor to Lanston Monotype Machine Company, Washington, D. C. Drilling or like machine.	700,308	May 20	2466	588	90	1714
Pierston, Paul M., Scarborough, N. Y. Bash-bar for greenhouses or other glazed structures.	697,746	Apr. 13	2337	565	90	526
Pierston, Paul M., Scarborough, N. Y. Bash-bar for greenhouses, &c.	697,747	Apr. 13	2340	568	90	529
Pietzsch, Gustav A. H., Kiata East, Victoria, Australia. Bicycle and tricycle.	697,104	Apr. 8	1380	504	90	811
Pignaud, Laurent. (See Laportot, Villard, and Pignaud.)						
Pignolet, Louis M., Orange, N. J. Surgical forceps.	702,473	June 17	2155	491	90	3090
Pignolet, Louis M., Orange, N. J. Surgical forceps.	698,528	Apr. 29	4707	1087	90	1087
Pignolet, Louis M., Orange, N. J. Eyeglass-polisher.	702,128	June 24	2458	738	90	2072
Pilkington, Joseph H., Waterbury, Conn., assignor to C. J. Higley, New York, N. Y. Garment-supporter.	701,088	May 27	2830	578	90	2015
Pilson, Clara, et al., administrators. (See Pilson, George F.)						
Pilson, George F., deceased; C. Pilson, Sykesville, and W. R. Brewer, Baltimore, Md., administrators. Horse-shoe-machine.	701,088	May 27	2830	578	90	2015
Pilson, George F., deceased; C. Pilson, Sykesville, and W. R. Brewer, Baltimore, Md., administrators. Horse-shoe-machine.	701,088	May 27	2830	578	90	2015
Pimlott, Mary A., administratrix. (See Pimlott, William E.)						
Pimlott, William E., assignor to J. M. Atkinson Company, Chicago, Ill. Circuit-breaker.	697,338	Apr. 15	2145	477	90	460
Pimlott, William E., deceased; M. E. Pimlott, administratrix, assignor to J. M. Atkinson Company, Chicago, Ill. Means for electrically connecting railway-rails.	697,334	Apr. 15	2145	477	90	459
Pindak, John J., Chicago, Ill. Armor.	700,028	May 13	1834	436	90	1553
Pindotoff, Anders A., Copenhagen, Denmark. Brush for cleaning bottles.	701,084	May 27	2828	580	90	2016
Pink, Maximilian, New York, N. Y. Liquid-pressure regulator.	702,076	June 10	1443	385	90	3024
Pinney, Elijah H., and E. A. Jones, Cass City, Mich. Animal-poke.	700,538	May 20	2461	645	90	1738
Pinney, Orestes O., Glenville, Ohio. Submerged water-heater.	702,315	June 24	2451	683	90	2096
Piper, Brian L., Toronto, Canada. Train-order signal.	698,517	Apr. 29	4707	1087	90	1087
Piper, Robert H., Wakefield, Mass., assignor to National Specialty Manufacturing Co., Jersey City, N. J. Device for supporting and delivering paper for wrapping or binding purposes.	700,615	May 27	2823	577	90	2015
Piper, Robert H., Wakefield, Mass., assignor to National Specialty Manufacturing Co., Jersey City, N. J. Device for supporting and delivering paper for wrapping or binding purposes.	700,615	May 27	2823	577	90	2015
Pirring, Felix, Ravenswood, Ill. Combination scrub-brush and mop.	698,051	Apr. 29	4700	1080	90	107
Pisko, Emanuel, New York, N. Y. Cutting and peeling device for cigar-wrapping machines.	701,308	June 3	187	40, 41	90	2146
Pitblado, Isaac, et al. (See Maloney, William, assignor.)						
Pitt, Mary, Chicago, Ill. Bird-cage.	702,008	June 24	2458	738	90	2072
Pittsburg Blue Print Company. (See Whinery, Samuel B., assignor.)						
Pittsburg Electric Machine Company. (See Phillips, Andrew, assignor.)						
Pittsburg Gas Engine Company. (See McCall, Harry M., assignor.)						
Pittsburg Writing Machine Company. (See Paul, John W., assignor.)						
Plaley, Albert A., Littleton, Mass. Universal joint.	700,309	May 20	2474	597	90	1716
Plazago, James G., et al. (See Donovan, Alford, assignor.)						
Place, Frederick E. (See Buckley and Place.)						
Place, John, and W. J. Lewis, Broadheath, England, assignors to Mergenthaler Linotype Company, New York, N. Y. Self-feeding mechanism for metal-pots.	697,011	Apr. 8	1304	280	90	874
Place, Washington N. G., Seattle, Wash. Guiding attachment for doors.	698,028	Apr. 29	4708	1088	90	108
Platka, Hugo, Middle Village, N. Y. Hothouse construction.	701,610	June 3	188	180	90	2228
Planteur, Jean, Lyons, and L. Dutremblay, Paris, France. Portable inhaling apparatus.	700,308	May 20	2474	597	90	1716
Plank, G. A. (See Wiswall, William J., assignor.)						
Plank, J. W., et al. (See Pennington, Edward J., assignor.)						
Plano Manufacturing Company. (See Phelps and Morris, assignors.)						
Plantinga, Pierre, Fort Wayne, Ind. Apparatus for extracting tar from gas.	699,580	May 6	810	131	90	1248
Plaster, William. (See Plaster, William M., assignor.)						
Plaster, William M., assignor of one-half to P. Plaster, Cotton, Tex. Gate.	697,590	Apr. 13	2754	618	90	984
Platt, Corwin H., Cleveland, Ohio. Adding-machine.	698,481	Apr. 1	130	38, 39	90	30
Platt, Joseph, Cincinnati, Ohio. Berth guard and ladder.	700,305	May 20	2459	590	90	1688
Plaut, Joseph, Topeka, Kans. Locomotive.	697,535	Apr. 15	2151	478	90	480
Plaut, John, Topeka, Kans. Locomotive.	702,748	June 17	2884	613	90	2994
Player, John, Topeka, Kans. Sliding door for railway-cars.	698,480	Apr. 1	130	38	90	30
Player, John, Dunkirk, assignor to American Locomotive Company, New York, N. Y. Reverse-lever.	698,480	Apr. 1	130	38	90	30
Player, John, Chicago, Ill., assignor to American Locomotive Company, New York, N. Y. Guide-yoke bracket.	698,480	Apr. 1	130	38, 40	90	40
Player, John, Chicago, Ill., assignor to American Locomotive Company, New York, N. Y. Locomotive-trailer.	698,484	Apr. 1	130	40	90	40
Player, John, Chicago, Ill., assignor to American Locomotive Company, New York, N. Y. Locomotive-trailer.	698,484	Apr. 1	130	40, 41	90	40
Player, John, Chicago, Ill., assignor to American Locomotive Company, New York, N. Y. Locomotive-trailer.	698,484	Apr. 1	130	41	90	41
Player, John, Chicago, Ill., assignor to American Locomotive Company, New York, N. Y. Locomotive-trailer.	698,484	Apr. 1	130	41	90	41
Playford, Sterling T., Cassopolis, Mich. Sectional tank.	698,500	Apr. 1	130	38	90	30
Pleck, Frank I., Sturgeon Bay, Wis. Bridge-gate.	698,500	Apr. 1	130	38	90	30
Plett, Johann C. A., Hamburg, Germany. Packing for stuffing-boxes.	698,500	Apr. 1	130	38	90	30

Poppenhuisen, Herman A., Evanston, Ill. Fire-arch.	697,608	Apr. 15	2077	520	90	884
Portchester Chemical Company. (See Thurlow, Nathaniel, assignor.)						
Porteous, James. (See Willis and Porteous.)						
Porter, Albert B., Evanston, Ill. Series-multiple switch.	698,180	Apr. 29	4708	1088	90	744
Porter, Edwin F., Boston, Mass., assignor to Bay State Electric Heat & Light Company, Jersey City, N. J. Apparatus for cooling and agitating air.	702,204	June 24	2450	727	90	2814
Porter, George J. (See MacArthur and Porter.)						
Porter, Harry T., et al. (See MacArthur and Porter.)						
Porter, Harry T., and G. H. Beaumont, assignors of one-third to W. T. Moore, Cleveland, Ohio. Bucket-dumping device for steam-shovels.	702,473	June 17	2156	492	90	3080
Porter, James A., assignor of two-thirds to J. L. Bentley and E. Stone, Crawfordville, Ind. Rotary engine.	702,474	June 17	2156	492	90	3080
Porter, Joseph Y., Detroit, Mich. Bicycle handle-bar.	698,187	Apr. 29	4708	1088	90	744
Porter Safety Seal Company. (See Abbott, Harry W., assignor.)						
Porterfield, John C., Columbus, Ohio. Dog-crate.	700,617	May 27	2846	739	90	1915
Portman, Giles M., Westline, Pa. Making rector-rails.	702,021	June 17	2154	477	90	2798
Pochemann, Georg, Pittsburg, Pa. Curtain-pole.	699,971	May 13	1041	267	90	1686
Post, William L., assignor of one-third to J. Cohen, Paterson, N. J. Stop-motion for ribbon-looms.	698,113	Apr. 29	4708	1088	90	1154
Postlethwaite, Edward T. (See Fairchild, Charles E., assignor.)						
Postlethwaite, Robert H., assignor to Edison Iron and Locomotive Works, San Francisco, Cal. Distributor for gold-separators.	697,745	Apr. 15	2048	526	90	890
Potter, Henry N., assignor to G. Westinghouse, Pittsburg, Pa. Treating ballast-wires for electric lamps.	699,322	May 6	180		90	1811
Potter, Joseph L., and E. E. Cohen, Indianapolis, Ind. Convertible wagon or sled.	702,077	June 17	2156	492	90	3080
Potter, Robert. (See Grundy, Thomas, assignor.)						
Potter, William B., Schenectady, N. Y., assignor to General Electric Company. Controller for electric motors.	697,015	Apr. 8	1305	271	90	975
Potter, William B., Schenectady, N. Y., assignor to General Electric Company. Electric railway.	697,015	Apr. 8	1305	271	90	975
Potter, William B., Schenectady, N. Y., assignor to General Electric Company. Controlling device for electric motors.	697,749	Apr. 15	2048	526	90	890
Pottlitzer, Herman, et al. (See Hendon, Frank A., assignor.)						
Pottlitzer, Julius, et al. (See Hendon, Frank A., assignor.)						
Pottlitzer, Leo, et al. (See Hendon, Frank A., assignor.)						
Pottlitzer, Max, et al. (See Hendon, Frank A., assignor.)						
Poulson, Britton, Fort Wayne, Ind. Washing-machine.	698,522	Apr. 29	4708	1088	90	761
Poulson, Peter, assignor of two-thirds to S. Mayer and W. F. Corey, Chicago, Ill. Motor-vehicle.	702,701	June 24	2451	685	90	2894
Powell, Charles W., Green Island, N. Y. Brake mechanism for railway-cars.	700,318	May 27	2848	739	90	1916
Powell, Julius W., Cherryvale, Kans. Churn.	702,028	June 24	2451	687	90	2814
Powell, Robert J., et al. (See Waters, Frederick R., assignor.)						
Powell, William G., assignor to E. O. Locke, Jacksonville, Fla. Calculating-machine.	701,611	June 3	181	181	90	2883
Powers, Francis W. (See Hoffman and Powers.)						
Powers, William, Central City, Iowa. Harrow.	702,475	June 17	2156	494	90	3080
Prakm, Adolph F., Indianapolis, Ind. Ventilating-jack for lanterns.	698,023	Apr. 29	4708	1088	90	708

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr. & Eng.	Vol.	Page.
Prampolini, William, San Luis Potosi, Mexico. Composition of matter and preparation of same.	708,078	June 17	2549	99	2871
Pratt, Albert K., assignor to White Machine Works, Incorporated, Whitinsville, Mass. Vibrator for wavy stop-motions.	697,108	Apr. 8	1476	281	99	288
Pratt, Alexander W., North Jay, Me., assignor of one-half to Venable Brothers, Atlanta, Ga. Raising sheets of stone.	708,328	June 24	2718	785	99	2884
Pratt, Allison A., New York, N. Y., assignor to F. D. Warner, New Canaan, Ind. Incon- descent gas-burner.	708,088	June 24	2228	785	99	2847
Pratt, Charles C., Kansas City, Kans., assignor of two-thirds to H. W. Merrill, Kansas City, Mo., and J. E. Metcalf, Kansas City, Kans. Mitten.	701,981	June 10	1184	285	99	2885
Pratt, Cyrus C., assignor of one-half to T. Holland, Portland, Ore. One-separator.	708,084	June 24	2224	787	99	2847
Pratt, Frank M. (See Erimma, Clem, assignor.)						
Pratt, John C., assignor of one-half to A. L. Foster, Hartford, Conn. Expandable pulley.	698,264	Apr. 29	4708	1087	99	1099
Pratt, John C., assignor of one-half to A. L. Foster, Hartford, Conn. Bicycle construc- tion.	708,748	June 17	2888	612	99	2884
Pratt, John C., assignor of one-half to A. L. Foster, Hartford, Conn. Bicycle construc- tion.	700,284	May 20	2190	801	99	1488
Pratt, Leverett A., Bay City, Mich. Post.						
Pratt & Whitney Company. (See Gordon, Frederick W., assignor.)						
Pratt & Whitney Company. (See Hanson, Benj. M. W., assignor.)						
Pratt & Whitney Company. (See Hanson and Gordon, assignors.)						
Pratt, William W., Chicago, Ill. Automatic air-moistening apparatus.	697,850	Apr. 15	2880	280	99	288
Pratt, James H. (See Decker, and Prusa.)						
Pratt, Walter. (See Eick, Amos, assignor.)						
Prefontaine, Hermann. (See Vantour and Prefontaine.)						
Prefontaine, William. (See Weller, Louis G., assignor.)						
Prellwitz, William. (See Sergeant and Prellwitz.)						
Prentiss Manufacturing Company. (See McCue, Charles T., assignor.)						
Prendergast, Daniel J., New York, N. Y., and V. H. Slinick, Philadelphia, Pa. Mistle for incandescent burners.	697,261	Apr. 8	1804	404	99	404
Prentiss, Thomas, New Britain, Conn. Saw-guide.	708,085	June 24	2226	787	99	2848
Prentiss, Samuel H. (See Bragdon, Charles M., assignor.)						
Prescott, Edwin, Arlington, Mass. Stanchion.	699,411	May 6	543	126	99	1268
Preslar, Charles F., assignor to Preslar-Crawley Manufacturing Co., Cincinnati, Ohio. Sealing device for tubular wells.	698,848	May 18	1401	284	99	1477
Preslar, Charles F., assignor to Preslar-Crawley Manufacturing Co., Cincinnati, Ohio. Apparatus for sinking tubular wells.	698,849	May 18	1402	284	99	1477
Preslar-Crawley Manufacturing Co. (See Preslar, Charles F., assignor.)						
Pressed Steel Car Company. (See Hansen, John M., assignor.)						
Preston, Charles F., Chicago, Ill. Tool-holder.	698,708	May 18	1114	281	99	1417

Prevost, Fritz. (See Boettcher, Hermann, assignor.)						
Prevost, Honoré, Montreal, assignor to H. Aylmer, Sherbrooke, Province of Quebec, Can- ada. Life-preserver.	697,228	Apr. 8	1804	404	99	404
Price, Joseph H., New Rockford, N. D. Shoe-protector.	708,470	June 17	2108	284	99	2881
Price, Thomas J. (See Young, Richard L., assignor.)						
Price, William G., Kingston, N. Y., assignor to Columbia Brake & Supply Company, Chi- cago, Ill. Brake for vehicles.	698,688	Apr. 1	406	102	99	100
Price, William G., Kingston, N. Y., assignor to Columbia Brake & Supply Company, Chi- cago, Ill. Brake for vehicles.	698,684	Apr. 1	478	110	99	108
Price, William G., Kingston, N. Y., assignor to Columbia Brake & Supply Company, Chi- cago, Ill. Brake for vehicles.	698,688	Apr. 28	5451	788	99	781
Pridmore, Lewis, Philadelphia, Pa. Book-curtain rod.	697,780	Apr. 15	2247	557	99	570
Pridmore, John W., Chicago, Ill. Grain-blade.	701,613	June 3	287	121	99	2883
Prier, George H., New York, N. Y. Leveling instrument.						
Priest, Edward D., and G. L. Schermerhorn, Schenectady, N. Y., assignors to General Electric Company, Commutator.	698,499	Apr. 1	171	41	99	41
Priestley, Charles W., Sharon, Tenn. Harvester-gear.	697,374	Apr. 8	1088	272	99	272
Printz, George, Aachen, Germany. Needle-threader.	698,825	Apr. 29	4710	1082	99	1087
Probert, Lowell. (See Wall and Probert.)						
Protected Rail Bond Company. (See Englund, Axel H., assignor.)						
Prouty Company, T. C. (See Prouty, Theodore C., assignor.)						
Prouty, Theodore C., Midland, assignor to T. C. Prouty Company, Limited, Abilene, Mich. Door-hanger loop.	698,584	May 6	513	121	99	1208
Provost, John M., Buffalo, N. Y. Bicycle-saddle.	701,280	June 3	188	41	99	2747
Provost, Andrew J., Jr., Brooklyn, N. Y. Apparatus for the treatment of sewage.	698,245	May 6	403	94	99	1267
Provine, George R., Montreal, Canada. Grade.	697,589	Apr. 15	2109	479	99	480
Pruden, Charles R., Rome, Ga. Boat.	697,589	Apr. 15	2109	480	99	481
Prusa, Frank J., Wrentham, R. I. Undergarment.	698,588	May 13	1854	845	99	1260
Pruszkowski, Wladyslaw, Schodnica, Austria-Hungary. Rotary boring apparatus.	701,281	June 3	188	41	99	2747
Pruszkowski, Wladyslaw, Schodnica, Austria-Hungary. Alloy.	708,588	June 24	2168	99	2854
Puddfoot, Charles, assignor, by name assignments, to Briscoe Manufacturing Com- pany, Detroit, Mich. Closure.	701,025	May 27	2286	280	99	2017
Pugh, James M., assignor to Wm. H. Armstrong & Co., Indianapolis, Ind. Surgical dressing-packer.	708,597	June 24	2164	737	99	2814
Pugh, William J., Davenport, Iowa. Button-carding machine.	698,543	May 6	513	121	99	1208
Pulbrook, Anthony, London, England. Elastic support for vehicles.	698,708	May 18	1114	281	99	1417
Pullman, William, and C. C. Field, Sodus, N. Y. Trolley-pole.	697,584	Apr. 15	2109	479	99	480
Pumpelly, James K., Chicago, Ill., assignor to Western Storage Battery Company, In- dianapolis, Ind. Separator for battery-plates.	698,429	Apr. 1	177	40	99	41
Pupin, Michael I., New York, N. Y., and S. W. Balch, Montclair, N. J. Winding-machine.	697,620	Apr. 15	2109	480	99	481
Purley, Alexander, St. Paul, Minn. Railway replacing-dog.	702,744	June 17	2888	614	99	2884
Purvis, E. Russell. (See Reiff, William H., assignor.)						
Purvis, William J., Fremont, Nebr. Fly-trap.	708,208	June 24	2170	838	99	2884
Puschel, Franz. (See Kuehne and Puschel.)						
Putnam, Jean F., Brooklyn, N. Y. Glass-turnace.	698,978	May 13	1648	276	99	1268
Putnam, Alfred F., Charlton, Mass. Fire-kilner and method of making.	697,014	Apr. 8	1810	271	99	271
Putnam, John, Cornell, Pa. Game or puzzle.	703,477	June 17	2898	614	99	2884
Putnam, Joseph E., Rochester, N. Y. Automatic starter for electric motors.	698,710	May 13	1648	276	99	1268
Pyott, James M., Jr., Chicago, Ill. Core-molding machine.	698,711	May 13	1180	288	99	1417

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr. E.	Vol.	Page.
Ray, Thomas L., Fort Worth, Tex. Analgesic bandage	690,697	May 18	1906	316	90	1500
Ray, William. (See Love and Ray.)						
Raymond, Alfred A., Chicago, Ill. Fire	700,707	May 20	2105	708	90	1880
Raymond Button Company of Baltimore City. (See Gwinn, George W., assignor.)						
Raymond, Charles L. (See McConnell and Raymond.)						
Raymond, Frederick P., St. Newton, Mass. Assignor, by mesne assignments, to United Shoe Machinery Company. Best holder for heel-attaching machines	699,112	Apr. 20	5126	1185	90	1154
Raymond, Elias H., Grand Rapids, Mich. Caster	699,284	Apr. 20	2428	758	90	781
Raymond, John G., assignor of one-half to R. A. Roe, Paterson, N. J. Heel for boots or shoes	699,593	May 6	682	198	90	1345
Reah, George F., assignor to R. Hoe, New York, N. Y. Delivery mechanism	700,398	May 20	2194	502	90	1639
Reah, George F., assignor to R. Hoe, New York, N. Y. Pneumatic sheet-carrying device	700,399	May 20	2195	503	90	1661
Reah, Robert H., Schenectady, N. Y., assignor to General Electric Company. Starting device for electric motors	697,016	Apr. 8	1819	372	90	277
Reah, William, Somerville, assignor to C. F. Brown, Reading, Mass. Wick for hydrocarbon-burners	697,541	Apr. 15	2105	461	90	408
Reagan, Edgar, assignor of one-half to W. C. Bruff, Floresville, Tex. Roller-press	699,114	Apr. 20	5127	1187	90	1186
Reagan, Edgar, assignor of one-half to W. C. Bruff, Floresville, Tex. Baling cotton	699,115	Apr. 20	5128	1188	90	1186
Rearick, Charles E., New York, N. Y. Steam-boiler	698,312	May 12	1216	306	90	1430
Reaser, Lewis, Reading, Pa. Hook and eye	699,390	May 6	190	45	90	1512
Reason, Walter M., Pontiac, Mich. Fluid-pressure regulator	701,099	May 27	2641	851	90	2015
Reasoner, James M., Matthews, Ind. Mail-box	700,679	June 17	2169	495	90	2021
Reck, Hermann, London, England, and A. Bors, Bielefeld, Germany. Centrifugal creamer	697,170	Apr. 8	1477	321	90	323
Redding, Jerome, Boston, assignor of two-thirds to I. W. Deering and L. D. Lothrop, Gloucester, Mass. Storage battery	699,412	May 6	547	126	90	1267
Redell, Alvin B., Chicago, Ill. Incandescent gas-lamp	699,413	Apr. 20	2454	759	90	781
Redington, John C. Q., Syracuse, N. Y. Barrel-forming machine	699,597	May 6	191	45	90	1512
Redlinger, Mathias, et al. (See Jacoby, William, assignor.)						
Redman, Charles H., Newark, N. J. Hair-clipper	699,664	Apr. 20	5105	692	90	78
Redman, Charles H., Newark, N. J. Hair-clipper	699,665	Apr. 1	265	84	90	78
Reece Buttonhole Sewing Machine Company. (See Thomas, Robert W., assignor.)						
Reece Buttonhole Sewing Machine Company. (See Dahl, Charles A., assignor.)						
Reed, Albert S., assignor to Onward Company, Chicago, Ill. Adjustable cone for bicycle-hubs	697,017	Apr. 8	1820	373	90	279
Reed, Arthur W., Corvallis, Minn. Automatic car-brake	698,319	Apr. 20	2611	797	90	513
Reed and Barton Corporation. (See Brabrook, George, assignor.)						
Reed and Barton Corporation. (See Harris, Calvin F., assignor.)						
Reed, Charles J., Philadelphia, Pa. Treating solutions of salts	699,414	May 6	549	126	90	1267
Reed, Charles J., Philadelphia, Pa. Electrolytic apparatus	699,415	May 6	550	127	90	1267
Reed, Estelle J., Brooklyn, N. Y. Child's eating-apron	699,416	May 6	192	46	90	1513
Reed, James J., New Philadelphia, Ohio. Automatic vending-machine	697,361	Apr. 15	2094	521	90	598
Reed, James M. (See Boman and Reed.)						
Reed, John D., Boston, Mass. Railway system	699,417	May 6	551	128	90	1267
Reeder, Frank L., and A. B. Freville, assignors to National Foundry and Machine Company, Louisville, Ky. Air-compressor	697,414	Apr. 8	1828	420	90	420
Reeder, Richard, Butler, Pa. Storm-protect for vehicles	700,430	June 17	2171	495	90	2502
Reedy, Lewis, Lawrence, Kans. Sprocket-wheel for bicycles	699,540	May 6	194	46	90	1514
Reedy, William H., et al. (See Rice, Joseph, assignor.)						
Reedy, William H., et al. (See Rice, Joseph, assignor.)						
Rees, John. (See Williams, John, assignor.)						
Reese, Arnold K., Lebanon, Pa. Combination safety regulating and drop valve	697,628	Apr. 15	2086	521	90	598
Reese, David D., assignor of one-half to R. D. Corwin, Scranton, Pa. Fire-pot for blacksmiths' forges	697,375	Apr. 8	1829	374	90	274
Reese, J. J. (See Greene, John, assignor.)						
Reese, Philip, Slope, Ohio. Dumping-wagon	700,095	May 12	1841	426	90	1267
Reese, William G., Oakland, Cal. Storm-apron for vehicles	701,614	June 3	506	122	90	2026
Reese, Eben N., et al. (See Wynn, David F., assignor.)						
Reeves & Company. (See Clay, Harry C., assignor.)						
Reeves, Harry M., assignor to Stromberg-Carlson Telephone Manufacturing Company, Chicago, Ill. Telephone instrument	696,055	Apr. 20	5106	693	90	790
Reeves, Reuben, Streator, Ill. Register	699,698	May 12	1808	346	90	1201
Regel, Henry A., Brooklyn, N. Y. Device for centering printers' rollers	701,090	May 27	2642	852	90	2016
Regina Music Box Company. (See Koch, Henry, assignor.)						
Rehman, John G. (See Tilly and Rehman.)						
Rehman, Martin O. (See Tilly and Rehman.)						
Reich, Adolph, assignor to D. Reich, New York, N. Y. Scraper	698,120	Apr. 22	2207	720	90	744
Reich, Dora. (See Reich, Adolph, assignor.)						
Reich, Anton, Plauen, near Dresden, Germany. Candy-molding machine	699,972	May 12	1644	377	90	1267
Reichenbach, Fritz, Berlin, Germany. Internal-combustion engine	701,205	June 3	403	99	90	2121
Reichenbach, Fritz, Berlin, Germany. Flexible device for connecting stationary or movable machine parts	701,615	June 3	507	123	90	2027
Reichert, John, Racine, Wis. Tank-lug	697,594	Apr. 8	1837	405	90	405
Reichert, Paul F. (See Ayling and Reichert.)						
Reid, Charles H., Danbury, Conn. Hat-machine	700,371	May 20	2173	506	90	1716
Reid, Charles H., Danbury, Conn. Hat-pinning-out machine	700,372	May 27	2593	770	90	1017
Reid, James B., assignor of two-thirds to J. Lebenheim & Sons, Gloversville, N. Y. Fireman's mask	700,421	June 17	2172	496	90	2503
Reid, John K., Montreal, Canada. Spike-drawing tool	698,544	Apr. 1	226	124	90	178
Reid, William, London, England. Lubricating-pulley	698,545	Apr. 1	227	125	90	178
Reiff, Joseph, Jr., Hebron, Ind., assignor to Hercules Woodware Company, Chicago, Ill. Mechanism for trimming slats	698,125	Apr. 22	2208	721	90	745
Reiff, William H., assignor of three-fifths to E. B. Purvis, Philadelphia, Pa. Detonating burglar-alarm	699,116	Apr. 20	5129	1189	90	1155
Reilly, Charles J. (See Moore and Reilly.)						
Reilly, Charles J., Syracuse, Ind., and E. B. Newberry, assignors to Sandusky Portland Cement Company, Sandusky, Ohio. Apparatus for digging, treating, and delivering mail	699,974	May 12	1645	378	90	1267
Reischer, Christian, Cleveland, Ohio. Headlight for motor-cars	699,714	May 12	1124	299	90	1419
Reine, August, Baltimore, Md. Show-case	699,380	Apr. 22	2209	722	90	746
Reine, August, Baltimore, Md. Show-case	701,206	June 3	404	100	90	2122

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr. E.	Vol.	Page.
Reine, August, Baltimore, Md. Show-case	701,210	June 3	405	101	90	2123
Reine, George I., et al. (See Sullivan, William H., assignor.)						
Reine, Oscar C., et al. (See Sullivan, William H., assignor.)						
Reinick, May A. (See Gibson, William, assignor.)						
Remington Arms Company. (See Withersell, George K., assignor.)						
Remy, George. (See Burd, Randall, and Remy.)						
Renfrew, William, Chelsea, Mass. Lacing-button	698,590	May 6	694	199	90	1346
Reiser, Henry F., assignor to Hollands Manufacturing Company, Erie, Pa. Pipe-wrench	700,087	May 12	1562	429	90	1567
Reische, Wilhelm, Gerdau, assignor to A. Voller, Gerdau, near Kiel, Germany. Water-pipe	700,088	May 12	1563	430	90	1567
Reistein, Clement. (See Brown, Franklin, assignor.)						
Revel, William W. (See Haglund and Revel.)						
Revor, Valeri F., Minneapolis, Minn. Shirt-holder	698,095	Apr. 22	5105	694	90	709
Rex Acetylene Generator Company. (See Freeman, Delbert O., assignor.)						
Rexroth, John J., assignor to himself and G. E. Shaw, Chicago, Ill. Door-hanger	697,215	Apr. 8	1831	380	90	321
Rey, Jean A. and J. M. E. Paris, France. Boiler	698,140	Apr. 22	2210	723	90	746
Rey, Jean M. E. (See Rey, Jean A. and J. M. E.)						
Reyburn, John E. (See Fyott, Louis T., assignor.)						
Reynolds, Charles J., Boston, assignor of two-thirds to D. M. Walt, Somerville and B. F. Freesty, Boston, Mass. Trace holder and cast-off	697,395	Apr. 8	1832	381	90	322
Reynolds, Charles W., assignor of one-half to S. T. Fomerooy, Toledo, Ohio. Brick-press	701,015	May 27	2643	853	90	2017
Reynolds, Clayton J., Pittsburg, Pa. Dental tool for fitting cap-crowns	701,016	June 3	406	102	90	2124
Reynolds, Earl H., Sterling, Ill. Envelop-feeding attachment for type-writers	699,975	May 12	1646	379	90	1268
Reynolds, Earl H., Sterling, Ill. Car-loader	700,120	May 12	1600	427	90	1567
Reynolds, Earl H., Sterling, Ill. Car-loader	700,121	May 12	1601	428	90	1567
Reynolds, Francis, and W. J. Underwood, Fall River, Mass. Mule	698,321	Apr. 22	2612	798	90	514
Reynolds, George W. (See Church and Reynolds.)						
Reynolds, James A., Wabash, Ind. Air-gage	698,324	Apr. 22	2613	799	90	515
Reynolds, James H., Milledgeville, Ga. Assignor to G. J. O'Doherty and W. Vandenberg, Boston, Mass. Paper-making machine	698,325	Apr. 1	267	85	90	79
Reynolds, John W., Ballston Spa, N. Y. Pump	700,580	June 17	2204	724	90	747
Reynolds, Samuel D., assignor to M. D. Shipman, C. E. and E. E. Bradt, DeKalb, Ill. Wagon	701,005	June 10	1558	395	90	2025
Reynolds, Stephen K., New York, N. Y. Pneumatic piano	701,006	June 10	1559	396	90	2026
Reynolds, Sylvanus J., Saginaw, Mich. Carpet-sweeper	701,007	June 10	1560	397	90	2027
Rhine, Charles A. (See Brown and Rhine.)						
Rhine, George W., Altoona, Pa. Air-compressor	698,370	May 6	695	194	90	1347
Rhodes, Alonzo K., assignor to Draper Company, Hopkinton, Mass. Roving-breaker for spinning-frames	697,015	Apr. 8	1833	382	90	323
Rhodes, Charles I., Bridgeport, Conn. Adjustable form for paper-box machines	699,418	May 6	552	129	90	1268
Riband, George L., Grand Saline, Tex. Vacuum-pump	697,396	Apr. 8	1834	383	90	324
Rice, John V., Jr., Edgewater Park, N. J., assignor, by mesne assignments, to W. O. Worth, Chicago, Ill., W. R. Donaldson, Louisville, Ky., and H. W. Kellogg, Battletown, Mich. Igniter for explosive-engines	699,014	Apr. 20	4978	1101	90	1128
Rice, Joseph, assignor of two-thirds to W. H. and W. I. Reedy, Chicago, Ill. Elevator	699,597	Apr. 20	4712	1088	90	1028
Rice, Wally M., assignor of one-half to I. R. Wolverton, Manassas, Va. Machine for removing garlic from wheat	701,207	June 3	407	103	90	2125
Rice, William P., Chicago, Ill. Treating air for cooling and moistening same	701,208	June 3	408	104	90	2126
Richards, Albert. (See Hyde, Thomas H., assignor.)						
Richards, E. H., Hartford, Conn. Portable fireplace and chimney	700,099	June 10	1561	429	90	1568
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Playing-ball	697,970	Apr. 1	212	810	90	192
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Golf-ball	697,971	Apr. 15	2087	522	90	599
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Golf-ball	697,972	Apr. 15	2088	523	90	600
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Manufacture of golf-balls or other articles	698,326	May 6	696	200	90	1348
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Playing-ball	698,327	May 12	1610	386	90	1269
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Manufacture of golf-balls	700,184	May 12	1602	430	90	1569
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Manufacture of golf-balls	700,185	May 12	1603	431	90	1570
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Golf-ball	701,017	June 3	409	105	90	2127
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Golf-ball	701,018	June 3	410	106	90	2128
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Golf-ball	701,019	June 3	411	107	90	2129
Richards, Jorro T., New York, N. Y. Attachment for uniting metal or wood beams	700,000	June 24	3197	725	90	2615
Richards, Jorro T., New York, N. Y. Attachment for uniting metal or wood beams	699,976	May 12	1647	380	90	1270
Richards, James D., Wabash, assignor of one-half to E. Gilleswater and E. Baker, Sims, Ind. Vehicle-brake	700,000	May 12	1648	381	90	1271
Richards, W. H., et al. (See Webb, Henry F., assignor.)						
Richards, Willard F., Buffalo, assignor to Gould Storage Battery Company, New York, N. Y. Machine for making battery-plates	698,314	May 12	1564	432	90	1571
Richards, Willard F., Buffalo, assignor to Gould Storage Battery Company, New York, N. Y. Car-coupling	700,441	May 20	2174	507	90	1717
Richards, Willard F., Buffalo, assignor to Gould Storage Battery Company, New York, N. Y. Draw-bar attachment for locomotives	700,442	May 27	2594	771	90	1018
Richards, Willard F., Buffalo, assignor to Gould Storage Battery Company, New York, N. Y. Draw-bar attachment	701,019	June 3	412	108	90	2130
Richards, William, Columbus, Mich. Nail-rod fastener	701,020	June 3	413	109	90	2131
Richardson, Artemus P., and E. S. Richardson, Pa. Assignor to E. S. Richardson. Garment-supporter	700,300	June 24	3198	726	90	2616
Richardson, Eugene S. (See Richardson, Artemus P., and E. S.)						
Richardson, Eugene S. (See Richardson, Artemus P., and E. S.)						
Richardson, Frank. (See Sweet, John H., assignor.)						
Richardson, George A., Lees, Wis. Brush	699,946	May 6	697	195	90	1349

Alphabetical list of patents, April to June, inclusive—Continued.

Inventor	Address	Title	No.	Date	Monthly volume		Official Gazette	
					Spec.	Dr.	Vol.	Page
Richardson, George W., assignor of two-thirds to E. W. Dickerson and W. W. Hubbell, Sparta, Wis.		Brush-broom	701,301	June 3	457	1	90	1198
Richardson, James (See Sullivan, James F., assignor.)								
Richardson, Leonidas W., Dustin, assignor of one-half to V. H. Lockwood, Lawrence County, Tenn.		Electric cut-off switch	699,899	May 4	927	921	90	1273
Richardson, M. E., et al. (See Norstrom, Nils E., assignor.)								
Richardson, Robert Glasgow, Scotland		Rotating cylinder pump	697,910	Apr. 8	1280	973	90	978
Richardson, Thomas D., Philadelphia, Pa.		Garment-hock	700,379	May 20	977	980	90	1317
Richmond, C. B., et al. (See Sullivan, William H., assignor.)								
Richmond Cedar Works (See Johnson, John D. A., assignor.)								
Richner, Levi, Crawfordsville, Ind.		Engine	700,084	May 27	986	721	90	1143
Richter, Georg F., Stuttgart, Germany		Sectional gas-retort	700,084	May 27	986	721	90	1143
Ricker, Henry H. (See Wardwell and Ricker.)								
Ricketts, James R., assignor of one-half to G. W. Wilson, Kingfisher, Okla. Ter.		Compressed-air water-elevator	699,171	Apr. 8	1479	311	90	991
Rickey, Israel E. (See Chase and Rickey.)								
Rickey, James W., Minneapolis, Minn., and H. G. Barnes, Sterling, Ill.		Self-cleaning broom	701,316	June 3	458	982	90	1298
Ridd, John K., San Antonio, Tex.		Car-bent elevator	699,694	May 6	990	981	90	1293
Riddell, John F., Clinton, Mass.		Tuft-pump spool for tufted pile-fabric looms	701,394	June 19	1167	980	90	1307
Ridderhof, Cornel, assignor to Wilmarth and Norman Company, Grand Rapids, Mich.		Drill-grinding machine	700,399	June 17	991	982	90	1270
Ridderhof, Cornel, assignor to Wilmarth and Norman Company, Grand Rapids, Mich.		Drill-grinding machine	699,815	May 13	1285	906	90	1400
Riddick, William J., Kingston, N. Y.		Rind-scoring	700,313	June 24	995	984	90	1297
Rideout, Charles A. (See Andros, Randall B., assignor.)								
Ridlon, Charles A., Alba, Mich., assignor of two-thirds to W. E. and G. A. Jackson, Buffalo, N. Y.		Apparatus for drying and polishing broom-handles	700,349	May 27	986	721	90	1143
Riebo, Louis, Lansford, Pa.		Rock-signal system	701,019	June 3	457	981	90	1298
Riecke, Paul, Dessau, Germany		Gas-washer	700,246	June 17	991	982	90	1270
Riegel, Harry, Pontiac, Ill.		Casket-handle attachment	699,490	Apr. 1	1177	40	90	1041
Riehl, Amos, assignor of one-third to W. Fredmore, Akron, Ohio.		Metal and rubber hose-hose	699,371	May 13	1083	981	90	1400
Riehl, Henry, Jr., Philadelphia, Pa.		Narrow-wave loom	700,081	June 3	457	981	90	1298
Riesner, David, assignor (See Schmidt, Adolf G., assignor.)								
Ritter, Bruno, Winterthur, Switzerland		Machine for cross-winding spools closed-celled	699,728	Apr. 29	1443	981	90	1400
Ritter, Scipion, assignor to Societe Anonyme des Wagons Tubulaires, Brussels, Belgium		Railway-vehicle frame or the like	699,742	Apr. 29	1443	981	90	1400
Rigby, Clark F., Mannington, W. Va.		Oil-overland pump	699,748	Apr. 1	970	140	90	1413
Rigby, Clark F., New Martinsville, W. Va.		Bope-clamp	699,749	Apr. 1	971	140	90	1413
Rigby, Clark F., New Martinsville, W. Va.		Guide for oil-well pump rods	699,750	Apr. 1	972	140	90	1414
Riker, Clarence B., Maplewood, N. J.		Device for mounting entomological specimens	697,792	Apr. 15	1080	987	90	971
Rikli, Adolf, Eisenwerk Claus, near Baltsch, Switzerland		Folding head-rest	700,379	May 20	977	980	90	1317
Riley, Charles E., Newton, Mass., assignor to Howard and Bulough American Machine Company, Limited, Pawtucket, R. I.		Conical-tube holder for winding machines	700,379	June 10	1443	981	90	1400
Riley, John, New York, N. Y.		Horse-shoe	699,473	Apr. 8	1403	981	90	1400
Rintoul, William (See Nathan, Thomson, and Rintoul.)								
Ripley, Daniel C., Pittsburg, Pa.		Glass-gathering machine	697,883	Apr. 15	973	140	90	971
Ris, Christopher, assignor to Aniline Color and Extract Works, formerly John B. Galey, Basle, Switzerland		Blue sulphur dye and making same	699,385	Apr. 29	1443	981	90	1400
Ris, Christopher, assignor to Aniline Color and Extract Works, formerly John B. Galey, Basle, Switzerland		Green sulfur dye and making same	699,386	Apr. 29	1443	981	90	1400
Risdon Iron and Locomotive Works (See Postlethwaite, Robert H., assignor.)								
Risner, Nicholas, and E. G. Burkhardt, Hawkeye, Iowa		Automatic railway-gate	698,550	Apr. 29	1403	981	90	1400
Ritchie, Andrew M., Brookline, Mass.		Magnet-holding and adjusting apparatus for pens	700,380	June 10	1373	437	90	1200
Ritter, Isaac, Jr., assignor to W. A. N. Derland, Philadelphia, Pa.		Tool for finishing metal surfaces or the like	700,385	May 27	986	721	90	1143
Rivett, John (See Hill and Rivett.)								
Roach, Albert C. (See Roach, William G. and A. C.)								
Roach, William G. and A. C., assignors of three-fifths to H. C. Yelzer and O. H. L. Wier, Wickes, Cincinnati, Ohio		Coloring marble, stone, or the like	700,080	May 13	1083	981	90	1400
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,373	May 20	977	980	90	1317
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,374	May 20	978	980	90	1318
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,375	May 20	979	980	90	1319
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,376	May 20	980	980	90	1320
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,377	May 20	981	980	90	1321
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,378	May 20	982	980	90	1322
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,379	May 20	983	980	90	1323
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,380	May 20	984	980	90	1324
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,381	May 20	985	980	90	1325
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,382	May 20	986	980	90	1326
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,383	May 20	987	980	90	1327
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,384	May 20	988	980	90	1328
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,385	May 20	989	980	90	1329
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,386	May 20	990	980	90	1330
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,387	May 20	991	980	90	1331
Roake, John S., Brooklyn, assignor to W. K. Hale, Oshkosh, N. Y., and G. W. Kirsner			700,388	May 20	992	980	90	1332

Rosend, Oscar. (See McIntyre, Edward F., assignor.)						
Ross, Adelle H. (See Ross, Charles J., assignor.)						
Ross, Charles J., assignor to A. H. Ross, Galesburg, Ill. Home-supporter	698,912	Apr. 1	200	220	99	211
Ross, Delmer C., et al. (See Chubb, James A., assignor.)						
Ross, George D., Glasgow, Scotland. Arrangement for shifting the points of tramway or railway lines	701,390	June 3	203	44	99	2149
Ross, Isom J., Waynesville, Ind. Band-cutter and feeder for threshing-machines	699,943	May 6	108	47	99	1214
Ross, John D., et al. (See Sharpneck, William S., assignor.) (Reissue.)						
Rossi, Auguste J., New York, assignor of one-half to J. MacNaughton, Tahawes, N. Y. Producing alloys or compounds of copper and titanium	700,944	May 20	2215	200	99	1004
Rossier, Charles, Buffalo, N. Y. Speed-vehicle	698,550	Apr. 20	4085	399	99	917
Rother, Julius, Katscher, Germany. Making disinfectant-powder	701,080	June 3	206		99	2000
Roughan, James. (See Norris and Roughan, assignors.)						
Roumy de Sales, Georges de, and F. Guegnon, Lyons, France. Accumulator	698,496	Apr. 1	180	44	99	43
Roy, George L. (See Lowe, John M., assignor.)						
Rowell, Benton C., Chicago, Ill. Rail-bond	697,890	Apr. 15	2700	619	99	697
Rowland, Calvin, Denver, Colo. Means for hanging screens	697,080	Apr. 8	1234	274	99	278
Rowland, Calvin, Denver, Colo. Means for hanging screens	700,936	June 17	2028	276	99	2780
Rowland, David E., Canton, Ohio. Hotel	697,276	Apr. 8	1054	273	99	274
Rowland, Henrietta H., administratrix. (See Rowland, Henry A., assignor.)						
Rowland, Henry A., deceased; H. H. Rowland, administratrix, assignor to Rowland Telegraphic Company, Baltimore, Md. Telegraphic distribution	699,974	May 6	200	120	99	1247
Rowland, Henry A., deceased; H. H. Rowland, administratrix, assignor to Rowland Telegraphic Company, Baltimore, Md. Telegraphic page-printer	699,975	May 6	207	120	99	1248
Rowland Telegraphic Company. (See Rowland, Henry A., assignor.)						
Rowlands, Erroll G., Racine, Wis. Screw-driver	701,941	June 10	1176	200	99	2070
Rowley, James M. (See Gabbard and Rowley, assignors.)						
Rowley, Winfield S., and L. B. Freeman, Indianapolis, Ind. Medical cabinet	700,581	May 20	2206	240	99	1700
Rowntree, Harold, Chicago, Ill., assignor to Otis Elevator Company, New York, N. Y. Elevator hoisting mechanism	698,412	Apr. 23	2708	202	99	246
Rowntree, Harold, Chicago, Ill., assignor to Otis Elevator Company, New York, N. Y. Electric motor	700,105	June 10	1077	207	99	2461
Rowntree, Harold, assignor to Rowntree Manufacturing Company, Chicago, Ill. Elevator-door-operating mechanism	700,576	May 20	2204	200	99	1718
Rowntree & Morrison Manufacturing Company. (See Norris and Roughan, assignors.)						
Roxburgh, James, and B. McClean, Dublin, Ireland. Composite printing-form	700,907	June 24	2728	207	99	2000
Royal Metal Manufacturing Company. (See Lowenthal, Isaac, assignor.)						
Royal, Theodore A., Jr., et al. (See Fowler, Frank L., assignor.)						
Royce, Edgar A., Excelsior Springs, Mo. Wheel-hub	700,270	May 20	2200	270	99	1710
Rübel, Walter, Ludwigshafen, Germany. Alloy	697,544	Apr. 15	2109		99	428
Rubin, Max, New York, N. Y. Suspender-buckle	700,886	May 27	2206	272	99	1919
Rubin, William, South Omaha, Neb. Machine for testing cans	699,944	May 6	200	46	99	1915
Rubie, Martin B., Philadelphia, Pa. Machine for cleaning and renovating feathers	698,994	Apr. 1	178	44	99	43
Rucker, Benjamin P., Brooklyn, N. Y. Circuit-breaker	701,021	June 3	206	124	99	2000
Rudell, John T. W., East St. Louis, Ill., assignor to Damascus Brake Beam Company, St. Louis, Mo. Finger-guard clip for brake-beams	699,980	May 13	1561	200	99	1511
Rudhardt, Paul, Geneva, Switzerland. Protecting apparatus for electrical machines and plants	700,108	June 24	2728	207	99	2000
Rudolph, Robert E., Paducah, Ky. Ventilator	699,016	Apr. 20	4000	1108	99	1180
Rudolph, John, and J. Landin, assignors to A. Jacobs, Stockholm, Sweden. Extracting metals from their oxid ores	698,730	Apr. 20	4445		99	1007
Ruebel, C. A. Ernst, St. Louis, Mo., assignor of one-half to E. H. B. Green, Terrell, Tex. Signal-lamp	699,576	May 6	200	120	99	1261
Ruegg, Werner, Schmersdorf, Germany. Projectile and time-fuse therefor	699,577	May 6	204	120	99	1261
Ruff, William J., Quincy, Ill. Pasteurizer	701,020	June 3	206	124	99	2000
Rugg, Ephraim T., Newark, Ohio. Rope halter	699,550	Apr. 20	4006	602	99	917
Ruhl, Amos P., New York, N. Y. Knife-sharpening device	700,528	May 20	2206	240	99	1700
Ruhl, Otto, Bremen, Germany. Concrete and metal skeleton for building purposes	700,443	May 20	2206	240	99	1744
Ruhlman, George H., and G. C. Miller, Cardington, Ohio. Can holder or jacket for capping machines	699,037	Apr. 20	2100	604	99	700
Rundquist, William, Elgin, Ill. Jewel-setting machine	698,736	Apr. 1	200	124	99	146
Rundquist, William, assignor to H. G. Weatherill, Elgin, Ill. Wrench	699,017	Apr. 20	4002	1108	99	1180
Rundquist, William F., Newburyport, Mass. Diaphragm-pump	699,006	Apr. 1	200	124	99	146
Runte, Henry, Chicago, Ill. Display device for neckties	699,715	May 13	1120	200	99	1419
Runte, Henry, Chicago, Ill. Display-holder for neckties	701,948	June 10	1178	200	99	2071
Rusyon, Charles. (See Coleman and Rusyon, assignors.)						
Rusyon, Lewis M., Alhambra, N. J. Fence	698,916	May 13	1200	200	99	1421
Rusyon, Lewis M., Alhambra, N. J. Fence	700,020	June 24	2721	207	99	2040
Rusyon, Lewis M., Alhambra, N. J. Fence	700,247	June 10	1174	201	99	2040
Rusyon, Lewis M., Alhambra, N. J. Fence	699,978	May 6	200	120	99	1261
Rush, Joseph H., New York, N. Y. Adjustable switch or outlet box						
Rush, Henry G., Old City, Pa. Gun-barrel for firing barrels						
Russell, Russell & Ward Burt and Nut Company. (See James, Charles W., assignor.)						
Russell, Edgar A., Wallingford, Conn. Expandable bolt	699,905	May 6	204	40	99	1215

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Draw.	Vol.	Page.
Russell, Edgar A., Wallingford, Conn. Shade-holder for incandescent electric lamps	700,305	June 24	2721	200	99	2040
Russell & Erwin Manufacturing Company. (See Voight, Henry G., assignor.)						
Russell, Frank J., New York, N. Y. Combined switch and plug receptacle-box	698,097	Apr. 1	200	124	99	146
Russell, Frank J., New York, N. Y. Water-tight fixture for electric lights	699,517	May 13	1207	200	99	1421
Russell, Isaac H., et al. (See Marshall, John, assignor.)						
Russell, Margaret J., Stamford, N. Y. Dough-kneader	700,940	June 10	1175	200	99	2000
Rust, Edwin G., Pueblo, Colo. Water-tube boiler	698,380	Apr. 22	2017	200	99	1414
Rust, Edwin G., Pueblo, Colo. Water-tube boiler	700,081	May 12	1248	200	99	1208
Rustin, Gilbert. (See Klindworth, Otto B., assignor.)						
Rutherford, Richard H., Marion, Oreg. Car-coupling	698,740	Apr. 20	4440	920	99	1007
Ryan, George F., Chicago, Ill. Pipe connection	700,524	June 17	2206	240	99	1700
Ryan, John F., Brooklyn, and W. McIlwain, Winfield, N. Y., assignors to A. H. Eyles, Ad-dingham, Pa. Filter-faucet	701,943	June 10	1176	200	99	2071
Ryan, Thomas F., et al. (See Brackney, Orville J., assignor.)						
Rye, Thor, assignor of one-half to W. A. Grove, Minnesota, Minn. Miter-joint for eaves-troughs	700,106	June 10	1081	207	99	2458
Ryerson, Edward J., Jackson, Mich. Stock	698,845	Apr. 1	244	194	99	170
Rylander, Johan A., Norrköping, Sweden. Preserving eggs	698,486	Apr. 1	170		99	43
Rylands, James J., Millvale, assignor to Homestead Valve Manufacturing Company, Homestead, Pa. Valve	699,518	May 13	1200	200	99	1420
Rylands, James J., Millvale, assignor to Homestead Valve Manufacturing Company, Homestead, Pa. Valve	701,900	June 3	408	90	99	2128
Rypinski, Maurice C., Schenectady, N. Y., assignor to General Electric Company. Shunt for electrical instruments	698,767	Apr. 1	207	124	99	147

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Draw.	Vol.	Page.
Schuster, Ernst. (See Eder, Reinhold, assignor.)						
Schütz, Richard, assignor to Firm C. Zeiss, Jena, Germany. Photographic curtain-shutter	705,007	June 24	3175	728	99	2017
Schutz, William C., assignor to F. R. Rice Mercantile Cigar Company, St. Louis, Mo.	705,185	June 24	2475	730	99	2074
Schurman, Dirk, Hoboken, N. J. Feed-bag	695,780	Apr. 1	890	104	99	147
Schwab, Benjamin, Nogales, Mexico. Bar or fastener for doors	695,280	Apr. 22	2061	890	99	518
Schwab, Frank X., Buffalo, N. Y. Keg	705,647	May 20	2287	821	99	1791
Schwab, Martin C., Baltimore, Md. Conveyor	705,115	June 10	1808	828	99	2425
Schwab, Nathan, New York, N. Y. Karolop-motometer	697,542	Apr. 15	2171	428	99	428
Schwaben, John N., Hudson, Wis. Draft-equalizer	697,549	Apr. 15	2172	428	99	428
Schwan, Nicolaus. (See Homolka and Schwan.)						
Schwartz, Herman, and I. Silbermann, New York, N. Y. Fountain-brush	701,408	June 3	2110	81	99	2121
Schwartz, Herman M., assignor to Fibre Manufacturing Company, Northampton, Mass.						
Schwartz, Louis, New York, N. Y., assignor to Eagle Chemical Works, Secaucus, N. J. Receptacle for ethyl chloride	694,701	Apr. 1	691	127	99	147
Schwartz, Oswald, New York, N. Y. Chimney cowl or ventilator	701,274	May 27	4189	960	99	2297
Schwartz, Michael, assignor to E. Payson, Chicago, Ill. Adjustable door-spring	700,595	May 20	2285	821	99	1791
Schwartz, William J., Brooklyn, N. Y. Gas-stove	695,744	Apr. 22	2455	958	99	1005
Schwesler, John, Philadelphia, Pa., assignor, by mesne assignments, to E. W. Cavenagh, New York, N. Y. Soap-granulator	695,144	Apr. 22	2000	725	99	747
Scior, John, Mansfield, Ohio. Combination bung and tapping bush	701,222	May 27	4287	941	99	2099
Scotfield, Edson D., et al. (See Winkler, William, assignor.)						
Scotfield, Edson M. (See Teacher, Edwin, assignor.)						
Scotfield, William E., Long Island City, assignor to Sunlight Gas Machine Company, New York, N. Y. Carbide-feeding device for acetylene-gas generators	697,094	Apr. 8	1284	375	99	351
Scott, Calvin, Bythedale, Mo. Identification-tag	700,008	June 24	2175	728	99	2017
Scott, Charles C., assignor to A. C. and M. L. Felkin, Boston, Mass. Illuminated sign	700,595	May 27	2285	821	99	1791
Scott, Charles H., Gloucester, England. Press for pressing linoleum, &c.	697,550	Apr. 15	2174	428	99	428
Scott, Charles H., Gloucester, England. Machinery for the manufacture of inlaid linoleum	697,551	Apr. 15	2175	428	99	428
Scott, Charles H., Gloucester, England. Manufacture of linoleum	697,552	Apr. 15	2180	428	99	428
Scott, Charles H., Chicago, Ill. Combined bustle and hip-form	702,155	June 10	1808	828	99	2425
Scott, Edwin V. (See Chedell and Scott.)						
Scott, George, Amsterdam, N. Y., and E. D. Wayburn, Chicago, Ill. Cutting-machine and cutting-table and pattern therefor	695,054	Apr. 22	2128	687	99	712
Scott, George C., Boston, Mass. Chair-tip	695,228	Apr. 22	2425	720	99	720
Scott, Gerard C., Columbus, Ohio. Amalgamating-machine	697,176	Apr. 8	1425	323	99	323
Scott, Gerard C., Columbus, Ohio. Amalgamating-machine	697,177	Apr. 8	1426	323	99	323
Scott, Gerard C., Columbus, Ohio. Amalgamating-machine	700,579	May 20	2285	821	99	1779
Scott, Henry W. (See Dearing, David M., assignor.)						
Scott, Jacob E., Boston, Mass., assignor to United Shoe Machinery Company, Paterson, N. J. Machine for buffing articles of leather	695,205	May 6	205	49	99	1215
Scott, James A., assignor of one-half to C. E. Fuller, Somerville, Mass. Folding stand or case	702,088	June 10	1808	827	99	2425
Scott, James T., Buffalo, Ala. Press for baling hay, cotton, &c.	695,220	Apr. 22	2425	720	99	720
Scott, John, Edinburgh, Scotland. Rotary plow	700,247	May 20	2227	828	99	1825
Scott, John, Edinburgh, Scotland. Rotary cultivator	701,513	June 3	2112	81	99	2121
Scott, Joseph A., Yonkers, N. Y. Water-tube boiler	700,248	May 20	2228	828	99	1825
Scott, Robert, San Jose, Cal. Quicksilver-furnace	695,223	May 13	1241	311	99	1425
Scott, Robert W., Philadelphia, L. N. D. Williams, Ashbourne, and H. Swinglehurst, Philadelphia, Pa., assignors to said Scott and Williams. Knitting-machine	697,523	Apr. 15	2098	644	99	648
Scott, Walter, Plainfield, N. J. Slip-sheet-introducing mechanism	695,745	Apr. 22	2427	720	99	1008
Scott, Wilber H., Ottawa, Canada. Bottle-capping machine	697,573	Apr. 15	2425	720	99	649
Scott, William G., Rockwell, Minn. Cultivator	695,523	Apr. 22	2029	825	99	212
Seavill Manufacturing Company. (See Stanley, Frederick E., assignor.)						
Scrivens, William. (See Lee, Charles F., assignor.)						
Scrivens, James H., Cleveland, Ohio. Sash-fastener	695,220	May 6	205	491	99	1222
Scruggs, William M., Monticello, Tenn. Gun-cartridge	700,528	May 27	2229	825	99	1712
Secklin-Gallagher Iron & Steel Company. (See Gallagher, Thomas H., assignor.)						
Seabrook, Percy B. H., London, England. Clamp particularly adapted for securing fittings to the frames of cycles	705,100	June 10	1806	229	99	2425
Seabury, Gorham T., et al. (See Krots, Linford E., assignor.)						
Seabury, George B. M., et al. (See Murphy, John F., assignor.)						
Seaman, Elizabeth C., New York, N. Y. Milk-can	697,528	Apr. 15	2123	425	99	425
Searle, Frederick, assignor to Loring Co. & Company, Incorporated, Worcester, Mass. Construction of wrenches	695,719	May 13	1124	225	99	1425
Searles, Charles F., assignor to W. D. Souziers, Columbus, Ohio. Clothes-wringer	702,020	June 24	2172	723	99	2217
Seaver, Robert E., assignor to H. C. Huddes, Sacramento, Cal. Egg-preserving safe	695,415	May 6	257	127	99	1229
Seaver, Frank B., Johnson Township, Clinton county, Ind. Drag and harrow-pulverizer combined	702,024	June 10	1806	227	99	2425
Seaver, John W. (See Wellman, Seaver, and Morgan.)						
Seaver, John W. (See Wellman, Seaver, and Morgan.)						
Sebillot, Amédée M. G. Paris, France. Apparatus for making sulfuric acid	700,240	May 20	2221	824	99	1825
Secor, Theodosius F., New York, N. Y. Ice-box cover	695,524	Apr. 22	2029	825	99	212
Seckon, Edward H., Brooklands, England. Hand-wheel	701,022	May 27	2244	828	99	2019
Sedgwick, Frederick, assignor to E. L. Krag, Chicago, Ill. Loose-leaf ledger						
See, James W. (See Hooven and See.)						
Seebach, Reinhardt, New York, N. Y. Picture-frame	695,523	Apr. 1	191	48	99	48
Seefelt, William, London, England. Fire-resting staircase						
Seel, Eugene, Stuttgart, Germany, assignor to Farbwerke of Höchstädt Co., New York, N. Y. Aloxin derivative and making same	695,745	Apr. 22	2421	720	99	1009
Seeman, Richard, Ealing, London, England. Apparatus for treating copper ores	702,420	June 17	2726	921	99	2225
Seerup, William T., Pocahontas, Ark. Folding rocking-chair	697,025	Apr. 8	1229	375	99	321
Seibering, Frank A., Akron, Ohio. Solid-rubber vehicle-tire	700,227	May 27	2225	777	99	1825

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Draw.	Vol.	Page.
Seldel, Paul, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen, Germany. Making indigo from lard	695,223	Apr. 22	2427	720	99	1008
Seldel, Paul, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen, Germany. Indigo-diacetic acid and making same	695,221	May 6	2051	49	99	1222
Seller, Paul M. (See Fitzgerald, Seltzer, and Kimmel.)						
Seller, Hubert, Dusseldorf, Germany. Apparatus for heating or cooling liquids	697,584	Apr. 15	2184	425	99	425
Seller, Joseph, South Norwalk, Conn. Fishing device	700,528	May 13	1250	321	99	1222
Seller, Philipp. (See Keller and Seller.)						
Seltz, William F. (See Brevington, Henry S., assignor.)						
Seltz, Clinton H., Norwalk, Pa. Automatic air-brake coupling	701,022	June 3	2141	140	99	2042
Seltz, James, Lancaster, Wis. Bridge	695,747	Apr. 22	2421	720	99	1009
Sellers, William, Haverhill, Mass. Trolley-wheel	697,522	Apr. 15	2123	425	99	425
Sellers, William, Haverhill, Mass. Trolley-wheel	695,145	Apr. 22	2021	725	99	745
Sellers, Fred E., St. Louis, Mo. Harvester-rod	700,024	May 13	1251	321	99	1222
Selph, Ben and, Hillsboro, Ohio. Assignor to Davidson Rubber Company, Boston, Mass.						
Seltzer, Cyrus J., Philadelphia, Pa., assignor to Davidson Rubber Company, Boston, Mass.	700,025	May 27	2229	825	99	1712
Seltz, Andrew J., New Rochelle, N. Y. Game or puzzle	701,022	June 3	2141	140	99	2042
Sendelbach, Edward, Torre Haute, Ind. Vehicle-hub	701,787	June 3	2172	723	99	2217
Seeg Company. (See Gay, Edgar A., assignor.)						
Seegelsch, Günther, Berlin, Germany. Harness	695,220	Apr. 22	2425	720	99	720
Seena, Preston L., Vancou, S. C., assignor to Draper Company, Hopedale, Mass. Apparatus for extracting screw-bolts, &c.	701,242	June 10	1808	827	99	2425
Sergeant, Henry C., Westfield, N. J., and W. F. Feltz, Easton, Pa., assignor to Ingersoll-Sergeant Drill Company, New York, N. Y. Regulating device for air-compressors	695,524	Apr. 1	192	47	99	47
Serpollet, Leon, Paris, France. Automatic proportional feeding device	702,421	June 17	2727	921	99	2225
Serrall, John A., Bayonne, N. J., assignor to Warren Webster and Company. Valve device for steam-heating systems	700,528	May 20	2229	825	99	1712
Sevens, Frank L., Oakport, assignor to Siemens & Halske Electric Company of America, Chicago, Ill. Magnetic clutch	700,528	May 27	2227	777	99	1825
Seibach, Julius and F. J. Cynthiana, Ind. Fire-escape	701,024	May 27	2147	140	99	2042
Seibach, Peter J. (See Seibach, Julius and F. J.)						
Seitler, Berthold, Chicago, Ill. Mixer or vaporizer for hydrocarbon-engines	697,523	Apr. 15	2123	425	99	425
Seumenicht, Johann A. F. C., Lagerdorf, Germany. Shaft-furnace for burning cement, &c.	695,223	May 13	1212	325	99	1475
Seward, Simon E. V., assignor to Seward Trunk and Bag Company, Petersburg, Va. Trunk	695,224	Apr. 1	205	126	99	1275
Seward Trunk and Bag Company. (See Seward, Simon E. V., assignor.)						
Seymour, Ralph C., South Orange, N. J., assignor to C. E. Cottrell & Sons Company, New York, N. Y. Anti-offset device	695,224	May 13	1212	325	99	1475
Shaffer, Howard A., Nazareth, Pa. Type-writing machine	702,025	June 10	1808	828	99	2425
Shaffer, Charles A., Indianapolis, Ind. Display-table	697,528	Apr. 8	1251	327	99	1222
Shaffer, Francis F., Cumberland, Md. Car-brake	695,228	May 6	205	491	99	1222
Shaffer, Samuel C., Mobile, Ala. Signal apparatus	702,422	June 17	2728	921	99	2225
Shaine, Boris M., New York, N. Y. Umbrella-rip retainer	695,228	Apr. 22	2425	720	99	720
Shaler, Frank L., Haverhill, Mass. Churner for shaking cream	695,228	Apr. 22	2425	720	99	720
Shallenberg, Charles S., Milwaukee, Wis., assignor, by mesne assignments, of one-half to M. J. Hurley, St. Louis, Mo. Metallic railway tie	701,513	June 3	2112	81	99	2121
Shallenberg, Charles S., Milwaukee, Wis., assignor, by mesne assignments, of one-half to M. J. Hurley, St. Louis, Mo. Combined spring and friction draft-rigging	701,514	June 3	2114	81	99	2121
Shallenberg, Charles S., Milwaukee, Wis., assignor, by mesne assignments, of one-half to M. J. Hurley, St. Louis, Mo. Car-brake	701,515	June 3	2115	81	99	2121
Shallenberg, Charles S., Jacksonville, Ill., assignor, by mesne assignments, of one-half to M. J. Hurley, St. Louis, Mo. Dust-guard for journal-boxes	701,515	June 3	2116	81	99	2121
Shallow, Edward F., West Philadelphia, Pa. Water-gate for boilers	701,515	June 3	2117	81	99	2121
Shanefelt, George W. (See Hornaday, Edson, assignor.)						
Shanahan, Thomas R., Gloversville, N. Y. Automatic trolley-catcher	697,574	Apr. 15	2428	720	99	541
Shandley, John C., Fairmont, W. Va. Whistle-coupling	697,525	Apr. 15	2123	425	99	425
Shanger, Charles H., et al. (See Ambrosius, Carl A., assignor.)						
Shanger, James E., et al. (See Ambrosius, Carl A., assignor.)						
Shank, Augustus W., assignor to E. A. Hall and W. C. Heller, Detroit, Mich. Street-car tender	695,228	May 13	1212	325	99	1441
Shannon, Irvin M., et al. (See Furman, John C., assignor.)						
Shartle, William, and D. Crawford, Glasgow, Scotland. Steam-generator	701,428	June 3	2111	40,47	99	2121
Sharp, Albert F. (See Bowman and Sharp.)						
Sharp, Francis M. and L. E. Hartwig, Okla. Terr. Cotton-chopper	701,728	June 3	2178	194	99	2221
Sharp, John W., Sidney, Ark. Drag for gathering muscels	702,220	June 10	1872	228	99	2425
Sharp, John W., Sidney, Ark. Drag for gathering muscels						
Sharp, Samuel J., assignor of three-fourths to H. E. Dunlap, L. F. and H. E. Stifel, Wheeling, W. Va. Look for overhead-trolley tracks	701,517	June 3	2119	85	99	2124
Sharpe, John E., Onida, assignor of one-half to N. D. Bartle, Guilford, N. Y. Insulator-supporting arm	700,570	May 20	2241	828	99	1712
Sharpley, David T., Westchester, Pa. Feed-regulating mechanism for liquids	695,549	May 6	210	223	99	1217
Sharpneck, Elial L., Chicago, Ill. Apparatus for the treatment of ores	697,175	Apr. 8	1251	324	99	326
Sharpneck, William S., assignor to J. D. Ross and E. W. Brooks, Chicago, Ill. Centrifugal pump. (Reissue.)	19,001	June 17	2770	924	99	2725
Sharps, Herbert E., assignor to O. Turney, Fairfield, Conn. Automatically-operated musical instrument	695,728	Apr. 1	194	127	99	126
Sharps, Herbert E., and W. W. Cooper, Bridgeport, Conn. Automatic spring-winding mechanism for mechanical musical-instrument devices	697,724	Apr. 15	2429	720	99	571
Sharrard, James W., and T. W. Lloyd, Atchison, Kans. Mechanical movement	695,522	May 13	1243	319	99	1425
Shauk, Arthur M., Galion, Ohio. Bicycle-driving-gear	697,575	Apr. 15	2410	720	99	541
Shauk, Arthur M., Galion, Ohio. Curtain-fastener	701,020	June 3	2140	141	99	2042
Shaw, Arthur D. (See Dodge and Shaw.)						
Shaw, Charles H., Brooklyn, assignor to E. H. Thompson, New York, N. Y. Sulfur candle	695,746	Apr. 22	2428	720	99	1010
Shaw, Gilbert E. (See Harrold, John J., assignor.)						
Shaw, John W., Berryman, Cal. Washer-fastener	697,528	Apr. 8	1212	325	99	425
Shaw, Robert S., Waukegan, England. Traveling type-writing machine	702,420	June 17	2726	921	99	2225
Shaw, Samuel, Newton, Mass. Damper for fireplaces	697,528	Apr. 15	2123	425	99	425

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr'g.	Vol.	Page.
Sleeper, Frank H., Westmount, assignor of one-half to North West Shoe Company, Ltd., Montreal, Canada. Engine.	698,708	Apr. 1	713	100	98	130
Sleeper, Charles W., Independence, Mo. Vehicle-spoke puller.	701,519	June 3	488	98	98	2195
Sleeper, Flavius J., Newark, Ill. Creaming-can.	698,589	Apr. 30	4048	835	98	980
Sleeker, Benjamin F., Paines, Ill. Grain-loader.	700,097	May 13	1897	324	98	1870
Slack, Edwin E., Braddock, Pa. Rolling-mill feed-table.	698,870	Apr. 30	4040	835	98	980
Slack, Victor H., (See Thompson and Slack.)						
Slack, Victor H., Philadelphia, Pa. Welding or other incandescence burner.	698,951	May 6	225	38	98	1281
Slack, George L., et al. (See Zengel, Joseph, assignor.)						
Slack, James W., assignor of two-thirds to J. S. Cullinan and H. G. Johnston, Corvallis, Tex. Bit for well-drilling apparatus.	698,415	Apr. 23	2773	523	98	947
Sly, William W., Cleveland, Ohio. Barrel-closure.	703,512	June 24	3739	639	98	2635
Small, Henry J., Sacramento, Cal., assignor to Westinghouse Air Brake Company, Pittsburgh, Pa. Car-brake. (Reissue.)	11,980	May 18	3048	497	98	1608
Small, Roscoe G., Bayonne, N. J. Differential gearing.	701,093	June 3	646	141	98	2643
Smalley, James B., (See Braden and Smalley.)						
Smart, Samuel H., trustee. (See Harris, John, assignor.)						
Smoad, Isaac D., Cincinnati, Ohio. House-heating apparatus.	700,888	May 20	3500	573	98	1730
Smolker, Angelina, Northstar, Ohio. Fruit-jar closer.	697,051	Apr. 15	3430	598	98	548
Smith, Alva P., Jr., Brookton, assignor to Boston Roller Chafe Iron Company, Boston, Mass. Brace-blank and chafe-iron holder.	698,731	Apr. 30	4485	908	98	1011
Smith, Albert D., assignor to H. G. and F. Woehler, St. Louis, Mo. Coin-controlled newspaper-vending machine.	698,338	May 6	287	54	98	1281
Smith, Alfred B., Reading, England. Apparatus for golf practice.	703,586	June 17	3793	639	98	2739
Smith, Alfred W., Adrian, Mich. Mail-box.	698,383	May 6	280	54	98	1281
Smith, Alvin G., Cheyenne, Wyo. Hair-tester.	698,388	Apr. 23	3080	528	98	817
Smith, Amos C., New York, assignor to E. B. Jaffray, trustee, Irvington, N. Y. Field-pressure engine.	703,301	June 17	3408	580	98	2641
Smith, Andrew, Chicago, Ill. Machine for turning outer-wheels.	698,738	Apr. 30	4487	908	98	1011
Smith and Anthony Company. (See Anthony, Edgar W., assignor.)						
Smith, Arthur C., Milwaukee, Wis., assignor to Automobile and Cycle Parts Company, Cleveland, Ohio. Lock for adjustable ball-bearing cones.	700,251	May 20	3285	505	98	1687
Smith, Arthur W., New York, N. Y. Scrubbing-brush.	697,028	Apr. 15	3438	599	98	543
Smith, Augustus, New York, N. Y. Gate for hoppers or chutes.	698,146	Apr. 30	3803	738	98	746
Smith, Caryll T., et al. (See Smith, Roy E., assignor.)						
Smith, Charles C., Bellevue, Idaho. Nut-wrench.	701,380	June 10	1195	273	98	2674
Smith, Charles D., St. Louis, Mo. Ventilator for chimneys.	697,180	Apr. 5	1494	284	98	287
Smith, Charles F., Beaumont, assignor to Smith Single Belt Reversing Countershaft Company, Monroe, Mass. Reversing-gear.	701,064	June 3	646	142	98	2644
Smith, Charles W., assignor of one-half to S. T. Smith and W. M. Trowbridge, Piedmont, S. C. Bed-brace.	698,416	Apr. 23	2775	523	98	948
Smith, Chauncey, and J. L. Nourse, Philadelphia, Pa. Support for hammocks.	698,885	Apr. 30	4478	1040	98	1070
Smith, Clarence E., assignor to North & Judd Manufacturing Company, New Britain, Conn. Fastening device.	698,871	Apr. 30	4480	908	98	980
Smith, Claude R., assignor of one-half to E. J. Givney, Olean, N. Y. Bicycle-wheel carrier.	700,880	June 17	3287	500	98	1730
Smith, Curtis W., Bellefonte, Ohio. Change-receiver.	697,108	Apr. 5	1475	285	98	287
Smith, De Wase B., Deerfield, N. Y. Bicycle-pump.	700,010	June 24	3160	728	98	2617
Smith, Edward A., Fowler, assignor to F. W. Nash and E. M. Sprague, Denver, Colo. Pick.	698,147	Apr. 30	3804	738	98	746
Smith, Edward J., High Springs, Fla. Spark-arrester.	698,021	Apr. 30	3804	1107	98	1187
Smith, Elnathan H., Ocean City, N. J. Stamp.	700,011	June 24	3168	728	98	2618
Smith, Enos Veraham Dean, near Hungerford, England, assignor to J. Smith, Troy, and H. Smith, New York, N. Y. Pneumatic tire.	700,840	May 27	3285	778	98	1688
Smith, Eugene F., Stockton, Cal. Bicycle-pump.	700,841	May 27	3286	778	98	1689
Smith, Frank N., assignor to S. R. Dresser, Bradford, Pa. Clamping-ring for pipe-couplings.	698,408	Apr. 1	275	50	98	98
Smith, Fred L., Franklin Falls, N. H. Clutch.	697,028	Apr. 15	3438	599	98	544
Smith, Frederick H., Wichita, Cal. Buckle-packer.	698,087	Apr. 30	4413	908	98	713
Smith, Frederick L., and H. D. Gibbs, assignors to Cataract Tool and Optical Company, Buffalo, N. Y. Telescope.	701,380	June 3	646	98	98	2195
Smith, George D., Buffalo, N. Y. Musical toy.	700,998	May 27	3244	597	98	1675
Smith, George J., (See McCulloch, James, assignor.)						
Smith, George S., assignor of one-half to W. S. Lower, Burr, Nehr. Grain-car door.	697,387	Apr. 15	3165	698	98	697
Smith, George W., Hardin, Mo. Motor-vehicle.	698,738	Apr. 30	4480	908	98	1012
Smith, George W., Evanston, Ill. Picture-projecting apparatus.	700,447	May 20	3218	505	98	1733
Smith, George W., Evanston, Ill., and W. A. Somers, St. Paul, Minn.; said Somers assignor to said Smith. Picture-projecting apparatus.	700,700	May 20	3105	703	98	1680
Smith, Greene A., Indianapolis, Ind. Combination gas and oil burner.	697,080	Apr. 5	1495	277	98	284
Smith, Harry, et al. (See Smith, Ezra, assignor.)						
Smith, Harry J., New York, N. Y. Implement for cutting paper or the like.	698,084	May 6	270	50	98	1284
Smith, Harry M., Black River Falls, Wis. Ventilator.	700,973	May 20	3244	595	98	1730
Smith, Harry P., Minneapolis, Minn. Printing attachment for four-packers.	697,385	Apr. 5	1487	277	98	279
Smith, Harry W., North Grafton, Mass. Webt-replenishing loom.	697,084	Apr. 15	3165	540	98	544
Smith, Henry, Milwaukee, Wis. Pneumatic mallet-drum.	700,948	May 27	3281	775	98	1684
Smith, Henry C., (See Van Noorden and Smith.)						
Smith, Henry C., Cambridge, assignor to Smith-Warren Company, Boston, Mass. Window frame and sash.	701,087	May 27	3280	695	98	1680
Smith, Hinesdale, Springfield, Mass. Friction-clutch.	701,088	June 10	1195	273	98	2674
Smith, Joseph A., Cedar Rapids, Iowa. Adding device.	700,446	May 20	3118	698	98	1745
Smith, James H., Chicago, Ill. Camera-stand.	703,740	June 17	3770	618	98	2687
Smith, James L., Princeton, Ind. Portable seat.	698,088	May 23	281	54	98	1281
Smith, James W., Woonsocket, R. I. Seam for sewed articles.	698,088	May 23	281	54	98	1281
Smith, James T., Chapel Hill, Tenn. Rein-support.	703,486	June 17	3715	605	98	2680
Smith, John, et al. (See Smith, Enos, assignor.)						
Smith, John, assignor of one-half to H. Brandie, Philadelphia, Pa. Candy-cutting machine.	701,085	June 3	646	142	98	2644
Smith, John A., Baltimore, Md., assignor to Smith Lyraphone Company. Variable-speed mechanism.	698,088	Apr. 30	4734	1041	98	1677

Stall, Emmett W. (See Merrick and Stall.)						
Stump, Ira E., assignor of one-half to E. M. Foote, Cleveland, Ohio. Ratchet screw-driver.	255,778	May 18	1243	200	90	1445
Sturgis, Herbert M., Kansas City, Mo., assignor to Sturgis Manufacturing Company. Detachable coupling.	695,512	Apr. 1	208	50	90	40
Sturgis, Herbert M., Kansas City, Mo., assignor to Sturgis Manufacturing Company. Heating apparatus.	695,514	Apr. 1	200	50	90	40
Sturgis Manufacturing Company. (See Sturgis, Herbert M., assignor.)						
Stuts, Ernest, Brooklyn, N. Y. Can for freeing water.	695,520	May 18	1420	207	90	1420
Stuts, Frederick, assignor of one-half to F. R. Gillinder, Philadelphia, Pa. Bottle-stopper.	701,101	May 27	2058	207	90	2081
Sub Marine Mining Company. (See Craig, Lee D., assignor.)						
Suchy, Joseph, Littleheart, N. D. Gear transmission.	708,516	June 24	2727	261	90	2680
Sugden, Thomas. (See Haigh and Sugden.)						
Sullivan, Albert P., and E. S. Bacon, Detroit, Mich.; said Bacon assignor to said Sullivan. Washboard.	692,064	Apr. 29	2007	1108	90	1126
Sullivan, Denis J., Manassas, Va. Nut-lock.	697,280	Apr. 8	1090	279	90	281
Sullivan, James F., assignor of one-half to J. Richardson, Philadelphia, Pa. File.	695,501	May 6	201	204	90	1207
Sullivan, John. (See Russell and Sullivan.)						
Sullivan, John L., North Carrollton, Miss. Flowshare.	700,225	May 20	2008	510	90	1093
Sullivan, Michael J. (See Walsh, Laurence J., assignor.)						
Sullivan, Samuel C., Erie, Pa. Means for cooking milk-cans.	697,111	Apr. 8	1279	208	90	212
Sullivan, William, St. Louis, Mo. Car-fender.	697,900	May 12	1670	208	90	1202
Sullivan, William H., assignor of forty-nine one-hundredths to O. C. and G. T. Reitas and C. B. Richmond, Denver, Colo. Concentrator.	695,918	Apr. 1	1001	228	90	271
Sulphides Reduction. (New Process.) (See Klerhausen, Francis, assignor.)						
Sulzer, George W. (See Soper, William A., assignor.)						
Suman, Harry F., Baltimore, Md., assignor to F. L. Ellingwood, New York, N. Y., and C. W. Schumann, Jr., Orange, N. J. Safety appliance.	695,085	Apr. 29	2008	1108	90	1126
Summers, Bertrand S., Chicago, Ill. Retting vegetable fibers.	695,515	Apr. 1	211	1109	90	48
Summers, Edwin C., Guyton, Okla. Ter. Neck-yoke center.	701,415	June 8	205	58	90	2125
Sumner, Dorcas, Pleasant Township, Wapello county, Iowa. Seed-sowing machine.	697,900	Apr. 15	2011	201	90	200
Sunderland, John S., London, England. Apparatus actuated by clock-movements for starting or stopping machinery.	708,028	June 17	2027	207	90	2072
Sundh, August. (See Baldwin and Sundh.)						
Sundt, Oscar, assignor to Garrett-Cromwell Engineering Company, Cleveland, Ohio. Leading spindle.	697,291	Apr. 8	1090	279	90	281
Sunlight Gas Machine Company. (See Goodfield, William E., assignor.)						
Suppes, Maximilian M., and R. Crocker, Jr., Elvira, Ohio. Heating-furnace.	695,907	Apr. 1	207	20, 91	90	75
Sutherland, Francis G., and A. Torrey, Detroit, Mich. Car side bearing.	701,416	June 8	206	58	90	2125
Sutherland, John. (See Granger, John, assignor.)						
Sutherland, William S., assignor of one-half to D. G. Elliott, Chelsea, Ind. Ter. Nut-lock.	697,416	Apr. 8	1095	281	90	480
Sutton, Festus P., Lowell, Ind. Threshing-machine.	697,292	Apr. 15	2108	280	90	490
Sutton, R. S., et al. (See Cohen, George W., assignor.)						
Svendgaard, Sverre, Sverre, Minn. Mirror-bracket.	699,001	May 13	1513	240	90	1508
Swan, Henry C., Oshkosh, Wis. Ellis c-spring.	702,257	June 10	1745	206	90	2454
Swanberg, Arthur W., Rockford, Ill. Horse-bitting device.	697,080	Apr. 8	1202	220	90	268
Swanitz, Alexander W., assignor to Swanitz Company, Chicago, Ill. Merchandise-transfer apparatus.	701,081	June 10	1210	276	90	2077
Swanitz, Alexander W., assignor to Swanitz Company, Chicago, Ill. Railway clearing-house.	701,082	June 10	1212	276	90	2077
Swanitz Company. (See Swanitz, Alexander W., assignor.)						
Swank, Lafa. (See Dringins and Swank.)						
Swanson, August C. J. (See Swanson, Ludwig G., assignor.)						
Swanson, Carl L. (See Warner, Thomas S., assignor.)						
Swanson, Ludwig G., assignor of one-half to A. C. J. Swanson, Springfield, Mass. Ventilating apparatus.	695,914	Apr. 1	1008	228	90	271
Swart, Walter G., Denver, Colo., and L. L. Blake, Lawrence, Kans. Apparatus for separating conductors from non-conductors.	701,417	June 8	206	58	90	2125
Swartout, George H., assignor of one-half to M. L. Smith, Placerville, Cal. Pipe-wrench.	702,079	June 10	1428	200	90	2454
Swartz, Hiram B., Wooster, Ohio. Self-heating and iron.	698,707	Apr. 29	4477	100	90	1013
Sweet, John M., assignor of one-half to F. Richardson, Batavia, N. Y. Rubber tire for vehicle-wheels.	695,771	Apr. 1	719	108	90	154
Sweet, Oliver C., Watertown, N. Y. Molding-board.	695,077	Apr. 29	2144	692	90	717
Sweetland, Leroy B., Huntington, Ind. Mail-bag crane.	701,774	June 8	2058	174	90	2020
Sweetman, Michael M., Kansas City, Mo. Crane.	700,226	May 20	2004	574	90	1721
Swenson, Magnus, Chicago, Ill., assignor to American Cotton Company, New York, N. Y. Core-driver for round-lap bales.	695,728	May 13	1141	207	90	1428
Swenson, Paul, Hopkins, Minn. Band-cutter and feeder.	702,164	June 10	1598	201	90	2455
Swenson, Eric, Chicago, Ill. Eraser.	695,984	May 13	1670	201	90	1212
Swenson, Moses C., Westhaven, Conn. Store-service apparatus.	702,080	June 10	1428	200	90	2454
Swift, Edward D., deceased; M. H. Swift, Chicago, Ill., executrix. Machine for the treatment of application of reciprocating or other power for operating rotary machinery.	699,774	May 13	1242	200	90	1428
Swift, Mary H., executrix. (See Swift, Edward D.)						
Swindell, James H., Pensacola, Fla. Nut-lock.	708,015	June 24	2105	228	90	2021
Swinglehurst, Harry. (See Scott, Williams, and Swinglehurst.)						
Swingle, Charles W. (See Allen, John M., assignor.)						
Symank, John H., and R. A. Kitzler, Stamp, Tex. Hay baler and rake.	697,088	Apr. 15	2441	543	90	547
Syme, John H., Chicago, Ill. Pocket-closure.	702,222	June 17	2027	207	90	2081
Symington, Thomas H., Wilmington, N. C. Journal-box.	697,080	Apr. 8	1202	220	90	268
Symons, Wilson E., Savannah, Ga. Bottles cast-steel car-truck.	700,228	May 27	2064	240	90	1875
Synott, Thomas W., Woonah, N. J. Power-transmitting device for match-machines.	702,028	June 17	2000	200	90	2072
Szecsapank, Jan, assignor to Société des Inventions Jan Szecsapank & Cie., Vienna, Austria-Hungary. Producing weaving diagrams.	701,418	June 8	240	58, 64	90	2127
Szecsapank, Jan, assignor to Société des Inventions Jan Szecsapank & Cie., Vienna, Austria-Hungary. Jacquard card and making same.	701,775	June 8	2054	187	90	2000
T. Conlhard & Company. (See Norris, William, assignor.)						
Tabor, Mott B., Canton, Pa., assignor to A. M. Lothrop and W. N. Moore. Suit-holder.	694,028	Apr. 29	2014	1100	90	1120
Tabor, Alexander V. (See Savage, William H., assignor.)						
Tabor, Clinton D., assignor to Tabor Sash Company, Newark, N. J. Revolving window-sash.	694,516	Apr. 1	215	22, 23	90	50
Tabor Sash Company. (See Tabor, Clinton D., assignor.)						
Tabor, Thomas H., Elletts, Ga. Farm-windlass and wagon-hoist.	697,112	Apr. 8	1200	208	90	212

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr'g.	Vol.	Page.
Tacoma Automatic Scales Co. (See Berry, John W., assignor.)	702,205	June 17	2027	207	90	2081
Tadlock, Sterling B., Junction City, Ark. Clothes-pounder.	701,419	June 8	240	58	90	2127
Talbot, Fred R., assignor to Talbot Pneumatic Service Company, Indianapolis, Ind. Automatic switch for pneumatic carriers.	701,420	June 8	240	58	90	2127
Talbot Pneumatic Service Company. (See Talbot, Fred R., assignor.)						
Talbot, Jacob M., assignor of one-half to J. M. Vandiver, Rome, Ga. Cultivator.	701,419	June 8	240	58	90	2127
Talbot, John, Leebury, England. Leaf-cutter.	692,027	Apr. 29	2015	1100	90	1121
Talbot, Walter O., Providence, R. I. Game apparatus.	700,226	May 27	2004	574	90	1721
Talbot, Samuel. (See Robinson and Talbot.)						
Talbot, Theodore W., Borg, Russia. Hemoglobinometer.	708,219	June 24	2728	261	90	2680
Tancook, James A., and T. O. Oochill, London, Canada. Automatic switch.	700,226	May 20	2004	574	90	1721
Tandler, Antonio, Chicago, Ill. Steam-engine valve.	701,080	June 8	240	58, 55	90	2125
Tannahill, Samuel, Jr., Augusta, Ga. Fertilizer-distributing attachment for cultivators.	697,112	Apr. 8	1201	206	90	212
Tannenbaum, Lippman. (See Hillard, Frederick E., assignor.)						
Tanner, John, et al. (See English, Edwin E., assignor.)						
Tanner, Zero L., U. S. Navy. Navigational sounding apparatus.	702,507	June 17	2028	206	90	2025
Tapecock, James L., Chicago, Ill. Fastener for backings in picture-frames.	700,226	May 20	2004	574	90	1721
Tarcom, Victor, Budapest, Austria-Hungary. Kite or flying-machine.	701,644	June 1	205	145	90	2047
Tardif, Omeril, Plattsburgh, Canada. Fire-escape.	700,228	June 10	1747	200	90	2456
Tardy, Leon J., assignor of one-half to J. P. A. K. H. Chaumont, Versailles, France. Vessel for containing liquids.	701,102	May 27	2020	207	90	2082
Tash, Thomas H., Potomac, Ill. Vehicle-axle nut.	708,016	June 24	2125	228	90	2021
Tate, Hugh J., assignor to Philadelphia Textile Machinery Company, Philadelphia, Pa. Garnet-cylinder.	695,978	Apr. 29	4735	1048	90	1073
Tate, Jones & Company. (See Schenk, Carl L. E., assignor.)						
Tatham, Charles, New York, N. Y. Boarding-shed.	700,220	June 24	2740	261	90	2680
Tatlock, Robert E. (See Graham and Tatlock.)						
Tatro, Wilbur W., Minneapolis, Minn. Washing-machine.	697,708	Apr. 15	2020	208	90	212
Taul, Martin L. (See Arnold, Henry R., assignor.)						
Taylor, Arthur, Rochester, N. Y. Expandable fish-hook.	700,228	May 27	2020	208	90	1977
Taylor, Brainerd, New York, N. Y., assignor to F. A. Richardson, Cambridge, Mass. Urinal.	698,410	Apr. 29	2761	264	90	240
Taylor, Clarence W., Sioux City, Iowa. Incandescent gas-burner.	700,574	May 20	2047	264	90	1728
Taylor, Clarence W., Sioux City, Iowa. Bunsen burner.	702,265	June 10	1746	206	90	2454
Taylor, Clarence W., Sioux City, Iowa. Incandescent gas-burner.	700,580	June 17	2028	201	90	2720
Taylor, Edward R., Pan Yau, N. Y. Producing chemicals in electric furnaces.	708,117	June 10	1505	220	90	2455
Taylor, Eugene H., Lynn, Mass. Machine for mitering and cornering box-blanks.	701,098	June 10	1212	277	90	2078
Taylor, Hugh S., et al. (See McGarvey, Edward, assignor.)						
Taylor, Israel B., Buffalo, N. Y. Incandescent gas-burner.	700,227	May 27	2021	208	90	1980
Taylor, Isaac. (See Taylor, James H., and L.)						
Taylor, James, and J. Robinson, Lancaster, England. Pocket implement.	695,967	May 13	1671	208	90	1520
Taylor, James A., Dunoon, Ill. Hitching-post.	701,944	June 10	1212	278	90	2073
Taylor, James H., and L. Philadelphia, Pa. Garment hook and fastener.	708,161	June 24	2468	201	90	2076
Taylor, James P., Port Worth, Tex. Clear-cutting and match-safe.	698,102	Apr. 22	2819	225	90	702
Taylor, James S., Fairplain, Pa. Onion-clipping machine.	700,080	June 24	2061	271	90	2023
Taylor, James W., assignor of three-fourths to G. A. Norwood, Jr., T. H. Holmes, and J. Spicer, Goldsboro, N. C. Machine for applying gathering-strings to bags.	695,080	Apr. 29	2728	206	90	2020
Taylor, John D., Buffalo, N. Y., assignor to Taylor Signal Company. Railway signaling and switching apparatus. (Reissue.)	11,908	May 6	940	224	90	1275
Taylor, John L., Boston, Mass. Apparatus for lifting wagon-boxes, &c.	695,968	Apr. 29	2027	206	90	210
Taylor, Robert E., et al. (See McGarvey, Edward, assignor.)						
Taylor Signal Company. (See Taylor, John D., assignor.) (Reissue.)						
Taylor, Thomas P., Bridgeport, Conn. Clamp for garment-supporters.	697,228	Apr. 8	1571	251	90	208
Taylor, Warren E., assignor to Yale & Towne Manufacturing Company, Stamford, Conn. Lock-hub.	695,908	Apr. 1	209	91	90	86
Taylor, Warren E., assignor to Yale & Towne Manufacturing Company, Stamford, Conn. Changeable combination key-lock.	701,220	May 27	4005	943	90	2071
Taylor, Warren E., assignor to Yale & Towne Manufacturing Company, Stamford, Conn. Changeable combination key-lock.	701,221	May 27	4007	944	90	2071
Tee, Mary J., administratrix. (See Tee, William A.)						
Tee Tray Company. (See Turbine, Leonard L., assignor.)						
Tee, William A., deceased, Bellevue, Ohio; M. J. Tee, administratrix. Device for loading corn-shocks.	701,845	June 8	200	145	90	2046
Teel, Martha O., The Dalles, Ore. Drawer guard or support.	701,222	May 27	4009	944	90	2072
Tennant, George E., Johnstown, Pa. Power-press.	695,980	May 6	418	96	90	1223
Tennessee Felt Manufacturing Company. (See Morgan, John W., assignor.)						
Tenney, Albert E., Everett, Mass. Variable-motion mechanism.	697,041	Apr. 8	1200	200	90	207
Terhune, Leonard L., Newark, N. J., assignor to Tee Tray Company. Electrical hood or reflector and clamp for same.	701,821	June 2	240	95	90	2100
Terrill, Elah, and F. A. Ray, Columbus, Ohio. Printing device.	695,959	Apr. 29	4078	900	90	925
Terrill, Elah, and F. A. Ray, Columbus, Ohio. Type-setting machine.	708,017	June 24	2126	228	90	2021
Terrill, Joseph E., and W. F. M. Montgomery, Cleburne, Tex. Cattle-holder.	695,958	May 13	1672	204	90	1522
Terrill, William. (See Terrill and Montgomery.)						
Terris, David E. (See Watkin, Oscar, assignor.)						
Terry, Theodore D., Jamestown, N. Y. Cultivator.	695,128	Apr. 29	2021	208	90	702
Tesserman, Henry, assignor to Barney & Smith Car Company, Dayton, Ohio. Brake-shoe mechanism.	695,421	Apr. 29	2740	261	90	2680
Teter-Henry Development Company. (See Henry, John A., assignor.)						
Teufel, George W., Philadelphia, Pa. Dental crown-slitting tool.	695,778	Apr. 1	721	140	90	1124
Thacher, Edwin, New York, N. Y., assignor of one-half to E. M. Scuddell, Pittsburg, Pa. Slide-rule.	701,102	May 27	2021	207	90	2080
Thacher, Wesley G. (See Thompson, Edmond, assignor.)						
Thackberry, Milton L. (See Zetterlund, August T., assignor.)						
Thaler, Robert, West Bay City, Mich. Screw-propeller.	695,984	Apr. 29	4072	900	90	926
Thatcher, Joseph W. (See Bennett, George S., assignor.)						
Thatcher, Joseph W., San Francisco, Cal. Dental mallet.	700,185	May 13	2012	261	90	1200
Thayer, Russell, assignor to Carbon Light and Power Company, Philadelphia, Pa. Lighting.	697,088	Apr. 8	1207	270	90	268
Thompson, Jakob, Union Hill, N. J. Rotary engine.	697,088	Apr. 15	2448	544	90	549
Thompson, Frederick, Memphis, Tenn. Envelope and advertising-opener therefor.	702,202	June 17	2021	208	90	2020
Thuring, Andrew J., Cincinnati, Ohio. Hub and axle bearing.	695,955	Apr. 29	4074	900	90	925

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.

Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	697,936	Apr. 15	2920	644	99	660
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,576	May 30	2290	511	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,576	May 30	2291	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,577	May 30	2292	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,578	May 30	2293	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,579	May 30	2294	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,580	May 30	2295	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,581	May 30	2296	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,582	May 30	2297	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,583	May 30	2298	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,584	May 30	2299	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,585	May 30	2300	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,586	May 30	2301	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,587	May 30	2302	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,588	May 30	2303	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,589	May 30	2304	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,590	May 30	2305	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,591	May 30	2306	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,592	May 30	2307	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,593	May 30	2308	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,594	May 30	2309	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,595	May 30	2310	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,596	May 30	2311	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,597	May 30	2312	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,598	May 30	2313	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,599	May 30	2314	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,600	May 30	2315	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,601	May 30	2316	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,602	May 30	2317	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,603	May 30	2318	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,604	May 30	2319	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,605	May 30	2320	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,606	May 30	2321	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,607	May 30	2322	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,608	May 30	2323	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,609	May 30	2324	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,610	May 30	2325	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,611	May 30	2326	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,612	May 30	2327	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,613	May 30	2328	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,614	May 30	2329	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,615	May 30	2330	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,616	May 30	2331	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,617	May 30	2332	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,618	May 30	2333	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,619	May 30	2334	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,620	May 30	2335	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,621	May 30	2336	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,622	May 30	2337	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,623	May 30	2338	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,624	May 30	2339	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,625	May 30	2340	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,626	May 30	2341	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,627	May 30	2342	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,628	May 30	2343	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,629	May 30	2344	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,630	May 30	2345	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,631	May 30	2346	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,632	May 30	2347	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,633	May 30	2348	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,634	May 30	2349	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,635	May 30	2350	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,636	May 30	2351	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,637	May 30	2352	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,638	May 30	2353	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,639	May 30	2354	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,640	May 30	2355	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,641	May 30	2356	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,642	May 30	2357	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,643	May 30	2358	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,644	May 30	2359	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,645	May 30	2360	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,646	May 30	2361	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,647	May 30	2362	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,648	May 30	2363	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,649	May 30	2364	512	99	1070
Thompson, Walter, Toronto, Canada, assignor, by mesne assignments, to Packers' Solderless Can Company, Paterson, N. J. Solderless side seam for tin cans	700,650					

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Specd.	Pgs.	Vol.	Page.
Tolinie, Robert C., assignor to Lobdell Car Wheel Company, Wilmington, Del. Flank for sand molds.....	701,105	May 27	2979	686	99	2985
Tolta, Max, and A. Lipschultz, St. Paul, Minn.; said Lipschultz assignor to said Tolta. Gas-distributing system.....	699,796 700,455	May 12 May 20	1145 9987	935 991	99	1455 1745
Tomek, Anton, St. Louis, Mo. Check-winding mechanism.....	700,121	May 12	2015	491	99	1000
Tommasina, Thomas, assignor to P. Galopla, Geneva, Switzerland. Telephonic receiver for wireless signal apparatus.....						
Tolson & Company, P. C. (See Lockwood, Edward M., Jr., assignor.)						
Tongue Lock Sewing Machine Company. (See Keith, Thomas K., assignor.)						
Toononen, Toones, and I. Carlson, Chicago, Ill. Mounting of piano-keys.....	702,091	June 24	2928	757	99	2932
Tooker, William W., et al. (See Cook, Howard, assignor.)						
Toomey, John A., Goshen, Ind. Automatic telegraphic transmitter.....	702,229	June 10	1739	401	99	2097

Advertising-wagon.	J. Leitcham.	499,007	Apr. 1	350	90	90	98
Aerating or agitating liquids. Apparatus for.	H. E. Dolphin.	499,294	May 6	511	71	90	1290
Aeroplans.	E. J. Conyne.	499,054	Apr. 20	4980	98	90	98
Agricultural utensil.	E. M. Grummet.	700,108	May 20	2102	481	90	1641
Air and hydrocarbon. Apparatus for supplying.	W. M. Best.	700,000	June 17	2620	515	90	2611
Air-brake.	J. E. Normand.	497,008	Apr. 8	1195	287	90	271
Air-brake.	D. Reamer.	701,025	June 10	1804	267	90	2690
Air-brake apparatus.	W. L. Clark.	701,700	June 3	917	305	90	2600
Air-brake. Automatic.	G. T. Woods.	701,981	June 10	1806	295	90	2694
Air-brake connection.	W. Neil.	701,572	May 27	4176	960	90	2695
Air-brake coupling. Automatic.	C. H. Seitz.	701,085	June 3	941	140	90	2640
Air-brake pistons. Holding-tool for.	J. Korkinck.	499,498	Apr. 1	109	90	90	26
Air-brake. Railway-car.	F. M. Kreitz.	701,905	May 27	4080	581	90	2692
Air-brake system. Continuous automatic.	E. L. Goss.	701,287	June 3	98	10	90	2192
Air-brake system. Continuous automatic.	E. L. Goss.	701,288	June 3	98	10	90	2192
Air-brake-testing apparatus.	G. N. Baum and M. Mercatoris.	701,074	June 17	2631	586	90	2671
Air-cleaning and cooling device.	J. McCrory.	701,074	May 27	2609	573	90	2611
Air-compressor.	F. L. Roder and A. B. Freville.	497,414	Apr. 8	1582	346	90	342
Air-compressor.	G. W. Rhine.	499,570	May 6	985	194	90	1246
Air-compressor.	R. Hill.	700,087	May 27	2640	515	90	1246
Air-compressor and intercooler.	W. R. Cowles.	499,255	May 6	300	90	90	1246
Air-compressor. Hydraulic.	J. Weyand.	499,280	Apr. 20	3476	744	90	786
Air-compressor regulating device.	H. C. Bergant and W. Frelvitz.	499,204	Apr. 1	108	47	90	2614
Air-cooling and agitating apparatus.	E. F. Porter.	702,094	June 24	2100	787	90	2614
Air-cooling apparatus.	A. Siebert.	497,070	Apr. 15	2417	123	90	543
Air-diffuser.	S. G. Smith.	497,070	Apr. 15	2417	123	90	543
Air for cooling and moistening same. Treating.	W. F. Blom.	701,508	June 3	404	90	90	2194
Air-heater.	C. B. Dunlop.	700,519	May 20	2701	986	90	1770
Air-heater. Compressed.	A. E. Loveloy.	499,188	May 6	88	14	90	1187
Air-moistening apparatus.	O. H. Evans.	701,508	June 3	404	109	90	2194
Air-moistening apparatus. Automatic.	W. W. Pratt.	497,050	Apr. 15	2417	123	90	543
Air-purifying and cooling apparatus.	R. H. Thomas.	700,000	May 27	2620	515	90	2611
Air-purifying apparatus.	D. Grove.	499,188	May 6	88	14	90	1187

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr. E.	Vol.	Page.
Air-ship.	C. F. A. Klotz.	701,280	June 8	141	20, 30	20	2128
Air-ship.	P. Samoraki.	701,310	June 8	430	30	20	2128
Air-ship.	H. B. Van Voorhis.	701,280	June 10	1819	341	20	2087
Air-ship propeller.	C. Groombridge.	697,408	Apr. 8	1908	285	20	204
Air superheater or carburetor.	H. M. McCall.	701,374	June 10	1955	444	20	2088
Alarm.	A. B. Cowles.	698,388	Apr. 20	3737	305	20	200
Alarm.	M. P. Janisch.	699,531	May 6	784	170	20	1280
Album for clothing patterns, drawings, &c.	K. A. Johansson.	699,571	May 13	1443	383	20	1408
Album. Loose-leaf.	R. F. Oberhauser.	701,027	June 10	1237	305	20	2070
Alkaloids and acid. Making.	M. Babson.	698,388	Apr. 20	3737	305	20	200
Alkali. Making.	H. A. Francis.	697,408	Apr. 15	3081	305	20	200
Alkaline cyanide. Making.	J. D. Darling.	698,408	Apr. 20	3875	305	20	204
Alkaline cyanide. Making.	J. D. Darling.	698,408	Apr. 20	3875	305	20	204
Alloy.	W. Rühl.	697,544	Apr. 15	3165	305	20	2014
Alloy.	W. Pruszkowski.	701,000	June 10	3165	305	20	2014
Alloy. Aluminum.	K. Murrman.	698,316	May 4	181	305	20	1280
Alloys or compounds of copper and titanium. Producing.	A. J. Rossi.	701,344	May 20	2213	305	20	1280
Alum derivative and making same.	K. Seel.	698,708	Apr. 20	4481	305	20	1009
Alpha-ions. Making.	P. Chuit and F. Bachofen.	701,128	June 10	1280	305	20	2040
Amalgamating apparatus.	G. F. Jernigan.	701,244	June 8	120	305	20	2128
Amalgamating apparatus.	M. Bloome.	701,170	June 10	1085	304	20	2041
Amalgamating-machine.	G. C. Scott.	697,177	Apr. 8	1459	305	20	200
Amalgamating-machine.	G. C. Scott.	700,879	May 20	2468	371	20	1719
Amalgamating-machine.	E. J. Kline.	698,408	Apr. 1	106	305	20	200
Amalgamator.	J. McKelvey.	698,580	May 6	788	187	20	1280
Amalgamator.	J. S. Marquette and P. J. Nelson.	701,518	May 27	4081	305	20	2046
Amalgamator.	J. Becker.	697,188	Apr. 8	1800	311	20	218
Ammunition. Loading-tray for transferring.	H. F. Schrader.	697,581	Apr. 15	2000	619	20	687
Amusement apparatus.	J. G. Watson.	697,140	Apr. 8	1718	305	20	200
Anchor.	F. W. Keeney.	701,164	June 24	3437	305	20	2077
Anchor. Ship's.	W. H. Tuck.	697,771	Apr. 15	2527	374	20	377
Animal-dipping apparatus.	S. W. Allen.	697,388	Apr. 8	1887	305	20	200
Animal-shears.	J. Chagnot.	698,978	Apr. 20	4911	1035	20	1108
Animal-trap.	M. Laramie.	698,145	May 6	37	10	20	1280
Animal-trap.	J. B. Butler.	698,408	May 6	647	140	20	2070
Animal-trap.	J. M. Hearndon.	701,070	June 17	2545	305	20	1947
Animal-trap.	B. Folk and T. J. Wood.	700,988	May 27	3048	305	20	1947
Animal-trap.	J. J. Markey.	701,101	May 13	1807	435	20	1973
Animal-trap.	C. Stickney.	698,018	Apr. 20	3039	305	20	904
Annunciator.	G. E. Hoglund and C. M. Hedman.	698,578	May 6	305	305	20	1280
Annunciator. Automatic.	J. A. Wotton.	698,140	May 6	30	7	20	1101
Annunciator. Electrical.	C. C. Blake.	701,188	June 10	1878	305	20	2081
Antimony. Treatment of ores and materials containing.	J. P. Van der Ploeg.	698,088	May 13	1413	305	20	1470
Anti-offset device.	R. C. Seymour.	697,188	Apr. 8	1490	310	20	201
Antislipping device.	D. M. Dearing.	700,801	May 20	2784	305	20	1707
Apartment-house.	W. C. James.	697,500	Apr. 15	2000	305	20	200
Apparel. Wearing.	I. W. Collins.	698,584	May 6	304	305	20	1287
Applicator.	G. J. Van Schott.	701,587	June 8	181	305	20	2088
Applicator and syringe. Combined.	A. Levy.	701,570	June 17	2000	307	20	2088
Apron and apron-tie.	L. J. Lohlein.	699,518	May 6	788	109	20	1285
Apron. Child's eating.	W. Garms.	698,588	May 6	120	40	20	1213
Apron. Child's eating.	E. J. Reed.	698,574	Apr. 1	304	70	20	70
Apron fastener. Storm.	C. C. Laros.	698,788	Apr. 20	4088	1008	20	1088
Apron-light hanger-board.	H. M. Buck and W. H. Strippy.	698,981	May 13	1008	305	20	1980
Arch-bar.	T. C. Balzer.	698,888	Apr. 1	904	191	20	178
Arch construction. Concrete.	W. C. Farley.	701,004	May 27	3784	305	20	2000
Arch. Metal.	R. Gray.	701,580	June 20	1200	375	20	2077
Arch support. Brick.	H. B. Strate.	701,008	May 13	1007	305	20	1987
Arm-rest. Book.	J. Barker.	698,588	Apr. 1	11	4	20	80
Armature-coil.	A. F. Batchelder.	698,784	May 13	1280	305	20	1440
Armature-winding for electric motors. System of.	T. J. Murphy.	700,088	May 13	1284	408	20	1440
Armor.	J. J. Piodak.	698,941	Apr. 8	1077	305	20	200
Armor-plate. Manufacture of.	G. Charpy.	698,408	Apr. 20	3088	305	20	200
Ash or refuse can.	T. Hill.	698,407	Apr. 20	3087	305	20	200
Ash or refuse can.	T. Hill.	698,971	Apr. 20	4008	1004	20	1108
Ash-pan drop-bottom.	J. A. Kromer.	697,807	Apr. 8	1784	305	20	200
Asphalt. Preparing.	A. Wolkel.	700,880	May 27	3078	787	20	1940
Asphaltum. Extracting and refining.	A. F. L. Bell.	11,970	Apr. 1	2018	305	20	214
Assayer's furnace.	J. J. Lomgren and A. C. Calkins.	697,774	Apr. 15	3088	375	20	200
Assaying apparatus. Ore.	W. T. Armstrong.	698,540	Apr. 1	970	305	20	80
Assaying-furnace.	A. C. Calkins.	701,088	May 27	3088	777	20	1988
Atomizer.	C. J. Seltzer.	701,711	June 8	775	173	20	2071
Atomizer.	H. Goltermann.	700,988	May 27	3088	941	20	1970
Atomizer air-forcing device.	C. J. Wals.	698,444	Apr. 20	3088	947	20	200
Auger.	J. J. Bundy.	697,388	Apr. 8	1888	305	20	200
Automatic brake.	J. J. Bundy.	697,187	Apr. 8	1873	305	20	200
Automatic motor.	C. J. Seltzer.	701,088	May 27	3088	777	20	1988
Automatic signal.	R. L. Storm.	698,197	May 6	120	305	20	1280
Automatic switch.	P. S. Lewis.	700,288	May 20	2805	374	20	1781
Automatic switch.	J. A. Hancock and T. O. Cochran.	698,477	Apr. 1	180	305	20	80
Automobile.	E. J. Pennington.	698,477	Apr. 1	180	305	20	80

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr. E.	Vol.	Page.
Automobile.	W. E. Trautman.	698,080	Apr. 1	498	115	20	108
Automobile.	H. K. Holman.	697,730	Apr. 15	2488	385	20	1087
Automobile.	G. P. Dorris.	698,910	Apr. 20	4008	1000	20	1087
Automobile.	A. L. Simpson and H. B. Palmer.	698,080	Apr. 20	4008	1100	20	1108
Automobile.	C. Oots.	701,778	May 20	3078	474	20	1988
Automobile.	A. J. Kall.	701,704	May 27	3078	788	20	1984
Automobile.	E. J. Pennington.	698,477	Apr. 1	180	305	20	80
Automobile-condenser.	A. L. Kall.	700,788	May 27	3078	784	20	1984
Automobile-driving mechanism.	G. A. Hunt.	697,730	Apr. 15	2488	387	20	1087
Automobile-frame.	T. W. Moran.	701,764	June 8	800	187	20	2000
Automobile safety fuel-tank.	S. Digness.	701,170	May 27	3078	817	20	2000
Awning.	W. G. Buschmeyer.	698,571	Apr. 20	3708	817	20	1280
Awning frame and hood. Combined.	O. King.	700,788	May 27	3078	788	20	2081
Axis.	E. Klein.	701,124	June 10	1488	304	20	2000
Axis attachment. Vehicle.	J. W. Hafer.	701,484	June 17	2005	470	20	2000
Axis box and beam. Car.	G. W. Hager.	698,084	Apr. 20	4080	371	20	910
Axis-gage.	J. A. Reynolds.	698,084	Apr. 20	4080	371	20	910
Axis journal-box and roller-bearing for railway-cars.	E. F. Crowther.	700,179	May 20	2070	470	20	1080
Axis. Locomotive driving.	O. Hagans.	700,088	May 13	1778	408	20	1081
Axis-lubricating attachment. Car.	G. W. Decker.	701,088	June 10	1088	305	20	2088
Axis-lubricator. Car.	J. E. Gill.	701,080	May 27	2788	385	20	1988
Axis. Self-lubricating.	M. Bruner.	697,088	Apr. 8	1813	380	20	1088
Axis-shaft.	H. Fowler.	698,088	Apr. 20	4084	1087	20	1088
Axis-rod.	T. De La Mare.	697,488	Apr. 15	2015	445	20	2127
Axis. Vehicle.	J. D. King.	701,384	June 8	120	305	20	1280
Axis compound. Reduction of.	M. Buckner.	701,071	May 20	3011	305	20	200
Baby-walker.	C. O. and J. W. Glascock.	697,474	Apr. 15	2040	305	20	1440
Back-pedaling brake.	F. C. Atherton and C. Hagg.	700,878	May 20	2008	317	20	1070
Badge.	E. B. Whitman.	698,081	Apr. 1	408	100	20	100
Badge and pencil-holder. Combined.	J. A. Mangold.	701,787	June 17	2008	311	20	2088
Badge-medallion.	J. R. Miller.	698,081	Apr. 1	408	100	20	100
Badge or button back.	J. W. and A. M. Ayers.	698,488	May 6	301	124	20	1287
Bag.	See Food-bag. School-bag. Warming-bag. Water-bag.						
Bag-fastener.	L. G. Gohard and J. M. Rowley.	697,710	Apr. 15	2070	304	20	1080
Bag-fastener.	G. M. Bushy.	701,527	June 8	407	305	20	2088
Bag for remedial applications.	F. C. Holmes.	698,441	Apr. 1	305	305	20	2088
Bag handle or carrier.	E. L. and W. H. Cadwell.	701,146	May 27	3048	305	20	2070
Bag-holder.	J. P. Adams.	701,088	June 17	2008	311	20	1080
Bag-machine.	L. D. Besser.	698,311	May 6	311	311	20	1284
Bag. Machine for applying gathering-strings to.	J. W. Taylor.	698,488	Apr. 20	3708	305	20	200
Ball.	A. Walden.	698,081	May 13	1487	305	20	1408
Ball. Biscuit-cups for ice-cream. Apparatus for.	A. Walden.	701,778	June 8	120	305	20	2088
Baking-cup cleaner.	M. Vachon and H. Prefontaine.	700,884	May 20	2004	307	20	1770
Baking powder. Automatic.	J. A. Just. (Belgium).	11,984	Apr. 20	3108	305	20	1288
Balance or scale.	E. O. Hedman.	701,780	June 17	2008	307	20	2088
Ball-covering.	M. Kirschner.	701,570	June 8	181	305	20	2088
Ball-tie.	H. De Haven.	701,380	May 27	311	304	20	2088
Ball-tie machine.	G. M. Duper.	701,380	June 24	3011	304	20	2088
Ball-tie machine.	R. J. Ely.	698,088	Apr. 20	4081	305	20	200
Ball-tie machine.	P. Frantz.	701,410	June 8	120	305	20	2088
Bales. Core-driver for round-bale.	M. Swenson.	698,738	May 13	1141	307	20	1408
Baler and rake. Hay.	J. E. Symank and R. A. Kistler.	697,088	Apr. 15	2041	304	20	1087
Baling cotton.	E. Reagan.	698,118	Apr. 20	4081	1108	20	1284
Baling-machine.	A. D. Thomas.	698,088	May 13	1077	305	20	1081
Baling-machine. Cotton.	E. Mott.	698,748	Apr. 1	308	180	20	140
Baling-press.	J. J. Atkinson.	698,088	Apr. 20	4088	305	20	200
Baling-press.	J. J. Atkinson.	698,088	Apr. 20	4088	305	20	200
Baling-press.	T. J. Corning.	698,081	May 13	1084	305	20	1080
Baling-press.	E. W. Hillard and H. Haidacker.	701,088	May 27	3071	305	20	2088
Baling-press.	M. Kirschner.	701,570	June 8	181	305	20	2088
Baling-press.	C. M. Arnold.	701,778	June 8	120	305	20	2088
Baling-press.	F. M. Chappell.	701,088	June 17	2007	301	20	2088
Baling-press for cotton, &c.	G. M. Harvey and E. A. Werner.	698,448	Apr. 1	308	117	20	1081
Baling-press for hay, cotton, &c.	J. T. Scott.	698,588	Apr. 20	4088	305	20	200
Baling-press. Roller.	J. J. Faulkner.	698,088	Apr. 1	301	305	20	128
Ball.	See Billiard-ball. Hand-ball. Musical ball. Playing-ball.						
Ball. Billiard-ball.	E. E. Gray.	701,540	June 24	3007	700	20	2070
Ball. Hand-ball.	E. E. Gray.	701,540	June 24	3007	700	20	2070</

Bicycle-support.	E. Moss.	702,222	June 17	2993	629	99	2942
Bicycle-two-speed driving gear.	W. H. Palmer.	692,120	Apr. 23	2979	715	99	145
Bicycle-wheel carrier.	C. R. Smith.	702,220	June 17	2987	623	99	2722
Bicycle-wheel hub.	L. O. Hanna.	692,941	Apr. 23	2985	1071	99	1022
Billiard-ball.	E. Kempshall.	697,685	Apr. 15	2983	651	99	697
Billiard-table cushion.	M. Benders.	701,254	May 27	4123	622	99	2972
Bin:							
See Grain-bin.							
Binder lock. Loose-leaf.	F. K. Krag.	692,920	Apr. 23	4002	1022	99	1137
Binder. Temporary.	E. A. Trussell.	697,571	Apr. 15	2909	428	99	292
Binder. Temporary.	G. A. Roedde.	697,659	Apr. 15	2797	619	99	1221
Binder. Temporary.	A. G. Balluff.	690,379	May 6	370	65	99	1449
Binder. Temporary.	F. L. Clark.	692,792	May 13	1276	295	99	1722
Binder. Temporary.	E. A. Trussell.	702,222	May 20	2610	374	99	2924
Binder. Temporary.	J. H. Farber.	701,220	June 10	1140	254	99	2924
Binder. Sheet for serial.	A. O. and E. R. Kittredge.	702,220	May 20	2729	627	99	1779
Binding-case for pamphlets, &c.	F. L. Clark.	692,792	May 13	1274	295	99	1449
Binoocular glasses.	G. Fecher.	701,222	June 10	1055	261	99	2940
Bird-cage.	M. Pata.	702,222	June 24	2122	722	99	2913
Blackite, &c. Apparatus for automatically coating.	G. S. Baker and W. T. Carr.	692,222	Apr. 1	254	60	99	2913
Blat:							
See Cutter-head bit.							
Bit and reamer. Combination.	G. A. Lane.	702,222	May 20	2622	622	99	1727
Bit-lengthening attachment.	B. F. Voss.	692,001	Apr. 23	2016	622	99	692
Blackboard.	O. Lange.	692,504	Apr. 23	2422	722	99	774
Black-furnace.	G. F. Herrick.	697,222	Apr. 8	1222	222	99	222
Black-furnace.	E. Bertrand.	692,222	Apr. 23	2422	770	99	722
Black-furnace.	F. C. Norcross and J. Mitchell.	702,222	May 20	2222	622	99	1722
Blasting purpose. Safety device for.	J. M. Doyle.	701,172	May 27	2222	612	99	2222
Blind fastening device.	N. O. Bond.	702,222	June 17	2222	622	99	1277
Blinds. Means for actuating window.	D. W. Roberts.	692,222	May 13	1422	222	99	1277
Block:

Book-supporter. Revolving.	S. A. Mares and J. E. Nottingham.	700,388	May 30	3708	698	99	1777
Books. Making.	A. R. Drusel.	700,413	June 17	3704	698	99	3990
Boot or shoe.	F. W. Slater.	700,000	June 17	3407	690	99	3991
Boot or shoe cushioning device.	F. P. McIntyre.	699,540	May 6	794	187	99	1289
Boots or shoes, &c. Machine for wax-dressing parts of.	H. H. Beckwith and C. Pease.	699,476	May 6	995	184	99	1284
Boots or shoes. Medium for polishing parts of.	J. E. Morris.	699,000	May 6	995	189	99	1289
Boring apparatus. Deep.	W. Wolke.	699,378	May 6	997	61	99	1288
Boring apparatus. Rotary.	W. Wolke.	701,261	June 3	391	41	99	2147
Boring-machine work-holding device.	W. Pruszkowski.	700,000	May 19	1099	398	99	1285
Boring-tool.	M. Young.	699,902	Apr. 1	977	210	99	327
Bottle.	J. Gray, Jr.	699,125	Apr. 29	3998	719	99	704
Bottle-capping machine.	W. H. Fox.	697,973	Apr. 15	3405	988	99	140
Bottle-capping machine.	W. H. Fox.	700,716	June 17	3615	698	99	3994
Bottle-capping machine.	O. Heyman.	700,308	June 24	3928	917	99	3993
Bottle-carrier.	O. F. Clark.	697,385	Apr. 6	1747	890	99	948
Bottle-carrier.	H. M. A. Harders.	699,000	May 13	1499	698	99	1498
Bottle-cleanser.	D. M. Irving.	700,490	May 30	3728	698	99	1797
Bottle-cleanser.	J. Dahers.	698,907	Apr. 29	4984	1098	99	1098
Bottle-cleanser.	J. M. Van Meter.	700,490	May 30	3945	690	99	1791
Bottle-filling machine.	R. Figueroa and L. Schmandt.	699,995	Apr. 8	1111	247	99	998
Bottle-filling machine.	L. Strabel and C. W. Williams.	697,381	Apr. 8			99	998
Bottle-filling machine.	L. Strabel and C. W. Williams.	698,571	Apr. 29	4728	1043	99	1078
Bottle for aged liquid.	D. Tomparini.	701,986	June 10	1295	979	99	3991
Bottle for preventing riddling.	J. F. McCannery and G. G. Duddies.	700,070	May 13	1619	491	99	491
Bottle. Non-refillable.	A. W. McCannery.	697,298	Apr. 8	1790	491	99	491
Bottle. Non-refillable.	J. J. Brocks.	697,798	Apr. 15	3993	905	99	905
Bottle. Non-refillable.	F. Klein.	697,851	Apr. 15	3773	616	99	616
Bottle. Non-refillable.	J. V. Payton.	697,878	Apr. 15	3773	616	99	616
Bottle. Non-refillable.	K. S. Bailey.	698,491	Apr. 15	3993	905	99	905
Bottle. Non-refillable.	C. G. Gilling.	698,908	Apr. 29	4098	1098	99	1098
Bottle. Non-refillable.	D. E. Coyne.	698,491	May 6	3773	616	99	616
Bottle. Non-refillable.	J. Zang.	698,908	May 6	3773	616	99	616
Bottle. Non-refillable.	J. R. Latham.	698,908	May 6	3773	616	99	616
Bottle. Non-refillable.	D. A. Farrell and H. E. Kresse.	700,219	May 20	3993	905	99	905
Bottle. Non-refillable.	D. F. Fitzgerald, P. M. Seifert, and M. Kimmel.	700,764	May 27	3993	905	99	905
Bottle. Non-refillable.	F. J. Herrington.	700,170	May 27	3993	905	99	905
Bottle. Non-refillable.	U. S. Als.	700,000	June 10	1295	979	99	3991
Bottle. Non-refillable.	G. Ferguson.	700,529	June 17	3993	905	99	3991
Bottle. Non-refillable.	F. J. Brannon.	700,709	June 17	3993	905	99	3991
Bottle. Non-refillable.	R. J. Daykin.	698,713	Apr. 29	4413	973	99	973
Bottle. Non-refillable and lock-ool.	J. T. Koushlan.	701,070	May 27	3993	905	99	3991
Bottle. Non-refillable.	J. J. Minwegen.	701,070	May 27	3993	905	99	3991
Bottle. Non-refillable.	J. Haley.	697,915	Apr. 15	3993	905	99	3991
Bottle or jar press.							
Bottle-rinsing apparatus.	G. Houtaux.	700,985	May 27	3993	905	99	3991
Bottle safety attachment. Patent.	C. J. Hebenhaer.	700,985	May 27	3993	905	99	3991
Bottle soaking and washing machine.	C. H. Low.	700,918	May 20	3798	691	99	2778
Bottle-stopper.	A. Stern.	697,098	Apr. 8	1293	379	99	379
Bottle-stopper.	G. Lippard.	699,198	Apr. 8	1293	379	99	379
Bottle-stopper.	J. Leonard.	700,048	May 13	1771	416	99	1771
Bottle-stopper.	G. Lippard.	700,944	May 20	3993	905	99	3991
Bottle-stopper.	F. Stuls.	701,101	May 27	3993	905	99	3991
Bottle-stopper and fitting.	S. Myer and G. Myler.	700,591	June 24	3971	777	99	3971
Bottle-stopper attachment.	H. A. Clark.	700,113	June 24	3971	777	99	3971
Bottle-washer.	H. E. Browning.	701,265	June 3	3971	777	99	3971

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Pr.	Vol.	Page.
Bottle-washer machinery	H. E. Browington	697,797	Apr. 15	2697	264	99	261
Bottle-washing machine	H. E. Browington	697,798	Apr. 15	2694	254	99	261
Bottle-washing machine	H. E. Browington	698,267	May 4	427	103	99	1298
Bottle-washing machine	H. L. Pethnap	701,129	May 27	8984	938	99	2625
Bottle-washing machine	F. J. Schmalzer	701,225	June 10	1208	874	99	2675
Bottle-washing machine	J. Kayer	702,010	June 10	1205	286	99	2688
Bottle-washing machine	J. Kayer	702,023	June 10	1205	281	99	2689
Bottle-washing or sterilizing machine	W. J. Cunningham	697,301	Apr. 8	1237	244	99	268
Bottles, case, &c. Top for tooth-powder	H. E. East	701,233	June 10	1091	948	99	2698
Bottles. Device for preventing ruffling of	F. W. Johnson	701,048	May 27	8779	985	99	2698
Bottles or jars. Neck and cover for closing	A. F. Wilson	699,028	May 4	925	210	99	271
Bottles, &c. Stopper for	G. Koch	698,571	Apr. 1	215	253	99	1257
Bottling-machine	H. Grunbaum	702,021	June 10	1294	280	99	2619
Bowling-alley foot-dampener	S. L. Holden	700,614	May 20	8914	971	99	1297
Bowling-alley pin setting or resetting device	Z. D. Butts	702,072	June 10	1441	284	99	2622
Bowling-alley score-board	J. Paape and G. F. Hochman	702,072	June 10	1441	284	99	2622

Box	C. E. Baldwin	702,377	June 10	1122	720	99	2602
Box	G. S. Madanov	702,394	June 10	2976	925	99	2777
Box and cover	T. Abraham	701,707	June 8	919	308	99	2600
Box and fastener	O. O. Clayton	698,423	Apr. 29	8207	322	99	261
Box-assembling machine	H. Erickson	701,289	June 10	1218	270	99	2670
Box-blank mitering and cornering machine	E. H. Taylor	701,493	June 10	1218	270	99	2670
Box-blank printing and scoring machine	F. Meisel	697,185	Apr. 8	1026	241	99	244
Box-fastener	A. O. Breckin and W. A. Anger	702,798	June 17	1270	925	99	2717
Box-fastener	J. H. S. Johnson	698,000	May 12	1071	280	99	1499
Box-lid and leg support	G. W. Hartman	700,205	May 20	9236	233	99	1709
Box or chest and table. Combined	F. L. Mitchell	697,519	Apr. 15	2127	271	99	498
Box or target pin	F. F. Croft	700,742	May 27	2126	729	99	1264
Box or package	F. H. Fisher	700,728	May 27	2089	729	99	1261
Box-plating device	W. S. Smith	700,028	May 27	2028	779	99	1264
Box-shaping machine	M. E. Partsch	698,094	May 13	1591	845	99	1690
Brace. Metal strip or clamp for use in manufacture of cardboard							
Brace:							
See Ball-bracket.							
Brace-blank and shaft-iron holder	A. P. Smith, Jr.	695,751	Apr. 29	4465	936	99	1011
Bracket:							
See Curtain-bracket.	Mirror-bracket.						
Curtain and drapery bracket.	Shade-bracket.						
Dental-engine wall-bracket.	Shade-roller bracket.						
Lamp-bracket.	Shelf-bracket.						
Window-bracket.							
Brackets							
Brack. Tubular	W. K. Henry	693,945	Apr. 29	6981	1072	99	1690
Brake:	J. A. Grosch	698,680	Apr. 29	8513	985	99	268
See Air-brake.							
Automatic brake.	Gramophone-brake.						
Back-pedaling brake.	Hoisting-apparatus brake.						
Bicycle-brake.	Locomotive-brake.						
Car-brake.	Propeller-shaft brake.						
Fluid-pressure brake.	Vehicle-brake.						
Brake	W. A. Crowder	698,329	Apr. 29	2227	775	99	795
Brake	H. A. Knox	698,222	May 4	784	122	99	1292
Brake	H. L. Schaffner	698,571	May 4	695	220	99	1292
Brake and power-shifting mechanism. Automatic.	J. F. Gail	702,412	May 20	2225	875	99	1781
Brake apparatus. Automatic fluid-pressure	G. Westinghouse	698,522	May 4	222	99	99	1292
Brake apparatus. Automatic fluid-pressure	M. Corringham	702,124	June 10	1202	922	99	2728
Brake apparatus. Fluid-pressure	V. J. Lemont	698,724	Apr. 29	2222	922	99	268
Brake-beam	A. S. Bellows	698,724	Apr. 29	2222	1012	99	1690
Brake-beam	C. H. Williams, Jr.	698,724	May 13	1422	922	99	1690
Brake-beam finger-guard	J. T. W. Rudolph	698,724	May 13	1422	922	99	1690
Brake-beam finger-guard clip	C. F. Huntton	698,724	May 13	1422	922	99	1690
Brake-beams. Reversible gear-sling or clamp for	J. S. Odgers	701,225	May 27	6072	1072	99	268
Brake-block	L. Van Cott and J. D. Kelley	702,513	June 17	2222	922	99	2728
Brake-mechanism	F. J. McCullough	702,513	June 17	2222	922	99	2728
Brake-mechanism	M. O. Wicks	697,795	Apr. 29	2222	922	99	2728
Brake-operating device	P. A. Brawner	697,795	Apr. 29	2222	922	99	2728
Brake-shoe							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Vol.	De.	Vol.	De.
Brake-shoe.	A. L. Streeter	708,880	June 17	2844	870	90	2780
Brake-shoe mechanism.	H. Tenenbaum	698,481	Apr. 28	2790	988	90	2848
Brake shoes. Device for compensating for wear in hydraulic.	A. Goldschmidt	697,140	Apr. 8	1488	817	90	2828
Brake slack-adjuster.	H. A. Wahlert	698,581	Apr. 1	984	88	90	80
Brake slack-adjuster.	H. A. Wahlert	698,582	Apr. 1	984	88	90	84
Brake slack-adjuster.	H. A. Wahlert	698,583	Apr. 1	985	84	90	84
Brake slack-adjuster.	H. A. Wahlert	698,584	Apr. 1	985	84	90	84
Brake slack-adjuster. Railway.	H. A. Wahlert	698,585	Apr. 1	987	84	90	84
Braking force. Apparatus for applying and controlling.	H. H. Westinghouse	708,980	June 10	1708	408	90	1680
Bram-pocker.	J. A. Cameron	697,181	Apr. 8	1487	815	90	810
Brand-cutter.	A. Fuller	698,910	Apr. 29	4281	1080	90	1080
Breach-block and lever connection.	C. F. Fay	700,116	May 13	1888	880	90	1877
Breeding-pen for sows.	O. S. Kindworth	700,940	Apr. 27	3884	984	90	1888
Brick.	P. Griffin	697,914	Apr. 15	2888	987	90	904
Brick-cleaning machine.	L. H. Brownell	698,427	Apr. 29	4187	987	90	940
Brick for storage-tin construction.	S. H. Trommsdorfer	708,119	June 10	1811	841	90	2887
Brick-machine die.	C. Boley	698,019	Apr. 28	3048	988	90	988
Brick-molds. Safety appliance for handling and feeding.	H. Schoonmaker	708,484	June 17	2817	648	90	2787
Brick press.	R. E. Roedel	698,478	May 6	989	154	90	1813
Brick press.	C. W. Reynolds	700,928	May 27	2855	771	90	1917
Brick. Sillon.	W. H. Gibson and H. Wendling.	701,708	June 8	771		90	2870
Bricks or blocks. Machine for molding.	C. G. Davies	700,708	May 27	2850	124	90	1887
Bricks. Producing sillon.	W. H. Gibson and H. Wendling.	701,707	June 8	771		90	2870
Bricks, tiles, &c. Machine for forming.	W. H. Wakefield	698,380	Apr. 29	4148	910	90	880
Bricks, tiles, &c. Manufacture of.	A. J. Kooble	698,384	May 6	781		90	1288
Bridge-gait.	F. I. Fleck	698,589	Apr. 1	249	88	90	77
Bridge.	J. Belkirk	698,747	Apr. 29	4481	984	90	1030
Bridge attachment.	J. A. Hull	697,488	Apr. 15	8035	468	90	2847
Bridge-bit-warming device.	G. Davis	701,181	May 27	3878	914	90	880
Brine. Treating.	G. N. Via	700,880	Apr. 27	3435	707	90	1901
Brine. Vacuum apparatus for boiling.	G. N. Via	700,881	June 10	1738	401	90	2190
Brine. Vacuum apparatus for boiling.	G. N. Via	701,284	June 8	189		90	8190
Briquet and producing same.	E. S. Lydie	698,976	Apr. 1	184	808	90	181
Broiler or toaster.	G. Haro	700,081	June 17	2838	880	90	2818
Bronzing-machine.	A. Pollard	698,497	Apr. 1	108	41	90	41
Broom.	C. R. Duningham	698,586	Apr. 29	4041	1081	90	1081
Brooder.	J. L. Macy	708,210	June 10	1889	818	90	2821
Brooder, Chicken.	S. L. Hirschey	701,040	May 27	2708	888	90	2704
Broom.	F. J. Ellis and A. R. Bong.	701,128	May 27	4538	881	90	2148
Broom. Brush-1.	E. Robertson	701,282	June 3	474	88	90	2138
Broom-orn knife.	G. W. Richardson	701,507	May 13	1738	415	90	1280
Broom-handle drying and polishing apparatus.	G. A. Larson and J. E. Johnson.	708,217	June 24	3838	904	90	2887
Broom-holder.	R. Elmer	698,543	Apr. 1	871	88	90	61
Brush.	J. M. Chambers	698,708	Apr. 1	708	178	90	168
Brush.	F. H. Tucker	697,595	Apr. 8	1701	980	90	888
Brush.	A. B. Weiss	697,708	Apr. 15	2835	971	90	974
Brush.	G. R. Richardson.	698,348	May 6	416	95	90	1249
Brush.	G. H. Denney	698,474	May 8	981	128	90	1488
Brush.	A. Glaser	698,708	May 13	1838	879	90	1738
Brush.	P. Becker	701,420	May 20	2888	979	90	2888
Brush.	E. E. Babcock	701,589	June 10	1738	418	90	2818
Brush.	J. F. Bowditch	708,080	June 24	3838	904	90	2888
Brush.	A. Stetser	698,081	Apr. 22	2160	989	90	797
Brush and mop. Combination scrub.	F. Pirrung	708,288	June 24	3168	780	90	2818
Brush and mop-holder. Combined scrub.	G. A. Eldon	698,080	May 13	1884	888	90	1881
Brush and tool-powder holder. Tooth.	E. C. M. Simpson and C. F. Crece-lua.						
Brush. Bath.	W. A. McIlhenny	698,670	Apr. 1	148	84	90	88
Brush. Block-turning and blade-cutting machine.	C. E. Fleming	698,080	Apr. 29	4041	1081	90	1081
Brush. Bottle-cleaning.	A. A. Lindstorte	701,084	May 27	3838	980	90	1879
Brush. Bottle. Palm.	G. C. Frank	700,988	May 27	1087	847	90	8448
Brush. Fish.	M. C. Isaacson	700,186	May 12	1738	418	90	1288
Brush. Flat.	W. H. Humphrey	701,428	June 8	810	48	90	8181
Brush. Fountain.	H. Schwartz and L. Silberman	708,880	June 10	1738	410	90	2888
Brush. Fountain marking.	J. A. Crandall	697,429	Apr. 15	1874	487	90	408
Brush-holder.	E. H. Schwartz	698,791	Apr. 1	901	137	90	147
Brush-machine.	W. Dixon	698,785	Apr. 1	987	141	90	168
Brush. Polishing.	J. W. Smith	697,088	Apr. 15	2488	988	90	848
Brush. Scrubbing.	J. Keston	708,718	June 17	2810	801	90	2888
Brushes, brooms, &c. Apparatus for attaching or detaching handles of.	G. A. Vickery	698,576	Apr. 29	4745	1048	90	1078
Brushes. Comb-joint tooth-removing machine for.	C. E. Alhart	700,988	Apr. 6	188	287	90	88
Brushes and operating mechanism. Claw-shell.	F. E. Hulett	700,444	Apr. 27	3838	984	90	88
Brushes. Cook.	L. Moore	700,080	Apr. 27	3838	984	90	1288
Brushet-dumping apparatus. Automatic.	H. T. Jones	701,518	June 8	841	200	90	2838
Brushet-dumping device for steam-shovels.	E. T. Farver and G. E. Beaumont.	708,478	June 17	2818	880	90	2880
Brushes. Means for dumping or discharging materials from.	H. A. L. Barry	708,478	June 24	3838	987	90	2878
Buckle.	A. E. Portland	698,580	May 8	788	128	90	2818
Buckle.	M. J. Orzech	701,281	June 8	808	118	90	8418
Buckle.	D. E. White	708,088	June 10	1485	987	90	88
Buckle. Belt.	A. E. Lee	697,585	Apr. 15	2787		90	84

Calculus for cleaning ship's sides and bottoms. Float-	R. Kuebler	702,225	June 24	3547	99	3048	
Calculus	W. J. Mathieson	701,570	June 17	3538	99	2880	
Calc-dropping apparatus. Cap.	M. A. Grant	701,128	May 27	3512	99	3034	
Calc-pen	R. H. Hiler	700,828	June 10	1801	99	2848	
Calc-pen	D. de Vullish and J. Orlowsky	701,050	June 3	778	100	2848	
Calcium carbide. Manufacture of	H. Abbott	697,488	Apr. 15	1978	98	488	
Calculus	H. Abbott	697,487	Apr. 15	1978	98	488	
Calculating-machine	L. T. McConnel and C. L. Raymond	699,807	May 12	1207	98	1427	
Calculating-machine	W. G. Powell	701,511	June 3	804	100	2880	
Calculating-machine	O. F. Harrison	701,731	June 3	795	100	2874	
Calculator	O. Rogers	698,141	Apr. 28	3586	98	745	
Calculator. Mechanical	W. H. MacCollin	697,581	Apr. 15	2030	98	1587	
Calendar	M. Lichter	700,089	May 12	1754	99	2818	
Calendar	F. M. Napa	702,028	June 24	3547	99	3048	
Calendar. Door	O. W. Edmondson	698,987	May 12	1271	98	1471	
Calendar-roll-grinding machine	J. Linton	697,084	Apr. 3	1387	98	328	
Calendar-roller	J. Kleinewort	700,888	May 20	3581	99	1908	
Calendar-roller	L. Schuler	701,511	June 3	818	99	2108	
Calendar-roller	G. E. Haskins	700,088	May 12	1754	99	1898	
Callipers. Micrometer	F. E. Higgins	699,177	May 6	90	99	1194	
Call system. Electric	A. A. Stanton, Jr.	698,408	Apr. 1	19	99	7	
Can-fastening for stamp-and-shaft	J. C. H. Vaught	697,115	Apr. 3	1398	98	818	
Can. Stamp-mill	H. L. Silver	698,900	Apr. 1	578	99	88	
Can. Stamp-mill	C. Bornmann	698,178	Apr. 28	3585	98	700	
Can. Stamp-mill	E. R. Bullard	698,086	Apr. 20	4198	98	940	
Can. Stamp-mill	H. Goodwin	700,140	May 12	1754	99	1898	
Can. Stamp-mill	U. Kehrung	702,225	June 24	3547	99	3048	
Can. Stamp-mill	F. W. Sany	698,787	May 12	1282	98	1441	
Can. Stamp-mill	D. A. Lovthum	700,758	May 27	3586	99	1908	
Can. Stamp-mill	J. O. F. Schaefer	701,420	June 3	808	100	2150	
Can. Stamp-mill	K. Nelson	698,721	Apr. 20	4435	98	1004	
Can. Stamp-mill	J. Forstheim	698,141	May 6	91	99	1198	
Can. Stamp-mill	H. E. Hicker	697,084	Apr. 15	1978	98	754	
Can. Stamp-mill	J. and A. Wilkins	698,184	Apr. 28	3585	98	1004	
Can. Stamp-mill	F. A. Brownell	698,901	Apr. 20	4198	98	940	
Can. Stamp-mill	H. D. Bartlett	700,286	June 3	808	100	2807	
Can. Stamp-mill	J. K. Thomson	702,225	June 10	1750	99	2428	
Can. Stamp-mill	J. K. Thomson	702,225	June 10	1751	99	2428	
Can. Stamp-mill	A. D. Davis	702,225	June 10	1751	99	2428	
Can. Stamp-mill	C. F. J. Nis	702,225	June 10	1751	99	2428	
Can. Stamp-mill	R. H. Trumbull	700,284	May 20	3585	99	2807	
Can. Stamp-mill	J. E. Smith	702,748	June 17	3773	99	3886	
Can. Stamp-mill	W. A. Harbach	702,018	June 10	1750	99	2428	
Can. Stamp-mill	H. Thurlow	698,701	Apr. 20	4198	98	1015	
Can. Stamp-mill	E. A. Nugent	698,008	Apr. 20	4197	98	1119	
Can. Stamp-mill	H. C. Black	697,708	Apr. 15	2011	98	584	
Can. Stamp-mill	H. C. Black	697,708	Apr. 15	2011	98	584	
Can. Stamp-mill	W. J. Kenney	697,708	Apr. 15	2011	98	584	
Can. Stamp-mill	H. C. Black	697,708	Apr. 15	2011	98	584	
Can. Stamp-mill	J. R. Duesen	701,170	May 27	3586	99	3038	
Can. Stamp-mill	H. L. Guehrer	698,701	Apr. 20	4197	98	980	
Can. Stamp-mill	M. Doyle and F. Gobbie	701,021	May 27	3586	99	3034	
Can. Stamp-mill	G. H. Ruhlman and G. C. Miller	698,907	Apr. 20	4198	98	708	
Can. Stamp-mill	L. S. Fleischman	698,919	Apr. 20	4198	98	1001	
Can. Stamp-mill	J. W. Sany	697,581	Apr. 15	2030	98	1587	
Can. Stamp-mill	C. W. Boman and J. M. Reed	698,448	May 6	901	99	1280	
Can. Stamp-mill	A. W. Livingston	701,528	June 3	498	100	2810	
Can. Stamp-mill	F. M. Leavitt	702,128	June 10	1800	99	2848	
Can. Stamp-mill	A. W. Livingston. (Reissue)	11,528	May 12	3008	99	1808	
Can. Stamp-mill	L. Funch	700,888	May 20	3581	99	1908	
Can. Stamp-mill	F. Kotick	697,084	Apr. 15	1978	98	1001	
Can. Stamp-mill	J. D. Bolton	700,119	May 12	1750	99	1898	
Can. Stamp-mill	H. G. Day	701,028	June 3	778	100	2875	
Can. Stamp-mill	W. O. Haycock	702,225	June 10	1803	99	2848	
Can. Stamp-mill	M. Monahan and P. Derner	698,025	May 12	1203	98	1428	
Can. Stamp-mill	A. B. McNairy	698,991	May 12	1203	98	1428	
Can. Stamp-mill	C. S. Bucklin	697,585	Apr. 1	1728	98	801	

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Can-testing apparatus.....	H. C. Black.....	700,391	May 27	5477	787	98	1941
Can-testing machine.....	W. Rubin.....	699,944	May 6	889	788	98	1215
Can-testing machine.....	E. J. Lewis.....	699,980	May 6	798	181	98	1282
Can top and cap.....	J. B. Stewart.....	697,083	Apr. 8	1285	880	98	888
Cane. Machine for manufacturing soldered.....	H. B. Williams.....	702,167	June 10	1608	828	98	2489
Cane. Means for cooling milk.....	S. C. Sullivan.....	697,111	Apr. 8	1879	808	98	312
Cane, pail, &c. Machine for manufacturing ball- cared.....	J. G. Hodgson.....	702,305	June 24	2864	818 819 820	98	2691
Canning apparatus. Food.....	G. Lees.....	697,361	Apr. 8	1888	887	98	289
Canning corn, &c.....	C. H. Plummer and F. T. Stare.....	698,795	May 13	1381	888	98	1440
Cancelling machine. Stamp.....	G. R. Sherwood.....	702,494	June 17	2806	808 809	98	2680
Candle.....	T. J. Garrigan.....	701,537	June 3	894	111	98	2613
Candle-holder.....	C. Bogendorfer.....	697,197	Apr. 8	1401	811	98	818
Candlesticks, &c. Coupling for.....	O. E. Gabriel.....	698,881	Apr. 29	4885	1088	98	1088
Candy-cutting machine.....	J. Smith.....	701,086	June 3	890	148	98	2644
Candy-molding machine.....	A. Balcho.....	699,973	May 13	1844	877	98	1897
Cane and whip. Combination.....	M. A. Allen.....	698,708	Apr. 1	888	128	98	128
Cane-car-unloading machine.....	H. Froehlich.....	702,086	June 10	1477	888	98	2489
Cane conveyor. Sugar.....	C. H. McNally.....	702,512	June 17	2804	844 845	98	2734
Cane. Flag.....	J. W. Freeborn.....	698,987	Apr. 8	1115	847	98	287
Cane-loader.....	H. S. Padgett.....	702,305	June 24	2708	884	98	2680
Cane. Magazine torpedo.....	J. H. Fox.....	698,986	Apr. 8	1114	847	98	287
Cane-mill cane-feeding mechanism.....	F. Elmundo.....	698,379	Apr. 29	3713	880	98	888
Canteen.....	M. L. Minton.....	698,097	May 13	1088	887	98	1414
Cap. Dynamite detonating.....	A. B. Hoover.....	697,948	Apr. 15	2707	801	98	897
Cap machine. Hemmed.....	L. A. Norton.....	702,376	June 10	1880	448 447 448	98	2697
Cap-visor and eye-shield. Combined.....	H. L. Waldron.....	700,387	May 20	2888	888	98	1788
Capsule.....	G. H. Paine.....	700,808	May 27	2815	788	98	1940
Capsules. Manufacture of.....	G. H. Paine.....	700,808	May 27	2820	788	98	1910
Car and door therefor. Hopper.....	R. V. Sage.....	699,819	May 13	1381	308	98	1488
Car. Automatic-dumping ore.....	C. H. Snow.....	697,685	Apr. 15	8488	848	98	848
Car body-booster. Railway.....	T. M. Gallagher.....	698,989	Apr. 29	4887	1088	98	1088
Car-bolster.....	W. P. Bettendorf.....	700,408	May 20	2888	888	98	1788
Car-bolster.....	C. S. Shallenberger.....	701,515	June 3	818	88	98	2188
Car-bolster.....	S. P. Bush.....	701,537	June 10	897	880	98	2680
Car-bolster.....	H. C. Buhop.....	702,701	June 17	2888	888	98	2678
Car-bolster. Railway.....	H. W. Frost.....	697,484	Apr. 15	8088	448	98	487
Car-bolster. Railway.....	C. Vanderbilt.....	698,376	Apr. 29	3741	1048	98	1074
Car-bolster. Railway.....	G. O. Murray.....	701,880	June 10	1187	880	98	2661
Car-brake.....	C. B. Fairchild.....	698,981	Apr. 1	878	818	98	888
Car-brake.....	F. F. Shaffer.....	697,938	Apr. 8	1881	878	98	878
Car-brake.....	A. Balon.....	698,784	Apr. 29	4888	888	98	1088
Car-brake.....	L. T. Pyott.....	698,346	May 6	413	84, 85	98	1288
Car-brake.....	H. J. Small. (Release).....	11,980	May 13	8048	487	98	1888
Car-brake. Automatic.....	A. W. Reed.....	698,319	Apr. 29	3811	797	98	813
Car brake mechanism. Railway.....	C. W. Powell.....	700,518	May 27	2848	788	98	1948
Car brake. Railway.....	W. N. McLean.....	698,310	Apr. 29	2897	788	98	818
Car chair. Parlor.....	A. P. Barney.....	697,777	Apr. 15	2895	878	98	881
Car. Coal and grain.....	S. Kellogg.....	702,376	June 10	2878	847	98	2648
Car. Convertible.....	H. W. Covert.....	698,389	Apr. 29	3818	774	98	784
Car. Convertible.....	J. O'Leary. (Release).....	11,988	May 20	3137	718	98	1088
Car. Convertible railway.....	J. A. Brill.....	698,408	Apr. 1	88	7, 8	98	8
Car. Convertible railway.....	J. A. Brill.....	698,408	Apr. 1	88	8, 9	98	11
Car-coupling.....	T. J. Sammons.....	697,088	Apr. 8	1289	878	98	878
Car-coupling.....	T. A. Savage.....	698,418	Apr. 29	3770	888	98	887
Car-coupling.....	D. L. Bock.....	698,428	Apr. 29	3810	841	98	871
Car-coupling.....	R. H. Rutherford.....	698,740	Apr. 29	4448	888	98	1087
Car-coupling.....	H. T. Krakau.....	698,970	Apr. 29	4808	1084	98	1188
Car-coupling.....	J. Burge and S. B. Cornell.....	698,428	May 6	888	128	98	1218
Car-coupling.....	J. H. D. Egan.....	698,508	May 6	710	188	98	1288
Car-coupling.....	J. Timms.....	700,388	May 20	2848	818	98	1871
Car-coupling.....	W. F. Richards.....	700,441	May 20	2888	888	98	1788
Car-coupling.....	H. H. Marshall.....	701,884	June 3	888	128	98	2888
Car-coupling.....	J. A. Chubb.....	702,168	June 10	1888	848	98	2487
Car-coupling.....	J. O. Nelson.....	702,288	June 10	1718	888	98	2478
Car-coupling.....	W. S. Jones and E. W. Webb.....	702,308	June 24	3104	714	98	2808
Car-coupling attachment.....	T. Harrison.....	702,388	June 24	3848	888	98	2810
Car-coupling. Automatic.....	J. Darling.....	698,088	Apr. 29	3888	1124 1125	98	1144
Car-coupling. Automatic.....	J. Darling.....	700,488	May 20	2841	878	98	1844
Car-door.....	J. R. Thompson.....	700,388	May 20	2841	812	98	1878
Car-door and grain-door combined.....	W. H. Doerner and J. A. Whalen.....	697,280	Apr. 15	2878	888	98	888
Car-door. Dumping.....	R. V. Sage.....	698,880	May 13	1384	810	98	1488
Car-door fastening. Mining.....	J. H. Watt.....	702,388	June 10	1780	401	98	2488
Car door. Grain.....	D. Downs and D. W. Draper.....	698,381	Apr. 1	871	881	98	184
Car door. Grain.....	G. S. Smith.....	697,237	Apr. 15	8188	488	98	487
Car door. Grain.....	L. L. Edwards.....	701,551	June 3	401	108	98	2810
Car door. Grain.....	A. B. Ballows.....	698,788	Apr. 29	4881	1088	98	1084
Car-door mechanism.....	J. Player.....	702,748	June 17	2884	618	98	2884
Car-door. Sliding.....	H. J. Donovan.....	700,888	May 20	2848	878	98	1818
Car draft attachment. Railway.....	J. K. Evans.....	702,188	June 10	1840	887	98	2488
Car draft-beam.....	C. Wright.....	701,680	June 3	891	188	98	2838
Car draw-gear.....	R. V. Sage.....	697,081	Apr. 8	1288	884	98	878

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Car-dumping structure. Revolvable.....	E. Ramsey.....	701,764	June 8	985	192	99	2890
Car-fender.....	L. White.....	697,708	Apr. 15	3554	571	99	578
Car-fender.....	M. F. Field.....	698,915	Apr. 20	4319	1098	99	1099
Car-fender.....	C. P. Hulst.....	698,954	Apr. 20	4377	1076	99	1108
Car-fender.....	W. Sullivan.....	699,996	May 13	1670	398	99	1532
Car-fender.....	J. D. Hodges.....	701,538	June 8	818	114	99	2815
Car-fender.....	E. A. Sample.....	701,945	June 10	1122	370	99	2971
Car-fender.....	W. B. Rohmer.....	702,494	June 17	2182	497	99	2994
Car-fender.....	W. Bonham.....	702,040	June 24	2242	745	99	3020
Car-fender. Street.....	A. W. Shank.....	699,790	May 13	1386	267	99	1441
Car-fender. Street.....	C. O. West.....	700,280	May 20	2295	515	99	1074
Car. Freight.....	F. Nagel.....	697,660	Apr. 15	2995	395	99	588
Car. Gondola.....	H. S. Hart.....	699,949	May 13	1605	367	99	1530
Car grain-floor.....	W. H. Mann and U. G. Muck.....	699,394	May 6	380	21	99	1522
Car-journal box.....	T. W. Mitchell.....	697,947	Apr. 15	2999	640	99	646
Car-loader.....	E. H. Reynolds.....	700,198	May 13	1600	453	99	1597
Car-loader.....	E. H. Reynolds.....	700,198	May 13	2001	459	99	1597
Car loader. Box.....	D. A. Chappell.....	702,095	June 17	2431	559	99	2980
Car. Metallic.....	H. S. Hart.....	700,707	May 27	2955	745	99	1898
Car. Metallic-frame box.....	J. E. Hansen.....	701,720	June 8	726	178	99	2974
Car. Mining.....	D. L. Brown.....	700,718	May 20	2122	711	99	1233
Car. Motor.....	J. G. Matthews.....	698,741	Apr. 1	927	149	99	141
Car. Motor.....	H. Austin.....	698,890	Apr. 20	4777	1050	99	1050
Car motors and brakes. Means for automatically controlling.....	J. H. Robertson.....	698,798	Apr. 1	876	152	99	144
Car-mover.....	J. W. Dear.....	702,267	June 24	2721	921	99	3026
Car or locomotive. Electric motor.....	C. de Kandó.....	700,059	May 13	1735	413	99	1555
Car or truck. Transferring.....	R. A. Ludlow.....	701,207	May 27	4053	922	99	2026
Car-pusher.....	H. C. Boyer and F. Radford.....	697,194	Apr. 8	1598	341	99	542
Car. Railway.....	H. McLoughlin.....	699,340	May 6	397	26, 28	99	1295
Car. Railway.....	F. Kuempel.....	702,039	June 24	2305	700	99	2941
Car-replacer.....	A. J. Michel.....	698,985	Apr. 20	4693	1091	99	1112
Car-roof.....	C. M. Jennings.....	698,976	Apr. 8	1144	354	99	292
Car-route indicator.....	M. O. Parenteau.....	702,819	June 17	2511	647	99	2796
Car safety-platform. Railway.....	J. Holland and W. P. Wickham.....	701,208	May 27	4045	920	99	2026
Car-seat.....	L. Janson.....	701,047	May 27	2775	925	99	2004
Car-seat.....	H. S. Hale.....	701,559	June 8	909	119	99	2913
Car-seat cleaner.....	J. A. Ridd.....	699,694	May 6	399	261	99	1272
Car side bearing.....	J. E. Norwood.....	697,561	Apr. 15	2142	476	99	496
Car side bearing.....	F. G. Szesemihl and A. Torrey.....	701,416	June 8	263	58	99	2126
Car side bearing. Railway.....	F. R. Cornwall.....	698,176	Apr. 22	2640	725	99	729
Car side bearing. Railway.....	C. H. Williams, Jr.....	702,696	June 17	2655	621	99	2755
Car side coupling. Railway.....	F. Köhn.....	700,728	May 27	2328	728	99	1928
Car-sill and bolster connection. Steel.....	R. V. Sage.....	698,088	Apr. 22	2110	664	99	709
Car station-annunciator. Railway.....	G. Hall.....	698,491	Apr. 22	2018	926	99	698
Car-stop. Folding.....	O. F. Thomas.....	697,398	Apr. 8	1608	370	99	292
Car. Stock.....	J. F. Clark.....	702,031	June 17	2428	584	99	2926
Car street-indicator. Street.....	J. C. Wuerth.....	697,208	Apr. 8	1724	325	99	297
Car. Tank.....	C. L. Wilmet.....	701,056	June 8	985	151	99	2922
Car tool-box. Hand.....	L. Larson.....	701,900	June 10	1100	251	99	2954
Car. Tram.....	E. A. Stanley and J. E. Anger.....	697,293	Apr. 8	1622	375	99	291
Car transport. Marine railway.....	W. W. Smith.....	698,572	Apr. 20	4053	926	99	2021
Car-ventilator.....	E. Anderson.....	697,125	Apr. 8	1298	211	99	217
Car-ventilator.....	P. B. Hole.....	701,028	June 10	1076	344	99	2240
Car-wheel.....	M. P. Gerbing.....	702,644	June 17	2425	571	99	2925
Car-wheel. Plate-metal.....	H. F. Mann.....	702,148	June 24	2445	720	99	2929
Car-window.....	A. Moffitt.....	698,989	Apr. 20	4693	1091	99	1114
Car. Adjustable roof or cover for tram.....	F. Kennington.....	698,518	Apr. 20	2927	575	99	901
Car. 2n. Folding step for.....	E. J. Hunt.....	697,203	Apr. 8	1545	345	99	245
Car. Friction draft-rigging for railway.....	J. J. Hennessy and P. N. Moore.....	700,422	May 20	2645	625	99	1734
Car. Roller side bearing for railway.....	S. W. McMunn and E. S. Woods.....	702,145	June 24	2451	791	99	2971
Car. System of operating fans by power for ventilating passenger.....	R. M. Dixon.....	698,947	Apr. 8	1698	340	99	291
Car. Track-scraper attachment for street-railway.....	F. H. Best.....	698,975	May 6	390	126	99	1267
Car-truck-carriage.....	E. M. Rosenblatt.....	702,594	June 17	2522	547	99	2922
Carbon-feeding mechanism.....	J. O. Kemp.....	699,204	May 6	512	115	99	1291
Carbon brush and making same.....	W. Mills.....	701,269	June 8	154	38	99	2140
Carbon-holder.....	S. B. Whinery.....	702,514	June 17	2540	510	99	2927
Carbon-sorting machine.....	M. H. Zellers.....	701,422	June 8	263	63, 67	99	2169
Carbonated water. Manufacture of sterilized.....	T. Weyl.....	700,494	May 20	2647	608	99	1751
Carbonating-machine.....	T. H. Irwin and H. J. Miller.....	697,722	Apr. 15	2427	555	99	590
Carbonator. Beverage.....	J. H. Fox.....	702,715	June 17	2519	608	99	2925
Carburetor.....	O. A. Lane and H. A. Devonport.....	699,497	Apr. 1	115	27	99	29
Carburetor.....	C. L. Champion.....	697,907	Apr. 15	2655	650	99	595
Carburetor.....	G. W. Honts.....	698,908	Apr. 20	4376	1076	99	1109
Carburetor.....	J. Wilkinson, E. F. Chapman, and H. Thornton.....	699,297	May 6	422	100	99	1292
Carburetor.....	D. Best.....	699,580	May 13	1392	314	99	1497
Carburetor.....	A. L. Maagin.....	699,985	May 13	1622	375	99	1295
Carburetor.....	G. C. Diehl and J. A. Barber.....	700,207	May 20	2622	595	99	1291

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Carburetor.....	E. R. Inman.....	700,777	May 27	2373	751	99	1902
Carburetor.....	P. Keller.....	701,550	June 10	1087	247	99	2323
Carburetor.....	P. Roemisch and A. Orre.....	702,378	June 10	1084	445	99	2323
Carburetor.....	M. S. Deringer.....	702,387	June 17	2475	355	99	2323
Carburetor. Explosive-engine.....	J. F. Duryea.....	699,304	May 6	705	196	99	1233
Carburetor. Explosive-engine.....	J. W. Parkin.....	702,459	June 17	2122	400	99	2323
Carbureting device for explosive-engines.....	T. McCormick and A. D. Miller.....	699,309	Apr. 1	954	222	99	210
Carbureting device for internal-combustion motors.....	C. A. Hamilton.....	699,309	May 6	340	79	99	1941
Card and making same. Jacquard.....	J. Sacconik.....	701,775	June 3	654	197	99	2323
Card or sign holder.....	F. P. Wilkin.....	697,908	Apr. 15	2225	625	99	625
Card. Playing.....	K. Frederickson.....	702,398	June 10	1211	412	99	2323
Card-punching machine. Jacquard.....	O. Zerkovits.....	698,347	Apr. 22	2649	397	99	621
Cards. Machine for copying patterns for jacquard.....	J. T. Bolton.....	698,705	Apr. 1	897	125	99	125
Carding-engine.....	J. R. Hinchliffe and J. Hall.....	698,437	Apr. 1	80	18, 19	99	20
Carding-machine attachment.....	C. D. Ingraham.....	699,497	May 6	649	189	99	1210
Carding-machine feeding mechanism.....	H. Kemp.....	701,457	June 3	377	34, 35	99	2125
Carding-machine grinding attachment.....	J. Andette.....	700,164	May 20	3047	498	99	1423
Carnation-supporter.....	W. W. Thomas.....	702,019	June 24	2900	727	99	2323
Carousal.....	W. Johnson.....	697,354	Apr. 8	1629	335	99	337
Carpenter's tool.....	J. U. Doby.....	700,023	May 13	1734	337	99	1543
Carpet and making same. Velvet.....	J. W. Dimick, Jr., and J. Jagger.....	699,616	May 6	927	215	99	1237
Carpet-cleaning rack.....	F. V. Johnson.....	698,508	Apr. 29	2644	372	99	625
Carpet fabric. Ingrain.....	J. O. McGorman.....	702,223	June 10	1250	423	99	2323
Carpet-fastener.....	R. H. Humphrey.....	700,691	May 20	3073	625	99	1544
Carpet fastener. Stair.....	J. S. Jardine.....	697,458	Apr. 15	2025	427	99	474
Carpet-rag looper.....	T. A. Clark.....	698,515	Apr. 22	4611	1017	99	1546
Carpet-stretcher.....	A. H. Davis.....	699,105	Apr. 29	5123	1122	99	1122
Carpet-stretcher.....	F. L. Kidd.....	702,223	June 10	1250	423	99	2323
Carpet-sweeper.....	J. Barnes, R. W. and W. H. Kenyon.....	698,028	Apr. 22	2123	699	99	723
Carpet-sweeper.....	E. J. Reynolds.....	701,393	June 3	123	42	99	2143
Carpets. Apparatus for the manufacture of knot-stitch.....	F. Boyer.....	698,520	Apr. 29	4737	1054	99	1423
Carriage. Collapsible baby.....	A. Katze.....	699,123	May 6	125	22	99	1123
Carriage-curtain.....	G. R. Harris.....	701,227	June 3	123	22	99	2121
Carriage. Folding.....	C. E. Fanning.....	697,223	Apr. 8	1721	354	99	354
Carriage. Folding.....	D. Broadbalt.....	698,101	Apr. 22	2604	701	99	723
Carriage-lock.....	A. G. Snell.....	699,024	May 13	1237	323	99	1237
Carriage or wagon spring.....	J. Williams.....	698,611	Apr. 22	4125	912	99	923
Carrier: See Bottle-carrier. Package-carrier. Cash-carrier. Parcel-carrier. Grain-carrier.							
Carrier and drier.....	L. L. Kelsey.....	699,123	Apr. 22	5123	1124	99	1123
Cart. Ash.....	N. Barney.....	697,773	Apr. 15	2533	575	99	523
Cart shovel and scraper.....	A. Gehringer.....	697,343	Apr. 8	1000	323	99	323
Carton.....	A. V. Locke.....	700,223	May 27	2523	625	99	1944
Carton-machine.....	W. G. Chapin.....	702,124	June 24	2617	623	99	2323
Cartridge.....	C. A. Bailey.....	699,021	Apr. 29	3054	1112	99	1123
Cartridge.....	J. Orcutt.....	701,723	June 3	625	123	99	2323
Cartridge.....	W. E. Hayner.....	702,203	June 10	1229	275	99	2423
Cartridge.....	E. G. Parkhurst.....	702,223	June 17	2624	675	99	2723
Cartridge-gun.....	W. M. Scruggs.....	700,223	May 27	2523	625	99	1973
Cartridge-loading machine. Metallic.....	G. M. Peters.....	702,121	June 10	1221	223	99	2423
Carving-machine.....	E. R. Lochman.....	701,223	June 10	1123	223	99	2223
Carving or copying machine.....	J. Gates.....	698,223	Apr. 22	4223	1023	99	1023
Case: See Binding-case. Packing-case. Cigar-storage case. Pen-case. Egg-case. Refrigerator-case. Exhibiting-case. Sample-case. Eyeglass-case. Shipping-case. Jewel-case. Show-case. Map or chart case. Telescopic case. Measuring-case. Traveling-case.							
Cash-carrier.....	D. Lippy.....	697,247	Apr. 8	1721	354	99	354
Cash-register.....	F. P. Gorla.....	697,476	Apr. 13	2644	421	99	421
Cash-register.....	T. Carroll.....	697,521	Apr. 22	2673	625	99	625
Cash-register.....	J. P. Cleal.....	697,522	Apr. 22	2673	625	99	621
Cash-register.....	W. Kachans and F. Püschel.....	698,927	Apr. 22	4223	1023	99	1123
Cash-register.....	T. Carney.....	699,123	Apr. 22	5123	1121	99	1123
Cash-register.....	J. P. Cleal.....	700,171	May 20	2625	471	99	1223

Casket-handle attachment.....	H. Riegel.....	703,743	June 17	3073	615	90	2004
Caster.....	G. B. Magoon.....	697,735	Apr. 15	2518	551	90	1844
Caster.....	S. H. Raymond.....	698,324	Apr. 22	3452	738	90	781
Caster.....	A. B. Dism (Rohrue).....	11,958	May 6	567	322	90	1874
Caster.....	N. Davis.....	699,708	May 13	1380	304	90	1450
Caster.....	J. P. Kelly.....	699,926	May 13	1684	372	90	1533
Caster. Ball.....	T. Galvin.....	701,106	May 27	4080	928	90	2011
Caster. Furniture.....	J. W. Kennedy.....	698,908	Apr. 29	4990	1690	90	1108
Caster. Warehouse-truck.....	T. E. J. Schaubly.....	698,409	Apr. 1	185	45	90	44
Casting.....	F. Baldt, Sr.....	703,171	June 24	3439	894	90	2079
Casting apparatus.....	A. M. Acklin.....	697,789	Apr. 15	2528	578	90	578
Casting apparatus.....	H. H. Franklin.....	703,194	June 10	1647	349	90	2444
Casting car-wheel. Core for.....	L. R. Faught.....	700,313	May 20	3354	540	90	1638
Casting-fisk.....	C. A. Palmer.....	698,008	Apr. 29	4982	1099	90	1119
Casting-machine.....	H. L. Beck.....	693,434	Apr. 29	3911	841	90	671
Casting-machine.....	C. H. Veeder.....	693,350	Apr. 29	4031	908	90	907
Casting-machine.....	C. H. Veeder.....	693,351	Apr. 29	4037	904	90	908
Casting-machine.....	C. H. Veeder.....	693,356	Apr. 29	4132	908	90	925
Casting machine. Strip-metal.....	C. C. Webster.....	703,338	June 24	3364	852	90	2000
Casting-mold.....	E. D. Tucker.....	697,115	Apr. 8	1394	307	90	314
Casting mold. Brake-shoe.....	A. Braks.....	697,794	Apr. 15	2699	558	90	890
Casting solid or hollow circular bodies.....	S. Michaloff.....	693,331	Apr. 29	3936	851	90	907
Casting. Forming.....	C. H. Veeder.....	693,332	Apr. 29	4109	908	90	908
Casting. Preparing sand molds for steel.....	H. B. Atha.....	693,333	Apr. 29	4779	908	90	1000
Casting. Producing soft-metal.....	G. H. Brabrook.....	697,973	Apr. 29	3931	850	90	677
Castamental bandage.....	H. Bauer.....	693,338	Apr. 1	322	61	90	80
Catgut ligature and suture and preparing same.....	C. E. Parber.....	701,501	June 8	397	90	90	2100
Catheter or like instrument.....	R. P. McCully.....	701,075	May 27	3511	874	90	2011
Cattle-guard.....	E. T. Meador.....	699,085	May 13	1536	368	90	1510
Cattle-holder.....	J. E. and W. Terrell and F. M. Montgomery.....	699,088	May 13	1573	364	90	1522
Cattle-probe.....	A. Hensch.....	703,339	June 24	3703	892	90	2002
Cattle-tie and stanchion.....	D. C. Martham.....	699,501	May 6	122	28	90	1202
Caulin. Producing.....	H. K. Moore.....	703,339	June 24	3997	892	90	2000
Cauling-block.....	C. W. Dixon.....	699,514	May 13	1537	364	90	1507
Celluloid articles. Manufacture of.....	J. Hackenberg.....	699,516	May 6	739	170	90	1233
Cellulose. Machine for separating and cleaning corn.....	E. G. Kraft.....	700,035	May 13	1738	414	90	1534
Cellulose solutions. Obtaining threads from.....	E. Bromberg, H. Fremery, and J. Urban.....	693,354	Apr. 29	3938	852	90	901
Cement. Making.....	O. Fritz.....	693,355	Apr. 29	3939	852	90	739
Cement. Making.....	F. G. Jordan.....	703,009	June 10	1393	307	90	2002
Cementing-machine.....	G. Julian.....	693,358	Apr. 29	4939	1030	90	1105
Center-iron and lap-ring.....	P. H. De Rochemont.....	701,145	May 27	3935	916	90	2000
Centering-machine.....	L. E. Whitton.....	693,359	Apr. 29	4135	914	90	942
Centrifugal machine.....	A. Kaczorowski.....	697,355	Apr. 8	1331	306	90	937
Centrifugal machine.....	O. Ohlsson.....	699,008	Apr. 29	4939	1030	90	1113
Centrifugal machine.....	H. McCormack.....	699,317	May 6	122	28	90	1202
Centrifugal machine.....	L. Hirt.....	699,321	May 6	325	66	90	1243
Centrifugal separator.....	J. E. Stadel.....	693,360	Apr. 29	3940	852	90	617
Centrifugal separator.....	P. L. Kimball.....	702,441	June 17	2036	477	90	2075
Centrifugal separator.....	I. V. Holmes.....	703,735	June 17	2704	622	90	2715
Ceramic products. Manufacture of.....	M. Buchner.....	700,073	May 20	3014	573	90	1890
Chain.....	L. D. Howard.....	703,374	June 17	3010	673	90	2745
Chain-link.....	A. Palmros.....	697,165	Apr. 8	1439	320	90	351
Chain-link.....	T. G. Antman.....	697,190	Apr. 8	1518	320	90	342
Chain-making machine.....	W. L. Judson.....	693,370	May 13	1313	294	90	1422
Chain protection. Driving.....	E. Catchpool.....	703,775	June 17	2731	627	90	2702
Chain retaining and releasing means.....	J. J. Galway.....	703,540	June 17	2391	522	90	2617
Chain-wheel.....	F. L. Morse.....	693,391	Apr. 29	4939	1030	90	1115
Chain wrench.....	G. Amborn, Jr.....	693,779	Apr. 29	4511	997	90	1021
Chain wrench.....	G. W. Buford.....	693,794	Apr. 29	4539	1004	90	1023
Chain. Casting.....	F. Baldt, Sr.....	703,170	June 24	3439	892	90	2079
Chain. Mechanism for securing lugs to carrier.....	C. G. Carlson and A. Tunell.....	700,046	May 13	1719	368	90	1540
Chair.....	A. M. Smith.....	697,373	Apr. 8	1230	468	90	697

Clock-frame	W. H. Stevens	702,504	June 24	2828	678	90	2848
Clock-key holder. Watchman's	A. Beyer	697,095	Apr. 8	1810	282	90	297
Clock-movements for starting or stopping machinery. Apparatus actuated by	J. S. Sunderland	702,028	June 17	2827	687	90	2872
Clock-pendulum	D. W. Thompson	702,080	June 24	2801	727	90	2828
Clock. Secondary electric	S. P. Thrasher	700,464	May 20	2828	670	90	1747
Clock striking mechanism	H. M. Hunt	698,287	May 6	438	112	90	1277
Clock striking mechanism	A. Tomek	700,468	May 20	2827	621	90	1740
Clock-synchronizer. Electric	C. F. Mears	702,000	June 17	2828	678	90	2828
Clock-winding mechanism. Electric	A. Tuerk	698,128	Apr. 22	2125	725	90	754
Closet-bowls. Waste-pipe connection for	A. Dellamore	699,497	May 6	701	168	90	1282
Closure	C. Puddfoot	701,085	May 27	2828	680	90	2817
Cloth-blank-folding machine	C. H. Knapp	699,192	May 6	114	30	90	1128
Cloth-cutter	R. E. Love	699,300	May 6	281	119	90	1282
Cloth-cutter	S. Geary	702,798	June 17	2755	684	90	2712
Cloth-cutting machine	F. Dodge	698,908	Apr. 29	4880	1080	90	1087
Cloth-cutting machine	J. R. Baird	702,088	June 24	2824	744	90	2827
Cloth. &c. Device for unrolling	H. L. Rosenthal	702,808	June 17	2815	647	90	2728
Cloth-drying machines. Electric alarm for	J. F. Bannan	701,348	May 27	4199	949	90	2077
Cloth folding and rolling machine	I. Cohen	698,428	Apr. 29	2828	654	90	688
Cloth, leather, &c. Means for cutting	H. E. Musgrave and G. A. Barnes	698,904	Apr. 29	4842	1084	90	1112
Clothes-drier	H. C. and J. F. Evered	701,088	June 3	745	194	90	2844
Clothes-drying apparatus	J. Williams	701,977	June 10	1820	288	90	2828
Clothes-line	A. A. Woodyatt	699,725	May 13	1171	278	90	1425
Clothes-line	E. Imhof	702,928	June 24	2877	708	90	2735
Clothes-line and peg holder or clamp. Combined safety	T. Grundy	697,404	Apr. 8	1008	486	90	494
Clothes-line fastener	J. D. Muller	698,988	Apr. 29	4840	1088	90	1112
Clothes-line prop	W. O. Dayton	698,308	Apr. 22	2125	685	90	840
Clothes-line reel	I. I. Edgerly	698,477	Apr. 29	2800	621	90	828
Clothes-line reel and stretcher	C. O. Anderson	700,008	May 13	1608	286	90	1282
Clothes-pin. Wire	L. Lato and W. Thrill	700,308	May 20	2130	488	90	1445
Clothes-pouder	S. B. Tadlock	702,508	June 17	2827	687	90	2828
Clothes-rack	O. P. Callahan	701,730	June 3	608	208	90	2828

Clutch-operating mechanism	H. C. Murphy	700,088	May 20	2685	674	90	1813
Clutch, Pneumatic-hammer	A. R. Lamplugh	699,681	May 13	1479	340	90	1484
Clutch, Speed-regulating	A. R. Lamplugh and H. Levi	699,682	May 13	1480	340	90	1485
Coal, coke, &c. Apparatus for washing	C. Burnett	700,735	May 27	2179	726	90	1280
Coal-crusher	A. W. F. Steckel	700,800	June 17	2648	678	90	2728
Coal, &c. Machine for washing	F. R. Wilson, Jr.	700,907	June 17	2698	681	90	2735
Coal-separator	W. J. Hamilton	700,954	June 24	2645	686	90	2609
Coaster-brake, Vehicle	R. E. Hammer	697,287	Apr. 8	1767	365	90	260
Coaster, Lays	H. G. Ralya	698,567	May 6	980	126	90	1845
Coast	J. De Mayo	698,568	May 6	980	126	90	1846
Coast-book, Safety	O. C. Schulz	697,753	Apr. 15	2550	567	90	571
Coast-book, Safety	W. C. Barton and C. F. Hanson	697,754	Apr. 15	2551	577	90	568
Coasting-machine	G. A. Breeze	698,619	May 6	915	113	90	1264
Coasting-machine, Apparatus for	J. H. Williams	698,620	Apr. 15	2526	685	90	620
Cock adjuster for air-brakes, Angle	W. S. De Camp	698,621	Apr. 15	2527	685	90	164
Cock, Ball	F. F. Flagg	700,316	May 20	2699	641	90	1604
Cock for liquids, Measuring and registering	F. W. Hughes and L. Campbell	697,844	Apr. 15	2513	608	90	628
Cock, Gas stop	M. R. Colvin	698,007	Apr. 20	2608	685	90	1608
Cock, Spring compression	E. O. Hodges	698,494	Apr. 1	76	16	90	21
Coffee, &c. Apparatus for making	F. W. Dalling	698,495	May 6	943	126	90	1880
Coffee, Apparatus for the treatment of	H. S. Maxim	701,780	June 3	343	126	90	2385
Coffee-berry-cleaning apparatus	W. A. Hastings and M. J. Harrington	700,987	May 20	2686	645	90	1697
Coffee, Machine for the torrefaction of	F. C. Thiel	698,496	May 6	977	181	90	1264
Coffee, Means for roasting	E. Boyes	697,190	Apr. 8	1468	313	90	219
Coffee-pot	F. N. Wilcox and J. S. Gallenle	698,604	May 6	901	110	90	1261
Coffee-pot	C. E. Ziegler	700,120	June 10	1517	349	90	2438
Coffee-roasting apparatus	R. Bennett	698,948	Apr. 20	2648	708	90	750
Coffee-roasting apparatus	V. O. Burel, G. Randon, and G. Remy	698,445	Apr. 20	2644	647	90	573
Coffin-protector	S. L. Black and H. P. Bunker	698,707	Apr. 1	598	194	90	120
Cog-wheel	F. Saxon	702,747	June 17	2674	615	90	2696
Cohesive	H. Shoemaker	700,708	May 20	2607	708	90	1680
Coin-controlled apparatus	A. W. Havens	702,068	June 24	2680	755	90	2690
Coin-controlled machine	W. W. Rosenfield	701,940	June 10	1172	360	90	2690
Coin-delivery device	J. M. Butcher	697,290	Apr. 8	1680	431	90	400
Coin-delivery machine	A. M. Crothers	700,306	May 20	2681	685	90	1681
Coin-delivery machine	E. J. Brandt	702,174	June 24	2601	606	90	2673
Coin-delivery machine	E. J. Brandt	702,175	June 24	2602	606	90	2674
Coin-freed apparatus for delivering sweets, &c.	E. A. Jeffreys	697,148	Apr. 8	1440	322	90	280
Coin-freed apparatus for sale of stamps, tickets, &c.	E. Uehrmann	698,611	Apr. 1	368	92	90	25
Coin-holder or bank, Pocket	E. E. English	702,328	June 10	1808	413	90	2405
Cola, Apparatus for the manufacture of	P. Naef	701,519	May 27	2678	687	90	2387
Cola-loading apparatus	S. T. and C. H. Wellman, J. W. Seaver, and T. R. Morgan	698,985	Apr. 20	2674	764	90	726
Collapsible box	H. H. Kinney	698,481	Apr. 1	104	34	90	97
Collapsible box	A. Stibiger	698,508	Apr. 20	2645	685	90	919
Collapsible box	F. English	701,217	June 3	70	15	90	2128
Collapsible box	M. J. Locke	701,204	June 10	1110	264	90	2696
Collapsible box, &c. Machine for folding	J. M. Hjermstad	701,200	June 10	1080	241	90	2646
Collapsible box, &c. Machine for folding	A. G. Couch	698,181	May 6	44	13	90	1108
Collapsible box, &c. Machine for folding	G. H. Wilson	698,080	Apr. 20	2638	1114	90	1125
Collapsible box, &c. Machine for folding	N. G. Denton	700,046	June 24	2654	743	90	2531
Collapsible box, &c. Machine for folding	B. S. Nichols	699,247	May 13	1400	388	90	1470
Collapsible box, &c. Machine for folding	E. L. Brundage	699,143	May 6	31	9	90	1180
Collapsible box, &c. Machine for folding	H. A. Mann	700,708	May 27	2607	708	90	1680
Collapsible box, &c. Machine for folding	A. R. Gustafson	701,718	June 3	735	174	90	2673
Collapsible box, &c. Machine for folding	A. R. Gustafson	701,719	June 3	736	175	90	2674
Collapsible box, &c. Machine for folding	A. F. Sanford	702,467	June 17	2190	500	90	2686
Collapsible box, &c. Machine for folding	M. Lange and T. Emilievics	702,445	June 17	2108	490	90	2677
Collapsible box, &c. Machine for folding	T. J. Younglove	697,810	Apr. 8	1787	365	90	267

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Page.	Page.	Page.	Page.
Comb.	See Currycomb						
Combining and shearing machine. Combined	S. W. Kaplan	698,470	May 6	638	181	90	1811
Combining-machine comb	I. Hay	702,300	June 10	1800	415	90	2680
Combining-machine comb	I. Hay	702,301	June 10	1810	414	90	2680
Combining-machine comb	I. Hay	702,302	June 10	1811	415	90	2680
Combination-lock	W. J. Nield	697,951	Apr. 15	2067	587	90	268
Combination-lock	W. H. S. Moore	698,545	May 18	1897	587	90	1470
Combined or laminated material	J. T. Johnson	698,567	Apr. 1	814	72	90	71
Combustion. Fluid for promoting	T. Battistini	700,868	May 27	2472	728	90	1940
Combustion-producing apparatus	L. D. West	698,907	Apr. 20	2610	614	90	941
Communication-service, Individual	C. P. Harris	697,947	Apr. 8	1607	380	90	260
Commutator	H. D. Priest and G. L. Schermerhorn	698,498	Apr. 1	171	41	90	41
Commutator-segment	W. H. Windle	702,378	June 10	1818	408	90	2680
Commutator-trimming apparatus	J. Phillips	698,479	Apr. 1	158	37	90	26
Compass and great-circle-course projector, Stellar	R. T. Lawless	702,180	June 24	2628	768	90	2628
Compass, Stunacle	J. Paoli	701,287	June 10	1148	268	90	2628
Compass errors. Device for correcting	J. Christensen	698,480	May 6	919	140	90	1808
Composing-machines, Differential letter-space reg- ister for	G. A. Goodson	698,730	Apr. 1	427	144	90	180
Composing tabular matter. Machine for	H. C. Isdahl	700,380	May 20	2680	646	90	1688
Composition of matter	G. L. de Lanchester	702,180	June 10	1844	408	90	2644
Composition of matter	T. O. Paine	702,151	June 24	2628	768	90	2672
Composition of matter and preparation of same	W. Frampolini	702,075	June 17	2640	618	90	2671
Compound engine	W. Hopkins	700,900	May 27	2686	617	90	1687
Compound or multiple-cylinder engine	L. Kling	700,900	May 27	2686	617	90	1771
Compress and packer	J. E. Griffin and S. C. Anderson	702,301	June 10	1800	371	90	2687
Concentrator	W. H. Sullivan	698,913	Apr. 1	1001	288	90	311
Concentrator	M. D. Rockford	698,797	Apr. 20	2644	686	90	1005
Concrete and metal skeleton for building purposes	O. Ruhl	700,448	May 20	2608	686	90	1744
Concrete column	O. W. Norcross	701,377	June 3	170	37	90	2142
Concrete-conductor	W. W. Montgomery	702,378	June 10	1818	408	90	2680
Concrete-mixing apparatus	C. T. Drake	698,622	May 18	1087	248	90	1408
Concrete-mixing machine	C. Otis	702,381	June 17	2640	618	90	2174
Concrete, &c. Mixing-machine for	W. B. Cavin	701,403	June 3	239	72	90	1800
Concrete structures. Mold for	C. F. Lancaster	698,485	May 6	943	218	90	1800
Condenser	F. Sargent	697,808	Apr. 15	2504	538	90	587
Condenser for steam motor-carriages	F. W. Turner	698,798	May 18	1147	306	90	1494
Condensing apparatus	K. R. Edson	698,798	May 18	1147	306	90	1494
Condensing system, Steam	J. D. McRae	700,988	May 20	2686	646	90	1688
Condiment	T. L. Healy	701,087	May 27	2670	561	90	580
Conductor system, Multiple	A. D. Lunt	697,798	Apr. 15	2510	53	90	2180
Conductors from non-conductors. Apparatus for separating	W. G. Swart and L. I. Blake	701,417	June 3	238	53	90	2180
Conduit	W. Houghdon	697,493	Apr. 15	2504	538	90	473
Conduit	C. D. Budd	698,908	Apr. 20	2644	686	90	1005
Conduit	T. J. Miller	701,314	May 27	2670	561	90	580
Conduit	C. A. W. Hultman	697,848	Apr. 15	2510	53	90	2180
Conduit for electric or like cables	F. Jones	698,787	Apr. 1	647	146	90	180
Conduit for underground conductors	W. F. Bossett	698,710	Apr. 1	601	136	90	180
Conduit outlet-box, Interior	W. F. Bossett	698,710	Apr. 1	601	136	90	180
Conduit outlet-box, Making	L. J. Bergdoll	697,414	Apr. 8	1788	387	90	330
Conduits. Means for inserting cords or the like into underground	J. T. Dickey	701,473	June 3	244	70	90	2180
Conduits with rubber in cement or liquid form. Ap- paratus for covering flexible	H. O. Kelllogg	698,687	May 13	1081	288	90	1411
Confectioner's molder or printer. Shear-motion	M. A. Smith	698,687	Apr. 20	2644	686	90	1005
Confectionery outlet	J. R. Carter	698,540	Apr. 1	820	95	90	6
Connecting device	I. Larson	698,598	May 6	918	119	90	1200
Connecting device	E. A. Burns	697,381	Apr. 8	1607	380	90	260
Contributing device	G. J. Klein	698,541	Apr. 20	2644	686	90	1005
Controller	T. von Zweigbergk	701,495	June 3	250	95	90	2173
Controller	T. von Zweigbergk	701,495	June 3	250	95	90	2173
Controlling device	T. P. Ford	701,701	June 3	728	160	90	2680
Conveyor	J. Oldham	697,874	Apr. 15	2572	618	90	480
Conveyor	G. W. Cross	698,688	Apr. 20	2644	686	90	1005
Conveyor	R. A. Zwoyer	698,578	May 6	927	64	90	1280
Conveyor	G. A. Brander	701,985	June 10	1828	418	90	2681
Conveyor	M. C. Schwab	702,115	June 10	1808	408	90	2680
Conveyor	J. H. Cook	702,428	June 17	2640	618	90	2681
Conveyor	A. J. Webster	702,304	June 17	2670	561	90	2677
Conveyor	C. W. Leavelle	702,305	June 17	2671	562	90	2677
Conveyor. Chain	J. C. Van Arsdale	701,340	June 10	1808	408	90	1204
Conveyor and support, Spiral	J. M. Dodge and A. D. Shaw	702,347	June 10	1808	408	90	2677
Conveyor feeding mechanism	A. M. Achin	702,356	June 10	1809	409	90	2677
Conveyor-light	J. M. Akers	698,681	Apr. 1	820	95	90	6
Conveyor, Pneumatic	R. G. Smith and J. H. Mathis	702,381	June 3	250	95	90	2173
Conveyors. Hanger coupling-bearing for screw	F. R. French	702,381	June 3	250	95	90	2173
Conveying apparatus	H. W. Amos and O. M. Goodwin	702,381	June 3	250	95	90	2173
Cooker and burner, Cake	T. J. Baskett	698,008	Apr. 20	2644	686	90	1005
Cooking apparatus, Stump	G. J. Hutchings	702,38

Cooler.							
See Cream-cooler.	Syrup-cooler.						
Milk-cooler.	Water-cooler.						
Cooler.	H. H. Buffum	708,177	June 24	3005	500	99	2380
Cooling and aerating device.	J. C. Miller	700,581	May 30	2729	600	99	1779
Cooling appliance.	T. B. Armstrong	700,005	May 13	1694	300	99	1587
Cooling-tower.	W. H. A. Hall and S. Lapham	698,013	Apr. 22	3023	057	99	606
Cooling-tub.	H. T. Myers	698,725	Apr. 22	4257	977	99	1028
Coop.	F. M. Steuterman	697,087	Apr. 5	1254	879	99	2408
Coop.	J. T. Zuka	702,044	June 10	1870	811	99	1919
Copier by wet method.	T. A. Irvine	699,009	Apr. 29	4933	000	99	1131
Copper from water.	A. J. Polmeteer	701,429	June 5	259	000	99	2181
Copper. Hardening.	S. L. Walter and F. W. Keiser	697,370	Apr. 8	1817	000	99	403
Copper-silver-sulfid ore. Treating.	D. P. Shuler	702,400	June 17	3190	501	99	2593
Copper ore. Apparatus for treating.	R. Seaman	702,344	June 10	1787	000	99	2459
Copper-water. Precipitant for treatment of.	J. H. McBride	701,339	June 3	577	185	99	2102
Copy-holder.	E. Sinclair	701,403	June 3	591	80	99	2107
Copying documents, drawings, &c. Apparatus for.	P. H. Yawman	701,447	June 3	595	94	99	2107
Copying-press. Roller.	M. Bernhard and R. T. Vent	698,947	Apr. 22	3494	708	99	790
Cords, &c. Fastener for ends of.	J. D. Harless	697,088	Apr. 5	1254	879	99	1294
Cord-bar. Collapsible.	R. L. Glover and A. Grabowski	698,935	May 6	355	32	99	1108
Cord-box cutter.	G. J. Hoskins	698,728	Apr. 22	4450	990	99	1014
Cord-making apparatus.	I. B. Thomas and F. Clare	698,707	Apr. 22	4454	998	99	1017
Cord-making machine.	G. H. Wadsworth and E. J. Sherwin	702,331	June 24	3700	485	99	2593
Corer and cutter. Fruit.	W. T. Acres	698,935	May 6	355	32	99	1108
Corer and seeder. Fruit.	A. Baumgarten	698,935	May 6	355	32	99	1108
Cork-extractor.	R. J. Williamson	697,597	Apr. 15	2886	499	99	507
Cork-extractor.	H. H. Ham	702,001	June 10	1895	805	99	2001
Cork-extractor.	R. B. Andros	701,791	June 3	911	805	99	2004
Cork-extractor.	J. Crosby	702,344	June 10	1787	000	99	2459
Corn husker and shredder and ensilage-cutter.	A. Rosenthal	701,387	June 3	590	45	99	2109
Corn-husking machine.	W. H. Gernand	702,720	June 17	3988	604	99	2606
Corn or grain dump and elevator.	J. Mabun and F. L. Hay	698,989	Apr. 22	3975	879	99	906
Corn-shock compressor.	I. B. Tryon	702,155	June 10	1898	801	99	2005
Corn-shock-loading device.	W. A. Tea	701,645	June 3	906	145	99	2048
Corn-shocker.	J. F. Steward	702,918	June 17	3411	580	99	2641
Corn, &c. Device for removing.	J. F. Allison	702,170	June 10	1818	808	99	2025
Cornstalk-cutter.	N. O. Krauss	697,510	Apr. 15	1549	347	99	540
Corn-stalk-trimming machine.	F. Latulip	697,723	Apr. 15	2510	800	99	508
Corner-post, transom-bar, or mullion.	F. Goldsmith	697,714	Apr. 15	2498	545	99	507
Corset.	J. J. Monahan	698,403	Apr. 1	128	32	99	84
Corset.	J. C. Andrews	698,188	Apr. 22	3940	780	99	755
Corset.	L. S. Foster	700,317	May 20	2771	541	99	1284
Corset.	A. E. Parsons	700,065	May 20	2515	547	99	1788
Corset and bust-form. Combined.	C. H. Schopbach	697,699	Apr. 15	2401	088	99	530
Corset-bust.	C. F. de Graess	702,191	June 24	3920	814	99	2607
Corset-fastening.	J. H. Wolcott	698,989	May 6	486	100	99	1294
Corset-stay-tipping machine.	M. D. Watrous	698,989	May 6	486	100	99	1294
Corset-stay.	A. A. Harvey	700,518	May 27	3028	810	99	1959
Corset-stay, &c. Socket for.	N. F. T. Hunt	702,553	June 17	3513	887	99	2681
Dot and tent. Combined folding.	D. I. Kuba	702,007	June 17	2896	884	99	2028
Ootton. Apparatus for unbalancing raw.	S. E. Roy and E. M. Marden	697,459	Apr. 15	2020	446	99	464
Cotton-chopper.	J. M. Grant	699,785	May 6	355	32	99	1108
Cotton-chopper.	W. R. Wilkinson	700,109	May 13	1679	437	99	1191
Cotton-chopper.	L. W. Wooten	701,448	June 3	597	104	99	2107
Cotton-chopper.	F. M. and L. E. Sharp	701,798	June 3	911	805	99	2004
Cotton-gin.	R. B. Lumpkin	701,814	June 3	940	810	99	2007
Cotton-gin. Roller.	C. J. McPherson	701,326	May 27	4109	987	99	2034
Cotton-machines. Covered roller for.	O. H. Hathaway and W. H. Spencer	698,535	Apr. 22	3927	888	99	906
Cotton-picker for forming mattress-bats.	J. W. Morgan	698,984	May 6	486	100	99	1294
Cotton-picker's sack.	J. H. Holmes	698,984	May 6	486	100	99	1294
Cotton-press.	S. M. Neely	698,048	Apr. 22	3070	578	99	703
Cotton-press.	A. D. Thomas	698,985	May 13	1571	261	99	1513
Cotton-press.	A. D. Thomas	698,987	May 13	1580	262	99	1513
Couch-frame.	J. Watkins	701,115	May 27	3336	808	99	2029
Couch-roll guard-board.	J. A. Connelly	700,125	May 13	1647	448	99	1529
Counterbalancing the momentum of reciprocating elements. Means for.	M. N. Forney	701,477	June 3	954	75	99	2109
Counter-guard-wall telescoping wicket.	E. B. Browne	698,546	Apr. 1	377	64	99	88
Counting apparatus.	R. W. Jorres	702,375	June 24	3977	846	99	2615
Coupling.							
See Air-brake coupling.	Pipe-coupling.						
Car coupling.	Pipe, &c. coupling.						
Car side coupling.	Pipe, shaft, &c. coupling.						
Detachable coupling.	Pump-rod coupling.						
Electric coupling.	Pump-tube coupling.						
Fluid coupling.	Railway-coupling.

Dental tool	J. E. Griswold	701,515	June 8	800	181	99	2284
Dental tool for fitting cap-crowns	C. J. Reynolds	699,693	May 12	1012	265	99	1267
Dental vulcaniser	J. E. Campbell	697,592	Apr. 30	2978	657	99	2628
Denture. Artificial	E. E. Weaver	701,975	June 10	1236	362	99	2475
Derriek	J. H. Lohner	702,287	June 10	1700	385	99	2287
Derriek-frame and joint-coupling therefor	A. Lutz	701,906	June 10	1113	308	99	2287
Derriek. Portable							
Designs. Apparatus for producing repeat-	H. Mackintosh	699,977	Apr. 1	906	210	99	191
Desk	W. J. McDevitt	697,592	Apr. 8	1646	389	99	270
Desk and seat. Adjustable	C. H. Woodard	699,980	May 12	1585	393	99	1515
Desk. Cabinet	W. J. Copeland	700,174	May 20	2009	472	99	1694
Detachable coupling	H. M. Stargis	698,513	Apr. 1	908	210	99	191
Detector							
See Time-detector.							
Detector-bar clip and stop.	J. Chalmers, Jr.	698,451	Apr. 20	2680	588	99	691
Detergents. Making	O. Bamberg	700,028	May 20	2-08	99	99	2620
Detonating composition	H. von Dahmen	700,028	Apr. 10	1985	441	99	146
Detonating apparatus	L. A. Schlar	697,592	Apr. 15	2424	541	99	2628
Diamond-crown-cutting machine	G. Armesy	697,280	Apr. 8	1538	354	99	895
Diamonds in metal. Machine for setting	J. Brejcha	700,122	May 12	1967	446	99	1285
Dye							
See Brick-machine die. See-Brick.							
Fork-making die.							
Diffusing vaporisable substance. Apparatus for digger	J. D. Campbell and W. H. Yates	698,928	May 12	1011	285	99	1287
Dig							
See Post-hole digger. See-Post-digger.							
Dine. Protecting	W. A. Keyes	699,395	May 6	514	99	99	1291
Distor	C. G. Gibson	702,708	June 17	2759	684	99	2715
Dimethylamine tartaric acid and making same	W. Sternberg	699,428	May 6	574	99	99	1292
Dipping-tank	W. Sternberg	702,125	June 10	1530	367	99	2428
Direct-acting engine	C. M. Henderson	698,084	Apr. 22	3121	610	99	797
Directory. Cabinet	T. Wrightson and J. Morison						
Directory, &c. Mechanical.	G. W. Maxwell	697,377	Apr. 8	1280	411	99	429
Directory. Mechanical.	G. W. Maxwell	697,376	Apr. 8	1280	410	99	428
Directory. Mechanical.	G. W. Maxwell	697,376	Apr. 8	1280	411	99	429
Directory. Mechanical.	G. W. Maxwell	697,376	Apr. 8	1280	412	99	431
Directory. Mechanical.	G. W. Maxwell	697,376	Apr. 8	1280	412	99	431
Directory. Mechanical.	G. W. Maxwell	697,376	Apr. 8	1280	412	99	431

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr. & C.	Vol.	Page.
Directory. Mechanical.	G. W. Maxwell.	697,928	Apr. 8 1900	418	414	414	414
Dish-making machine.	C. Anderson.	698,928	Apr. 8 1900	1088	70	70	70
Dish-washer.	I. Ervin.	698,986	Apr. 1 1900	265	70	70	70
Disinfectant-powder. Making.	J. Rother.	701,080	June 8 1900	608	2138	2138	2138
Disinfectants. Making.	W. T. Kendrick and G. W. Dixon.	701,288	June 8 1900	188	708	708	708
Disinfecting apparatus.	E. Fournier.	698,100	Apr. 28 1900	2885	210	210	210
Disinfecting apparatus.	C. J. Wals.	708,041	June 10 1900	1281	84	84	84
Disinfecting device.	L. E. Jones.	701,426	June 8 1900	374	1181	1181	1181
Disinfecting device for sink-drains.	J. F. Seabury and C. Lutz.	698,988	May 13 1900	1688	281	281	281
Disinfecting fluid. Device for automatically distributing.	F. A. Martin.	708,987	June 14 1900	2885	90	90	90
Disintegrating-machine.	A. A. Dickson.	698,988	Apr. 1 1900	485	90	90	90
Disintegrating-machine.	J. M. MacDonald.	698,788	May 13 1900	1288	1218	1218	1218
Dispensing-apparatus drip attachment.	G. W. Boyd.	698,461	May 8 1900	678	187	187	187
Dispensing-apparatus drip attachment.	G. W. Boyd.	708,181	June 10 1900	1081	341	341	341
Display device.	J. K. Oney.	698,537	May 6 1900	504	1841	1841	1841
Display device. Necktie.	H. Runtz.	698,718	May 13 1900	1188	1419	1419	1419
Display device or exhibitor.	L. T. Bell.	701,280	May 27 1900	4181	981	981	981
Display-holder. Necktie.	H. Runtz.	701,948	June 10 1900	1178	981	981	981
Display of goods. Utensil for.	C. N. Heins.	698,948	Apr. 28 1900	4888	1078	1078	1078
Display-rack.	G. D. Seall.	701,518	June 8 1900	955	218	218	218
Display-rack and advertising device. Combined.	C. A. Shaffer.	708,085	June 10 1900	1281	308	308	308
Display-table. Jewelry.	J. P. Angell.	708,888	June 17 1900	878	1108	1108	1108
Distilling apparatus.	E. Jester.	698,988	Apr. 28 1900	4888	1078	1078	1078
Distilling apparatus.	J. S. Roake.	700,378	May 20 1900	2481	1717	1717	1717
Distilling apparatus.	J. S. Roake.	700,374	May 20 1900	2481	1717	1717	1717
Distilling apparatus. Water.	A. J. Chase.	697,918	Apr. 15 1900	2588	688	688	688
Distilling apparatus. Water.	E. K. Murphy.	698,794	Apr. 28 1900	4488	978	978	978
Distress-signal.	T. Coates.	701,108	May 27 1900	911	924	924	924
Dividing apparatus.	J. Gullmarin.	698,500	Apr. 1 1900	288	71	71	71
Dock. Land-reclaiming.	E. Chaquette.	708,697	June 17 1900	2488	381	381	381
Docking-machine. Steam.	A. R. Hill.	708,787	June 17 1900	2888	548	548	548
Door and frame for air-tight chambers.	H. P. Stevenson.	697,688	Apr. 15 1900	2488	548	548	548
Door. Automatically-operating.	J. H. Whitaker.	698,588	Apr. 28 1900	4770	1048	1048	1048
Door bar or fastener.	B. Schwab.	701,481	June 8 1900	288	2188	2188	2188
Door-check.	J. Klapper.	701,084	May 27 1900	3788	808	808	808
Door-check and closer.	H. G. Wright.	698,778	Apr. 1 1900	788	184	184	184
Door-check. Liquid.	J. L. Hamed.	698,988	Apr. 28 1900	4888	1071	1071	1071
Door-closing and holding device.	O. Francke.	698,988	Apr. 28 1900	4888	1071	1071	1071
Door. Double.	J. H. Kinter and W. H. Romig.	698,988	Apr. 8 1900	1148	888	888	888
Door fastener. Sliding.	J. H. Kinter.	698,988	Apr. 28 1900	4888	788	788	788
Door, for fastening.	E. H. Hoyer.	708,146	June 10 1900	1588	3448	3448	3448
Door. Folding.	E. H. Hoyer.	708,146	June 10 1900	1588	3448	3448	3448
Door-guard.	W. N. S. Place.	698,028	Apr. 28 1900	3108	708	708	708
Door-guiding attachment.	J. J. Reiroth.	697,818	Apr. 8 1900	1561	380	380	380
Door-hanger.	W. Louden.	700,211	May 20 1900	2188	480	480	480
Door-hanger.	P. G. Minier.	701,507	June 8 1900	878	128	128	128
Door-hanger.	T. C. Prouty.	698,584	May 6 1900	818	181	181	181
Door-hanger loop.	D. S. Blanpied.	701,188	May 27 1900	3688	808	808	808
Door-holder.	A. Newell.	700,887	May 13 1900	2180	480	480	480
Door lock. Sliding.	J. W. Horner. (Retained).	11,988	May 13 1900	3080	488	488	488
Door-mat. Metal.	W. A. Braden and J. B. Smalley.	700,404	May 20 1900	2084	581	581	581
Door-operating mechanism.	D. J. Mathews.	700,887	May 20 1900	2777	685	685	685
Door-securer.	P. H. Jackson.	699,488	May 6 1900	680	180	180	180
Door. Sidewalk trap.	G. B. Pickop.	698,888	Apr. 28 1900	4705	1087	1087	1087
Door. Sliding.	M. Schwartz.	698,744	Apr. 28 1900	4485	988	988	988
Door-spring. Adjustable.	H. Bommer.	708,088	June 17 1900	2879	884	884	884
Door-spring.	W. S. Lincoln.	700,248	May 20 1900	2480	588	588	588
Doors. Operating and latch-releasing mechanism for sliding.	J. B. d'Homerque.	698,201	Apr. 28 1900	2417	788	788	788
Doors, windows, &c. Frame for.	C. W. Bray.	698,488	Apr. 28 1900	2881	848	848	848
Doubling apparatus.	J. L. Canney.	698,988	Apr. 8 1900	1078	287	287	287
Dough-cutting-machine scraper.	J. Lee.	698,578	Apr. 1 1900	288	78	78	78
Dough, &c. Machine for mixing and kneading.	E. C. Chase and I. E. Richey.	698,814	Apr. 28 1900	4505	1018	1018	1018
Dough-manipulating and loaf-forming machine.	H. A. Duc, Jr.	698,911	Apr. 28 1900	4811	1080	1080	1080
Dough mixer and kneader.	C. A. Thomson.	701,046	June 8 1900	988	147	147	147
Dough-molding machine.	W. S. and C. I. Corby.	708,116	June 24 1900	2888	777	777	777
Dough working and shaping machine.	J. J. Blackman.	697,787	Apr. 15 1900	2614	580	580	580
Dovetailing-machine.	J. and D. Sagar.	708,008	June 24 1900	3170	780	780	780
Dovetailing-machine.	J. Dabau.	698,178	Apr. 28 1900	3888	788	788	788
Draft attachment. Doubletree.	J. D. Ingram.	698,981	Apr. 1 1900	587	188	188	188
Draft-equalizer.	J. N. Schwalm.	697,548	Apr. 15 1900	3178	488	488	488
Draft-equalizer.	G. Linhard.	697,788	Apr. 15 1900	3515	580	580	580
Draft-equalizer.	H. J. Heider.	697,841	Apr. 15 1900	2708	601	601	601
Draft-equalizer.	W. Schluter.	698,088	Apr. 28 1900	3113	684	684	684
Draft-equalizer.	W. S. Ernst.	698,988	Apr. 28 1900	4644	1084	1084	1084
Draft-equalizer.	T. F. and J. J. Folk.	698,988	Apr. 28 1900	4644	1084	1084	1084
Draft-equalizer.	J. Jones.	698,184	May 6 1900	108	88	88	88
Draft-equalizer.	W. C. Dymart.	701,178	May 27 1900	4008	281	281	281

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Pat.	Draw.	Vol.	Page.
Draft-equalizer.	E. Burns.	700,888	May 20	2884	580	580	1688
Draft-equalizer.	K. Bombard.	697,970	Apr. 28	2848	640	640	970
Draft-rigging.	E. Patterson.	698,581	Apr. 28	4088	880	880	970
Draft-rigging.	W. M. Cox.	708,118	June 24	2888	778	778	2888
Draft-rigging.	T. L. McKee.	698,818	Apr. 28	3441	788	788	770
Draft-rigging. Combined friction and direct-acting spring.	J. J. Hennessey.	708,488	June 17	3088	471	471	3070
Draft-rigging. Combined spring and friction.	C. S. Shallenberger.	701,814	June 8	414	24	24	2188
Draftsman's instrument.	E. C. Loetscher.	698,688	Apr. 1	514	167	167	172
Draw and harrow-pulverizer combined.	F. R. Sawyer.	708,084	June 10	1840	877	877	2432
Drainer. Cellar or cistern.	W. D. Labadie.	698,988	May 13	1084	878	878	1284
Drains and sewers. Mode of and means for ventilating and flushing house or other.	I. Rhone and E. Ault.	697,888	Apr. 8	1818	407	407	408
Drapery frame clamp.	J. J. Park.	698,007	Apr. 28	4844	1088	1088	1180
Draw-bar attachment.	W. F. Richards.	701,818	June 8	508	188	188	2884
Draw-gear and buffing apparatus.	F. Hien.	708,948	June 24	2881	704	704	2728
Draw-gear. Triple spring.	C. Wright.	701,681	June 8	384	188	188	2828
Drawer for sewing-machine stands, &c.	R. H. Wheeler.	697,588	Apr. 15	2887	497	497	5078
Drawer guard or support.	M. O. Teal.	701,288	May 27	4088	944	944	408
Drawer-guide.	W. H. Gercke.	697,471	Apr. 15	3088	420	420	2828
Drawer-support.	F. O. Anderson.	708,888	June 17	1987	488	488	2438
Drawers foot-strap.	M. D. Wilcox.	701,744	June 8	388	188	188	2828
Drawers. Woman's.	K. R. Jarvis.	697,888	Apr. 15	2778	504	504	430
Drawing-board.	J. de Minisewski.	701,918	June 10	1188	388	388	2880
Drawing-frame.	F. A. Alteneder.	697,884	Apr. 15	2884	508	508	518
Drawing implement.	M. C. Kango.	698,788	May 13	1178	178	178	1688
Dredge-box.	H. B. Williams.	708,108	June 10	1618	888	888	2488
Dredge. Clam.	E. Chaquette.	708,688	June 17	2488	384	384	2881
Dredge. Clam.	E. Chaquette.	708,688	June 17	2488	384	384	2888
Dredge. Floating.	E. Chaquette.	708,708	June 17	2888	587	587	2880
Dredge. Hydraulic.	G. L. Cudner.	700,408	May 20	2841	588	588	1780
Dredge, excavator, and elevator. Hydraulic.	G. L. Cudner.	697,704	Apr. 15	2488	580	580	988
Dredging apparatus.	P. E. Nolan and M. Mortenson.	697,318	Apr. 8	1588	348	348	74
Dredging. Self-loading bucket for.	J. A. Mumford.	698,581	Apr. 1	587	80	80	3828
Dress-shield.	J. F. Murphy.	708,687	June 17	2888	978	978	180
Dress-shield holder.	J. F. Murphy.	698,688	Apr. 1	588	188	188	2048
Dress-supporter.	M. J. Caruthers.	701,147	May 27	2888	910	910	2828
Dress-supporter.	R. F. Montgomery.	708,488	June 17	3188	684	684	2828
Drier.							
See Clothes-drier.	Hair-drier.

Fruit-drier.	Sand-drier.						
Grain-drier.							
Drier.	F. E. Allen.	698,617	Apr. 28	4178	918	918	948
Drier.	E. Storch.	698,118	Apr. 28	5148	1188	1188	1188
Drier and kiln.	A. E. Dowell and W. B. McHenry.	700,408	May 20	2840	617	617	1780
Drier for paper, cloth, &c.	C. H. Crowell.	708,044	June 24	2847	747	747	2870
Dry-kiln.	E. Gervard.	698,888	May 13	1878	818	818	1478
Drying apparatus.	L. Atwood.	697,818	Apr. 8	1721	388	388	888
Drying apparatus.	H. Dedrich.	698,488	Apr. 28	4818	888	888	948
Drying can or cylinder.	A. A. Hunting.	700,778	May 27	2871	781	781	1807
Drying-rack.	J. H. Davis.	701,548	June 8	470	108	108	2804
Drill.							
See Grain-drill.	Head-drill.						
Rock-drill.							
Drill.	E. E. Atkinson.	701,788	June 8	918	874	874	2880
Drill.	H. E. Jacobs.	708,217	June 10	1688	880	880	2472
Drill reciprocating key-cutting attachment.	E. W. Kelley.	698,708	Apr. 28	4488	971	971	908
Drill-rod grab.	W. W. Campbell.	708,088	June 10	1780	408	408	3484
Drill work-holding attachment.	G. E. Metcalf.	700,884	May 27	2808	888	888	1987
Drilling-machine.	C. A. Worman.	697,581	Apr. 15	2888	498	498	808
Drilling-machine.	S. A. Baker.	698,948	Apr. 28	3488	788	788	787
Drilling-machine.	D. Warner.	698,188	Apr. 28	3188	1147	1147	1188
Drilling-machine.	B. F. Kelley.	698,688	May 6	678	170	170	1888
Drilling-machine.	R. M. Downie.	700,678	May 20	2022	601	601	1881
Drilling machinery.	C. E. Wiley.	701,118	May 27	2888	884	884	2088
Drilling or like machine.	F. H. Pierpont.	700,888	May 20	2488	580	580	1714
Driving mechanism.	O. Wiltzhauser.	700,888	May 27	2487	788	788	1088
Driving mechanism. Reversible.	C. S. Parsons.	708,948	June 10	1728	280	280	2480
Dropper.							
See Medicine-dropper.	Seed-dropper.						
Drum. Heating and ventilating.	A. W. Brock.	701,888	June 8	14	8	8	2111
Drum or barrel band.	J. L. Sheppard.	697,087	Apr. 8	1288	278	278	888
Dumping apparatus.	J. Egli.	700,118	May 13	1888	488	488	1879
Dumping apparatus.	R. Kelly.	708,977	June 24	2870	947	947	2018
Dumping device.	R. F. Thomas.	698,688	Apr. 28	3010	1117	1117	1188

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr. e.	Vol.	Page.
Duplicator	S. Case	699,075	Apr. 29	1075	1182	99	1148
Dust-beater	S. J. Sims	699,092	Apr. 29	1184	997	99	773
Dust-collecting and settling apparatus	C. H. Larson	701,596	June 10	1095	950	99	2998
Dust-collector	J. H. Lane and E. H. Whitmore	699,194	May 6	118	81	99	1230
Dust-collector	E. R. Draver	699,480	May 6	688	147	99	1895
Dust-collector	J. E. Mitchell	702,513	June 10	1288	419	99	2908
Dust-collector	P. Eberwein	702,124	June 24	3408	789	99	9988
Dust-guard	P. Martin	701,928	June 10	1117	955	99	2927
Dust-pan	W. L. Harris	699,994	Apr. 29	4974	1099	99	1090
Dust-pan, broom, and dust-brush holder	J. M. Miller	699,997	Apr. 29	4982	1091	99	1114
Dust-spraying machine	C. H. Asling	699,498	May 6	809	124	99	1297
Duster, Feather	E. K. Warren and A. A. Ackerman	699,999	Apr. 29	4749	1048	99	1075
Dye and making same. Black sulfur	C. Schraube and H. T. Bucherer	700,995	May 29	2922	99	99	1790
Dye and making same. Black sulfur	W. Kolbe	701,021	May 27	2781	99	99	2025
Dye and making same. Black sulfur	I. Levinstein and C. Henschling	700,999	June 10	1946	99	99	2924
Dye and making same. Blue sulfur	C. Ris	699,711	Apr. 1	874	99	99	144
Dye and making same. Blue wool	A. Weinberg	703,108	June 24	378	99	99	2164
Dye and making same. Brown-violet sulfur	A. Weinberg	699,995	Apr. 29	4974	1099	99	916
Dye and making same. Green sulfur	C. Ris	699,999	Apr. 29	4974	1099	99	780
Dye and making same. Greenish-black sulfur	A. Weinberg	701,497	June 3	897	99	99	9161
Dye and making same. Red	E. Winter	697,708	Apr. 15	2508	99	99	574
Dye and making same. Red cotton	E. Lurati	700,991	May 30	2701	99	99	1776
Dyes on indigo. Fixing	G. De Kaulstarr	702,128	June 24	3408	789	99	2921
Dyeing	P. Schirp	700,998	May 27	2777	778	99	1882
Dyeing, etc. Apparatus for	C. Wolf	701,444	June 3	898	99	99	2165
Dyeing apparatus. Yarn	J. C. Hamer	703,002	June 10	1950	99	99	2901
Dyeing apparatus. Yarn	S. Hutchins	699,999	May 6	490	116	99	1879
Dynamo	F. B. Duncan	700,199	May 20	2095	477	99	1090
Dynamo or motor brush-holding ring	F. B. Duncan	697,996	Apr. 29	4918	991	99	699
Dynamoes or motors on their bed-plates. Means for adjusting	P. Kennedy	699,197	May 6	106	25, 27	99	1197
Dynamoes with trucks of railway-cars. Means for connecting	U. Kleiner	702,200	June 17	2777	998	99	2717
Ear-drum. Artificial	E. H. Stoll	700,949	May 27	2409	798	99	1999
Easel	T. Rye	702,128	June 10	1951	997	99	2428
Excess-current miter-joint	S. D. Tripp	701,498	June 3	898	99	99	2160
Edge-finishing machine	H. A. Oldershaw	697,709	Apr. 8	1798	408	99	438
Edge-setting machine	C. Johnson	700,998	May 20	2192	492	99	1048
Edger. Gang	E. E. Thomas	697,535	Apr. 15	2601	490	99	530
Edger guard. Gang	J. E. Murray	699,990	Apr. 1	555	127	99	180
Educational device	F. W. Davenport	701,997	June 10	1999	294	99	2900
Educational device	K. L. Wood	701,498	June 3	898	99	99	2164
Egg-beater	H. H. Holtan	700,049	May 13	1790	411	99	2921
Egg-candler	H. Erickson	699,481	Apr. 29	4904	998	99	1889
Egg-cup	J. M. Stukes	699,999	May 6	840	99	99	1889
Egg-packing compound	R. B. Sears	699,419	May 6	557	127	99	1889
Egg-preservation safe	A. L. Walker	697,759	Apr. 15	2500	500	99	978
Egg-separator	A. L. Walker	702,111	June 24	3477	778	99	2925
Egg-separator	W. Darling	702,760	June 17	2728	990	99	2710
Egg-tray	J. A. Rylander	699,495	Apr. 1	179	99	99	48
Eggs. Preserving	A. M. Ziegler	699,771	Apr. 29	4907	998	99	1880
Electric alarm	D. Vial Filis	700,999	May 20	2195	998	99	1790
Electric alarm	G. M. Peyton	700,913	May 27	2699	798	99	1914
Electric alarm	W. H. Harting	701,528	June 3	814	114	99	2915
Electric alarm and fastening device	H. G. Carleton	699,518	Apr. 29	4915	1014	99	1042
Electric battery	C. Hubert	700,497	May 20	2090	998	99	1790
Electric battery	P. Delefos	702,544	June 10	2095	990	99	2918
Electric battery	R. D. Langhila	701,398	June 3	149	99	99	2129
Electric brushes. Making	C. Luke	701,399	May 27	2627	998	99	2094
Electric cables. Covering means for joints in	J. H. West	700,107	May 13	1796	407	99	1873
Electric cables. Manufacture of	F. Wilke	699,998	Apr. 29	4919	998	99	987
Electric-circuit-choking device	C. A. Rolfe	697,519	Apr. 8	1598	380	99	981
Electric-circuit-protecting device	G. P. McDonnell	697,198	Apr. 8	1497	380	99	980
Electric-circuit-regulating device	D. G. Black	699,547	May 13	1003	998	99	1895
Electric-circuit safety-fuse	F. C. Newell	699,472	Apr. 1	146	99	99	29
Electric circuits. Automatic regulator for	O. L. Plummer	697,978	Apr. 8	1690	378	99	273
Electric circuits. Automatic safety-switch for	W. M. Carr	699,146	May 6	27	99	99	1192
Electric combustion-furnace	H. and E. Hammesfahr	702,728	June 17	2828	998	99	2908
Electric conducting-wire	H. W. Dover	699,498	May 6	698	148	99	1907
Electric conductors and making cables. Covering	E. E. Schraube and O. Stas y Orfila	699,998	Apr. 29	4980	1104	99	1129
Electric conductors with or without guard-wires. Automatic device for the safe operation of	F. E. Case	697,129	Apr. 8	1418	318	99	921
Electric controller	F. E. Case	697,445	Apr. 15	1998	441	99	498
Electric controller	A. C. Eastwood	699,998	May 6	718	189	99	1898
Electric controller	J. C. Henry	699,991	May 13	1610	998	99	1121
Electric controller	A. Phillips	701,398	June 3	800	129	99	2921
Electric controller	J. W. Brown, Jr.	702,544	June 10	2095	998	99	2918
Electric controller	E. C. Fellows	702,540	June 24	3477	778	99	2925
Electric controller. Automatic	A. McGary and P. Mellinger	697,997	Apr. 8	1648	390	99	971
Electric coupling	T. C. James	699,498	May 6	691	181	99	1210
Electric cut-off switch	L. W. Richardson	699,998	May 6	718	189	99	1898
Electric distribution system	C. P. Steinmetz	697,085	Apr. 8	1228	273	99	298
Electric distribution system	E. Thomson	699,106	Apr. 29	2988	798	99	798
Electric elevator	A. M. Modry	699,994	Apr. 8	1170	291	99	998
Electric elevator	J. Chambers	700,070	May 20	2018	991	99	1898

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr'e.	Vol.	Page.
Electric furnace	M. E. Conley	697,610	Apr. 15	2229	590	99	999
Electric furnace	G. de Chalmot	699,054	May 13	1014	235	99	1295
Electric furnace	W. R. Parks	700,998	May 27	2690	794	99	1911
Electric furnace	F. Morani	701,318	May 27	4070	997	99	2998
Electric generator	J. M. Wilson	699,784	May 13	1187	272	99	1497
Electric generator. Dynamo	R. G. Lamme	702,055	June 17	2919	978	99	2922
Electric heater.	M. C. Bart	699,091	May 13	1010	235	99	1295
Electric heater.	W. B. Hinman	700,994	May 30	2716	991	99	1794
Electric indicating instrument	R. Fleming	699,087	Apr. 1	68	14	99	17
Electric-light bulbs. Device for applying and re-moving	L. H. Alsworth	697,961	Apr. 29	2990	648	99	978
Electric-light hanger	L. Poole	701,990	June 10	1192	264	99	2925
Electric lights in railway-carriages from the guard's van. Device for operating	K. J. Preston and A. B. Gill	699,419	May 6	548	128	99	1297
Electric lights. Water-tight fixture for	F. J. Russell	699,517	May 13	1287	306	99	1681
Electric lighting and apparatus therefor. System of	P. Laportot, G. Villard, and L. Pigaud	699,098	Apr. 1	501	115	99	109
Electric machine. Dynamo	E. J. Barr	697,798	Apr. 15	2604	277	99	988
Electric machines. Regulation of dynamo	T. W. Williams	697,087	Apr. 8	1292	295	99	291
Electric maximum-demand indicator	A. Wright	702,040	June 17	2900	991	99	2798
Electric meter	T. Duncan	699,087	Apr. 29	4914	981	99	998
Electric meter	T. Duncan	699,088	Apr. 29	4916	982	99	998
Electric meter	T. Duncan	699,089	Apr. 29	4920	983	99	998
Electric meter	T. Duncan	699,090	Apr. 29	4922	984	99	998
Electric meter	T. Duncan	699,091	Apr. 29	4924	985	99	998
Electric meter	T. Duncan	699,092	Apr. 29	4926	986	99	998
Electric meter	T. Duncan	699,093	Apr. 29	4928	987	99	998
Electric meter	T. Duncan	699,094	Apr. 29	4930	988	99	998
Electric meter	T. Duncan	699,095	Apr. 29	4932	989	99	998
Electric meter	T. Duncan	699,096	Apr. 29	4934	990	99	998
Electric meter	T. Duncan	699,097	Apr. 29	4936	991	99	998
Electric meter	T. Duncan	699,098	Apr. 29	4938	992	99	998
Electric meter	T. Duncan	699,099	Apr. 29	4940	993	99	998
Electric meter	T. Duncan	699,100	Apr. 29	4942	994	99	998
Electric meter	T. Duncan	699,101	Apr. 29	4944	995	99	998
Electric meter	T. Duncan	699,102	Apr. 29	4946	996	99	998
Electric meter	T. Duncan	699,103	Apr. 29	4948	997	99	998
Electric meter	T. Duncan	699,104	Apr. 29	4950	998	99	998
Electric meter	T. Duncan	699,105	Apr. 29	4952	999	99	998
Electric meter	T. Duncan	699,106	Apr. 29	4954	1000	99	998
Electric meter	T. Duncan	699,107	Apr. 29	4956	1001	99	998
Electric meter	T. Duncan	699,108	Apr. 29	4958	1002	99	998
Electric meter	T. Duncan	699,109	Apr. 29	4960	1003	99	998
Electric meter	T. Duncan	699,110	Apr. 29	4962	1004	99	998
Electric meter	T. Duncan	699,111	Apr. 29	4964	1005	99	998
Electric meter	T. Duncan	699,112	Apr. 29	4966	1006	99	998
Electric meter	T. Duncan	699,113	Apr. 29	4968	1007	99	998
Electric meter	T. Duncan	699,114	Apr. 29	4970	1008	99	998
Electric meter	T. Duncan	699,115	Apr. 29	4972	1009	99	998
Electric meter	T. Duncan	699,116	Apr. 29	4974	1010	99	998
Electric meter	T. Duncan	699,117	Apr. 29	4976	1011	99	998
Electric meter	T. Duncan	699,118	Apr. 29	4978	1012	99	998
Electric meter	T. Duncan	699,119	Apr. 29	4980	1013	99	998
Electric meter	T. Duncan	699,120	Apr. 29	4982	1014	99	998
Electric meter	T. Duncan	699,121	Apr. 29	4984	1015	99	998
Electric meter	T. Duncan	699,122	Apr. 29	4986	1016	99	998
Electric meter	T. Duncan	699,123	Apr. 29	4988	1017	99	998
Electric meter	T. Duncan	699,124	Apr. 29	4990	1018	99	998
Electric meter	T. Duncan	699,125	Apr. 29	4992	1019	99	998
Electric meter	T. Duncan	699,126	Apr. 29	4994	1020	99	998
Electric meter	T. Duncan	699,127	Apr. 29	4996	1021	99	998
Electric meter	T. Duncan	699,128	Apr. 29	4998	1022	99	998
Electric meter	T. Duncan	699,129	Apr. 29	5000	1023	99	998
Electric meter	T. Duncan	699,130	Apr. 29	5002	1024	99	998
Electric meter	T. Duncan	699,131	Apr. 29	5004	1025	99	998
Electric meter	T. Duncan	699,132	Apr. 29	5006	1026	99	998
Electric meter	T. Duncan	699,133	Apr. 29	5008	1027	99	998
Electric meter	T. Duncan	699,134	Apr. 29	5010	1028	99	998
Electric meter	T. Duncan	699,135	Apr. 29	5012	1029	99	998
Electric meter	T. Duncan	699,136	Apr. 29	5014	1030	99	998
Electric meter	T. Duncan	699,137	Apr. 29	5016	1031	99	998
Electric meter	T. Duncan	699,138	Apr. 29	5018	1032	99	998
Electric meter	T. Duncan	699,139	Apr. 29	5020	1033	99	998
Electric meter	T. Duncan	699,140	Apr. 29	5022	1034	99	998
Electric meter	T. Duncan	699,141	Apr. 29	5024	1035	99	998
Electric meter	T. Duncan	699,142	Apr. 29	5026	1036	99	998
Electric meter	T. Duncan	699,143	Apr. 29	5028	1037	99	998
Electric meter	T. Duncan	699,144	Apr. 29	5030	1038	99	998
Electric meter	T. Duncan	699,145	Apr. 29	5032	1039	99	998
Electric meter	T. Duncan	699,146	Apr. 29	5034	1040	99	998
Electric meter	T. Duncan	699,147	Apr. 29	5036	1041	99	998
Electric meter	T. Duncan	699,148	Apr. 29	5038	1042	99	998
Electric meter	T. Duncan	699,149	Apr. 29	5040	1043	99	998
Electric meter	T. Duncan	699,150	Apr. 29	5042	1044	99	998
Electric meter	T. Duncan	699,151	Apr. 29	5044	1045	99	998
Electric meter	T. Duncan	699,152	Apr. 29	5046	1046	99	998
Electric meter	T. Duncan	699,153	Apr. 29	5048	1047	99	998
Electric meter	T. Duncan	699,154	Apr. 29	5050	1048	99	998
Electric meter	T. Duncan	699,155	Apr. 29	5052	1049	99	998
Electric meter	T. Duncan	699,156	Apr. 29	5054	1050	99	998
Electric meter	T. Duncan	699,157	Apr. 29	5056	1051	99	998
Electric meter	T. Duncan	699,158	Apr. 29	5058	1052	99	998
Electric meter	T. Duncan	699,159	Apr. 29	5060	1053	99	998
Electric meter	T. Duncan	699,160	Apr. 29	5062	1054	99	998
Electric meter	T. Duncan	699,161	Apr. 29	5064	1055	99	998
Electric meter	T. Duncan	699,162	Apr. 29	5066	1056	99	998
Electric meter	T. Duncan	699,163	Apr. 29	5068	1057	99	998
Electric meter	T. Duncan	699,164	Apr. 29	5070	1058	99	998
Electric meter	T. Duncan	699,165	Apr. 29	5072	1059	99	998
Electric meter	T. Duncan	699,166	Apr. 29	5074	1060	99	998
Electric meter	T. Duncan	699,167	Apr. 29	5076	1061	99	998
Electric meter	T. Duncan	699,168	Apr. 29	5078	1062	99	998
Electric meter	T. Duncan	699,169	Apr. 29	5080	1063	99	998
Electric meter	T. Duncan	699,170	Apr. 29	5082	1064	99	998
Electric meter	T. Duncan	699,171	Apr. 29	5084	1065	99	998
Electric meter	T. Duncan	699,172	Apr. 29	5086	1066	99	998
Electric meter	T. Duncan	699,173	Apr. 29	5088	1067	99	998
Electric meter	T. Duncan	699,174	Apr. 29	5090	1068	99	998
Electric meter	T. Duncan	699,175	Apr. 29	5092	1069	99	998
Electric meter	T. Duncan	699,176	Apr. 29	5094	1070	99	998
Electric meter	T. Duncan	699,177	Apr. 29	5096	1071	99	998
Electric meter	T. Duncan	699,178	Apr. 29	5098	1072	99	998
Electric meter	T. Duncan	699,179	Apr. 29	5100	1073	99	998
Electric meter	T. Duncan	699,180	Apr. 29	5102	1074	99	998

Electric meter	T. Duncan	699,237	Apr. 29	5216			

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Electric synchronous apparatus.	W. M. Miner	702,458	June 17	2128	488	90	2228
Electric synchronous apparatus.	W. M. Miner	702,454	June 17	2128	488	90	2228
Electric time-switch.	E. H. Wright	702,088	June 24	2228	148	90	2228
Electric time-switch.	C. F. Heath	703,183	June 24	2418	784	90	2228
Electric transmission of power.	E. M. Fraser	697,888	Apr. 15	2228	128	90	2228
Electric-tube lighting.	D. M. Moore	702,214	June 10	1888	418	90	2228
Electric-tube lighting.	D. M. Moore	702,216	June 10	1888	420	90	2228
Electric-tube lighting.	D. M. Moore	702,214	June 10	1884	420	90	2228
Electric-tube lighting.	D. M. Moore	702,217	June 10	1888	421	90	2228
Electric-tube lighting.	D. M. Moore	702,281	June 10	1897	428	90	2228
Electric-tube lighting.	D. E. Wilder	698,287	Apr. 22	2478	118	90	2228
Electric vapor-lighter.	J. M. G. Pullman	698,281	May 6	478	118	90	2228
Electric wires and conduits. Outlet-box for.	R. W. Lyle	702,022	June 17	2317	377	90	2228
Electric wires or cables. Conduit for.	R. W. Lyle	702,028	June 17	2319	377	90	2228
Electric wires or cables. Conduit for.	R. W. Lyle	702,028	May 6	677	107	90	2228
Electrical apparatus.	T. H. Brady	701,847	June 3	673	147	90	2228
Electrical apparatus.	A. Traut	701,847	June 3	673	147	90	2228
Electrical apparatus. Means for extinguishing arcs in.	G. W. Partridge	700,008	May 27	2228	708	90	2228
Electrical apparatus. Means for ventilating cores for.	J. D. Kelley	700,225	May 20	2401	548	90	2228
Electrical condenser.	G. F. Mansbridge	697,707	Apr. 15	2227	458	90	2228
Electrical-control system.	G. T. and L. Woods	697,707	Apr. 15	2227	458	90	2228
Electrical controlling apparatus.	R. F. Platt	702,188	June 10	1878	268	90	2228
Electrical energy. Means for transmitting.	J. M. Woodbridge	697,132	Apr. 8	1894	300	90	2228
Electrical flush switch.	W. J. Newton	702,908	June 24	2120	784	90	2228
Electrical hood or reflector and clamp for same.	L. L. Torbush	701,421	June 3	244	35	90	2228
Electrical instruments. Shunt for.	M. C. Rypinski	698,707	Apr. 1	667	188	90	2228
Electrical knife-switch.	L. J. Smith and W. F. Boswert	698,417	Apr. 22	2777	388	90	2228
Electrical-machine collector-ring.	R. Siegfried	702,228	June 17	2405	549	90	2228
Electrical machines and plants. Protecting apparatus for.	P. Rudhardt	702,128	June 24	2450	728	90	2228
Electrical outlet-box.	E. W. Miller	698,215	May 6	151	20	90	2228
Electrical outlet-box.	H. Krantz	700,240	May 20	2415	551	90	2228
Electrical protector.	G. A. Rolfe	701,285	June 3	197	42	90	2228
Electrical storms. Apparatus for demonstrating the phenomena of.	G. J. and D. C. Moore	700,228	May 20	2708	627	90	2228
Electrical switch.	E. G. Kaesthuber	698,427	Apr. 1	90	22	90	2228
Electrical tap-socket.	E. B. Meyrowitz	698,205	May 6	125	34	90	2228
Electrically winding up driving-springs. Apparatus for.	H. Aron	700,297	May 20	2684	622	90	2228
Electricity-meter.	E. G. Holm	702,212	June 10	1881	370	90	2228
Electricity-meter.	A. Wright	702,244	June 17	2228	622	90	2228
Electricity-meter.	A. Wright	702,249	June 17	2228	621	90	2228
Electricity-meter. Direct or continuous current.	A. Wright	702,245	June 17	2228	620	90	2228
Electricity-meter of the electrolytic type.	A. Wright	702,250	June 17	2228	622	90	2228
Electricity-metering.	A. Wright	702,247	June 17	2228	621	90	2228
Electrochemical generator.	H. S. Amvake	702,700	June 17	2706	621	90	2228
Electrode.	K. A. Wilde	700,228	May 20	2428	720	90	2228
Electrode. Arc-lamp.	R. Hopf	700,240	May 20	2477	621	90	2228
Electrode. Arc-lamp.	R. Hopf	700,240	May 20	2476	622	90	2228
Electrode for electric accumulators.	E. J. Clark	701,288	June 3	198	41	90	2228
Electrode. Storage-battery.	J. Von der Poppelburg	701,215	June 10	1120	222	90	2228
Electrodes. Forming secondary-battery.	W. Morrison	702,705	June 17	2701	621	90	2228
Electrodes. Graphitizing.	E. G. Acheson	698,251	May 13	1408	222	90	2228
Electrolysis. Apparatus for fused-bath.	C. W. Roepper and G. P. Scholl	697,187	Apr. 8	1458	227	90	2228
Electrolytic apparatus.	F. McDonald	698,415	May 6	125	34	90	2228
Electrolytic apparatus.	C. J. Reed	698,415	May 6	125	34	90	2228
Electrolytic apparatus for manufacturing certain salts suitable for the subsequent production of chlorine.	G. J. Atkins	698,007	May 13	1221	220	90	2228
Electrolytic converter.	F. H. Long	698,264	May 13	1090	274	90	2228
Electromagnetic apparatus. Polarized.	F. E. Cook	698,060	May 13	1085	222	90	2228
Electrotherapeutic apparatus.	G. W. Euker	701,125	May 27	4015	222	90	2228
Elevator.	C. W. Baldwin	698,708	Apr. 1	888	122	90	2228
Elevator.	A. B. Roney	698,728	Apr. 22	4448	222	90	2228
Elevator.	J. Rice	698,857	Apr. 22	4718	1222	90	2228
Elevator.	E. R. Gill	701,222	June 3	25	12	90	2228
Elevator-boots. Removable tray for.	M. Hanford	702,127	June 24	2418	728	90	2228
Elevator-cars. Regulator for controlling the descent of.	J. M. Lemmon	697,028	Apr. 15	2008	454	90	2228
Elevator-controller.	A. Gallinant	702,244	June 24	2228	624	90	2228
Elevator-door-operating device.	F. K. Fawcett	698,227	Apr. 22	4648	1024	90	2228
Elevator-door-operating mechanism.	H. Bittner	698,228	May 6	468	101	90	2228
Elevator-door-operating mechanism.	C. B. Gilmore	698,228	May 6	468	101	90	2228
Elevator-door-operating mechanism.	J. L. Kall	698,228	May 6	468	101	90	2228
Elevator-door-operating mechanism.	H. Rowntree	700,275	May 20	2424	570	90	2228
Elevator for chider-pits, &c.	W. Robertson	698,421	Apr. 1	174	42	90	2228
Elevator-gate. Self-closing.	G. E. Anderson	698,325	Apr. 22	3722	222	90	2228
Elevator-guard.	I. I. Fonda	702,025	June 10	1472	222	90	2228
Elevator hoisting mechanism.	H. Rowntree	697,412	Apr. 22	3722	222	90	2228
Elevator locking device.	M. E. Muckel, Jr.	702,272	June 10	1954	444	90	2228
Elevator or storage-house construction.	S. H. Tromanbauer	702,118	June 10	1228	241	90	2228

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Elevator safety appliance.	G. M. Moore	698,041	Apr. 22	2075	677	90	2228
Elevator safety appliance.	J. E. Erickson	699,275	May 6	444	100	90	2228
Elevator safety appliance.	S. B. Trapp	700,428	May 20	2221	628	90	2228
Elevator safety attachment.	G. Donnelly	698,728	Apr. 1	628	141	90	2228
Elevator safety attachment.	W. A. Forman	698,511	May 6	722	182	90	2228
Elevator signal device.	S. D. Collett	700,519	May 20	2222	672	90	2228
Elevator system. Electric.	J. D. Ihler	697,227	Apr. 15	2216	974	90	2228
Elevator valve mechanism. Hydraulic.	H. F. Witte	700,277	May 27	2451	728	90	2228
Elevator valves. Slow-closing device for hydraulic.	L. H. Hartman	701,222	May 27	4165	957	90	2228
Elliptical frames. Machine for forming.	C. E. Sandstrom	701,224	June 3	680	127	90	2228
Elliptical frames. Machine for forming.	C. E. Sandstrom	701,225	June 3	682	127	90	2228
Elliptical spring.	C. A. Miller	697,625	Apr. 15	2728	612	90	2228
Embalming and cooling board.	H. C. Swan	702,257	June 10	1745	222	90	2228
Embossing and printing mechanism.	J. A. Turney and E. F. O'Sullivan	702,511	June 17	2222	500	90	2228
Embossing-machine.	C. E. Mass	698,084	Apr. 22	2063	674	90	2228
Embossing-machine.	I. Clapper	699,149	May 6	42	12	90	2228
Embossing-machine.	I. Clapper	702,228	June 10	1750	428	90	2228
Embroidering-machine.	D. Nadel	697,220	Apr. 8	1022	221	90	2228
Embroidering-machine pattern mechanism.	D. Nadel	697,270	Apr. 8	1024	271	90	2228
Embroidery-frame.	N. G. Vowler	699,223	May 6	249	57	90	2228
Embroidery-hoop holder.	M. F. Smith	698,572	Apr. 22	4051	626	90	2228
Embroidery-loom.	C. E. Bentley	698,540	Apr. 1	222	62	90	2228
Embroidery-loom.	C. E. Bentley	698,541	Apr. 1	270	62	90	2228
Enamelling-fork for bath-tubs.	E. Dithridge	700,021	May 12	1722	222	90	2228
End-board and boot for wagons. Combined.	C. Fisher	701,220	June 3	75	15	90	2228
End-gate and fastening therefor.	L. F. Fredericks	700,028	June 10	1410	216	90	2228
End-gate and fastening therefor. Wagons.	D. K. Wier	698,204	Apr. 22	4122	912	90	2228
End-gate fastener.	A. A. Kellogg	700,143	May 13	1221	222	90	2228
End-gate for manure-spreader or similar beds.	C. L. V. Kinney	698,068	Apr. 1	451	105	90	2228
End-gate-rod fastener.	W. A. Day	701,224	June 10	1972	244	90	2228
End-gate. Wagons.	N. Hon	701,224	June 10	1972	244	90	2228
Endless-belt feed or carrying apparatus.	B. M. Bishop	700,474	May 20	2270	611	90	2228
Engine.							
See Heating-engine. Impact-engine.							
Carding-engine. Internal-combustion engine.							
Compound engine. Locomotive-engine.							
Compound or multiple-cylinder engine. Molding-machine engine.							
Direct-acting engine. Oil-engine.							
Explosive-engine. Pressure-engine.							
Fluid-pressure engine. Pumping-engine.							
Gas-engine. Rotary engine.							
Gas-impact-engine. Rotary explosive-engine.							
Gas or oil engine. Rotating-piston engine.							
Gear-cutting engine. Steam or fluid-pressure engine.							
Engine.	F. H. Sleeper	698,708	Apr. 1	707	150	90	2228
Engine.	F. H. Sleeper	698,707	Apr. 1	710	150	90	2228
Engine.	F. H. Sleeper	698,708	Apr. 1	712	150	90	2228
Engine.	W. D. Linscott	697,248	Apr. 8	1750	222	90	2228
Engine.	J. Brantigan and P. Hoelslein	698,141	May 6	27	8	90	2228
Engine.	L. Richter	698,241	May 13	1222	222	90	2228
Engine.	G. E. Whitney	702,410	June 17	2222	624	90	2228
Engine controlling mechanism.	O. F. Daanenbergh and H. L. Morgan	697,220	Apr. 8	1022	221	90	2228
Engine driving-wheel. Traction.	K. E. Leebart	698,014	Apr. 22	4078	1101	90	2228
Engine igniter. Explosive.	J. V. Rice, Jr.	698,022	May 13	1022	222	90	2228
Engine-lubricator.	W. J. and G. Lane	698,022	May 13	1022	222	90	2228
Engine mixer or vaporizer. Hydrocarbon.	R. Sottergren	697,225	Apr. 15	2125	422	90	2228
Engine muffler. Explosive or other.	A. L. Kull	700,725	May 27	2225	724	90	2228
Engine or motor. Steam or other.	T. S. McKinzie	701,424	June 3	222	82	90	2228
Engine reversible device.	W. H. Barker	698,022	Apr. 1	502	116	90	2228
Engine sparking apparatus. Gasoline.	R. E. Hago and H. P. Waller	700,228	May 20	2428	620	90	2228
Engine speed-regulator. Explosive.	J. W. Stanton	700,100	May 13	1222	222	90	2228
Engine speed-regulator. Explosive.	J. S. Klein	697,422	Apr. 8	1917	422	90	2228
Engine speed-regulator. Explosive.	J. W. Lambert	698,422	Apr. 22	2727	222	90	2228
Engine speed-regulator. Explosive.	R. A. F. Bellows	700,421	May 20	2220	572	90	2228
Engine speed-regulator. Gas.	H. H. Heanagin	698,022	Apr. 1	972	212	90	2228
Engine spray-pump. Explosive.	J. T. Metcalfe	701,022	May 27	2222	571	90	2228
Engine starting mechanism. Gas.	F. A. L. Sackner	702,127	June 24	2472	722	90	2228
Engines. Electric igniter for explosion.	E. H. Fahrney	701,225	June 3	742	122	90	2228
Engines. Means for facilitating the starting of gas or similar.	J. Hutchings	702,727	June 17	2727	622	90	2228
Engines or motors. Mechanism for utilizing the power of.	H. W. Schlomann	697,175	Apr. 8	1427	222	90	2228
Engines. Regulation of speed and power.	E. Thomson	702,022	June 10	1254	222	90	2228
Engines. Sparking igniter for explosive.	R. L. Young	698,422	May 6	522	122	90	2228
Engraving-machine.	W. S. Eaton	698,022	Apr. 8	1100	244	90	2228
Extrails. Machine for incrusting or slitting.	J. W. Kohlhopf and A. J. Francis	698,022	Apr. 22	2072	672	90	2228
Extrails.	W. A. Hammond and J. C. Kahle	698,421	Apr. 1	62	12	90	2228

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Envelop	J. Lucas	696,928	Apr. 8	1158	267	99	288
Envelop	S. A. Bonaffon	697,971	Apr. 29	3040	850	99	678
Envelop	J. G. Bonhart	698,688	Apr. 20	4191	985	99	947
Envelop	W. A. Dean	701,308	June 3	47	10	99	3118
Envelop	A. F. Callahan	701,580	June 10	980	280	99	2828
Envelop	D. H. Keller	702,100	June 10	1428	234	99	2431
Envelop	W. H. Haworth	702,945	June 24	3080	704	99	2728
Envelop	F. Thellengard	703,508	June 17	2281	508	99	2026
Envelop and blank therefor	A. J. Johnston	697,875	May 13	1465	285	99	1428
Envelop-closure, Metallic	G. E. Adams	698,630	Apr. 22	3080	646	99	673
Envelop, Document	J. G. Wallace	700,282	May 20	2423	555	99	1708
Envelop or wrapper, Reversible	W. Masters	698,300	Apr. 22	3528	790	99	808
Envelop, Safety	C. H. Mann	701,454	June 3	308	67	99	2171
Equalizer, Four-horse	O. and F. Zoeller	699,084	May 13	1870	261	99	1512
Eraser	E. Swenson	699,748	May 13	1161	275	99	1439
Eraser-tip for pencils	W. E. Brownell	699,407	May 13	1029	371	99	1528
Eraser, Machine for cleaning blackboard	J. A. Jones	702,581	June 17	2261	651	99	2730
Escutcheon and paint protector, Combined double	S. Thompson	702,581	June 17	2261	651	99	2730
Evaporating apparatus	O. M. Nilson	696,728	Apr. 29	4420	680	99	1005
Evaporating apparatus, Vacuum	G. M. Vis	700,105	May 13	1871	426	99	1572
Evaporating pan	J. H. Hill and J. Rivett	697,494	Apr. 15	3028	455	99	473
Evener, Doubletree	L. A. Freedy	697,116	Apr. 8	1286	307	99	314
Excavating and loading machine	D. H. Mahoney	701,588	June 3	567	124	99	2255
Exercising device	W. F. Lott	699,401	May 6	525	120	99	1228
Exhaust apparatus, Automatic variable	H. H. Hoff	699,080	Apr. 1	443	108	99	95
Exhaust-consumer	G. A. Hunt	702,007	June 24	3297	738	99	2929
Exhaust-head	H. Sims	696,601	Apr. 1	273	86	99	82
Exhaust mechanism	T. D. Kline	701,304	May 27	4043	980	99	3028
Exhibiting case, Talmie	A. H. Peal	697,522	Apr. 15	2143	476	99	496
Expandable bolt	M. M. Hyland	699,245	May 6	304	40	99	1216
Explosive engine	P. Maginnis	698,266	Apr. 22	3561	785	99	808
Extendible trough	J. F. Wilmet	700,588	May 20	2765	683	99	1776
Extension-table	C. W. Muns	698,005	May 6	908	210	99	1268
Extension-table	F. White	700,282	May 20	2423	555	99	1708
Extension-table	F. White	701,728	June 2	825	199	99	2262
Extractor: See Cork-extractor. Hydro-extractor. Fruit-juice extractor. Stamp-extractor.							
Eyeglass-case	W. Zorbi and J. J. Heise	702,584	June 17	2262	513	99	2510
Eyeglass-polisher	H. C. Figneron	698,853	Apr. 29	4707	1087	99	1057
Eyeglasses	H. C. Thomson	698,078	Apr. 22	3145	628	99	717
Eyeglasses	W. N. Blanchard	699,070	Apr. 29	5049	1121	99	1423
Eyeglasses	L. A. and L. J. Bachus	699,741	May 13	1177	274	99	1238
Eyeglasses	P. Z. McDonald	698,638	May 13	1088	273	99	1218
Eyeglasses	A. R. Critzer	700,689	May 20	2887	675	99	1813
Eyeglasses	F. A. Stevens	701,519	June 3	956	212	99	2200
Eyeglasses	W. L. Wall and L. Propert	701,111	May 27	3284	698	99	3028
Eyeglasses or spectacles	F. J. Leland	697,544	Apr. 8	1778	396	99	306
Eyeglass	H. G. Webber	698,770	Apr. 29	4428	904	99	1018
Eyeglass	E. Kempshall	700,121	May 13	1900	443	99	1578
Eyeglass	J. W. Force	701,478	June 3	323	78	99	2128
Eyeglass	I. W. Giles	702,190	June 10	1855	371	99	2468
Eyeglass	P. R. Glass	701,561	May 27	4158	958	99	3028
Eyeglass	P. R. Glass	701,562	May 27	4159	959	99	3029
Eyeglass	P. R. Glass	701,563	May 27	4160	960	99	3030
Fabric: See Carpet fabric. Tubular fabric. Elastic fabric. Tufted fabric. Photographic fabric. Woven figured fabric. Pile fabric.							
Fabric-cutting machine	H. A. Meyer	701,910	June 10	1128	267	99	2280
Fabric-slitting machine	W. B. Conrad and J. A. Cameron	697,985	Apr. 22	2928	658	99	628
Fabric, Machine for cutting blanks from	J. A. Cameron	697,978	Apr. 22	2929	659	99	629
Fabric, Machine for fixing spangled material to	R. Cornely	700,305	May 20	2280	536	99	1890
textile	D. Margolius	698,590	Apr. 1	517	189	99	173
Fabric, Making repaired	E. Knecht	702,568	June 17	2285	584	99	2296
Fabric, Reserve and discharge on textile	C. S. Pittsburgh	698,486	Apr. 1	61	14	99	16
Fan	W. E. Coleman	697,446	Apr. 15	2005	443	99	461
Fan	J. J. Wood	697,997	Apr. 15	2467	545	99	551
Fan	C. D. Pierce	699,706	May 13	1110	251	99	1417
Fan, Automatic	M. Ottenheimer	701,070	May 27	3210	675	99	3013
Fan, Electric	J. J. Wood	697,998	Apr. 15	2468	546	99	552
Fan, Electric	J. J. Wood	700,511	May 20	2747	689	99	1773
Fan-governor	H. Koch	701,914	June 10	1129	268	99	2281
Fan motor attachment	W. S. Moody	698,595	May 13	1508	345	99	1500
Fan-collecting apparatus for street-cars, &c. Automatic	L. Ferliester	700,708	May 20	2097	704	99	1240
Fan-register	A. Nielsen	698,943	Apr. 8	1079	233	99	249
Fan-gate	A. B. Clayton	697,139	Apr. 8	1288	343	99	343
Fan-gate	G. R. Clarke	697,681	Apr. 15	2281	580	99	589
Fan-gate	E. King	698,717	Apr. 29	4414	974	99	1009
Fan-gate	M. H. Larimore	702,027	June 10	1424	288	99	2421
Fastener, Expansion	E. J. McCormick	700,289	May 20	2429	546	99	1290
Fastener for catchels, purses, &c.	A. and J. Hinkel						

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr'g.	Vol.	Page.
Fastening device.	A. L. Drake.	698,470	Apr. 29	2880	868	99	887
Fastening device.	C. E. Smith.	698,571	Apr. 29	4050	886	99	980
Fastening device.	C. D. Hancock.	702,088	June 10	1414	317	99	2417
Fastening for articles of clothing.	J. M. Duffy.	701,313	June 3	88	13	99	2190
Fats or the like. Apparatus for the recovery of	O. Kremer.	700,056	May 13	1791	416	99	1556
Fatty compound of iodine and sulfur and making same.	O. Degner.	699,900	Apr. 1	974		99	208
Faucet.	J. C. Post.	697,581	Apr. 15	2786	617	99	694
Faucet.	F. F. Field.	699,577	May 6	408	110	99	1871
Faucet.	F. P. Sparraker.	702,680	June 17	2555	686	99	2672
Faucet and water-controlling connection. Safety.	E. G. (James).	696,731	Apr. 1	635	143	99	187
Faucet. Filter.	J. F. Ryan and W. McEwan.	701,943	June 10	1179	290	99	2271
Faucet for fluids. Compound.	C. G. Loygorri y Murrieta.	697,739	Apr. 15	2526	528	99	598
Feather cleaning and renovating machine.	M. R. Ruble.	698,494	Apr. 1	178	44	99	43
Feather-cleaning machine.	H. W. Pennybacker.	700,078	May 13	1909	434	99	1508
Feed and water device for chickens.	G. C. Lathrop.	697,443	Apr. 8	1777	366	99	306
Feed apparatus. Automatic.	F. Woerner.	700,110	May 13	1860	437	99	1574
Feed apparatus. Measured.	S. E. Newberry.	699,689	May 13	1101	256	99	1415
Feed-bag.	D. Schuurman.	698,780	Apr. 1	690	156	99	147
Feed-regulator.	C. B. Moore and G. B. Totman.	700,219	May 20	2156	494	99	1651
Feed-rolls.	C. W. H. Blood. (Reliance).	11,984	May 13	2028	468	99	1002
Feed-trough.	J. M. Allen.	702,686	June 17	2564	660	99	2674
Feed-water cleaner.	D. B. Morrison.	700,086	May 13	1909	419	99	1580
Feed-water filter and heater.	J. Davis.	700,686	May 20	2043	576	99	1814
Feed-water heater.	B. F. Kelley.	698,380	Apr. 22	3297	738	99	2929
Feed-water heater.	F. W. Shupert.	701,518	June 3	280	96	99	2194
Feed-water heater and purifier.	L. Brooks.	698,268	Apr. 22	3561	785	99	808
Feed-water. Heating.	F. H. Trevithick.	699,777	May 13	1253	390	99	1445
Feed-water regulator.	C. M. Spencer.	700,440	May 20	2518	566	99	1746
Feed-water siphon and trap. Combined.	C. Linstrom.	699,331	May 6	350	90	99	1251
Feeder.	G. M. Hiller.	701,088	May 27	3760	888	99	3001
Feeder. Boiler.	H. G. Larcom.	698,266	Apr. 22	3577	739	99	806
Feeder for young calves or colts.	R. A. Whitford.	697,304	Apr. 8	1721	324	99	360
Feeding and weighing mechanism. Automatic.	P. C. Waring.	698,284	Apr. 22	3489	782	99	784
Feeding device. Automatic proportional.	L. Sarpollet.	702,491	June 17	2201	501	99	2209
Feeding device. Stock or poultry.	Z. Xavers.	701,121	May 27	3906	899	99	3028
Feeding mechanism. Boiler.	R. H. White.	702,280	June 24	3128	685	99	2268
Feller. Machine for drilling rivet-holes in metallic wheel.	G. H. Everson.	698,189	Apr. 22	3287	743	99	707
Felly. Vehicle-wheel.	C. B. Van Horn.	697,118	Apr. 8	1267	306	99	315
Fence.	E. Lavelly.	697,523	Apr. 8	1637	367	99	360
Fence.	W. M. Craft.	699,177	Apr. 22	3261	725	99	781
Fence.	H. Bowen.	699,268	May 6	287	96	99	1233
Fence.	L. M. Runyon.	699,816	May 13	1286	306	99	1461
Fence.	T. Rodechar.	702,335	June 24	3731	857	99	2925
Fence. Barbed-wire.	T. Rodechar.	699,028	Apr. 22	3508	1118	99	1159
Fence construction.	J. H. Bain.	701,810	June 3	980	224	99	2226
Fence fabric, Making.	J. J. Hicks.	698,287	Apr. 22	3536	854	99	819
Fence-machine.	J. M. Stucker.	697,387	Apr. 8	1799	423	99	428
Fence-machine. Wire.	L. D. Peak and J. W. Osborne.	697,387	Apr. 8	1799	423	99	428
Fence-machine. Wire.	J. W. Driggles and L. Swank.	698,126	Apr. 22	3575	740	99	704
Fence-machine. Wire.	A. C. Mills and G. R. Lamb.	698,528	Apr. 29	3938	888	99	906
Fence-machine. Woven-wire.	F. Stebler.	700,710	May 20	2114	707	99	1261
Fence-making-machine spreader.	W. C. Kincaid.	699,180	May 6	119	39	99	1196
Fence-post.	R. T. Van Valkenburg.	698,280	Apr. 1	1247	278	99	284
Fence-post.	C. W. Snook.	697,081	Apr. 8	1247	278	99	1014
Fence-post.	L. A. Thoraburg and A. L. Denser.	698,739	Apr. 29	4438	291	99	1010
Fence-post.	F. A. Peobles.	700,077	May 13	1286	428	99	1523
Fence-post.	O. R. Smith and F. T. Bisbee.	700,481	May 20	2502	578	99	1750
Fence-post.	C. Leall.	700,481	May 20	2528	598	99	1789
Fence-post.	C. L. Tuttle.	701,426	June 3	326	57	99	2161
Fence-post.	E. R. Spore and J. M. Kaub.	701,771	June 10	1707	344	99	2476
Fence-post.	J. A. Mitchell.	702,380	June 10	1707	344	99	2476
Fence-post-making machine.	O. R. Smith and F. T. Bisbee.	700,528	May 20	2226	590	99	1607
Fence-post, telegraph-pole, &c.	I. M. Warner.	702,528	June 17	2240	520	99	2728
Fence. Stationary.	A. H. and C. R. Cook and W. H. Hood.	701,597	June 3	323	7	99	2115
Fence tool. Wire.	W. Neab.	701,790	June 3	323	7	99	2115
Fence. Wire.	F. W. and J. G. Opel.	700,074	May 13	1815	421	99	1526
Fence-wire stretcher.	E. Sahler.	699,546	May 6	306	40	99	1216
Fences. Machine for weaving cross-wires in.	N. Steele and H. Brown.	698,285	Apr. 22	3536	854	99	819
Fencing. Woven-wire.	J. M. Denning.	697,074	Apr. 8	1260	306	99	309
Fender.							
See Car-fender.							
Fender.	A. Beck.	700,716	May 20	2129	710	99	1264
Fender and brake. Combined.	E. E. and E. E. Clark.	701,628	June 3	326	160	99	2290
Ferrule for awl or knife handles.	M. Kuehn.	701,561	June 3	326	160	99	2290
Fertilizer-distributor.	E. Edwards.	698,704	May 13	1284	397	99	1451
Fertilizer-distributor.	C. H. Sanford.	699,547	May 6	307	40	99	1216
Fertilizer-distributor.	W. P. Nise.	700,588	May 20	2774	688	99	1780
Fertilizer-distributor.	T. J. Waddell.	701,776	June 3	323	7	99	2115
Fertilizer-distributing receptacle. Plant.	J. E. Edwards.	701,818	June 3	323	7	99	2115
Fiber-crozier.	P. Mickle.	698,304	Apr. 22	3526	841	99	809
Fiber. Machine for reducing wood to	W. K. Squier.	701,418	June 3	280	61, 80	99	2115

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Fiber-separating machine	E. B. Allison	699,988	May 13	979	288	99	1881
Fibers or filaments from solutions of cellulose, &c., and for twisting and putting into coil form such or other fibers or filaments. Apparatus for the production of textile	C. F. Topham	702,288	June 10	1970	448	99	2530
Fibers. Retting vegetable	B. S. Summers	698,515	Apr. 1	211	99	99	40

Fire-door holding and releasing device	P. Olsen	698,698	Apr. 1	558	128	99	121
Fire-engine fire-kindler	H. W. Hines	698,438	Apr. 1	88	19	99	38
Fire-engine fire-kindler	W. Stewart	698,508	Apr. 1	301	48	99	47
Fire-engine fire-kindler	T. J. Briser	698,711	Apr. 1	608	188	99	131
Fire-engine fire-kindler	W. E. and N. E. Cain	698,885	Apr. 1	880	188	99	131
Fire-engine fire-kindler	H. Boettcher	698,981	Apr. 8	1048	288	99	241
Fire-engine fire-kindler	J. T. Mahar	697,788	Apr. 15	3531	888	99	504
Fire-engine fire-kindler	J. T. Mahar	698,658	May 6	805	190	99	1348
Fire-engine fire-kindler	J. C. McCormick	700,548	May 30	3901	640	99	1794
Fire-engine fire-kindler	J. and P. J. Setbacken	701,044	May 27	3847	888	99	2019
Fire-engine fire-kindler	O. Tardif	708,388	June 10	1747	368	99	2488
Fire-engine fire-kindler	E. F. Hendricks and E. Thompson	708,888	June 17	2888	687	99	2741
Fire-engine fire-kindler	E. M. Christ and W. I. Haldeman	708,888	June 17	2888	687	99	2741
Fire-engine fire-kindler	R. Nicholls	700,078	May 13	1818	481	99	1508
Fire-engine fire-kindler	R. E. Hemming	701,488	June 3	870	288	99	2194
Fire-engine fire-kindler	M. E. Weller	698,780	Apr. 1	728	188	99	136
Fire-engine fire-kindler	W. H. Bandl	700,698	May 20	2998	644	99	1808
Fire-engine fire-kindler	R. M. Martin	700,698	May 20	3080	700	99	1846
Fire-engine fire-kindler	W. E. Ezy	698,884	Apr. 1	287	218	99	198
Fire-engine fire-kindler	H. O. Montgomery	700,318	May 30	3154	484	99	1651
Fire-engine fire-kindler	C. Muhring	697,006	Apr. 8	1194	288	99	278
Fire-engine fire-kindler	C. E. Miller	697,641	Apr. 15	2849	511	99	828
Fire-engine fire-kindler	W. Doll	697,611	Apr. 15	2888	511	99	817
Fire-engine fire-kindler	J. Curry	698,698	May 13	1088	241	99	1401

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Fire-extinguishing systems. Main valve for	H. Evermann	700,187	May 30	3008	479	99	1888
Fire-hose shut-off	J. H. Towers	698,574	Apr. 29	4780	1044	99	1072
Fire-kindler and method of making	A. F. Putnam	697,014	Apr. 8	1218	371	99	877
Fireman's mask	J. B. Reid	708,431	June 17	2173	496	99	2808
Fireman's shield	F. W. Shappard	708,028	June 10	1888	328	99	2408
Fireplace and chimney. Portable	E. S. Richards	708,998	June 24	5180	788	99	2513
Fireproof building structure	J. O. Ellinger	708,088	June 10	1478	381	99	2438
Fireproof door, &c. Automatic	C. A. Barber	698,788	Apr. 29	4388	1000	99	1032
Fireproof shutter, door, &c.	J. G. Wilson	700,478	May 27	3447	791	99	1938
Fire-resisting staircase	W. Seefelt	698,508	Apr. 1	191	46	99	45
Fire-resisting window	T. Lee	698,688	May 13	1088	338	99	1411
Fire-screen gate	J. W. McLean	698,948	Apr. 29	4998	1088	99	1085
Fire-shutter	P. Ebner	698,478	Apr. 29	3808	1801	99	889
Fire-starter or gas-heater	T. B. Draper and G. T. Lyon	708,048	June 10	1880	318	99	2408
Fires. Extinguishing	J. D. Moore and F. M. Martin	700,987	May 27	3818	880	99	1908
Fires in closed compartments. Apparatus for extinguishing	H. B. Feibiger	708,714	June 17	2612	601	99	2304
Fires in closed compartments. Apparatus for the stoppage of water from automatic sprinkler-heads after firing valve for subsurface explosion-tubes	T. Tipping and E. Fletcher	700,108	May 18	1870	488	99	1572
Fishing-bait	J. P. Holland	698,971	Apr. 8	1184	328	99	951
Fishing-bait	J. Heddon	698,438	Apr. 1	73	17	99	81
Fishing-bait	A. Morris	708,388	June 10	1718	488	99	2478
Fishing-bait	A. B. Lacey	698,387	May 6	516	119	99	1881
Fishing-bait	J. M. Eytok, Jr.	698,711	May 13	1138	382	99	1418
Fishing-bait	P. E. T. Berner	701,138	May 27	3988	304	99	2087
Fishing-bait	A. Taylor	700,988	May 27	3938	840	99	1977
Fishing-bait	E. D. Rockwell	700,538	May 30	3988	648	99	1788
Fishing-bait	R. B. Charlton	698,148	May 6	40	11, 12	99	1194
Fishing-bait holder	V. Gebhardt	698,304	May 6	330	78	99	1241
Fishing device	J. Seiler	700,088	May 13	1880	431	99	1500
Fishing. Floating seine-net or weir for	J. S. Dill	698,084	Apr. 29	5038	1128	99	1145
Fishing-gear	A. W. Wilson	697,910	Apr. 15	3887	688	99	638
Fishing-net sinker	A. Johnson	708,988	June 24	5179	709	99	2708
Fishing-reel	M. A. Shipley	698,888	May 13	1348	318	99	1488
Fishing-reel	E. von Hofe	700,484	May 30	3978	800	99	1788
Fishing-reel line-guide	L. Atwood	708,388	June 24	3908	877	99	2900
Flash-lamp	H. Krueger and R. J. Hoffman	698,088	Apr. 28	3958	671	99	608
Flash-light apparatus	G. Collard	698,438	May 6	519	141	99	1808
Flash-light machine. Photographic	A. Hensley	698,588	May 6	738	172	99	1288
Flash	L. G. Bigelow	698,438	Apr. 1	18	5	99	8
Flash. Casting-flask. Mold-flask	W. F. Nicholas	698,700	May 13	1108	358	99	1415
Flash-iron heater	J. T. Smith	701,770	June 3	878	198	99	2891
Flax or hemp straw. Machine for treating	W. E. Lombard	708,388	June 24	3981	800	99	2918
Fleshing-machine	C. L. and R. A. Schultz	700,398	May 30	3818	808	99	1808
Flexible coupling	O. E. Gibson	701,878	June 10	1888	327	99	2844
Flies from cattle and trapping same. Device for brushing	A. W. Ayling and P. F. Reichert	698,641	May 13	901	380	99	1388
Flood-bell	J. H. Oyle	697,188	Apr. 8	1438	388	99	330
Flood-gate	H. B. Casperson	701,678	June 3	791	189	99	2880
Flood-gate	E. A. Stevens	708,188	June 24	3480	800	99	2878
Flood-gate	G. B. Waite	708,088	June 24	3907	738	99	2928
Flood-gate	J. M. Cammack	700,188	May 30	3908	480	99	1800
Flood-gate	W. H. Barrar	708,618	June 17	3438	538	99	2848
Flood-gate	E. J. Welland	708,887	June 17	3848	538	99	2728
Flood-gate	C. F. Lemcke	708,588	June 17	3848	537	99	2728
Flood-gate	W. H. Grippin	698,307	May 6	388	78	99	1848
Flood-gate	C. O. Gaudin	698,840	Apr. 29	4700	1088	99	1038
Flood-gate	C. W. Smedley and J. P. E. de Brito	701,887	June 3	884	148	99	2848
Flood-gate	O. W. Norcross	698,548	Apr. 29	4000	888	99	918
Flood-gate	O. W. Norcross	698,548	Apr. 29	4018	888	99	918
Flood-gate	W. W. Olin	698,084	May 13	1081	240	99	1401
Flood-gate	J. and S. Andrews	698,340	Apr. 28	3428	788	99	787
Flood-gate	G. P. Paoletti	698,381	Apr. 28	3448	787	99	788
Flood-gate	M. A. De Force	698,184	May 6	51	14	99	1108
Flood-gate	D. Boyd	698,174	Apr. 29	3887	788	99	780
Flood-gate	J. E. Cramer	701,388	May 27	4144	938	99	3078
Flood-gate	J. Cashner	701,148	May 27	3884	610	99	2048
Flood-gate	I. C. Eick	708,348	June 10	1818	487	99	2517
Flood-gate	J. Hartman	700,648	May 30	3978	688	99	1888
Flood-gate	W. E. Johnson	698,308	Apr. 1	988	219	99	808
Flood-gate	M. W. Hibbard	698,308	May 6	438	118	99	1874
Flood-gate	H. H. Westinghouse	708,388	June 10	1770	404	99	2480
Flood-gate	W. H. Westinghouse	708,497	June 17	2818	804	99	2808
Flood-gate	R. O. Sayer	708,498	June 17	2197	800	99	2808
Flood-gate	A. C. Smith	708,001	June 17	3408	300	99	2808
Flood-gate	W. M. Benson	701,688	May 27	3841	381	99	2048
Flood-gate	P. H. Hamilton	708,373	June 30	3908	678	99	2707
Flood-gate	J. Hartman	700,648	May 30	3978	688	99	1888
Flood-gate	J. Patton	701,388	June 3	178	30	99	118
Flood-gate	C. E. Day	701,548	June 3	478	107	99	2808
Flood-gate	L. F. Haynes	708,088	June 10	1888	380	99	2408
Flood-gate	E. P. Rogers	698,388	Apr. 28	3818	738	99	2707
Flood-gate	A. D. Miller	700,688	May 30	3978	688	99	1888

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr'e	Vol.	Page.
Fly-exit for screens.	C. F. Working.	690,787	May 13	1178	878	98	148
Fly-paper holder.	C. D. Eaton and A. L. Norton.	708,547	June 17	2890	381	99	261
Fly-screens.	A. L. Stokesberry.	698,768	Apr. 29	4476	983	99	1017
Fly-trap.	W. J. Purvis.	703,338	June 24	3719	356	99	232
Fly-trap. Electric.	E. R. Greene.	694,374	Apr. 22	3546	701	99	803
Folding box.	E. R. Greene.	694,408	Apr. 1	127	94	98	3
Folding box.	B. R. McFadden.	698,388	Apr. 22	3681	777	99	79
Folding box.	D. Elliott.	700,049	May 18	1781	418	99	125
Folding box.	J. C. Elver.	701,622	June 8	931	180	99	229
Folding box.	Z. B. Webb.	701,622	June 8	3218	768	99	229
Folding chair.	W. E. Nivison.	708,077	June 24	4087	856	99	91
Folding device.	E. J. Schuneman.	696,588	Apr. 29	1428	327	99	248
Folding-machine.	L. E. Barnes.	708,085	June 10	1545	307	99	266
Folding stand or easel.	J. A. Scott.	701,688	June 8	701	155	99	266
Folding table, shelf, or desk.	G. A. Ank.	708,930	June 24	3573	800	99	266
Food and making same. Malted cereal.	J. K. Lippen.	697,706	Apr. 15	3660	678	99	57
Food-chopper.	H. K. Wood.	700,778	May 27	5185	716	99	187
Food-cutter.	J. A. Bone.	708,188	June 24	3477	700	99	287
Foot. Artificial.	M. Smith.	699,760	May 13	1288	269	99	144
Foot-rest.	L. Woerner.	701,703	June 8	862	188	99	288
Foot-warmer.	J. P. McAbee.	697,375	Apr. 8	1668	873	99	3
Forge fire-pot. Blacksmith's.	D. D. Reese.	698,738	Apr. 1	678	128	99	1
See Hay-fork.	S. D. Robison.	700,580	May 30	3704	626	99	17
Fork-making die.	M. C. Moran.	701,928	June 10	1140	368	99	22
Form. Adjustable sleeve.	P. J. Nelson.	701,559	June 3	506	111	99	22
Form. Construction of.	A. Goerke.	696,787	Apr. 1	744	106	99	1
Foundations. Sinking.	A. M. Acklin.	698,471	May 6	656	128	99	18
Foundry-sand. Apparatus for feeding and tempering.	A. M. Acklin.	698,471	May 6	656	128	99	18
Foundry-sand feeding and tempering apparatus.	A. M. Acklin.	698,471	May 6	656	128	99	18
Frame.	See Drawing-frame. Quilting-frame. Embroidery-frame. Vial-carrying frame. Picture-frame.						
Frame.	E. Oldenbusch.	697,878	Apr. 15	3771	614	99	4
Pressing can. Water.	E. Stutz.	699,368	May 13	1493	387	99	14
Pro-operating mechanism.	F. C. Anderson.	708,085	June 24	3523	748	99	26
Proot on vegetation. Machine for preventing deposition of.	S. D. Smith.	708,816	June 24	3738	860	99	26
Fruit-box.	W. Clement.	702,778	June 17	3738	685	99	7
Fruit box or basket.	G. H. Williams.	698,778	Apr. 29	4508	968	99	10
Fruit-drier.	L. Van Scoyoc.	697,573	Apr. 15	2407	585	99	10
Fruit-drier tray.	J. H. Collins.	697,387	Apr. 8	1591	454	99	10
Fruit-grading machine.	A. H. Pettit.	697,380	Apr. 8	1591	454	99	10
Fruit-jar.	F. Mason.	701,218	May 27	4028	933	99	3
Fruit-jar.	H. B. Burns.	703,708	June 17	2588	508	99	3
Fruit-juice extractor.	C. Pate.	700,638	May 30	3008	908	99	1
Fruit, &c. Press for expressing juice from.	B. A. Geurink.	708,190	June 24	3227	818	99	1
Fuel. Artificial.	W. R. Peakes.	698,560	Apr. 29	4704	951	99	1
Fuel. Artificial.	A. E. Tucker and C. Cory.	700,389	May 30	3511	808	99	1
Fuel block and briquet.	F. Chailly.	697,384	Apr. 8	1598	454	99	1
Fuel-burner.	C. A. Dally.	701,900	June 8	394	806	99	1
Fuel-regulator. Automatic.	H. A. House, Jr.	698,698	Apr. 1	448	106	99	1
Furnace.	See Assayer's furnace. Metallurgical furnace. Assaying-furnace. Muffle-furnace. Blast-furnace. Ore-roasting furnace. Boiler-furnace. Quicksilver furnace. Boiler or other furnace. Retort-furnace. Boasting-furnace. Rolling-mill furnace. Electric furnace. Shaft-furnace. Electric combustion-furnace. Sheet-metal-heating furnace. Fine-fuel furnace. Smoke-consuming furnace. Gas-furnace. Spelter-furnace. Glass-furnace. Steel-furnace. Glass-making furnace. Straw-burning furnace. Heating-furnace. Hot-air furnace.

Garment	D. B. Littlefield	697,594	Apr. 15	2604	405	99	2180
Gas and air mixer	G. A. Loeben	701,000	June 8	128	128	99	2180
Gas and air mixing burner	W. J. Woodward	697,708	Apr. 15	2580	578	99	2180
Gas and oil burner. Combination	G. A. Smith	697,080	Apr. 8	1245	277	99	2180
Gas apparatus. Acetylene	A. W. Edwards	700,008	June 10	1471	351	99	2180
Gas apparatus for extracting tar from	P. Plantinga	690,508	May 6	810	191	99	2180
Gas apparatus for the manufacture of carbureted-hydrogen	B. Van Steenberg	690,508	May 6	428	97	99	2180
Gas-burner	H. Eldridge	697,481	Apr. 15	2028	447	99	2180
Gas-burner	J. Harris	697,481	Apr. 15	2028	444	99	2180
Gas-burner	P. Keller and P. Keller	700,305	May 20	2125	497	99	2180
Gas-burner	H. Eldridge	701,085	May 27	2741	554	99	2180
Gas-burner	C. W. Currier	701,308	June 8	40	8	99	2180
Gas-burner	T. Holland	700,878	June 17	2600	678	99	2180
Gas-burner for firing barrels	H. O. Rush	690,578	May 6	856	200	99	2180
Gas-burner. Heating	E. S. Clark	698,485	Apr. 22	2625	598	99	2180
Gas-burner. Incandescent	F. E. Clavson and O. C. Benjamin	698,878	Apr. 22	2708	518	99	2180
Gas-burner. Incandescent	J. W. Blakey	698,028	Apr. 22	2608	541	99	2180
Gas-burner. Incandescent	C. W. Taylor	700,574	May 20	2647	654	99	2180
Gas-burner. Incandescent	I. E. Taylor	700,587	May 27	2421	786	99	2180
Gas-burner. Incandescent	C. W. Taylor	700,820	June 17	2626	621	99	2180
Gas-burner. Incandescent	A. A. Pratt	700,088	June 24	2628	708	99	2180
Gas-burner lighting attachment	E. W. Cornell	700,048	June 24	2605	746	99	2180
Gas-burner mantle-support	H. H. Tibbs	698,887	May 13	1488	388	99	2180
Gas-burning heater	A. W. Kent	698,519	Apr. 22	2826	678	99	2180
Gas-capsule	G. A. Logan	698,928	Apr. 8	1155	257	99	2180
Gas. Charging compartments with	J. D. Moore and F. M. Martin	700,538	May 20	2794	688	99	2180
Gas-check for burner or similar burner	F. M. Brooks	700,538	May 27	2480	708	99	2180
Gas-distributing system	M. Toits and A. Lipschultz	690,725	May 13	1145	288	99	2180
Gas-engine	F. L. Nichols	700,878	June 10	1287	445	99	2180
Gas-fire appliance	J. F. Hewitt	697,941	Apr. 15	2621	587	99	2180
Gas-fixture	G. F. Bryan	690,080	May 13	1003	284	99	2180
Gas-fixture globe-holder attachment	J. Kirby, Jr.	690,644	Apr. 1	418	108	99	2180
Gas for use in explosion-engines. Device for generating	J. S. Kilian	690,580	Apr. 1	816	74	99	2180
Gas-furnace. Steam-boiler	E. J. Duff	701,801	June 10	1081	280	99	2180
Gas generating and burning furnace	C. M. Gearing	700,413	June 17	2056	408	99	2180
Gas-generating apparatus	W. J. Faulkner	701,180	May 27	4018	923	99	2180
Gas-generating apparatus	W. J. Faulkner	701,808	June 8	928	207	99	2180
Gas-generating apparatus. Acetylene	E. N. Dickerson	698,418	Apr. 1	49	11	99	2180
Gas-generating apparatus. Acetylene	J. Nounaret	698,044	Apr. 22	2628	678	99	2180
Gas-generating apparatus. Acetylene	A. E. Adolphson	690,226	May 13	1200	314	99	2180
Gas-generating apparatus. Acetylene	P. Bucher	700,405	May 20	2540	581	99	2180
Gas generator. Acetylene	F. Simonson	698,765	Apr. 1	700	120	99	2180
Gas generator. Acetylene	J. B. Crompton	698,820	Apr. 1	688	200	99	2180
Gas generator. Acetylene	E. J. Dolan	698,948	Apr. 8	1080	241	99	2180
Gas generator. Acetylene	C. E. Drake	697,618	Apr. 15	2285	512	99	2180
Gas generator. Acetylene	G. P. Washburn	698,160	Apr. 22	2828	787	99	2180
Gas generator. Acetylene	P. F. v. Mohrer, J. P. and J. Hopp	698,204	Apr. 22	2820	781	99	2180
Gas generator. Acetylene	O. J. Moussette	698,306	Apr. 22	2826	788	99	2180
Gas generator. Acetylene	A. Yancy	698,425	Apr. 22	2726	688	99	2180
Gas generator. Acetylene	M. D. Compton	698,638	Apr. 22	2806	680	99	2180
Gas generator. Acetylene	F. H. Merrill and F. Hickman	698,720	Apr. 22	2828	678	99	2180
Gas generator. Acetylene	T. H. Lewis	698,975	Apr. 22	4018	1005	99	2180
Gas generator. Acetylene	O. Falkenwald	698,108	Apr. 22	5125	1125	99	2180
Gas generator. Acetylene	A. D. Williamson	698,371	May 6	261	60	99	2180
Gas generator. Acetylene	J. S. Wood, Jr.	698,374	May 6	268	61	99	2180
Gas generator. Acetylene	D. H. Long	698,328	May 6	262	91	99	2180
Gas generator. Acetylene	L. Montel	698,327	May 6	262	91	99	2180
Gas generator. Acetylene	W. H. Bailey	698,645	May 13	268	288	99	2180

Gas generator.	Acetylene.	J. Quist and J. A. Bain.	700,810	May 27	2840	760	99	1916
Gas generator.	Acetylene.	A. C. Einstein.	700,908	May 27	2810	808	99	1948
Gas generator.	Acetylene.	J. W. Weeks.	701,432	June 8	257	61	99	2168
Gas generator.	Acetylene.	J. A. Mosher.	701,540	June 8	577	126	99	2228
Gas generator.	Acetylene.	A. Davis.	701,580	June 10	1016	287	99	2267
Gas generator.	Acetylene.	D. H. Truchler.	700,804	June 17	2418	651	99	2268
Gas generator.	Acetylene.	J. D. Buckley and E. H. Phinney.	700,778	June 17	2725	685	99	2707
Gas generator.	Acetylene.	R. W. Carman and F. M. Lawrence.	698,944	May 13	1806	384	99	1518
Gas generator.	Formaldehyde.	G. W. Bonds.	697,720	Apr. 15	2619	581	99	580
Gas generator.	Gas-engine.	W. E. Scofield.	697,884	Apr. 8	1284	275	99	261
Gas generators.	Carbide-feeding device for acetylene.	B. N. Hayes.	698,028	May 13	1073	261	99	1409
Gas-heated iron.		C. W. Claybourne.	697,525	Apr. 8	1580	355	99	256
Gas-heater.		F. G. Horstlein.	698,017	Apr. 22	2026	686	99	694
Gas-heater.		E. A. Monjo.	700,585	May 20	2737	637	99	1781
Gas-heater.		L. Wilson.	700,877	May 20	2273	619	99	1677
Gas impact-engine.		E. D. Anderson.	698,437	Apr. 22	2820	680	99	900
Gas-lighter.	Electric.	A. J. Marshall.	698,508	May 6	181	38	99	1302
Gas-lighting apparatus.		C. Fader.	700,811	June 10	1881	418	99	3020
Gas-lighting device.		G. Meyer.	700,138	June 10	1644	388	99	2464
Gas lighting or extinguishing device.		V. Forti.	700,084	June 24	2530	680	99	2586
Gas-light. Substance and mantle for incandescent.		L. Hicks.	700,195	June 10	1640	388	99	2465
Gas-line safety device.		J. C. Furman.	698,827	Apr. 1	819	187	99	178
Gas-line. Automatic shut-off for.		W. D. Luce.	700,071	June 24	2508	781	99	2640
Gas-machine weight-motor.		J. Franklin.	700,987	June 24	3044	700	99	2709
Gas-main stopper.		H. Spencer.	697,878	Apr. 8	1881	408	99	407
Gas-making apparatus.		E. Fleischer.	701,535	June 8	508	110	99	2213
Gas. Making water.		F. W. C. Schiewind.	698,028	Apr. 22	2117	688	99	711
Gas. Manufacturing.		F. W. C. Schiewind.	698,028	Apr. 22	2117	688	99	712
Gas-manufacturing plant.		E. H. Ellsworth.	700,088	May 13	1736	400	99	1545
Gas-meter.		E. Thompson.	698,518	Apr. 1	284	51	99	58
Gas or oil engine.		D. L. Block.	700,408	May 20	2534	580	99	1787
Gas-pressure regulator.		E. J. Duff.	697,320	Apr. 8	1288	428	99	682
Gas-producer.		L. Mond.	697,887	Apr. 15	2703	618	99	15
Gas-producer.		J. W. Dougherty.	698,480	Apr. 1	88	18	99	2026
Gas-producer.	Mechanical stirrer or pump for.	T. H. Miller.	700,580	June 17	2684	540	99	2300
Gas-producing apparatus.		D. O. Freeman.	701,704	June 8	767	170	99	1640
Gas-purifier.		C. R. Faber, Jr.	700,188	May 20	2085	479	99	2300
Gas-purifier grid.		J. A. Burgess.	701,525	June 10	1980	288	99	641
Gas. Purifying acetylene.		H. A. Blackmore.	697,981	Apr. 15	2671	581	99	2470
Gas-purifying agents. Making.		H. L. McAdams.	700,880	June 10	1715	387	99	1408
Gas-regulator.		C. W. Isbell.	698,670	May 13	1448	328	99	1918
Gas-retort.		G. F. Richter.	700,084	May 27	2808	778	99	686
Gas-retort. Sectional.					778	778	99	1288
Gas-saving appliance.		S. J. John.	698,507	Apr. 22	2843	678	99	1288
Gas-service pipes. Antifrosting device for.		H. N. Baylis.	698,261	May 6	254	68	99	3224
Gas-washer.		P. Riecke.	701,619	June 8	405	128	99	1288
Gas. Apparatus for destroying.		J. Edmunds.	698,828	Apr. 22	2828	618	99	889
Gas. Means for compressing or liquefying.		H. Borland.	698,228	Apr. 22	265	90	99	1288
Gas. Vessel for the reception of high-pressure.		A. Ludwig.	698,190	May 6	124	38	99	1288
Gas. Vessel and seal for hydrocarbon liquid containers.		P. J. Lockwood.	698,190	May 6	124	38	99	1288
Gate.		E. Graham.	698,520	Apr. 1	288	71	99	67
Gate.		T. A. Hill.	698,078	Apr. 1	288	128	99	115
Gate.		W. M. Plaster.	697,880	Apr. 15	2784	616	99	684
Gate.		W. H. Kemper.	698,591	Apr. 22	2859	787	99	805
Gate.		E. Phillips.	698,651	Apr. 22	2860	1080	99	1080
Gate.		H. M. Lockman.	701,905	June 10	1118	254	99	2268
Gate.		C. E. Johnson.	700,120	June 10	1943	448	99	2302
Gate.		O. B. Jacobs.	697,521	Apr. 15	2090	484	99	478
Gate.		C. F. Lee.	698,308	May 13	1208	301	99	1486
Gauntlet.		J. D. McFarland, Jr.	700,970	May 27	2617	681	99	1960
Gear. Adjustable speed.		A. Herchmann.	698,484	Apr. 22	2828	687	99	684
Gear braking device. Compensating.		T. A. Dick.	700,380	June 24	2820	684	99	2705
Gear. Changeable-speed and reversing.		F. L. Ewerhardt and H. F. Emme.	700,184	May 20	2627	477	99	1080
Gear-cutting engine.		J. H. Mitchell.	698,128	Apr. 22	2671	716	99	741
Gear. Differential and reversing.		C. F. Allen.	698,704	Apr. 1	880	128	99	186
Gear. Driving.		J. C. Woody, W. E. Danley, and W. H. Young.	698,728	Apr. 1	727	167	99	187
Gear. Driving.		W. F. Williams.	700,941	June 17	2640	637	99	8764
Gear. Elliptic chain driving.		W. F. Williams.	700,940	June 17	2630	637	99	8764
Gear. Elliptic chain driving.		H. E. A. Kindermann.	700,305	May 20	2126	467	99	1640
Gear for machine-tools. Auxiliary reversing.		K. P. Dawson.	701,102	May 27	2674	914	99	2027
Gear. Friction.		J. Anderson.	698,618	Apr. 22	2828	688	99	688
Gear-molding apparatus.								

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Gear, Reversing.	C. F. Smith.	701,264	June 3	646	143	99	2944
Gear transmission.	J. Suchy.	701,218	June 24	2737	861	99	2938
Gear, Transmitting.	J. S. Copeland.	707,300	Apr. 8	1835	243	99	345
Gear, Variable-speed.	F. R. Cocksburn.	701,542	June 3	466	105	99	2904
Gearing and casing therefor. Combined.	H. B. Keiper.	707,680	Apr. 15	2885	519	99	335
Gearing, Belt, rope, or chain.	E. H. Hodgkinson.	703,948	June 24	3005	705	99	2738
Gearing, Change.	F. W. Gordon.	698,008	Apr. 22	3028	985	99	932
Gearing, Differential.	W. G. Caffrey.	707,801	Apr. 15	2645	580	99	336
Gearing, Differential.	E. G. Small.	701,632	June 3	646	141	99	2943
Gearing, Differential.	C. H. O. Hansen.	702,738	June 17	2728	686	99	2715
Gearing, Reversing.	C. W. Wagner.	699,996	May 6	897	305	99	1390
Gearing, Reversing and variable-speed.	H. G. Underwood.	703,940	Apr. 1	851	196	99	180
Gearing, Variable-speed.	L. E. Krots.	707,410	Apr. 8	1994	488	99	1973
Gearing, Variable-speed.	S. de Ploeg.	700,961	May 27	2625	585	99	324
Gearing, Variable-speed.	F. W. Gordon.	701,576	June 10	1039	289	99	2943
Gearing, Variable-speed friction.	E. P. Cowles.	703,227	June 24	2618	833	99	2904
Gelatin-yieldable liquids. Obtaining.	E. R. Edson.	703,940	June 24	2623	833	99	2905
Gem grinding and polishing apparatus.	F. E. Hillard.	701,670	June 10	1064	280	99	2943
Generator.							
See Electric generator. Motor-generator.							
Electromechanical generator.							
generator.							
Gas-generator.							
Magneto-electric generator.							
Generators or motors. Compensation of.	F. G. Baum.	699,244	Apr. 22	2401	795	99	795
Generators or motors. Means for compensating.	F. G. Baum.	699,245	Apr. 22	2402	795	99	795
Birth fastening Saddle.	C. I. Bush.	701,586	June 10	995	280	99	2921
Glass.							
See Magnifying glass.							
Glass-annulling leet. Plate.	W. D. Keyes.	700,487	May 20	2579	501	99	1737
Glass, &c. Apparatus for the manufacture of.	J. Löhne.	699,980	Apr. 29	2680	1022	99	1111
Glass-blowing machine.	H. J. Colburn.	698,817	Apr. 29	4513	1017	99	1049
Glass-blowing machine.	L. H. Colburn.	698,818	Apr. 29	4514	1018	99	1047
Glass-blowing machine.	O. E. Walton.	700,205	June 24	2746	898	99	2980
Glass bottles. Machine for making.	L. Grote.	700,101	May 20	2100	490	99	1040
Glass by electrical heating. Manufacture of.	A. Voelker.	700,061	June 10	1454	407	99	2425
Glass-cutter.	W. L. Barrett.	703,377	June 10	1781	407	99	2426
Glass-cutter, Circular.	D. R. Johnson.	703,728	June 17	2647	809	99	2921
Glass-delivering apparatus.	W. D. Keyes.	700,488	May 20	2680	991	99	1737
Glass. Drawing.	J. H. Lubbers.	703,014	June 10	1812	300	99	2925
Glass. Drawing.	J. H. Lubbers.	703,015	June 10	1813	301	99	2926
Glass-drawing apparatus.	J. H. Lubbers.	703,016	June 10	1814	302	99	2927
Glass-drawing apparatus.	J. H. Lubbers.	703,017	June 10	1815	303	99	2928
Glass, &c. Electric furnace for making.	J. Löhne.	699,981	Apr. 29	4081	1023	99	1111
Glass-furnace.	J. P. Putallaz.	699,973	May 13	1698	377	99	1395
Glass-gathering machine.	D. C. Ripley.	697,596	Apr. 15	2798	618	99	935
Glass-gathering machine.	T. Coleman, Jr., and C. Runyon.	702,688	June 17	2406	545	99	2923
Glass-making furnace.	K. Gobbe.	699,982	Apr. 29	4082	1024	99	1094
Glass. Manufacturing.	A. Voelker.	699,708	Apr. 29	4083	992	99	1017
Glass-polishing machine.	W. Labodny.	699,498	Apr. 1	1111	347	99	99
Glass refining and delivering apparatus.	W. D. Keyes.	699,720	Apr. 1	961	146	99	139
Glass. Roller for rolling and ornamenting sheet or plate.	L. Appert.	697,880	Apr. 8	1538	257	99	935
Glass to molds. Mechanism for feeding.	T. Coleman, Jr.	703,224	June 17	2407	545	99	2924
Glassware. Lens-fastening for.	H. H. Waugh.	703,225	June 10	1975	451	99	2921
Glassware. Apparatus for fire-finishing.	H. Schaub.	699,500	Apr. 1	189	45	99	44
Glassware-finishing machine.	W. R. McCoy.	697,581	Apr. 15	2189	473	99	935
Glassware. Manufacturing hollow.	J. L. C. V., F. J., P. R., and F. L. Arbogast.	699,008	Apr. 29	6080	1117	99	1139
Glass-working machine.	F. R. McBerly.	699,487	Apr. 1	126	22	99	94
Glassing-machine. Automatic.	E. C. Hemming.	703,098	June 10	1470	328	99	2929
Glassing system.	A. M. Whipple.	697,598	Apr. 15	2629	497	99	935
Glove-fastening.	W. B. Murphy.	697,590	Apr. 15	2707	613	99	933
Gluing-machine.	O. D. Wetmore.	699,268	May 6	897	30	99	1235
Gluten. Manufacturing.	J. Brown.	699,791	Apr. 29	4533	1028	99	1085
Gold-dredge.	L. A. Morel.	699,594	Apr. 29	2628	77	99	73
Gold. Manufacture of colloidal.	T. B. Lee.	699,578	Apr. 1	899	77	99	93
Gold-saving device. Submarine.	C. Paul.	699,105	Apr. 29	2615	704	99	721
Gold-separator.	L. D. Craig.	699,935	May 13	1485	341	99	1495
Gold-separator distributor.	R. C. Lester.	703,643	June 17	2487	570	99	2927
Gold-separator distributor.	C. W. Gardner.	697,748	Apr. 15	2542	595	99	939
Gold-separator distributor.	R. H. Forthelwaite.	699,887	Apr. 1	945	214	99	199
Gold-separator distributor.	E. Kempshall.	699,889	Apr. 1	951	215	99	200
Gold-separator distributor.	E. Kempshall.	699,890	Apr. 1	952	216	99	201
Gold-separator distributor.	E. Kempshall.	699,891	Apr. 1	953	217	99	202
Gold-separator distributor.	E. Kempshall.	699,892	Apr. 1	954	218	99	203
Gold-separator distributor.	E. Kempshall.	699,893	Apr. 1	955	219	99	204
Gold-separator distributor.	E. Kempshall.	699,894	Apr. 1	956	220	99	205
Gold-separator distributor.	E. Kempshall.	699,895	Apr. 1	957	221	99	206

Grain-drill seed-tube.	J. W. Polndexter.	702,114	June 10	1958	349

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr's.	Vol.	Page.
Grain-elevator for separators	S. B. Hart	702,050	June 10	1410	218 519	99	2418
Grain-flow indicator	C. C. Neale	698,998	Apr. 8	1179	264 265	99	270
Grain-handling apparatus	A. Atkinson	700,886	May 27	2400	705 706	99	1940
Grain-loader	E. F. Steiner	700,087	May 13	1897	494	99	1570
Grain or seed. Apparatus for sampling	J. J. Brown	702,208	June 24	2614	590 591	99	2008
Grain preparatory to grinding. Apparatus for treatment of	G. Blanchini	700,472	May 20	2967	610	99	1755
Grain-scourer	W. Lee	698,577	Apr. 1	280	78	99	78
Grain-separating machine	W. L. Belt	702,279	June 10	1784	407	99	2498
Grain-separator	F. Witte	699,915	Apr. 1	1008	223 224	99	212
Grain-separator feeder	F. J. Wood	702,940	May 27	4112	946	99	2074
Grain-spout	B. Klenholz	702,440	June 17	2006	477	99	2575
Grain-train apparatus	G. A. Herzog	700,408	May 20	2715	681	99	1795
Gramophone-brake	E. R. Johnson	700,987	May 27	2568	681	99	1940
Graphophone	E. P. Felt	702,097	June 3	758	167	99	2296
Grapple	J. W. Norris	698,544	Apr. 20	4014	687	99	918
Grappling-hook	D. White	702,654	June 3	686	151	99	2251
Grass and ditcher line	J. M. Churchman	702,541	June 3	463	104	99	2008
Grate	G. B. Prowse	697,598	Apr. 15	2159	479	99	490
Grate	E. R. Cahoon	698,680	Apr. 20	4204	928	99	950
Grate	T. H. Lucas	700,081	May 13	1797	416	99	1558
Grate	C. T. Coe	700,618	May 20	2600	672 673	99	1808
Grate-bar	H. E. Parson	702,535	June 17	2278	548	99	2294
Grate-bar	H. Truesdell	702,891	June 17	2648	979	99	2738
Grate for automatic stoking. Inclined	H. H. Campbell	702,535	June 17	2278	519	99	2614
Grate-front and fender	J. J. Roll	700,580	May 20	2625	645	99	1798
Grate-front and stove. Combined	C. F. Wilson	699,128	Apr. 20	5158	1148	99	1159
Grate. Round shaking	F. W. Foster	699,378	May 6	409	110	99	1271
Grate. Tilting water	H. D. Sawyer	701,946	June 10	1185	270	99	2473
Grave-marker	J. A. Delaney	700,904	May 27	2608	804	99	1945
Gravity-lock	D. J. Kennedy	701,822	June 10	1090	248	99	2032
Gravity-motor	W. O. Bonner	702,085	June 10	1400	286	99	2426
Grid or broiler	J. J. Pearce	698,528	Apr. 20	4026	590	99	916
Grinding knives, principally those of sausage-machines, &c. Machine for	O. Becker	700,328	May 20	2212	587	99	1664
Grinding-machine	E. S. Shimer and H. A. Pardoe	698,213	Apr. 22	2604	795	99	811
Grinding-machine	M. W. Neuens	700,288	May 20	2178	428	99	1636
Grinding-machine	J. Gilson	701,021	May 27	2751	899	99	1928
Grinding-machine	W. H. Fetters	702,725	June 17	2746	831	99	2711
Grinding-machine	M. W. Neuens	702,212	June 24	2574	822	99	2625
Grinding-machine automatic work-rest	A. B. Landis	697,654	Apr. 15	2734	606	99	613
Grinding machine. Ball	E. G. Hoffmann	702,025	June 24	2628	737	99	2629
Grinding machine. Drill	H. P. White	697,294	Apr. 15	2221	428	99	508
Grinding machine. Drill	C. Ridderhof	702,895	June 17	2261	676	99	2720
Grinding-machine work-rest	A. B. Landis	697,653	Apr. 15	2729	605	99	612
Grinding-machine work-rest	A. B. Landis	697,653	Apr. 15	2728	605	99	612
Grinding-machine work-rest	A. B. Landis	700,693	May 20	2608	657	99	1826
Grinding-mill	J. Brown	698,441	Apr. 20	2657	846	99	677
Grinding-mill. Ball	M. F. Abbe	702,787	June 17	2700	680	99	2702
Grinding or crushing head	V. W. Mason, Jr.	700,586	May 20	2775	685	99	1778
Grinding or polishing machine	A. Crocker	698,945	Apr. 8	1088	289	99	260
Grinding-wheel	G. H. Fowler and W. D. Howe	698,202	May 6	286	74.75	99	1240
Guano-distributor	R. H. Milam	698,687	May 6	946	219	99	1270
Guano-distributor	J. S. Byrd	702,981	June 24	2926	600	99	2738
Guide-yoke bracket	J. Player	698,428	Apr. 1	184	30.40	99	40
Gun. Automatic	L. L. Driggs	698,672	Apr. 20	2601	880	99	887
Gun. Automatic	A. Noble	702,940	June 10	1721	289	99	2479
Gun. Automatic rapid-fire	V. P. De Knight	698,107	Apr. 22	2819	705	99	722
Gun. Breakdown	W. H. Gates	698,194	Apr. 22	2401	749	99	770
Gun. Breakdown	W. H. Davenport	701,188	May 27	2629	912	99	2048
Gun. Breech-loading	J. F. Meigs and S. A. S. Hammar	700,217	May 20	2144	498	99	1540
Gun breech mechanism	L. N. D. Mixell	702,423	June 17	2128	463	99	2298
Gun-carriage	H. P. Osborn	698,049	Apr. 22	2006	681	99	700
Gun-carriage	K. Dainlein	700,114	May 18	1891	480	99	1576
Gun-carriage	K. Dainlein	700,087	May 20	2645	676	99	1814
Gun-cleaning tool	A. H. Durston	702,250	June 10	1922	440	99	2221
Gun-lock	D. Brown	698,440	Apr. 20	2604	845	99	878
Gun recoil-pad	J. R. Winters	699,908	May 6	906	212	99	1298
Gun. Semi-automatic	L. V. Benét	698,851	Apr. 1	854	197	99	180
Gun-shield attachment	J. F. Meigs	697,892	Apr. 18	2759	611	99	619
Gun-sight	R. Chesnut	698,948	Apr. 8	1079	296	99	249
Gun-sight	J. Becker	701,721	June 3	905	208	99	2206
Gun. Spring air	W. F. Hartman	699,401	Apr. 1	128	20	99	22
Gun-tower. Armored	R. Geelhaar	701,270	June 10	1049	225 226	99	2042
Gun-turret. Main	C. H. Howland-Sherman	697,943	Apr. 15	2708	602 603	99	607
Gun. Water	C. H. Radcliffe	702,472	June 17	2167	494	99	2201
Guns. Means for securing center pivots to axes in	G. Ehrhardt	700,622	May 20	2222	271	99	1216

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Page.	Dr's.	Vol.	Page.
Guns. Single-trigger mechanism for double	C. E. De Long	699,891	May 6	206	70	90	1297
Gymnastic apparatus. Coin-freed	K. Strauss	699,895	Apr. 22	2228	808	90	818
Hair-preventing device	D. Maggiora, P. and E. Bianchi	701,907	June 10	1115	255	90	2207
Hair drier and comb. Combination	C. E. Bradshaw	701,973	June 3	713	187	90	2207
Hair-drying device	W. W. Cowley	699,412	Apr. 1	20	9	90	12
Hair-drying device	W. J. O'Hara	697,743	Apr. 15	2532	585	90	567
Hair-fastener	A. G. Smith	698,328	Apr. 20	2600	608	90	517
Hair-fastener	R. E. Glass	701,479	June 3	306	81	90	2188
Halter. Operating	R. W. Ellis	699,947	May 13	1908	368	90	1519
Halter. Rope	E. T. Bugg	698,550	Apr. 20	4086	798	90	917
Hame-fastener. Adjustable	F. J. Boyle	699,438	May 6	676	157	90	1816
Hammer. Automatic valved	D. S. Waugh	701,265	May 27	4108	945	90	2073
Hammer. Magazine	W. Jacoby	701,731	June 3	516	180	90	2073
Hammer nail-holder	P. E. McGinty	701,076	May 27	2812	374	90	2012
Hammer nail-holding attachment	E. L. Carls	698,581	Apr. 20	4306	390	90	951
Hammer. Pneumatic	J. Boyer	697,738	Apr. 15	2694	522	90	567
Hammock	I. E. Palmer	699,410	May 6	548	125	90	1266
Hammock	I. E. Palmer	700,976	May 27	2681	694	90	1973
Hammock-aling	J. B. Dalrymple	699,418	Apr. 1	40	9	90	12
Hammock-support	C. Smith and J. L. Mounce	698,825	Apr. 20	4723	1040	90	1070
Hand-ball	R. F. Downey	700,411	May 20	2540	594	90	1730
Hand-guard and wrist-supporter	G. L. Pierce	708,471	June 17	2155	491	90	2569
Hand-protector	D. F. Morgan	708,211	June 24	2576	581	90	2695
Hand-wheel	E. H. Seddon	702,931	June 10	1980	449	90	2595
Handle:							
See Bag-handle.	Removable handle.

Hanging and fastening device	A. Schluter, Jr	697,378	Apr. 8	1671	373	90	375
Harness	G. Sengelaub	698,229	Apr. 22	2025	801	90	816
Harness	A. Wood	701,609	June 3	689	158	90	2232
Harness-hook	C. W. Hodges	698,970	Apr. 8	1123	251	90	261
Harrow	J. H. Mosley	698,596	Apr. 20	3908	894	90	909
Harrow	J. Macphail	700,214	May 20	2140	490	90	1649
Harrow	W. Powers	702,475	June 17	2163	494	90	2650
Harrow and land-roller. Convertible	H. B. Waltrip	700,868	May 27	2429	788	90	1982
Harrow and roller. Combined	J. Stout	699,367	May 6	337	55	90	1222
Harrow clearing attachment	N. Paulsen	702,071	June 10	1440	383	90	2422
Harrow-jack	N. W. Thompson	698,927	Apr. 1	568	129	90	122
Harrow. Spike-tooth	T. D. Jones	701,735	June 3	584	182	90	2260
Harrow-tooth fastener	J. F. Duffin	698,473	Apr. 20	2605	600	90	686
Harrow-tooth fastening	G. T. Willis and J. Porteous	697,058	Apr. 8	1224	255	90	292
Harvester and husker. Corn	T. P. and H. Weichel	699,801	May 6	896	206	90	1200
Harvester attachment	M. Hopfer	698,442	Apr. 1	87	20	90	22
Harvester attachment	C. F. Craver	701,301	June 3	87	8	90	2116
Harvester. Bean	C. C. Fast	698,066	Apr. 1	511	118	90	111
Harvester. Bean	J. H. Stanton	702,509	June 17	2223	808	90	2604
Harvester. Beet	M. W. Palmer	699,990	May 6	607	120	90	1242
Harvester bundle-carrier	H. Green	697,142	Apr. 8	1420	313	90	224
Harvester. Clover	A. D. Miller	701,912	June 10	1127	268	90	2200
Harvester fly-wheel	G. L. Phelps and J. O. Morris	697,128	Apr. 8	1471	320	90	222
Harvester. Grain-binding	W. N. Whitely	702,223	June 24	2723	665	90	2221
Harvester, husker, and loader. Combined corn	J. E. Larson	701,990	June 10	1097	251	90	2254
Harvester knottor attachment	D. L. Wolf	699,880	May 6	440	100	90	1224
Harvester. Peanut	C. E. Wyborney	701,528	June 3	440	99	90	2122
Harvester-reel	C. W. Priestley	697,274	Apr. 8	1698	373	90	273
Harvester-reel	B. A. Seiph	700,094	May 15	1651	421	90	1569
Harvester-reel	C. A. A. Rand	700,392	May 20	2198	501	90	1659
Harvester spring-catch tongue-saddle	J. F. Steward	701,029	May 27	2655	666	90	2021
Harvesting-machine	A. T. Zetterlund	699,977	May 6	774	174	90	1223
Harvesting-machine grain-shocking attachment	G. H. Spaulding	698,220	Apr. 22	2449	701	90	722
Hasp-fastener	A. Voight	702,805	June 17	2419	551	90	2242
Hat and coat rack	J. L. Storm	697,959	Apr. 8	1694	378	90	231
Hat and coat rack	M. Braymes	697,438	Apr. 15	1968	499	90	437
Hat-block	C. Miller	697,214	Apr. 8	1554	343	90	360
Hat box. Folding	E. C. Beecher	698,993	Apr. 8	1040	221	90	240
Hat-brim trimmer	J. R. Griffith and H. Morehouse	702,070	June 17	2200	571	90	2744
Hat-fastener	J. N. Brunner	698,443	Apr. 20	2641	647	90	277
Hat-guard	A. Stamm	701,029	June 3	687	148	90	2242
Hat-machine	C. H. Reid	700,971	May 20	2476	598	90	1714

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Hat or dress fastener	M. Oebon	699,550	May 6	806	190	99	1242
Hat or head-gear	J. Halmann	703,728	June 3	806	177	99	2276
Hat-paring machine	E. B. Alvord	700,933	May 20	2989	583	99	1680
Hat-pin retainer	G. F. Packard	700,804	May 27	2910	761	99	1910
Hat-pinning-out machine	C. H. Reid	700,988	May 27	2923	770	99	1917
Hat-rest	G. and J. Edwards	700,907	May 27	2909	808	99	1946
Hat-stay-flanging machine. Curved.	A. E. Nielsen and F. Bentzen	699,371	Apr. 15	2770	614	99	621
Hats and articles produced thereby. Making	J. H. Neave	699,388	May 6	100	40	99	1203
Hats. Drying	J. Marshall	699,980	Apr. 8	1164	259	99	207
Hatchway-door safety-gate	D. C. Necker and W. A. Blackman	699,544	May 6	778	184	99	1985
Hay-derrick	H. O. Sparks	699,506	Apr. 1	196	47	99	46
Hay-derrick	G. G. Mayenacheln	700,353	May 20	2424	555	99	1708
Hay-fork	S. A. Nichols	697,748	Apr. 15	2931	584	99	507
Hay-loader	W. McKenna	699,096	Apr. 29	4947	1035	99	1116
Hay-loader and press. Combined	W. F. Ramsey and H. E. Pool	699,285	May 6	187	44	99	1212
Hay-loading apparatus	T. F. Behrman	700,733	May 27	2151	716	99	2009
Hay on wagon. Device for binding	J. H. Winterrowd	700,580	June 17	2946	518	99	1665
Hay-press	E. W. Moore	700,697	May 20	2931	701	99	1965
Hay-rack	R. P. Vorles	701,110	May 27	2928	591	99	2007
Hay-rack lifter	W. J. Frank	700,064	June 24	2929	751	99	2024
Hay-rake	A. W. Zimmermann	701,698	June 3	806	154	99	2054
Hay-rake. Horse	S. B. Hendricks	699,218	May 6	268	53	99	1245
Hay-rake. Sulky	A. B. Black	697,967	Apr. 8	1211	259	99	207
Head-block or follower	J. J. Crowley	699,461	Apr. 29	2973	335	99	694
Head-rest. Folding	A. Rikli	699,714	Apr. 15	2950	567	99	371
Headlight. Motor-car	C. Reinke	699,714	May 13	1194	268	99	1419
Hearing. Appliance for assisting the	P. A. Klaws	699,718	Apr. 29	4409	973	99	906
Heat-distributing mains. Covering for	W. H. Pearce	700,501	June 24	2186	736	99	2513
Heat regulating or governing apparatus	T. Clarkson	699,790	Apr. 1	764	175	99	108
Heater: See Air-heater. Gas-burning heater. Oil-heater. Refrigerator-heater. Soldering-iron heater. Charcoal-heater. Tank-heater. Electric heater. Tire-heater. Feed-water heater. Water-heater. Flat-iron heater. Water-heater. Gas-heater.	W. M. Thomas and L. Van Scoyoc	699,773	Apr. 1	728	108	99	154
Heater	J. Daney and W. H. Cork	700,745	May 27	2928	725	99	1698
Heater	C. C. Longard	700,791	May 27	2934	726	99	1700
Heater and drier	L. D. Vogel	701,222	June 3	800	218	99	197
Heater for liquids. Flooding recuperative	E. Ahlborn	699,958	Apr. 1	698	218	99	197
Heater. Automatic regulating device for steam	E. B. Allen and W. B. Salmon	699,789	Apr. 1	748	170	99	180
Heating and metal-rolling. System for continuous	T. V. Allie	700,084	June 10	1458	227	99	2425
Heating apparatus	H. M. Sturgis	699,514	Apr. 1	309	80	99	49
Heating apparatus	J. M. Young	701,241	May 27	4115	947	99	2074
Heating apparatus	M. M. Johnson	700,310	June 10	1691	261	99	2478
Heating apparatus. House	I. D. Smason	700,368	May 20	2900	572	99	1790
Heating apparatus. Steam	S. G. Phillips	700,080	May 13	1295	435	99	1244
Heating apparatus. Steam	C. H. Atkins	700,326	June 10	1916	428	99	2518
Heating apparatus. Water	R. Stubbs	701,778	June 3	801	193	99	2028
Heating capacity of combustibles. Determining the	S. W. Parr	700,585	May 20	2916	646	99	1787
Heating-furnace	M. M. Suppes and R. Crocker, Jr.	699,607	Apr. 1	267	90, 91	99	85
Heating-furnace	L. S. Baker	699,791	Apr. 1	708	171	99	160
Heating-furnace	H. J. Noyes	700,008	May 27	2913	761	99	1910
Heating-furnace	W. Gorman	700,722	June 17	2929	605	99	2026
Heating-furnace for coiled bundles	A. R. Hunt and W. Ahlen	699,598	May 6	749	175	99	1230
Heating system	J. M. Cripe	697,512	Apr. 15	2923	591	99	697
Heating-system valve device. Steam	J. A. Serrell	700,569	May 20	2940	632	99	1791
Heating system. Fitting for steam	C. A. Ball	700,286	June 10	1367	421	99	2511
Heddle motion. Salvage	J. Wilkinson	701,222	June 3	800	218	99	197
Heel. Boot or shoe	J. G. Roe	699,545	May 6	689	196	99	1245
Heel. Boot or shoe	F. G. Saylor	699,703	May 13	1295	257	99	1441
Heel. Boot or shoe	J. H. Jackson	700,187	June 10	1598	247	99	2443
Heel-cushion	O. Eick	699,597	May 6	816	73	99	1299
Heel. Cushioned	M. L. Hansen	699,111	Apr. 29	5122	1135	99	1184
Heel. Detachable	F. F. Raymond, Jr.	699,519	May 6	784	171	99	1287
Heel-holder for heel attaching machines	J. J. Jones	699,118	Apr. 29	5122	1135	99	1184
Heel-lift. Boot or shoe	J. J. Jones	699,599	Apr. 29	4984	1073	99	1104
Heel-lift. Shoe	J. J. Jones	699,599	Apr. 29	4984	1073	99	1104
Hemoglobinometer	T. W. Tallqvist	700,519	June 24	2186	736	99	2513
Hides or skins. Machine for treating	F. J. Perkins	699,596	Apr. 1	846	22, 23	99	76
Hides or skins. Machine for treating	F. J. Perkins	701,080	May 27	2919	575	99	2013
Hinge	M. P. Newman	699,516	Apr. 29	2443	736	99	779
Hinge	C. Dick	699,468	Apr. 29	2994	658	99	995
Hinge	G. A. Wheeler	699,564	Apr. 29	4705	1045	99	1078
Hinge	J. M. Upton and W. S. Gray	699,737	May 13	1149	268	99	1498
Hinge	J. MacLean	700,436	May 20	2921	528	99	1729
Hinge	A. W. Brightwell	700,518	May 20	2918	670	99	1826
Hinge	S. E. Le Marr	700,694	May 20	2977	690	99	1845

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Hinge	E. M. Hulme and J. B. Hoover	700,204	June 10	1898	416	99	2900
Hinge	F. Dyer	700,440	June 17	2484	370	99	2222
Hinge. Detachable	G. M. Pickop	699,970	May 13	1640	378	99	1288
Hinge. Door	W. L. Evans, Jr.	701,554	June 3	498	110	99	2311
Hinge-fastener. Detachable	E. H. Jackson	699,530	May 6	753	176	99	1389
Hinge. Floor	T. G. Morris	700,321	May 20	2158	494	99	1656
Hinge. Furniture	E. A. Gay	699,671	Apr. 1	581	130	99	113
Hinge-joint for connecting rod-sections	F. A. E. Hamilton	700,304	June 10	1698	278	99	2457
Hinge. Separable across	M. W. Murray	699,688	May 13	1100	268	99	1414
Hinge. Spring	J. B. Howies	701,244	June 3	129	25	99	2124
Hinge. Spring	W. A. Skinner	700,888	June 17	2841	678	99	2728
Hitching device. Horse	A. W. Swanberg	697,036	Apr. 8	1267	280	99	326
Hitching-post	J. A. Taylor	701,984	June 10	1818	278	99	2273
Hitching-strap. Releasing	A. Howard and G. F. Lunn	701,320	May 27	4171	958	99	2024
Hoe	G. H. Grapes	701,230	June 3	98	20	99	2169
Hoe	E. C. Lewis	700,629	June 17	2514	875	99	2028
Hoe. Hand	J. D. McCrimmon	701,600	June 3	579	127	99	2299
Hoe. Weeding	O. Barreille	700,911	June 24	2984	627	99	2779
Hoe or cattle splitting machine	J. C. Hughes	701,545	June 3	194	35, 36	99	2184
Hog-trough	F. B. Davis	697,399	Apr. 8	1594	257	99	365
Hoist	D. E. Rowland	697,378	Apr. 8	1654	373	99	374
Hoist	C. Petty	700,320	June 24	2711	654	99	2268
Hoist for unloading ships	W. E. Huthings	700,031	May 13	1784	418	99	1585
Hoist. Pneumatic	G. E. Martin	701,970	June 24	3184	730	99	2806
Hoisting and conveying machine	T. Long	699,028	Apr. 22	3060	672	99	900
Hoisting and conveying machine	E. Jackson	701,287	June 10	1900	246	99	2260
Hoisting and dumping apparatus	C. A. Morris	699,825	May 13	1206	308	99	1295
Hoisting apparatus	D. H. Darrin and W. M. Dollar	699,426	Apr. 29	2676	555	99	894
Hoisting apparatus	S. R. Wales	699,908	May 13	1673	365	99	1288
Hoisting-apparatus brake	H. Votach	700,584	June 17	2986	628	99	2721
Hoisting-bucket	A. E. Morris and J. Roughan	699,000	Apr. 29	4951	1097	99	1117
Hoisting-bucket	A. E. Morris	699,543	May 6	404	34, 35	99	1293
Hoisting device	E. F. Atherton	700,008	June 24	2681	696	99	2778
Hoisting device	E. F. Atherton	700,008	June 24	2682	697	99	2779
Hoisting-engines or elevators. Safety controller and indicator for	C. E. Allison	697,772	Apr. 15	2929	574	99	670
Holdback	R. W. Walker	699,597	Apr. 1	940	55	99	35
Hook-pad. Antislipping	J. H. Mitchell	700,160	May 13	1908	457	99	1086
Hook: See Check-hook. Lacing-hook. Coat-hook. Meat-hook. Fish-hook. Picture-hook. Garment-hook. Shelf-hook. Grab-hook. Singletree-hook. Grapppling-hook. Snap-hook. Harness-hook. West-hook. Lace-hook.	E. E. Chipman	699,078	Apr. 29	5076	1122	99	1143
Hook and eye	J. Fryer	699,103	May 6	66	17	99	1120
Hook and eye	L. R. Hesse	699,596	May 6	190	45	99	1213
Hook and eye	S. W. F. Lee	701,522	June 3	549	180	99	2322
Hook-forming machine	N. E. Brown	699,448	Apr. 29	2628	846	99	977
Hook-lug	R. E. Moore	700,034	June 10	1281	304	99	2699
Hook-nailing horse. Lining	W. J. Ott	700,497	June 17	2150	400	99	2568
Hooks of tanks, vats, &c. Device for tightening or loosening	C. L. Parker	700,704	May 20	3101	705	99	1549
Hopper or chute gate	A. Smith	699,146	Apr. 29	2608	728	99	748
Hopple. Horse	M. Klein	700,507	May 20	2741	627	99	1771
Horn-rotating mechanism	I. Fréchet	701,198	May 27	4084	987	99	2080
Horse breaker and starting machine	J. F. Carr	699,908	Apr. 29	4707	1097	99	1005
Horse-detacher	E. Oaker	697,923	Apr. 15	2923	598	99	695
Horse-detacher	F. M. Hunt	699,081	Apr. 29	2044	699	99	696
Horse-detacher	E. B. Stearns	699,577	Apr. 29	4061	998	99	998
Horse-detacher	C. J. Mamy	699,646	May 13	1399	282	99	1475
Horses. Fastening device for driving	P. Mayotte	701,751	June 3	847	176	99	2295
Horses' feet. Antislipping-pad for	T. F. Hayes	700,794	June 17	2763	685	99	2715
Horses' legs with water. Appliance for treating	J. T. Studley	701,521	June 3	694	97	99	2165
Horseshoe	W. L. King	699,490	Apr. 1	108	24	99	37
Horseshoe	G. A. Luck	699,546	Apr. 1	461	107	99	39
Horseshoe	H. O. Porter	699,595	Apr. 1	851	193	99	129
Horseshoe	J. Riley	697,178	Apr. 8	1431	282	99	385
Horseshoe	D. L. Boumal	697,791	Apr. 15	2923	592	99	697
Horseshoe	E. Odell and R. Hubner	699,545	Apr. 29	4014	927	99	913
Horseshoe	C. Strube	700,190	May 13	2011	430	99	1599
Horseshoe	A. M. Melmer	700,627	May 20	3005	639	99	1298
Horseshoe	E. B. Fick	700,396	June 10	1908	418	99	2490
Horseshoe	J. Dillon	700,128	June 24	2405	751	99	2598
Horseshoe-calk	J. E. Cunningham	699,595	May 13	1571	318	99	1470
Horseshoe-calk	E. F. La Clair	700,057	May 13	1768	418	99	1587
Horseshoe-calk sharpener	G. W. Halstead	700,649	May 20	2981	690	99	1813
Horseshoe-machine	G. F. Pison	701,032	May 27	2980	679	99	2013
Horseshoe-machine	G. F. Pison	701,032	May 27	2980	680	99	2013
Horseshoe. Metal and rubber	A. Richl	699,460	Apr. 1	173	48	99	41
Horseshoe. Nailless	J. W. Moore	697,155	Apr. 8	1428	285	99	386
Horseshoe-pad	H. Christopher	699,804	Apr. 29	4709	1097	99	1005
Horseshoe. Rubber-tread	H. C. Frost	701,607	June 3	225	208	99	2804

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Horsehoe. Soft-tread	O. E. Dyson	693,373	May 6	481	108	99	1989
Horse-hall holder	H. E. Gavitt	697,348	Apr. 6	1599	329	99	2008
Hose adapted for couplings, &c. Flexible	M. Montgomery	703,785	June 17	2637	612	99	2008
Hose and electric signaling device. Combined	H. T. Croak	693,423	May 6	690	148	99	1989
Hose-coupling	J. J. Bowes, Jr.	693,396	May 6	448	108	99	1989
Hose-coupling	J. R. Atkinson	701,495	June 3	707	188	99	2004
Hose-coupling	G. H. Caugherty	701,169	June 24	2514	329	99	2004
Hose-coupling. Electric	G. G. Wells	694,702	Apr. 1	555	128	99	1971
Hose-coupling fastener	C. Frankish	701,702	June 3	705	170	99	2004
Hose-nozzle	H. Gibbs	693,384	May 6	428	118	99	1973
Hose-nozzle	H. F. Neumeyer	694,554	May 6	501	199	99	1941
Hose-pipes, &c. Coupling for	J. Morris, Jr.	702,728	May 27	2207	729	99	1998
Hose-rack	E. Cliff	693,956	May 13	1018	287	99	1989
Hose-reel	A. E. Wood	693,346	Apr. 23	2647	807	99	2021
Hose-reel	J. McKee	699,281	May 6	139	30	99	1928
Hose-supporter	G. H. Phelps	693,911	Apr. 1	969	222	99	2111
Hose-supporter	C. J. Ross	693,918	Apr. 1	980	222	99	2111
Hose-supporter	C. H. Wheeler	697,046	Apr. 6	1978	329	99	2009
Hose-supporter	M. Anderson	697,596	Apr. 13	2226	318	99	2112
Hosiery. Manufacture of open-striped	E. A. Hirner	693,954	May 13	1616	370	99	1998
Hosiery with lacework stripes. Manufacture of	W. Wilson	702,545	June 17	2653	698	99	2174
Hot-air furnace	W. H. Birge	693,170	Apr. 23	3349	728	99	728
Hot-air furnace	M. Lee and W. W. Bryan	700,654	May 20	3000	698	99	1987
Hot-air furnace	F. Schrader	702,008	June 24	2173	781	99	2017
Hot-air furnace	E. L. Heald	702,195	June 24	2545	815	99	2008
Hot-air register	A. O. Jones	692,192	May 6	101	25	99	1196
Hot-air register. Side-wall	G. Auer. (Reissue)	12,004	June 24	2651	666	99	2008
Hot blast and smoke-consumer. Combined	J. B. Ehrlich	695,478	Apr. 20	3008	998	99	2000
Hothouse construction	H. Pladeck	701,610	June 3	598	130	99	2022
Hot-water boiler. Sectional	B. F. Behrendt	693,136	May 6	30	5, 6	99	1190
House.							
See Apartment-house. Portable house.							
Hub. Ball-bearing	D. McKay	697,335	Apr. 13	2123	474	99	474

Hub. Vehicle	J. E. Foley	702,548	June 17	2201	281	99	2017
Hub. Wheel	L. T. Gibbs	700,028	May 13	1745	404	99	1848
Hub. Wheel	E. A. Royce	700,378	May 20	2458	570	99	1714
Hub. Wheel	R. E. Smith	697,181	Apr. 6	1496	324	99	2007
Human body. Instrument for cooling or for warming internal portions of the	W. Henderson	697,084	Apr. 6	1245	306	99	2005
Hydrant	W. K. Stansbury	702,501	June 17	2220	508	99	2014
Hydraulic jack	J. C. Gelly	696,930	Apr. 1	704	179	99	160
Hydraulic motor	F. Koss	693,396	May 6	515	119	99	1981
Hydraulic motor	W. Hurrell	702,216	June 10	1695	370	99	2012
Hydraulic testing-machines. Automatic gage for	C. W. Poole	696,591	Apr. 1	352	84	99	78
Hydrocarbon-burner	L. C. Graciale	693,981	Apr. 9	1191	249	99	2008
Hydrocarbon-burner	R. Witty	693,068	Apr. 29	5040	1114	99	1136
Hydrocarbon-burner	R. H. Fullaway	693,980	May 6	474	111	99	1972
Hydrocarbon-burner	J. F. Hardy	700,914	May 27	2384	919	99	1950
Hydrocarbon-burner	G. R. Elliott	701,086	May 27	2743	657	99	1997
Hydrocarbon-burner	C. J. Johnson	701,347	June 3	137	36	99	2125
Hydrocarbon-burner	A. Menck	702,449	June 17	2117	451	99	2081
Hydrocarbon-burner. Retort	A. D. Duncan and W. H. Wafer	702,036	June 17	2479	568	99	2003
Hydrocarbon-lighting system	F. A. and R. D. Cody	702,406	June 17	2086	468	99	2009
Hydrocarbon-motor. Double-cylinder	F. Dürr	699,508	May 6	707	164	99	1382
Hydrocarbon-vapor burner	L. G. Heist	702,588	June 17	2296	584	99	2019
Hydro-extractor. Continuous	L. Atwood	700,119	May 13	1886	488	99	1976
Hydrogen chlorid and sodium sulfate. Making	T. Meyer	702,277	June 17	2917	694	99	2118
Ice-box cover	T. F. Secor	698,564	Apr. 20	4040	994	99	918
Ice-box. Folding	D. F. Rogers	698,754	Apr. 1	879	153	99	145
Ice-cream cabinet	J. Hurley	699,179	May 6	90	24	99	1196
Ice-cream disher	G. W. Shorer	697,677	Apr. 15	2415	537	99	1428
Ice-cream freezer	W. A. Soper	698,574	Apr. 20	4084	997	99	921
Ice-cream freezer	E. E. C. Werner	700,591	May 20	2876	880	99	1759
Ice-cream freezer	H. Monach, Jr.	701,270	June 3	153	33, 34	99	2140
Ice-cream sandwiches. Machine for making	L. Weglein, Jr.	696,778	Apr. 1	730	165	99	198
Ice-cream-shipping vessel	F. C. Klotz	697,496	Apr. 15	2351	491	99	476
Ice-machine press	D. L. Holden	701,932	June 10	1075	243	99	2040
Ice-making apparatus. Automatic skimming-regulator for	A. O. Frik	702,858	June 17	2679	665	99	2140
Ice. Manufacturing	S. N. Smith	702,314	June 24	2730	880	99	2008
Ice-manufacturing apparatus	S. N. Smith	702,315	June 24	2731	880	99	2007
Ice-manufacturing apparatus	S. N. Smith	702,353	June 24	2681	578	99	2007
Ice-trays	J. A. McManis	698,730	Apr. 20	4634	979	99	1004
Ice-tray	T. W. Hennings	693,319	May 6	354	83	99	1946
Identification device	C. A. Hyde	697,595	Apr. 15	2715	603	99	2005
Identification-tag	C. Scott	702,038	June 24	2173	738	99	2017
Ignition apparatus. Electrical	H. T. and H. A. Dawson	701,307	June 3	44	10	99	2118
Ignition device. Electric	A. R. Moser	695,043	Apr. 20	2075	678	99	702
Ignition system	F. L. Gregory	698,555	Apr. 1	940	214	99	198
Illuminator	W. Harvey	702,649	June 17	2495	678	99	2008
Illustrating apparatus	F. S. Newman	701,274	June 3	161	35, 36	99	2141
Impact-engine	N. Gilpatrick	698,971	Apr. 20	2686	780	99	799
Implement. Pocket	J. Taylor and J. Robinson	699,957	May 13	1671	223	99	1232
Incandescent-burner mantle	D. J. Prendergast and V. H. Slinak	697,221	Apr. 6	1804	454	99	404
Incandescent burner. Welsbach or other	V. H. Slinak	699,951	May 6	225	58	99	1221

[illegible]

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Pat.	Des.	Vol.	Page.
Incandescent burner. Welch or other	T. Stites	700,157	May 13	2005	480	99	1389
Incandescent mantles. Manufacturing	G. Buhlmann	698,108	Apr. 23	2206	708	99	1320
Incubation preventive	E. Holm	698,084	May 13	1074	99	1410
Indicating instrument	L. T. Robinson	701,997	June 10	1108	387	99	1367
Indicator: See Car-route indicator. Power-indicator. Gas street-indicator. Railway-indicator. Grain-flow indicator. Revolution indicator. Lubricant indicator. Station-indicator. Office-indicator. Photograph time-indicator.							
Indicator	E. V. Beale	698,358	Apr. 22	2074	811	99	986
Indicator	J. S. Baughman	708,912	June 24	2207	698	99	2780
Indigo from indol. Making	P. Seidel	698,388	Apr. 22	2094	99	816
Indigo. Making	T. Sandmeyer	697,545	Apr. 15	2102	99	408
Indigo. Making resist-white under	A. J. Salomonson	699,083	Apr. 29	2096	99	1123
Indigo. Purifying raw	H. Homolka	708,720	June 17	2042	99	2600
Induction apparatus	W. Scheidel	702,050	June 10	1245	537	99	2402
Ingots. Piercing and shaping metallic	L. D. Davis	697,059	Apr. 22	2008	609	99	994
Inhaler	E. Stevens	699,255	May 6	222	52	99	1321
Inhaler	E. M. Morgan	708,144	June 10	1551	351	99	2445
Inhaler. Pocket	H. J. Valentine	697,117	Apr. 8	1886	801	99	815
Inhaler with nasal attachment	G. H. Maurer	700,222	May 20	2108	800	99	1709
Labeling apparatus. Portable	J. Planour and L. Dutremblay	697,770	Apr. 15	2585	878	99	1608
Injector. Automatic	C. B. Allen	698,533	Apr. 29	4480	880	99	916
Injector-burner	W. Flotts	701,119	May 27	2001	806	99	2081
Inking apparatus	H. A. W. Wood	698,359	May 6	209	90	99	1297
Inlet and catch-basin	H. Wheeler	701,550	June 2	507	119	99	2218
Insect-destroyer	S. V. Graves	698,187	Apr. 22	2221	741	99	708
Insect-destroying machine	O. V. Dyer and W. S. Willette	701,328	June 2	147	31	99	2150
Insect-exterminator	M. Karth	701,328	June 2	147	31	99	2150
Insoluble-making machine	A. B. Fowler	701,191	May 27	4080	926	99	2089
Insulated conductor	E. Thomson and J. G. Callan. (Re-issue.)	11,907	May 27	4195	948	99	2090
Insulated wire	J. A. Heany	708,196	June 24	2548	815	99	2900
Insulated wire. Manufacture of	J. A. Heany	705,197	June 24	2540	816	99	2900
Insulating and waterproofing materials. Manu- facture of electrically	F. Greening	701,712	June 2	780	99	2672
Insulating composition and producing same	A. Gentsch	699,268	May 6	491	99	1872
Insulating covering-stands and forming same into cables. Apparatus for	H. W. Dover	699,430	May 6	637	147	99	1207
Insulating electric conductors	I. Kitz	708,155	June 24	2487	787	99	2906
Insulating handle connection	G. Braubrook	708,097	June 10	1408	289	99	2428
Insulating metallic surfaces or wires	J. A. Heany	708,198	June 24	2553	99	2900
Insulating metallic surfaces with asbestos	J. A. Heany	708,201	June 24	2555	99	2901
Insulating paint	L. M. Randolph	701,328	June 2	147	31	99	2150
Insulation for metallic surfaces. Preparing asbes- tos for use as an	J. A. Heany	708,200	June 24	2554	99	2900
Insulation from wire. Implement for stripping	C. C. Stibley	698,567	Apr. 29	4045	895	99	919
Insulator	W. H. Nichols	697,001	Apr. 8	1188	265	99	871
Insulator	A. N. Berg and E. E. Bechtold	697,720	Apr. 15	2008	877	99	988
Insulator	H. F. Kretzer	699,761	May 13	1226	265	99	1436
Insulator	V. G. Converse	701,847	June 10	1008	225	99	2875
Insulator	V. G. Converse	701,848	June 10	1009	226	99	2876
Insulator and attachment for electric wires	C. C. Johnston	697,222	Apr. 15	2094	519	99	824
Insulator and manufacturing same	F. M. Locke	708,081	June 17	2574	878	99	2904
Insulator. Electric circuit	W. J. Walker	700,428	May 20	2046	606	99	1701
Insulator. Electrical	H. P. Ball	698,087	Apr. 22	2197	699	99	722
Insulator for high-potential currents	R. Quinter	698,088	Apr. 8	1117	247	99	227
Insulator-pin	F. M. Locke	701,008	May 27	2795	870	99	2908
Insulator pin and bracket	E. T. Bally	701,348	May 27	4194	949	99	2976
Insulator-pin machine	A. D. Catlin	701,328	June 2	147	108	99	2900
Insulator-pin. Sleeve for protecting	F. M. Locke	698,079	Apr. 29	4915	1086	99	1110
Insulator-supporting arm	J. E. Sharpe	700,670	May 20	2041	628	99	1722
Insulator. Wire	W. O. Benbow	698,088	Apr. 1	107	117	99	110
Insulators. Making	F. M. Locke	708,082	June 17	2575	879	99	2905
Internal-combustion engine	P. Burt	698,547	Apr. 1	877	64	99	82
Internal-combustion engine	W. J. Robb	700,241	May 20	2004	801	99	1080
Internal-combustion engine	F. Reichenbach	701,222	June 2	408	96	99	2191
Internal-combustion engine	O. W. Kealey	701,221	June 10	1028	247	99	2822
Internal-combustion engine	J. S. Rogers	708,246	June 10	1721	391	99	2421
Internal-combustion engine	J. F. Hobart	708,420	June 17	2675	474	99	2972
Invalid reclining-chair	I. W. Amerman and R. L. Johannes	701,220	June 10	967	215	99	2867
Iron: See Gas-treated iron. Soldering-iron. Red-iron. Smoothing-iron.							
Iron—flat and angle. Machine for bending	W. Volmer	699,088	May 13	1422	286	99	1481
Iron or steel. Apparatus for making	E. Meininghaus	697,912	Apr. 8	1122	248	99	240
Iron or steel. Removing scale oxid from the sur- face of	A. K. Eaton	708,080	June 10	1221	99	2400
Ironing-board	C. W. Parsons and C. B. Kain	702,080	June 10	1480	286	99	2422
Ironing-board	M. Oniel	702,242	June 10	1722	290	99	2420
Ironing-board. Double	J. M. Gernert and J. F. Aten	701,187	May 27	4080	286	99	2001
Ironing-machine	J. J. O'Shea	700,428	May 20	2008	806	99	1722
Ironing-machine. Edge	G. E. Morris	699,001	Apr. 22	4065	1007	99	1115
Ironing-machine. Edge	R. A. Twiss	700,428	May 20	2007	804	99	2192
Ironing-stand	A. F. Hyman and T. Mount	699,088	May 13	1522	287	99	1010
Ironing-table	E. S. Churchman	699,088	Apr. 1	422	87	99	81
Ironing-table. Folding	W. E. Knapp	700,064	May 12	1727	412	99	1700
Isovaleramide derivative and making same	A. Liebrecht	697,720	Apr. 15	2215	99	622

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr. & C.	Vol.	Page.
Knitting-machine.	F. B. Wildman	705,085	June 24	3819	770	90	2884
Knitting-machine. Circular.	K. Paine	692,549	Apr. 29	4088	719	90	914
Knitting-machine. Circular.	H. Britton	700,780	May 27	4161	781	90	1877
Knitting-machine stop-motion.	F. Wilcomb	698,099	Apr. 28	4168	781	90	730
Knitting-machine stop-motion.	F. Wilcomb	698,080	Apr. 28	4172	781	90	728
Knitting-machine stop-motion.	F. Wilcomb	698,091	Apr. 28	4177	781	90	729
Knitting-machines. Attachment for making open or lace work in straight.	A. Gee	708,085	June 24	3839	783	90	5935
Knob and bell Combination door.	J. W. Freeman	700,498	May 30	4204	819	90	1708
Knob and bell Combined door.	J. W. Freeman	700,981	May 30	4207	824	90	1884
Knob-attaching device.	G. B. Pictrop	697,129	Apr. 8	1474	830	90	388
Knob. Door.	W. F. Gilbert	699,515	May 6	798	189	90	1819
Label.	G. E. Howard	708,880	June 10	1915	497	90	1761
Label. Ear.	H. T. Kane	700,498	May 30	4208	817	90	1761
Label. Machine for inserting and fastening strings in.	S. B. Tily, J. G. and M. O. Rehfuss	702,388	June 10	1918	401	90	2428
Labeling and wrapping mechanism. Case.	F. H. Knapp and C. W. Blackstone.	698,180	Apr. 29	3890	876	90	901
Labeling-machine.	F. C. H. Strasburger	701,382	May 27	4301	948	90	2070
Labeling-machine. Bottle.	C. Laffer	695,984	May 13	1455	841	90	1406
Labeling-machine. Bottle.	N. Mander	700,498	May 30	4208	824	90	1729
Lace-fastener.	A. H. Andrews and E. T. Morrison.	697,564	Apr. 8	1388	885	90	352
Lace-fastener. Shoe.	L. H. Hancock	701,199	May 27	4303	957	90	2031
Lace hook and clasp.	H. B. Wilson	700,374	May 30	4207	817	90	1678
Lace representing mosaic work. Manufacture of.	E. E. Sanner	698,013	Apr. 29	4094	1108	90	1134
Lace. Shoe.	T. O. Holland	698,463	Apr. 1	85	19	90	88
Lacing-hook.	E. Kempshall	700,138	May 13	1908	448	90	1578
Lacing hook. Shoe.	F. E. Vandercrook	699,989	May 13	1673	894	90	1532
Lacing hook. Shoe.	F. E. Vandercrook	699,990	May 13	1674	894	90	1538
Lacing. Shoe.	H. W. Miller	699,989	May 13	1641	388	90	1475
Ladder.	J. C. McCombie	700,548	May 30	4200	830	90	1732
Ladder and hose-nomle controlling apparatus. Combined.	J. Cook and A. G. Engvall.	705,113	June 24	3891	777	90	2886
Ladder. Double or step.	E. Hardin	701,382	June 3	448	100	90	2920
Ladder. Extension.	C. B. Totman	697,354	Apr. 8	1388	880	90	352
Ladder-iron.	C. A. Truitt	698,048	Apr. 1	850	158	90	179
Ladder. Sectional.	B. P. Hoggins	700,580	May 30	4207	808	90	1844
Ladder. Step.	H. L. Friel	700,580	May 13	1741	401	90	1546
Ladder. Step.	A. Mau and C. Fassel	700,574	June 17	2325	508	90	2630
Ladder. Trussed scaling.	G. A. Edmonson and A. H. Myers	699,274	May 6	468	108	90	1308
Ladle. Bottom-pouring.	C. W. Sherman	699,274	Apr. 29	4094	884	90	818
Lamp. Alcohol.	S. Sternau and L. Strasburger	699,507	Apr. 1	199	43	90	47
Lamp and lamp-holder. Electric.	H. J. Dowling	697,428	Apr. 15	2019	446	90	1484
Lamp attachment.	L. F. Koester, Jr.	701,595	May 27	4209	837	90	1807
Lamp-bracket.	A. Thuermer	697,501	Apr. 15	1813	422	90	890
Lamp-burner.	S. B. Morse	701,910	June 10	1135	880	90	1801
Lamp. Carriage.	E. M. Rosenbluth	708,988	June 17	2005	547	90	2689
Lamp circuit and cut-out. Electric-arc.	M. H. Baker	708,988	June 17	2005	547	90	2636
Lamp. Electric.	C. Hubert	700,690	May 30	4207	834	90	1830
Lamp. Electric-arc.	M. Froment	698,507	Apr. 1	779	177	90	165
Lamp. Electric-arc.	J. Eberhardt	697,077	Apr. 8	1388	895	90	361
Lamp. Electric-arc.	H. Bremer	697,438	Apr. 15	1905	480	90	487
Lamp. Electric-arc.	C. E. Hartman	697,438	Apr. 15	1905	480	90	487
Lamp. Electric-arc.	M. S. Okun	698,238	Apr. 30	3089	500	90	704
Lamp. Electric-arc.	J. A. Sweeney and F. Gubing.	698,575	Apr. 30	4057	897	90	885
Lamp. Electric-arc.	P. H. F. Spies	698,575	Apr. 30	4057	897	90	885
Lamp. Electric-arc.	C. Gilbert	698,981	Apr. 30	4940	1098	90	1094
Lamp. Electric-arc.	A. Lere	699,195	May 6	121	22	90	1200
Lamp. Electric-arc.	J. S. Nowotny	699,285	May 6	105	40	90	1208
Lamp. Electric-arc.	J. L. Davies	700,918	May 27	4208	853	90	1808
Lamp. Electric-arc.	G. G. Tilden	701,498	June 3	940	85	90	2169
Lamp. Electric-tube.	D. M. Moore	702,519	June 10	1928	489	90	2638
Lamp. Electric-tube.	D. M. Moore	702,519	June 10	1928	489	90	2638
Lamp. Formaldehyde.	R. P. Kuhn. (Reissue).	11,695	May 12	1891	464	90	1873
Lamp. Gas.	A. C. Humphrey	698,640	Apr. 1	445	104	90	88
Lamp. Gas.	L. C. Fuller	701,628	June 3	940	10	90	2122
Lamp. Gas.	T. Maguire	702,122	June 10	1948	851	90	2141
Lamp. Gas-holder. Arc.	G. E. Stevens	697,787	Apr. 15	2028	588	90	872
Lamp. Gas-holder and making same. Pyroelectric.	C. P. Steinmetz	701,328	June 10	1928	715	90	2074
Lamp. Gas-holder.	H. J. Harrison	698,378	Apr. 28	3549	978	90	101
Lamp. Gas-holder.	T. Lindsay and L. L. White	700,817	May 30	4208	871	90	1775

Measuring-instrument. Mechanical movement.	T. Dunoon	698,764	Apr. 29	5428	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,765	Apr. 29	5442	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,766	Apr. 29	5456	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,767	Apr. 29	5470	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,768	Apr. 29	5484	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,769	Apr. 29	5498	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,770	Apr. 29	5512	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,771	Apr. 29	5526	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,772	Apr. 29	5540	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,773	Apr. 29	5554	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,774	Apr. 29	5568	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,775	Apr. 29	5582	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,776	Apr. 29	5596	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,777	Apr. 29	5610	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,778	Apr. 29	5624	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,779	Apr. 29	5638	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,780	Apr. 29	5652	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,781	Apr. 29	5666	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,782	Apr. 29	5680	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,783	Apr. 29	5694	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,784	Apr. 29	5708	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,785	Apr. 29	5722	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,786	Apr. 29	5736	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,787	Apr. 29	5750	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,788	Apr. 29	5764	986	99	901
Measuring-instrument. Mechanical movement.	T. Dunoon	698,789	Apr. 29	5778	986	99	901
Measuring-instrument							

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Memorandum and indicating device.	C. D. Weaver	701,225	May 27	4105	945	99	3023
Methyl. Chlorinated methyl-ether of	K. Wedekind	703,104	June 24	3933		99	3054
Merchandising	W. Kleineworters	698,085	Apr. 29	3031	671	99	697
Merchandise. Structure for storage and delivery of	R. E. Leatham	690,000	May 13	1089	354	99	1418
Merchandise-transfer apparatus	A. W. Swallow	701,991	June 10	1210	375	99	2677
Merry-go-round	B. Kippels	698,304	Apr. 29	3575	789	99	938
Metal articles. Machine for finishing	H. H. Burns	699,613	May 5	918	214	99	1285
Metal-binding-machine guide	C. Weber	703,996	June 17	2943	615	99	2739
Metal binding-strips. Machine for making	F. W. R. Yager	698,794	Apr. 1	740	190	99	138
Metal can or receptacle for packing soap, &c.	F. L. Bartelt	699,199	Apr. 29	3945	729	99	708
Metal-cleaning composition	V. E. Brown	697,976	Apr. 22	2957		99	678
Metal-cutting, coping, and upsetting machine. Combined shape	D. Hammond	700,419	May 30	3523	587	99	1732
Metal from receptacles. Drawing motion	L. Lincoln	697,993	Apr. 15	2943	928	99	695
Metal gate	W. R. Cantrell	700,737	May 27	3198	729	99	1681
Metal. Machine for cutting beveled edges on plate or sheet	P. Parvelli	708,213	June 24	3579	939	99	3935
Metal. Making leaf	F. Haasle	699,980	May 13	1545		99	1525
Metal parts. Heating	E. Delester. (Belgium)	18,008	June 24	3950		99	3955
Metal plates or packs. Feeding and heating	T. V. Allen	698,129	May 6	19	3	99	1179
Metal-pots. Self-feeding mechanism for	J. Place and W. J. Lewis	697,011	Apr. 8	1904	300	99	274
Metal receptacles. Apparatus for shaping	M. L. Dearing	701,846	June 3	480	107	99	2907
Metal receptacles. Shaping	M. L. Dearing	701,830	June 3	498	108	99	2910
Metal rods or bars. Conveyor for	C. E. Edwards	701,084	May 27	3177	555	99	1948
Metal-shaping machine	O. Clark	703,041	June 24	3943	745	99	2939
Metal sheet-piling	G. W. Jackson	697,949	Apr. 15	3938	686	99	645
Metal shell-head and cap	J. Jr. and L. S. Murdoch	699,508	Apr. 29	3930	934	99	909
Metal strips, &c. Gripping mechanism for feeding	R. Fehr	699,508	Apr. 29	715	167	99	1294
Metal surfaces. Producing designs or delineations on	R. F. Bartle and A. E. Horn	703,993	June 17	2375	398	99	2976
Metal surfaces, &c. Tool for finishing	I. Ritter, Jr.	700,295	May 27	3239	771	99	1912
Metal wheel	W. H. Schofield	697,390	Apr. 18	2934	648	99	697
Metal wheels. Machine for making	E. Einfeldt	700,095	May 13	1799	393	99	1244
Metal wheels. Making	E. Einfeldt	700,094	May 13	1787	397	99	1542
Metal-working machine	W. M. Roberts	697,987	Apr. 15	3704	619	99	696
Metal-working-machine feeding device	T. S. Haley	700,595	May 30	3994	543	99	1907
Metals and producing alloys thereof. Reducing	H. S. Blackmore	699,393	May 6	295		99	1993
Metals by electrolysis. Recovering	H. A. French	697,261	Apr. 15	3936	967	99	613
Metals. Electrically pulverizing	P. Barry	700,399	May 20	3938	879	99	1732
Metals from ores, &c. Extraction of	R. Hunt	699,108	Apr. 29	3190	929	99	1183
Metals from ores and scrap containing same. Extracting	S. S. Sedler	700,595	May 20	3939	930	99	1790
Metals from ores. Recovering	J. W. Kell and J. H. Burfield	702,293	June 17	3906	541	99	2929
Metals from their acid ores. Extracting	J. Radcliffe and J. Landin	698,799	Apr. 30	4440		99	1037
Metals. Grinding or polishing	J. Misholay	698,129	Apr. 29	3935	714	99	191
Metals on metallic surfaces and the products thereof. Depositing	S. Cowper-Coles	700,095	June 3	39		99	2115
Metals. Preventing oxidation of molten	J. H. Walker	698,799	Apr. 29	4492	939	99	1913
Metals. Recovering	E. D. Kendall	698,993	Apr. 29	3270	799	99	1921
Metals. Treating copper or other ores for obtaining their contents of	N. B. Keith	700,941	May 27	3573	939	99	1991
Metallic sulfide soluble. Rendering	C. G. Collins	702,027	June 10	1979		99	3048
Metallic tie and rail-fastener	E. E. Myers	699,599	Apr. 1	390	81	99	75
Metallic tie and rail-fastener	B. B. and H. F. Cronk	699,790	Apr. 1	681	199	99	194
Metallic tie and rail joint and kind	C. A. Frye	701,194	May 27	4037	993	99	2980
Metallic wheel	G. H. Everson	697,079	Apr. 8	1295	993	99	1951
Metallic yarn and textile fabric	L. Larmel	700,915	May 27	3938	930	99	2980
Metalurgical filter	F. H. Long	702,054	June 10	1979		99	1979
Metalurgical furnace	J. A. Hunter	699,799	May 13	1210	375	99	2677
Meter:							
See Current-meter.	Liquid-meter.						
Electricity-meter.	Motor-meter.						
Electricity-meter.	Water-meter.						
Gas-meter.							
Motor-box connection	J. J. Hoppen	699,174	May 6	99	29	99	1190
Motor. Means for preventing creeping of	A. D. Lunt	699,493	Apr. 1	117	29	99	99
Nice-board-making machine	H. F. Watson	697,994	Apr. 15	3451	547	99	640
Nice chimney	A. P. Storrs	700,991	May 27	3938	993	99	1979
Microscope	C. F. Dieckmann	703,493	May 30	3945	993	99	1739
Microscope-stage. Mechanical	C. F. Dieckmann	703,493	June 24	3930	741	99	3981
Middlings-purifier	A. Crank	697,431	Apr. 15	3919	444	99	699
Milk and cream during the process of separation.	A. H. Borgstrom	699,799	May 13	1210	375	99	1467
Means for ventilating							
Milk and obtaining same. Modified	E. von Dungen	700,991	May 30	3951		99	1819
Milk-can	F. C. Sweeney	697,939	Apr. 15	3192	435	99	499
Milk-can	O. N. Abbott	700,999	Apr. 30	3938	993	99	1800
Milk-cooler	W. C. Sunk	702,134	June 10	1984	246	99	1149
Milk-cooler	W. L. Haley	702,134	June 24	3910	739	99	3939
Milk-er or bottle	E. O. Smith	699,393	Apr. 1	399	290	99	197
Milk-modifying gear	F. Muller	700,999	May 27	3943	997	99	1719
Milk-receptacle box	J. M. Flak	697,999	Apr. 15	3976	995	99	699
Milk-warmer and night-lamp. Nursery	F. M. Devore	700,749	May 27	3939	739	99	1991
Milk-warmer	D. E. Wilson	702,293	June 10	1979	451	99	2981

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of inventions, April to June, inclusive—Continued.

Mold mechanism	C. H. Veeder	698,885	Apr. 29	4119	937	99	984
Molds. Chaplet for supporting cores in	W. A. Bole	702,020	June 17	2459	956	99	2247
Molds. Forming sand	G. J. Adams	697,357	Apr. 8	1870	418	99	418
Molds. Forming sand	S. J. Adams	697,358	Apr. 8	1874	418	99	418
Molding	F. Baldt, Sr.	702,169	June 24	2497	99	99	2279
Molding	F. Baldt, Sr.	702,173	June 24	2500	99	99	2279
Molding apparatus	C. R. Davis	698,581	Apr. 1	295	97	99	99
Molding apparatus	C. M. Day	697,184	Apr. 8	1417	216	99	326
Molding apparatus	W. E. McCleary	697,940	Apr. 15	2901	640	99	648
Molding apparatus	W. C. Wright	702,084	June 24	2881	748	99	2287
Molding apparatus. Sand	S. J. Adams	697,355	Apr. 8	1861	417	99	417
Molding apparatus. Sand	S. J. Adams	697,356	Apr. 8	1867	418	99	418
Molding-board	O. C. Sweet	698,077	Apr. 29	3144	688	99	717
Molding-machine	J. Stuart	701,773	June 8	980	195	99	2202
Molding-machine	J. Hoagland	702,293	June 24	2881	640	99	2241
Molding-machine. Core	J. M. Pyott, Jr.	698,710	May 13	1118	282	99	1438
Molding-machine engine	L. S. Stiles	702,013	June 24	2108	725	99	2219
Molding-machine. Sand	D. L. Adams	697,892	Apr. 15	2980	928	99	510
Molding-press	J. F. Buckley	702,195	June 10	1095	285	99	2422
Mop	H. A. Hayden	701,428	June 8	260	99	99	2184
Mop and wringer therefor	E. Hilker	698,028	May 13	1615	289	99	1222
Mop-head	A. S. Held	698,312	May 6	245	99	99	1241
Mop-head	A. S. Held	698,313	May 6	247	91	99	1242
Mop-head	A. S. Held	698,314	May 6	247	91	99	1243
Mop-head	A. S. Held	698,315	May 6	248	91	99	1244
Mop-head	E. B. Campbell	700,075	May 20	8017	691	99	1280
Mop-holder	P. Schmidt	698,788	Apr. 1	685	186	99	147
Mop-holder	A. L. Wilson	701,657	June 8	657	188	99	2222
Mop-wringer	F. W. Towne	697,282	Apr. 8	1873	289	99	282
Mop-wringer	H. C. White	698,773	Apr. 29	4901	994	99	2019
Mop-wringer	A. M. Duraham	698,073	Apr. 29	3073	1221	99	1140
Mopping device	H. F. Ackerman	701,935	June 10	1268	286	99	2223
Mordanting animal fiber	O. P. Amend	700,394	May 20	2998	99	99	1020
Mortar-bed	J. M. Holloway	702,244	June 24	2905	874	99	2244
Mortising machine. Hinge	J. A. MacKenzie	698,295	May 6	229	90.91	99	1282
Mortising machine. Window-frame	F. V. Phillips	698,020	Apr. 29	4905	1100	99	1180
Mortising, tenoning, and grooving machine	J. Clarke	697,280	Apr. 8	1860	285	99	287
Mosaic blocks. Die for cutting	W. A. Arnold	702,201	June 17	2001	495	99	2255
Mosaic work. Making	J. S. Parker	702,222	June 10	1520	495	99	2256

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Col.	Dr.	Vol.	Page.
Mosquito-bar or canopy support.	P. Jarr.	701,309	June 8	189	87	90	2125
Motion. Apparatus for converting rotary into reciprocating.	R. H. Yale.	701,322	June 10	1253	295	90	2204
Motion. Converting.	C. H. Fraley and G. F. Miller.	697,989	Apr. 15	2998	898	90	691
Motion-converting mechanism.	G. W. Zeller.	693,788	Apr. 1	743	196	90	128
Motion-converting mechanism.	J. M. Harkins.	699,018	Apr. 29	4975	1101	90	1128
Motion. Mechanism for converting.	M. C. Nixon.	700,338	May 20	2452	886	90	1719
Motion mechanism. Variable.	A. B. Tenney.	697,041	Apr. 8	1380	280	90	287
Motion-transmitting mechanism. Variable.	H. Telle.	697,878	Apr. 15	2212	408	90	288
Motor.	J. Wilson.	701,608	June 2	628	124	90	2890

Music-leaf turner.	K. F. D. Miller.	698,548	May 6	708	187	90	1280
Music-marking and reading instrument.	M. S. Lowe.	698,206	Apr. 29	2979	790	90	857
Music-rack.	H. W. Mills.	698,208	Apr. 6	1121	261	90	298
Music-roll.	L. B. Duman.	697,981	Apr. 15	2973	684	90	890
Music-sheet performing apparatus.	H. M. Salyer.	700,227	June 17	2984	677	90	2980
Musical ball.	J. Stone.	700,020	May 27	2410	188	90	1088
Musical instrument.	H. Langfelder.	702,224	June 10	1856	228	90	2474
Musical instrument. Automatic.	J. Carpentier.	697,980	Apr. 29	2986	628	90	930
Musical instrument. Automatic.	E. de Kleist.	700,761	May 27	2979	758	90	1986
Musical instrument. Automatic stringed.	F. W. Wood and E. H. Stiles, Jr.	702,588	June 17	2980	688	90	2796
Musical instrument. Automatically-operated.	H. E. Sharps.	698,708	Apr. 1	904	187	90	148
Musical-instrument bridge.	E. E. Jackson.	698,928	Apr. 29	4878	1076	90	1128
Musical-instrument device. Automatic spring-winding mechanism for mechanical.	H. E. Sharps and W. F. Cooper.	697,724	Apr. 15	2228	688	90	871
Musical instrument. Mechanical.	C. L. Emmons.	698,480	Apr. 29	2905	682	90	930
Musical-instrument playing attachment.	H. M. Salyer.	700,080	May 27	2970	771	90	1084
Musical-instrument self-playing attachment.	J. Coorville.	700,677	May 20	2980	691	90	1084

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention	Name	No.	Date	Monthly volume		Official Gazette	
				Spec.	Draw.	Vol.	Page
Musical-instrument self-playing attachment	H. H. Galyer	700,389	May 27	2894	773	99	1919
Musical-instrument valve. Pneumatic	M. Clark	699,935	Apr. 29	4909	1095	99	1905
Musical instruments. Machine for cutting perforated sheets for automatic	M. Clark	699,934	Apr. 29	2893	774	99	1919
Musical wonder	H. Rodemeyer	699,978	May 13	1890	321	99	1890
Mussels. Drag for gathering	J. W. Sharp	702,350	June 10	1797	388	99	2428
Mustache-guard	E. C. Gladwin	702,730	June 17	2797	684	99	2714
Mustard-pot	H. Ostrom	702,350	June 24	2841	587	99	2808
Mutoscope	H. P. Ollertis	699,932	Apr. 1	589	205	99	108
Nail-clipper. Right and left	H. Wilcox	702,516	June 17	2842	511	99	2842
Nail-coating	J. V. Brauch and B. Homann	699,798	Apr. 1	780	195	99	195
Nail-holding implement	F. Beck	699,932	Apr. 1	589	205	99	108
Nail-machine. Wire	J. H. Clark and A. Mayer	701,497	June 3	389	72, 74	99	2178
Nail-making machine	H. Dussault	701,738	May 27	2890	719	99	2890
Nail-puller	W. Pearce	700,440	May 20	2804	585	99	1748
Nail-puller	R. C. Fowler	700,708	May 27	2829	740	99	1891
Nail-puller	R. C. Fowler	700,707	May 27	2828	740	99	1890
Nail-puller	I. W. Stearns	700,543	May 27	2801	728	99	1287
Nailing-machine	H. W. Morgan	699,935	Apr. 1	188	38	99	34
Nasal shield	T. Carreno	701,423	June 3	485	108	99	2828
Nebulizer	W. and J. Beckel	699,935	Apr. 29	4795	1085	99	1085
Neckband-shaper	W. and J. Beckel	701,181	May 27	4008	921	99	2844
Necktie	M. H. Kleinbogen and A. L. Levi	699,935	May 6	312	72	99	1288
Necktie-band fastener	T. F. Dunn	697,388	Apr. 15	2854	685	99	644
Necktie-band fastener	W. G. Dunham	699,931	Apr. 29	4087	392	99	918
Necktie-box, &c.	A. B. Schaefer	702,141	June 24	2442	759	99	2829
Necktie-fastener	I. Levy	699,939	Apr. 1	788	179	99	187
Necktie-fastener	G. Greiss	699,935	Apr. 8	1125	250	99	289
Necktie-fastener	W. H. Hart, Jr.	699,939	Apr. 22	2447	735	99	735
Necktie-fastener	S. B. Palmer	699,941	May 6	408	98	99	1286
Necktie-fastener	J. H. McQuaid	701,172	May 27	2891	918	99	2891
Necktie-fastener	A. N. Dow	702,610	June 17	2426	528	99	2444
Necktie-fastener	I. S. Altman	702,678	June 24	3125	718	99	2807
Necktie-fastener	W. Lawrence	701,154	May 27	2884	912	99	2845
Necktie-fringe	A. Cole	699,938	Apr. 29	4079	301	99	988
Necktie-holder	J. Udell	702,384	June 24	2890	820	99	2818
Necktie-holder	P. M. Lewis	697,388	Apr. 15	2794	612	99	680
Necktie-holder	R. Miller	699,154	May 6	40	14	99	1148
Necktie-holder	T. A. Curtis	699,935	Apr. 29	4710	1085	99	1087
Needle. Tape	G. Priests	701,494	June 3	389	87	99	2187
Needle-threader	D. V. Miller	700,245	May 20	2815	686	99	1044
Net for boat, &c.	W. Schille	699,041	Apr. 29	2021	1110	99	1128
Net. Trap	J. C. Turnipseed	702,518	June 17	2845	511	99	2808

Oil-engine. Hydrocarbon.....	D. A. Briggs.....	701,140	May 27	2045	907	90	3040
Oil-feeder.....	L. G. Nilson.....	702,515	June 17	2005	045	90	2704
Oil-feeder. Carbon.....	L. K. Hosen.....	698,508	Apr. 22	2005	070	90	580
Oil or gasoline can.....	L. E. and E. H. Morris and C. L. Schmucker.....	701,755	June 2	051	107	90	2000
Oil. Refining.....	E. Roosa.....	699,571	May 6	027	104	90	1246
Oil-refining apparatus.....	E. Roosa.....	699,572	May 6	029	105	90	1247
Oil-sewer.....	C. F. Rigby.....	699,747	Apr. 1	000	158	90	143
Oil-tank.....	J. J. Paquette.....	702,584	June 17	2074	541	90	2004
Oil and products produced thereby. Effecting the drying of non-drying.....	W. N. Blakeman, Jr.....	702,173	June 10	1616		90	2453
Oil. Refining.....	E. Douillet.....	700,181	May 20	2004	470	90	1207
Oil.....	A. M. Alden.....	697,700	Apr. 15	2021	549	90	200
Oiling device. Motor-vehicle.....	W. A. Hatcher and J. W. Packard.....	702,703	May 27	2000	745	90	1000
Oil-planting machine.....	J. S. Taylor.....	702,000	June 24	2061	771	90	2053
Opera-chair. Folding.....	A. B. Milner.....	702,461	June 17	2120	451	90	2022
Optical objective.....	C. C. Allen.....	698,702	Apr. 1	745	170	90	130
Optometer.....	F. A. Hardy.....	698,832	Apr. 22	2072	1000	90	1060
Ordnance. Firing attachment for breech-loading.....	J. W. Stockert.....	699,264	May 6	204	55	90	1222
Ordnance recoil apparatus.....	K. Deimlein.....	701,801	June 2	094	206	90	2000
Ore bucket, dumper, and chute.....	L. Collier.....	700,741	May 27	2104	723	90	1600
Ore classifier.....	J. Klein.....	699,720	Apr. 1	022	147	90	140
Ore-concentrator.....	A. H. Stebbins.....	699,604	Apr. 1	077	50	90	58
Ore-concentrator.....	A. H. Stebbins.....	699,605	Apr. 1	080	50	90	54
Ore-concentrator.....	A. H. Stebbins.....	699,606	Apr. 1	084	50	90	54
Ore-concentrator.....	C. M. Kimball.....	698,302	Apr. 22	2072	703	90	585
Ore-concentrator.....	W. G. Dodd.....	701,820	June 10	1002	220	90	2002
Ore-concentrator.....	L. Cohen and J. Gross.....	702,541	June 17	2022	519	90	2015
Ore-concentrator. Dry.....	R. E. and E. Waugh.....	702,276	June 24	2022	570	90	2040
Ore-crusher.....	A. C. Oalkins.....	697,202	Apr. 15	2007	027	90	504
Ore-crusher.....	R. H. Aiken.....	701,001	May 27	2075	044	90	1051
Ore-elevator.....	H. A. Vesin.....	702,902	June 17	2047	070	90	2728
Ore-filtrating apparatus.....	P. Naef.....	700,373	May 27	2020	021	90	1070
Ore-pocket.....	F. K. Hoover and A. J. Mason.....	702,721	June 17	2043	000	90	2000
Ore-roaster.....	J. L. Hopper.....	702,004	June 10	1206	200	90	2002
Ore roasting and cooling apparatus.....	W. C. Davis.....	700,122	May 13	1001	440	90	1002
Ore-roasting furnace.....	T. D. Merton.....	697,092	Apr. 15	2731	011	90	519
Ore-separator.....	J. M. McClave, F. H. Kirby, and E. E. Cumba.....	697,251	Apr. 8	1733	401	90	400
Ore-separator.....	F. R. Waters.....	700,711	May 20	2110	700	90	1000
Ore-separator.....	F. C. O'Brien.....	702,280	June 24	2122	725	90	2012
Ore-separator.....	C. C. Pratt.....	702,064	June 24	2004	707	90	2007
Ore separator and classifier.....	C. Culver.....	701,251	June 10	1013	225	90	2002
Ore-separator. Magnetic.....	J. W. Carter.....	702,194	June 10	1004	205	90	2002
Ore-treating apparatus.....	A. M. Dorr and J. Spang.....	699,427	May 6	084	145	90	1207
Ores. Apparatus for the treatment of.....	E. L. Sharprock.....	697,173	Apr. 8	1421	224	90	200
Ores by the cyanid process. Means for working.....	F. D. Wood.....	701,220	May 27	2110	046	90	2022
Ores containing silica or silicates. Treating.....	G. Guiraud.....	702,943	June 24	2022		90	2701
Ores. Treating.....	R. McKnight.....	699,428	Apr. 1	141		90	50
Ores. Treating.....	A. M. Dorr and J. Spang.....	699,429	May 6	081	144	90	1206
Ores. Treating.....	A. D. Miller.....	700,520	May 20	2720	005	90	1770
Ores. Treating.....	C. J. Best.....	701,124	May 27	2024	005	90	2027
Ores. Treatment of complex and refractory.....	F. Ellershausen.....	702,511	May 20	2021		90	1000
Organ. Automatically-operated road and pipe.....	J. W. Crooks.....	697,227	Apr. 8	1700	001	90	200
Ornamenting. Method of.....	G. W. Blair and F. O. Horn.....	697,022	Apr. 15	2071		90	514
Outlet-box. Interior-conduit.....	W. F. Bonner.....	701,127	May 27	2022	005	90	2022
Oven.....	H. F. Hoffman.....	699,500	Apr. 22	2002	000	90	580
Oven.....	F. Rademacher.....	699,712	May 13	1122	200	90	1000

Paper-box machine.....	A. Kochs.....	701,290	June 3	144	21	99	2129
Paper-box machines. Adjustable form for.....	C. I. Rhodes.....	699,416	May 6	995	127	99	1299
Paper-box machinery. Creasing or scoring and mitering mechanism for.....	C. W. Gay.....	702,295	June 10	1940	448	99	2928
Paper boxes. Adjustable former-block for forming.....	S. Robinson.....	700,446	May 20	2927	999	99	1749
Paper cleaner. Wall.....	W. Adcock.....	701,279	June 3	2	1	99	2109
Paper-cutting machines. Knife for guillotine.....	T. B. Kendall.....	700,098	May 13	1735	418	99	1556
Paper-display rack. Wall.....	O. Blakeley.....	699,479	May 6	999	165	99	1215
Paper dolly. Lace.....	J. Hess.....	700,771	May 27	2928	745	99	1929
Paper-fastener.....	H. Trenchard, Jr.....	700,204	May 13	1971	429	99	1573
Paper-feed mechanism.....	F. M. Peters and H. H. Hungerford.....	702,979	June 17	2929	991	99	2929
Paper-folding machine.....	H. K. King.....	700,295	May 20	2725	995	99	1779
Paper for art printing. Treating.....	J. Wesel.....	699,773	Apr. 29	4994	999	99	1929
Paper for wrapping or binding purposes. Device for supporting and delivering.....	R. H. Piper.....	700,318	May 27	2949	797	99	1915
Paper for wrapping or binding purposes. Device for supporting and delivering.....	R. H. Piper.....	700,318	May 27	2949	795	99	1945
Paper-hanger's coloring-tool.....	B. Olin.....	700,976	May 27	2929	999	99	1979
Paper-hanger's tool.....	T. E. Board.....	702,293	June 10	1921	429	99	2912
Paper-hanging machine.....	J. M. Gluckman.....	699,273	Apr. 1	999	121	99	113
Paper-hanging machine.....	C. Holmes.....	701,727	June 3	811	179	99	2977
Paper-holder.....	J. S. Bacon.....	701,291	June 3	9	2	99	2945

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Sec.	Dr.	Vol.	Page.
Paper-jigger.....	P. E. Kent.....	702,996	June 24	2119	718	99	2904
Paper-jigger.....	W. E. Jeff.....	702,971	June 24	2073	845	99	2914
Paper. Machine for forming plastic patterns on wall.....	R. Kraus.....	697,468	Apr. 15	2084	662	99	477
Paper. &c. Machine for perforating.....	J. B. Brow.....	699,649	May 13	1998	222	99	1299
Paper. Making.....	J. B. Hanscom.....	702,995	June 20	1992	373	99	2905
Paper-making machine.....	J. H. Reynolds.....	699,895	Apr. 1	267	85	99	79
Paper-making machine.....	H. Parker.....	702,999	May 20	2072	644	99	1799
Paper-making machine.....	H. Parker.....	702,954	May 20	2014	646	99	1797
Paper-mill machinery. Blow-off nozzle for.....	J. H. Baker.....	702,499	May 20	2026	610	99	1754
Paper of variable thickness.....	C. C. Jones.....	701,794	June 3	882	181	99	2920
Paper on pasteboard tubes. Roller for winding.....	E. J. Barker.....	697,776	Apr. 15	2694	876	99	580
Paper or pasteboard. Impregnating.....	A. B. Glass.....	702,941	June 24	2000	890	99	2943
Paper or pulp-board making machine.....	L. Atwood.....	698,488	Apr. 20	2008	899	99	899
Paper or the like. Implement for cutting.....	H. J. Smith.....	699,594	May 6	870	902	99	1254
Paper roll.....	W. G. Haas.....	697,405	Apr. 8	1907	495	99	494
Paper. Plant for treating.....	J. Wenzel.....	697,761	Apr. 15	2002	571	99	573
Paper-pulp, &c. Bleaching.....	F. H. Long.....	702,142	June 10	1846	850	99	2945
Paper-stock.....	H. F. Dunbar.....	701,175	May 27	2005	918	99	2051
Paper. Treatment of waste material for use in the manufacture of.....	R. Dietrich.....	701,810	June 3	89	11	99	2118
Paper-vessel handle and fastener.....	W. E. Duthie.....	702,080	June 24	2002	739	99	2922
Paper with glazed surface. Manufacture of water and fat proof.....	H. Herfs.....	697,207	Apr. 8	1845	-----	99	299
Papers, letters, &c. Holder or file for.....	M. J. Widenhofer.....	701,025	June 3	695	151	99	2951
Papers. Receptacle for containing.....	M. J. Wade.....	702,028	June 24	2005	739	99	2922
Parcel-carrier. Folding.....	J. B. Phillips.....	697,579	Apr. 15	2782	616	99	694
Paper and cutter.....	G. Giovanna.....	702,419	June 17	2057	495	99	2946
Paper-green. Making.....	R. Franchot.....	698,694	Apr. 29	4384	998	99	998
Passenger or goods elevator or conveyor.....	W. H. Aston.....	701,459	June 3	818	70	99	2174
Paste pot or jar.....	M. J. Wade.....	702,084	June 24	2006	739	99	2923
Pasteurizer.....	W. J. Buft.....	701,026	June 3	611	124	99	2925
Pasteurizing apparatus.....	T. L. Valerius.....	701,169	May 27	2075	591	99	2028
Pattern-cards. Mechanism for producing.....	T. Capper.....	699,490	Apr. 20	2000	661	99	890
Pattern-plates. Making.....	C. R. Davis.....	702,992	June 24	2017	698	99	2794
Paving-flag.....	J. Steinbach.....	699,073	Apr. 22	2124	-----	99	714
Pen-shelling machine.....	T. Bonshard.....	700,476	May 20	2075	618	99	1797
Pen, &c. Bleaching.....	C. H. Plummer.....	697,573	Apr. 8	1926	371	99	573
Pen-and-roaster and popcorn-popper.....	W. P. Crane.....	701,288	May 27	4147	925	99	2090
Pen-briquets. Manufacturing.....	E. Heibing.....	700,481	May 20	2069	-----	99	1794
Pen into fuel. Converting.....	J. O. Green and H. T. Martin.....	700,190	May 20	2069	-----	99	1640
Pen-press.....	A. Dobson.....	701,511	June 3	89	11	99	2119
Pen-press.....	A. A. Dickson.....	701,555	June 10	1094	299	99	2925
Pedal attachment.....	R. Gross.....	701,714	June 3	781	173	99	2375
Pedal-balance.....	F. H. Anderson.....	701,945	May 27	4122	945	99	2076
Pedestal.....	P. Brown.....	700,594	May 27	2421	799	99	1942
Peg-cutter.....	J. A. Holmblad.....	696,974	Apr. 8	1126	223	99	992
Pegging-machine.....	A. Graffam.....	699,700	Apr. 29	4390	964	99	990
Pen:							
See Breeding-pen.....							
Pen.....	F. J. W. Fischer.....	699,444	May 6	646	149	99	1399
Pen. Fountain.....	F. C. Brown.....	697,975	Apr. 22	2054	661	99	677
Pen. Fountain.....	L. E. Waterman.....	698,861	Apr. 29	4750	1046	99	1076
Pen. Fountain.....	R. B. Dickie.....	699,499	May 6	704	109	99	1291
Pen. Fountain.....	W. G. Fraser.....	700,909	May 27	2512	808	99	1948
Pen. Fountain.....	O. Wall.....	702,323	June 24	2744	998	99	2940
Penholder.....	R. L. McIntyre.....	702,739	June 17	2059	612	99	2926
Penholder.....	F. McIntyre.....	702,323	June 24	2708	853	99	2941
Penholder. Pen-point-erecting.....	H. C. Stiefel.....	701,643	June 3	664	145	99	2047
Pen ink-feeder.....	I. Hultman and A. M. Johanson.....	702,265	June 24	2605	848	99	2912
Pen. Safety fountain.....	L. E. Waterman.....	698,828	Apr. 29	4750	1047	99	1077
Pen. Stylographic.....	W. W. Sanford.....	698,829	Apr. 29	4716	1099	99	1099
Pens. Machine for grinding and polishing steel or other metallic.....	J. W. Milligan and H. Ballings.....	697,223	Apr. 8	1864	415	99	415
Pencil.....	C. V. Cudlipp.....	699,801	Apr. 1	799	175	99	199
Pencil.....	J. A. M. Morris.....	701,073	May 27	2007	573	99	2011
Pencil.....	R. E. Rakestraw.....	702,204	June 24	2719	827	99	2926
Pencil attachment.....	A. I. Orlandy.....	700,808	May 27	2315	751	99	1919
Pencil-case.....	C. E. Little.....	702,149	June 24	2442	799	99	2940
Pencil-holder.....	F. J. Kamber.....	701,493	June 3	575	84	99	2155
Pencil holder and sharpener. Combined.....	C. C. Lovejoy.....	698,122	Apr. 22	2002	714	99	740
Pencil. Lead.....	D. Dunham and V. J. Cooper.....	700,622	May 20	2058	975	99	1816
Pencil rubber-tip attachment. Lead.....	C. W. Boman.....	702,220	June 24	2608	829	99	2921
Pencil-sharpener.....	E. Burke.....	697,222	Apr. 8	1744	299	99	294
Pencil-sharpener.....	E. L. McDivitt.....	700,071	May 13	1813	490	99	1561
Pencil-sharpener.....	J. H. Farnett and J. E. Warren.....	701,027	May 27	2744	897	99	1999
Perambulator.....	S. P. Withrow.....	700,297	May 20	2025	575	99	1725
Perforating-machine.....	W. H. Trean.....	701,107	May 27	2574	890	99	2025
Permutation-lock.....	J. and C. E. Arner.....	696,761	Apr. 29	4518	993	99	1023
Petroleum-motor. Four-stroke.....	H. A. Bertheau.....	700,225	May 20	2017	692	99	1925
Phenylamidocarbonitrile. Making.....	B. Homolka and N. Schwan.....	701,044	May 27	2709	-----	99	2002
Phonograph.....	C. W. Vernon.....	698,059	Apr. 29	2159	666	99	719
Phonograph or graphophone.....	G. Bettini.....	697,939	Apr. 22	2045	649	99	676
Phonograph time-indicator.....	J. Kemmer, Jr.....	699,399	May 6	510	119	99	1299
Phonographic duplication processes. Dipping-tank for.....	J. W. Aylsworth and W. H. Miller.....	698,499	Apr. 29	2204	999	99	579
Phonographic reproducer.....	P. Weber.....	699,699	Apr. 29	4149	912	99	949

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Copies.	Dts.	Vol.	Page.
Photophone-log. Tooth and base for.	E. K. Chase.	698,874	Apr. 28	5708	819	80	694
Photographic curtain-shutter.	R. Schittlauf.	703,037	June 24	6178	728	80	8917
Photographic developer.	A. Eichengrün and K. Demeler.	703,941	June 24	5935		80	8928
Photographic developer and making same.	A. Eichengrün and T. Becker.	703,943	June 24	5937		80	8925
Photographic fabric and preparing same.	P. M. O. Grenier.	698,088	Apr. 1	620		80	90
Photographic film-protecting strip.	W. F. Mautlich.	703,875	June 17	5957	590	80	8930
Photographic film roll and roll-holder.	J. E. Thomsen.	698,187	Apr. 28	5997	790	80	794
Photographic instrument.	E. R. Miller.	697,791	Apr. 15	5940	520	80	895
Photographic lens shade.	F. V. Richardson.	698,008	Apr. 29	5949	1098	80	1117
Photographic negatives, &c. Apparatus for judging the color and density of.	J. W. Dawson.	698,980	June 1	670	801	80	104
Photographic pictures. Developing.	A. Eichengrün and K. Demeler.	703,942	June 24	5936		80	8925
Photographic plate for reproducing ink impressions.	L. O. Hearlert.	705,264	June 17	5900		80	8919
Photographic plate holder.	J. Goddard.	700,084	May 12	1781	404	80	1248
Photographic plate holder.	W. N. L. Davidson.	701,899	June 2	61	9	80	8117
Photographic plate trays.	O. Gueth.	705,128	June 24	5940	514	80	8927
Photographic plates. Storage-box for.	A. Wagner.	698,585	May 6	593	505	80	1897
Photographic printing frame.	F. Herold.	698,015	Apr. 29	5908	697	80	694
Photographic roll-film.	B. Hausdorf.	700,694	May 30	5941	698	80	1885
Photographic roll-holder.	D. H. Houston.	700,120	May 18	1998	491	80	1878
Photographic shutter.	C. Bornmann.	698,179	Apr. 22	5998	794	80	790
Photographic shutter.	A. Wollemak.	700,879	May 27	5455	738	80	1297
Photographic-shutter-controlling device.	J. Poliakoff.	700,053	May 13	1695	497	80	1865
Photographs. Automatic and instantaneous apparatus for producing.	F. D. Rummel.	698,958	Apr. 1	477	110	80	108
Photometric recorder and indicator.	J. Poliakoff.	700,280	June 10	1670	498	80	2300
Photoprinting and vignetting frame. Combined.	W. Armstrong and W. E. O. Chambers.	698,799	May 18	5174	573	80	1493
Physician's examining chair and table.	E. P. Curtis.	698,728	Apr. 1	698	120	80	185
Piano attachment.	G. L. C. Borch.	700,726	May 27	5186	717	80	1876
Piano-card.	A. A. Huseby.	698,005	Apr. 29	5941	571	80	690
Piano-key mounting.	T. Tomason and I. Carlson.	703,081	June 24	5938	797	80	8939
Piano or organ player. Automatic.	E. L. Watson.	700,380	May 20	5513	878	80	1798
Piano-player. Automatic.	F. C. White.	697,380	Apr. 6	1976	698	80	364
Piano-players. Double-bellows action for pneumatic.	T. P. Brown and P. Wehn.	701,328	June 2	451	101	80	2300
Piano. Pneumatic.	B. K. Reynolds.	700,080	June 10	1548	305	80	2401
Piano-support.	J. Olsendorf.	700,977	May 27	5920	694	80	1972
Piano-vibrato-accelerato attachment.	H. H. Northrop.	698,044	Apr. 1	147	35	80	90
Piano. Wireless.	I. F. Gilmore.	698,590	May 13	1277	819	80	1475
Pianos. Automatic attachment for.	J. A. Smith.	699,981	May 13	1854	790	80	1512
Pick.	E. A. Smith.	698,147	Apr. 29	5904	794	80	795
Pick.	J. A. Imhof.	698,888	Apr. 29	4628	1081	80	1028
Pictorial device.	T. T. McGilvary.	700,708	May 20	5334	708	80	1695
Picture-exhibitor.	T. F. Burgess.	698,380	Apr. 28	5998	817	80	681
Picture-exhibitor and phonograph. Combined.	R. Seebach.	698,308	Apr. 1	150	45	80	45
Picture-frame.	F. A. Buchner.	698,985	Apr. 8	1098	298	80	545
Picture-frame.	J. T. Nelson.	700,548	May 20	5937	848	80	1795
Picture-frame. Fastener for backings in.	J. L. Tapscott.	700,352	May 30	5284	811	80	1899
Picture-frames. Machine for mounting ornamental composition directly upon circular.	F. E. Adams. (Reissue).	11,980	Apr. 8	1957	498	80	434
Picture-hanger.	C. I. Still.	698,510	Apr. 1	904	40	80	90
Picture-hanger.	G. Kopp.	695,591	Apr. 8	1158	290	80	254
Picture-hanger.	G. H. Chace.	701,145	May 27	5925	510	80	2048
Picture-hanger.	M. A. Bye.	708,178	June 24	5236	806	80	2920
Picture-hook hanger.	P. Drinkaus.	697,967	Apr. 28	5911	691	80	690
Picture-mat-cutting machine.	G. W. Smith.	700,447	May 20	5812	597	80	690
Picture-projecting apparatus.	G. W. Smith and W. A. Somers.	700,709	May 20	5108	707	80	1890
Picture-projecting apparatus.	W. D. Baldwin and A. Sundh.	700,470	May 20	5984	610	80	1784
Piers, &c. Shifting device for.	W. D. Baldwin and A. Sundh.	700,330	May 20	5928	694	80	1821
Piers, &c. Shifting device for.	W. D. Baldwin and A. Sundh.	700,600	May 20	5930	694	80	1821
Piers, &c. Shifting device for.	W. D. Baldwin and A. Sundh.	700,600	May 20	5930	694	80	1821
Pigment and producing same.	W. N. Bakeman, Jr.	708,177	June 10	1938		80	2480
Pigments and products produced thereby. Treating.	W. N. Bakeman, Jr.	708,178	June 10	1939		80	2480
Pigments for paints. Treating.	W. N. Bakeman, Jr.	708,179	June 10	1919		80	2480
Pigments. Imparting drying properties to.	W. N. Bakeman, Jr.	708,178	June 10	1917		80	2480
Pile.	A. A. Raymond.	700,707	May 20	5105	706	80	1890
Pile fabric. Machine for cutting loops of.	J. D. Knowlton.	701,375	June 2	567	115	80	2820
Pile fabric. Woven double.	J. Killars.	701,275	June 2	599	115	80	2817
Pile or nap fabric. Apparatus for producing.	J. Eaton.	703,254	June 17	5975	694	80	3789
Pill-machine.	W. Rabiol.	700,270	May 20	5976	697	80	1714
Pills. Device for facilitating taking.	B. Koppenhagen.	697,350	Apr. 8	1848	345	80	945
Pillow-cham holder.	M. A. Yeager.	701,365	June 10	1927	692	80	2705
Pillow-cham holder.	T. Bambauer.	703,795	June 17	5723	692	80	2705
Pile.							
See Clothes-pin.	Larding-pin.						
Insulator-pin.	Safety-pin.						
Keyless pin.							
Pin.	H. A. Kimball.	698,370	Apr. 1	518	71	80	71
Pin-holder.	E. Koller.	698,395	Apr. 28	5976	709	80	823
Pin-wheel and gear-wheel motion.	J. T. Cyr.	698,910	May 18	1289	291	80	1223
Pipe.							
See Tobacco-pipe.	Water-pipe.						
Pipe.	T. N. Saurman.	700,345	June 10	1738	304	80	2139

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume		Official Gazette.	
				U. S. Pat. Off.	Pub. Off.	Vol.	Page
Pipe and fine cleaner	C. F. Craddock and G. W. Farlin, Jr.	600,999	May 6	808	70	99	1280
Pipe-compressor	K. Schmidt	700,375	May 30	9480	1870	99	1719
Pipe connection	S. E. Ryan	702,558	June 17	3538	548	90	90
Pipe, &c., coupling	G. E. Diescher	701,019	May 27	3798	854	90	1934
Pipe-tripping clamping-ring	F. M. Smith	698,008	Apr. 1	876	28	90	90
Pipe coupling	G. L. Bonham	702,888	June 10	970	218	90	2320
Pipe crimper	M. L. Hunker	690,587	May 6	747	175	90	1821
Pipe cutter and wrench	A. S. Boyd and G. Yearnell	702,919	June 24	3926	695	90	2769
Pipe fittings or joints. Non-conducting covering for	J. W. Farley	701,989	June 10	1380	386	90	2805
Pipe-grab	V. Matula	700,216	May 29	3148	461	90	100
Pipe-lifting machine	A. Hogenson	697,711	Apr. 15	8491	1847	90	528
Pipe-lifting mechanism	A. Hogenson	697,708	Apr. 15	2280	518	90	554
Pipe or tube sawing machine	H. W. Hathorn	700,118	May 13	1998	441	90	1577
Pipe, shaft, &c., coupling	J. A. Haire	708,351	June 24	3648	387	90	2900
Pipe-wrench	S. E. Diescher	701,080	May 27	3798	854	90	1904
Pipe-wrench	G. W. Bufford	697,377	Apr. 28	3857	628	90	678
Pipe-wrench	A. Underwood	698,708	Apr. 29	4492	948	90	1017
Pipe-wrench	C. O. Longard	698,698	May 18	1094	226	90	1418
Pipe-wrench	H. F. Renner	700,097	May 12	1848	439	90	1507
Pipe-wrench	F. C. Matzpen	701,096	May 27	3798	854	90	2653
Pipe-wrench	O. J. Wight	701,287	May 27	4138	948	90	2678
Pipe-wrench	W. Love	704,070	June 10	1428	338	90	2126
Pipe-wrench	G. H. Swarthout	702,353	June 10	1741	708	90	2428
Pipe-wrench	J. P. Stenger	702,928	June 24	3708	758	90	2461
Pipe-wrench, Chain	A. P. McBride	702,928	June 24	3708	758	90	2461
Pipes, &c. Hanger for	G. Amborn, Jr.	698,708	Apr. 29	4514	908	90	1028
Pipes	A. B. Carl	708,704	June 17	3521	506	90	2707
Pipes	E. Mummendey	697,467	Apr. 15	3254	585	90	521
Pipes	T. J. Bennett	697,539	Apr. 1	221	81	90	55
Pipes	E. K. Baldwin	697,598	Apr. 28	3285	548	90	674
Pipes for gas or other motors	H. E. Ebbs	700,398	May 20	3954	588	90	1891
Pipes, golding and packing device	J. R. Allfree	698,980	Apr. 8	1019	236	90	1777
Pitcher, Syrup	E. W. Marotte	697,328	May 6	328	100	90	184
Pitman	J. E. Gundry	694,384	Apr. 29	4947	1089	90	100
Pitman connection	J. Glenn	700,910	May 27	3514	808	90	1947
Pitman-rod connection	G. W. Beum	698,287	Apr. 28	3676	811	90	82
Placket-closing device	C. Brandt	701,074	June 3	715	158	90	2352
Placket-closure	L. W. Lucien	697,880	Apr. 15	3754	810	90	618
Plating-machine roll	D. L. Chandler	701,841	June 10	906	228	90	2558
Plane	G. P. Davidson	698,414	Apr. 1	46	16	90	10
Plane	A. W. Stanley and H. S. Walter	708,158	June 24	3479	680	90	218
Plane guide, Bench	G. G. Daniels	701,471	June 8	543	76	90	218
Plaster or analogous tool. Chisel	H. E. F. and E. G. Eberhardt	700,079	May 30	307	908	90	158
Plastimeter	E. W. Bryan	700,728	May 27	3174	728	90	187
Plating-machine	J. R. Thomas	701,104	May 27	3888	880	90	202
Planting-machine	W. W. Carey	702,341	June 10	1688	438	90	251
Plant-destroying implement	J. Ludwig and J. Carstens	698,328	Apr. 8	1198	288	90	90
Plants. Composition for protecting growing	J. W. White	698,345	Apr. 28	3548	808	90	80
Planter	J. A. Anderson	698,349	Apr. 28	3548	808	90	80
Planter	J. J. Olinger	701,779	June 8	309	198	90	134
Planter	J. M. Walcott	702,287	June 10	1	908	90	280
Planter	J. E. Jones	698,288	Apr. 1	908	184	90	180
Planter and cultivator	J. E. Jones	700,028	May 20	2788	684	90	170
Planter and fertilizer-distributor. Combined corn-	H. D. Mastor	697,310	Apr. 15	2108	408	90	40
Planter and fertilizer-distributor. Combined out-	F. M. Hudgins	698,738	May 13	1814	898	90	143
Planter attachment. Corn-	J. E. Mulder	700,840	May 20	2787	688	90	178
Planter. Check-row	W. La Follette	698,280	May 13	1477	330	90	148
Planter. Corn-	W. L. Bogle	698,540	Apr. 1	979	6	90	6
Planter. Corn-	W. K. Graham	697,468	Apr. 8	1800	434	90	48
Planter. Corn-	H. L. Crawford	698,228	Apr. 28	3710	821	90	86
Planter. Corn-	L. F. Graham	699,764	May 13	1828	381	90	183
Planter. Corn-	G. W. Brunton	700,781	May 27	3109	781	90	177
Planter. Corn-	L. F. Graham	701,712	June 8	777	178	90	187
Planter. Corn-	L. F. Graham	702,347	June 24	3888	884	90	202
Planter. Corn-	L. P. Graham	702,348	June 24	3888	884	90	202
Planter. Corn-	I. A. Weaver	702,367	June 24	3888	884	90	202
Planter. Cotton-seed	A. G. Cox	698,428	Apr. 28	3570	804	90	80
Planter. Disk seed	T. H. Hardcastle	697,477	Apr. 15	3328	434	90	111
Planter for row opening and covering attachment	W. A. Harper	701,282	June 8	107	51	90	111
Planter grain-ejector. Corn-	A. J. Marshall	702,078	June 17	3661	827	90	88
Planter marker. Seed-	H. E. Schenover	702,286	June 17	3661	827	90	88
Planter. Potato	F. Schumann	700,288	Apr. 20	3284	680	90	175
Planter. Seed-	T. J. Gaylor	698,004	Apr. 28	3591	808	90	80
Planter. Seed-	E. F. Israel	698,987	Apr. 28	4098	1087	90	307
Planter. Seed-	E. L. Caraway	701,228	June 8	380	114	90	80
Planter. Seed or potato	C. H. Gering	700,880	May 13	1748	401	90	150
Planter of peas. Irrigating	A. Brodsky	698,428	Apr. 1	36	6	90	6

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				U. S. Pat.	For.	U. S. Pat.	For.
Printing machine. Multicolor.	G. W. Jackson and R. O. Fearnley.	997,497	Apr. 15	5088	498	99	474
Printing-machine printing-block. Oil-cloth.	E. F. Trecher	998,997	Apr. 29	4977	501	99	999
Printing machine. Rotary color.	W. P. Wrightson	999,991	May 6	449	191	99	1994
Printing-machine sheet-delivery apparatus.	C. P. Cottrell	999,998	May 13	1494	999	99	1494
Printing-machine sheet-delivery mechanism.	C. P. Cottrell	999,997	May 13	1498	999	99	1494
Printing machine. Stand.	J. A. Ambler	999,999	Apr. 1	1	1	99	1
Printing-machine. Universal.	C. L. Dawson	999,999	May 6	999	199	99	1999
Printing-machine web-guide.	O. Bowers	997,179	Apr. 8	1498	999	99	999
Printing machine. Yarn.	J. Hamilton	999,999	May 13	1904	999	99	1919
Printing plates. Preparing lithographic.	O. C. Strecher	700,000	June 24	9999	999	99	9999
Printing-press.	W. Spalkhaver	997,999	Apr. 15	9199	497	99	497
Printing-press.	A. P. Warner	998,944	Apr. 29	9944	999	99	999
Printing-press.	E. Higgins	700,119	May 13	1997	441	99	1977
Printing-press.	G. P. Fennar	701,999	June 3	797	199	99	9997
Printing-press.	A. E. Dowell	700,549	June 17	9997	991	99	9914
Printing-press.	J. L. Firm	700,199	June 24	9999	919	99	9999
Printing-press attachment.	E. C. Simpson	999,994	May 13	1414	997	99	1419
Printing-press controller. Automatic.	T. C. Dexter	999,913	May 13	1999	999	99	1999
Printing-press delivery mechanism.	A. J. Hood	999,179	May 6	99	91	99	1199
Printing-press delivery-table.	E. M. Howell	999,919	Apr. 1	197	199	99	199
Printing-press driving means.	S. G. Goss	700,491	June 17	9979	499	99	9949
Printing-press. Envelop.	W. G. Johnston	999,999	May 13	1997	991	99	1419
Printing-press page pin. Job.	W. J. Ward	999,949	Apr. 29	9949	919	99	999
Printing-press ink-distributing device.	J. Thomson	700,999	May 29	9944	919	99	9991
Printing-press ink-roller.	J. P. Marks	999,119	Apr. 29	9191	1199	99	1194
Printing-press ink-roller.	J. P. Marks	701,491	June 9	991	99	99	9919
Printing-press. Multicolor.	J. E. Cape	999,999	Apr. 8	1909	997	99	1199
Printing-press. Tip.	J. F. Williams	999,049	Apr. 29	9999	1119	99	1199
Printing-press. Apparatus for dispersing electricity in delivering sheets into or from.	F. A. Eyer	700,199	May 6	99	19	99	1199
Projectile.	C. C. Bowers	700,199	May 29	9999	499	99	1999
Projectile.	A. W. Mattson	700,949	June 17	9991	977	99	9994
Projectile and time-fuse therefor.	W. Ruess	999,977	May 6	994	999	99	1991
Propeller-controller.	W. Cooper	702,199	June 10	1999	949	99	9441
Propeller. Hand-power.	L. A. Wilson	999,709	Apr. 1	999	197	99	199
Propeller. Marine.	C. C. D. Carvalho	700,191	June 24	9919	999	99	9999
Propeller. Reversible screw.	L. Wilson	700,979	May 29	9979	999	99	1977
Propeller. Screw.	R. Thaler	999,994	Apr. 29	4979	999	99	999
Propeller. Screw.	C. A. Parsons	701,949	May 27	4119	947	99	1719
Propeller. Screw.	J. Aegerter	701,949	May 27	4119	947	99	9979
Propeller-shaft brake.	G. Whitley	997,999	Apr. 8	1979	999	99	999
Propeller-shaft. Coupling for ships.	J. Verity	999,999	Apr. 6	499	99, 99	99	9999
Propeller-wheel.	E. E. Strommen	999,999	Apr. 29	4971	999	99	1199
Propulsion of ships. Apparatus for the hydraulic.	L. Vidal	999,049	Apr. 29	9994	1111	99	1199
Protractor, square, and pitch-board. Combined.	N. D. Hamel	700,999	May 29	9999	944	99	1977
Protractor, square, and pitch-board. Combined.	N. D. Hamel	700,999	May 29	9999	944	99	1977

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Ch.	Dr.	Vol.	Page.
Pump. Centrifugal.	J. D. Mothes	703,394	May 30	3169	486	99	1084
Pump. Centrifugal.	W. S. Sharpnack. (Reliance)	12,091	June 17	3970	894	99	3785
Pump. Chain.	L. A. Brigel	701,780	May 27	3160	914	99	1877
Pump. Combined air and water.	E. D. Docter	701,607	June 3	3999	190	99	3933
Pump. Under check-valve.	J. W. Part	699,599	Apr. 1	3989	190	99	129
Pump. Diaphragm.	H. E. Arnold	699,597	Apr. 23	3737	994	99	599
Pump. Double-acting cylinder.	W. O. Buck	699,094	Apr. 1	419	97	99	91
Pump. Eccentric-chain Mt.	J. McCulloch	701,313	June 3	3949	399	99	3939
Pump. Fluid-pressure.	O. O. Bray Jr	699,494	May 8	3778	190	99	1817
Pump. Foot.	E. H. White	697,595	Apr. 15	3995	499	99	1001
Pump. Hand.	J. M. Lowe	698,730	Apr. 29	3995	617	99	1781
Pump-handle.	H. M. Etter	701,494	May 17	3949	519	99	3939
Pump-motor.	F. S. Woods	702,394	June 10	1991	499	99	3910
Pump-pipe grapple.	L. M. and S. H. Schenke	698,791	Apr. 29	4490	978	99	1001
Pump-rod coupling.	J. M. Lowe	698,740	Apr. 1	3771	190	99	148
Pump-rod guide. Oil-well.	C. F. Riegt	697,019	Apr. 6	1999	373	99	379
Pump. Rotating cylinder.	R. Richardson	697,019	Apr. 6	1999	373	99	379
Pump. Siphon.	G. Giordetti, T. J. Fuyat, and D. Federico	697,595	Apr. 15	3997	999	99	694
Pump-tube coupling. Chain.	L. A. Brigel, Jr	699,499	May 13	1004	999	99	1999
Pump. Vacuum.	W. F. Garrison	703,094	Apr. 29	3749	867	99	849
Pump valve. Vacuum.	W. F. Garrison	703,094	Apr. 29	1419	919	99	9417
Pump vent-closing valve.	J. E. Panner	697,597	Apr. 15	3999	595	99	901
Pumps. Joining-lange for test.	B. Funder	703,593	June 24	3975	995	99	3777
Pumps. Proportionate-distribution valve system for.	A. Abendschoh	699,599	Apr. 29	3999	1194	99	1144
Pumping apparatus.	J. Albrechtsen	703,493	May 13	1991	314	99	1497
Pumping apparatus.	J. W. Simmons	699,610	June 17	3911	894	99	3901
Pumping apparatus. Water.	B. Winkelman	699,610	Apr. 1	406	94	99	69
Pumping-engine.	H. Nielsen	700,974	Apr. 27	3999	699	99	1977
Pumping-engine. Electric.	A. Bruner	701,599	June 3	493	199	99	3939
Pumping-mechanism. Automatic.	A. B. Anderson	697,599	Apr. 15	3995	609	99	519
Pumping-mechanism for feeding water to steam-boilers.	C. Crompton	699,091	Apr. 29	3991	1194	99	1144
Pumping-power. Oil-well.	G. D. Fowler	701,497	June 3	399	99	99	3199
Punch. Hand.	S. C. Morrill	699,510	May 6	144	39	99	1905
Punch. Pocket-knife leather.	O. L. Harrison	701,570	June 10	1099	399	99	3949
Punch. Ticket.	H. Cottrell	699,599	Apr. 29	4490	1019	99	1049
Punching-bag support.	C. W. Dudley	698,995	Apr. 29	3743	999	99	841
Punching-machine.	D. K. McLaren	699,599	May 6	798	195	99	1934
Punching-press guide.	T. and J. R. Conley	701,544	June 3	397	195	99	1149
Puncture-healing composition.	W. O. De Mar	699,099	Apr. 29	3995	999	99	497
Frame or bag frame catch.	A. F. Fuller	697,497	Apr. 15	3998	999	99	690

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Dr'g.	Vol.	Page.
Rail ends. Aligning, securing, and bonding of	F. Dele Torre and D. E. Banks	700,964	May 27	3800	880	90	1877
Rail. Guard	T. McGinty	697,288	Apr. 15	3128	474	89	498
Rail-joint	A. Elenorath	698,720	Apr. 1	688	148	89	187
Rail-joint	B. H. Tripp	697,589	Apr. 15	3007	881	89	501
Rail-joint	P. Baran	697,778	Apr. 15	3006	875	89	500
Rail-joint	S. W. Leslie	697,532	Apr. 15	3041	908	89	513
Rail-joint	C. E. Weller	698,008	Apr. 30	4128	914	89	541
Rail-joint	E. Zamborsky	698,618	Apr. 30	4178	917	89	545
Rail-joint	J. Threlkell	698,908	May 11	1876	340	89	1800
Rail-joint	C. B. Mead	699,098	May 13	1884	875	89	1805
Rail-joint	E. O. Davis	700,160	May 27	3073	915	89	507
Rail-joint	E. P. and H. C. Hunter	700,316	June 10	1684	870	89	507
Rail-joint	W. A. Paine	700,408	June 17	2151	490	89	508
Rail-joint	C. D. James	701,568	June 17	2219	888	89	508
Rail-joint and tie-plate. Combined	T. Comrove	701,849	June 10	1011	888	89	1805
Rail-joint bed-plate	J. H. Whitmyer	699,928	May 13	1819	840	89	1810
Rail-joint connection	O. Nordie	699,934	May 6	184	40	89	1810
Rail or similar conductors. Mechanism for removing ice and snow from third-rail-support	E. Chaschewitz and W. T. Thompson	701,795	June 8	316	204	89	2000
Rails, bars, &c. Mechanism for straightening	G. E. Ostman	697,101	Apr. 8	1280	300	89	310
Rails. Device for electrically connecting	C. E. White	700,960	June 17	3840	885	89	2730
Railings, &c. Coupling for	O. Debarde	697,817	Apr. 15	3000	880	89	500
Railway	J. Finnegan	699,500	May 6	717	147	89	1804
Railway automatic couplings. Lock-lifter for	A. Webb	697,904	Apr. 15	3015	885	89	500
Railway block-signaling system	T. Welch	697,048	Apr. 8	1270	308	89	300
Railway block system	W. M. Chapman and W. Fostell	700,308	May 30	3000	881	89	1807
Railway clearing-house	J. E. Nelson	699,540	May 6	771	139	89	1804
Railway coaches or sleepers. Dust and cinder guard for	A. W. Swain	701,008	June 10	1212	378	89	2077
Railway construction	J. S. McKenna	697,880	Apr. 15	3125	470	89	497
Railway contact apparatus. Electric	G. L. de Leuchères	700,141	June 10	1545	340	89	2444
Railway-coupling	A. Markle	698,124	Apr. 22	3804	714	89	701
	A. Wuthe	697,184	Apr. 8	1280	310	89	300
Railway coupling apparatus	W. R. S. Jones	700,958	June 17	3817	881	89	2000
Railway-crossing	B. M. Rawlings	697,540	Apr. 15	3103	490	89	491
Railway-crossing	W. M. Cooper	698,175	Apr. 22	3850	785	89	700
Railway-crossing	C. L. Lilberg	698,908	Apr. 30	4124	764	89	775
Railway-crossing	C. F. Pannell	698,410	Apr. 22	3705	880	89	848
Railway-detonator	F. Lemaire	698,908	June 24	3000	840	89	2010
Railway. Electric	W. B. Potter	697,013	Apr. 8	1212	371	89	570
Railway. Electric	A. A. Stolle	699,580	May 6	878	304	89	1800
Railway. Electric	C. J. Kintner	700,187	May 13	1915	444	89	1800
Railway. Electric	C. J. Kintner	700,188	May 13	1916	445	89	1800
Railway. Electric	C. J. Kintner	700,189	May 13	1917	446	89	1800
Railway. Electric	C. J. Kintner	700,190	May 13	1918	447	89	1800
Railway. Electric	C. J. Kintner	700,191	May 13	1919	448	89	1800
Railway. Electric	C. J. Kintner	700,192	May 13	1920	449	89	1800
Railway. Electric	C. J. Kintner	700,193	May 13	1921	450	89	1800
Railway. Electric	C. J. Kintner	700,194	May 13	1922	451	89	1800
Railway. Electric	C. J. Kintner	700,195	May 13	1923	452	89	1800
Railway. Electric	C. J. Kintner	700,196	May 13	1924	453	89	1800
Railway. Electric	C. J. Kintner	700,197	May 13	1925	454	89	1800
Railway. Electric	C. J. Kintner	700,198	May 13	1926	455	89	1800
Railway. Electric	C. J. Kintner	700,199	May 13	1927	456	89	1800
Railway. Electric	C. J. Kintner	700,200	May 13	1928	457	89	1800
Railway. Electric	C. J. Kintner	700,201	May 13	1929	458	89	1800
Railway. Electric	C. J. Kintner	700,202	May 13	1930	459	89	1800
Railway. Electric	C. J. Kintner	700,203	May 13	1931	460	89	1800
Railway. Electric	C. J. Kintner	700,204	May 13	1932	461	89	1800
Railway. Electric	C. J. Kintner	700,205	May 13	1933	462	89	1800
Railway. Electric	C. J. Kintner	700,206	May 13	1934	463	89	1800
Railway. Electric	C. J. Kintner	700,207	May 13	1935	464	89	1800
Railway. Electric	C. J. Kintner	700,208	May 13	1936	465	89	1800
Railway. Electric	C. J. Kintner	700,209	May 13	1937	466	89	1800
Railway. Electric	C. J. Kintner	700,210	May 13	1938	467	89	1800
Railway. Electric	C. J. Kintner	700,211	May 13	1939	468	89	1800
Railway. Electric	C. J. Kintner	700,212	May 13	1940	469	89	1800
Railway. Electric	C. J. Kintner	700,213	May 13	1941	470	89	1800
Railway. Electric	C. J. Kintner	700,214	May 13	1942	471	89	1800
Railway. Electric	C. J. Kintner	700,215	May 13	1943	472	89	1800
Railway. Electric	C. J. Kintner	700,216	May 13	1944	473	89	1800
Railway. Electric	C. J. Kintner	700,217	May 13	1945	474	89	1800
Railway. Electric	C. J. Kintner	700,218	May 13	1946	475	89	1800
Railway. Electric	C. J. Kintner	700,219	May 13	1947	476	89	1800
Railway. Electric	C. J. Kintner	700,220	May 13	1948	477	89	1800
Railway. Electric	C. J. Kintner	700,221	May 13	1949	478	89	1800
Railway. Electric	C. J. Kintner	700,222	May 13	1950	479	89	1800
Railway. Electric	C. J. Kintner	700,223	May 13	1951	480	89	1800
Railway. Electric	C. J. Kintner	700,224	May 13	1952	481	89	1800
Railway. Electric	C. J. Kintner	700,225	May 13	1953	482	89	1800
Railway. Electric	C. J. Kintner	700,226	May 13	1954	483	89	1800
Railway. Electric	C. J. Kintner	700,227	May 13	1955	484	89	1800
Railway. Electric	C. J. Kintner	700,228	May 13	1956	485	89	1800
Railway. Electric	C. J. Kintner	700,229	May 13	1957	486	89	1800
Railway. Electric	C. J. Kintner	700,230	May 13	1958	487	89	1800
Railway. Electric	C. J. Kintner	700,231	May 13	1959	488	89	1800
Railway. Electric	C. J. Kintner	700,232	May 13	1960	489	89	1800
Railway. Electric	C. J. Kintner	700,233	May 13	1961	490	89	1800
Railway. Electric	C. J. Kintner	700,234	May 13	1962	491	89	1800
Railway. Electric	C. J. Kintner	700,235	May 13	1963	492	89	1800
Railway. Electric	C. J. Kintner	700,236	May 13	1964	493	89	1800
Railway. Electric	C. J. Kintner	700,237	May 13	1965	494	89	1800
Railway. Electric	C. J. Kintner	700,238	May 13	1966	495	89	1800
Railway. Electric	C. J. Kintner	700,239	May 13	1967	496	89	1800
Railway. Electric	C. J. Kintner	700,240	May 13	1968	497	89	1800
Railway. Electric	C. J. Kintner	700,241	May 13	1969	498	89	1800
Railway. Electric	C. J. Kintner	700,242	May 13	1970	499	89	1800
Railway. Electric	C. J. Kintner	700,243	May 13	1971	500	89	1800
Railway. Electric	C. J. Kintner	700,244	May 13	1972	501	89	1800
Railway. Electric	C. J. Kintner	700,245	May 13	1973	502	89	1800
Railway. Electric	C. J. Kintner	700,246	May 13	1974	503	89	1800
Railway. Electric	C. J. Kintner	700,247	May 13	1975	504	89	1800
Railway. Electric	C. J. Kintner	700,248	May 13	1976	505	89	1800
Railway. Electric	C. J. Kintner	700,249	May 13	1977	506	89	1800
Railway. Electric	C. J. Kintner	700,250	May 13	1978	507	89	1800
Railway. Electric	C. J. Kintner	700,251	May 13	1979	508	89	1800
Railway. Electric	C. J. Kintner	700,252	May 13	1980	509	89	1800
Railway. Electric	C. J. Kintner	700,253	May 13	1981	510	89	1800
Railway. Electric	C. J. Kintner	700,254	May 13	1982	511	89	1800

Railway. Electric	C. J. Kintner	700,258	May 13	1986	515	89	1800
Railway. Electric	C. J. Kintner	700,259	May 13	1987	516	89	1800
Railway. Electric	C. J. Kintner	700,260	May 13	1988	517	89	1800
Railway. Electric	C. J. Kintner	700,261	May 13	1989	518	89	1800
Railway. Electric	C. J. Kintner	700,262	May 13	1990	519	89	1800
Railway. Electric	C. J. Kintner	700,263	May 13	1991	520	89	1800
Railway. Electric	C. J. Kintner	700,264	May 13	1992	521	89	1800
Railway. Electric	C. J. Kintner	700,265	May 13	1993	522	89	1800
Railway. Electric	C. J. Kintner	700,266	May 13	1994	523	89	1800
Railway. Electric	C. J. Kintner	700,267	May 13	1995	524	89	1800
Railway. Electric	C. J. Kintner	700,268	May 13	1996	525	89	1800
Railway. Electric	C. J. Kintner	700,269	May 13	1997	526	89	1800
Railway. Electric	C. J. Kintner	700,270	May 13	1998	527	89	1800
Railway. Electric	C. J. Kintner	700,271	May 13	1999	528	89	1800
Railway. Electric	C. J. Kintner	700,272	May 13	2000	529	89	1800
Railway. Electric	C. J. Kintner	700,273	May 13	2001	530	89	1800
Railway. Electric	C. J. Kintner	700,274	May 13	2002	531	89	1800
Railway. Electric	C. J. Kintner	700,275	May 13	2003	532	89	1800
Railway. Electric	C. J. Kintner	700,276	May 13	2004	533	89	1800
Railway. Electric	C. J. Kintner	700,277	May 13	2005	534	89	1800
Railway. Electric	C. J. Kintner	700,278	May 13	2006	535	89	1800
Railway. Electric	C. J. Kintner	700,279	May 13	2007	536	89	1800
Railway. Electric	C. J. Kintner	700,280	May 13	2008	537	89	1800
Railway. Electric	C. J. Kintner	700,281	May 13	2009	538	89	1800
Railway. Electric	C. J. Kintner	700,282	May 13	2010	539	89	1800
Railway. Electric	C. J. Kintner	700,283	May 13	2011	540	89	1800
Railway. Electric	C. J. Kintner	700,284	May 13	2012	541	89	1800
Railway. Electric	C. J. Kintner	700,285	May 13	2013	542	89	1800
Railway. Electric	C. J. Kintner	700,286	May 13	2014	543	89	1800
Railway. Electric	C. J. Kintner	700,287	May 13	2015	544	89	1800
Railway. Electric	C. J. Kintner	700,288	May 13	2016	545	89	1800
Railway. Electric	C. J. Kintner	700,289	May 13	2017	546	89	1800
Railway. Electric	C. J. Kintner	700,290	May 13	2018	547	89	1800
Railway. Electric	C. J. Kintner	700,291	May 13	2019	548	89	1800
Railway. Electric	C. J. Kintner	700,292	May 13	2020	549	89	1800
Railway. Electric	C. J. Kintner	700,293	May 13	2021	550	89	1800
Railway. Electric	C. J. Kintner	700,294	May 13	2022	551	89	1800
Railway. Electric	C. J. Kintner	700,295	May 13	2023	552	89	1800
Railway. Electric	C. J. Kintner	700,296	May 13	2024	553	89	1800
Railway. Electric	C. J. Kintner	700,297	May 13	2025	554	89	1800
Railway. Electric	C. J. Kintner	700,298	May 13	2026	555		

INDEX OF PATENTS ISSUED FROM THE
Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Pat.	Des.	Vol.	Page.
Refrigerator	A. de Chalmers	699,493	Apr. 19	699	493	11	114
Refrigerator attachment	A. B. Kohorn	699,495	Apr. 1	699	495	11	115
Refrigerator-car	J. B. Underwood	699,496	May 6	699	496	11	116
Refrigerator-chest	W. H. Ames	700,719	May 27	700	719	12	120
Refrigerator-chest	W. H. Ames	700,721	May 27	700	721	12	121

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Pat.	Des.	Vol.	P.
Roller-mill feeder	H. Gaskvander and J. H. Dearholt.	699,570	Apr. 1	699	570	11	132
Roller-press	E. Reagan	699,571	Apr. 20	699	571	11	133
Rolling-car-axles. Apparatus for	C. Steele	699,572	Apr. 20	699	572	11	134
Rolling design upon strips or bars. Apparatus for.	J. and W. D. Kynon	699,573	May 13	699	573	11	135
Rolling machinery	E. W. Hopkins	700,574	June 10	700	574	12	161
Rolling metal sheets	T. V. Allen	699,575	May 6	699	575	11	136
Rolling metal sheets in packs. Hot.	T. V. Allen	699,576	May 6	699	576	11	137
Rolling-mill converter or guide	T. V. Allen	699,577	May 6	699	577	11	138
Rolling-mill, electrically-driven	M. Harvey	699,578	May 13	699	578	11	139
Rolling-mill feed-table	E. R. Shook	699,579	Apr. 20	699	579	11	140
Rolling-mill furnace	T. V. Allen	699,580	May 6	699	580	11	141
Rolling tapering bodies. Mill for	G. H. Everett	697,581	Apr. 20	697	581	10	108
Rolling tubes. Heating mandrels for.	W. H. Bache	700,582	June 17	700	582	12	162
Roof-covering sheet	W. F. Norman and J. M. Berghauer	700,583	May 20	700	583	12	163
Roof-cresting. Metallic	S. F. Clark	700,584	June 24	700	584	12	164
Roof-guard	O. La Rue	700,585	June 24	700	585	12	165
Roost. Fumigating poultry.	J. H. P. Evans	700,586	June 17	700	586	12	166
Roost. Poultry.	C. F. Rigby	699,587	Apr. 1	699	587	11	142
Rope-clamp	W. M. Hull	700,588	June 10	700	588	12	167
Rope-clasp	F. B. Adams	700,589	June 10	700	589	12	168
Rope-fastener	W. C. Thomas	699,590	Apr. 15	699	590	11	143
Rope-laying machine	W. C. Thomas	699,591	Apr. 15	699	591	11	144
Rope-stitch	R. and H. Schell	697,592	Apr. 15	697	592	10	109
Rotary engine	F. Farns	697,593	Apr. 15	697	593	10	110
Rotary engine	H. Lohr	699,594	Apr. 1	699	594	11	145
Rotary engine	I. V. Ketchum	699,595	Apr. 1	699	595	11	146
Rotary engine	M. J. Hewitt	699,596	Apr. 1	699	596	11	147
Rotary engine	P. G. Bates	699,597	Apr. 8	699	597	11	148
Rotary engine	J. P. Shepard	697,598	Apr. 8	697	598	10	111
Rotary engine	W. H. Dougherty	697,599	Apr. 8	697	599	10	112
Rotary engine	J. Thompson	697,600	Apr. 15	697	600	10	113
Rotary engine	S. D. Beck	699,601	Apr. 20	699	601	11	149
Rotary engine	S. Smith	699,602	May 13	699	602	11	150
Rotary engine	J. E. Arthur	699,603	May 13	699	603	11	151
Rotary engine	R. W. Bates	700,604	May 13	700	604	12	169
Rotary engine	R. D. Hobbs	700,605	May 20	700	605	12	170
Rotary engine	T. J. Harris	700,606	May 20	700	606	12	171
Rotary engine	F. A. Hendon	701,007	June 3	701	007	13	172
Rotary engine	G. C. Shepard	701,008	June 3	701	008	13	173
Rotary engine	W. F. Bangs	701,009	June 3	701	009	13	174
Rotary engine	J. A. Porter	700,610	June 17	700	610	12	175
Rotary engine	C. A. and O. W. Hall	700,611	June 17	700	611	12	176
Rotary engine	W. L. Conkey	700,612	June 17	700	612	12	177
Rotary engine	P. Phillips	700,613	June 17	700	613	12	178
Rotary engine	E. F. Fickett	700,614	June 17	700	614	12	179
Rotary engine	J. W. Strahan	700,615	June 24	700	615	12	180
Rotary engine, water-motor, or pump	T. C. McBride	699,616	Apr. 20	699	616	11	152
Rotary explosive-engine	J. A. McLean	697,617	Apr. 15	697	617	10	114
Rotary explosive-engine	B. J. Ross	700,618	May 20	700	618	12	181
Rotary motor	H. Van Buren	700,619	May 20	700	619	12	182
Rotary steam-engine	J. F. Craig and T. V. Fleming	701,010	June 3	701	010	13	183
Rotating-piston engine	J. Dow	697,620	Apr. 8	697	620	10	115
Routing or engraving machine	W. A. Bates	699,621	Apr. 8	699	621	11	153
Routing or engraving machine	W. A. Bates	699,622	Apr. 8	699	622	11	154
Rublock	C. H. Butts	697,623	Apr. 15	697	623	10	116
Rublock. Driver	A. H. Rollins	700,624	May 27	700	624	12	184
Rubber article. Hollow container.	T. W. Miller	699,625	Apr. 8	699	625	11	155
Rubber boot or shoe	J. L. Perry	700,626	June 17	700	626	12	185
Rubber-dam holder	E. H. Bond	699,627	Apr. 1	699	627	11	156
Rubber. Dehydrating machine	A. Y. Warner and F. H. Ellis	697,628	Apr. 15	697	628	10	117
Rubber. Dehydrating machine	T. Harmer	697,629	Apr. 15	697	629	10	118
Rubber. Dehydrating machine	R. Mulholland	699,630	Apr. 1	699	630	11	157
Rubber. Dehydrating machine	A. O. Bourne	697,631	Apr. 15	697	631	10	119
Rubber-working machine	J. H. Pearce	697,632	Apr. 8	697	632	10	120
Rubbing starting and removing apparatus	S. Hanks	699,633	Apr. 1	699	633	11	158
Rubber	W. R. Parsons	699,634	Apr. 1	699	634	11	159
Rub and square. Combined	F. J. Conklin	701,011	May 27	701	011	13	186
Ruler. Slide	R. Thacker	700,635	May 20	700	635	12	187
Ruler, book-holder, and marker combined	C. D. Thomas	700,636	June 24	700	636	12	188
Ruler, flexible	J. Lawrence	700,637	June 24	700	637	12	189
Ruler, measuring	R. H. Canaan	700,638	May 20	700	638	12	190
Ruler, measuring	A. M. Whitton	700,639	May 20	700	639	12	191
Rolling-machine. Engraver's	F. Waid	699,640	May 13	699	640	11	160
Runways. Device for arresting	F. E. Arnold	700,641	June 10	700	641	12	192

Alphabetical list of inventions, April to June, inclusive—Continued

Invention	Name	No.	Date	Monthly volume		Official Gazette	
				1	2	1	2
Sad-iron	C. H. Sheffall	700,444	May 20	2800	387	1764	
Sad-iron	H. Grubin	700,445	June 17	2800	428	1807	
Sad-iron and vapor-stove. Combined	J. M. Currier	700,446	May 20	2800	478	1807	
Sad-iron handle	C. T. Domarest	700,447	June 10	1770	411	1808	
Sad-iron, self-heating	H. B. Swarts	700,448	Apr. 29	1871	380	1808	
Sad-iron wicker	E. Laidie	700,449	May 13	1900	341	1808	
Saddle, harness	M. Wilson	700,450	Apr. 8	1287	380	1808	
Safe	C. V. Pockham	700,451	June 17	2807	384	1808

Safety-pin	G. Bodan	700,455	June 24	2809	420	1808	
Safety-pin	G. Bodan	700,456	June 24	2809	420	1808	
Safety-pin	R. A. Ingraham	700,457	May 20	2809	420	1808	
Sail for marine vessels	R. Lundquist	700,458	June 8	2809	420	1808	
Sails, shifting top	A. Krasna	700,459	June 8	2809	420	1808	
Sales-clip and blank therefor	R. and E. Shoop	700,460	Apr. 29	2809	420	1808	
Sallygate of alloyed quins, &c.	H. Taron	700,461	May 20	2809	420	1808	
Salt-chamber granulating attachment	J. A. Moller, Jr.	700,462	May 20	2809	420	1808	
Salts. Treating solutions of	C. J. Reed	700,463	May 20	2809	420	1808	
Sample case and exhibitor	S. M. Wilson	700,464	June 8	2809	420	1808	
Sand-blast	M. C. Newhouse	700,465	May 20	2809	420	1808	
Sand-blasting apparatus	M. E. Evans	700,466	May 20	2809	420	1808	
Sand-box	J. L. Chadell and E. V. Scott	700,467	June 24	2809	420	1808	
Sand-dischargers. Compressed-air controlling device for	J. A. Mumford	700,468	Apr. 1	2809	420	1808	
Sand-drier	F. Hopkins	700,469	Apr. 29	2809	420	1808	
Sandpapering-machine	R. W. Dow	700,470	Apr. 29	2809	420	1808	
Sand-screener	C. F. O'Neil	700,471	Apr. 29	2809	420	1808	
Sand-sprinkling machine	D. T. Clement	700,472	May 20	2809	420	1808	
Sanding and polishing machine	D. T. Clement	700,473	May 20	2809	420	1808	
Sanding-machine	D. T. Clement	700,474	May 20	2809	420	1808	
Sanitary receptacle and cover	J. F. Pugh	700,475	Apr. 29	2809	420	1808	
Sanitary trap	J. F. Pugh and T. H. Gilmore	700,476	Apr. 29	2809	420	1808	
Sash-balance	A. S. Newton	700,477	May 20	2809	420	1808	
Sash-bar for greenhouses, &c.	G. E. Pichop and W. E. Corbin	700,478	May 20	2809	420	1808	
Sash-bar for greenhouses, &c.	F. M. Pierson	700,479	May 20	2809	420	1808	
Sash-bar for greenhouses, &c.	F. M. Pierson	700,480	May 20	2809	420	1808	
Sash-cord fastener	F. M. Pierson	700,481	May 20	2809	420	1808	
Sash-cord fastener	F. M. Pierson	700,482	May 20	2809	420	1808	
Sash-fastener	J. G. Thompson	700,483	May 20	2809	420	1808	
Sash-fastener	J. F. and H. N. Huber	700,484	May 20	2809	420	1808	
Sash-fastener	J. W. Lyon	700,485	May 20	2809	420	1808	
Sash-fastener	J. H. Williams	700,486	May 20	2809	420	1808	
Sash-fastener	R. D. Logan	700,487	June 17	2809	420	1808	
Sash-fastener	C. A. Goodell	700,488	June 17	2809	420	1808	
Sash-fastener, detachable window	A. L. Darr	700,489	June 17	2809	420	1808	
Sash-fastener or holder	J. W. Cade	700,490	June 17	2809	420	1808	
Sash-fastener, storm	R. C. Quinby	700,491	May 20	2809	420	1808	
Sash-holder	R. H. Gray	700,492	May 20	2809	420	1808	
Sash-lock	D. Hoyt	700,493	Apr. 1	2809	420	1808	
Sash-lock	E. H. Goucher	700,494	Apr. 15	2809	420	1808	
Sash-lock	W. Schanzweiler	700,495	Apr. 29	2809	420	1808	
Sash-lock	J. H. Thornton	700,496	June 10	1800	411	1808	
Sash-lock, automatic	F. George	700,497	Apr. 1	2809	420	1808	
Sash-locking mechanism	J. A. Brooks and E. H. Whittaker	700,498	June 17	2809	420	1808	
Sash, revolving window	C. D. Taber	700,499	Apr. 1	2809	420	1808	
Sash-tightening device	C. B. Foote, Jr.	700,500	Apr. 29	2809	420	1808	
Sash ventilator, window	J. Jacobs	700,501	May 20	2809	420	1808	
Sash, window	P. Baran	700,502	Apr. 29	2809	420	1808	
Saw, butcher's	G. Meyer	700,503	June 8	2809	420	1808	
Saw, circular	R. Lefmayer	700,504	Apr. 15	2809	420	1808	
Saw-clamp	W. I. Kirk	700,505	June 10	1800	411	1808	
Saw, compound	J. F. Carey	700,506	June 10	1800	411	1808	
Saw-sling device	L. M. Miller	700,507	May 20	2809	420	1808	
Saw-sling device	A. H. L. and G. A. W. Folkers	700,508	June 8	2809	420	1808	
Saw-guide	T. Prentice	700,509	June 24	2809	420	1808	
Saw guide and tension device, hand	A. Gillarduzzi	700,510	Apr. 15	2809	420	1808	
Saw-handle clamp	J. A. Ross	700,511	Apr. 29	2809	420	1808	
Saw-handle fastening	M. E. Herrick	700,512	June 24	2809	420	1808	
Saw jointer and gage	H. McDonnell	700,513	May 20	2809	420	1808	
Sawmill and planer	E. E. Willard	700,514	Apr. 29	2809	420	1808	
Sawmills, steam ex-works for	R. F. Barker and M. Corry	700,515	Apr. 29	2809	420	1808	
Saw-protecting hood	A. Bourget	700,516	Apr. 29	2809	420	1808	
Saw, pruning	G. E. Taylor	700,517	Apr. 29	2809	420	1808	
Saw-set	R. E. Foster	700,518	Apr. 29	2809	420	1808	
Saw-sharpening device	R. E. Foster	700,519	Apr. 29	2809	420	1808	
Saw-tooth gage	W. H. Ponce	700,520	June 17	2809	420	1808	
Saw, wood	W. H. Ponce	700,521	June 17	2809	420	1808	
Sawing, jointing, and boring machine	C. E. Sandstrom	700,522	June 8	2809	420	1808	
Sawing-machine	G. C. Knapp	700,523	Apr. 15	2809	420	1808	
Sawing-machine	F. J. Fable	700,524	June 8	2809	420	1808	
Sawing-machine, automatic cut-off	W. E. Lewis	700,525	June 10	1800	411	1808	
Sawing-machine, electric	H. Partington	700,526	May 20	2809	420	1808	
Sawing-machine, gang-edge	A. E. Roe	700,527	June 17	2809	420	1808	

Alphabetical list of inventions, April to June, inclusive—Continued

Invention	Name	No.	Date	Monthly volume		Official Gazette	
				1	2	1	2
Scaffold	J. Boardman	700,514	June 24	2809	420	1808	1808
Scaffold, portable	E. Chartrand	700,517	Apr. 15	2805	420	1808	1808
Scale	C. G. Strubbe	700,524	May 20	2801	510	1808	1808
Scale	H. E. Ogden, Jr.	700,525	May 27	2177	280	1808	1808
Scale and penholder combined	P. F. M. Burrows	699,570	Apr. 29	2760	217	1808	1808
Scale attachment	W. D. Evans and J. T. Marshall	700,544	June 24	2807	420	1808	1808
Scale, automatic weighing	H. Wilson	700,526	June 17	2240	420	1808	1808
Scale, Computing	F. E. McLeod	697,582	Apr. 8	1800	212	1808	1808

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Seaming machine. Side.	O. W. Sleeper	698,098	Apr. 28	2125	697,025	69	712
Seaming metal sheets. Machine for double.	C. H. Brown	701,911	May 27	5785	698,025	69	1268
Seaming sheet-metal bodies. Machine for end.	W. J. Kenny	698,045	May 12	1889	697,025	69	1474
Seat: See Lawn-seat. Spring-seat. Portable seat. Vehicle-seat.	W. Morrison	701,917	June 10	1128	698,025	69	2621
Secondary battery.	S. T. Playford	698,090	Apr. 28	3335	697,025	69	707
Sectional tank.	J. M. Gardner	698,090	Apr. 28	1117	697,025	69	257
Seed chubster. Cotton.	A. Chaplin	701,911	June 17	3015	698,025	69	2625
Seed-drill and cultivator. Combined hand.	H. K. and H. A. Bacon	697,171	Apr. 8	1519	696,025	69	349
Seed-dropper.	S. A. Loring	698,090	June 17	3335	697,025	69	1901
Seed hulls. Treatment of cotton.	J. C. W. Stanley	698,010	Apr. 28	4989	1100	69	2673
Seed products. Manufacture of.	F. B. Pope	700,986	May 27	3810	698,025	69	1191
Seeder.	C. H. H. and W. F. F. F.	701,911	June 3	698	144	69	1268
Seeder-adjusting device.	W. Stephenson	701,911	June 3	698	144	69	2641
Seeder and cultivator tooth.	E. O. Edwards	697,080	Apr. 28	2682	698,025	69	464
Seeder, fertilizer-distributor, and cultivator. Combined.	A. Crevetto	700,986	June 24	3890	698,025	69	1901
Seeding and planting machine.	R. D. Himmelfarb	698,776	Apr. 28	4989	697,025	69	1268
Seeding-machine.	J. H. Samuels	702,495	June 17	5166	698,025	69	1268
Seine-purging machine.	W. R. Lantz	698,874	Apr. 1	698	237	69	126
Seine-purging machine.	W. R. Lantz	697,180	Apr. 8	1442	698,025	69	267
Self-closing gate.	W. R. Lantz	697,181	Apr. 8	1445	698,025	69	267
Self-playing instrument.	R. E. Carpenter	701,911	June 3	719	698,025	69	1268
Self-playing instrument.	R. E. Flora	700,915	May 27	3821	698,025	69	1261
Separating and bolting machine.	D. W. Marmon	698,881	Apr. 1	212	126	69	176
Separator. See Centrifugal separator. Grain-separator. Coal-separator. Magnetic separator. Cream-separator. Ore-separator. Egg-separator. Steam-separator. Gold-separator. Steam and oil separator.	R. Q. Stiller	700,984	May 27	3890	698,025	69	1261
Separator.	A. J. Provost, Jr.	698,845	May 6	400	94	69	1267
Sewage. Apparatus for the treatment of.	G. H. Anderson, J. W. Stevens, and A. Lutz	701,911	June 10	995	212	69	1267
Sewage-disposal plant.	J. W. Smith	698,844	May 6	391	54	69	1261
Sewed articles. Seam for.	O. McNeil	702,495	June 17	5166	698,025	69	1268
Sewed articles. Seam for.	W. G. Travette	697,048	Apr. 8	1882	697,025	69	267
Sewerage system.	C. F. O'Neil	698,875	Apr. 1	180	36	69	37
Sewer catch-basin.	J. Crawford	698,480	Apr. 28	3673	698,025	69	1191
Sewer trap.	T. H. Brown	697,280	Apr. 8	1741	698,025	69	261
Sewing device. Broom.	W. H. Beck	698,400	Apr. 1	16	5	69	2646
Sewing-machine.	A. W. Eaton	701,911	June 10	1098	698,025	69	267
Sewing-machine.	W. R. Abernethy	698,844	Apr. 28	3731	698,025	69	267
Sewing-machine.	R. E. Wanless	698,844	Apr. 28	3731	698,025	69	267
Sewing-machine.	A. Giacchini	701,911	June 10	1098	698,025	69	267
Sewing-machine. Button.	S. E. Barries	701,911	May 27	3714	698,025	69	1261
Sewing-machine cloth guide.	S. Borton and O. B. Brush	698,988	Apr. 8	1689	698,025	69	948
Sewing-machine driving mechanism.	C. A. Dahl	698,871	May 6	400	105	69	1266
Sewing-machine. Eyelet-hole.	W. S. Jenkins	698,888	Apr. 1	294	124	69	117
Sewing-machine felling and hemming attachment.	C. L. Weatherwax	701,911	June 17	5166	698,025	69	1268
Sewing-machine folding guide.	M. Hachfeld	697,280	Apr. 8	1741	698,025	69	261
Sewing-machine. Fur and glove.	I. Stuhlman	698,775	May 12	1841	698,025	69	1448
Sewing-machine guide.	A. H. De Vos	698,417	Apr. 1	26	10, 11	69	14
Sewing-machine hemming and cording attachment.	M. Hachfeld	698,775	Apr. 1	1841	698,025	69	1448
Sewing-machine. Lock-stitch.	H. O. Blackwell	700,911	May 27	3821	698,025	69	1261
Sewing-machine lock-stitch mechanism.	H. B. Tracy	697,184	Apr. 8	1445	698,025	69	267
Sewing-machine loop-taking mechanism.	G. G. Betts	698,087	Apr. 28	3068	698,025	69	1141
Sewing-machine lower-thread tension mechanism.	H. S. Martin	701,911	June 3	698	126	69	2646
Sewing-machine. Mattress.	W. F. Wray	698,404	Apr. 1	16	5	69	2646
Sewing-machine needle-bar-guiding mechanism.	G. Schaefer	698,414	Apr. 28	3731	698,025	69	267
Sewing-machine needle threader.	J. Douglas and V. Hansen	700,986	June 24	3890	698,025	69	1261
Sewing-machine ruffler or gatherer.	R. E. Dunn	697,080	Apr. 28	2682	698,025	69	464
Sewing-machine. Shoe.	T. E. Keith	700,986	May 27	3890	698,025	69	1261
Sewing-machine. Shoe.	C. T. Warren	701,911	June 3	698	126	69	2646
Sewing-machine shuttle mechanism.	J. Bovey and G. Rockwell	700,986	May 27	3890	698,025	69	1261
Sewing-machine spool-holder and tension device.	A. I. Jacobs. (Release)	11,896	May 27	4194	698,025	69	1261
Sewing-machine table and guard attachment combined.	E. H. Ahrens	701,911	June 3	698	126	69	2646
Sewing-machine take-up.	W. C. Frew	698,875	May 27	3890	698,025	69	1261
Sewing-machine take-up mechanism.	J. L. Kieffer	698,871	Apr. 1	294	124	69	117

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Sewing-machine tension mechanism.	J. L. Kieffer	698,871	Apr. 1	294	124	69	117
Sewing-machine thread-cutting mechanism.	R. W. Thompson	700,986	June 24	3890	698,025	69	1261
Sewing-machine-treads foot-stitch.	A. Eppich	698,888	May 6	400	94	69	1267
Sewing-machine trimming attachment.	R. F. Darned	698,919	Apr. 28	4244	698,025	69	1269
Sewing-machine lock-gripper.	J. H. Gruber	698,911	Apr. 28	3335	697,025	69	2625
Sewing-machine. Wool.	R. E. Whaley	700,979	May 27	3881	698,025	69	1261
Shade and curtain fixture. Window.	E. W. Schindler	697,088	Apr. 28	2682	698,025	69	464
Shade and curtain holder. Window.	W. H. Griffin	700,979	May 27	3881	698,025	69	1261
Shade attachment. Window.	H. F. and C. Stephens	698,919	June 17	3347	698,025	69	2625
Shade-bracket.	E. H. Wray	700,979	June 24	3881	698,025	69	1261
Shade-bracket. Automatic extension.	A. H. Owsley	701,911	June 3	698	126	69	2646
Shade-cord clamp. Window.	E. J. Wells and J. F. Young	701,911	May 6	391	55	69	1265
Shade-hanger. Window.	J. O. Walker	700,980	June 17	3337	698,025	69	2625
Shade-holder.	A. H. Owsley	701,911	June 3	698	126	69	2646
Shade-rod-hanger. Window.	C. H. Bacon	697,218	Apr. 8	1794	697,025	69	260
Shade-roller and bracket therefor.	C. A. Baker	698,888	Apr. 28	4244	698,025	69	947
Shade-roller and curtain-pole bracket. Combined.	L. Bloom	698,888	Apr. 28	4244	698,025	69	947
Shade-roller bracket.	J. F. Kalar	698,888	Apr. 1	215	74	69	71
Shade-roller bracket.	J. J. De Long	701,911	May 27	3879	615	69	2646
Shade-roller. Hanger-bracket for vertically-adjustable.	C. F. Thomas	697,134	Apr. 8	1289	267	69	514
Shaft-boring apparatus.	R. Abt	698,915	Apr. 28	3335	697,025	69	2625
Shaft-coupling.	A. R. Tower	700,987	May 27	3890	698,025	69	1261
Shaft-coupling.	R. E. Discher	701,911	May 27	3881	698,025	69	1261
Shaft-coupling. See.	R. E. Discher	701,911	May 27	3881	698,025	69	1261
Shaft-coupling. Spring.	G. C. Hiehn, Jr.	700,979	May 27	3881	698,025	69	1261
Shaft-door and stage locking device.	A. Grothe	701,911	June 3	698	126	69	2646
Shaft-driving device.	J. H. H. H.	701,911	May 27	3881	698,025	69	1261
Shaft-furnace for burning cement, &c.	J. A. F. O. H. H.	698,915	May 27	3881	698,025	69	1261
Shaft-hanger.	C. A. Hiehn, Jr.	700,979	Apr. 1	215	74	69	71
Shaft or pole support.	E. H. H. H.	700,979	June 24	3881	698,025	69	1261
Shaft-prop.	H. H. H.	700,979	June 24	3881	698,025	69	1261
Shaft support and coupling. Combined.	J. H. H. H.	698,915	Apr. 28	3335	697,025	69	2625
Shaft-support. Vehicle.	G. J. H. H.	701,911	June 3	698	126	69	2646
Shafts. Hiking.	A. H. H. H.	698,915	May 27	3881	698,025	69	1261
Sharpening device. Knife.	A. F. H. H.	700,986	May 27	3890	698,025	69	1261
Shaving-clip.	D. T. Kendrick	700,987	May 27	3890	698,025	69	1261
Shaver.	D. T. Kendrick	700,987	May 27	3890	698,025	69	1261
Shaver. See Animal-shaver.	H. F. H. H.	697,280	Apr. 8	1741	698,025	69	261
Shaver.	C. C. H. H.	697,280	Apr. 15	1907	698,025	69	468
Shaver.	W. G. H. H.	698,915	Apr. 28	3335	697,025	69	2625
Shaver.	R. H. H. H.	700,986	June 24	3890	698,025	69	1261
Sheet-carrying device. Pneumatic.	G. F. H. H.	700,986	May 27	3890	698,025	69	1261
Sheet-carrying and packing device.	A. J. H. H.	700,986	June 24	3890	698,025	69	1261
Sheet-delivery apparatus.	G. F. H. H.	698,914	Apr. 28	3335	697,025	69	2625
Sheet-folding and cutting machine.	W. G. H. H.	700,986	June 24	3890	698,025	69	1261
Sheet-introducing mechanism. Ship.	W. H. H. H.	698,915	Apr. 28	3335	697,025	69	2625
Sheet-metal articles. Machine for wiring.	J. L. H. H.	697,280	Apr. 15	1907	698,025	69	468
Sheet-metal box or can.	E. F. H. H.	697,280	Apr. 15	1907	698,025	69	468
Sheet-metal disk or cap feeding machine. Automatic.	J. F. H. H.	700,986	June 24	3890	698,025	69	1261
Sheet-metal folded joints. Machine for the production of.	T. L. H. H.	700,986	June 24	3890	698,025	69	1261
Sheet-metal-heating furnace.	J. E. and R. Jones	698,915	May 6	391	55	69	1265
Sheet-metal. Machine for manufacturing expanded.	W. L. H. H.	698,915	Apr. 28	3335	697,025	69	2625
Sheet-metal sections. Packaging.	G. F. H. H.	698,915	May 6	391	55	69	1265
Sheet-metal vessels hermetically tight. Rendering joints of.	W. Thompson	698,915	May 6	391	55	69	1265
Sheet-metal vessels. Machine for bulging.	G. W. H. H.	698,915	Apr. 28	3335	697,025	69	2625
Sheet-metal-working press.	R. F. H. H.	697,280	Apr. 15	1907	698,025	69	468
Shelf and shipping-crate. Book.	A. A. H. H.	700,986	May 27	3890	698,025	69	1261
Shelf-bracket. Adjustable.	W. C. H. H.	701,911	Apr. 28	3335	697,025	69	2625
Shelf-hook.	C. A. H. H.	697,280	Apr. 15	1907	698,025	69	468
Shells.	W. A. H. H.	700,986	May 27	3890	698,025	69	1261
Ships' cargoes. Apparatus for unloading.	A. H. H. H.	700,986	May 27	3890	698,025	69	1261
Ships' hatches. Protective tambling-hood for.	J. H. H. H.	700,986	May 27	3890	698,025	69	1261
Ships' hulls. Means for cleaning.	W. A. H. H.	698,914	May 6	391	55	69	1265
Ship's-log apparatus. Electrical.	T. F. and T. P. Walker	701,911	June 3	698	126	69	2646
Ship's ventilator.	C. H. H. H.	698,915	May 27	3890	698,025	69	1261
Shipping case. Patent.	F. H. H. H.	698,915	Apr. 28	3335	697,025	69	2625
Shirt.	G. J. H. H.	697,280	Apr. 15	1907	698,025	69	468
Shirt.	D. L. H. H.	700,986	May 27	3890	698,025	69	1261
Shirt-hand stiffener.	A. D. H. H.	697,280	Apr. 15	1907	698,025	69	468
Shock-compressor.	R. H. H. H.	697,280	Apr. 15	1907	698,025	69	468
Shock-loading apparatus.	A. G. H. H.	700,986	June 24	3890	698,025	69	1261
Shocks. Appliances for taking up or neutralizing.	F. H. H. H.	700,986	May 27	3890	698,025	69	1261
Shoe.	J. C. H. H.	697,280	Apr. 15	1907	698,025	69	468

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Pat.	Vol.	Page.
Shoe-cleaner	D. J. Foley	702,089	June 24	2226	781	22	2224
Shoe-duster	W. G. Mulken	700,080	May 12	1811	480	22	1800
Shoe-fastener	D. M. Kinnear and W. W. Jones	701,083	June 10	1004	240	22	2222
Shoe-fastening	A. G. Mead	702,085	June 17	2222	577	22	2225
Shoe-horn	G. Schneider	702,110	June 24	2726	222	22	2225
Shoemaker's jack	A. T. Draper	692,086	Apr. 20	4912	220	22	222
Shoe-polisher	J. F. Brougher	694,712	Apr. 1	604	123	22	121
Shoe-polisher	E. De Baun	702,089	June 10	1726	611	22	2225
Shoe-protector	J. H. Price	702,078	June 17	2108	494	22	2221
Shoe-straining device	H. Michaelis and H. Christian	700,085	May 12	1002	418	22	1220
Shoe-stretcher	C. L. Passmore	700,703	May 20	2102	705	22	1240
Shoe-turning device	G. B. Gardner	702,126	June 10	1650	220	22	2225
Shoes while polishing same. Device for supporting.	C. G. Keller	701,200	June 3	120	27	22	2125
Shot. Boarding	C. Tatham	702,220	June 24	2740	561	22	2220
Shot-making machine	J. L. Curline	697,214	Apr. 15	2225	221	22	227
Shot-sprenger	D. Brown	692,087	May 6	622	122	22	1212
Shovel:							
See Cart-shovel. Pneumatic shovel.							
Shovel	J. W. Elison	701,205	June 3	222	227	22	2220
Shovel	J. F. Haviland	702,087	June 10	1472	222	22	2220
Shovel	A. Rolalo	692,220	Apr. 20	2212	727	22	212
Show-case	F. Pollard	692,211	May 12	1214	225	22	1222
Show-case	A. Rolalo	701,222	May 27	4220	222	22	2222
Show-case	A. Rolalo	701,216	June 3	222	211	22	2227
Show-case	A. Jaeger	701,222	June 10	1024	222	22	2221
Show-case	O. F. Kurz	702,444	June 17	2120	472	22	2272
Show-base or show-front	H. F. Palmer	697,022	Apr. 8	1127	222	22	272
Show stand or rack. Revolving.	G. P. Rahn	700,222	May 20	2121	221	22	1220
Shutter-fastener	L. Moretti	697,220	Apr. 8	1727	421	22	420
Shutter. Focal-plane	W. W. Van Duser	697,227	Apr. 8	1724	221	22	222
Shutter-operating device	J. L. Hottelton	702,122	June 10	1222	222	22	2247
Shutter. Window	F. L. Shaler	692,022	Apr. 20	4222	1125	22	1122
Shoe cleaner. Shaking	D. I. Coggin	692,722	May 12	1122	272	22	1222
Sieve. Flour-bolting	J. B. Mueller	692,227	Apr. 8	1125	222	22	222
Sifter	J. M. Olson	697,744	Apr. 15	2224	222	22	227
Sifter and receptacle. Ash.	H. M. Austin	692,124	May 6	12	4	22	1172
Sifter. Ash	W. M. Viner	697,222	Apr. 15	2214	222	22	222
Sifter. Flour	J. F. Foster and A. Forber	701,722	June 3	722	172	22	2222
Sifter or strainer. Culinary	U. Eberhardt	700,721	May 27	2222	722	22	1222
Sifter. Sand	H. R. Roberts	701,222	June 10	1121	222	22	2227
Sifter-spoon. Flour	J. B. Schmidt	702,222	June 17	2221	222	22	2742
Sigs	L. J. Hunter	692,172	May 6	22	22	22	1124
Sigs. Advertising	T. P. Holmstrom	692,222	Apr. 1	22	12	22	22
Sigs. Changeable	H. Tripp and G. E. Stephenson	694,772	Apr. 1	722	124	22	122
Sigs. Electric light	G. D. Chapman and C. R. Quine	692,222	Apr. 22	2222	772	22	722
Sigs. Illuminated	O. C. Scott	700,222	May 27	2222	772	22	1222
Sigs. Illuminated	D. H. Moore	692,222	May 6	141	22	22	1224
Sigs. Vacuum-tube	H. Norden and L. S. Crandall	702,122	June 10	1227	222	22	2247
Signal. Switchboard for illuminating electric-lamp.

Sing. Combined road and ice	F. R. Brown	702,222	June 24	2212	222	22	2222
Sing. Ice	A. Bonds	692,221	Apr. 20	2222	722	22	221
Sing. Roller	A. L. Foy	692,172	Apr. 20	2227	722	22	722
Sing-wheel. Roller	B. H. Alvey	692,222	Apr. 20	2224	222	22	727
Sing							
Sing and drawers. Combined	L. A. Dargard	702,227	May 20	2222	214	22	1727
Sing and waist supporter	J. C. McDonald	692,222	May 6	222	22	22	1224
Sing-sing and waist-retainer. Combined	W. C. Cortelyou	692,222	May 6	222	22	22	1222
Sing-sing	V. F. Beyer	692,222	Apr. 20	2122	224	22	722
Sing. Lady's	G. Lewis	692,222	Apr. 20	2422	722	22	722
Sing. Lady's	J. and H. M. Hammer	692,221	Apr. 1	224	12	22	22
Sing. Lady's	W. F. Wyman	692,222	Apr. 20	2472	722	22	22
Sing-protector	J. Hottelton	692,222	Apr. 1	222	122	22	22
Sing-supporter	A. H. Stupen	697,222	Apr. 8	1222	221	22	222

UNITED STATES PATENT OFFICE, 1902.

123

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Draw.	Vol.	Page.
Sky-light opener	G. Dickelhaup	701,135	May 27	2226	925	22	2223
Slat-trimming mechanism	J. Roth, Jr.	693,139	Apr. 22	2226	729	22	725
Slat-cutting machine	C. R. Huston	702,227	June 24	2226	642	22	2223
Slid. Box	A. F. Lagerstrom	702,228	June 10	1224	436	22	2223
Slid. Box	J. C. Meyers	693,951	Apr. 8	1165	229	22	222

Slid. Box	H. B. Williams	702,122	June 10	1222	242	22	2227
Slid. Box	H. A. Webster	693,222	May 6	224	122	22	1222
Slid. Box	W. H. Clark	693,227	Apr. 22	2220	772	22	722
Slid. Box	C. F. Cushing	700,224	May 20	2220	672	22	1212
Slid. Box	W. L. Smith	701,410	June 3	222	60	22	2122
Slid. Box	R. Hope-Jones	702,227	June 17	2227	622	22	2222
Slid. Box	R. De Moulmeester	701,122	May 27	2222	912	22	2222
Slid. Box	E. L. Tanner	702,227	June 17	2222	622	22	2222
Slid. Box	D. Sumner	697,222	Apr. 15	2211	621	22	222
Slid. Box	G. C. Lee	693,222	May 12	1221	227	22	1222
Slid. Box	E. J. Smith	693,221	Apr. 22	6224	1107	22	1227
Slid. Box	A. Garvin	693,222	Apr. 8	1222	242	22	222
Slid. Box	D. H. Sims	702,222	June 17	2272	624	22	2277
Slid. Box	O. O. White	702,222	June 17	2224	621	22	2722
Slid. Box	H. C. Folger, H. Moriarty, and E. R. Jacobson	694,270	Apr. 1	512	122	22	112
Slid. Box	O. A. Menger	702,127	May 12	1222	622	22	1224
Slid. Box	E. L. P. Mars	701,272	May 27	2222	672	22	2221
Slid. Box	H. Christensen	693,122	Apr. 22	2227	722	22	722
Slid. Box	J. A. White	702,222	June 24	2222	624	22	2222
Slid. Box	F. Trinks	693,022	Apr. 22	2012	1112	22	1122
Slid. Box	M. C. Johnson	693,272	May 12	1444	624	22	1422
Slid. Box	M. C. Johnson	693,272	May 12	1421	222	22	1422
Slid. Box	G. W. Heerlein	702,221	May 20	2722	622	22	1722
Slid. Box	J. A. Smith	693,222	Apr. 22	6724	1041	22	1071
Slid. Box	J. E. Cope	701,222	June 3	22	6	22	2112
Slid. Box	A. Laidler	701,221	June 3	542	112	22	2221
Slid. Box	J. Harty	702,112	June 10	1422	227	22	2222
Slid. Box	H. T. Weller	693,222	Apr. 22	4721	242	22	242
Slid. Box	V. G. Apple	694,222	Apr. 22	6724	1042	22	1022

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Pat.	Des.	Pat.	Des.
Speed-regulator for rotary shafts	A. E. Howe	701,081	June 24	3085	540	3081	
Speed-regulator. Mechanical	H. P. White	701,082	June 24	3070	730	3069	
Speed-shaft. Variable	E. Christensen	701,083	June 17	3420	894	3420	
Spelter-furnace	A. J. Ash	701,084	June 17	3327	814	3327	
Spelter. Making	O. Nagel	701,085	May 13	1020		1020	
Spelter. Refining	C. W. Wood	701,086	Apr. 20	3327		3327	
Spigot and bung remover. Combined	T. Livingston	701,087	June 24	3011	670	3011	
Spigot-drawing tool	J. K. Reid	701,088	Apr. 1	840	194	840	
Spindle-machine	H. H. Bringer	701,089	Apr. 20	3330	700	3330	
Spindle:							
See Axle-spindle. Spinning-spindle.							
Loading-spindle.	J. Widmer	701,090	May 20	3330	517	3330	
Spinning	R. W. Streichenert	701,091	June 10	1000	800	1000	
Spinning artificial-silk filaments for forming strands or threads. Apparatus for	O. W. and A. Mettler	701,092	Apr. 8	1100	300	1100	
Spinning device	P. P. Graves	701,093	May 6	40	10	40	
Spinning, doubling, or twisting machine. Ring-	E. Rhoades	701,094	Apr. 8	1001	270	1001	
Spinning-frame roving-breaker	J. G. Fredericks	701,095	May 13	1040	344	1040	
Spinning-machine	O. L. Owen	701,096	May 6	640	130	640	
Spinning-machine traverse-motion	G. Stahle	701,097	Apr. 20	4070	300	4070	
Spinning-machine. Vessel or pot for gathering fibers being thrown off	L. W. Campbell	701,098	May 6	600	100	600	
Spinning or twisting frame	F. M. Marcy	701,099	Apr. 8	1040	300	1040	
Spinning or twisting machine. Truing up the drawing-rolls of	G. H. Ellis	701,100	May 27	4010	300	4010	
Spinning. Preparing flax fiber for	E. Kempshall	701,101	May 13	1000	640	1000	
Spinning-rod	W. Gibson	701,102	June 3	770	171	770	
Spinning-spindle	W. Gibson	701,103	June 3	900	300	900	
Spinning-spindle. Knee-brake for stopping	J. Boyd	701,104	May 27	3040	300	3040	
Spittoon. Fountain	W. E. Allen	701,105	June 24	3044	300	3044	
Spittoon. Pocket	R. Buehner and Y. Marx	701,106	May 27	3177	700	3177	
Spittoon. Sanitary	N. J. Beaudin and N. E. Thibert	701,107	Apr. 20	3330	1000	3330	
Spoke-fastener and tire-tightener. Combined	E. Lovelle	701,108	Apr. 1	110	30	110	
Spoke-holes in metallic wheel-fellies. Machine for drilling	G. H. Everett	701,109	June 3	747	100	747	
Spoke-puller. Vehicle	C. W. Sester	701,110	June 3	400	30	400	
Sponge or mucilage holder	H. W. Sontagood	701,111	Apr. 20	3330	700	3330	
Sponge substitute. Forming	A. Straus	701,112	June 10	1004		1004	
Spool and producing same	E. Hubbard	701,113	Apr. 8	1915	407	1915	
Spool-blanks. Machine for making	J. W. Carver	701,114	May 20	3004	610	3004	
Spool-holder	J. M. Hilton	701,115	Apr. 15	3330	607	3330	
Spool-machine	H. H. Pierce	701,116	May 27	3000	577	3000	
Spool or bobbin	E. R. Crocker	701,117	May 20	3070	674	3070	
Sprayer. Liquid	W. E. Chandler	701,118	Apr. 15	3030	440	3030	
Spraying device	L. A. Appinwall	701,119	June 3	704	100	704	
Spraying-machine	I. and J. Zimmerman	701,120	May 20	3030	500	3030	
Spring:	L. Doerr	701,121	May 6	300	71	300	
See Carriage or wagon. Elliptical spring.							
Tail-board spring.							
Door-spring.							
Spring-clip	J. M. Mays	701,122	May 27	3000	671	3000	
Spring-cushion and its support	W. H. Bates	701,123	June 3	301	71	301	
Spring-rod	J. J. Breakley	701,124	Apr. 20	3000	804	3000	
Sprinkler:							
See Lawn-sprinkler.							
Sprinkling or spraying device	G. Schock	701,125	June 24	3040	700	3040	
Sprocket attachment	J. G. Wangerin	701,126	Apr. 15	3010	404	3010	
Spr. Riding	C. W. Davison	701,127	June 10	1000	300	1000	
Square. T.	G. M. Lee	701,128	June 24	3041	700	3041	
Square-roll	W. F. Demaree	701,129	Apr. 1	40	10	40	
Stacker	S. F. Weaver	701,130	Apr. 15	3000	400	3000	
Stacker. Hay	S. C. Dunham	701,131	May 27	3004	304	3004	
Stacker. Hay	J. H. Cope	701,132	May 27	4140	300	4140	
Stacker. Pneumatic	D. Dow	701,133	Apr. 1	300	60	300	
Stacker. Pneumatic	F. L. Norton	701,134	Apr. 15	3070	600	3070	
Stacker. Pneumatic	J. R. Bartholomew	701,135	June 17	3730	604	3730	
Stacker. Pneumatic	F. L. Norton	701,136	June 24	3000	700	3000	
Stacker. Pneumatic straw	J. M. Andrews (Reliance)	701,137	May 27	4100	300	4100	
Stacker. Straw	A. Hagemeister	701,138	Apr. 1	700	100	700	
Stacker. Straw	J. B. Buckwalter	701,139	Apr. 20	4007	1004	4007	
Stacker. Wheeled straw	S. D. Felsing and E. G. Gustafson	701,140	Apr. 8	1100	340	1100	
Stacker. Wind	M. Glyn	701,141	May 27	3007	400	3007	
Stage illumination with indirect light	M. Fortney	701,142	Apr. 20	4000	1110	4000	
Stair-builder. Adjustable form for	C. A. Ambrosius	701,143	Apr. 20	3040	1117	3040	
Stair-rod fastener	W. Richards	701,144	June 3	100	40	100	
Stair-routing machine	F. V. Phillips	701,145	May 27	3000	700	3000	
Stairs, &c. System and apparatus for facilitating the ascent of	L. Brennan	701,146	June 17	3007	517	3007	
Stairway	F. W. Weber	701,147	May 13	1077	340	1077	
Stairway	G. C. Tilton	701,148	May 20	3000	600	3000	
Stair-cutting	W. R. Walsh	701,149	June 17	3000	600	3000	
Stamp	E. H. Smith	701,150	June 24	3100	700	3100	
Stamp-cutting	E. H. Oaklin	701,151	June 10	1000	304	1000

Station-indicator	F. G. Lusk	701,172	May 13	1004	300	1004	
Stave-blanks for casks. Machinery for jointing or finishing	A. Dunbar	701,173	June 24	3004	300	3004	
May-bolt and making same	G. O. Gridley	701,174	May 13	1000	300	1000	
Steam-tender	W. W. Jacques	701,175	May 20	3070	300	3070	
Steam and internal-combustion motor. Combined	F. D. Clark	701,176	Apr. 1	300	100	300	
Steam and oil separator	J. T. Lindstrom	701,177	May 13	1000	300	1000	
Steam-boller	A. Spencer	701,178	Apr. 1	700	100	700	
Steam-boller	J. A. Stevens	701,179	Apr. 15	3000	300	3000	
Steam-boller	C. B. Bessick	701,180	May 13	1000	300	1000	
Steam-boller	E. J. Moore	701,181	May 13	1000	300	1000	
Steam-boller. Vertical tube	F. Burger and H. H. Williams	701,182	Apr. 1	600	100	600	
Steam. Controlling the generation of	C. and A. Macher and W. G. Hay	701,183	June 10	1000	300	1000	
Steam-engine	P. B. Whitney	701,184	Apr. 8	1000	300	1000	
Steam-engine	W. A. Johnson	701,185	Apr. 20	3040	300	3040	
Steam-engine	A. J. Markham	701,186	May 13	1000	417	1000	
Steam-engine	C. G. Worthington	701,187	June 24	3000	700	3000	
Steam-generating system	W. O. Williams	701,188	Apr. 20	4110	1101	4110	
Steam-generator	C. A. Kitta	701,189	Apr. 20	3000	300	3000	
Steam-generator	W. H. Kittle and B. Crawford	701,190	June 3	311	40	311	
Steam-generator	A. Thompson	701,191	June 3	340	100	340	
Steam-generator	J. J. Kitchner	701,192	June 10	1000	300	1000	
Steam-generator	J. L. Glynn	701,193	June 17	3000	300	3000	
Steam-generator. Combined water and fire tube	T. H. Rutledge	701,194	Apr. 15	3070	300	3070	
Steam-generator for locomotive service	C. H. Fox	701,195	May 20	3070	400	3070	
Steam-generator regulator	T. O'Brien	701,196	June 3	404	104	404	
Steam-generator shaft, cylinder, &c. Manufacture of	R. F. McFar	701,197	May 20	3044	300	3044	
Steam-generator. Apparatus for purifying water for	A. Gray	701,198	Apr. 15	3004	300	3004	
Steam-generator. Means for regulating the supply of water and liquid fuel to	J. Simpson	701,199	Apr. 20	3000	1107	3000	
Steam in cylinders. Means for reducing condensation of	G. R. Harvey	701,200	Apr. 1	600	101	600	
Steam-line. Automatic drip for	J. H. Halsey	701,201	Apr. 15	3000	300	3000	
Steam or fluid-pressure engine	W. J. Emmitt	701,202	Apr. 8	1001	310	1001	
Steam-regulator	G. Adair and P. Foss	701,203	Apr. 20	3004	300	3004	
Steam-separator	W. L. Jennings	701,204	Apr. 1	97	30	97	
Steam-separator	W. W. Wray	701,205	May 27	3040	704	3040	
Steam-separator	J. Bowden	701,206	Apr. 20	3010	700	3010	
Steam-trap	W. H. and B. Thompson	701,207	Apr. 1	301	31	301	
Steam-trap	G. H. Hays	701,208	Apr. 8	1700	400	1700	
Steam-trap	J. W. Rogers	701,209	May 6	70	30	70	
Steam-trap	C. H. Barry	701,210	May 13	1000	300	1000	
Steam-trap	H. H. Hays and T. Bagley	701,211	May 27	3000	300	3000	
Steam-trap	F. Taylor	701,212	June 3	70	10	70	
Steam-trap. Wheel	J. Francis	701,213	June 3	70	10	70	
Steel, &c. Apparatus for making	E. C. Wells	701,214	Apr. 20	4100	300	4100	
Steel-converter	S. K. Bahrnd	701,215	Apr. 20	4007	1001	4007	
Steel-furnace. Open-hearth	F. L. Saniter and J. L. Smith	701,216	June 24	3070	300	3070	
Steel plant. Converter	O. H. McCullough, Jr., and L. C. E. Holcomb	701,217	Apr. 15	3000	300	3000	
Steering apparatus for ships. Hydraulic	B. A. Fisher	701,218	Apr. 15	3000	300	3000	

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				1st	2nd	Vol.	Page
Steering mechanism. Hydraulic.	J. Christensen.	222,421	May 6	615	140	100	1000
Steering or other purposes. Shifting mechanism for.	G. C. Brock.	222,422	Apr. 29	2222	222	100	1000
Small roller.	L. F. F. Zeller.	222,423	June 3	222	122	100	1000
Small roller.	G. D. Hart.	222,424	May 12	122	122	100	1000
Step structure.	H. W. Baur.	222,425	Apr. 29	222	122	100	1000
Stereoscope.	H. C. and H. O. White.	222,426	June 3	222	122	100	1000
Stereoscope.	H. C. and H. O. White.	222,427	June 3	222	122	100	1000
Stereotype-plate and base.	C. S. Partridge.	222,428	June 17	222	122	100	1000
Stereotype-plate matrices. Machine for producing.	I. Kline.	222,429	Apr. 29	222	122	100	1000
Stereotyping. Casting-box for.	S. G. Goss.	222,430	Apr. 29	222	122	100	1000
Stereotyping. Turl matrix-pulp for.	R. Kraft.	222,431	Apr. 29	222	122	100	1000
Sterilizer.	G. G. Scamman.	222,432	May 12	122	122	100	1000
Sterilizing apparatus.	G. W. Kellogg.	222,433	Apr. 29	222	122	100	1000
Stethoscope. Binaural.	R. C. M. Bowles.	222,434	Apr. 29	222	122	100	1000
Stiffening cord or tape.	E. E. Warren.	222,435	May 6	222	122	100	1000
Stirrup.	W. H. Angley and W. Clifton.	222,436	May 27	222	122	100	1000
Stitch-indenting machine.	I. Yeates.	222,437	June 17	222	122	100	1000
Stitch-indenting machine.	A. Olson.	222,438	June 17	222	122	100	1000
Stitch-indenting machine.	J. B. Hadenway.	222,439	May 12	122	122	100	1000
Stitch-indenting machine.	J. B. Hadenway.	222,440	May 27	222	122	100	1000
Stitch-indenting machine.	R. J. Ryerson.	222,441	Apr. 1	222	122	100	1000
Stock.	A. J. Spencer.	222,442	Apr. 29	222	122	100	1000
Stock-roller.	K. Palma.	222,443	Apr. 29	222	122	100	1000
Stocking.	H. Well.	222,444	Apr. 1	222	122	100	1000
Stocking-guard.	R. H. Yarrington and T. Hall.	222,445	May 12	122	122	100	1000
Stocking-supporter.	R. W. King.	222,446	June 24	222	122	100	1000
Stoker and smoke-consumer. Automatic.	W. Fraser.	222,447	May 27	222	122	100	1000
Stoker. Mechanical.	A. F. Hagie.	222,448	June 3	222	122	100	1000
Stoker. Mechanical.	J. O. McClellan.	222,449	June 17	222	122	100	1000
Stone. Apparatus for the manufacture of artificial.	C. W. Stevens.	222,450	May 6	222	122	100	1000
Stone. Artificial building.	C. W. Stevens.	222,451	May 6	222	122	100	1000
Stone. Artificial building.	C. W. Stevens.	222,452	May 6	222	122	100	1000
Stone. Machine for handling.	C. W. Stevens.	222,453	May 6	222	122	100	1000
Stone. Making artificial.	H. E. Brown.	222,454	Apr. 29	222	122	100	1000
Stone. Making dolomite sand.	H. E. Brown.	222,455	Apr. 29	222	122	100	1000
Stone. Manufacture of artificial sand.	H. E. Brown.	222,456	Apr. 29	222	122	100	1000
Stone-molding machine. Artificial.	H. F. Palmer.	222,457	May 27	222	122	100	1000
Stone-molding machine. Artificial.	H. F. Palmer.	222,458	June 24	222	122	100	1000
Stone or brick and the preparation of lime therefor.	O. H. Anderson.	222,459	June 17	222	122	100	1000
Manufacture of artificial.	J. W. Lehmann.	222,460	May 6	222	122	100	1000
Stone or brick. Building.	A. W. Frank.	222,461	June 24	222	122	100	1000
Stone. Raising sheets of.	T. Sciglis.	222,462	June 10	222	122	100	1000
Stone surface. Machine for working.	A. Adler.	222,463	Apr. 12	222	122	100	1000
Stool. Adjustable counter.	J. L. Hawken and R. E. W. Bandy.	222,464	June 3	222	122	100	1000
Stopper.	W. G. Bates and W. A. Reed.	222,465	Apr. 12	222	122	100	1000
Stopper for bottles, jars, &c. Manufacturing.	J. Bocking.	222,466	May 6	222	122	100	1000
Stopping or staking device.	H. J. Cogswell.	222,467	May 12	222	122	100	1000
Storage battery.	L. W. Lombard.	222,468	May 20	222	122	100	1000
Storage battery.	L. W. Lombard.	222,469	May 20	222	122	100	1000
Storage battery.	A. D. Edgerton.	222,470	June 10	222	122	100	1000
Storage battery.	H. E. Hine.	222,471	Apr. 29	222	122	100	1000
Storage-tank.	R. E. Sanders.	222,472	Apr. 29	222	122	100	1000
Store-front.	M. O. Sweeney.	222,473	Apr. 1	222	122	100	1000
Store-service apparatus.	A. K. Beckwith.	222,474	Apr. 1	222	122	100	1000
Stove.	W. F. Kietler.	222,475	Apr. 29	222	122	100	1000
Stove.	A. W. Walker.	222,476	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,477	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,478	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,479	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,480	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,481	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,482	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,483	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,484	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,485	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,486	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,487	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,488	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,489	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,490	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,491	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,492	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,493	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,494	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,495	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,496	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,497	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,498	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,499	Apr. 29	222	122	100	1000
Stove.	R. R. Cahoon.	222,500	Apr. 29	222	122	100	1000

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				1st	2nd	Vol.	Page
Stove. Heating.	R. R. Cahoon.	222,501	Apr. 29	222	122	100	1000
Stove. Heating.	R. R. Cahoon.	222,502	Apr. 29	222	122	100	1000
Stove. Heating.	C. W. Wanner.	222,503	May 6	222	122	100	1000
Stove. Heating.	C. R. Moon.	222,504	June 24	222	122	100	1000
Stove. Heating and cooking.	J. O. Parmelee.	222,505	Apr. 15	222	122	100	1000
Stove. Heating, cooking, and baking.	R. O. MacCallum.	222,506	Apr. 15	222	122	100	1000
Stove heating or cooking attachment.	J. P. Lynett.	222,507	May 27	222	122	100	1000
Stove. Laundry.	R. Clark.	222,508	June 24	222	122	100	1000
Stove-heating.	R. R. Cahoon.	222,509	Apr. 29	222	122	100	1000
Stove or range. Heating.	D. F. Winn.	222,510	May 27	222	122	100	1000
Stove or range.	R. R. Cahoon.	222,511	Apr. 29	222	122	100	1000
Stove or range. Cooking.	R. Clark.	222,512	Apr. 1	222	122	100	1000
Stove or range. Gas.	G. W. Graves and J. F. Mills, Jr.	222,513	Apr. 29	222	122	100	1000
Stovepipe.	G. R. Barclay.	222,514	June 3	222	122	100	1000
Stovepipe.	A. Channing.	222,515	Apr. 29	222	122	100	1000
Stovepipe attachment.	J. Joy and J. M. Burton.	222,516	Apr. 29	222	122	100	1000
Stovepipe collar.	J. S. Hatcher.	222,517	Apr. 29	222	122	100	1000
Stovepipe-thimble.	J. W. L. Murray.	222,518	June 17	222	122	100	1000
Stovepipe-ventilator.	F. Anshutz.	222,519	June 10	222	122	100	1000
Stove, range, &c.	H. F. Canale and C. F. Woolley.	222,520	Apr. 15	222	122	100	1000
Stove-shelf.	R. W. Anthony.	222,521	Apr. 1	222	122	100	1000
Stove-top.	R. W. Whitlock.	222,522	May 6	222	122	100	1000
Stove. Vapor.	J. H. Pink and E. Andlauer.	222,523	June 3	222	122	100	1000
Stove. Adjustable fire-box for.	J. F. Neely.	222,524	Apr. 29	222	122	100	1000
Stove. Automatic cut-off for gas.	R. O. Hillier.	222,525	Apr. 29	222	122	100	1000
Stove. Range-oven for gas or gasoline.	R. W. Hillier.	222,526	May 12	222	122	100	1000
Stove. Combined gas and air feeding attachment for gas.	J. Dennis, Jr.	222,527	May 12	222	122	100	1000
Strainer.	E. L. Mason.	222,528	Apr. 29	222	122	100	1000
Strainer.	W. Jones.	222,529	Apr. 29	222	122	100	1000
Strainer. Vegetable.	C. M. Gundel.	222,530	May 27	222	122	100	1000
Strap.							
Strap. For pole-strap. Trunk-strap.	J. H. Wallace.	222,531	June 10	222	122	100	1000
Strap-grip for handling boxes, &c.	H. C. Clay.	222,532	June 24	222	122	100	1000
Straw-burning furnace.	W. Hight.	222,533	Apr. 29	222	122	100	1000
Street-sweeper.	S. Comstock.	222,534	May 27	222	122	100	1000
Street-sweeper.	A. F. Palmer and H. L. Phelps.	222,535	June 3	222	122	100	1000
Street-sweeper.	P. R. Hadenway.	222,536	June 24	222	122	100	1000
Strength-tester.	G. Jensen and H. Neumann.	222,537	June 17	222	122	100	1000
Strike-regulator.	R. H. Yale.	222,538	June 10	222	122	100	1000
Structure. Hollow or double walled.	A. de Charmont.	222,539	Apr. 29	222	122	100	1000
Structures containing cream strains. Construction of.	M. Walter.	222,540	Apr. 29	222	122	100	1000
Stud.	P. Neumann.	222,541	Apr. 1	222	122	100	1000
Stud-cutting machinery.	F. A. Livingston.	222,542	June 24	222	122	100	1000
Stamp-extractor.	C. E. Beckwith.	222,543	Apr. 1	222	122	100	1000
Stamp-puller and tree-transplanter. Combined.	W. A. Hammer.	222,544	May 20	222	122	100	1000
Stamps. Destroying tree.	J. J. E. McLaughlin.	222,545	Apr. 1	222	122	100	1000
Submarine construction. System of.	R. H. Wehler.	222,546	May 12	222	122	100	1000
Sugar and solutions thereof. Purifying.	C. A. Sprague and C. A. Kera.	222,547	Apr. 29	222	122	100	1000
Sugar, &c. Apparatus for purifying.	G. Donahue.	222,548	June 3	222	122	100	1000
Sugar-bearing material. Purifying fluid.	C. A. Sprague and C. A. Kera.	222,549	May 12	222	122	100	1000
Sugar. Converting cellulose into.	A. Channing.	222,550	Apr. 1	222	122	100	1000
Sugar. Converting cellulose into fermentable.	A. Channing.	222,551	May 20	222	122	100	1000
Sugar-crysalis. Treating.	C. A. Sprague and C. A. Kera.	222,552	May 12	222	122	100	1000
Sugar-mold. Moulding.	J. H. Lynch.	222,553	Apr. 1	222	122	100	1000
Sugar-mold. Moulding.	C. E. Beckwith.	222,554	Apr. 29	222	122	100	1000
Sugar-product. Intermediate.	C. A. Sprague and C. A. Kera.	222,555	June 24	222	122	100	1000
Suit-holder.	H. E. Taber.	222,556	Apr. 29	222	122	100	1000
Suit-holder.	C. H. Barrows.	222,557	Apr. 29	222	122	100	1000
Suit-holder.	A. Garmet and H. E. L. Fildes.	222,558	Apr. 29	222	122	100	1000
Suit-holder.	C. H. Shaw.	222,559	Apr. 29	222	122	100	1000
Suit-holder. Treating metallic.	J. D. Moore and F. H. Martin.	222,560	May 27	222	122	100	1000
Suit-holder. Apparatus for generating sulfuric anhydride. Making.	H. G. Beckwith. (Release).	222,561	May 27	222	122	100	1000
Supporting device.	R. H. Bowers.	222,562	June 17	222	122	100	1000
Supporter or connecting means.	D. E. Warner.	222,563	Apr. 1	222	122	100	1000
Supporter-rod.	A. T. Dingley.	222,564	Apr. 1	222	122	100	1000
Supporter-rod.	R. W. Johnson.	222,565	May 27	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,566	June 24	222	122	100	1000
Supporter-rod.	L. M. Pignolet.	222,567	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,568	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,569	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,570	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,571	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,572	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,573	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,574	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,575	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,576	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,577	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,578	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,579	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,580	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,581	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,582	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,583	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,584	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,585	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,586	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,587	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,588	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,589	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,590	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,591	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,592	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,593	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,594	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,595	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,596	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,597	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,598	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,599	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,600	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,601	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,602	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,603	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,604	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,605	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,606	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,607	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,608	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,609	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,610	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,611	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,612	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,613	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,614	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,615	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,616	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,617	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,618	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,619	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,620	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,621	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,622	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,623	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,624	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,625	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,626	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,627	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,628	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,629	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,630	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,631	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,632	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,633	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,634	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,635	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,636	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,637	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,638	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,639	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,640	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,641	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,642	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,643	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,644	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,645	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,646	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,647	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,648	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,649	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,650	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,651	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,652	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,653	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,654	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,655	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,656	June 24	222	122	100	1000
Supporter-rod.	J. H. Fugh.	222,657	June 24	222	122	100	1000

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				U. S. Pat.	For.	U. S. Pat.	For.
Tapkey.	W. and A. McDonald and C. D. Treveling.	696,957	Apr. 29	697	1498	99	1998
Target trap.	L. A. Sherman.	696,793	Apr. 1	696	187	99	149
Telexing instrument.	J. J. Youlin.	696,915	May 13	1998	854	99	1997
Telexing apparatus. Radio.	J. R. Parker.	696,830	May 6	719	161	99	1994
Telexing type-writing. Machine for.	F. Harb.	696,134	Apr. 29	696	720	99	791
Telexing writing. Means for.	P. B. Hollock.	696,999	Apr. 29	699	1070	99	1997
Telexing circuit. Multiplex.	L. A. McCarthy.	700,800	May 27	810	790	99	1998
Telexing line repeater.	J. W. Gray.	700,087	May 13	1761	697	99	1998
Telexing or other circuit. Automatic line switch for.	C. A. Simpson.	700,090	May 27	840	890	99	1998
Telexing pole and fence post.	I. M. Warner.	696,994	Apr. 29	674	897	99	790
Telexing coupler.	G. A. Green.	697,619	Apr. 15	813	815	99	811
Telexing coupler. Wireless.	J. A. Albertson.	696,088	Apr. 29	807	1118	99	1198
Telexing system. Wireless.	C. D. Harter.	696,189	May 6	87	15	99	1198
Telexing and telephonic transmission. Signal for composite.	E. L. Grand.	700,911	May 27	841	897	99	1998
Telexing apparatus.	S. G. Brown.	700,890	June 10	1997	498	99	2918
Telexing distribution.	H. A. Rowland.	696,974	May 6	898	197	99	1997
Telexing page printer.	H. A. Rowland.	696,975	May 6	997	197	99	1998
Telexing transmitter. Automatic.	J. A. Toomey.	700,890	June 10	1798	401	99	2997
Telexing. Electric.	L. G. Brown.	700,890	Apr. 17	941	897	99	2997
Telexing. Submarine cable.	A. C. Osborne and G. O. Squier.	696,881	Apr. 29	807	775	99	791
Telexing. Wireless.	M. Barry.	700,710	Apr. 1	600	137	99	139
Telexing. Wireless.	M. Barry.	700,710	Apr. 29	899	899	99	1098
Telexing. Wireless.	M. Barry.	697,990	Apr. 15	1137	475	99	697
Telexing apparatus. Party line.	G. Harb.	696,997	Apr. 29	899	798	99	810
Telexing. Radio.	C. L. Kiefer.	696,090	Apr. 29	8049	670	99	697
Telexing call for party line.	W. A. Williams, O. L. Ingram, and J. R. Wilson.	700,793	June 3	996	990	99	2996
Telexing call for.	N. Michaels.	701,890	June 3	974	125	99	2998
Telexing circuit.	G. E. Goodland.	696,979	May 13	1098	847	99	1498
Telexing circuit system.	E. F. Frost.	696,198	May 6	84	99	99	1198
Telexing exchange. Automatic.	N. E. Norstrom.	701,499	June 10	899	690	99	898
Telexing exchange system.	W. M. Davis.	697,999	Apr. 29	899	990	99	897
Telexing exchange system.	W. M. Davis.	697,999	Apr. 29	899	990	99	897
Telexing exchange system.	W. M. Davis.	697,999	Apr. 29	899	990	99	897
Telexing exchange system.	W. M. Davis.	697,999	Apr. 29	899	990	99	897
Telexing exchange system. Multiple-switchboard.	H. G. W. Davis.	696,087	Apr. 29	8199	694	99	790
Telexing instrument. Combination.	H. G. W. Davis.	697,991	Apr. 29	8001	690	99	697
Telexing instrument. Multiple-switchboard.	H. G. W. Davis.	696,088	Apr. 29	8198	695	99	790
Telexing instrument. Multiple-switchboard.	J. G. Nolan.	697,098	Apr. 29	1194	896	99	897
Telexing instrument. Multiple-switchboard.	R. Shady.	700,890	May 10	8495	973	99	1997
Telexing instrument. Multiple-switchboard.	L. Schmidt.	700,094	June 10	8179	791	99	2918
Telexing instrument. Multiple-switchboard.	F. Oppenick.	700,690	June 17	8997	791	99	2998
Telexing instrument. Multiple-switchboard.	N. Bennett and W. A. Phoenix.	701,098	June 3	7	99	99	2119
Telexing instrument. Multiple-switchboard.	J. M. Overlander.	701,098	June 10	1299	908	99	2499
Telexing instrument. Multiple-switchboard.	H. M. Fink.	696,619	May 6	998	814	99	1998
Telexing instrument. Multiple-switchboard.	H. P. Clanton.	701,199	June 17	8998	911	99	3098
Telexing instrument. Multiple-switchboard.	C. G. Burke.	701,794	June 3	914	294	99	2999
Telexing instrument. Multiple-switchboard.	W. F. Fink.	697,099	Apr. 29	1900	895	99	894
Telexing instrument. Multiple-switchboard.	A. K. Andrews.	696,890	Apr. 29	8798	897	99	897
Telexing instrument. Multiple-switchboard.	T. R. Leing.	696,979	Apr. 29	6997	1094	99	1198
Telexing transmitter-arm. Base plate for.	C. E. Wilson.	696,619	Apr. 29	617	617	99	616
Telexing receiver for wireless signal apparatus.	T. J. Tomlinson.	700,181	Apr. 18	8016	617	99	1999
Telexing wall set.	C. E. Wilson.	696,619	Apr. 29	416	616	99	615
Telexing.	F. L. Smith and H. D. Gross.	700,093	June 3	498	99	99	2195
Telexing.	A. A. Cameron.	700,049	June 10	1870	818	99	2999
Telexing.	F. L. Smith.	696,200	May 6	891	79	99	1994
Telexing.	F. L. Smith.	696,199	May 6	79	79	99	1199
Telexing. Frictional blowout.	C. E. Wilson.	696,619	Apr. 29	8916	695	99	898
Telexing and telephonic transmission. Apparatus for testing.	E. F. Morris.	696,046	Apr. 1	1096	894	99	299
Telexing.	E. F. Morris.	696,079	Apr. 1	999	819	99	199
Telexing set. Table.	J. Salmon.	696,999	May 13	1691	891	99	1999
Telexing set. Table.	J. H. and W. O. Quigley.	700,194	June 10	1979	897	99	2491
Telexing set. Table.	N. Bostinger.	700,097	Apr. 29	8999	894	99	1977
Telexing machine. House.	J. A. Barlow.	696,997	Apr. 1	899	99	99	89
Telexing machine.	V. B. Buchanan.	701,198	May 27	6919	900	99	3094
Telexing machine.	V. B. Buchanan.	700,945	June 24	8999	894	99	2999
Telexing machine. Sheet.	W. W. Buchanan.	700,945	June 10	1999	449	99	2999
Telexing machine.	R. A. Matthews.	697,213	Apr. 6	1931	695	99	349
Telexing machine.	G. R. Clark.	700,994	June 24	8001	699	99	2999
Telexing machine.	H. A. Northridge.	700,976	May 27	8999	899	99	1979
Telexing machine.	A. L. McCormick.	696,999	Apr. 1	999	191	99	179
Telexing machine.	J. W. Sherman.	700,981	May 29	9997	773	99	1799
Telexing machine.	J. G. Nolan.	697,999	Apr. 18	2149	676	99	497
Telexing machine.	J. F. Windup and R. C. Stoker.	696,999	June 10	1999	461	99	2999
Telexing machine.	A. Paul.	696,997	Apr. 1	999	199	99	179
Telexing machine.	F. B. Bump and H. A. Tolmie.	696,997	Apr. 1	971	897	99	897
Telexing machine.	C. G. Bradley.	697,199	Apr. 15	1499	814	99	219
Telexing machine.	C. G. Bradley.	697,199	Apr. 15	8971	897	99	816
Telexing machine.	C. G. Bradley.	697,199	Apr. 15	8999	899	99	899
Telexing machine.	C. G. Bradley.	697,199	Apr. 15	8999	899	99	899
Telexing machine.	C. G. Bradley.	697,199	Apr. 15	8999	899	99	899

Thill-coupling	R. W. Derbyshire	701,417	June 3	120	12	12	12
Thill-coupling	F. H. Lenton	701,418	June 3	120	12	12	12
Thill-coupling	H. H. Hart	701,419	June 3	120	12	12	12
Thill-coupling	E. Wolhaupter	701,420	June 3	120	12	12	12
Thill-coupling	B. P. Leale	701,421	June 3	120	12	12	12
Thill-coupling	E. S. Lafferty	701,422	June 3	120	12	12	12
Thill-coupling	S. D. Noel	701,423	June 3	120	12	12	12
Thill-coupling	A. Gustorf	701,424	June 3	120	12	12	12
Thill-coupling	R. Pasco	701,425	June 3	120	12	12	12
Thill-coupling	J. Elsenbecker	701,426	June 3	120	12	12	12
Thill-coupling	R. A. Fisher	701,427	June 3	120	12	12	12
Thill-coupling	W. P. Appleyard	701,428	June 3	120	12	12	12
Thill-coupling	C. Hubert	701,429	June 3	120	12	12	12
Thill-coupling	J. Schleicher	701,430	June 3	120	12	12	12
Thill-coupling	C. E. Davis	701,431	June 3	120	12	12	12
Thill-coupling	C. J. C. and C. A. Kramm	701,432	June 3	120	12	12	12
Thill-coupling	J. W. Deibner	701,433	June 3	120	12	12	12
Thill-coupling	J. B. Yeakle	701,434	June 3	120	12	12	12
Thill-coupling	W. F. Barry	701,435	June 3	120	12	12	12
Thill-coupling	E. Quintaine	701,436	June 3	120	12	12	12
Thill-coupling	T. Tynan	701,437	June 3	120	12	12	12
Thill-coupling	J. F. Fawcett	701,438	June 3	120	12	12	12
Thill-coupling	F. G. Dickerson	701,439	June 3	120	12	12	12
Thill-coupling	L. D. Sartom	701,440	June 3	120	12	12	12
Thill-coupling	A. T. Collier	701,441	June 3	120	12	12	12
Thill-coupling	E. L. Lewis	701,442	June 3	120	12	12	12
Thill-coupling	W. H. St. John	701,443	June 3	120	12	12	12
Thill-coupling	W. F. Williams	701,444	June 3	120	12	12	12
Thill-coupling	A. de Clairmont	701,445	June 3	120	12	12	12
Thill-coupling	J. M. Sweet	701,446	June 3	120	12	12	12
Thill-coupling	H. J. Hengstler and A. E. Adams	701,447	June 3	120	12	12	12
Thill-coupling	S. Glanville	701,448	June 3	120	12	12	12
Thill-coupling	H. E. Smith	701,449	June 3	120	12	12	12
Thill-coupling	B. S. Melnyk	701,450	June 3	120	12	12	12
Thill-coupling	T. H. Bryant	701,451	June 3	120	12	12	12
Thill-coupling	C. E. Thomas	701,452	June 3	120	12	12	12
Thill-coupling	E. Smith	701,453	June 3	120	12	12	12
Thill-coupling	E. Greene	701,454	June 3	120	12	12	12
Thill-coupling	F. E. Hyde	701,455	June 3	120	12	12	12
Thill-coupling	J. K. Williams	701,456	June 3	120	12	12	12

Tire-cutting machine. Rubber	J. A. Barrows	701,457	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. K. Williams	701,458	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,459	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,460	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,461	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,462	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,463	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,464	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,465	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,466	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,467	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,468	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,469	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,470	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,471	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,472	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,473	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,474	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,475	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,476	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,477	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,478	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,479	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,480	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,481	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,482	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,483	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,484	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,485	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,486	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,487	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,488	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,489	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,490	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,491	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,492	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,493	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,494	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,495	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,496	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,497	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,498	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,499	June 3	120	12	12	12
Tire-cutting machine. Rubber	J. A. Barrows	701,500	June 3	120	12	12	12

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Pat.	Des.	Vol.	Page.
Turbine. Axial-flow.	H. S. Day and T. R. Robinson.	697,705	Apr. 1	70	12	50	120
Turbine. Combined axial and radial.	B. Schult.	702,093	June 17	200	30	10	270
Turbine. Compound steam.	H. F. Fullinger.	692,097	Apr. 1	51	10	10	10
Turbine. Compound-combustion.	M. Beck.	692,098	Apr. 20	470	100	10	100
Turbine. Elastic-fluid.	C. G. Curtis.	702,704	May 27	200	12	10	100
Turbine. Steam.	J. H. Pedeler.	702,314	May 20	200	10	10	100
Turbine. Steam.	J. Burgram, (Belmont).	11,000	June 10	100	10	10	100
Turbine wheel.	J. Kadowaki.	702,401	June 17	200	10	10	100
Turbine-wheel support. Steam.	J. A. Bonagren.	697,120	Apr. 8	140	210	10	310
Turbine. Apparatus for controlling the speed of steam.	G. O. H. Olson.	701,800	June 8	200	10	10	100
Turning and boring apparatus. Elliptical.	C. J. Montross.	701,817	May 27	400	100	10	100
Turning center-wheel. Machine for.	A. Smith.	692,708	Apr. 20	400	100	10	100
Turning device.	G. H. Hildreth.	692,817	Apr. 1	700	100	10	100
Turning machine. Wood.	W. T. Jones.	692,804	Apr. 1	600	100	10	110
Turning machine. Wood.	W. J. Cochran.	697,807	Apr. 15	200	100	10	100
Turret. Superposed.	T. C. Fenton.	692,781	May 13	100	100	10	100
Tweezer with clamp all in one piece.	G. Havel.	692,805	May 6	100	100	10	100
Twine-making machine.	L. J. Monahan and C. Kleron.	697,411	Apr. 8	100	100	10	100
Twisting and spinning fibrous materials. Machine for.	J. Marshall.	692,810	May 6	100	100	10	100
Twyer. Cupola-furnace.	H. E. Palmer.	692,421	Apr. 20	200	100	10	100
Twyer. Furnace.	S. and F. H. Wain.	697,321	Apr. 8	170	100	10	100
Twyer. Furnace.	W. R. Foster.	692,422	Apr. 20	200	100	10	100
Type-casting machine.	F. Locke.	697,380	Apr. 15	200	100	10	100
Type-casting machine squirt-proventer.	G. A. Goodson.	702,041	June 24	200	100	10	100
Type-casting or other machine. Record-strip-feed- ing mechanism of automatic.	J. A. Barrows.	702,041	May 20	200	100	10	100
Type-composing machine.	T. Lanston.	702,041	May 20	200	100	10	100
Type-composing machine for tabular matter.	W. Kemp, Jr.	702,030	May 20	200	100	10	100
Type-composing machine. Automatic leader for.	J. A. Bancroft and M. C. Indahl.	702,030	May 20	200	100	10	100
Type-containing channel.	L. K. Johnson and A. A. Low.	692,390	May 6	100	100	10	100
Type-distributing apparatus.	A. A. Low and J. Broakey.	692,400	May 6	100	100	10	100
Type-distributing apparatus.	J. Broakey.	702,021	June 17	200	100	10	100
Type-distributing machine.	P. R. Hodgkin and G. R. Kenney.	702,021	June 17	200	100	10	100
Type-distributing machine.	J. Hinkley.	702,024	June 17	200	100	10	100
Type. Font of.	H. A. Goodson.	692,784	Apr. 1	600	100	10	100
Type for printing calendar. Set of.	J. L. Carroll.	701,677	June 3	700	100	10	100
Type-folding matrix.	H. A. Goodson.	692,785	Apr. 1	600	100	10	100
Type-justifying machine.	F. McClintock.	700,700	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,701	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,702	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,703	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,704	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,705	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,706	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,707	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,708	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,709	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,710	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,711	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,712	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,713	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,714	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,715	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,716	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,717	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,718	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,719	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,720	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,721	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,722	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,723	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,724	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,725	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,726	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,727	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,728	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,729	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,730	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,731	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,732	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,733	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,734	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,735	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,736	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,737	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,738	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,739	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,740	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,741	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,742	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,743	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,744	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,745	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,746	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,747	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,748	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,749	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,750	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,751	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,752	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,753	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,754	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,755	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,756	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,757	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,758	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,759	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,760	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,761	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,762	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,763	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,764	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,765	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,766	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,767	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,768	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,769	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,770	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,771	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,772	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,773	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,774	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,775	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,776	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,777	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,778	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,779	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,780	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,781	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,782	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,783	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,784	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,785	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,786	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,787	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,788	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,789	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,790	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,791	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,792	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,793	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,794	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,795	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,796	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,797	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,798	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,799	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,800	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,801	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,802	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,803	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,804	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,805	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,806	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,807	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,808	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,809	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,810	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,811	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,812	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,813	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,814	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,815	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,816	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,817	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,818	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,819	May 20	200	100	10	100
Type-justifying machine.	F. McClintock.	700,820	May 20	200	100	10	100
Type-justifying machine.	F. McCl						

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention	Name	No.	Date	Monthly volume		Official Gazette	
				U. S.	Pat.	Vol.	Page
Valve, Automatic	F. H. Mason	698,393	Apr. 29	3934	391	99	397
Valve, Automatic vent	L. J. Walsh	701,423	June 3	3935	392	99	398
Valve, Balanced	E. R. Statmanich	700,935	May 27	3936	397	99	399
Valve, Balanced slide	F. O. Charles	693,715	Apr. 1	315	393	99	394
Valve, Check or pump	R. Krober	703,323	June 10	1935	398	99	395
Valve, Combination safety, regulating, and drop	A. K. Reese	697,433	Apr. 15	3936	391	99	396
Valve, Compression	J. Morrison	702,973	June 17	3913	374	99	397
Valve-controlling mechanism for automatic water-heaters	J. Tracy and W. A. Bollinger	700,357	May 29	3935	394	99	398
Valve, Cylinder drain	G. Faith and T. Hook	693,395	Apr. 29	3935	394	99	399
Valve, Cylinder relief	A. Spencer	700,945	May 27	3936	397	99	400
Valve, Engine	J. G. McCormack	693,391	Apr. 1	395	397	99	401
Valve, Engine's	H. A. Christensen	701,345	June 10	395	398	99	402
Valve, Flush	J. J. Finney	700,355	May 29	3935	313	99	403
Valve, Flush	J. J. Finney	700,356	May 29	3935	313	99	404
Valve, Flush	J. J. Finney	700,357	May 29	3935	313	99	405
Valve for air-brakes, Pressure-retaining	J. A. Toal	697,394	Apr. 15	3937	345	99	406
Valve for automatic water-heaters	J. L. Graham	693,793	May 13	1935	399	99	407
Valve for gas-engines, Balanced	R. H. Dyer	699,373	May 6	400	103	99	408
Valve for internal-combustion engines, Exhaust	J. Salter, Jr.	701,344	June 10	1131	399	99	409
Valve for reversible steam-engines	A. H. Koons	702,339	June 17	3937	399	99	410
Valve for steam-carriages, Throttle	R. H. White	697,393	Apr. 15	3937	399	99	411
Valve for steam fire-engines, &c. Automatic	A. Mayer	697,397	Apr. 15	1331	399	99	412
Valve for steam-passages, Water and air relief	O. H. Atkins	702,333	June 10	1935	400	99	413
Valve-gear	O. Schmidt and H. A. Drandt	693,393	Apr. 29	4771	1040	99	414
Valve-gear	S. I. and W. S. Orain	701,330	June 3	39	7	99	415
Valve-gear, Locomotive	H. Maxwell	702,330	June 17	3735	400	99	416
Valve-governing mechanism for engines, Inlet	J. P. Duryea	702,330	June 10	1435	399	99	417
Valve mechanism	E. J. Armstrong	701,337	June 3	703	133	99	418
Valve mechanism, Out-off	J. Haug	697,399	Apr. 15	3703	399	99	419
Valve mechanism, Out-off	F. T. Schumacher	702,333	June 3	313	39	99	420
Valve mechanism, Engine	T. H. Haberkorn	702,333	June 17	3931	400	99	421
Valve mechanism, Hydraulic	W. F. Cole	702,333	May 27	3935	397	99	422
Valve-operating mechanism, Washbasin	E. B. Parsons	693,794	May 13	1103	399	99	423
Valve, Piston	W. Heston	693,375	Apr. 1	397	399	99	424
Valve, Reducing	G. W. Lord	702,334	May 29	3935	399	99	425
Valve regulator and governor	J. F. McElroy	702,335	June 10	1235	399	99	426
Valve, Relief	F. Schreidt	702,337	June 10	1231	399	99	427
Valve, Retaining	W. G. Lamb	702,338	June 17	3731	399	99	428
Valve, Rotary	J. B. Starg	701,333	June 3	393	133	99	429
Valve, Safety	W. E. Jerauld	693,393	May 6	703	177	99	430
Valve, Safety	W. S. Washburn	701,333	June 3	393	133	99	431
Valve, Steam-engine	A. Tandler	701,333	June 3	393	133	99	432
Valve, Steam-engine	E. L. Bauer	701,333	June 3	393	133	99	433
Valve, Stop	W. G. Tyson	702,333	June 10	1371	399	99	434
Valve, Throttle	G. W. King	701,374	June 3	393	133	99	435
Valve, Throttle	J. S. Chambers	701,379	June 3	723	133	99	436
Valve, Water-cooled	H. E. Ebb	697,374	Apr. 29	3937	399	99	437
Valve, Construction and application of piston	J. H. B. Head	697,393	Apr. 15	3704	399	99	438
Valved stopper for receptacles, &c.	S. Molnar	702,310	June 17	3930	400	99	439
Vapor-burner, Incandescent	E. L. Fee	702,334	May 29	3935	400	99	440
Vapor-generator	M. Castelmann and O. Thielon	697,397	Apr. 1	701	173	99	441
Vaporizer or burner, Hydrocarbon	L. G. Gebhard and J. H. Rowley	697,313	Apr. 15	3936	315	99	442
Vault	J. W. Donnell	702,333	June 3	740	133	99	443
Vault, Burial	J. C. Hennis	693,393	Apr. 29	3935	1133	99	444
Vault, Burial	A. B. Buren	702,334	May 27	3177	734	99	445
Vault-light	L. Braun	693,793	May 13	1235	399	99	446
Vault or grave	T. D. Haskins and F. J. Bocher	693,393	May 6	393	394	99	447
Vegetable-puller	W. Galarno	697,403	Apr. 15	3935	400	99	448
Vegetable-stem, Machine for treating	J. A. Lacotte	701,397	May 27	3935	397	99	449
Vehicle	F. Bosch	697,393	Apr. 15	1937	391	99	450
Vehicle	A. Horschmann	693,393	Apr. 29	3935	397	99	451
Vehicle	J. Torrent	700,330	May 29	3935	399	99	452
Vehicle	R. C. Hicks	700,333	May 27	3935	315	99	453
Vehicle	J. F. Hathaway	702,333	June 10	1421	313	99	454
Vehicle	F. Stratton	702,334	June 17	3935	397	99	455
Vehicle	A. Clark	702,335	June 24	3935	310	99	456
Vehicle-body	J. E. and C. B. Brown	693,453	May 6	393	133	99	457
Vehicle-body corner-iron	G. W. Vinson	697,393	Apr. 15	1703	399	99	458
Vehicle-body rail	W. Marin	693,453	May 6	397	131	99	459
Vehicle-brake	W. G. Price	693,453	Apr. 1	393	103	99	460
Vehicle-brake	W. G. Price	693,454	Apr. 1	393	110	99	461
Vehicle-brake	E. M. Letts	693,453	May 13	1937	374	99	462
Vehicle-brake	J. D. Richards	700,333	May 13	1944	399	99	463
Vehicle-brake	W. A. Orttlow	702,337	June 10	1703	410	99	464
Vehicle-brake and bell	R. H. Madson	700,340	May 29	3935	394	99	465
Vehicle-brake, Automatic	J. B. Austin	700,337	May 29	3937	394	99	466
Vehicle-brake mechanism	W. Winkler	693,393	Apr. 1	394	39	99	467
Vehicle-controller, Electric	H. E. Outler	697,393	Apr. 29	3935	399	99	468
Vehicle-controller, Electric	H. E. Outler	697,397	Apr. 29	3935	399	99	469
Vehicle-controller, Electric	A. L. Simpson and H. R. Palmer	693,393	Apr. 29	3935	1103	99	470
Vehicle-curtain attachment	F. W. Holden	693,397	Apr. 29	1935	1107	99	471
Vehicle-driving mechanism, Motor	C. O. Bramwell	701,333	June 3	427	131	99	472
Vehicle, Dumping	T. H. H.	702,333	May 6	70	133	99	473
Vehicle, Dumping	A. Fouts	702,333	May 29	3935	401	99	474
Vehicle, Dumping	H. F. Shepherd	702,371	May 29	3935	399	99	475

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Vol.	Page.	Vol.	Page.
Vehicle frame. Motor.	W. A. Crowder.	693,576	Apr. 26	3700	260	36	1934
Vehicle frame. Motor.	W. A. Crowder.	700,902	May 27	3439	303	36	1934
Vehicle frame or running gear.	A. Bath.	697,965	Apr. 26	3667	645	36	1934
Vehicle frame. Self-propelled.	A. A. Ball, Jr.	693,397	Apr. 1	6	3	36	1934
Vehicle ground-wheel. Mechanism for transmitting power from.	C. L. V. Kinney.	693,642	Apr. 1	449	165	36	1934
Vehicle. Motor.	W. W. Robinson.	694,333	Apr. 1	339	22, 23	36	1934
Vehicle. Motor.	E. J. Pennington.	694,334	Apr. 1	339	138	36	1934
Vehicle. Motor.	C. D. Mosher.	697,938	Apr. 15	3666	336	36	1934
Vehicle. Motor.	C. L. Mayhew.	693,083	Apr. 29	3005	376	36	1934
Vehicle. Motor.	R. E. Olds.	693,121	Apr. 29	3677	713	36	1934
Vehicle. Motor.	R. J. McMahon.	693,739	Apr. 29	4490	379	36	1934
Vehicle. Motor.	G. W. Smith.	693,793	Apr. 29	4490	389	36	1934
Vehicle. Motor.	W. L. Right.	693,833	Apr. 29	4490	1081	36	1934
Vehicle. Motor.	J. R. Oape.	693,304	May 6	693	21, 27	36	1934
Vehicle. Motor.	J. E. Thornycroft.	693,427	May 6	678	131	36	1934
Vehicle. Motor.	H. P. Maxim.	693,543	May 6	773	133	36	1934
Vehicle. Motor.	W. Norris.	693,603	May 13	1330	304	36	1934
Vehicle. Motor.	W. A. Crowder.	702,742	May 27	3197	730	36	1934
Vehicle. Motor.	R. C. Hicks.	700,773	May 27	3664	743	36	1934
Vehicle. Motor.	A. C. Krebs.	700,930	May 27	3666	384	36	1934
Vehicle. Motor.	J. D. Maxwell.	701,300	June 10	1113	337	36	1934
Vehicle. Motor.	H. P. Maxim and H. M. Pope.	702,443	June 17	3113	430	36	1934
Vehicle. Motor.	P. Foulson.	703,391	June 24	3713	333	36	1934
Vehicle mud-guard.	J. Pfeiffer.	697,910	Apr. 6	1304	333	36	1934
Vehicle mud or mud band.	S. D. and J. M. Morger.	701,943	June 3	121	25	36	1934
Vehicle propelling and brake mechanism.	O. C. Howes.	694,973	Apr. 6	1130	334	36	1934
Vehicle pump.	R. L. Morgan.	697,039	Apr. 6	1304	333	36	1934
Vehicle reach.	J. W. Travis and H. A. Deane.	697,334	Apr. 6	1373	333	36	1934
Vehicle robe-lock.	A. M. Johnson.	693,337	Apr. 26	3664	703	36	1934
Vehicle running gear.	C. F. Burns.	697,000	Apr. 15	3242	333	36	1934
Vehicle running gear.	H. W. Koshler.	693,332	Apr. 29	3671	377	36	1934
Vehicle running gear.	E. J. Pennington.	693,331	May 6	933	233	36	1934
Vehicle running gear.	C. H. Spencer.	700,430	May 20	3619	333	36	1934
Vehicle running gear.	G. H. Sherman.	701,331	June 3	644	141	36	1934
Vehicle running gear. Motor.	H. A. Knox and J. H. Jones.	697,945	Apr. 15	3207	333	36	1934
Vehicle safety attachment.	J. P. Lowe.	700,337	May 27	3666	333	36	1934
Vehicle seat.	L. E. Truflow.	693,433	May 6	631	133	36	1934
Vehicle seat-lock.	C. H. Lambert.	693,643	Apr. 1	430	107	36	1934
Vehicle. Speed.	C. Roster.	693,333	Apr. 29	4033	333	36	1934
Vehicle speed-registering attachment.	G. A. Kennedy.	701,333	June 3	133	27, 28	36	1934
Vehicle spring-gear.	D. True.	697,370	Apr. 15	3233	333	36	1934
Vehicle. Steam-propelled road.	E. S. Straker.	693,333	Apr. 26	3666	703	36	1934
Vehicle steering and driving gear. Motor.	R. W. H. Bailey and A. W. Brightmore.	693,331	Apr. 29	4770	1030	36	1934
Vehicle steering apparatus.	A. W. Kent.	700,773	May 27	3677	723	36	1934
Vehicle steering gear.	P. L. Mallott and E. E. Hall.	693,497	Apr. 26	3701	333	36	1934
Vehicle steering lock.	G. P. Aborn.	697,333	Apr. 15	3430	333	36	1934
Vehicle steering mechanism.	H. P. Maxim.	702,333	June 24	3133	721	36	1934
Vehicle storm-apron.	W. G. Reese.	701,614	June 3	333	133	36	1934
Vehicle storm-curtain.	R. Reeder.	702,430	June 17	3171	433	36	1934
Vehicle support. Elastic.	A. Paulbrook.	693,739	May 13	1113	333	36	1934
Vehicle toe-rest.	L. E. Truflow.	693,331	Apr. 1	430	113	36	1934
Vehicle-top.	G. W. Kernodle.	702,373	June 24	3230	337	36	1934
Vehicle water-cooling apparatus. Motor.	E. T. Barrowes.	701,434	June 3	333	73	36	1934
Vehicle wheel.	E. Hudson.	697,333	Apr. 6	1333	333	36	1934
Vehicle wheel.	S. E. Oviatt.	693,333	Apr. 29	3661	1033	36	1934
Vehicle wheel.	P. H. White.	693,334	May 13	1073	333	36	1934
Vehicle wheel.	D. H. Haywood.	700,430	May 20	3703	333	36	1934
Vehicle wheel.	G. S. Lee.	700,514	May 20	3733	333	36	1934
Vehicle wheel.	G. S. Lee.	700,515	May 20	3733	333	36	1934
Vehicle wheel.	G. S. Lee.	700,516	May 20	3733	333	36	1934
Vehicle wheel.	G. S. Lee.	700,517	May 20	3733	333	36	1934
Vehicle wheel.	D. H. Haywood.	701,373	June 3	173	37	36	1934
Vehicle wheel.	D. H. O'Hara.	701,373	June 24	3173	731	36	1934
Vehicle wheel.	H. H. Schenk.	702,003	June 24	3233	733	36	1934
Vehicle wheel.	C. T. McCue.	702,073	June 24	3233	733	36	1934
Vehicle wheel and tire therefor.	L. F. and R. C. Altpeter.	701,373	June 3	3	1	36	1934
Vehicles, cycles, &c. Variable-speed gear for motor.	J. E. Madan.	697,133	Apr. 6	1433	333	36	1934
Vehicles for mechanically operating electric switches. Connection of strikers to motor.	W. Kingland.	693,333	Apr. 26	3666	1031	36	1934
Vehicles. Means for automatic control of motor.	H. H. Sherk.	693,333	May 6	633	333	36	1934
Vail fastener.	W. Bernstein.	701,133	May 27	3664	333	36	1934
Vail fastener.	A. Bippart.	701,391	June 10	1373	333	36	1934
Vail holder.	M. H. McGrath.	697,333	Apr. 15	3131	374	36	1934
Vail holder.	J. H. Barry.	697,730	Apr. 15	3600	373	36	1934
Velopede pedal.	E. W. Hemstock.	702,333	May 20	3734	333	36	1934
Velopede, &c. Stowaway mud-guard for.	C. W., F. H., and E. A. Bismel.	702,333	June 24	3237	333	36	1934
Vending apparatus. Coin-controlled.	D. Bourbe.	702,310	June 24	3234	333	36	1934
Vending-machine.	E. A. Wilcox.	700,334	May 20	3666	377	36	1934
Vending-machine.	J. C. de Janin.	702,310	June 10	1333	333	36	1934

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Pat.	Des.	Vol.	Page.
Vending-machine	D. Knowlton	705,127	June 24	5422	757	10	227
Vending-machine	D. Knowlton	705,128	June 24	5423	758	10	228
Vending-machine, Automatic	J. J. Reed	694,931	Apr. 15	5324	821	9	229
Vending-machine, Cigar	W. R. Dunscomb	695,970	May 12	5342	842	9	230
Vending-machine, Cigar	W. R. Dunscomb	705,080	June 17	5421	756	10	231
Vending-machine, Coin-controlled	F. Lynde	694,934	Apr. 15	5325	822	9	232
Vending-machine coin-controlled mechanism	D. Knowlton	705,127	June 24	5422	757	10	233
Vending-machine, Coin-controlled newspaper	A. D. Smith	694,935	May 6	5326	823	9	234
Vending-machine, Coin-operated	G. J. Morgan and G. Tillotson	694,936	Apr. 1	5327	824	9	235
Vending-machine, Match	G. G. Schroeder	694,937	May 12	5343	843	9	236
Veneer-cutting machine	L. G. Morris	694,938	May 6	5328	825	9	237
Veneer-cutting machine	L. G. Morris	694,939	May 6	5329	826	9	238
Veneer-cutting machine	L. G. Morris	705,129	June 24	5424	759	10	239
Veneer-cutting machine	L. G. Morris	694,940	May 6	5330	827	9	240
Veneer-cutting machine	L. G. Morris	694,941	May 6	5331	828	9	241
Veneer-cutting machine	L. G. Morris	694,942	May 6	5332	829	9	242
Veneer-cutting machine	L. G. Morris	694,943	May 6	5333	830	9	243
Veneer-cutting machine	L. G. Morris	694,944	May 6	5334	831	9	244
Veneer-cutting machine	L. G. Morris	694,945	May 6	5335	832	9	245
Veneer-cutting machine	L. G. Morris	694,946	May 6	5336	833	9	246
Veneer-cutting machine	L. G. Morris	694,947	May 6	5337	834	9	247
Veneer-cutting machine	L. G. Morris	694,948	May 6	5338	835	9	248
Veneer-cutting machine	L. G. Morris	694,949	May 6	5339	836	9	249
Veneer-cutting machine	L. G. Morris	694,950	May 6	5340	837	9	250
Veneer-cutting machine	L. G. Morris	694,951	May 6	5341	838	9	251
Veneer-cutting machine	L. G. Morris	694,952	May 6	5342	839	9	252
Veneer-cutting machine	L. G. Morris	694,953	May 6	5343	840	9	253
Veneer-cutting machine	L. G. Morris	694,954	May 6	5344	841	9	254
Veneer-cutting machine	L. G. Morris	694,955	May 6	5345	842	9	255
Veneer-cutting machine	L. G. Morris	694,956	May 6	5346	843	9	256
Veneer-cutting machine	L. G. Morris	694,957	May 6	5347	844	9	257
Veneer-cutting machine	L. G. Morris	694,958	May 6	5348	845	9	258
Veneer-cutting machine	L. G. Morris	694,959	May 6	5349	846	9	259
Veneer-cutting machine	L. G. Morris	694,960	May 6	5350	847	9	260
Veneer-cutting machine	L. G. Morris	694,961	May 6	5351	848	9	261
Veneer-cutting machine	L. G. Morris	694,962	May 6	5352	849	9	262
Veneer-cutting machine	L. G. Morris	694,963	May 6	5353	850	9	263
Veneer-cutting machine	L. G. Morris	694,964	May 6	5354	851	9	264
Veneer-cutting machine	L. G. Morris	694,965	May 6	5355	852	9	265
Veneer-cutting machine	L. G. Morris	694,966	May 6	5356	853	9	266
Veneer-cutting machine	L. G. Morris	694,967	May 6	5357	854	9	267
Veneer-cutting machine	L. G. Morris	694,968	May 6	5358	855	9	268
Veneer-cutting machine	L. G. Morris	694,969	May 6	5359	856	9	269
Veneer-cutting machine	L. G. Morris	694,970	May 6	5360	857	9	270
Veneer-cutting machine	L. G. Morris	694,971	May 6	5361	858	9	271
Veneer-cutting machine	L. G. Morris	694,972	May 6	5362	859	9	272
Veneer-cutting machine	L. G. Morris	694,973	May 6	5363	860	9	273
Veneer-cutting machine	L. G. Morris	694,974	May 6	5364	861	9	274
Veneer-cutting machine	L. G. Morris	694,975	May 6	5365	862	9	275
Veneer-cutting machine	L. G. Morris	694,976	May 6	5366	863	9	276
Veneer-cutting machine	L. G. Morris	694,977	May 6	5367	864	9	277
Veneer-cutting machine	L. G. Morris	694,978	May 6	5368	865	9	278
Veneer-cutting machine	L. G. Morris	694,979	May 6	5369	866	9	279
Veneer-cutting machine	L. G. Morris	694,980	May 6	5370	867	9	280
Veneer-cutting machine	L. G. Morris	694,981	May 6	5371	868	9	281
Veneer-cutting machine	L. G. Morris	694,982	May 6	5372	869	9	282
Veneer-cutting machine	L. G. Morris	694,983	May 6	5373	870	9	283
Veneer-cutting machine	L. G. Morris	694,984	May 6	5374	871	9	284
Veneer-cutting machine	L. G. Morris	694,985	May 6	5375	872	9	285
Veneer-cutting machine	L. G. Morris	694,986	May 6	5376	873	9	286
Veneer-cutting machine	L. G. Morris	694,987	May 6	5377	874	9	287
Veneer-cutting machine	L. G. Morris	694,988	May 6	5378	875	9	288
Veneer-cutting machine	L. G. Morris	694,989	May 6	5379	876	9	289
Veneer-cutting machine	L. G. Morris	694,990	May 6	5380	877	9	290
Veneer-cutting machine	L. G. Morris	694,991	May 6	5381	878	9	291
Veneer-cutting machine	L. G. Morris	694,992	May 6	5382	879	9	292
Veneer-cutting machine	L. G. Morris	694,993	May 6	5383	880	9	293
Veneer-cutting machine	L. G. Morris	694,994	May 6	5384	881	9	294
Veneer-cutting machine	L. G. Morris	694,995	May 6	5385	882	9	295
Veneer-cutting machine	L. G. Morris	694,996	May 6	5386	883	9	296
Veneer-cutting machine	L. G. Morris	694,997	May 6	5387	884	9	297
Veneer-cutting machine	L. G. Morris	694,998	May 6	5388	885	9	298
Veneer-cutting machine	L. G. Morris	694,999	May 6	5389	886	9	299
Veneer-cutting machine	L. G. Morris	695,000	May 6	5390	887	9	300

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Pat.	Des.	Vol.	Page.
Wardrobe	G. Bois	705,130	June 24	5425	760	10	281
Wardrobe and dresser, Combined folding	M. J. Randall	705,131	May 20	5426	761	10	282
Warming-lag	T. O'Donnell	705,132	June 24	5427	762	10	283
Warp-stop-motion detector	D. D. Mahoney	695,117	Apr. 20	5344	844	9	284
Warp-stop-motion mechanism	W. I. Stimpson	695,118	Apr. 20	5345	845	9	285
Warp-stop-motion vibrator	A. K. Frost	695,119	Apr. 20	5346	846	9	286
Warp-threads, Machine for drawing in	H. Farden	705,120	May 12	5428	763	10	287
Warping-machine	J. W. Dimick, Jr., and J. Jagger	695,121	May 6	5347	847	9	288
Warping-machine, reel	J. O. Hartwick	695,122	May 6	5348	848	9	289
Warping-machine, reel	C. H. Baker	705,123	June 24	5429	764	10	290
Warping-machine, reel	E. T. Hall	695,124	Apr. 20	5349	849	9	291

Wrench	R. A. Broul	694,490	Apr. 1	38	6	98	9
Wrench	G. B. Howard and J. Langhart, Jr.	694,579	Apr. 1	104	129	98	129
Wrench	F. V. Barick	694,561	Apr. 9	1299	380	98	980
Wrench	V. O. Brown	694,581	Apr. 9	1743	380	98	981
Wrench	J. H. Paulin	694,577	Apr. 15	2777	615	98	641
Wrench	S. A. Holmes	694,540	Apr. 15	2996	697	98	694
Wrench	S. W. Wardwell and H. H. Eicher	694,538	Apr. 23	3193	694	98	719
Wrench	L. W. Johnson	694,539	Apr. 23	3245	795	98	824
Wrench	H. Decker	694,577	Apr. 23	3711	820	98	820
Wrench	H. D. Hubbard	694,498	Apr. 23	3883	820	98	820
Wrench	H. D. Hubbard	694,708	Apr. 23	4297	970	98	980
Wrench	R. Huntley	694,617	Apr. 23	4399	1143	98	1143
Wrench	W. Sundquist	694,594	May 6	129	28	98	1219
Wrench	W. J. Quinn	694,448	May 6	622	157	98	1599
Wrench	A. Bond	694,448	May 6	622	157	98	1599
Wrench	A. F. Glavis	694,676	May 13	1084	246	98	1419
Wrench	C. C. Longard	694,680	May 13	1085	246	98	1419
Wrench	J. D. McFarland, Jr.	700,390	May 20	2445	387	98	1710
Wrench	H. Kints and M. J. Leonard	700,400	May 20	2591	391	98	1717
Wrench	W. M. Treglow, Sr.	701,103	May 27	3077	691	98	2043
Wrench	C. F. Bettmann and S. Tinkington	701,422	June 3	334	71	98	2170
Wrench	D. R. Lee	701,504	June 3	381	130	98	2293
Wrench	F. C. Peabody	701,590	June 10	1121	294	98	2295
Wrench	W. Shirk	701,581	June 10	1194	375	98	2374
Wrench	G. H. Boyd	701,590	June 24	3000	390	98	2400
Wrenches. Construction of	F. Searle	694,719	May 13	1124	285	98	1401
Wringer:							
See Clothes-wringer. Map-wringer.							
Writing attachment	J. C. Fink	701,587	June 10	1040	380	98	2041
Writing-machine	R. B. Hess	697,390	Apr. 8	1011	324	98	324
Writing-machine	R. B. Hess	700,397	May 20	2045	380	98	1990
Writing-machine carriage	J. T. Schaeff	700,379	June 10	1007	449	98	2000
Xylophone-player	F. R. Goodman	700,385	May 13	1793	445	98	2045
Yoke-center guard. Neck	J. F. Vaughaun	700,390	Apr. 23	4141	380	98	380
Yoke-center. Neck	E. C. Summers	701,415	June 3	385	38	98	2125
Yoke. Neck	J. H. Storch	698,075	Apr. 23	2145	691	98	715
Zinc-bearing ores. Purifying	C. R. P. Steiman	697,393	Apr. 15	2933	691	98	691
Zinc by electrolysis. Apparatus for obtaining	L. Mond	701,516	May 27	4007	385	98	2005
Zinc by electrolysis. Obtaining	L. Mond	701,515	May 27	4005	385	98	2005
Zinc. Extracting	J. L. Babé and A. Tricart	702,704	June 17	3711	981	98	2004
Zinc gelatious compound	A. Michangris and R. Berendes	699,694	Apr. 23	4001	380	98	980
Zinc or electrolyte plates. Frame or base for	S. Waterman	702,694	June 17	3420	380	98	2045
Zinc or other volatile metals from ores or matters. Apparatus for obtaining	J. Armstrong	701,687	June 3	312	38	98	3170
Zinc or other volatile metals from ores or matters. Obtaining	J. Armstrong	701,686	June 3	312	38	98	3170

Fabric, except silk velvets and cotton, wool, and silk threads and yarn. Wool, cotton, half-wool, silk, and half-silk.	A. M. A. Richardson	22,298	Apr. 15	55	680
Fabric. Woven cotton.	Silver Mfg. Co.	22,299	Apr. 22	55	681
Feed and feeding order.	P. A. Reid	22,300	Apr. 1	55	682
Fencing. Wire.	Smith & Revell	22,301	Apr. 8	55	683
Filters. Water.	Outby & Barton Company	22,302	June 17	55	1305
Finger-rings.	American Fire Engine Company	22,303	June 17	55	1306
Fire-engines. Steam.	C. A. Daniels	22,304	Apr. 15	55	684
Fire-extinguishing compounds and fire-preventives in powder form.	Henry Millward & Sons	22,305	Apr. 22	55	1307
Fishing-tackle. Certain named.	Henry Millward & Sons	22,306	May 27	55	1308
Fishing-tackle. Certain named.	R. K. Allison	22,307	May 13	55	1309
Flour.	S. S. Pierce Co.	22,308	May 13	55	1310
Flour. Wheat.	H. D. Falls & Co.	22,309	Apr. 1	55	685
Flour. Wheat.	Exclusive Water Mill Co.	22,310	Apr. 8	55	686
Flour. Wheat.	F. G. Atkinson	22,311	May 20	55	1311
Flour. Wheat.	E. Miro (Société en Commandite)	22,312	June 17	55	1312
Fly-paper. Sticky.	T. D. Nostrand	22,313	Apr. 8	55	687
Food compound. Certain named health.	Darmstadt German Food Co.	22,314	June 24	55	1313
Food in tablet form. Pattening.	J. W. Shultz	22,315	June 10	55	1314
Food preparations from cereals, vegetables, and legumes.	Real Food Co.	22,316	June 10	55	1315
Food products. Certain named.	Stapel-Cooper Co.	22,317	Apr. 22	55	688
Food products. Certain named.	Buffalo Cereal Company	22,318	May 13	55	1316
Food, relishes, and medicinal preparations. Certain named.	Ox-Beef Company of America	22,319	June 17	55	1317
Food. Stock.	J. W. Potty	22,320	June 8	55	1318
Food. Stock.	Central Stock Food Co.	22,321	June 24	55	1319
Food. Stock.	Applin & Barrett & Western Creameries	22,322	Apr. 8	55	689
Foods and relishes. Certain named.	Dodson-Brown Mfg. Co.	22,323	June 2	55	690
Foods, crackers, and biscuits. Breakfast.	Grocers' Specialty Mfg. Co.	22,324	May 20	55	1320
Footwear.	D. B. Baker	22,325	June 8	55	1321
Forms. Bust.	Henderson & Henderson	22,326	May 20	55	1322
Fruit and medicinal and food products of such fruit. Certain named.	F. A. Robinson	22,327	Apr. 8	55	691
Fruits and honey.	W. S. Hart	22,328	Apr. 15	55	692
Fungicides and insecticides.	Bowker Insecticide Company	22,329	June 24	55	1323
Fur goods. Certain named.	Gordon & Ferguson	22,330	May 20	55	1324
Furnace materials.	Morgan Crucible Co.	22,331	Apr. 22	55	693
Furnaces. Soft-iron.	F. Floeager	22,332	June 10	55	1325
Game.	Cincinnati Game Company	22,333	May 27	55	1326
Game-boards.	R. Mikkelson	22,334	June 8	55	1327
Games.	A. J. Patterson	22,335	June 8	55	1328
Garments. Ruffled night.	E. Rosenfeld & Co.	22,336	Apr. 8	55	694
Garments. Certain named.	Direct Supply Co.	22,337	May 6	55	695
Garters and hose-supporters.	E. Gutmann	22,338	Apr. 22	55	696
Gas-burner tips. Aluminum.	Gas Tip and Self Lighter Co.	22,339	Apr. 22	55	697
Gas-generators.	H. Glasse	22,340	May 13	55	1329
Gelatin.	Kingery Manufacturing Company	22,341	June 24	55	1330
Gelatin and preparations of gelatin.	Miligan & Higgins Glue Co.	22,342	May 20	55	1331
Gelatin preparation for table desserts.	Grocers' Specialty Mfg. Co.	22,343	June 24	55	1332
Glanders. Preparation for the cure of.	F. Schmidt	22,344	Apr. 1	55	698
Glass tiles.	Solar Prism Co.	22,345	May 13	55	1333
Golf-balls.	"Sanitas" Company	22,346	May 27	55	1334
Goring and webbing. Textile.	Hub Gore Makers	22,347	Apr. 22	55	699
Groceries. Certain named.	Jos. Spaidel Grocery Co.	22,348	Apr. 8	55	700
Groceries. Certain named.	M. Shepper	22,349	Apr. 8	55	701
Groceries. Certain named.	Sprague, Warner & Company	22,350	Apr. 8	55	702
Groceries. Certain named.	Sprague, Warner & Company	22,351	Apr. 8	55	703
Groceries. Certain named.	Sprague, Warner & Company	22,352	Apr. 8	55	704
Groceries. Certain named.	G. E. McGaw & Co.	22,353	Apr. 15	55	705
Groceries' sundries. Certain named.	Asher, Marshall & Condit	22,354	May 27	55	1335
Groceries' sundries. Certain named.	A. J. Valk & Bro.	22,355	June 17	55	1336
Grocery supplies. Certain named.	C. Shankberg Co.	22,356	May 27	55	1337
Gum. Chewing.	New York Vending Machine Company	22,357	Apr. 15	55	706
Gum. Chewing.	New York Vending Machine Co.	22,358	May 27	55	1338
Hair-restorers, applications for the hair, and cosmetics.	M. T. Goldman	22,359	Apr. 22	55	707
Harmoniums.	Strass Bros. & Co.	22,360	May 20	55	1339
Harmoniums. Mouth.	Firm of M. Hohner	22,361	June 17	55	1340
Harmoniums. Mouth.	Firm of M. Hohner	22,362	June 17	55	1341
Harmoniums. Mouth.	Firm of M. Hohner	22,363	June 17	55	1342
Harmoniums. Mouth.	Firm of M. Hohner	22,364	June 17	55	1343
Harmoniums. Mouth.	Firm of M. Hohner	22,365	June 17	55	1344
Harmoniums. Mouth.	Firm of M. Hohner	22,366	June 17	55	1345
Harmoniums. Mouth.	Firm of M. Hohner	22,367	June 17	55	1346
Harmoniums. Mouth.	Firm of M. Hohner	22,368	June 17	55	1347
Harmoniums. Mouth.	Firm of M. Hohner	22,369	June 17	55	1348
Harmoniums. Mouth.	Firm of M. Hohner	22,370	June 17	55	1349
Harmoniums. Mouth.	Firm of M. Hohner	22,371	June 17	55	1350
Harmoniums. Mouth.	Firm of M. Hohner	22,372	June 17	55	1351
Harmoniums. Mouth.	Firm of M. Hohner	22,373	June 17	55	1352
Harmoniums. Mouth.	Firm of M. Hohner	22,374	June 17	55	1353
Harmoniums. Mouth.	Firm of M. Hohner	22,375	June 17	55	1354
Harmoniums. Mouth.	Firm of M. Hohner	22,376	June 17	55	1355
Harmoniums. Mouth.	Firm of M. Hohner	22,377	June 17	55	1356
Harmoniums. Mouth.	Firm of M. Hohner	22,378	June 17	55	1357
Harmoniums. Mouth.	Firm of M. Hohner	22,379	June 17	55	1358
Harmoniums. Mouth.	Firm of M. Hohner	22,380	June 17	55	1359
Harmoniums. Mouth.	Firm of M. Hohner	22,381	June 17	55	1360
Harmoniums. Mouth.	Firm of M. Hohner	22,382	June 17	55	1361
Harmoniums. Mouth.	Firm of M. Hohner	22,383	June 17	55	1362
Harmoniums. Mouth.	Firm of M. Hohner	22,384	June 17	55	1363
Harmoniums. Mouth.	Firm of M. Hohner	22,385	June 17	55	1364
Harmoniums. Mouth.	Firm of M. Hohner	22,386	June 17	55	1365
Harmoniums. Mouth.	Firm of M. Hohner	22,387	June 17	55	1366
Harmoniums. Mouth.	Firm of M. Hohner	22,388	June 17	55	1367
Harmoniums. Mouth.	Firm of M. Hohner	22,389	June 17	55	1368
Harmoniums. Mouth.	Firm of M. Hohner	22,390	June 17	55	1369
